CO2: Understand the processing techniques required to analyze the bio medical signals

CO3: Understand data reduction techniques for ECG signal.

DIGITAL IMAGE PROCESSING

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE10		

Course objectives: To study the basic theory and algorithms used in digital image processing.

Unit-I

FUNDAMENTALS: Introduction, Fundamental steps in digital image processing (DIP), components of DIP system, A simple image formation model, Image sampling and quantization, Basic relationship between pixels, Color image processing: color fundamentals, Color models: RGB, CMY and CMYK, HIS. **7 Hours**

Unit-II

IMAGE ENHANCEMENT IN SPATIAL DOMAIN: Background, Point processing – Image negatives, Log transformations, Power law transformations, Contrast stretching, Gray level slicing, Bit plane slicing, Histogram processing – Histogram equalization, Histogram matching (specification), Local enhancement, Arithmetic/Logic operations – Image subtraction, Image averaging, SPATIAL FILTERING : Smoothing spatial filters – Smoothing linear filters, order statistics filters, Sharpening spatial filters – Foundation, Laplacian and gradient**.**

8 Hours

Unit-III

IMAGE ENHANCEMENT IN FREQUENCY DOMAIN: Introduction to the Fourier Transform and the frequency domain , Basic filtering in the

frequency domain, Basic filters and their properties, Smoothing frequency domain filters: Ideal low-pass filters, Butterworth low-pass filters, Gaussian lowpass filters, Sharpening frequency domain filters: Ideal high-pass filters, Butterworth high-pass filters, Gaussian high-pass filters, Homomorphic filtering. **8 Hours**

Unit-IV

IMAGE COMPRESSION: Fundamentals: Coding redundancy, interpixel redundancy, psychovisual redundancy, Image Compression models: Source encoder and decoder, Channel encoder and decoder, Error Free compression: Variable length coding, LZW coding, Bit plane coding, Lossless predictive coding, Lossy Compression: Lossy predictive coding, transform coding fundamentals, image compression standards:basics,JPEG. **8 Hours**

Unit-V

IMAGE SEGMENTATION: Detection of discontinuities**:** point detection, Line detection, edge detection, Edge Linking and boundary Detection: Local Processing, Global processing via the Hough transform, Introduction, Global processing via Graph theoretic Techniques, Thresholding: Foundation, Role of illumination, Basic Global thresholding, Basic Adaptive thresholding, Optimal global and adaptive thresholding, Region-based segmentation: Basic Formulation, Region growing, Region splitting & merging. **8 Hours**

TEXT BOOK:

1	Rafael C. Gonzalez & Richard E. Woods	Digital Image Processing, 3rd Edition. Prentice idol of India.

REFERENCE BOOK:

1	Anil K. Jain	Fundamentals of Digital Image Processing, 2nd Edition, Prentice Hall of India.

Course outcomes: Student will be able to:

CO1: Understand image formation, representation, sampling and quantization.

CO2: Understand image processing techniques in spatial domain and frequency domain

CO3: Understand various compression and segmentation techniques used for images.

ANALOG AND DIGITAL COMMUNICATION

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	:39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE11		

Course objectives: To study modulation and demodulation techniques used in analog and digital communication systems.

Unit-I

Introduction: Need & Importance of modulation.

Amplitude Modulation: Principle, AM generation, modulation index, bandwidth, power in sidebands, frequency translation, Problems.

7 Hours

Unit-II

Amplitude Modulation Techniques: AM/DSB, AM-SSB/SC generation, bandwidth & power, Demodulation of AM waves, coherent & non coherent detection, effect of noise, threshold effect, FDM.

8 Hours

Unit-III

Angle Modulation: Principle of FM & PM, NBFM, WBFM, bandwidth, modulation index, generation, demodulation -frequency discriminator, phase locked loop (1st order), threshold effect in FM, pre-emphasis & de-emphasis, comparison of AM and FM. **9 Hours**

Unit-IV

Pulse Modulation: Sampling theorem for low pass and band pass signal, statement and proof, practical aspects of sampling, reconstruction of signal from sampled signal, PAM, PDM and PPM generation and detection, PCM, DPCM, delta modulation, adaptive delta modulation and TDM**.** **8 Hours**

Unit-V

Digital Communication: Methods of binary data transmission, RZ, NRZ (L) NRZ (M) NRZ(S) BiO(L) BiO(S), PSK, QPSK, DPSK, FSK, probability error for PSK & QPSK, Coding: Huffman coding, error control coding, block code. **7 Hours**

TEXT BOOKS

1	Simon Haykin	Analog and Digital Communication, John Wiley
2	Taub and Schilling	Principles of Communication systems, TMH

REFERENCE BOOKS :

1	George kennedy	Electronic Communication System
2	Sam shanmugam	Communication Systems

Course outcomes: The student will be able to:

CO1: Explain the need for modulation.

CO2: Distinguish between various analog modulation and demodulation techniques.

CO3: Explain the various digital modulation techniques and distinguish between analog and digital communication systems.

CO4: compute communication system parameters, such as bandwidth, power, signal to quantization noise ratio and data rate

CO5: Explain the various line codes used in digital communication and error detection in digital transmission systems.

COMPUTER NETWORKS

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE12		

Course objectives: To study fundamentals of computer networks, components of network and data communication between computers.

Unit I

INTRODUCTION: Network Hardware, Network Software, OSI Reference Model, TCP/IP reference model.

PHYSICAL LAYER:

Guided Transmission Media, Wireless Transmission, the Public Switched Telephone Network, the Mobile Telephone System. **8 Hours**

Unit II

DATA LINK LAYER: Data Link Layer Design Issues, Error Detection and Correction, Elementary Data Link Protocols, Sliding Window Protocols, Protocol Verification, HDLC, The data link layer in the internet, point to point protocol. **8 Hours**

Unit III

NETWORK LAYER: Network Layer Design Issues, Routing Algorithms: optimality principle, shortest path routing, Distance vector routing, flooding, link state routing. **8 Hours**

Unit IV

TRANSPORT LAYER: The transport service, Elements of transport protocols, Simple transport protocol, the internet transport protocols: UDP, TCP. **8 Hours**

Unit V

APPLICATION LAYER: Domain Name System (DNS), electronic mail, worldwide web. **7 Hours**

TEXT BOOK:

1	Andrews S. Tanenbaum	Computer Networks, 4th Edition, Pearson Education.

REFERENCE BOOKS:

1	HONDEL AND FLUBER	ATM Protocol concepts, Addison Wesley.
2	W STALLINGS	Data and computer networks, 5th Edition, Prentice Hall of India 1998.

Course outcomes: The student will be able to:

CO1: Understand different types of network.

CO2: Explain hardware and software components required to build the network.

CO3: Explain different layers of network, issues related to design of network.

CO4: Explain function and role of physical, data link, network, transport and application layer in a network.

REMOTE SENSING AND TELEMETRY

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE13		

Course objectives: To study different techniques of remote sensing and data transmission.

Unit I

Introduction: Introduction to Remote Sensing. A Remote Sensing System, Remote Sensing Terminology and Units, Sources And Types of Electromagnetic Energy Used In Remote Sensing, Electromagnetic spectrum, image characteristics Earth Surface Interaction With Electromagnetic Radiation, Atmospheric Interactions With Electromagnetic Radiation. **7 Hours**

Unit II

Aerial Photography & Sensor : Introduction, Film technology, Characteristics of aerial photography, low sun angle photographs, photo mosaics, high altitude aerial photographs, Cameras Film Taking Measurements From Aerial Photographs, Interpreting Aerial Photographs, Multispectral Scanner, Thermal Infrared Line Scanner, Sideways Look Airborne Radar (SLAR). **8 Hours**

Unit III

Satellite Sensor Imagery: Introduction, Earth Resources Satellites, Manned Earth Resources Satellites, Unmanned Earth Resources Satellites, Meteorological Satellites, Military And User Satellites.

8 Hours

Unit IV

Image Processing: Introduction, Continuous Image Processing, Discrete Image Processing, Geographic Information System. **8 Hours**

Unit V

Introduction to Telemetry Systems: Introduction, Fundamentals of RF Telemetry, Basic Telemetry, System Components, Methods of Coding Modulation, Pulse Code Modulation, PCM Multiplexing And Conversion, PCM Data Transmission, PCM PSD Telemetry System, Theoretical Comparison of Telemetry Systems, Sub modulation Methods, RF Modulation Methods, Power Efficiency of Combined Systems, Practical Constraint of Telemetry Methods Optimized Power Efficiency.

8 Hours

TEXT BOOKS:

1	Paul J Curran, Longman	Principles of remote sensing
2	Floyed F Sabns	Remote sensing principles and interpretation

Course outcomes: The student will be able to:

CO1: Understand the concepts of remote sensing.
CO1: Explain sources and types of electromagnetic energy used in remote sensing.
CO1: Understand the concepts of aerial photography.
CO1: Explain the role of satellites in assessing earth resources.
CO1: Describe the techniques of image processing. Differentiate the various techniques of remote transmission and processing of signal.

ELECTRICAL ENGINEERING MATERIALS

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE14		

Course objectives: To study the structure, properties and applications of various materials used in electrical and electronic system.

Unit-I

Introductory Concepts: Introduction to material science and engineering, Material classification, Overview of electrical properties of materials, Atomic structure and bonding in solids, Energy bands in solids and classification of materials on band structure, Structures of crystalline and non-crystalline solids. **8 Hours**

Unit-II

Dielectric Properties of Insulators: Static fields: Introduction, Polarization and dielectric constant, Dielectric constant of polyatomic molecules, Internal field and static dielectric constant of solids. Ferroelectric materials, Spontaneous polarization, Piezoelectricity, Alternating fields: Frequency dependence of electronic and ionic polarizabilities, Complex dielectric constant of non-dipolar solids, Overview of dipolar relaxation and dielectric loss. **8 Hours**

Unit-III

Magnetic Properties of Materials: Summary of concepts, Magnetization from a macroscopic point of view. Origin of permanent magnetic dipoles in matters, Classification of magnetic materials: Diamagnetism, Paramagnetic spin systems, Ferromagnetism, Antiferromagnetic materials, Ferromagnetic materials, Magnetostrictive materials. **8 Hours**

Unit-IV

Conduction Mechanisms: Metals: Overview of electron theory of metals, Electron scattering and receptivity of metals, Heat developed in current carrying conductors, Superconductivity.

Semiconductors: Review of classification, Carrier densities in n-type and p-type semiconductors, Hall Effect, Drift and diffusion currents, p-n junction and n-p-n junction transistors, Overview of physics of power-semiconductor devices. **8 Hours**

Unit-V

Applications: Properties and application of electrical conducting, semiconducting, insulating and magnetic materials, soft and hard magnetic materials, permanent magnetic materials, Thermal

conductivity of metals, optical properties of solids, Materials for semiconductor industries, Advancements. **7 Hours**

TEXT BOOKS

1	A.J. Dekker	Electrical engineering materials, PHI
2	C.S.Indulkar, S.Triruvagdan	An Introduction to Electrical Engg. Materials, S.Chand & Co

REFERENCE BOOKS :

1	Ian P. Hones	Material Science for Electrical and Electronic Engineering, Oxford University Press.
2	Narula	Material Science, Tata McGraw Hill

Course outcomes: The student will be able to:

CO1: Understand the classification and electrical properties of materials.

CO2: Explain the dielectric properties of insulator and magnetic properties of materials.

CO3: Distinguish between insulators, semiconductors and conductors

CO4: Understand the applications of materials in the various applications.

INDUSTRIAL DRIVES

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	:39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE15		

Course objectives: To study the classification, operation and characteristics of AC and DC motor drives.

Unit-I

Electric Drives: Concept and Classification, Dynamics of Electric Drives, Types of Loads, Torque Characteristics of Load, Characteristics of Motor-Load Combination, Dynamics of Motor-Load Combination, Steady-state and Transient stability of Electric Drive. Characteristics of Electric Drives: Modified Speed-Torque Characteristics of DC Shunt motors, DC Series motor and Induction Motors. **8 Hours**

Unit-II

Starting of Electric Motors: Methods of Starting Electric Motors, Acceleration time, Energy relation during starting, DC Shunt & Series motors and Induction motors, Methods to reduce the energy loss during starting. Electric Braking: Types of Braking, Braking of DC and AC motors, Energy relation and Dynamics of Braking. Rating of Motors: Heating effects, Load conditions and Classes of duty,

Determination of power rating, Effect of load inertia and load equalization. **8 Hours**

Unit-III

D.C motor control: Single-phase controlled rectifier and Chopper circuit arrangement for continuous armature current operation., Circulating current and non-circulating current modes of operation, Principles of closed loop control for DC drives. **8 Hours**

Unit-IV

Induction motor control: Speed control of 3-phase Induction motor with AC voltage regulators, Voltage source inverters and Cyclo-converters, Static rotor resistance control, Slip power recovery schemes: Static Krammer drive and Scherbius drive. **8 Hours**

Unit-V

Synchronous motor control: Self controlled and Separately controlled, synchronous motors, Brushless D.C motors, Switched reluctance motors. **7 Hours**

REFERENCE BOOKS :

1	S.K.Pillai	A First Course in Electrical Drives, New Age International, 2000
2	G.K.Dubey	Fundamentals of Electric Drives, Narosa Public House, Delhi, 2001
3	M.D.Singh and K.B.Khanchandani	Power Electronics, Tata McGraw Hill publishing Company Ltd., 2000
4	Bimal.K.Bose	Modern Power Electronics and AC Drives, Pearson Education Asia, 2002

Course outcomes: The student will be able to:

CO1: Understand fundamental elements of drive systems, analyse the steady-state characteristics of a few commonly used types of drives used in the industry.

CO2: Understand the classification of AC and DC motors.

CO3: Apply the theories of electrical machines, power electronic converters and decide its operational parameters for DC & AC motor drive system.

CO4: Design control circuitry to control the speed of motors.

EMBEDDED SYSTEMS and RTOS

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	:39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE16		

Course objectives: To study the concepts of embedded real time applications using microcontrollers.

Unit I

Introduction: An Embedded System, Characteristics of Embedded Systems, Software embedded into a system, Generalised Architecture of Embedded Systems, Architecture of Microprocessors, Microcontroller and Digital Signal Processors, Structural units of processors in embedded systems, Introduction to a simple (MU0) processor design – Data path, Instruction set.

Real Time Systems: Definition, Basic model of a Real Time systems, Types of Real Time systems.

ARM Processor: The ARM Architecture, The ARM programmer's model.

ARM Assembly Level Programming: The ARM Instruction set(32-bit) **-** Data transfer and Data processing Instructions **8 Hours**

Unit II

ARM Assembly Level Programming: Control transfer Instructions, Thumb Instruction set (16-bit), ARM Organization and Implementation –Pipelined Architecture of ARM Processor. **8 Hours**

Unit III

Memory Organization: Introduction, Classification of Memory on the basis of location and the way of data storage, Memory Access and Memory specifications, Memory Hierarchy, Cache design, Memory management unit (MMU), Memory organization of ARM processor. **8 Hours**

Unit IV

Input/Output Devices in Embedded Systems: Timers and Counters, Pulse Width Modulator (PWM), Watchdog timer.

Communication in Embedded Systems: Parallel and serial communication, RS232 for Asynchronous Serial communication, Network communication – I^2C bus, CAN bus, USB.

Interrupt Handling: Polling and Interrupts, Types of Interrupts, Context and the period of context switching, Interrupt latency and Deadline.

Computing Platforms and Design Analysis: Development and Debugging – Program design – Model of Programs – Assembly and Linking, Basic Compilation Techniques. **8 Hours**

Unit V

Computing Platforms and Design Analysis: Analysis and Optimization of Execution time, power, energy, program size – Program validation and testing.

Processes and Real Time Operating Systems: Introduction, Multitasks and Multiple Processes, Interrupt routines in RTOS, Shared data problem by multiple tasks and interrupt Service routines, Solving shared data problem of interrupt service routine**:** critical region, volatile keyword.

Inter process Communication: Semaphores - Deadlock, Priority inversion, Message queues, Mail boxes.

Task Scheduling: Process state and scheduling, scheduling algorithms: First In First Out, Round robin algorithm, Round robin with priority, Shortest job first, Preemptive multitasking and Non-Preemptive multitasking algorithm Simple priority based, Rate monotonic & Earlier Deadline first scheduling. **8 Hours**

TEXT BOOKS:

1	Steve Furber	ARM System On Chip Architecture, 2nd Edition Pearson Education 2005.
2	David E. Simon	An Embedded Software primer, Pearson Education 1999.
3	Frank Vahid,Tony Givargis	Embedded systems design: A unified hardware/software introduction, John Wiley and sons, Inc,2002

REFERENCE BOOKS:

1	Rajkamal	Embedded systems: Architecture programming and design, TMH 2008.
2	Jonathan W Valvano	Embedded Microcomputer systems: Real Time Interfacing, Thomson-Engineering Publishers.
3	Tim Wilmshurst, Palgrave mcmillan	An Introduction to the design of small scale Embedded systems
4	KVKK Prasad	Embedded Real-Time Systems: Concepts, Design and Programming, Dreamtech press, 2005.
5	Wayn Wolf	Computers as Components : Principle of Embedded computer systems design, 2nd Edition, Elsevier 2009

Course outcomes: Student will be able to:

CO1: Understand embedded system architecture.

CO2: Develop software for real time applications using RTOS.

CO3: Design and develop embedded system applications using microcontroller.

COMPUTER ARCHITECTURE

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE17		

Course objectives: To study the concepts of pipelining, instruction level parallelism and memory hierarchy design of computers

Unit-I

Introduction: Introduction to Computer Architecture, Quantitative principles of computer design, basics of How to Flow chart for hardware

Pipelining Basic and Intermediate Concepts: Basics of Pipelining, Basics of RISC instruction set and its Implementation. **8 Hours**

Unit-II

Pipelining Basic and Intermediate Concepts: Classic 5-stage pipelining for a RISC processor, Basic performance issues in pipelining, Pipelining Hazards, A simple Implementation of MIPS pipeline. **8 Hours**

Unit-III

Pipelining: Pipelining implementation difficulties, Extending MIPS pipeline to Handle Multi-cycle Operations.

Instruction level Parallelism: ILP Concepts, Basic Compiler Techniques for exposing ILP, Reducing Branch Costs with prediction, Overcoming Data Hazards with Dynamic Scheduling, Hardware threading. **8 Hours**

Unit-IV

Instruction level Parallelism: Hardware based speculation, Static Branch prediction, Static Multiple issue: The VLIW approach, limitations of ILP. **8 Hours**

Unit-V

Memory Hierarchy Design: Introduction, Review of the ABCs of Cache, Cache Performance, Reducing Cache miss Penalty and miss rate, Reducing Hit rate, Memory Technology and Optimization, Virtual Memory **7 Hours**

TEXT BOOK:

1	John L. Hennessy and David A. Patterson	Computer Architecture A Quantitative Approach, 3rd and 4th Edition, The Morgan Kaufmann Series.

REFERENCE BOOKS:

1	John L. Hennessy and David A. Patterson.	Computer Organization and Design 5th Edition. The Morgan Kaufmann Series.

Course outcomes: Student will be able to:

CO1: Understand the architecture and hardware flow chart of processors.

CO1: Understand the instruction set of RISC processors.

CO1: Analyse the performance issues in pipelining.

CO1: Understand and analyse the concepts of instruction level parallelism.

CO1: Understand the performance of different types of memory.

INTERNET OF THINGS

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE18		

Course Objectives: To study the fundamentals and applications of internet of things and to know the methodologies and tools involved in design of IoT.

Unit-I

Introduction & Concepts: Definition and Characteristics of IoT, Things in IoT, IoT Protocols, IoT Functional Blocks, IoT Communication Models, IoT Communication APIs, IoT Enabling Technologies, IoT Levels and Deployment Templates.

IOT and M2M, SDN and NFV for IoT, IoT System Management with NETCONFIG-YANG **8 Hours**

Unit-II

Developing Internet of Things: IoT Platform Design Methodology, Specifications: Requirements, Process, Domain, Information, Services, Level, Functional, Operational,Integration, Application Development

Python Language: Data Types & Data Structures, Control Flow, Functions, Modules, Packages, File Handling, Date & Time Operations, Classes, Python Packages of Interest for IoT **7 Hours**

Unit –III

IoT Physical Devices and End Points: Basic Building Blocks of an IoT Device, Raspberry Pi, Linux on Raspberry Pi, Raspberry Pi Interfaces: Serial, SPI, I2C.

Programming Raspberry Pi with Python: Controlling LED, Interfacing Switch

Other IoT Devices: Arduino, BeagleBone Black. **8 Hours**

Unit-IV

Cloud and Data Analytics: Introduction to cloud storage Models and Communication APIs, Python Web Application Framework – Django, Web Services for IoT, SkyNet Messaging Platform.

Data Analytics for IoT: Apache Hadoop, spark, Real-Time Data Analysis, Tools for IoT: Chef **8 Hours**

Unit-V

IoT Case Studies: Home Automation: Smart Lighting, Cities: Smart Parking Environment: Weather Reporting Bot, Forest Fire Detection; Agriculture – Smart Irrigation, IoT Printer. **8 Hours**

TEXT BOOK:

1	Arshdeep Bahga, Vijay Madisetti	Internet of Things: A Hands-on Approach", Universities Press, 2014, 1st Edition.

REFERENCE BOOKS:

1	Ovidiu Vermesan, Peter Friess	Internet Of Things-From Research and Innovation to Market Deployment", River Publishers Series in Communication.
2	Adrian McEwen, Hakim Cassimally	Designing the Internet of Things", ISBN 978-81-265-5686-1 Wiley Publication.

Course Outcomes: Students will be able to:

CO1: Comprehend fundamentals of IoT and get exposure to the aspects of communication and protocols associated with IoT.

CO2: Identify hardware and software associated with the development of IoT systems. Design IOT Systems using IoT and Data analysis tools.

DSP ARCHITECTURE

Contact Hours/ Week :	3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours :	39	CIE Marks :	50
Total Tutorial Hours :	0	SEE Marks :	50
Sub. Code :	REIE19		

Course objectives: To study DSP algorithms, architecture and interfacing of peripheral devices to the DSP processor.

Unit-I

Introduction To Digital Signal Processing: Introduction to Digital Signal Processing system, The Sampling Process, Discrete time Sequences, Decimation and Interpolation, Convolution, correlation,

Discrete Fourier Transform (DFT) & Fast Fourier Transform(FFT), Classification of Digital Filters.

Number formats for Signals and co-efficient in DSP systems: Fixed point format, Double precession fixed point format, Floating point format, Block floating point format, Multiplication of Fixed point numbers and Floating point numbers, dynamic errors in DSP system.

8 Hours

Unit- II

TMS320C54xx Programmable Digital Signal processor: Introduction, Architecture overview of TMS320C54xx Digital Signal Processors, Bus structure, Central processing unit (CPU) : Arithmetic Logic Unit(ALU), Accumulators, Barrel shifter, Multiplier/Adder, compare select & store unit, Exponent encoder. Memory Organization: Memory space, Program memory, extended program memory, Data memory, I/O-memory. Data types,

Data addressing: Immediate, Absolute, Accumulator, Direct, Indirect, Memory mapped Register, Stack. Program memory addressing: Program Counter (PC), Branches, Calls, Returns, Conditional operations, repeating a single instruction, repeating a block of instructions, reset operation. **8 Hours**

Unit- III

Instruction Set, On chip Peripherals and Pipeline Operation of TMS320C54xx: Instruction set: Arithmetic, Logical, Program control, Load & store operations.

On-chip Peripherals: Timer, Host Port Interface, Clock generator, Serial port interface - synchronous serial port,

Interrupts: Interrupt context save, interrupt latency, Pipeline operation. **8 Hours**

Unit- IV

Implementation of Basic DSP Algorithms: Introduction, the Q-notation, An FFT algorithm for DFT computation, A butterfly computation, Overflow and Scaling, Bit Reversed index generation, FFT implementation on the TMS320C54xx, Computation of the signal spectrum. FIR Filters, IIR Filters, Interpolation Filters, Decimation Filters, PID controller, Adaptive Filters, 2-D Signal processing.

8 Hours

Unit- V

Interfacing Memory And Parallel I/O Peripherals To Programmable DSP Devices: Introduction, Memory space organization, External bus interfacing signals, Memory interface, Parallel I/O interface, Programmed I/O, Interrupts and I/O, Direct memory access (DMA).

Interfacing Serial Converters to a Programmable DSP device: Introduction, Synchronous Serial Interface (SSI). Multichannel Buffered Serial Port(MCBSP) **7 Hours**

TEXT BOOKS

1	Avtar Singh and S. Srinivasan	Digital Signal Processing, Thomson Publishing, 2004, Singapore.
2	V Udaya shankara	Modern Digital signal processing, 3rd Edition, PHI 2015

REFERENCE BOOKS

1	Emmanuel C Ifeachor and B W Jervis	Digital Signal Processing: A Practical Approach, Pearson Education, New Delhi
2	B Venkataramani and M Bhaskar	Digital Signal Processing, Tata- McGraw Hill, New Delhi, 2002.

Course outcomes: The student will be able to:

CO1: Explain functional units of digital signal processor MS320C54x).

CO2: Develop algorithms for computation of signal spectrum, implementing digital Filters, PID controller and adaptive filters.

CO3: Interface memory and I/O devices to a DSP Processor.

BIOMEDICAL INSTRUMENTATION

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks:	50
Sub. Code	: REIE20		

Course objectives: This course will enable students to:

1.To study various biomedical instruments for acquiring and monitoring Biomedical signals.

2.To study various measuring and therapeutic instruments for biomedical application.

Unit-I

Fundamentals: Sources of biomedical signals, Basic instrumentation system, General constraints in design of biomedical instrumentation systems Bioelectric Signals and Electrodes: Origin of bioelectric signals, Types of bioelectric signals.

Recording electrodes, Electrode-Tissue interface, Polarization, Skin contact impedance, Silver-silver chloride electrodes, Electrodes for ECG, EEG, EMG, Microelectrodes. **7 Hours**

Unit-II

Electrocardiography: Electrical activity of the heart, Genesis & characteristics of Electrocardiogram (ECG), Block diagram description of an Electrocardiograph, ECG lead system, Multi-channel ECG machine Phonocardiograph.

Electroencephalography: Genesis of Electroencephalogram (EEG), Block diagram description of an Electroencephalograph, 10-20 electrode systems, and computerized analysis of EEG.

Electromyography: Genesis of Electromyogram (EMG), Block diagram description of an Electromyography**.** **8 Hours**

Unit-III

Blood pressure measurement: Direct & Indirect method, Automatic blood pressure measuring apparatus using Korotkoff's method, Rheographic method, Oscillometric method, Ultrasonic Doppler shift method.

Blood Flow Meters: Electromagnetic blood flow meters, Ultrasonic blood flow meters, NMR blood flow meters, Laser Doppler blood flow meters. **8 Hours**

Unit-IV

Cardiac Pacemakers and Defibrillators: Need for cardiac pacemaker, External pacemaker, Implantable pacemaker, Types of Implantable pacemakers, Programmable pacemaker, Rate-responsive pacemakers, AC & DC defibrillators, Dual peak DC defibrillator, Square wave defibrillator. **8 Hours**

Unit-V

Measurement of Respiration rate: Thermistor method, Impedance Pnuemography, CO_2 method, Apnoea detectors.

Patient Monitoring Systems: Bedside patient monitoring systems, Central monitors, Measurement of heart rate – Average heart rate meter, Instantaneous heart rate meter (cardio tachometer), Measurement of pulse rate

Patient Safety: Electric shock hazards, Micro shock & Macro shock, Leakage currents. **8 Hours**

TEXT BOOKS

1	R. S. Khandpur.	Handbook of Biomedical Instrumentation, Tata McGraw-Hill Publishing Company 3rd Edition, 2014
2	C.Raja Rao & S.K.Guha	Principles of Biomedical instrumentation, Universities press (India) Ltd,2nd Edition,2001

REFERENCE BOOKS :

1	Lesely Cromwell	Principles of applied biomedical instrumentation, John Wiley and sons ,2nd Edition,2002
2	J. G. Webster	Encyclopedia of medical devices and instrumentation, John Wiley.3rd Edition,1998

Course outcomes: After the completion of this course, student will be able to:

CO1: Understand the different sources of bio-medical signals and working of different electrodes, machines used to pick bio-medical signals.

CO1: Acquire knowledge about working of different bio-medical measuring instruments.

CO1: Acquire knowledge about working of different therapeutic instruments.

MICRO ELECTRO MECHANICAL SYSTEMS (MEMS)

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks:	50
Sub. Code	: REIE22		

COURSE OBJECTIVE:

To study the basics of various Microsensors and Micro actuators, Microfabrication techniques and packaging, polymers used for MEMS application.

UNIT I

INTRODUCTION: MEMs and Microsystems, Typical MEMS and Microsystems Products, Evolution of Micro fabrication, Microsystems and Microelectronics, Multidisciplinary nature of Microsystems Design and Manufacture, Application of Microsystems in Automotive Industry, Application of Microsystems in other Industries. **7 hours**

UNIT II

MICROSENSORS AND MICROACTUATORS: Introduction, Micro sensors: Acoustic wave sensors, Biomedical sensors and biosensors, Chemical sensors, Optical sensors, Pressure sensors, Thermal sensors Micro actuation: Actuation using thermal forces, Actuation using Shape-memory alloys, Actuation using Piezoelectric crystals, Actuation using Electrostatic forces, MEMS with Micro actuators, Micro accelerators, Microfluidics. **8 hours**

UNIT III

MICROSENSORS AND MICROACTUATORS-II: Scaling Laws in Miniaturization: Introduction, Scaling in Geometry, Scaling in Rigid-Body Dynamics, Scaling in Electrostatic Forces, Scaling in Fluid Mechanics, Scaling in Heat Transfer.

Piezoresistive Sensors, Piezoresistive Sensor Materials, Stress Analysis of Mechanical Elements, Applications to Inertia, Pressure, Tactile and Flow Sensors. **8 hours**

UNIT IV

MICROFABRICATION AND PACKAGING: Microfabrication: Introduction, Chemical vapor deposition (CVD): APCVD (Atmospheric-pressure CVD)-LPCVD (Low-pressure CVD)-PECVD (Plasma-enhanced CVD), Physical vapor deposition (PVD):Evaporative-Sputtering-Electron Beam PVD, oxidation, Ion implantation, Diffusion, Etching, Photolithography, Surface micromachining: General description, process in general, mechanical problems associated with surface micromachining, Summary of Micro manufacturing, Packaging: General Considerations in Packaging Design, The Three Levels of Microsystems Packaging, Interfaces in Microsystems Packaging, Essential Packaging Technologies. **8 hours**

UNIT V

POLYMER AND MICROFLUIDICS APPLICATIONS: Polymers in MEMS: Polimide – SU-8 – Liquid Crystal Polymer (LCP) – PDMS – PMMA – Parylene – Fluorocarbon, Application to Acceleration, Pressure, Flow and Tactile sensors- Microfluidic Applications: Motivation for microfluidics, Essential Biology concepts, Basic Fluid Mechanic Concepts, Design and Fabrication of Selective component: Channels-Valves, Case study on Selected MEMS Products. **8 hours**

Course outcomes: Upon completion of this course the student will be able to:

CO1: Describe the Fundamentals of Microelectromechanical system (MEMS)

CO2: Describe about the working and use of various microsensors and microactuators for various applications.

CO3: Identify, select and explain the various scaling laws for the miniaturization and Piezoresistive Sensors

CO4: Identify and describe about the rudiments of various Micro fabrication techniques and packaging.

CO5: Identify and select the polymers used in MEMS and Design the selective MEMS Product

AUTOMOTIVE ELECTRONICS

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks:	50
Sub. Code	: REIE23		

Course objectives:

To study mechanical systems, sensors, actuators and electronic control systems in Automotive Industry.

Unit I

Automotive Fundamentals Overview – Four Stroke Cycle, Engine Control, Ignition System, Spark plug, Spark pulse generation, Ignition Timing, Drive Train, Transmission, Brakes, Steering System, Battery, Starting System

Air/Fuel Systems – Fuel Handling, Air Intake System, Air/ Fuel Management **7 Hours**

Unit II

Sensors – Oxygen (O2/EGO) Sensors, Throttle Position Sensor (TPS), Engine Crankshaft Angular Position (CKP) Sensor, Magnetic Reluctance Position Sensor, Engine Speed Sensor, Ignition Timing Sensor, Shielded Field Sensor, Optical Crankshaft Position Sensor, Manifold Absolute Pressure (MAP) Sensor -, Knock Sensor, Airflow rate sensor, Throttle angle sensor , Lidar Sensor

Actuators – Fuel Metering Actuator, Fuel Injector, Ignition Actuator **8 Hours**

Unit III

Electromagnetic compatibility (EMC) and interference suppression: EMC between different systems in the vehicle

Communication – **LIN Bus**: Protocol, Network management

Electronic Engine Control – Engine parameters, variables, Engine Performance terms, Electronic Fuel Control System, Electronic Ignition control, Idle sped control, EGR Control. **8 Hours**

Unit IV

Vehicle Motion Control – Cruise Control, Chassis, Power Brakes, Antilock Brake System (ABS), Electronic Steering Control, Power Steering, Traction Control, Electronically controlled suspension

Integrated Body – Climate Control Systems, Electronic HVAC Systems, Safety Systems – SIR, Interior Safety, Lighting, Entertainment Systems. **8 Hours**

Unit V

Automotive Diagnostics – Timing Light, Engine Analyzer, On-board diagnostics, Off-board diagnostics, Expert Systems

Advancements in Automotive Electronic Systems – Alternative Fuel Engines, Collision Avoidance Radar warning Systems, Low tire pressure warning system, Radio navigation,

Autonomous driving vehicles: Different levels of automation.

Introduction to Adaptive cruise control

Active and Passive safety Elements: Lane departure warning systems, parking assistance systems, Air bags.

8 Hours

REFERENCES:

Sl.No	Author Name	Title and Publisher
1.	William B. Ribbens,	"Understanding Automotive Electronics", 8th Edition, SAMS/Elsevier Publishing, 2017
2.	Robert Bosch Gambh	Automotive Electronics Systems and Components, 5th edition, John Wiley& Sons Ltd., 2007.
3.	Najamuz Zaman	"Automotive Electronics Design Fundamental" first edition, Springer 2015.
4.	Hillier's	"Fundamentals of Motor Vehicle Technology on Chassis and Body Electronics",6th Edition, Nelson Thrones, 2012.

Course outcomes: The student will be able to:

CO1: Identify and explain the working of various mechanical systems in an automotive system

CO2: Identify and select suitable sensors for measurement and actuators for control in an automotive system

CO3: a. Detect interference among different systems and perform control of various sub systems

b. select/suggest suitable communication protocol among subsystems in an automotive system

CO4: Identify and select control of various subsystems for vehicle motion

CO5: a. Select suitable methods to analyze and diagnose faults in automotive subsystems

b. Select methods to improve the performance and identify levels of Autonomous driving system

INDUSTRIAL SAFETY AND COMMUNICATION

Contact Hours/ Week :	4+0+0 (L+T+P)	Credits :	4.0
Total Lecture Hours :	52	CIE Marks :	50
Total Tutorial Hours :	0	SEE Marks :	50
Sub. Code :	7REI01		

Course Objectives: To study

1. Hazardous Area & Material classification as per NEC Standards and different intrinsic safety methods.
2. Process safety and different safety management systems.
3. Serial and parallel communication standards and commonly used industrial protocols.
4. HART communication protocol, its advantages and applications.
5. FFB and Profibus architecture, advantages and its applications.

Unit-I

Safety in Instrumentation & Control Systems: Hazardous Area & Material classification as per NEC/IEC Standards, Explosion Proof Housing, Encapsulation, Sealing, & Immersion, Purging systems.

ATEX: ATEX classification of Hazardous Areas, ATEX Marking Example & Temperature Class.

Intrinsic Safety: Definition, Designing for intrinsic Safety, Isolation or Encapsulation (Series & Shunt Protective elements, & Zener barrier), Grounding and Shielding Techniques. **09 Hours**

Unit-II

Process safety and Safety Management Systems: Introduction to process safety, risk, risk terminologies, consequence and risk, risk measurement, Process Hazard Analysis (PHA), Hazard and operability study (HaZOp), Safety Integrity Level (SIL), Introduction to IEC61511 standard for Functional safety, protection layers, Safety Instrumented System: function, architecture, safety life cycle, Application of safety system. **10 Hours**

Unit-III

Serial and parallel Communication Standards: Synchronous & asynchronous communication, RS 232, 422, 485 interface standards and Troubleshooting. Parallel data communications interface standards-General purpose interface bus (GPIB) or IEEE-488, Centronics interface standard.

CAN protocol: OSI Model, Message Format, Arbitration, High and low speed CAN bus.

Universal serial bus (USB): Topology, Packet format, Host hub, Connectors.

Industrial Protocol: XON/OFF signaling, Binary synchronous protocol (BSC), HDLC/SDLC protocol, CSMA/CD protocols, File transfer protocols-OSI analogy.

Industrial control applications: ASCII based protocol - ANSI-X3.28-2.5-A4, ASi, interbus and LON. **12 Hours**

Unit-IV

HART Communication protocol- Evolution of signal standards, features of HART protocol, Communication modes, HART networks, HART Data format or telegram structure, field device & Control system interface to HART bus, HART cabling considerations, HART commands and types, HART field controller implementation, 3 layers of HART- OSI model, DDL and compatibility, Advantages and applications of HART protocol, DeviceNet and Controlnet. MODBUS plus. **11 Hours**

Unit-V

Field Bus: Basics, Architecture, Message Format, OSI-model of Field Bus, FF/FFB segments, interconnection type- distributed and Chicken foot, FFB types- H1 & HSE, Network design and system configuration, General considerations, advantages of FB & FFB and their comparison.

PROFIBUS: Architecture, OSI-model of PROFIBUS, PROFIBUS types-PA, DP & FMS and their comparison, Designing the PROFIBUS, General considerations, Network design, Advantages & application of PROFIBUS in industries, Industrial Ethernet. Case Study. **10 Hours**

TEXT BOOKS:

1	Steve Mackay, John Park and Edwin Wright.	Practical Data Communication for Instrumentation and Control, 1st Edition, Newnes (Elsevier), 2002.
2	Deon Reynders, Steve Mackay, Edwin Wright	Practical Industrial Data Communications Best Practice Techniques, Newnes (Elsevier), 2005

Reference Books:

1	David Bailey and Edwin Wright.	Practical SCADA for industry, Newnes (Elsevier), 2003
2	Dave Macdonald	Practical Industrial Safety, Risk Assessment and Shutdown Systems, Elsevier, 2004.
3	Mannan S.,	Lee's Loss Prevention in the Process Industries, Vol.II & III, 3 rd Ed., Butterworth Heinemann, 2005.

Course outcomes: The student will be able to:

CO1: i. Identify and describe various hazardous area and materials, Intrinsic and extrinsic safety methods.
ii. Identify and describe various grounding and shielding techniques used in Industries.
CO2: Identify and describe various Process safety risks and Safety Management Systems
CO3: i. Select appropriate physical interface standards associated with data communication for process industries to meet multi drop and point to point communications.
ii. Identify, select and explain appropriate protocols for industrial control applications for various process industries.
CO4: Identify, select and explain the hybrid protocol topologies for remote process data Transmission.
CO5: Identify, select and explain the protocol for remote process data Transmission.

INDUSTRIAL CONTROL SYSTEMS & AUTOMATION

Contact Hours/ Week:	4+0+0 (L+T+P)	Credits :	4.0
Total Lecture Hours :	52	CIE Marks :	50
Total Tutorial Hours :	0	SEE Marks :	50
Sub. Code :	7REI02		

Course objectives:

1. To study the architecture of PLCs, SCADA and DCS
2. To study programming of PLC using ladder diagrams for process control applications.

Unit I

Introduction to programmable logic controllers:

PLC hardware components: Input status file, output status file, I/O Units addressing, analog I/O Units, PLC memory.

Input Units: Discrete AC input Unit, DC input Units, Sourcing and sinking Units, Interfacing of solid state proximity sensors.

Output Units: Discrete output Units, solid state output Unit switching, TTL output Units, relay output Units, Output unit selection considerations, choosing the proper output Unit, isolated output Units, surge suppression, emergency-stop switches.

Introduction to PLC programming: PLC programming language, procedure for creating ladder diagram, ladder logic diagram, structure of the ladder program, graphical symbol for Boolean instructions and function. **12 Hours**

Unit II

Relay-type instructions: Internal relay instructions normally open and normally closed instructions, output latching instructions, one shot instructions, negated output instruction, interfacing start stop pushbutton and motor to PLC, developing ladder diagram with analytical problems.

Timer instructions: Mechanical timing relay, timer instruction, ON delay and OFF delay and retentive timer instructions, cascading timers, developing ladder diagram for analytical problems.

Counter instructions: Counter instructions, PLC counter up and down instructions, cascading counters, combining counters and timers, developing ladder diagram for analytical problems. **10 Hours**

Unit III

Comparison, data handling and sequencer instructions: Comparison instructions, data handling instructions, sequencer instructions, programming sequence output instructions, developing ladder diagram with analytical treatment.

Program flow instructions: Subroutines - jump to subroutine instruction, subroutine file, conditioned return in subroutine, nested subroutines, jump to label instruction – multiple jumps to same label, rung operation within a jump zone, immediate input with mask instruction, refresh instruction, master control reset instruction.

Math instructions: Addition instruction, subtraction instruction, multiplication instruction, division instruction, other word-level math instructions, file arithmetic operations.

Shift register instructions: Shift registers and word shift registers.

10 Hours

Unit IV

SCADA: Introduction and brief history of SCADA - Fundamental principles of modern SCADA systems, Remote terminal units, Specialized SCADA protocols.

DCS: Overview of a distributed control system, DCS software configuration, DCS communication, advantages and features of DCS. Use of DCS in pulp and paper. IOT based communication. **10 Hours**

Unit V

Distributed Control system: Local Control Unit (LCU) architecture - Comparison of different LCU architectures – LCU Process Interfacing Issues: - Block diagram, Overview of different LCU security design approaches, secure control output design, Manual and redundant backup designs. **10 Hours**

TEXT BOOKS:

1	Thomson isbn: 981-240-625-5- Garry Dunning.	Introduction to programmable logic controller 2nd edition,
2	Newnes an imprint of Elsevier	Practical SCADA for industry David bailey and Edwin wright, 2003
3	JR Hackworth, Pearson Education	Programmable Logic Controllers
4	Johnson Curtis, S K Singh	Process Control Instrumentation Technology, PHI, 7th Edition, 2003
5	PHI	Computer Aided Process Control, 2004
6	Chilton Book Company/ Radnor, Bela G. Liptak	Instrument Engineers Handbook, Process Measurement volume1; Process Control volume2, 3rd Edition, Pennsylyania,1969.

REFERENCE BOOKS:

1	PHI	Process Control Instrumentation Technology, 7th Edition 2003.
2	N.A. Anderson, Bocaratan, Radnor	Instrumentation for Process measurement and control, CRC Press. 2001
3	Gary Dunning.	Introduction to Programmable logic Controllers, Delmar, 3rd Edition, 2006
4	TATA McGRAW-HILL Frank D.Petruzella	Programmable Logic Controllers, 3rd Edition,.

Course outcomes: The student will be able to:

CO1: Identify the basic components of PLC & develop ladder logic for given Boolean expression.

CO2: Develop ladder logic to control industrial process using PLC timer, counter instruction.

CO3: Develop ladder logic for process control applications.

CO4: Identify different elements of SCADA & interpret the functionality of various elements of SCADA.

CO5: Identify different elements of DCS & interpret the functionality of various elements of DCS.

PROCESS AUTOMATION LAB

Contact Hours/ Week:	0+0+3 (L+T+P)	Credits :	1.5
Sub. Code :	7REIL1	CIE Marks :	50
		SEE Marks :	50

Course objectives: To study the characteristics of control valves, optimum response of different control loops using various controller modes and applications of Programmable Logic controller (PLC).

List of Experiments:

1. Tuning of PID Controller using Zeigler Nichols method for temperature control.
2. Optimum response of the flow controller using P/PI/PD/PID mode.
3. Optimum response of the level controller using P/PI/PD/PID mode.
4. Optimum response of the pressure controller using P/PI/PD/PID mode.
5. Optimum response of the temperature controller using P/PI/PD/PID mode.
6. Multi process control system.
7. Control valve characteristics.
8. PLC Based i) Traffic Signal control ii) Car Parking
9. PLC Based i) Bottle filling system. ii) Elevator system.
10. PLC Based i) Measure RPM of a Motor ii) Plugging of Induction Motor

Open ended Experiments:

1. Optimum response of Hybrid process control in P/PI/PD/PID mode using DCS with IOT.
2. PLC Based i) Drilling system. ii) Robotic arm.

Additional learning Experiments:

1. TEMPERATURE CONTROL SYSTEM: To control the temperature of a system using PLC
2. SOLAR TRACKING USING PROGRAMMABLE LOGIC CONTROLLER: Implantation of single axis solar tracking system using PLC

Note: Experiment No. 6 is only for Continuous Internal Evaluation (CIE) only.

Course outcomes: Student will be able to:

CO1: Design and apply of proportional, integral, PI, PD and PID controllers.

CO2: Develop ladder diagram for different industrial applications utilizing PLC.

CO3: Design and demonstrate operation of a process automated system.

MAJOR PROJECT

Contact Hours/ Week:	0+0+0 (L+T+P)	Credits :	2.5
Total Lecture Hours :	0	CIE Marks :	50
Total Tutorial Hours :	0	SEE Marks :	50
Sub. Code :	7REIP1		

Course Objective: To apply technical knowledge to design and develop a prototype or a system useful in medical, agricultural & industrial application or in other areas useful to the society and environment.

Course outcomes: The student will be able to:

CO1: Apply the knowledge of engineering specialization to solve practical problems in society.

CO2: Identify, formulate and analyze engineering problems to provide solution for the benefit of the society and environment.

CO3: Perform literature survey and analyze the existing solutions for an engineering problem which helps in lifelong learning

CO4: Identify and apply an appropriate modern tool to provide the solution.

CO5: A) Communicate and present the ideas /design effectively in both oral and written format.

B) Work and contribute as individual in a team to execute a project within a given time frame and budget to fulfill an objective.

INTERNSHIP

Contact Hours/ Week:	0+0+0 (L+T+P)	Credits :	2.0
Total Lecture Hours :	0	CIE Marks :	100
Total Tutorial Hours :	0	SEE Marks :	0
Sub. Code :	REIIT		

Course Objective: To undergo training in industrial environment to gain the skills for solving real life problems.

Course outcomes: The student will be able to:

CO1: Apply the knowledge of engineering specialization to analyze real life problems.

CO2: Function effectively as an individual to Prepare report and presentation document adhering to ethics and standards.

CO3: Communicate and present more effectively within the time frame.

CO4: Apply the tools and skills acquired in carrying out major project.

CO5: Work confidently and efficiently in industrial environment.

TECHNICAL SEMINAR

Contact Hours/ Week:	0+0+0 (L+T+P)	Credits :	2.0
Total Lecture Hours :	0	CIE Marks :	100
Total Tutorial Hours :	0	SEE Marks :	0
Sub. Code :	7REIS		

Course Objective: To improve the skill of performing literature survey and to improve the oral and written communication skill.

Course outcomes: The student will be able to:

CO1: Review research literature, and analyze engineering problems with respect to industry & society.

CO2: Apply the knowledge of engineering specialization to analyze the technical content.

CO3: Function effectively as an individual to Prepare report and presentation document adhering to ethics and standards.

CO4: Communicate and present more effectively within the time frame.

PROFESSIONAL ELECTIVES

THIN FILM INSTRUMENTATION

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE02		

Course objectives: To study the basics of vacuum technology, thin film deposition techniques and characterization techniques of thin films.

Unit-I

Kinetic Theory of gases and Vacuum Terminology: Ideal gas equations, Mean free path, Conduction of gas flow, Molecular flow, molecular velocity or speeds, Gas impingement on surfaces, Gas flow Regimes, adsorption, out gasing & throughput. **7 Hours**

Unit -II

Rotary, Roots and sorption Pumps: Introduction, Rotary Vacuum pumps, Roots Pumps & Sorption pumps

High Vacuum Pumps: Principles, Selection of backing Pumps, Selection of vapour fluid, Diffusion pump fluids, Magnifications to the Diffusion pumps, Turbo molecular pumps, cryopumps, sputter ion pump & integrated vapor pumps. **8 Hours**

Unit -III

Measurement of Vacuum: Introduction, Different types of Vacuum gauges: Hydrostatic gauges, Thermal conductivity gauges, Ionization gauges, capacitance gauge and Spinning rotor gauge.

Leak Detection Techniques: Introduction, Leak rate & units, Rate Rise measurement, Leak Detector: Tesla Coil, Halogen leak Detector, Thermal Conductivity gauge, Helium leak detector. **8 Hours**

Unit -IV

Thin Film Deposition Techniques : Introduction, Different techniques of deposition Physical vapor Deposition (PVD): Introduction, Resistive Evaporation, flash Evaporation, E-beam Evaporation, Sputter deposition-DC diode bias, Triode, Magnetron, RF sputtering, Chemical Deposition Methods: Introduction, overview and history-Electro deposition (Electrolytic, Electro less, Anodization), Chemical Vapor deposition: Plasma CVD, PE CVD and LP CVD. **8Hours**

Unit -V

Thin film Characterization: Overview of thin film characterization, **Imaging** techniques: Scanning electron microscopy (SEM), AFM, **Structural** properties: X-ray diffraction (XRD), **Electrical** properties: Resistance/resistivity – four point probe, Vander Pauw, **Mechanical** properties: Stress-curvature measurements. **8 Hours**

TEXT BOOKS:

1	John A. Venables	Introduction to Surface and Thin Films Processes, Cambridge University Press, 2000.
2	M. Ohring	Materials Science of Thin Films: Deposition and Structure, 2nd Edition, Academic Press, 2002.
3	Leon I. Maissel and Reinhard Glang.	Handbook of Thin Film Technology, McGraw-Hill Publishing Company, New Delhi (1970)

Course outcomes: The Student will be able to:

CO1: Apply the knowledge of thin film coating techniques to prepare thin film of various materials (metals, semiconductor and insulators).

CO2: Understand the physical/electrical and structural properties of semiconductor materials and various defects generated by deposition methods.

CO3: Apply the characterization techniques in analyzing the material properties

CO4: Develop thin film sensors.

OPTICAL INSTRUMENTATION

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE03		

Course objectives: To study the basics of various types of optical fibers, manufacturing methods, properties and signal transmission techniques.

Unit-I

Overview of Optical Fiber Communications: Historical perspective, Motivations for Light wave Communications, Optical Spectral Bands, The basic Communications system, measurement of information and capacity of a communication channel, advantages of optical fiber communications, Ray theory & applications, Total Internal Reflection, Acceptance angle, Numerical Aperture, Skew rays, Applications of Fiber optic Communications, communication super highway architecture.

7 Hours

Unit-II

Optic Fiber Waveguides: Step Index Fiber, Graded–Index Fiber, Modes and fields in Step Index and graded index Fibers, Fiber materials — Glass, Halide, Active glass, Chalgenide glass, Plastic optical fibers, Photonic crystal fibers, Fiber manufacturing techniques, Fiber optic cables.

8 Hours

Unit-III

Signal degradation in optical fibers: Attenuation, Absorption losses, Scattering losses, Bending Losses, Core and Cladding losses, Signal Distortion in Optical Wave guides-Information Capacity determination – Group Delay-Material Dispersion, Wave guide Dispersion, Signal distortion in SM fibers-Polarization Mode dispersion, Inter modal dispersion, Pulse Broadening in GI fibers-Mode Coupling–Design Optimization of SM fibers-RI profile and cut-off wavelength.

8 Hours

Unit-IV

Optical sources: Direct and indirect Band gap materials, Light Emitting Diodes, LED operating characteristics, Laser principles, Laser Diode, Laser Diode operating characteristics, Narrow spectral width and tunable laser diodes, Optical amplifiers.

Couplers and connectors: Connector Principles, Fiber-End preparation, Splices, Connectors, Source Coupling. **8 Hours**

Unit-V

Optical Detectors: PIN and APD diodes: Photo detector noise, SNR, Detector Response time, Avalanche Multiplication Noise, Structures for InGaAs APDs, Temperature Effect on Avalanche Gain, Comparison of Photo detectors, Fundamental Receiver Operation, preamplifiers, Error Sources Receiver Configuration Probability of Error Quantum limit.

8 Hours

TEXT BOOKS:

1	Gerd Keiser	Optical Fiber Communication, McGraw –Hill International, Singapore, 3rded., 2000
2	Joseph C. Palais, 4th Edition,	Fiber Optic Communications, Pearson Education, 5th Edition, 2004.

Course outcomes: The students will be able to:

CO1: Analyze optical communication system.

CO2: Understand the various properties and losses of optical fibers.

CO3: Understand and select optical detectors and sources for various applications.

SMART SENSORS

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	:39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE04		

Course objectives: To study various smart sensing techniques, packaging and testing methods of smart sensors.

Unit I

BASICS OF SMART SENSORS & MICROMACHINING: Introduction, Mechanical-Electronic transitions in sensing, nature of sensors, overview of smart sensing and control systems, integration of micromachining and microelectronics, introduction to micromachining, bulk micromachining, wafer bonding, surface micromachining, LIGA process, laser micromaching, miocromilling, Dry etching process:- plasma and reactive ion etching. **8 Hours**

Unit II

MCUS AND DSPS TO INCREASE SENSOR IQ: Introduction, amplification and signal conditioning, separate versus integrated signal conditioning, digital conversion, MCU control, MCUs for sensor interface, DSP control, Techniques and Systems Considerations, sensor integration. **8 Hours**

Unit III

COMMUNICATIONS FOR SMART SENSORS: Introduction: Definitions and Background, Sources (Organizations) and Standards, Automotive Protocols, Industrial Networks, Office/Building Automation, Home Automation, Protocols in Silicon, Other Aspects of Network Communications. **7 Hours**

Unit IV

SENSOR COMMUNICATION & MEMS: Introduction, Wireless zone sensing, RF sensing: Surface Acoustical Wave Devices, Radar, Global Positioning System, Remote Emissions Sensing, Remote Keyless Entry, intelligent transportation system, RF-ID, Micromachined Actuators:- Microvalves, Micropumps, Micronozzles, Microoptics, microgrippers, microprobes, micromirrors, FEDs. **8 Hours**

Unit V

PACKAGING, TESTING AND RELIABILITY OF SMART SENSORS: Introduction, Semiconductor packaging applied to sensors, hybrid packaging, packaging for monolithic sensors, reliability implications, testing,

Unit Standards for Smart Sensors: Introduction, setting the standards for smart sensors and systems, IEEE 1451.1, IEEE 1451.2, IEEE P1451.3, IEEE 1451.4, extending the systems to network**8 Hours**

TEXT BOOK:

1	Randy Frank	Understanding Smart Sensors, 2nd Edition. Artech House Publications, 2000.

REFERENCE BOOK:

1	Paul W. Chapman	Smart Sensors**,** ISA Press.

Course outcomes: Student will be able to:

CO1: Explain the process of smart sensor development.

CO2: Understand the method of improvement of sensor IQ using microcontroller and DSP.

CO3: Analyse different communication protocols for smart sensors. Understand the operation of micro machined devices.

AIR CRAFT INSTRUMENTATION

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE05		

Course objectives: To study different measuring instruments and indicators used in aircrafts.

Unit I

Aircraft instruments: Introduction, instruments grouping, instruments display, quantitative and qualitative displays, director displays, cockpit layout, standard atmosphere, basic air data system, pitot static probe, heating circuit arrangements. **8 Hours**

Unit II

Air data instruments: Air speed indicator, square law characteristics, match/air speed indicator, altimeters, effects of atmospheric temperatures, vertical air speed indicators, air temperature indicator, air data alternating system, match warning system, altitude alert system. **8 Hours**

Unit III

Gyroscopic flight instruments: The gyroscope and its properties, determining direction of precession, limitations of gyroscopes, operating gyroscopic instruments, gyro horizons, erection systems for gyro horizons,

errors due to acceleration and turning, direction indicator, turn and bank indicator. **8 Hours**

Unit IV

Fuel quantity indicating systems: capacitance type system, indicating system, affects of fuel temperature changes, measurement of fuel quantity by weight, construction of probes, and location of probes. **7 Hours**

Unit V

Engine power and control instruments: RPM measurement, generator and indicating system, tacho probe and indicator system, torque monitoring, exhaust gas temperature, engine pressure ratio measurement, fuel flow measurement, integrated flow meter system. **8 Hours**

TEXT BOOK:

1	EHJ Pallet Longman.	Aircraft instruments and integrated systems, Scientific & Technical, 1992

REFERENCE BOOKS:

1	WH Coulthard.	Air craft Instrument Design, Pitman & sons, 1981.
2	C A Williams.	Aircraft Instruments, Golgotia Publications, New Delhi.

Course outcomes: The student will be able to:

CO1: Understand the necessity of various parameters to be analysed in aircraft.

CO1: Understand the principle of operation of air speed indicator.

CO1: Explain the operation of gyroscope and its application in aircraft.

CO1: Understand the technique of measuring fuel quantity and its indication

---

INDUSTRIAL INSTRUMENTATION

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE06		

Course objectives: To study the principle of operation, construction and working of different automatic process control systems and nuclear reactor instrumentation.

Unit-I

Definition, Classification of Variables & Measurement: Classification of variables, Classification by measurement signals, measurement signals for variables, Types of measurement, Definition & Sources of Error, Classification of errors, Evaluation of Data.

7 Hours

Unit-II

Measuring & Transmission methods: True Significance of the Measurement, Significance of the measurement on the Process, Factors to be accomplished as a result of Measurement, Factors involved in obtaining this measurement, Measuring methods, Transmission (Telemetering) methods, Hydraulic & Magnetic types, Pneumatic types, Electric & Electronic types. **8 Hours**

Unit-III

Steam power plant instrumentation: Instrument selection, primary and secondary plant measurement, Automatic Control systems: Feed water Control of all types, Steam –temperature control , Auxiliary System Controls, Control room trends, Data logging and computing equipment. **8 Hours**

Unit-IV

Food industry instrumentation: Instrumentation in Brewing, Canning industry, Baking industry, Dairy industries. **8 Hours**

Unit-V

Paper and Pulp Instrumentation: Different types of pulping, Pulp bleaching, Pulp blending, wet end and drier instrumentation.

Nuclear Reactor Instrumentation: Nuclear reactor dynamics, reactor instrumentation, reliability aspects of protective systems. **8 Hours**

TEXT BOOK:

1	Considine and Ross	Hand book of applied instrumentation, McGraw-Hill.

REFERENCE BOOKS:

1	Donald P. Eckman	Industrial Instrumentation, Wiley.
2	K.Krishna Murthy, S.Vijayachitra	Industrial Instruments, New Age International Publisher.
3	J.S.Smith	Food processing principles & Applications, University press (US)2004.
4	Nancy jean Sell	Process control Fundamentals for the Pulpe-Paper Industry, Tappi (June 1997)

Course outcomes: The student will be able to:

CO1: Understand the various process signals to be measured.

CO1: Explain the various techniques of transmission of signals.

CO1: Identify the various parameters to be considered for proper operation of power plant, food industry and nuclear reactors.

DIGITAL VLSI DESIGN

Contact Hours/ Week :	3 +0 (L+T)	Credits :	3.0
Total Lecture Hours :	39	CIE Marks :	50
Total Tutorial Hours :	0	SEE Marks :	50
Sub. Code :	REIE07		

Course objectives: The course will enable students to:
1. Design Digital ICs and analysis at different levels of abstraction.
2. Design combinational and sequential circuits using various techniques.
3. Design semiconductor memories.

Unit-I

Introduction: Introduction, Abstraction levels in Digital IC Design, VLSI Design Flow: FPGA and ASIC Design Flow, VLSI Design Styles: Full Custom Design, Standard cell based design and FPGA based design, Fabrication process flow, CMOS n-well process, Layout Design rules.
MOS Transistor: Metal Oxide Semiconductor Structure, MOS System under external bias, Structure and Operation of MOSFET. **8 Hours**

Unit-II

MOS Transistor: MOSFET Current – Voltage Characteristics, MOSFET Capacitances, Scaling the MOSFET.
MOS Inverters: Introduction, Resistive load inverter, Inverter with n-type MOSFET Load, Static CMOS Inverter an Intuitive perspective, Static Characteristics of CMOS inverter: Switching threshold, Noise Margin, Device variations, Dynamic Characteristics of CMOS inverter: Propagation delay from a design perspective, BiCMOS Inverters, Latch-up in CMOS circuits. **7 Hours**

Unit-III

Designing Combinational Logic gates in CMOS: Introduction, Static CMOS Design style: Complementary CMOS, Ratioed logic, Pass Transistor Logic, Dynamic CMOS Design Style: Dynamic Logic Basic Principles, Speed and power dissipation of Dynamic Logic, Issues in Dynamic Design, Cascading Dynamic Gates.
Designing Sequential Logic Circuits: Introduction: Timing metrics for sequential circuits, Classification of Memory elements, Static Latches and Registers: The Bistability principle, SR Flip-Flops, Multiplexer based latches, Master slave edge triggered registers. **8 Hours**

Unit-IV

Designing Sequential Logic Circuits: Dynamic Latches and Registers: Dynamic Transmission gate edge triggered registers, Clock skew and its effect on registers, C^2MOS – A Clock skew insensitive approach, Pipelining: An approach to optimize sequential circuits.
Designing Arithmetic Building Blocks: Adder: Binary Adder, *Full Adder Circuit Design Consideration:* Static Full Adder Circuit, Mirror Adder,

Transmission gate based full adder, Manchester Carry chain.

8 Hours

Unit-V

Semiconductor Memories: Introduction, Memory Classification, Memory Architecture and Building Blocks, Dynamic Random Access Memory (DRAM), Static Random Access Memory (SRAM), Read only Memories, Non Volatile Read write Memories, Memory Peripheral Circuitry: Address Decoders, Sense Amplifiers. **8 Hours**

TEXT BOOK:

1	Jan M Rabaey, Anantha Chandrakasan, Borivoje Nikolic	Digital Integrated Circuit A Design Perspective, 2nd Edition PHI.

REFERENCE BOOK:

1	Sung-Mo Kang and Yusuf Leblebici	CMOS Digital Integrated Circuits Analysis and Design, 3rd Edition, TMH publications
2	Sedra and Smith	Microelectronics, 5th Edition, Oxford University Press.
3	Douglas A Pucknell and Kamran Eshraghian.	Basic VLSI Design

Course outcomes: After the completion of this course, student will be able to:

CO1: Explain fabrication process of MOS Devices.
CO2: Analyze terminal characteristics of Metal Oxide Semiconductor Field Effect Transistors (MOSFETs).
CO3: Design and analyze digital circuits and systems at different levels of abstraction.
CO4: Design layouts for digital circuits.
CO5: Use EDA tools to design and analyze digital circuits at different levels of abstraction.
CO6: Design ROM, RAM and read write memory devices at transistor level.

MEDICAL IMAGING INSTRUMENTS

Contact Hours/ Week	:	3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	:	39	CIE Marks :	50
Total Tutorial Hours	:	0	SEE Marks :	50
Sub. Code	:	REIE08		

Course objectives: To study the principle and operation of various biomedical imaging instruments.

Unit-I

Introduction: Imaging Modalities-X Ray, Ultrasound and MRI.

X-RAYS: Interaction between X-Rays and matter, Intensity of an X-Ray, Attenuation, X-Ray Generators, Beam Restrictors and Grids, Intensifying screens, fluorescent screens and Image intensifiers. X-Ray detectors. **7 Hours**

Unit-II

X-RAY DIGNOSTIC METHODS: Conventional X-Ray radiography, Digital radiography, Dynamic spatial re-constructor, X-Ray image characteristics, biological effects of ionizing radiation. **8 Hours**

Unit-III

X-RAY COMPUTED TOMOGRAPHY: Basic Principle, components.

THERMAL IMAGING: Medical thermography, Infrared detectors, thermographic equipment. **8 Hours**

Unit-IV

ULTRASOUND IMAGING: Attenuation, Absorption and Scattering Generation and Detection of Ultrasound Ultrasonic transducers, Arrays, Pulse Echo systems: A mode, B mode, M mode scanners, Tissue characterization, Color Doppler flow imaging. **8 Hours**

Unit-V

RADIONUCLIDE IMAGING: Interaction of nuclear particles and matter, nuclear sources, Radionuclide generators, nuclear radiation detectors, rectilinear scanner, scintillation camera, SPECT, PET scanning technique. **8 Hours**

TEXT BOOKS:

1	Kirk shung	Principles of Medical Imaging, Academic Press.
2	Khandpur	Handbook of Biomedical Instrumentation, TMH, 2nd Edition.

Course outcomes: The student will be able to:

CO1: Understand the various methods acquiring medical images.

CO2: Understand the principle, operation and various components of X-ray, thermal, ultrasound and radionuclide imaging equipments.

BIO MEDICAL DIGITAL SIGNAL PROCESSING

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	:39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE09		

Course objectives: To study the origin, characteristics and process techniques of different bio-medical signals.

Unit-I

INTRODUCTION TO BIOMEDICAL SIGNALS : The nature of biomedical signals, the action potential, origin of ECG, EEG, EMG, EOG and their characteristics, objectives of biomedical signal analysis, Difficulties in biomedical signal analysis, computer aided diagnosis, Introduction to Real Time Signal Processing, ECG and EEG Signal Processing Techniques. Computer aided diagnosis. **7 Hours**

Unit-II

LINEAR PREDICTION THEORY: The Autoregressive (AR) method, Recursive estimation of AR parameters, Spectral error measure, Adaptive segmentation, Transient detection and elimination. **8 Hours**

Unit-III

ECG SIGNAL PROCESSING: ECG data acquisition, ECG lead system, ECG parameters and their estimation: ECG QRS detection techniques, estimation of RR interval: Finite first difference method, the use of multi-scale analysis for parameter estimation of ECG waveforms, Arrhythmia analysis monitoring, long term continuous ECG recording.

8 Hours

Unit-IV

ECG DATA REDUCTION TECHNIQUES: Direct data compression techniques, Direct ECG data compression techniques: Turing point algorithm, AZTEC algorithm, CORTES and FAN algorithm, other data compression techniques: data compression by DPCM, Data compression method comparison. **8 Hours**

Unit-V

ADAPTIVE INTERFERENCE/NOISE CANCELLATION : A review of Wiener filtering problem, Principle of an Adaptive filter, The steepest descent algorithm, the Widrow-Hoff least mean square adaptive algorithm, Adaptive noise canceller, Cancellation of 50Hz interference in ECG, Canceling Donor-heart interference in Heart-transplant electrocardiography, Cancellation of ECG signal from the electrical activity of the chest muscles,

canceling of maternal ECG in fetal ECG, Cancellation of High frequency noise in Electro-surgery**.** **8 Hours**

TEXT BOOKS:

1	D C Reddy	Biomedical Signal Processing Principles and Techniques, Tata McGraw-Hill publications.
2	Rangaraj M. Rangayyan	Biomedical Signal Analysis a case study approaches, John Wiley publications.

REFERENCE BOOK:

1	Willis J.Tompkins	Biomedical Digital Signal Processing, The Prentice Hall of India publications

Course outcomes: The student will be able to

CO1: Understand the origin of bio-medical signals and their characteristics.

CO2: Understand the processing techniques required to analyze the bio medical signals

CO3: Understand data reduction techniques for ECG signal.

DIGITAL IMAGE PROCESSING

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE10		

Course objectives: To study the basic theory and algorithms used in digital image processing.

Unit-I

FUNDAMENTALS: Introduction, Fundamental steps in digital image processing (DIP), components of DIP system, A simple image formation model, Image sampling and quantization, Basic relationship between pixels, Color image processing: color fundamentals, Color models: RGB, CMY and CMYK, HIS. **7 Hours**

Unit-II

IMAGE ENHANCEMENT IN SPATIAL DOMAIN: Background, Point processing – Image negatives, Log transformations, Power law transformations, Contrast stretching, Gray level slicing, Bit plane slicing, Histogram processing – Histogram equalization, Histogram matching (specification), Local enhancement, Arithmetic/Logic operations – Image subtraction, Image averaging, SPATIAL FILTERING : Smoothing spatial filters – Smoothing linear filters, order statistics filters, Sharpening spatial filters – Foundation, Laplacian and gradient**.** **8 Hours**

Unit-III

IMAGE ENHANCEMENT IN FREQUENCY DOMAIN: Introduction to the Fourier Transform and the frequency domain , Basic filtering in the frequency domain, Basic filters and their properties, Smoothing frequency domain filters: Ideal low-pass filters, Butterworth low-pass filters, Gaussian lowpass filters, Sharpening frequency domain filters: Ideal high-pass filters, Butterworth high-pass filters, Gaussian high-pass filters, Homomorphic filtering. **8 Hours**

Unit-IV

IMAGE COMPRESSION: Fundamentals: Coding redundancy, interpixel redundancy, psychovisual redundancy, Image Compression models: Source encoder and decoder, Channel encoder and decoder, Error Free compression: Variable length coding, LZW coding, Bit plane coding, Lossless predictive coding, Lossy Compression: Lossy predictive coding, transform coding fundamentals, image compression standards:basics,JPEG. **8 Hours**

Unit-V

IMAGE SEGMENTATION: Detection of discontinuities**:** point detection, Line detection, edge detection, Edge Linking and boundary Detection: Local Processing, Global processing via the Hough transform, Introduction, Global processing via Graph theoretic Techniques, Thresholding: Foundation, Role of illumination, Basic Global thresholding, Basic Adaptive thresholding, Optimal global and adaptive thresholding, Region-based segmentation: Basic Formulation, Region growing, Region splitting & merging. **8 Hours**

TEXT BOOK:

1	Rafael C. Gonzalez & Richard E. Woods	Digital Image Processing, 3rd Edition. Prentice idol of India.

REFERENCE BOOK:

1	Anil K. Jain	Fundamentals of Digital Image Processing, 2nd Edition, Prentice Hall of India.

Course outcomes: Student will be able to:

CO1: Understand image formation, representation, sampling and quantization.

CO2: Understand image processing techniques in spatial domain and frequency domain

CO3: Understand various compression and segmentation techniques used for images.

ANALOG AND DIGITAL COMMUNICATION

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	:39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE11		

Course objectives: To study modulation and demodulation techniques used in analog and digital communication systems.

Unit-I

Introduction: Need & Importance of modulation.

Amplitude Modulation: Principle, AM generation, modulation index, bandwidth, power in sidebands, frequency translation, Problems.

7 Hours

Unit-II

Amplitude Modulation Techniques: AM/DSB, AM-SSB/SC generation, bandwidth & power, Demodulation of AM waves, coherent & non coherent detection, effect of noise, threshold effect, FDM.

8 Hours

Unit-III

Angle Modulation: Principle of FM & PM, NBFM, WBFM, bandwidth, modulation index, generation, demodulation -frequency discriminator, phase locked loop (1st order), threshold effect in FM, pre-emphasis & de-emphasis, comparison of AM and FM. **9 Hours**

Unit-IV

Pulse Modulation: Sampling theorem for low pass and band pass signal, statement and proof, practical aspects of sampling, reconstruction of signal from sampled signal, PAM, PDM and PPM generation and detection, PCM, DPCM, delta modulation, adaptive delta modulation and TDM**.**

8 Hours

Unit-V

Digital Communication: Methods of binary data transmission, RZ, NRZ (L) NRZ (M) NRZ(S) BiO(L) BiO(S), PSK, QPSK, DPSK, FSK, probability error for PSK & QPSK, Coding: Huffman coding, error control coding, block code.

7 Hours

TEXT BOOKS

1	Simon Haykin	Analog and Digital Communication, John Wiley
2	Taub and Schilling	Principles of Communication systems, TMH

REFERENCE BOOKS :

1	George kennedy	Electronic Communication System
2	Sam shanmugam	Communication Systems

Course outcomes: The student will be able to:

CO1: Explain the need for modulation.

CO2: Distinguish between various analog modulation and demodulation techniques.

CO3: Explain the various digital modulation techniques and distinguish between analog and digital communication systems.

CO4: compute communication system parameters, such as bandwidth, power, signal to quantization noise ratio and data rate

CO5: Explain the various line codes used in digital communication and error detection in digital transmission systems.

COMPUTER NETWORKS

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE12		

Course objectives: To study fundamentals of computer networks, components of network and data communication between computers.

Unit I

INTRODUCTION: Network Hardware, Network Software, OSI Reference Model, TCP/IP reference model.

PHYSICAL LAYER:

Guided Transmission Media, Wireless Transmission, the Public Switched Telephone Network, the Mobile Telephone System. **8 Hours**

Unit II

DATA LINK LAYER: Data Link Layer Design Issues, Error Detection and Correction, Elementary Data Link Protocols, Sliding Window Protocols, Protocol Verification, HDLC, The data link layer in the internet, point to point protocol. **8 Hours**

Unit III

NETWORK LAYER: Network Layer Design Issues, Routing Algorithms: optimality principle, shortest path routing, Distance vector routing, flooding, link state routing. **8 Hours**

Unit IV

TRANSPORT LAYER: The transport service, Elements of transport protocols, Simple transport protocol, the internet transport protocols: UDP, TCP. **8 Hours**

Unit V

APPLICATION LAYER: Domain Name System (DNS), electronic mail, worldwide web. **7 Hours**

TEXT BOOK:

1	Andrews S. Tanenbaum	Computer Networks, 4th Edition, Pearson Education.

REFERENCE BOOKS:

1	HONDEL AND FLUBER	ATM Protocol concepts, Addison Wesley.
2	W STALLINGS	Data and computer networks, 5th Edition, Prentice Hall of India 1998.

Course outcomes: The student will be able to:

CO1: Understand different types of network.

CO1: Explain hardware and software components required to build the network.

CO1: Explain different layers of network, issues related to design of network.

CO1: Explain function and role of physical, data link, network, transport and application layer in a network.

REMOTE SENSING AND TELEMETRY

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE13		

Course objectives: To study different techniques of remote sensing and data transmission.

Unit I

Introduction: Introduction to Remote Sensing. A Remote Sensing System, Remote Sensing Terminology and Units, Sources And Types of Electromagnetic Energy Used In Remote Sensing, Electromagnetic spectrum, image characteristics Earth Surface Interaction With Electromagnetic Radiation, Atmospheric Interactions With Electromagnetic Radiation. **7 Hours**

Unit II

Aerial Photography & Sensor : Introduction, Film technology, Characteristics of aerial photography, low sun angle photographs, photo mosaics, high altitude aerial photographs, Cameras Film Taking Measurements From Aerial Photographs, Interpreting Aerial Photographs,

Multispectral Scanner, Thermal Infrared Line Scanner, Sideways Look Airborne Radar (SLAR). **8 Hours**

Unit III

Satellite Sensor Imagery: Introduction, Earth Resources Satellites, Manned Earth Resources Satellites, Unmanned Earth Resources Satellites, Meteorological Satellites, Military And User Satellites. **8 Hours**

Unit IV

Image Processing: Introduction, Continuous Image Processing, Discrete Image Processing, Geographic Information System. **8 Hours**

Unit V

Introduction to Telemetry Systems: Introduction, Fundamentals of RF Telemetry, Basic Telemetry, System Components, Methods of Coding Modulation, Pulse Code Modulation, PCM Multiplexing And Conversion, PCM Data Transmission, PCM PSD Telemetry System, Theoretical Comparison of Telemetry Systems, Sub modulation Methods, RF Modulation Methods, Power Efficiency of Combined Systems, Practical Constraint of Telemetry Methods Optimized Power Efficiency.

8 Hours

TEXT BOOKS:

1	Paul J Curran, Longman	Principles of remote sensing
2	Floyed F Sabns	Remote sensing principles and interpretation

Course outcomes: The student will be able to:

CO1: Understand the concepts of remote sensing.
CO1: Explain sources and types of electromagnetic energy used in remote sensing.
CO1: Understand the concepts of aerial photography.
CO1: Explain the role of satellites in assessing earth resources.
CO1: Describe the techniques of image processing. Differentiate the various techniques of remote transmission and processing of signal.

ELECTRICAL ENGINEERING MATERIALS

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE14		

Course objectives: To study the structure, properties and applications of various materials used in electrical and electronic system.

Unit-I

Introductory Concepts: Introduction to material science and engineering, Material classification, Overview of electrical properties of materials, Atomic structure and bonding in solids, Energy bands in solids and classification of materials on band structure, Structures of crystalline and non-crystalline solids. **8 Hours**

Unit-II

Dielectric Properties of Insulators: Static fields: Introduction, Polarization and dielectric constant, Dielectric constant of polyatomic molecules, Internal field and static dielectric constant of solids. Ferroelectric materials, Spontaneous polarization, Piezoelectricity, Alternating fields: Frequency dependence of electronic and ionic polarizabilities, Complex dielectric constant of non-dipolar solids, Overview of dipolar relaxation and dielectric loss. **8 Hours**

Unit-III

Magnetic Properties of Materials: Summary of concepts, Magnetization from a macroscopic point of view. Origin of permanent magnetic dipoles in matters, Classification of magnetic materials: Diamagnetism, Paramagnetic spin systems, Ferromagnetism, Antiferromagnetic materials, Ferromagnetic materials, Magnetostrictive materials. **8 Hours**

Unit-IV

Conduction Mechanisms: Metals: Overview of electron theory of metals, Electron scattering and receptivity of metals, Heat developed in current carrying conductors, Superconductivity.

Semiconductors: Review of classification, Carrier densities in n-type and p-type semiconductors, Hall Effect, Drift and diffusion currents, p-n junction and n-p-n junction transistors, Overview of physics of power-semiconductor devices. **8 Hours**

Unit-V

Applications: Properties and application of electrical conducting, semiconducting, insulating and magnetic materials, soft and hard magnetic materials, permanent magnetic materials, Thermal conductivity

of metals, optical properties of solids, Materials for semiconductor industries, Advancements. **7 Hours**

TEXT BOOKS

1	A.J. Dekker	Electrical engineering materials, PHI
2	C.S.Indulkar, S.Triruvagdan	An Introduction to Electrical Engg. Materials, S.Chand & Co

REFERENCE BOOKS :

1	Ian P. Hones	Material Science for Electrical and Electronic Engineering, Oxford University Press.
2	Narula	Material Science, Tata McGraw Hill

Course outcomes: The student will be able to:

CO1: Understand the classification and electrical properties of materials.

CO2: Explain the dielectric properties of insulator and magnetic properties of materials.

CO3: Distinguish between insulators, semiconductors and conductors

CO4: Understand the applications of materials in the various applications.

INDUSTRIAL DRIVES

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	:39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE15		

Course objectives: To study the classification, operation and characteristics of AC and DC motor drives.

Unit-I

Electric Drives: Concept and Classification, Dynamics of Electric Drives, Types of Loads, Torque Characteristics of Load, Characteristics of Motor-Load Combination, Dynamics of Motor-Load Combination, Steady-state and Transient stability of Electric Drive. Characteristics of Electric Drives: Modified Speed-Torque Characteristics of DC Shunt motors, DC Series motor and Induction Motors. **8 Hours**

Unit-II

Starting of Electric Motors: Methods of Starting Electric Motors, Acceleration time, Energy relation during starting, DC Shunt & Series motors and Induction motors, Methods to reduce the energy loss during starting. Electric Braking: Types of Braking, Braking of DC and AC motors, Energy relation and Dynamics of Braking. Rating of Motors: Heating

effects, Load conditions and Classes of duty, Determination of power rating, Effect of load inertia and load equalization. **8 Hours**

Unit-III

D.C motor control: Single-phase controlled rectifier and Chopper circuit arrangement for continuous armature current operation., Circulating current and non-circulating current modes of operation, Principles of closed loop control for DC drives. **8 Hours**

Unit-IV

Induction motor control: Speed control of 3-phase Induction motor with AC voltage regulators, Voltage source inverters and Cyclo-converters, Static rotor resistance control, Slip power recovery schemes: Static Krammer drive and Scherbius drive. **8 Hours**

Unit-V

Synchronous motor control: Self controlled and Separately controlled, synchronous motors, Brushless D.C motors, Switched reluctance motors. **7 Hours**

REFERENCE BOOKS :

1	S.K.Pillai	A First Course in Electrical Drives, New Age International, 2000
2	G.K.Dubey	Fundamentals of Electric Drives, Narosa Public House, Delhi, 2001
3	M.D.Singh and K.B.Khanchandani	Power Electronics, Tata McGraw Hill publishing Company Ltd., 2000
4	Bimal.K.Bose	Modern Power Electronics and AC Drives, Pearson Education Asia, 2002

Course outcomes: The student will be able to:

CO1: Understand fundamental elements of drive systems, analyse the steady-state characteristics of a few commonly used types of drives used in the industry.

CO2: Understand the classification of AC and DC motors.

CO3: Apply the theories of electrical machines, power electronic converters and decide its operational parameters for DC & AC motor drive system.

CO4: Design control circuitry to control the speed of motors.

EMBEDDED SYSTEMS and RTOS

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	:39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE16		

Course objectives: To study the concepts of embedded real time applications using microcontrollers.

Unit I

Introduction: An Embedded System, Characteristics of Embedded Systems, Software embedded into a system, Generalised Architecture of Embedded Systems, Architecture of Microprocessors, Microcontroller and Digital Signal Processors, Structural units of processors in embedded systems, Introduction to a simple (MU0) processor design – Data path, Instruction set.

Real Time Systems: Definition, Basic model of a Real Time systems, Types of Real Time systems.

ARM Processor: The ARM Architecture, The ARM programmer's model.

ARM Assembly Level Programming: The ARM Instruction set(32-bit) **-** Data transfer and Data processing Instructions **8 Hours**

Unit II

ARM Assembly Level Programming: Control transfer Instructions, Thumb Instruction set (16-bit), ARM Organization and Implementation –Pipelined Architecture of ARM Processor. **8 Hours**

Unit III

Memory Organization: Introduction, Classification of Memory on the basis of location and the way of data storage, Memory Access and Memory specifications, Memory Hierarchy, Cache design, Memory management unit (MMU), Memory organization of ARM processor. **8 Hours**

Unit IV

Input/Output Devices in Embedded Systems: Timers and Counters, Pulse Width Modulator (PWM), Watchdog timer.

Communication in Embedded Systems: Parallel and serial communication, RS232 for Asynchronous Serial communication, Network communication – I^2C bus, CAN bus, USB.

Interrupt Handling: Polling and Interrupts, Types of Interrupts, Context and the period of context switching, Interrupt latency and Deadline.

Computing Platforms and Design Analysis: Development and Debugging – Program design – Model of Programs – Assembly and Linking, Basic Compilation Techniques. **8 Hours**

Unit V

Computing Platforms and Design Analysis: Analysis and Optimization of Execution time, power, energy, program size – Program validation and testing.

Processes and Real Time Operating Systems: Introduction, Multitasks and Multiple Processes, Interrupt routines in RTOS, Shared data problem by multiple tasks and interrupt Service routines, Solving shared data problem of interrupt service routine**:** critical region, volatile keyword.
Inter process Communication: Semaphores - Deadlock, Priority inversion, Message queues, Mail boxes.
Task Scheduling: Process state and scheduling, scheduling algorithms: First In First Out, Round robin algorithm, Round robin with priority, Shortest job first, Preemptive multitasking and Non-Preemptive multitasking algorithm Simple priority based, Rate monotonic & Earlier Deadline first scheduling. **8 Hours**

TEXT BOOKS:

1	Steve Furber	ARM System On Chip Architecture, 2nd Edition Pearson Education 2005.
2	David E. Simon	An Embedded Software primer, Pearson Education 1999.
3	Frank Vahid,Tony Givargis	Embedded systems design: A unified hardware/software introduction, John Wiley and sons, Inc,2002

REFERENCE BOOKS:

1	Rajkamal	Embedded systems: Architecture programming and design, TMH 2008.
2	Jonathan W Valvano	Embedded Microcomputer systems: Real Time Interfacing, Thomson-Engineering Publishers.
3	Tim Wilmshurst, Palgrave mcmillan	An Introduction to the design of small scale Embedded systems
4	KVKK Prasad	Embedded Real-Time Systems: Concepts, Design and Programming, Dreamtech press, 2005.
5	Wayn Wolf	Computers as Components : Principle of Embedded computer systems design, 2nd Edition, Elsevier 2009

Course outcomes: Student will be able to:
CO1: Understand embedded system architecture.
CO2: Develop software for real time applications using RTOS.
CO3: Design and develop embedded system applications using microcontroller.

COMPUTER ARCHITECTURE

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE17		

Course objectives: To study the concepts of pipelining, instruction level parallelism and memory hierarchy design of computers

Unit-I

Introduction: Introduction to Computer Architecture, Quantitative principles of computer design, basics of How to Flow chart for hardware

Pipelining Basic and Intermediate Concepts: Basics of Pipelining, Basics of RISC instruction set and its Implementation. **8 Hours**

Unit-II

Pipelining Basic and Intermediate Concepts: Classic 5-stage pipelining for a RISC processor, Basic performance issues in pipelining, Pipelining Hazards, A simple Implementation of MIPS pipeline. **8 Hours**

Unit-III

Pipelining: Pipelining implementation difficulties, Extending MIPS pipeline to Handle Multi-cycle Operations.

Instruction level Parallelism: ILP Concepts, Basic Compiler Techniques for exposing ILP, Reducing Branch Costs with prediction, Overcoming Data Hazards with Dynamic Scheduling, Hardware threading.

8 Hours

Unit-IV

Instruction level Parallelism: Hardware based speculation, Static Branch prediction, Static Multiple issue: The VLIW approach, limitations of ILP.

8 Hours

Unit-V

Memory Hierarchy Design: Introduction, Review of the ABCs of Cache, Cache Performance, Reducing Cache miss Penalty and miss rate, Reducing Hit rate, Memory Technology and Optimization, Virtual Memory

7 Hours

TEXT BOOK:

1	John L. Hennessy and David A. Patterson	Computer Architecture A Quantitative Approach, 3rd and 4th Edition, The Morgan Kaufmann Series.

REFERENCE BOOKS:

1	John L. Hennessy and David A. Patterson.	Computer Organization and Design 5th Edition. The Morgan Kaufmann Series.

Course outcomes: Student will be able to:

CO1: Understand the architecture and hardware flow chart of processors.
CO1: Understand the instruction set of RISC processors.
CO1: Analyse the performance issues in pipelining.
CO1: Understand and analyse the concepts of instruction level parallelism.
CO1: Understand the performance of different types of memory.

INTERNET OF THINGS

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE18		

Course Objectives: To study the fundamentals and applications of internet of things and to know the methodologies and tools involved in design of IoT.

Unit-I

Introduction & Concepts: Definition and Characteristics of IoT, Things in IoT, IoT Protocols, IoT Functional Blocks, IoT Communication Models, IoT Communication APIs, IoT Enabling Technologies, IoT Levels and Deployment Templates.

IOT and M2M, SDN and NFV for IoT, IoT System Management with NETCONFIG-YANG **8 Hours**

Unit-II

Developing Internet of Things: IoT Platform Design Methodology, Specifications: Requirements, Process, Domain, Information, Services, Level, Functional, Operational,Integration, Application Development

Python Language: Data Types & Data Structures, Control Flow, Functions, Modules, Packages, File Handling, Date & Time Operations, Classes, Python Packages of Interest for IoT **7 Hours**

Unit –III

IoT Physical Devices and End Points: Basic Building Blocks of an IoT Device, Raspberry Pi, Linux on Raspberry Pi, Raspberry Pi Interfaces: Serial, SPI, I2C.
Programming Raspberry Pi with Python: Controlling LED, Interfacing Switch
Other IoT Devices: Arduino, BeagleBone Black. **8 Hours**

Unit-IV

Cloud and Data Analytics: Introduction to cloud storage Models and Communication APIs, Python Web Application Framework – Django, Web Services for IoT, SkyNet Messaging Platform.

Data Analytics for IoT: Apache Hadoop, spark, Real-Time Data Analysis, Tools for IoT: Chef **8 Hours**

Unit-V

IoT Case Studies: Home Automation: Smart Lighting, Cities: Smart Parking Environment: Weather Reporting Bot, Forest Fire Detection; Agriculture – Smart Irrigation, IoT Printer. **8 Hours**

TEXT BOOK:

1	Arshdeep Bahga, Vijay Madisetti	Internet of Things: A Hands-on Approach", Universities Press, 2014, 1st Edition.

REFERENCE BOOKS:

1	Ovidiu Vermesan, Peter Friess	Internet Of Things-From Research and Innovation to Market Deployment", River Publishers Series in Communication.
2	Adrian McEwen, Hakim Cassimally	Designing the Internet of Things", ISBN 978-81-265-5686-1 Wiley Publication.

Course Outcomes: Students will be able to:

CO1: Comprehend fundamentals of IoT and get exposure to the aspects of communication and protocols associated with IoT.

CO2: Identify hardware and software associated with the development of IoT systems. Design IOT Systems using IoT and Data analysis tools.

DSP ARCHITECTURE

Contact Hours/ Week :	3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours :	39	CIE Marks :	50
Total Tutorial Hours :	0	SEE Marks :	50
Sub. Code :	REIE19		

Course objectives: To study DSP algorithms, architecture and interfacing of peripheral devices to the DSP processor.

Unit-I

Introduction To Digital Signal Processing: Introduction to Digital Signal Processing system, The Sampling Process, Discrete time Sequences,

Decimation and Interpolation, Convolution, correlation, Discrete Fourier Transform (DFT) & Fast Fourier Transform(FFT), Classification of Digital Filters.

Number formats for Signals and co-efficient in DSP systems: Fixed point format, Double precession fixed point format, Floating point format, Block floating point format, Multiplication of Fixed point numbers and Floating point numbers, dynamic errors in DSP system.

8 Hours

Unit- II

TMS320C54xx Programmable Digital Signal processor: Introduction, Architecture overview of TMS320C54xx Digital Signal Processors, Bus structure, Central processing unit (CPU) : Arithmetic Logic Unit(ALU), Accumulators, Barrel shifter, Multiplier/Adder, compare select & store unit, Exponent encoder. Memory Organization: Memory space, Program memory, extended program memory, Data memory, I/O-memory. Data types,

Data addressing: Immediate, Absolute, Accumulator, Direct, Indirect, Memory mapped Register, Stack. Program memory addressing: Program Counter (PC), Branches, Calls, Returns, Conditional operations, repeating a single instruction, repeating a block of instructions, reset operation.

8 Hours

Unit- III

Instruction Set, On chip Peripherals and Pipeline Operation of TMS320C54xx: Instruction set: Arithmetic, Logical, Program control, Load & store operations.

On-chip Peripherals: Timer, Host Port Interface, Clock generator, Serial port interface - synchronous serial port,

Interrupts: Interrupt context save, interrupt latency, Pipeline operation.

8 Hours

Unit- IV

Implementation of Basic DSP Algorithms: Introduction, the Q-notation, An FFT algorithm for DFT computation, A butterfly computation, Overflow and Scaling, Bit Reversed index generation, FFT implementation on the TMS320C54xx, Computation of the signal spectrum. FIR Filters, IIR Filters, Interpolation Filters, Decimation Filters, PID controller, Adaptive Filters, 2-D Signal processing. **8 Hours**

Unit- V

Interfacing Memory And Parallel I/O Peripherals To Programmable DSP Devices: Introduction, Memory space organization, External bus

interfacing signals, Memory interface, Parallel I/O interface, Programmed I/O, Interrupts and I/O, Direct memory access (DMA). Interfacing Serial Converters to a Programmable DSP device: Introduction, Synchronous Serial Interface (SSI). Multichannel Buffered Serial Port(MCBSP)

7 Hours

TEXT BOOKS

1	Avtar Singh and S. Srinivasan	Digital Signal Processing, Thomson Publishing, 2004, Singapore.
2	V Udaya shankara	Modern Digital signal processing, 3rd Edition, PHI 2015

REFERENCE BOOKS

1	Emmanuel C Ifeachor and B W Jervis	Digital Signal Processing: A Practical Approach, Pearson Education, New Delhi
2	B Venkataramani and M Bhaskar	Digital Signal Processing, Tata- McGraw Hill, New Delhi, 2002.

Course outcomes: The student will be able to:

CO1: Explain functional units of digital signal processor MS320C54x).

CO2: Develop algorithms for computation of signal spectrum, implementing digital Filters, PID controller and adaptive filters.

CO3: Interface memory and I/O devices to a DSP Processor.

BIOMEDICAL INSTRUMENTATION

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits	: 3.0
Total Lecture Hours	: 39	CIE Marks	: 50
Total Tutorial Hours	: 0	SEE Marks	: 50
Sub. Code	: REIE20		

Course objectives: This course will enable students to:

1.To study various biomedical instruments for acquiring and monitoring Biomedical signals.

2.To study various measuring and therapeutic instruments for biomedical application.

Unit-I

Fundamentals: Sources of biomedical signals, Basic instrumentation system, General constraints in design of biomedical instrumentation systems Bioelectric Signals and Electrodes: Origin of bioelectric signals, Types of bioelectric signals.

Recording electrodes, Electrode-Tissue interface, Polarization, Skin contact impedance, Silver-silver chloride electrodes, Electrodes for ECG, EEG, EMG, Microelectrodes. **7 Hours**

Unit-II

Electrocardiography: Electrical activity of the heart, Genesis & characteristics of Electrocardiogram (ECG), Block diagram description of an Electrocardiograph, ECG lead system, Multi-channel ECG machine Phonocardiograph.

Electroencephalography: Genesis of Electroencephalogram (EEG), Block diagram description of an Electroencephalograph, 10-20 electrode systems, and computerized analysis of EEG.

Electromyography: Genesis of Electromyogram (EMG), Block diagram description of an Electromyography**.** **8 Hours**

Unit-III

Blood pressure measurement: Direct & Indirect method, Automatic blood pressure measuring apparatus using Korotkoff's method, Rheographic method, Oscillometric method, Ultrasonic Doppler shift method.

Blood Flow Meters: Electromagnetic blood flow meters, Ultrasonic blood flow meters, NMR blood flow meters, Laser Doppler blood flow meters. **8 Hours**

Unit-IV

Cardiac Pacemakers and Defibrillators: Need for cardiac pacemaker, External pacemaker, Implantable pacemaker, Types of Implantable pacemakers, Programmable pacemaker, Rate-responsive pacemakers, AC & DC defibrillators, Dual peak DC defibrillator, Square wave defibrillator. **8 Hours**

Unit-V

Measurement of Respiration rate: Thermistor method, Impedance Pnuemography, CO_2 method, Apnoea detectors.

Patient Monitoring Systems: Bedside patient monitoring systems, Central monitors, Measurement of heart rate – Average heart rate meter, Instantaneous heart rate meter (cardio tachometer), Measurement of pulse rate

Patient Safety: Electric shock hazards, Micro shock & Macro shock, Leakage currents. **8 Hours**

TEXT BOOKS

1	R. S. Khandpur.	Handbook of Biomedical Instrumentation, Tata McGraw-Hill Publishing Company 3rd Edition, 2014
2	C.Raja Rao & S.K.Guha	Principles of Biomedical instrumentation, Universities press (India) Ltd,2nd Edition,2001

REFERENCE BOOKS :

1	Lesely Cromwell	Principles of applied biomedical instrumentation, John Wiley and sons ,2nd Edition,2002
2	J. G. Webster	Encyclopedia of medical devices and instrumentation, John Wiley.3rd Edition,1998

Course outcomes: After the completion of this course, student will be able to:

CO1: Understand the different sources of bio-medical signals and working of different electrodes, machines used to pick bio-medical signals.

CO1: Acquire knowledge about working of different bio-medical measuring instruments.

CO1: Acquire knowledge about working of different therapeutic instruments.

MICRO ELECTRO MECHANICAL SYSTEMS (MEMS)

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks:	50
Sub. Code	: REIE22		

COURSE OBJECTIVE:

To study the basics of various Microsensors and Micro actuators, Microfabrication techniques and packaging, polymers used for MEMS application.

UNIT I

INTRODUCTION: MEMs and Microsystems, Typical MEMS and Microsystems Products, Evolution of Micro fabrication, Microsystems and Microelectronics, Multidisciplinary nature of Microsystems Design and Manufacture, Application of Microsystems in Automotive Industry, Application of Microsystems in other Industries. **7 Hours**

UNIT II

MICROSENSORS AND MICROACTUATORS: Introduction, Micro sensors: Acoustic wave sensors, Biomedical sensors and biosensors, Chemical sensors, Optical sensors, Pressure sensors, Thermal sensors

Micro actuation: Actuation using thermal forces, Actuation using Shape-memory alloys, Actuation using Piezoelectric crystals, Actuation using Electrostatic forces, MEMS with Micro actuators, Micro accelerators, Microfluidics. **8 Hours**

UNIT III

MICROSENSORS AND MICROACTUATORS-II: Scaling Laws in Miniaturization: Introduction, Scaling in Geometry, Scaling in Rigid-Body Dynamics, Scaling in Electrostatic Forces, Scaling in Fluid Mechanics, Scaling in Heat Transfer.

Piezoresistive Sensors, Piezoresistive Sensor Materials, Stress Analysis of Mechanical Elements, Applications to Inertia, Pressure, Tactile and Flow Sensors. **8 Hours**

UNIT IV

MICROFABRICATION AND PACKAGING: Microfabrication: Introduction, Chemical vapor deposition (CVD): APCVD (Atmospheric-pressure CVD)-LPCVD (Low-pressure CVD)-PECVD (Plasma-enhanced CVD), Physical vapor deposition (PVD):Evaporative-Sputtering-Electron Beam PVD, oxidation, Ion implantation, Diffusion, Etching, Photolithography, Surface micromachining: General description, process in general, mechanical problems associated with surface micromachining, Summary of Micro manufacturing, Packaging: General Considerations in Packaging Design, The Three Levels of Microsystems Packaging, Interfaces in Microsystems Packaging, Essential Packaging Technologies. **8 Hours**

UNIT V

POLYMER AND MICROFLUIDICS APPLICATIONS: Polymers in MEMS: Polimide – SU-8 – Liquid Crystal Polymer (LCP) – PDMS – PMMA – Parylene – Fluorocarbon, Application to Acceleration, Pressure, Flow and Tactile sensors- Microfluidic Applications: Motivation for microfluidics, Essential Biology concepts, Basic Fluid Mechanic Concepts, Design and Fabrication of Selective component: Channels-Valves, Case study on Selected MEMS Products. **8 Hours**

REFERENCES:

Sl.No	Author Name	Title
1.	Chang Liu	'Foundations of MEMS', Pearson Education Inc., 2012.
2.	Tai Ran Hsu	"MEMS & Micro Systems Design and Manufacture" Tata McGraw Hill, New Delhi, 2002.
3.	Stephen D Senturia	'Microsystem Design', Springer Publication, 2000.
4.	M.Madou	"Fundamental of Microfabrication", CRC Press, 2nd edition
5.	Ai Qun Liu	"RF MEMS Switches and Integrated Switching Circuits", Springer publication, 2010.

Course outcomes: Upon completion of this course the student will be able to:

CO1: Describe the Fundamentals of Microelectromechanical system (MEMS)

CO2: Describe about the working and use of various microsensors and microactuators for various applications.

CO3: Identify, select and explain the various scaling laws for the miniaturization and Piezoresistive Sensors

CO4: Identify and describe about the rudiments of various Micro fabrication techniques and packaging.

CO5: Identify and select the polymers used in MEMS and Design the selective MEMS Product

AUTOMOTIVE ELECTRONICS

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks:	50
Sub. Code	: REIE23		

Course objectives:

To study mechanical systems, sensors, actuators and electronic control systems in Automotive Industry.

Unit I

Automotive Fundamentals Overview – Four Stroke Cycle, Engine Control, Ignition System, Spark plug, Spark pulse generation, Ignition Timing, Drive Train, Transmission, Brakes, Steering System, Battery, Starting System

Air/Fuel Systems – Fuel Handling, Air Intake System, Air/ Fuel Management **7 Hours**

Unit II

Sensors – Oxygen (O2/EGO) Sensors, Throttle Position Sensor (TPS), Engine Crankshaft Angular Position (CKP) Sensor, Magnetic Reluctance Position Sensor, Engine Speed Sensor, Ignition Timing Sensor, Shielded Field Sensor, Optical Crankshaft Position Sensor, Manifold Absolute Pressure (MAP) Sensor -, Knock Sensor, Airflow rate sensor, Throttle angle sensor , Lidar Sensor

Actuators – Fuel Metering Actuator, Fuel Injector, Ignition Actuator **8 Hours**

Unit III

Electromagnetic compatibility (EMC) and interference suppression: EMC between different systems in the vehicle

Communication – **LIN Bus**: Protocol, Network management

Electronic Engine Control – Engine parameters, variables, Engine Performance terms, Electronic Fuel Control System, Electronic Ignition control, Idle sped control, EGR Control. **8 Hours**

Unit IV

Vehicle Motion Control – Cruise Control, Chassis, Power Brakes, Antilock Brake System (ABS), Electronic Steering Control, Power Steering, Traction Control, Electronically controlled suspension

Integrated Body – Climate Control Systems, Electronic HVAC Systems, Safety Systems – SIR, Interior Safety, Lighting, Entertainment Systems.

8 Hours

Unit V

Automotive Diagnostics – Timing Light, Engine Analyzer, On-board diagnostics, Off-board diagnostics, Expert Systems

Advancements in Automotive Electronic Systems – Alternative Fuel Engines, Collision Avoidance Radar warning Systems, Low tire pressure warning system, Radio navigation,

Autonomous driving vehicles: Different levels of automation.

Introduction to Adaptive cruise control

Active and Passive safety Elements: Lane departure warning systems, parking assistance systems, Air bags. **8 Hours**

Sl.No	Author Name	Title and Publisher
1.	William B. Ribbens,	"Understanding Automotive Electronics", 8th Edition, SAMS/Elsevier Publishing, 2017
2.	Robert Bosch Gambh	Automotive Electronics Systems and Components, 5th edition, John Wiley& Sons Ltd., 2007.
3.	Najamuz Zaman	"Automotive Electronics Design Fundamental" first edition, Springer 2015.
4.	Hillier's	"Fundamentals of Motor Vehicle Technology on Chassis and Body Electronics",6th Edition, Nelson Thrones, 2012.

Course outcomes: The student will be able to:

CO1: Identify and explain the working of various mechanical systems in an automotive system

CO2: Identify and select suitable sensors for measurement and actuators for control in an automotive system

CO3: a. Detect interference among different systems and perform control of various sub systems
b. select/suggest suitable communication protocol among subsystems in an automotive system

CO4: Identify and select control of various subsystems for vehicle motion

CO5: a. Select suitable methods to analyze and diagnose faults in automotive subsystems
b. Select methods to improve the performance and identify levels of Autonomous driving system

SCHEME & SYLLABUS
OF
III & IV Semestres B.E.

INDUSTRIAL ENGINEERING & MANAGEMENT

2022-23

Vision of the Department

To be a distinguished centre for the dissemination of knowledge and promoting research and consultancy in the field of Industrial Engineering and Management and for catering to the needs of the society.

Mission of the Department

1. To practice the philosophy of learning-teaching-learning and adopt the latest tools and techniques for the effective dissemination of knowledge in the field of Industrial Engineering and Management.
2. To collaborate with academic institutions, industry and research organizations to establish Centers of Excellence (COE) in emerging areas and promote research and consultancy.
3. To impart training for the overall development of students and inculcate commitment for social responsibility.

Program Educational Objectives (PEOs)

1. Graduates will excel in their chosen careers and successfully pursue higher education in Industrial Engineering and Management and related fields.
2. Graduates will manage the functioning of organization and enhance its competitiveness using contemporary tools in a socially acceptable way.
3. Graduates will demonstrate professionalism, ethical conduct, and societal responsibility and adapt to current trends by engaging in lifelong learning.

Programme Specific Outcomes (PSOs)

1. PSO1: Apply broad-based basic engineering and analytical tools for system design, analysis, performance evaluation and decision-making.
2. PSO2: Apply management concepts and principles for decision making in the area of operations, marketing, finance and human resource and analyse their impact.
3. PSO3: Apply the knowledge of materials, machining and manufacturing; analyse and evaluate the choices made.
4. PSO4: Apply the knowledge of industrial engineering for work system design and analyse, evaluate and create cost effective and safer systems and procedures.

Program Outcomes (POs)

Engineering Graduates will be able to:

a) Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
b) Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
c) Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
d) Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
e) Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
f) The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
g) Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
h) Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
i) Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
j) Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
k) Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
l) Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

SCHEME OF TEACHING AND EXAMINATION (160 Credits Scheme)

III Semester

Sl. No.	Course and Course Code		Course Title	Staff allotted to prepare complete Syllabus	Teaching hrs/week				Examination				Credits
					Lecture	Tutorial	Practical/ Drawing	Self-Study Component	Duration in hrs.	CIE Marks	SEE Marks	Total Marks

NIM31- Manufacturing Technology
(Integrated Professional Core Course)

Contact Hours/ Week	: 3 (Lecture)	Credits:	4.0
Total Lecture Hours	: 42	CIE Marks:	50+50
Total Tutorial Hours	: -	SEE Marks:	50+50
Practical/ Week	: 2 (Hours/Week)		

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	***Select appropriate manufacturing process to produce given component. *Recommend appropriate design of gating system. *Determine properties of foundry sand.
CO2:	*Apply the basic engineering knowledge of molding process to design a required mold. *Identify the suitable melting furnace for melting the given material. *Identify defects in casting using nondestructive testing equipments.
CO3:	Distinguish various metal joining processes & identify the defects in welded parts with possible cause & cure.
CO4:	Select cutting tool material for metal cutting processes with appropriate properties.
CO5:	Distinguish hot working & cold working processes.

Unit- I

MANUFACTURING PROCESSES: Introduction to Manufacturing, Types of manufacturing processes, advantages, disadvantages and applications.

Properties of molding sand, Testing of foundry sand- sand strength, moisture content test, clay content test, permeability.

Casting Process – Casting, Steps in casting process.

Patterns - patterns making, pattern materials, types of patterns, pattern allowances. Elements of gating system.

08 Hours

Unit- II

MOLDING PROCESSES & CASTING INSPECTIONS: Shell molding, Co2 molding, investment molding, vacuum molding, Mercast molding, advantages, limitations and applications.

Die casting- gravity and pressure die casting.

Continuous casting process

Melting Furnaces -cupola furnace, electric arc furnace, induction furnace.

Defects in casting - Types of defects, Causes and remedies. Cleaning and inspection of castings.

Non-destructive testing - X-ray radiography, Dye penetrant test, ultrasonic test and magnetic particle inspection.

08 Hours

Unit- III

WELDING PROCESSES: Introduction to welding and its important applications, Classification of welding processes- preparation of base metal and joint, fluxes and types.

Arc Welding –Principle, classification, TIG, Electroslag welding.
Resistance Welding - Principle, Spot, Seam, Projection welding.
Metallurgical Aspect of Welding - Solidification and Structure of welds, Heat affected zone, residual stress, Weldability and Weldability test.
Advanced welding processes - Thermit welding & explosive welding.
.

08 Hours

Unit-IV

THEORY OF METAL CUTTING: Introduction to metal cutting processes, cutting tool materials-Desired properties, types of cutting tool materials- HSS, carbides, coated carbides and ceramics. Cutting tool nomenclature, Orthogonal and Oblique cutting processes. Types of chip formation, tool wear and tool failure, tool life, effects of cutting parameters on tool life, tool failure criteria, Taylor's tool life equation (problems), Cutting fluids, properties and selection

07 Hours

Unit- V

Theory of metal Forming: Material Behavior in Metal Forming, Metal Forming- Hot working process & cold working process, advantages, limitations and applications, classification of metal forming process. Parameters affecting metal forming process.
Forming process - Introduction to rolling, forging, extrusion process & sheet-metal operations.

11 Hours

REFERNCE BOOKS:		
S No	**Author**	**Title**
1	Mikell P. Groover, John wiley & sons, inc.	Fundamentals of Modern Manufacturing: Materials, Processes, and Systems "7th Edition
2	Serope Kalpakjian, Steven R Schmid	Manufacturing Engineering and Technology" 7th Edition, Pearson Publications, Singapore.
3	R. K. Rajput	A textbook of manufacturing technology: manufacturing processes", publisher- laxmi publications, isbn: 9788131802441, 8131802442, 2nd edition.

LAB COMPONENT

Unit - I

1. Testing of Moulding Sand and Core Sand

Preparation of sand specimen and conduction of the following tests:

- Determination of Compression, Shear and Tensile strength of foundry sand.
- Determination of Permeability
- Determination of Grain fineness number
- Determination of Clay content
- Mould preparation

Unit - II

1. Conduction of tensile, shear, compression, torsion and bending tests of a Mild Steel specimen using a Universal Testing Machine.
2. Conduction of Impact test (Izod and Charpy tests) on Mild Steel Specimen.
3. Determination of Brinell, Rockwell and Vicker's Hardness Number.

NIM32- Engineering Metrology and Measurements
(Integrated Professional Core Course)

Contact Hours/ Week	: 3 (Lecture)	Credits:	3.0
Total Lecture Hours	: 42	CIE Marks:	50+50
Total Tutorial Hours	: -	SEE Marks:	50+50
Practical/ Week	: 2 (Hours/Week)		

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	Illustrate the standards and principles used in engineering measurement and design the gauges for measurement of shaft and hole and analyze the data
CO2:	Compare various measuring instruments and choose the one according to specific requirement
CO3:	Explain the principle behind the measuring systems incorporated in engineering application.
CO4:	Interpret the importance of nano metrology and other measurement systems.
CO5:	Articulate the methods of measuring force, torque and pressure

UNIT – I

Introduction of Metrology: Definition and Objectives of metrology, Standards of length - International prototype meter, standard of Temperature, Imperial standard yard, Wave length standard, subdivision of standards, line and end Standard, comparison, transfer from line standard to end standard, calibration of end bars, Slip gauges,Wringing phenomena, Indian Standards (M-87, M-112), Numerical problems on building of slip gauges.System of limits, Fits, Tolerances.

Principle of interchangeability and selective assembly, Indian Standards, concept of limits of size and tolerances, definition of fits, types of fits and their designation, hole basis system, shaft basis of system, classification of gauges, brief concept of design of gauges, (Taylor's principle), Wear allowance and machining allowance on gauges, Types of gauges -plain plug Gauge, ring Gauge, snap gauge, limit gauge, Numerical problems on gauges.

12 Hours

UNIT - II

COMPARATORS AND ANGULAR MEASUREMENT- Introduction to Comparator, Characteristics and Classification of Comparators, Mechanical Comparators, electrical, optical, Pneumatic Comparators, Back Pressure Gauges, Solex Comparators. Angular Measurements (Simple Numerical), Bevel Protractor, Use of Sine Bars & Sine Center. **7 Hours**

UNIT – III

Measurements and Measurement Systems-Definition, Significance of measurement, generalized measurement system, definitions and concept of Accuracy, precision, calibration, threshold, sensitivity, hysteresis, repeatability, linearity, loading effect,

System response-time delay. Errors in Measurements, Classification of Errors.

6 Hours

UNIT – IV

Transducers- linear variable differential transformer, piezo electric transducer, photo electric transducer, electronic transducer. 08 Hrs. Transfer Efficiency, Primary and Secondary Transducers, CMM-types

NANO IMPACT ON METROLOGY- Introduction, Importance of Nano metrology, applications, Introduction to Microscopy, Scanning Electron Microscope, X-ray diffraction system. **7 Hours**

UNIT - V

MEASUREMENT OF FORCE, TORQUE AND PRESSURE - Principle, Proving Ring, Torque Measurement, Prony Brake, Hydraulic Dynamometer, Pressure Measurements, Bridgeman Gauge, Macleod Gauge, Temperature and Strain Measurement, Resistance Thermometers, Methods of Strain Measurement. **7 Hours**

TEXT BOOKS:		
S No	**Author**	**Title**

2	Jain R K	Mechanical Measurements, 978-81-7409-191-2

REFERNCE BOOKS:		
S No	**Author**	**Title**
1	Sirohi and Radhakrishna	"Mechanical measurements". John Willey, 3rd Edition, 1993, ISBN-13: 978-0470219539, ISBN-10: 047021953X.
2	N V Ragvendra & L Krishnamurthy	"Nano Impact on metrology", Oxford Press, 1st Edition, 2013, ISBN-13: 978-0-19-808549-2, ISBN-10: 0-19-808549-4.

Lab Component

Unit – I (Metrology)

1. Study and use of Slip Gauges.
2. Calibration of External Micrometer for periodic & progressive pitch error.
3. Measurement of Taper Using Sine bar / sine center.
4. Measurement of straightness by wedge method / Spirit level/Autocollimator.
5. Experiment to demonstrate the use of Profile Projector.

Unit – II (Measurement)

1. Calibration of linear variable differential transducer and measurement of displacement
2. Calibration of Pressure Transducer and measurement of unknown pressure.
3. Calibration of load cell
4. Measurement of Vibration Parameter using Vibration Sensors (contact and noncontact type).
5. Measurement of Temperature using different Thermocouples.

NIM33- Material Science & Metallurgy
(Professional Core Course)

Contact Hours/ Week	: 3 (Lecture)	Credits:	4.0
Total Lecture Hours	: 42	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Practical/ Week	: -		

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	Apply the basic engineering knowledge of mechanisms and properties of materials and differences in the mechanical behavior of engineering materials.
CO2:	Apply the basic engineering knowledge to analyze and conduct investigation to identify the different phases in a phase diagram.
CO3:	Apply the basic engineering knowledge to Evaluate the various ways in which failure of material occurs and analyze the data.
CO4:	Apply the basic engineering knowledge to Identify the Importance of heat treatment & its Significance.
CO5:	Apply the basic engineering knowledge to identify the newer composite, advance and smart materials for various engineering applications

UNIT -I

ENGINEERING MATERIALS: Introduction: Importance of Materials science and engineering, classification of materials. Crystal imperfections –point, line and surface imperfections. Edge dislocation, Screw dislocation, elastic and plastic properties, elastic recovery after plastic deformation, linear and nonlinear elastic behavior and properties, mechanical properties in plastic range, yield strength, offset yield strength, ductility, ultimate tensile strength, and toughness. Plastic deformation of single crystal by slip and twinning.

08-Hours

UNIT -II

SOLIDIFICATION AND PHASE DIAGRAM: Definitions and basic concepts: solubility limit, phases, microstructure, phase equilibrium, one-component (or unary) Phase diagrams, binary phase diagrams. Solid solutions Hume Rothary rule substitutional and interstitial solid solutions, intermediate phases, Gibbs phase rule. Different types invariant reactions – Eutectic, Eutectoid, Peritectic, Peritectectoid reactions. Numerical on binary phase diagram. **08-Hours**

UNIT -III

FRACTURE AND STRENGTHENING MECHANISMS: Fracture- Fundamentals of fracture, ductile fracture, brittle fracture, ductile-to-brittle transition. Creep- Generalized creep

behavior, stress and temperature effects, alloys for high-temperature use. Fatigue- Cyclic stresses, crack initiation and propagation, factors that affect fatigue life, fatigue testing and S-N diagram. Mechanisms of strengthening in metals- Strengthening by grain size reduction, solid-solution strengthening, strain hardening, Recovery, re-crystallization, and grain growth.

08- Hours

UNIT -IV

IRON CARBON EQUILIBRIUM DIAGRAM AND HEAT TREATMENT: The iron–iron carbide (fe–fe3c) phase diagram, Heat treating of metals: TTT curves, continuous cooling curves, description of the following heat treatment processes with industrial applications: annealing and its types. Normalizing, hardening, tempering, martempering, austempering, hardenability, surface hardening methods like carburizing, cyaniding, nitriding, flame hardening and induction hardening, and age hardening. **09- Hours**

UNIT -V

ADVANCE MATERIALS: Composite materials - Definition, classification, types of matrix materials & reinforcements, Metal Matrix Composites (MMCs), Ceramic Matrix Composites (CMCs) and Polymer Matrix Composites (PMCs), Particulate-reinforced and fiber reinforced composites, advantages and application of composites.

SMART MATERIALS – fiber optic materials, piezo-electrics, shape memory alloys Shape Memory Alloys – Nitinol, super elasticity. Nano materials – Introduction to nano-technology, 0D, 1D, 2D structures –Size Effects, General Methods available for the Synthesis of Nanostructures- top down and bottom-up approach, advantage , disadvantages and application of nano materials. **09- Hours**

NIML31- MACHINE SHOP

(Professional Core Course Lab)

Contact Hours/ Week	: -	Credits:	1.0
Total Lecture Hours	: -	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Practical/ Week	: 2 (Hours/Week)		

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	Perform turning, facing , knurling , thread cutting, tapering , eccentric, turning and allied operations
CO2:	Perform keyways / slots , grooves etc using shaper
CO3:	Perform gear tooth cutting using milling machine
CO4:	Understand the formation of cutting tool parameters of single point cutting tool using bench grinder / tool and cutter grinder
CO5:	Demonstrate precautions and safety norms followed in Machine Shop

PART – A

Preparation of three models on lathe involving Plain turning, Taper turning, Step turning, Thread cutting, Facing, Knurling, Drilling, Boring, and Eccentric turning.

PART – B

Cutting of V Groove/ dovetail / Rectangular groove using a shaper Cutting of Gear Teeth using Milling Machine

PART –C

For demonstration

Demonstration of formation of cutting parameters of single point cutting tool using bench grinder / tool & cutter grinder. Demonstration of surface milling /slot milling

Universal Human Values, Social Connect and Responsibility		Course Code: **NHS04**	
Contact Hours/Week	: 1+0+0+0 (LTPS)	Credits :	1.0
Total Lecture Hours	: 13	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	Become more aware of themselves, and their surroundings (family, society, nature)
CO2:	Become more responsible in life, and value human relationships and human society
CO3:	Have better critical ability in handling problems and in finding sustainable solutions

Pre-requisites: Universal Human Values (conducted during induction programme)

Unit 1: Understanding Harmony in the Human Being - Harmony in self

Understanding human being as a co-existence of the sentient 'I' and the material 'Body'; Understanding the needs of Self ('I') and 'Body' - happiness and physical facility; Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer); Understanding the characteristics and activities of 'I' and harmony in 'I'; Understanding the harmony of 'I' with the Body: Sanyam and Health, correct appraisal of Physical needs, meaning of Prosperity in detail, Include discussions to differentiate between i) Prosperity and accumulation. ii) Ensuring health vs dealing with disease

5 Hours

Unit 2: Understanding Harmony in the Family and Society - Harmony in Human-Human Relationship

Understanding values in human - human relationship, meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness, Trust and Respect as the foundational values of relationship; Understanding the meaning of Trust, Difference between intention and competence; Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship; Understanding the harmony in the society (society being an extension of family)- Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals.

4 Hours

Unit 3: Understanding Harmony in the Nature and Existence - Whole-existence as Co-existence

Understanding the harmony in the Nature; Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self-regulation in nature; Understanding Existence as Co-existence of mutually interacting units in all-pervasive space; Holistic perception of harmony at

all levels of existence. Include discussions on-human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

4 Hours

REFERNCE BOOKS:		
S No	**Author**	**Title**
1	Gaur, R.R. & Sangal R	'Foundation Course in Human Values and Professional Ethics; Presenting a universal approach to value education through self-exploration', Excel Books, Bangalore, 2016, ISBN: 978-8-174-46781-2
2	Tripathi A.N	Human Values', New Age International Publisher, 2003, ISBN: 81-224-1426-5

Evaluation Pattern:

Two Tests of 25 marks each and 45 minutes duration
SEE for 50 marks and examination duration is 90 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	45	25 marks	25 marks
Test-2	14th Week	45	25 marks	25 marks
CIE			50 marks	50 marks
SEE		90	50 marks	50 marks
Total			**100 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern may be hybrid type with MCQs and descriptive questions.*

- *10 Marks MCQs*
- *3 descriptive questions of 5 marks each*
- *All the questions are compulsory*

SEE: *SEE pattern may also be hybrid type with MCQs and descriptive questions.*

- *20 Marks MCQs*
- *1 descriptive question of 10 marks from each of the units (total 3 questions)*
  or
  2 questions of 5 marks from each of the units (total 6 questions)
- *All the questions are compulsory*

ಬಳಕೆ ಕನ್ನಡ Course Code: **NHS01**

Balake Kannada (Kannada for Usage)

Contact Hours/ Week	: 2 (T)	Credit :	1.0
Total Lecture Hours	: 0	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	To understand the necessity of learning of local language for comfortable life.
CO2:	To Listen and understand the Kannada language properly.
CO3:	To speak, read and write Kannada language as per requirement.
CO4:	To communicate (converse) in Kannada language in their daily life with Kannada speakers.
CO5:	To speak in polite conservation.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. ಬಳಕೆ ಕನ್ನಡವನ್ನು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಬೋಧಿಸಲು ವಿಟಿಯು ಸೂಚಿಸಿರುವ ಪಠ್ಯಪುಸ್ತಕಗಳನ್ನು ಉಪಯೋಗಿಸಬೇಕು.

2. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಉತ್ತೇಜಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.

3. ಪ್ರತಿ ವಿದ್ಯಾರ್ಥಿ ಪುಸ್ತಕವನ್ನು ತರಗತಿಯಲ್ಲಿ ಬಳಸುವಂತೆ ನೋಡಿಕೊಳ್ಳುವುದು ಮತ್ತು ಪ್ರತಿ ಪಾಠ ಮತ್ತು ಪ್ರವಚನಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟಂತೆ ಪೂರಕ ಚಟುವಟಿಕೆಗಳಿಗೆ ತೊಡಗಿಸತಕ್ಕದ್ದು.

4. ಡಿಜಿಟಲ್ ತಂತ್ರಜ್ಞಾನದ ಮುಖಾಂತರ ಇತ್ತೀಚೆಗೆ ಡಿಜಿಟಲೀಕರಣಗೊಂಡಿರುವ ಭಾಷೆ ಕಲಿಕೆಯ ವಿಧಾನಗಳನ್ನು ಪಿಪಿಟಿ ಮತ್ತು ದೃಶ್ಯ ಮಾಧ್ಯಮದ ಮುಖಾಂತರ ಚರ್ಚಿಸಲು ಕ್ರಮ ಕೈಗೊಳ್ಳುವುದು. ಇದರಿಂದ

ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ತರಗತಿಯಲ್ಲಿ ಹೆಚ್ಚು ಏಕಾಗ್ರತೆಯಿಂದ ಪಾಠ ಕೇಳಲು ಮತ್ತು ಅಧ್ಯಯನದಲ್ಲಿ ತೊಡಗಲು ಅನುಕೂಲವಾಗುತ್ತದೆ.

5. ಭಾಷಾ ಕಲಿಕೆಯ ಪ್ರಯೋಗಾಲಯದ ಮುಖಾಂತರ ಬಹುಬೇಗ ಕನ್ನಡ ಭಾಷೆಯನ್ನು ಕಲಿಯಲು ಅನುಕೂಲವಾಗುವಂತೆ ಕಾರ್ಯಚಟುವಟಿಕೆಗಳನ್ನು ಮತ್ತು ಕ್ರಿಯಾ ಯೋಜನೆಗಳನ್ನು ರೂಪಿಸುವುದು.

Unit 1 (5 Hours):

1. Introduction, Necessity of learning a local language. Methods to learn the Kannada language.
2. Easy learning of a Kannada Language: A few tips. Hints for correct and polite conservation, Listening and Speaking Activities
3. Key to Transcription.
4. ವೈಯಕ್ತಿಕ ಸ್ವಾಮ್ಯಸೂಚಕ/ಸಂಬಂಧಿತ ಸರ್ವನಾಮಗಳು ಮತ್ತು ಪ್ರಶ್ನಾರ್ಥಕ ಪದಗಳು - Personal Pronouns, Possessive Forms, Interrogative words

Unit 2 (4 Hours):

1. ನಾಮಪದಗಳ ಸಂಬಂಧಾರ್ಥಕ ರೂಪಗಳು, ಸಂದೇಹಾಸ್ಪದ ಪ್ರಶ್ನೆಗಳು ಮತ್ತು ಸಂಬಂಧವಾಚಕ ನಾಮಪದಗಳು - Possessive forms of nouns, dubitive question and Relative nouns.
2. ಗುಣ, ಪರಿಮಾಣ ಮತ್ತು ವರ್ಣಬಣ್ಣ ವಿಶೇಷಣಗಳು, ಸಂಖ್ಯಾವಾಚಕಗಳು Qualitative, Quantitative and Colour Adjectives, Numerals
3. ಕಾರಕ ರೂಪಗಳು ಮತ್ತು ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು - ಸಪ್ತಮಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯ - (ಆ, ಅದು, ಅವು, ಅಲ್ಲಿ) Predictive Forms, Locative Case

Unit 3 (5 Hours):

1. ಚತುರ್ಥಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯದ ಬಳಕೆ ಮತ್ತು ಸಂಖ್ಯಾವಾಚಕಗಳು - Dative Cases, and Numerals
2. ಸಂಖ್ಯಾಗುಣವಾಚಕಗಳು ಮತ್ತು ಬಹುವಚನ ನಾಮರೂಪಗಳು - Ordinal numerals and Plural markers
3. ನ್ಯೂನ/ನಿಷೇಧಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು ಮತ್ತು ವರ್ಣ ಗುಣವಾಚಕಗಳು - Defective / Negative Verbs and Colour Adjectives

Unit 4 (6 Hours):

1. ಅಪ್ಪಣೆ/ಒಪ್ಪಿಗೆ, ನಿರ್ದೇಶನ, ಪ್ರೋತ್ಸಾಹ ಮತ್ತು ಒತ್ತಾಯ ಅರ್ಥರೂಪ ಪದಗಳು ಮತ್ತು ವಾಕ್ಯಗಳು Permission, Commands, encouraging and Urging words (Imperative words and sentences)
2. ಸಾಮಾನ್ಯ ಸಂಭಾಷಣೆಗಳಲ್ಲಿ ದ್ವಿತೀಯ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ಸಂಭವನೀಯ ಪ್ರಕಾರಗಳು Accusative Cases and Potential Forms used in General Communication
3. 'ಇರು ಮತ್ತು ಇರಲ್ಲ' ಸಹಾಯಕ ಕ್ರಿಯಾಪದಗಳು, ಸಂಭಾವ್ಯಸೂಚಕ ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು - Helping Verbs; "iru and iralla", Corresponding Future and Negation Verbs
4. ಹೋಲಿಕೆ (ತರ-ತಮ), ಸಂಬಂಧ ಸೂಚಕ ಮತ್ತು ವಸ್ತು ಸೂಚಕ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಪದಗಳ ಬಳಕೆ - Comparative, Relationship, Identification and Negation Words

Unit 5 (6 Hours):

1. ಕಾಲ ಮತ್ತು ಸಮಯದ ಹಾಗೂ ಕ್ರಿಯಾಪದಗಳ ವಿವಿಧ ಪ್ರಕಾರಗಳು – Different types of forms of Tense, Time and Verbs
2. -ದ್, -ತ್, -ತು, -ಇತು, -ಆಗಿ, -ಅಲ್ಲ, -ಗ್, -ಕ್, ಇದೆ, ಕ್ರಿಯಾ ಪ್ರತ್ಯಯಗಳೊಂದಿಗೆ ಭೂತ, ಭವಿಷ್ಯತ್ ಮತ್ತು ವರ್ತಮಾನ ಕಾಲ ವಾಕ್ಯ ರಚನೆ. Formation of Past, Future and Present Tense Sentences with Verb Forms
3. Kannada Vocabulary List: ಸಂಭಾಷಣೆಯಲ್ಲಿ ದಿನೋಪಯೋಗಿ ಕನ್ನಡ ಪದಗಳು - Kannada Words in Conversation.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration
SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks

Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

TEXT BOOKS:

TEXT BOOKS:		
S No	**Author**	**Title**
1	ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ	ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ		Course Code: **NHS02**	
Contact Hours/ Week	: 2 (T)	Credit :	1.0
Total Lecture Hours	: 0	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯ ಉದ್ದೇಶಗಳು:

1. ವೃತ್ತಿಪರ ಪದವಿ ವಿದ್ಯಾರ್ಥಿಗಳಾಗಿರುವುದರಿಂದ ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.
2. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಪ್ರಧಾನ ಭಾಗವಾದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳನ್ನು ಸಾಂಕೇತಿಕವಾಗಿ ಪರಿಚಯಿಸಿ ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ ಸಾಹಿತ್ಯ ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಅರಿವು ಹಾಗೂ ಆಸಕ್ತಿಯನ್ನು ಮೂಡಿಸುವುದು.
3. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವನ್ನು ಹಾಗೂ ಅವರುಗಳು ಸಾಧಿಸಿದ ವಿಷಯಗಳನ್ನು ಪರಿಚಯಿಸುವುದು.
4. ಕನ್ನಡ ಶಬ್ದ ಸಂಪತ್ತಿನ ಪರಿಚಯ ಮತ್ತು ಕನ್ನಡ ಭಾಷೆಯ ಬಳಕೆ ಹಾಗೂ ಕನ್ನಡದಲ್ಲಿ ಪತ್ರ ವ್ಯವಹಾರವನ್ನು ತಿಳಿಸಿಕೊಡುವುದು.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡವನ್ನು ಬೋಧಿಸಲು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಪ್ರಸ್ತುತ ಪುಸ್ತಕ ಆಧರಿಸಿ ಬ್ಲಾಕ್ ಬೋರ್ಡ್ ವಿಧಾನವನ್ನು ಅನುಸರಿಸುವುದು. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಪ್ರೇರೇಪಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.
2. ಇತ್ತೀಚಿನ ತಂತ್ರಜ್ಞಾನದ ಅನುಕೂಲಗಳನ್ನು ಬಳಸಿಕೊಳ್ಳುವುದು – ಅಂದರೆ ಕವಿ-ಕಾವ್ಯ ಪರಿಚಯದಲ್ಲಿ ಕವಿಗಳ ಚಿತ್ರಣ ಮತ್ತು ಲೇಖನಗಳು ಮತ್ತು ಕಥೆಕಾವ್ಯಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟ ಧ್ವನಿ ಚಿತ್ರಗಳು, ಸಂಭಾಷಣೆಗಳು, ಈಗಾಗಲೇ ಇತರ ವಿಮರ್ಶಕರು ಬರೆದಿರುವ ವಿಮರ್ಶಾತ್ಮಕ ವಿಷಯಗಳನ್ನು ಪಿಪಿಟಿ, ಡಿಜಿಟಲ್ ಮಾಧ್ಯಮಗಳ ಮುಖಾಂತರ ವಿಶ್ಲೇಷಿಸುವುದು.
3. ನವೀನ ಮಾದರಿಯ ಸಾಹಿತ್ಯ ಬೋಧನೆಗೆ ಸಂಬಂಧಪಟ್ಟ ವಿಧಾನಗಳನ್ನು ಶಿಕ್ಷಕರು ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಅನುಕೂಲವಾಗುವ ರೀತಿಯಲ್ಲಿ ಅಳವಡಿಸಿಕೊಳ್ಳಬಹುದು.

ಘಟಕ ೧: ಲೇಖನಗಳು (6 hours)

೧. ಕರ್ನಾಟಕ ಸಂಸ್ಕೃತಿ – ಹಂ.ಪ. ನಾಗರಾಜಯ್ಯ

೨. ಕರ್ನಾಟಕ ಏಕೀಕರಣ : ಒಂದು ಅಪೂವ ಚರಿತ್ರೆ – ಜಿ. ವೆಂಕಟಸುಬ್ಬಯ್ಯ

೩. ಆಡಳಿತ ಭಾಷೆಯಾಗಿ ಕನ್ನಡ – ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ ಮತ್ತು ಪ್ರೊ. ವಿ. ಕೇಶವಮೂರ್ತಿ

ಘಟಕ 2: ಆಧುನಿಕ ಪೂರ್ವದ ಕಾವ್ಯ ಭಾಗ (5 hours)

೧. ವಚನಗಳು: ಬಸವಣ್ಣ, ಅಕ್ಕಮಹಾದೇವಿ, ಅಲ್ಲಮಪ್ರಭು, ಆಯ್ದಕ್ಕಿ ಮಾರಯ್ಯ, ಜೇಡರದಾಸಿಮಯ್ಯ, ಆಯ್ದಕ್ಕಿ ಲಕ್ಕಮ್ಮ

೨. ಕೀರ್ತನೆಗಳು: ಅದರಿಂದೇನೂ ಫಲ ಇದರಿಂದೇನು ಫಲ – ಪುರಂದರದಾಸರು
ತಲ್ಲಣಿಸದಿರು ಕಂಡ್ಯ ತಾಳು ಮನವೇ - ಕನಕದಾಸರು

೩. ತತ್ವಪದಗಳು: ಸಾವಿರ ಕೊಡಗಳ ಸುಟ್ಟು - ಶಿಶುನಾಳ ಶರೀಫ

ಘಟಕ 3: ಆಧುನಿಕ ಕಾವ್ಯ ಭಾಗ (6 hours)

1. ಡಿ.ವಿ.ಜಿ. ರವರ ಮಂಕುತಿಮ್ಮನ ಕಗ್ಗದಿಂದ ಆಯ್ದ ಕೆಲವು ಭಾಗಗಳು
2. ಕುರುಡು ಕಾಂಚಾಣ: ದ.ರಾ. ಬೇಂದ್ರೆ
3. ಹೊಸಬಾಳಿನ ಗೀತೆ: ಕುವೆಂಪು

ಘಟಕ 4: ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯ (5 hours)

1. ಡಾ. ಸರ್ ಎಂ. ವಿಶ್ವೇಶ್ವರಯ್ಯ : ವ್ಯಕ್ತಿ ಮತ್ತು ಐತಿಹ್ಯ - ಎ.ಎನ್. ಮೂರ್ತಿರಾವ್
2. ಕರಕುಶಲ ಕಲೆಗಳು ಮತ್ತು ಪರಂಪರೆಯ ವಿಜ್ಞಾನ : ಕರೀಗೌಡ ಬೀಚನಹಳ್ಳಿ

ಘಟಕ 5: ಕಥೆ ಮತ್ತು ಪ್ರವಾಸ ಕಥನ (4 hours)

1. ಯುಗಾದಿ : ವಸುಧೇಂದ್ರ
2. ಮೆಗಾನೆ ಎಂಬ ಗಿರಿಜನ ಪರ್ವತ : ಹಿ.ಚಿ. ಬೋರಲಿಂಗಯ್ಯ

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಪರಿಣಾಮಗಳು (Course Outcomes):

1. ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯವಾಗುತ್ತದೆ.
2. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳು ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಆಸಕ್ತಿಯು ಮೂಡುತ್ತದೆ.

3. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

4. ಕನ್ನಡ ಭಾಷಾಭ್ಯಾಸ, ಸಾಮಾನ್ಯ ಕನ್ನಡ ಹಾಗೂ ಆಡಳಿತ ಕನ್ನಡದ ಪದಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

Evaluation Pattern:

Ability Enhancement Course – III

(Offered by the Department)

Relational Data Base Management Systems (RDBMS)

Contact Hours/ Week	: 2 (L 2)	Credits:	2
Total Lecture Hours	: 20	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Course Code	:AECIM31		

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	Able understand the basics of DBMS
CO2:	Able Establish and develop conceptual design of data base models
CO3:	Able Establish and develop ER diagrams
CO4:	Able create SQL Basic quarries
CO5:	Able create SQL Complex quarries

Unit – 1

Introduction : An example; Characteristics of Database approach; Actors on the screen; Workers behind the scene; Advantages of using DBMS approach; A brief history of database applications; when not to use a DBMS. Data models, schemas and instances; Three-schema architecture and data independence; Database languages and interfaces

04 Hours

Unit-2

Entity-Relationship Model The database system environment; Centralized and client-server architectures; Classification of Database Management systems, Using High-Level Conceptual Data Models for Database Design; An Example Database Application; Entity Types, Entity Sets, Attributes and Keys 0**4 Hours**

Unit-3

Relationships & ER Diagrams: Relationship types, Relationship Sets, Roles and Structural Constraints; Weak Entity Types; Refining the ER Design; ER Diagrams, Naming Conventions and Design Issues; Relationship types of degree higher than two. **04 Hours**.

Unit – 4

SQL Basic quarries: SQL Data Definition and Data Types; Specifying constraints in SQL; Schema change statements in SQL; Basic queries in SQL: Basic Select statement, including conditions, performing arithmetic operations, ordering rows, SQL functions **04 Hours**

Unit – 5

SQL Complex quarries: More complex SQL Queries, Joins, Usage of Group by clause, Use of Set theory operators, Sub queries, DML statements (Insert, Delete, Update), DDL statements (Create, Alter, Drop and Truncate), Specifying general constraints, TCL statements (Commit, Rollback), other database objects like Views, Sequences and Synonyms **04 Hours**

TEXT BOOKS:		
S No	**Author**	**Title**
1	Elmasri and Navathe	Fundamentals of Database Systems, 5th Edition, Addison-Wesley, 2007
2	Raghu Ramakrishnan and Johannes Gehrke	Database Management Systems, 3rd Edition, McGraw-Hill, 2003.

Ability Enhancement Course – III
(Offered by the Department)
ADVANCED MANUFACTURING TECHNOLOGY

Contact Hours/ Week	: 2 (L 2)	Credits:	2
Total Lecture Hours	: 20	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Course Code	:AECIM32		

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	Apply basic modern manufacturing engineering Knowledge for manufacturing (Level-2).
CO2:	Describe the role and importance of modern manufacturing processes (Level-2).
CO3:	Describe the working principles of modern manufacturing processes (Level-3)
CO4:	Analyze and identify the process parameters affecting the modern manufacturing processes (Level-2).
CO5:	Analyze the applications of modern manufacturing processes) (Level-2).

Unit- I

INTRODUCTION: Need for non-traditional machining methods-Classification of modern machining processes – considerations in process selection, applications and recent development.

04 Hours.

Unit- II

MECHANICAL PROCESSES: USM- Working principles, equipment used, applications. AJM - Working Principles, equipment used, applications. WJM- Working principles, equipment used, applications. **04 Hours.**

Unit- III

ELECTRO – CHEMICAL PROCESSES: Fundamentals of electro chemical machining, electrochemical grinding, electro chemical honing and deburring process, advantages and applications. **04 Hours.**

Unit- IV

THERMAL PROCESSES –I: Working Principles and applications of Electric Discharge machining, Electric Discharge Grinding and electric discharge wire cutting processes and their applications. **04 Hours.**

Unit- V

THERMAL PROCESSES –II: General Principle and application of laser beam machining, General Principle and application of plasma for machining, Chemical machining-principle maskants –etchants- applications. **04 Hours.**

Java Programming

Contact Hours/ Week	: 2 (L 2)	Credits:	2
Total Lecture Hours	: 20	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Course Code	:AECIM33		

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	Able understand the basics of Java Programming
CO2:	Able understand to create Methods and Classes for Java Programming
CO3:	Able understand and apply Interface Fundamentals in Java Programming
CO4:	Able understand and apply String Handling Fundamentals in Java Programming

UNIT – 1

Overview of Java: The Java Language, The Key Attributes of Object-Oriented Programming, The Java Development Kit, A First Simple Program, The Java Keywords, and Identifiers in Java, The Java Buzz words.**Introducing Data Types, Operators:**Java's Primitive Types, Literals, A Closer Look at Variables, The Scope and Lifetime of Variables, operators, Shorthand Assignments, Type conversion. **04 Hours**

UNIT – 2

Control Statements: If statement, Nested ifs, if-else-if Ladder, Switch Statement, Nested switch statements, for Loop, While Loop, do-while Loop, Use break, Use continue, Nested Loops.**Introducing Classes, Objects and Methods:**Class Fundamentals, Creating Objects, Reference Variables and Assignment, Methods, Returning from a Method, Returning Value, Using Parameters, Constructors, Parameterized Constructors.

04 Hours

UNIT –3

A Closer Look at Methods and Classes: Controlling Access to Class Members, Pass Objects to Methods, How Arguments are passed, Returning Objects, Method Overloading, Overloading Constructors, Recursion, Understanding Static, Introducing Nested and Inner Classes.**Inheritance:**Inheritance Basics, Member Access and Inheritance, Constructors and Inheritance, Using super to Call Superclass constructors, Using super to Access Superclass Members, Creating a Multilevel Hierarchy, When are Constructors Executed, Superclass

References and Subclass Objects, Method Overriding, Using Abstract Classes, Using final, The Object class. **04 Hours**

UNIT –4

Interfaces: Interface Fundamentals, Creating an Interface, Implementing an interface, Implementing Multiple Interfaces, Constants in Interfaces, Interfaces can be extended, Differences between the Abstract Class and Interfaces. **04 Hours**

UNIT –5

String Handling: String Fundamentals, The String Constructors, The Length() Method, Obtaining the characters within a string, String comparison[using equals() and equalsIgnoreCase(), startsWith() and endsWith(), equals() versus ==, compareTo() methods], Searching Strings[indexOf(), lastIndexOf() methods], Changing the case of characters within a String[toUpperCase(), toLowerCase()], String Buffer – Constructors, length(), capacity(), charAt(), setCharAt(), getChars(), append(), insert(), reverse(), delete(), deleteCharAt(), replace(), substring() methods, String Builder **04 Hours**

(Offered by the Department)

INTERNET OF THINGS

Contact Hours/ Week	: 2 (L 2)	Credits:	2
Total Lecture Hours	: 20	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Course Code	:AECIM34		

IoT Full form is **Internet of Things**. The Internet of Things is commonly related to the networks of physical objects. These objects are embedded with software, sensors, and other technology. IoT helps in data exchanging among physical objects over the internet. IoT technology is similarly pertaining to the concept of smart-home, appliances, smart speakers, smartphones, healthcare systems, and security systems, etc.

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	Able understand the basic concepts of IOT
CO2:	Able understand the Arduino Simulation Environment
CO3:	Able understand the Sensor & Actuators with Arduino
CO4:	Able understand the Basic Networking with ESP8266 WiFi module
CO5:	Able understand the IoT Protocols & Cloud Platforms for IOT

Unit 1

Introduction to IOT : Understanding IoT fundamentals, IOT Architecture and protocols, Various Platforms for IoT, Real-time Examples of IoT Overview of IoT components and IoT Communication Technologies, Challenges in IoT

03 Hours

Unit 2

Arduino Simulation Environment: Arduino Uno Architecture, Setup the IDE, Writing Arduino Software, Arduino Libraries, Basics of Embedded C programming for Arduino, Interfacing LED, push-button and buzzer with Arduino, Interfacing Arduino with LCD

04 Hours

Unit 3

Sensor & Actuators with Arduino: Overview of Sensors working, Analog and Digital Sensors, Interfacing of Temperature, Humidity, Motion, Light and Gas Sensor with Arduino, Interfacing of Actuators with Arduino, Interfacing of Relay Switch and Servo Motor with Arduino

04 Hours

Unit 4

Basic Networking with ESP8266 WiFi module: Basics of Wireless, Networking, Introduction to ESP8266 Wi-Fi Module, Various Wi-Fi library, Web server- introduction, installation, configuration, Posting sensor(s) data to web server

04 Hours

Unit 5

IoT Protocols & Cloud Platforms for IOT: M2M vs. IOT, Communication Protocols, Virtualization concepts and Cloud Architecture, Cloud computing, benefits, Cloud services — SaaS, PaaS, IaaS, Cloud providers & offerings, Study of IOT Cloud platforms, Thing Speak API and MQTT, Interfacing ESP8266 with Web services

05 Hours

REFERNCE BOOKS:		
S No	**Author**	**Title**
1	Pethuru Raj and Anupama C. Raman	"The Internet of Things: Enabling Technologies, Platforms, and Use Cases" (CRC Press)
2	Arshdeep Bahga and Vijay Madisetti	"Internet of Things: A Hands-on Approach" (Universities Press)
3		Research papers

NMAT4: Statistics for Engineering

Contact Hours/ Week	: 3 (Lecture)	Credits:	3.0
Total Lecture Hours	: 42	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Practical/ Week	: -		

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	Collect, organize and analyze the data in the real-life situation and represent the data in graphical form (PO-1, PO-2)
CO2:	Apply the correct probability distribution for the given situation to determine the probability (PO-1, PO-2, PO-5)
CO3:	Set up, test and make decisions about hypotheses when uncertainty exists. (PO-2,5 & PSO-1)
CO4:	Identify the degree and direction of relationship among process variables and develop appropriate regression models for the same. (PO-1, PO-2, PO-4, PO-5)
CO5:	Perform Analysis of Variance for simple experimental designs and understand the importance for big data in real world situation (PO-4)

UNIT-I

Introduction to statistics: Numerical summary measures such as Measure of central tendency and dispersion, coefficient of variance, Skewness, Kurtosis. Graphical summary such as Frequency distribution and Histogram, Box plot, scatter plot and probability plot. Use of statistical software in problem solving.

. **10 Hours**

UNIT-II

Random Variables and Probability distributions:

Discrete Random Variables and Probability distributions: Introduction to Discrete Random variables (No analytical treatment), Discrete probability distributions such as - Binominal distribution, Hyper-geometric , Poisson distribution and their Applications in decision making.

Continuous Random Variables and Probability Distributions: Introduction to Continuous random variables (No analytical treatment), Continuous Probability distributions such as- Normal, Normal distribution Central Limit Theorem, Exponential Distribution and Weibul distribution and their application in engineering decision making. Use of statistical software in problem solving. **10 Hours**

UNIT-III

Sampling Distributions – confidence Intervals Estimation for single sample, Two Sample on mean of a Normal distribution, variance known and variance unknown. Confidence interval on variance and standard deviation of normal population. Tests of hypotheses - Tests on the mean of a Normal distribution, Tests of hypotheses on means of two normal distributions variance is known and unknown, hypothesis test on variance and standard deviation, Goodness of fit test on Uniform, Binomial and Poisson distributions . Use of statistical software in problem solving.

6 Hours

UNIT-IV

Regression and Correlation: Simple Linear Regression Analysis, correlation coefficient, Karl Pearson and Spearman's coefficients, Coefficient of Determination, Multiple linear Regression with two variables. engineering application and use of statistical software in problem solving.

8 Hours

UNIT-V

Design of Experiments and Big data: Introduction, terminologies, principles of experimental design, ANOVA, Introduction to Big data: Data science, Characteristics of data, Categorization of Analytical methods Data, Visualization, Multivariate Statistics Missing Data analysis, Outliers, Normality, Linearity, and Homoscedasticity (no analytical treatment) use of statistical software in problem solving.

8 Hours

NIM41- WORK SYSTEM ENGINEERING & ERGONOMICS
(Integrated Professional Core Course)

Contact Hours/ Week	: 3 (Lecture)	Credits:	3.0
Total Lecture Hours	: 42	CIE Marks:	50+50
Total Tutorial Hours	: -	SEE Marks:	50+50
Practical/ Week	: 2 (Hours/Week)		

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	To impart knowledge and skills of work study and productivity concepts in industries.
CO2:	Students are able to study the existing process, analyze, evaluate, design and develop proposed practices charts using method engineering techniques.
CO3:	Students are able to collect data, analyze various manufacturing operations.
CO4:	Students are able to analyze and draw the man, machine chart to improve the efficiency of man and machine.
CO5:	To describe and analyze the ergonomic concepts in designing the industrial equipment, tools and machines with respect to human capabilities.

UNIT - I

PRODUCTIVITY AND WORK STUDY- Definition of productivity, Productivity of land, materials, machine and men, factors affecting the productivity, Measurement of productivity, Total time of Job, management techniques to reduce work content and ineffective time. Work study: Definition, objective and scope, relationship between method study and work measurement, work study,Human factor in work study, Qualities required for work study man, Basic steps in work study. **8 Hours**

UNIT - II

METHOD STUDY- Definition, objective, scope and basic procedure of method study, selection of job, various recording techniques like outline process charts, flow process charts, man machine chart, multiple activity charts. Flow diagram, string diagram and travel chart. Charts to record moment at work place –two handed process chart. Critical examination, Principles of motion economy, classification of moments.

8 Hours

UNIT – III

WORK MEASUREMENT - Definition, objective and benefit of work measurement. Work measurement techniques. Conducting study with the simple problems.

TIME STUDY: Definition, time study equipment, selection of job, steps in time study. Breaking jobs into elements, recording information. Rating & standard Rating, standard performance, scale of rating, factors of affecting rate of working, allowances and standard time determination. Predetermined motion time study – Method time measurement (MTM).

8 Hours

UNIT - IV

ERGONOMICS - Introduction, areas of study under ergonomics, system approach to ergonomics model, man-machine system. Components of man-machine system and their functions – work capabilities of industrial worker, study of development of stress in human body and their consequences. Computer based ergonomics.

7 Hours

UNIT - V

DESIGN OF MAN-MACHINE SYSTEM - Fatigue in industrial workers. Quantitative qualitative representation and alphanumeric displays. Controls and their design criteria, control types, relation between controls and displays, layouts of panels and machines. Design of work places, influence of climate on human efficiency.

WORKING CONDITIONS IN WORK PLACE: Layout and housekeeping, lighting, noise, vibration, ergonomics, fire prevention and protection, OSHAS.

8 Hours

1	Dr. A.K.Singh	Time and Motion study, Jaico publishing house.
2	S Dalela and Sourabh	Work Study and Ergonomics, Standard book house, 6th Edition.

WORK STUDY AND ERGONOMICS LABORATORY

Unit-1: METHOD STUDY

1. Recording Techniques: Preparing the following charts and diagrams

- Outlines process chart
- Flow process chart and Flow diagram
- Two handed process charts
- Multiple Activity Chart
- String diagram,

2. Experiments on the Application of principle of motion economy

3. Development of Layout plans using Presto board and String Diagram

Unit-2: WORK MEASUREMENT

6. Exercises on Pace & Performance rating

7. Determining the standard time for simple operations using Stopwatch time study

8. Exercises on estimating standard time using PMTS.

Unit-3: ERGONOMICS

9. Measurement of variation effect in body parameters, Oxygen consumption and CO2 consumption during work cycles.

10. Effect of Noise, Light, and Heat on human efficiency in work environments.

NIM42- Computer Integrated Manufacturing and Industry 4.0
(Integrated Professional Core Course)

Contact Hours/ Week	: 3 (Lecture)	Credits:	3.0
Total Lecture Hours	: 42	CIE Marks:	50+50
Total Tutorial Hours	: -	SEE Marks:	50+50
Practical/ Week	: 2 (Hours/Week)		

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	To impart knowledge of CIM and Automation and different concepts of automation
CO2:	To expose students to computer aided process planning, material requirement planning, capacity planning etc
CO3:	To expose the students to CNC Machine Tools, CNC part programming, and industrial robots
CO4:	To expose students to automated flow lines, assembly lines, Line Balancing Techniques and Flexible Manufacturing Systems
CO5:	To introduce the students to concepts of Additive Manufacturing, Internet of Things, and Industry 4.0 leading to Smart Factory

UNIT -I

Introduction to Automation and Industrial Control Systems: Automation in Production Systems, automated manufacturing systems- types of automation, reasons for automating, Computer Integrated Manufacturing, computerized elements of a CIM system, CAD/CAM and CIM. Mathematical models and matrices: production rate, production capacity, utilization and availability, manufacturing lead time, work-in process, numerical problems, Fundamentals, system configurations, applications, automated flow lines, buffer storage, control of production line, analysis of transfer lines, analysis of flow lines without storage, partial automation, analysis of automated flow lines with storage buffer, fundamentals of automated assembly systems, numerical problems. **8 Hours**

UNIT -II

CAD and CAPP : The design process, applications of computers in design, software configuration, functions of graphics package, constructing the geometry. Transformations: 2D

transformations, translation, rotation and scaling, homogeneous transformation matrix, concatenation, numerical problems on transformations, Computer Aided Process Planning, Retrieval and Generative Systems, benefits of CAPP, Production Planning and Control Systems, typical activities of PPC System, computer integrated production management system, Material Requirement Planning, inputs to MRP system, working of MRP, outputs and benefits, Capacity Planning, Computer Aided Quality Control, Shop floor control. **8 Hours**

UNIT –III

Numerical controls, programming and programmable logic controllers: Fundamentals of NC technology, Computers and numerical controls, Applications of NC, Analysis of positioning system, NC part programming, Components of the PLC, PLC Operating Cycle, Programming the PLC. **8 Hours**

UNIT –IV

Flexible manufacturing systems and Robot technology: Fundamentals of Group Technology and Flexible Manufacturing Systems, types of FMS, FMS components, Material handling and storage system, applications, benefits, computer control systems, FMS planning and design issues, Automated Storage and Retrieval Systems, AS/RS and Automatic parts identification systems and data capture. Robot anatomy, joints and links, common robot configurations, robot control systems, accuracy and repeatability, end effectors, sensors in robotics. Robot programming methods: on-line and off-line methods. Robot industrial applications: Material handling, processing and assembly and inspection. **8 Hours**

UNIT –V

Additive Manufacturing, Industry 4.0 & Cloud computing: Basic principles of additive manufacturing, slicing CAD models for AM, advantages and limitations of AM technologies, Additive manufacturing processes: Photo polymerization, material jetting, binder jetting, material extrusion, Powder bed sintering techniques, sheet lamination, direct energy deposition techniques, applications of AM. Recent trends in manufacturing, Hybrid manufacturing, Industry 3.0 v/s Industry 4.0, functions, applications and benefits. Components of Industry 4.0, Internet of Things (IOT), IOT applications in manufacturing, Big-Data and Cloud Computing for IOT, IOT for smart manufacturing, influence of IOT on predictive maintenance, industrial automation, supply chain optimization, supply-chain & logistics, cyber-physical manufacturing systems.

8 Hours

Computer Integrated Manufacturing and Industry 4.0 Lab Component

1. Manual and Computer assisted part programming and Component manufacture in machining centre/CNC Lathe
2. Simulation of Machining using CAM software.
3. Automated component inspection using vision system.
4. Practice on Computer Aided Measuring Instruments.
5. Practice on Rapid Prototyping

NIM43- ENGINEERING ECONOMICS

(Professional Core Course)

Contact Hours/ Week	: 3 (Lecture)	Credits:	3.0
Total Lecture Hours	: 42	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Practical/ Week	: -		

Course Outcomes: Upon completion of this course the student will be able to

CO1:	Identify the role of engineering economy in the decision-making process for engineering applications and use the concepts of cash flows and apply discounted cash-flow analysis to evaluate proposed capital investments.
CO2:	Compare two and more alternative investment decisions with equal, unequal, and infinite project lives using present worth and Future worth Comparisons.
CO3:	Evaluate rate of return of an independent project and comparing several mutually exclusive alternatives to find the most economical solution using AW comparison and ROR analysis for making decisions
CO4:	Apply Classical depreciation methods to identify and analyse the impact of depreciation on feasibility of real life projects.
CO5:	Apply the suitable replacement analysis technique in decision making, involving optimal replacement of the assets.

UNIT – I

INTRODUCTION TO ENGINEERING ECONOMY - Engineering Decision - makers, Problem solving, Decision making, Law of demand and supply, Law of returns.

INTEREST AND INTEREST FACTORS - Interest rate, simple interest & Compound interest factors, Cash- flow diagrams. **8 Hours**

UNIT – II

PRESENT WORTH COMPARISON - Conditions for present worth comparisons, Basic Present worth comparisons, Present worth equivalence, Net Present worth, Assets with unequal lives, infinite lives, Future worth comparison. **8 Hours**

UNIT – III

EQUIVALENT ANNUAL WORTH COMPARISONS - Equivalent Annual Worth Comparison methods, Situations for Equivalent Annual Worth Comparison, Consideration of asset life, Comparison of assets with equal and unequal lives, Use of sinking fund method, Problems.

RATE OF RETURN CALCULATIONS: Rate of return, Minimum acceptable rate of return, IRR, ERR; Problems on Rate of return calculation.

8 Hours

UNIT – IV

DEPRECIATION: Causes of Depreciation, Basic methods of computing depreciation charges: Straight line method of depreciation, Declining and double declining balance method, Sum of year's digits method and Sinking fund method.

8 Hours

UNIT – V

REPLACEMENT ANALYSIS: Deterioration, obsolescence, inadequacy, Economic life for cycle replacements, group & individual replacement. Problems.

8 Hours

COMPUTER AIDED MACHINE DRAWING

Lab Hours/ Week	:2	Credits	:1.0
SEE Marks	:50	CIE Marks	: 50
Course Code	:NIML41		

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	Identify Geometric Dimensioning and Tolerances (GD & T)
CO2:	Draw different orthographic views of given the components
CO3:	Construct sectional views of different machine components.
CO4:	Assemble the different parts to get the final product

Introduction: Review of graphic interface of the software. Review of basic sketching commands and navigational commands. Starting a new drawing sheet, Sheet sizes, Naming a drawing, Drawing units, grid and snap.

Geometric Dimensioning and Tolerances (GD & T) – ASME Y14.5

ASME Y14.5M 1994 standard –Straightness, Perpendicularity, Flatness Angularity Roundness, Concentricity, Cylindricity Run out, Profile True position. Maximum material condition (MMC) Least material condition (LMC), projected tolerance zone, diametrical tolerance zone, Tangent plane Free State

03- Hours

Part-A

Unit – I

Orthographic Views: Conversion of pictorial view into orthographic views of simple machine parts with or without section. (Bureau of Indian Standards conventions are to be followed for the drawings) Hidden line conventions.

08- Hours

Unit – II

Sectional views: introduction to sections, hatching of sections, cutting planes, revolved or removed sections, half section, full section, local section, arrangement of successive sections.

08- Hours

Part-B

Assembly Drawings:

- Couplings–Flange, Universal, Oldham's coupling.
- Joints– Knuckle, cotter with socket and spigot.
- Miscellaneous machine components– Screw jack (bottle type), Plummer block (Pedestal Bearing), Machine vice, Tailstock of lathe- For practice only, Tool Head of shaper-For practice only. **20- Hours**

Open end drawings have to be given from each Unit for each student (only for C.I.E Marks not for main exam)

Continuous Internal Evaluation (C.I.E) Marks: 50

All the sheets should be drawn in the class using software. Sheet sizes should be A4. All sheets must be submitted at the end of the class by taking printouts.

Scheme of Examination:

a) **Two questions to be set** from each Part-A, Part-B and Part-C

b) Part-A carry 20 marks and Part-B questions carry 30 marks.

i.e. Part-A…… 2 x 10 = 20 Marks

Part-B ……1 x 30 = 30 Marks

Total = 50 Marks

c) Maximum of 3 hours to be given to each candidate and no Time Restriction for Sketching and Computer Drawings.

d) 20 % of the marks for manual sketching and 80 % for computer drawings in part –A questions.

e) 100 % marks to be considered for computer drawings in part-C questions.

f) No Viva-Voce.

CONSTITUTION OF INDIA AND PROFESSIONAL ETHICS		Course Code: **NHS03**	
Contact Hours/ Week	: 2 (T)	Credits :	1.0
Total Lecture Hours	: 0	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	To orient students on the salient features of the Indian Constitution with special emphasis on fundamental rights and duties.
CO2:	To provide an overview of the Union and State legislature, executive and judiciary.
CO3:	To explain the importance of electoral process and help students appreciate the ethical practices in elections.
CO4:	To facilitate the students to have a clear perspective of the Ethical values and their relevance in the present context of globalization.
CO5:	To enable the students familiarize themselves with the ethical values proposed and practiced by the great leaders / eminent personalities with particular reference to Sir M. Visvesvaraya.

Part I: Constitution of India

Unit 1: Introduction to Constitution of India

Salient Features of Indian Constitution, Preamble to the Indian Constitution, Different kinds of fundamental rights, Directive Principles of State Policy, Categorical study of Directive Principles, Relationship between DPSP and Fundamental Rights, Fundamental Duties. Meaning and kinds of human rights and safeguards.

06 Hours

Unit 2: Union and State Governments

Union and State Legislature: Composition and powers of Loksabha, Rajyasabha, Legislative Assembly and Legislative Council. Union and State Executive: The appointment and powers of President, Vice-president, Prime-Minister, Union Council of Ministers, Governor of State, Chief Minister of State and State Council of Ministers. Union and State Judiciary: The Composition and powers of Supreme Court and High Court.

07 Hours

Unit 3: Other Provisions of Constitution

Method of amendment of constitution of India, 42nd and 44th amendment act. Special provisions relating to SC / ST, Women and Children and other backward classes. Electoral process related to the Election Commission of India: Composition, functioning and removal of the Election Commissioner(s).

Human Rights: Meaning, Kinds and Safeguard of Human Rights, State Human Rights Commission and National Human Rights Commission.

05 Hours

Part II -Professional Ethics

Unit 4: Professional Ethics and Human Values

Introduction, What is Ethics? Scope of Professional Ethics, Values and Characteristics, Types of values: Negative and positive values, Ethical values for Professional success. ***Case Studies*:** Ethical practices of the reputed Indian Companies: TATA Group, Wipro Technologies.

4 Hours

Unit 5: Professional Code of Conduct

Introduction, Professional Code, Legal System, Ethical and Unethical practices, Making the Professional Code successful. Ethical values of Sir M. Visvesvaraya, Mahatma Gandhi and Swami Vivekananda.

4 Hours

5	Swami Vivekananda	"My India: The India Eternal" – Ramakrishna Mission Institute of Culture, Kolkata, 1993.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration
SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

Advanced Technical Training Lab- Python

Lab Hours/ Week	:2	Credits	:1.0
SEE Marks	:50	CIE Marks	:50
Course Code	: **5MESL1**		

Course Outcomes: Upon completion of this course the student will be able to	
CO1:	Design and develop solutions for particular programming problems using the fundamental concepts of Python Programming.
CO2:	Implement different data structures like Arrays, Dictionary, Queues, Lists and Tuples.
CO3:	Implement File operation like Open, close reading & writing the file
CO4:	Understand the Object-Oriented Concepts like Classes, Objects, Inheritance and Polymorphism

#	Modules Covered	Duration in hrs.
1	Fundamentals of Python Programming, IO & Operators	04
2	Control Statements, Decision Making, Iterations	06
3	String & String Manipulations	02
4	Data Structures	14
5	Functions	02
6	Fie Operations	02
7	Python OOPs Concepts	06

Topics Covered

1. Introduction to Programming

A. History

B. Features

C. Setting up Path

D. Compilation

E. Data types

F. Variables

2. Working with IO & Operators

A. Declaration, Input – Output

B. Arithmetic Operator

C. Relational Operators

D. Assignment Operators

E. Logical Operators

F. Membership Operators

G. Identity Operators

H. Bitwise Operators

I. Multi- line Statements

J. Comment Line

3. Decision Making

a. Need of Decision Making and Syntax

b. If

c. If-else

d. Nested if

e. If-else if

4. Iterations

a. For Loop

b. While Loop

c. Nested Loops

5. Control Statements

a. Break

b. Continue

c. Pass

6. String

a. Creating a String

b. Memory Allocation

c. Built Functions in String

7. List

a. Creating List

b. Accessing Elements in List

c. Negative Accessing Elements in List

d. Slicing in List

e. Built Functions in List

8. Tuple

a. Creating Tuples

b. Immutable

c. Accessing values in Tuple

d. Slicing in Tuple

e. Built Functions in List

9. Dictionary

a. Creating a Dictionary with Integer Key, Mixed Key, dict(), Pair element, nested Dictionary.

b. Adding Element to Dictionary

c. Accessing Element in Dictionary

d. Built Functions in Dictionary

10. Set

a. Creating a Set and Built Functions in Set

11. Function

a. Syntax of Function

b. With Argument With return type.

c. With Argument without return type

d. Without Argument with return type

e. Without Argument without return type

f. Predefined, User defined, Anonymous Functions

g. Scope of variables.

12. File Operations

a. Open & Close File

b. Read & Write operations

13. Python OOPS Concepts

a. Classes & Objects

b. Inheritance

c. Encapsulation

d. Polymorphism

i. Method Overloading

ii. Method Over Riding

e. Data Abstraction

f. Methods

CIE: 50 Marks

Students are accessed every week for 35 marks.

- Evaluation includes Problem Analysis, Program Writing and Executing Programs in the Lab (10 + 15 + 10).
- Two tests are conducted for 15 marks each.
- Marks distribution (50 Marks) = Average of weekly assessments (35 Marks) + Average of two tests (15 Marks).

SEE: 50 Marks

- There are 20 programs in the list divided into two parts A & B, students have to pick one program each from the Part A & Part B
- Both the parts carry equal weightage.
- The evaluation includes Program Write-up + Analysis + Program Execution + Viva (10 + 10 + 20 + 10 = 50 Marks)
- Change of the experiment is allowed only once in the first half an hour of the exam and in such cases the evaluation will be done for 80% of the Marks.

SCHEME & SYLLABUS
OF

V & VI Semestres B.E.

INDUSTRIAL ENGINEERING & MANAGEMENT

2022-23

Vision of the Department

To be a distinguished centre for the dissemination of knowledge and promoting research and consultancy in the field of Industrial Engineering and Management and for catering to the needs of the society.

Mission of the Department

1. To practice the philosophy of learning-teaching-learning and adopt the latest tools and techniques for the effective dissemination of knowledge in the field of Industrial Engineering and Management.
2. To collaborate with academic institutions, industry and research organizations to establish Centers of Excellence (COE) in emerging areas and promote research and consultancy.
3. To impart training for the overall development of students and inculcate commitment for social responsibility.

Program Educational Objectives (PEOs)

1. Graduates will excel in their chosen careers and successfully pursue higher education in Industrial Engineering and Management and related fields.
2. Graduates will manage the functioning of organization and enhance its competitiveness using contemporary tools in a socially acceptable way.
3. Graduates will demonstrate professionalism, ethical conduct, and societal responsibility and adapt to current trends by engaging in lifelong learning.

Programme Specific Outcomes (PSOs)

1. PSO1: Apply broad-based basic engineering and analytical tools for system design, analysis, performance evaluation and decision-making.
2. PSO2: Apply management concepts and principles for decision making in the area of operations, marketing, finance and human resource and analyse their impact.
3. PSO3: Apply the knowledge of materials, machining and manufacturing; analyse and evaluate the choices made.
4. PSO4: Apply the knowledge of industrial engineering for work system design and analyse, evaluate and create cost effective and safer systems and procedures.

Program Outcomes (POs)

Engineering Graduates will be able to:

a) Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
b) Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
c) Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
d) Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
e) Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
f) The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
g) Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
h) Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
i) Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
j) Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
k) Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
l) Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

SCHEME OF TEACHING AND EXAMINATION (175 Credits Scheme)

V Semester

Sl. No.	Course	Course Code	Course Title	Teaching Department	Teaching hrs/week			Examination			Credits

6RIME22	Organizational Behaviour
6RIME23	Enterprise Resource Planning
MEI61	Computer Aided Mechanical Design and Analysis-II

DESIGN OF MACHINE ELEMENTS

Contact Hours/ Week	: 4 + 1 (Lecture+ Tutorials)	Credits:	4.5
Total Lecture Hours	: 52	CIE Marks:	50
Total Tutorial Hours	: 13	SEE Marks:	50
Course Code	:5RIM01		

Course Objectives:

Students will able to:

1. Describe the Design considerations, Codes and Standards. Illustrates the Stress concentration, Failure of brittle materials and ductile materials. Justifies factor of safety, Theories of failure.
2. Explain Low cycle fatigue, High cycle fatigue, Endurance limit and Fluctuating stresses. Derive Goodman and Soderberg relationship.
3. Explain Low cycle fatigue, High cycle fatigue, Endurance limit and Fluctuating stresses. Derive Goodman and Soderberg relationship.
4. Identify and compute mechanical joints-Cotter and Knuckle Joints, Riveted Joints, Welded Joints.
5. Discuss the Types of springs. Reckon stresses in Coil springs of circular and non circular cross section and Leaf springs.

Unit- I

Design for Static Strength: Definition of Engineering design and its classification, Codes and Standards, Static loads and factor of safety, problems under different static forces. Theories of failure- Maximum normal stress theory, maximum shear stress theory, Distortion energy theory; Stress concentration, reduction of stress concentration, Determination of Stress concentration factor. Combined Stress concentration factor. **(10 + 2) Hours**

Unit- II

Design for impact and Fatigue Strength: Introduction to Impact load, Derivation of instantaneous stress and deflection due to axial, bending and torsion loading, numerical problems on impact load. Introduction to fatigue, S - N diagram, Low cycle fatigue, High cycle fatigue, and Endurance limit. Modifying factors -size effect, surface effect, Stress concentration effects; Fluctuating stresses, Fatigue strength under fluctuating stresses, Goodman and Soderberg relationship; Stresses due to combined loading, cumulative fatigue damage.

(10+ 3) Hours

Unit- III

Design of Shafts: Introduction to forces on power transmission shaft under gear drives and belt drives. Design of solid shaft and hollow shaft based on normal and shear stress theories, design of shaft based on torsional rigidity, ASME & BIS codes for design of transmission shafts, shafts under fluctuating loads and combined loads.

(10+2) Hours

Unit- IV

Mechanical Joints: Introduction to mechanical joints, Riveted Joints, types, rivet materials, Failures of Riveted joints, Efficiency, Welded Joints -Types, Strength of butt and fillet welds, design of Cotter and Knuckle Joints for axial load.
(10 + 3) Hours

Unit- V

Design of Springs: Importance springs in Mechanical Engineering, types of springs -stresses in coil springs of circular and non-circular cross sections. Tension and compression springs, fluctuating loads, Leaf Springs: Stresses in Leaf springs. Equalized stresses- Energy stored in springs.

(12+3) Hours

Course Out Comes:

Upon completion of this course the student will be able to:

CO1: Describe the necessity of factor of safety & identify different theories of failures to design the components subjected to different types of static loads. (Level -3).

CO2: Compute the dimensions of the machine elements subjected to dynamic (fatigue and impact) loads (Level -3).

CO3: Design the shafts for power transmission subjected to different load conditions (Level -3).

CO4: Distinguish between different mechanical joints and design the appropriate mechanical joints for the different applications (Level -2).

CO5: Determine and measure the energy storage in various springs and select the different types of springs for different applications (Level -3).

ELEMENTS OF MANUFACTURING AUTOMATION

Contact Hours/ Week	: 3 (Lecture)	Credits: 4.0
Total Lecture Hours	: 42	CIE Marks: 50
Total Tutorial Hours	: -	SEE Marks: 50
Course Code	:5RIM02	

Course Objectives:

1. To make students to understand the Computer Applications in Design and Manufacturing (CAD/CAM) leading to Computer integrated systems.
2. To expose students to Computer Graphics, enable them to perform various 2D transformations of entities on display devices. To be aware of various industrial applications of NC/CNC/DNC system and to expose students to computer aided process planning.
3. To expose the students to Robotics and Application of Artificial intelligence in CAD/CAM/CIM
4. To introduce the students to concepts of Computer Networks for Manufacturing, Inspection technologies, Industry 4.0 and Internet of Things leading to Smart Factory.
5. To get familiarized with various skills necessary for Industrial applications of Programmable Logic Controllers (PLCs).

Unit- I:

Introduction to CAD/CAM, CIM

CAD/CAM: Definition of CAD/CAM, Role of CAD/CAM in product cycle and Automation and CAD/CAM, Fundamentals of CAD: CAD system definition,, the design process, Application of computers in design, Creating the manufacturing database, Benefits of CAD, Hardware In CAD - Basic Hardware structure, working principles, usage and types of hardware for CAD, integrated CAD/CAM, Introduction to CIM: Definition of CIM, CIM Wheel, Evolution of CIM, components of CIM, Benefits of CIM. **8 Hours**

Unit- II

Computer Graphics- Software configuration of a graphic system, function of a Graphics package, construction of geometry, wire frame and solid modelling, CAD/CAM integration. Describe modelling facilities. Geometric 2D and 3D transformations. (Numerical problems on 2D transformations), **CAD standards:** Introduction to exchange of modeling data, Graphic standards- IGES, DXF.

NC/CNC/DNC systems: NC systems - introduction, basic components of an NC system, NC procedure, NC coordinate systems, NC motion control systems, application of Numerical control, NC Part programming. Computer control in NC: introduction, problems with conventional NC, NC controller technology, CNC, DNC, combined CNC and DNC systems, Adaptive control machining systems.

10 Hours

Unit- III

Robotics: Introduction, robot physical configurations, basic robot motions other technical features, programming the robot, robot programming languages, end effectors , work cell controls and interlocks, robotic sensors, robot applications.

Application of Artificial intelligence in CAD/CAM/CIM: Introduction, Expert system in CIM, Expert system in Process Planning, Application AI in computer vision. **8 Hours**

Unit- IV

Computer Networks For Manufacturing: Hierarchy of computers in manufacturing, local area networks, manufacturing automation protocol, Inspection technologies: contact v/s noncontact inspection techniques, conventional measuring and gauging techniques, Automated Inspection, Co-ordinate measuring machines, CMM construction, CMM operation and programming, CMM applications and benefits.

Future of Automated Factory: Industry 4.0, functions, applications and benefits. Components of Industry 4.0, Internet of Things (IOT), IOT applications in manufacturing, Big-Data and Cloud Computing for IOT, IOT for smart manufacturing, influence of IOT on predictive maintenance, industrial automation, and cyber-physical manufacturing systems.

8 Hours

Unit- V

Programmable Logic Controllers (PLCs): Introduction, Micro PLC, Programming a PLC, Logic Functions, Input & Output Modules, PLC Processors, PLC Instructions, Documenting a PLC System, Timer & Counter Instructions, Comparison & Data Handling Instructions, Sequencing Instructions, Mask Data Representation, Typical PLC Programming, Exercises for Industrial Applications.

8 Hours

Course outcomes:

Upon completion of this course the student will be able to:

CO1: Describe application of computers Applications in Design and Manufacturing (CAD/CAM) leading to Computer integrated systems

CO2: Demonstrate the use of 2D and 3D transformations in CAD and to describe the concepts of CNC, DNC and Adaptive control.

CO3: Discuss importance of computer networks inspection technologies and their applications in manufacturing systems and to Visualize and appreciate the modern trends in manufacturing like Industry 4.0 and applications of Internet of Things leading to Smart Manufacturing.

CO4: Identify and discuss different robot configurations, applications and to identify applications of Artificial intelligence in CAD/CAM/CIM.

CO5: Apply the basic concepts of Programmable Logic Controllers (PLCs) for various Industrial Applications.

MODELLING, SIMULATION AND ANALYSIS

Contact Hours/ Week	: 3 + 1 (Lecture+ Tutorials)	Credits:	3.5
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: 13	SEE Marks:	50
Course Code	:5RIM03		

Course Learning Objectives:

The students will be able to

1. Define the basics of simulation modelling and replicating the practical situations in organizations.

2. Generate random numbers and random variates using different techniques.

3. Analysis of Simulation models using input analyzer, and output analyzer

4. Explain Verification and Validation of simulation model.

5. Explain the various simulation and statistical analysis packages/ softwares used in simulation.

Unit- I

Introduction to Simulation- Simulation, advantages, Disadvantages, Areas of application, System, System environment, components of a system, Model of a system, types of models, Principles used in modeling, steps in a simulation study.

Simulation Examples-Simulation of Queuing systems, Simulation of Inventory System, Other simulation examples. **(8+5)- Hours**

Unit- II

General Principles- Concepts in discrete - events simulation, event scheduling / Time advance algorithm, simulation using event scheduling.

Random Numbers- Properties, Generations methods,, Tests for Random number- Frequency test : Kolmogorov- Smirnov test, chi-square test, Independence test: Runs test, Autocorrelation test, Gap test, Poker test. **(8+4) -Hours**

Unit- III

Random Variate Generation- Inverse Transform Technique- Exponential, Uniform, Weibull, Triangular distributions, Direct transformation for Normal and log normal Distributions, convolution methods- Erlang distribution, Acceptance – Rejection Techniques – Poisson Distribution, Gamma Distribution.

(7+2)- Hours

Unit- IV

Analysis Of Simulation Data-

Input Modeling-Data collection, Identification and distribution with data, parameter estimation, Goodness of fit tests, Selection of input models without data, Multivariate and time series analysis (problems on hypothesis testing for goodness of fit & parameter estimation).

Verification and Validation of Model – Model Building, Verification, Calibration and Validation of Models.

Output Analysis – Stochastic Nature of output data, introduction to Output analysis of terminating simulation and steady state simulations.

(8+2) -Hours

Unit- V

Optimization Via Simulation- Meaning, difficulty, Robust Heuristics, Random Search

Applications- Simulation of Manufacturing and Material Handling Systems, Simulation of Computer Systems, Simulation of Project Management.

Simulation Software's- Selection of Simulation Software, Simulation packages, Experiment and Statistical Analysis tool, Trend in Simulation Software.

08 -Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Explain the major capabilities and limitations of discrete-event simulation and apply simulation modeling to solve simple real – world problems (Level-2).

CO2: Generate and test random number variates and apply them to develop simulation models (Level-3).

CO3: Select appropriate probability distributions for random-number generation (Level-3).

CO4: Discuss input and output analysis, verification and validation of simulation model (Level-3).

CO5: Evaluate the suitability of available simulation packages in relation to particular requirements (Level-2).

FINANCIAL MANAGEMENT AND COSTING

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50
Course Code	:5RIME11		

Course Objectives:

This course will enable students to:

1. Describe the accounting system, types and importance of financial accounting.
2. Compute and interrupt different financial ratios that could be useful to a short term creditors and investors.
3. Identify the different forms of business organization and capital budgeting techniques.
4. Describe working capital management and formulate operating cycle for a given numerical problem on working capital management.
5. Illustrate the elements of costing and types of variance analysis.

Unit: I

Financial Accounting: Introduction to book keeping, definition of book keeping objectives, types of book keeping, journal, ledger, trail balance, preparation of trail balance, trading account, preparation of trading account, profit and loss account, preparation of profit and loss account, balance sheet, preparation of balance sheet, analytical treatment. **10- Hours**

Unit: II

Financial Ratio Analysis: Financial analysis, definition of ratios, uses of ratios, significance of ratio analysis, limitations. Types of ratios, liquidity ratios, capital structure ratios, activity ratios, profitability ratios, analytical treatment.

08 -Hours

Unit: III

Introduction to Financial Management: Definition of financial management, objectives of financial management, functions of financial management, forms of business organization.

Capital Budgeting: Definition of capital budgeting, features of capital budgeting.

06 -Hours

Unit: IV

Working Capital Management: Definition, factors influencing working capital management, operating cycle, analytical treatment.
Budgeting: Definition, Budgetary control, master budget, Flexible budget, analytical treatment.

08- Hours

Unit: V

Costing: Definition of costing, objectives of costing, elements of costing, methods of costing. Preparation of cost sheet. Job cost, sheet, batch cost sheet.

07- Hours

Course Outcomes (COs)

Upon the successful completion of the course, students will be able to :

CO1 : Interpret the importance of different types of accounting system.
CO2 : Analyze and interpret the importance of Ratio analysis in financial system.
CO3 : Prepare trading account, profit and loss account and balance sheet used in industrial concern.
CO4 : Discuss the requirements of working capital management.
CO5 : Analyze, formulate and compute the different variances used in standard costing.

5RIME12-FINITE ELEMENT METHOD

Contact Hours/ Week	: 3	Credits :	03
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50
Course Code	:5RIME12		

Course Learning Objectives (CLOs):

Student will be able to:

1. Solve engineering problems using Variational formulations (Rayleigh's Ritz method) and weighted residual methods (Galerkin's method).
2. Formulate Strain displacement matrix and shape functions for one dimensional element.
3. Develop a stiffness matrix and solve one dimensional bar and truss problems in engineering application.
4. Formulate and solve beam problems
5. Understand the use of Four-Noded Tetrahedral Element and Eight-Noded Hexahedral Element and Solve different heat conduction problems.

Unit-I

Introduction to Finite Element Method : Engineering Analysis, History, Advantages, Classification, Basic steps in FEM, Convergence criteria, Role of finite element analysis in computer-aided design, Mathematical Preliminaries, Basic Equations and Potential Energy Functional, Principle of Virtual work, Differential Equations Formulations, Variational formulations (Rayleigh's Ritz method) and weighted residual methods (Galerkin's method).

08- Hours

Unit-II

One Dimensional elements: (Bars, Trusses) Modeling considerations, Coordinate systems. Bar elements: Introduction, shape functions for1D bar Element (linear, quadratic and cubic elements in different coordinate systems), Strain matrix and Stress matrix. Introduction to truss elements, Shape functions, strain and stress matrices for plane truss elements.

08- Hours

Unit-III

Applications of one-dimensional problem: Stiffness matrix, properties of stiffness matrix, Consistent nodal force vector, Body force, reaction vector, assembly of elemental matrices and vectors, incorporation of boundary conditions, derivation of element stiffness matrix and load vector for bar andtruss elements. Numerical problems on bar&truss elements.

07- Hours

Unit-IV

Beam Elements : Introduction to beam elments, Hermite shape functions for beam elements , Stiffness and Numerical problems on beam elements.

Two Dimensional Elements: Introduction, Analyses of Plane Elasticity Problems (plane stress and plane strain conditions), Three Noded Triangular Element (TRIA 3), Four Noded Quadrilateral Element (QUAD 4), Shape functions for linear triangular and quadrilateral elements.

08- Hours

Unit-V

Three-Dimensional Elements: Introduction to three-dimension elements, Four Noded Tetrahedral Element (TET 4), Eight-Noded Hexahedral Element (HEXA 8) & Lagrange family of elements, Shape functions(without derivation),

Heat Transfer problems: Steady state heat transfer, 1 D heat conduction governing equation, boundary conditions, One dimensional element

08- Hours

Course Outcomes (COs)

CO1: Apply Variational formulations (Rayleigh's Ritz method) & weighted residual methods (Galerkin's method) to Engineering problems.

CO2: Analyze Admissible displacement functions, strain matrix and stiffness matrix for one dimensional elements.

CO3: Develop stiffness matrix for beam elements and solve beam problems for different loading conditions.

CO4: Formulate Jacobian matrix and stress matrix for CST elements, quadrilateral elements

CO5: Formulate Shape functions for Four-Noded Tetrahedral Element (TET 4), Eight-Noded Hexahedral Element (HEXA 8) & Higher Order Elements and solve one dimensional heat transfer problems.

SOFT COMPUTING

Contact Hours/ Week	: 3 (Lecture)	Credits:	3.0
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Course Code	:5RIME13		

Course Objective:

The objective of the course is to:

1. Introduce tools and techniques of Soft Computing.
2. Familiarize Neural networks and learning methods for modelling Engineering problems.
3. Introduce the ideas of fuzzy sets, fuzzy logic and fuzzy inference system in modelling engineering problem.
4. Familiarize the importance of Hybrid system and swarn intelligence in modelling engineering problems.
5. Introduce basics of genetic algorithms and their applications in optimization of models.
6. Develop skills thorough understanding of the theoretical and practical aspects of Soft Computing.

UNIT - I

Introduction to Soft Computing: What is soft computing? Differences between soft computing and hard computing, Need for soft computing; Soft Computing constituents, Methods in soft computing, Applications of Soft Computing, Neural Networks: Definition, advantages, Applications, Scope. Fuzzy logic: Definition, Applications. Hybrid System: Definition, Types of Hybrid Systems, Applications. Genetic Algorithms: Definition, Applications. **07- Hours**

UNIT - II

Fundamental of Neural Network: Basic concept, Biological Neurons and Model of Artificial Neuron, Neural network Architecture, Models of Artificial Neural Networks, single layer and multi-layer feed forward Neural network, recurrent network, Characteristics, Learning methods. Back Propagation network, Architecture, Perception Model,

Single-layer perceptron and multilayer perceptron model;Multi-layer Feed-forward Network: Delta Learning Rule for Multi-perceptron Layer, Generalized Delta Learning Rule, Feed-forward Recall and Error Back-propagation Training, Training of neural network, Radial Basis Function Networks. Applications of neural networks in engineering. **08- Hours**

UNIT-III

Fuzzy Logic: Brief Review of Conventional Set Theory, Introduction to Fuzzy Sets, Properties of Fuzzy Sets, Operations on Fuzzy Sets, Membership Functions. Fuzzy Extension Principle, Fuzzy Relations, Projection and Cylindrical Extension of Fuzzy Relations, Fuzzy Max-Min and Max-Product Composition. Fuzzy Knowledge Based Systems with Applications, Defuzzification Methods, Fuzzy Composition Rules, Fuzzy Reasoning ñ Fuzzy Inference Systems ñ Mamdani Fuzzy Models ñ Sugeno Fuzzy Models ñ Tsukamoto Fuzzy Models. **08- Hours**

UNIT- IV

Genetic Algorithms: What are Genetic Algorithms? Why Genetic Algorithms? Biological Background: The Cell, Chromosomes, Genetics, Reproduction, Neural Selection, Traditional Optimization and Search Techniques, Genetic Algorithm and Search space: Simple GA, General GA, Operators in GA, Encoding, Selection, Crossover, Mutation, Stopping Condition for GA flow, Constraints in GA, Problem solving using GA, Classification of GA. **08- Hours**

UNIT- V

Hybrid Systems: ANFIS: Adaptive Neuro-Fuzzy Inference Systems: Introduction, ANFIS Architecture, and Hybrid Learning Algorithm.

Swarm Intelligence: What is swarm intelligence? Various animal behaviour which has been used as examples, ant colony optimization, swarm intelligence in bees, flocks of birds, shoals of fish, ant-based routing, particle swarm optimization. **08- Hours**

Course Outcomes:

Upon completion of this course the student will be able to:

CO1 : Explain the ideas of soft computational techniques based on human experience identify relevant application in real life. (Level-2).

CO2 : Generate an ability to design, analyse and perform experiments on real life problems using various neural learning algorithms. (Level-4).

CO3 : Conceptualize fuzzy logic and its implementation for various real world applications. (Level-5).

CO4 : Provide the mathematical background to carry out optimization using genetic algorithms and Integrate various soft computing techniques for complex problems. (Level-6)

CO5 : Apply the process of approximate reasoning using neuro-fuzzy modelling (Level -3)

COMPUTER AIDED MECHANICAL DESIGN AND ANALYSIS –I

Contact Hours/ Week	: 3+3 (Theory + Lab)	Credits: 3.0
Total Lecture Hours	: 39	CIE Marks: 50
Total Tutorial Hours	: -	SEE Marks: 50

Course Objectives:

1. Main intent of the course is to better equip young engineers to increase awareness and industry connect.
2. CADA is typically designed based on industrial applications showcasing design fundamentals for automotive industry.
3. Computer aided design is integrating computer software techniques with engineering design.
4. Computer Aided Engineering (CAE) covers the broad usage of computer software to aid in engineering analysis tasks.
5. CADA emphasizes the usage of dies and fixtures for the production of a component.

Unit- I

Styling: Introduction to the sessions on styling, Introduction to Design, what is "Good Design", Good Design Examples of All Time, what is Industrial Design? Where Industrial Design is used?

Typical Product Life Cycle, Automotive Design Process (Design Process for production release), Design Studio Process or Product Conceptualization process, Case Study.

What are CAS Surfaces or Digital Clay Models? Why CAS Surfaces? What are Class A Surfaces? Role of Class A Surface Engineer, Requirements for a Surface to fulfill "Class A Surface" Standards, Why Class A? Case Studies for Class A Surfaces, Step by Step Process for Bonnet Class A Surface Creation.

08 Hours

Unit- II

Design and Development: Function of a bonnet, Inputs for the bonnet. Study of Class-A Surfaces, Develop Hood Package Layout, Develop Typical Sections, Define

Block Surfaces in 3D, Define Dynamic Clearance Surfaces in 3D, Define Hood Structural Members.

CAE 1(Durability, crash), Panel Detail Design, Define Body Assembly Process, CAE 2 (Durability, crash, Individual panel level), Design Updating and Detailing Prototypes, Design Updating and Production Release. **06 Hours**

Unit -III

Computer Aided Engineering: Introduction to Computer Aided Engineering (CAE) and its importance in the Product Lifecycle Management (PLM). Introduction to Finite Element Analysis (FEA) and its application in various domains like NVH, Durability and Vehicle Crashworthiness. Brief history of FEA with the timeline over all these years of its evolution.

Introduction to Pre-Processor, Post Processor and solvers. Importance of discretization of design space using elements and nodes on various automobile components along with importance of Stiffness Matrix. Emphasize on importance of Implicit and Explicit solvers along with various types of pre and post processors.

Durability, NVH: Importance of oil canning on an automobile hood with a case study relating to Durability domain. Free-free modal analysis on the hood which is a case study related to NVH domain.

Crashworthiness: Introduction to vehicle crashworthiness and bio-mechanics. It starts with a revision of Newtonian laws, energy management and emphasis of impulse in car crashes. It takes Head impact analysis as a case study on the hood of an automobile which is a EuroNCAP test regulation. The session also emphasizes the importance of Head performance criteria (HPC) in determining severity of injury.

Importance of Failure Criteria,Von– Mises Stress

Introduction to failure criteria by explaining the analogy of using uni-axial test results for predicting tri-axial results in reality. This session talks about the Mohr's circle and explains in detail von-Mises stress criteria; application of various failure criteria on brittle or ductile materials. **10 Hours**

Unit- IV

Formability: What is Sheet metal design and manufacturing cycle?, What is simultaneous Engineering (SE) feasibility study?, Auto body and its parts, Important constituents of an automobile, What is sheet metal?, Sheet metal processes.
Types of draw dies, Draw Model development, Considerations while developing draw model.

Forming simulations, Material properties, Forming Limit Curve (FLD), Pre processing, Post Processing. Sheet Metal Formability – Simulation.

06 Hours

Unit- V

Die Design: Introduction, Thermo- elastic stress-strain relations, Thin circular disc, Long circular cylinder.
Sheet metal parts and their operation like Cutting, Non-cutting etc., Presses, Various elements used in die design., Function of each element explained with pictures, Different types of dies, Animations describing the working of dies, This session covers real life 3D examples of die design.
Fixture Design: Define welding, Describe operations (Spot/Arc welding…), Explain what is meant by Body Coordinates, Explain the 3-2-1 principle, Explain need for Fixture,Describe Design Consideration.

Explain how to use product GD&T in the Fixture design, List the Fixture Elements.

Describe typical operations in Sheet metal Fixture (Manual/Pneumatic/Hydraulic fixture), Describe typical Unit Design for Sheet metal parts (Rest/Clamp/location/Slide/Dump units/base), Describe types of Fixture (Spot welding/Arc welding/Inspection Fixture/Gauges). **09 Hours**

Course Outcomes:

Upon completion of this course the student will be able to:

- CO1 : understand Class A surfaces in product development.
- CO2 : explain typical Product Life Cycle and product conceptualization process.
- CO3 : know the definition of stress and deformation.
- CO4 : explain various sheet metal operations performed in automotive industry.
- CO5 : describe various dies and fixtures used in industry.

COMPUTER AIDED MACHINE DRAWING

Lab Hours/ Week	:3	Credits	:1.5
SEE Marks	:50	CIE Marks	: 50
Course Code	:5RIML01		

Course objectives

To impart the skill to students with the writing and reading principles of "Engineering Drawing", which is a graphical universal language used in technical world for describing the shape and size of an object via supplying orthographic views and/ or solid models associated with all the necessary dimensions , associated tolerances and annotations created in a CADD environment.

Introduction: Review of graphic interface of the software. Review of basic sketching commands and navigational commands. Starting a new drawing sheet, Sheet sizes, Naming a drawing, Drawing units, grid and snap.

Geometric Dimensioning and Tolerances (GD & T) – ASME Y14.5

ASME Y14.5M 1994 standard –Straightness, Perpendicularity, Flatness Angularity Roundness, Concentricity, Cylindricity Run out, Profile True position. Maximum material condition (MMC) Least material condition (LMC), projected tolerance zone, diametrical tolerance zone, Tangent plane Free State

03- Hours

Part-A

Unit - I

Orthographic Views: Conversion of pictorial view into orthographic views of simple machine parts with or without section. (Bureau of Indian Standards conventions are to be followed for the drawings) Hidden line conventions.

08- Hours

Unit - II

Sectional views: introduction to sections, hatching of sections, cutting planes, revolved or removed sections, half section, full section, local section, arrangement of successive sections. **08- Hours**

Part-B

Assembly Drawings:

- Couplings–Flange, Universal, Oldham's coupling.
- Joints– Knuckle, cotter with socket and spigot.
- Miscellaneous machine components– Screw jack (bottle type), Plummer block (Pedestal Bearing), Machine vice, Tailstock of lathe- For practice only, Tool Head of shaper-For practice only.

20- Hours

Open end drawings have to be given from each Unit for each student (only for C.I.E Marks not for main exam)

Continuous Internal Evaluation (C.I.E) Marks: 50

All the sheets should be drawn in the class using software. Sheet sizes should be A4. All sheets must be submitted at the end of the class by taking printouts.

Scheme of Examination:

a) **Two questions to be set** from each Part-A, Part-B and Part-C

b) Part-A carry 20 marks and Part-B questions carry 30 marks.

i.e. Part-A…… 2 x 10 = 20 Marks

Part-B ……1 x 30 = 30 Marks

Total = 50 Marks

c) Maximum of 3 hours to be given to each candidate and no Time Restriction for Sketching and Computer Drawings.

d) 20 % of the marks for manual sketching and 80 % for computer drawings in part –A questions.

e) 100 % marks to be considered for computer drawings in part-C questions.

f) No Viva-Voce.

Course Outcomes:

Upon the successful completion of the course, students will be able to:

CO1: Identify Geometric Dimensioning and Tolerances (GD & T)

CO2: Draw different orthographic views of given the components.

CO3: Construct sectional views of different machine components.

CO4: Assemble the different parts to get the final product.

COMPUTER AIDED MANUFACTURING LABORATORY

Lab Hours/ Week	:3	Credits	:1.5
SEE Marks	:50	CIE Marks	:50
Course Code	:5RIML02		

Course objectives

To expose the students to the techniques of CNC programming and cutting tool path generation through CNC simulation software by using G-Codes and M-codes and writing part program for simple machine parts.

Part-A

1. Manual part programming on Turning:
Writing and execution of manual part program for machining of parts with operations turning, taper turning and thread cutting. Grooving, contouring, use of canned cycles and Simulation of tool path.

Part-B

1. Manual part programming on Drilling:

Writing and execution of manual part program for machining of parts with operations such as drilling, and tapping. Use of canned cycles, Simulation of tool path.

2. Manual part programming on Milling:
Writing and execution of manual part program for machining of parts with operations such as Profile milling, pocket milling and Simulation of tool path.

3. Code generation (Demonstration):
Automatic code generation for turned and milled parts.

Suggested Software Packages

1. Simulation Packages: CNC startturn, SeeNCturn, SeeNCMill, CAPStrun and CAPSmill, NX-CAM, Master Cam, etc.

Course outcomes:

Upon completion of this course the student will be able to:

CO1: Generate and simulate part programs on turning operations. (Level 3)

CO2: Generate and simulate part programs on drilling and tapping operations (Level 3)

CO3: Generate and simulate part programs on milling operations. (Level 3)

CO4: Describe automatic code generation for turning, drilling and milling.(Level 1)

Scheme of Examination:

a) **Two questions to be set** from each Part-Aand Part-B

b) Part-A carry 20 marks and Part-B questions carry 20 marks.

i.e. Part-A…… 1 x 20 = 20 Marks

Part-B ……1 x 20 = 20 Marks

Viva-Voce…… = 10 Marks

Total = 50 Marks

c) Maximum of 3 hours to be given to each candidate and no Time Restriction for manual programming and computer simulation.

d) 20 % of the marks for manual Part programming and 80 % for computer simulation in part A and B questions.

Advanced Technical Training Lab- Python

Lab Hours/ Week	:2	Credits	:1.0
SEE Marks	:50	CIE Marks	:50
Course Code	: **5MESL1**		

Course learning objectives (CLO):

At the end of the course the student should be able to:

1. Build the logic for a given problem statement by using algorithms using fundamental concepts of the Programming Language Python such as conditional statements, looping constructs, division, mod operations and string manipulation.
2. Implement the Data Structures such as Arrays, Dictionary, Queues, Lists, and Tuples using Python Programming language.
3. Implement File operations such as opening, reading, writing and closing.
4. Understanding the OOPS concepts such as classes, Objects, Inheritance & Polymorphism

Course Outcomes:

Upon successful completion of this course, the student should be able to:

1. Design and develop solutions for particular programming problems using the fundamental concepts of Python Programming.
2. Implement different data structures like Arrays, Dictionary, Queues, Lists and Tuples.
3. Implement File operation like Open, close reading & writing the file
4. Understand the Object-Oriented Concepts like Classes, Objects, Inheritance and Polymorphism

#	Modules Covered	Duration in hrs.
1	Fundamentals of Python Programming, IO & Operators	04
2	Control Statements, Decision Making, Iterations	06
3	String & String Manipulations	02
4	Data Structures	14
5	Functions	02
6	Fie Operations	02
7	Python OOPs Concepts	06

Topics Covered

1. Introduction to Programming

A. History

B. Features

C. Setting up Path

D. Compilation

E. Data types

F. Variables

2. Working with IO & Operators

A. Declaration, Input – Output

B. Arithmetic Operator

C. Relational Operators

D. Assignment Operators

E. Logical Operators

F. Membership Operators

G. Identity Operators

H. Bitwise Operators

I. Multi- line Statements

J. Comment Line

3. Decision Making
   a. Need of Decision Making and Syntax
   b. If
   c. If-else
   d. Nested if
   e. If-else if
4. Iterations
   a. For Loop
   b. While Loop
   c. Nested Loops
5. Control Statements
   a. Break
   b. Continue
   c. Pass
6. String
   a. Creating a String
   b. Memory Allocation
   c. Built Functions in String
7. List
   a. Creating List
   b. Accessing Elements in List
   c. Negative Accessing Elements in List
   d. Slicing in List
   e. Built Functions in List
8. Tuple
   a. Creating Tuples
   b. Immutable
   c. Accessing values in Tuple
   d. Slicing in Tuple

e. Built Functions in List

9. Dictionary

a. Creating a Dictionary with Integer Key, Mixed Key, dict(), Pair element, nested Dictionary.

b. Adding Element to Dictionary

c. Accessing Element in Dictionary

d. Built Functions in Dictionary

10. Set

a. Creating a Set and Built Functions in Set

11. Function

a. Syntax of Function

b. With Argument With return type.

c. With Argument without return type

d. Without Argument with return type

e. Without Argument without return type

f. Predefined, User defined, Anonymous Functions

g. Scope of variables.

12. File Operations

a. Open & Close File

b. Read & Write operations

13. Python OOPS Concepts

a. Classes & Objects

b. Inheritance

c. Encapsulation

d. Polymorphism

i. Method Overloading

ii. Method Over Riding

e. Data Abstraction

f. Methods

CIE: 50 Marks

Students are accessed every week for 35 marks.

- Evaluation includes Problem Analysis, Program Writing and Executing Programs in the Lab (10 + 15 + 10).
- Two tests are conducted for 15 marks each.
- Marks distribution (50 Marks) = Average of weekly assessments (35 Marks) + Average of two tests (15 Marks).

SEE: 50 Marks

- There are 20 programs in the list divided into two
- parts A & B, students have to pick one program each from the Part A & Part B
- Both the parts carry equal weightage.
- The evaluation includes Program Write-up + Analysis + Program Execution + Viva (10 + 10 + 20 + 10 = 50 Marks)
- Change of the experiment is allowed only once in the first half an hour of the exam and in such cases the evaluation will be done for 80% of the Marks.

QUALITY ASSURANCE AND RELIABILITY

Contact Hours/ Week	: 4+1(Lecture + Tutorial)	Credits :	4.5
Total Lecture Hours	: 52	CIE Marks :	50
Total Tutorial Hours	: 13	SEE Marks :	50
Course Code	:6RIM01		

Course Objective:
The objectives of this course are, enabling students to:

1. Understand the basics of Quality Assurance process
2. Acquire the knowledge of using 7 QC tools in process improvement
3. Understand the process of implementing ISO 9001 QMS
4. Learn about the various types of control charts, their application and interpretation
5. Acquire the knowledge of acceptance sampling procedure
6. Understand the role of statistical theory in tolerance design
7. Know about computing reliability of various systems

UNIT: I

Introduction: Definition of Quality, Dimensions of Quality, Quality Engineering terminology, Brief history of quality methodology, Statistical methods for quality improvement, Quality costs – four categories costs and hidden costs, Brief discussion on sporadic and chronic quality problems, Quality of design and quality of conformance, Quality function deployment, Deming's PDCA cycle, Juran's Quality Trilogy and spiral of quality, Comparison of quality control, quality assurance and Total quality management, Quality circle. **(10 + 1) - Hours**

UNIT: II

ISO 9000 series of QMS Standards, Principles of QMS, Clauses of ISO 9001:2015 QMS, Steps in getting ISO 9001:2015 Certification, Statistical Process Control - Introduction to statistical process control – chance and assignable causes of variation. Seven QC tools, Case Studies on application of Seven QC tools. Basic principles of control charts, choice of control limits, sample size and sampling frequency, rational subgroups. Analysis of patterns of control charts. Process capability – Basic definition, relation to product tolerance, C_p & C_{pk}, Methods of

estimating process capability and six-sigma concept of process capability. **(11+3) -Hours**

UNIT: III

Control Charts For Variables: Controls charts for mean ($\bar{X}$) and Range (R), statistical basis of the charts, development and use of $\bar{X}$ and R charts, interpretation of charts. Control charts for $\bar{X}$ and standard deviation (S), development and use of $\bar{X}$ and S chart. Type- I and Type- II errors, Run chart, control charts for individual measurements and moving-range charts. Cumulative-Sum chart. **(12+3) - Hours**

UNIT: IV

Control chart for attributes: Control charts for defectives - development and operation of control chart for constant sample size and variable sample size. Control charts for defects - development and operation of control chart for constant sample size and variable sample size, Choice between variables and attributes control charts. Guidelines for implementing control charts.

Sampling Inspection: Concept of accepting sampling, economics of inspection, Acceptance plans – single, double and multiple sampling. Operating characteristic curves – construction and use. Determinations of average outgoing quality, average outgoing quality level, average total inspection, producer risk and consumer risk, published sampling plans. Numerical problems on single and double sampling plans only.

(12+3) - Hours

UNIT: V

Reliability and Life Testing: Failure models of components, definition of reliability, MTBF, Failure rate, common failure rate curve, types of failure, reliability evaluation in simple cases of exponential failures in series, paralleled and series-parallel device configurations, Redundancy and improvement factors evaluations.

Statistical theory of tolerances: Application of statistical theory of tolerances to design of tolerances in random assemblies and application in other areas. **(11+3) - Hours**

Course outcomes:

Upon completion of this course the student will be able to:

- ***CO1:*** *Apply the fundamental and advanced knowledge of quality engineering; thus become conscious of working in team, communicate and adopt to lifelong learning (L3 & L4; PO1, PO2, PO3, PO4, PO5, PO9, PO10 & PO12)*
- ***CO2:*** *Describe the QMS principles, requirements and implementation procedure (L2; PO1)*
- ***CO3:*** *Demonstrate ability to collect data from a process, plot appropriate control charts and draw inferences (L3 & L4; PO2 & PO3)*
- ***CO4:*** *Design appropriate acceptance sampling plan for a given conditions and analyze their performance (L3 & L4; PO2 & PO3)*
- ***CO5:*** *Compute the reliability of a given system (L3 & L4; PO1 & PO2)*
- ***CO6:*** *Estimate the tolerances for the component and assembly using statistical principles (L3 & L4; PO1, PO2 and PO3)*

OPERATIONS RESEARCH

Contact Hours/ Week	: 4 +1 (L + T)	Credits:	4.5
Total Lecture Hours	: 52	CIE Marks:	50
Total Tutorial Hours	: 13	SEE Marks:	50
Course Code	:6RIM02		

Course Objective:

The objectives of this course are, enabling students to:

1. Understand how to translate a real-world problem, given in words, into mathematical formulation as LPP and solve using graphical and simplex method.
2. Able to build and solve transportation and assignment models.
3. Propose best strategies under decision making methods in game theory.
4. Use CPM and PERT techniques to plan, schedule and control project activities and to analyze time-cost trade off of a project network.
5. Understand the mathematical modeling of queuing system.

Unit- I

Introduction - Definition of OR, Features of OR models, Application of OR, Advantages and Limitation of OR.

Linear Programming - Definition, mathematical formulation, standard form, solution space, Graphical method.

(10 + 2) -Hours

Unit- II

Linear Programming - simplex method, Variants of simplex algorithm – Artificial basis (Big-M), Duality, Economic interpretation of Duality, Dual simplex method, Special Cases in LPP-Redundancy, Degeneracy, Multiple optimum solution. **(12 + 3)- Hours**

Unit- III

Transportation Problem - Formulation of transportation model, Basic feasible solution using different methods (North-West corner, Least Cost, Vogel's Approximation Method), Optimality test, Unbalanced

transportation problem, Degeneracy in transportation problems, Variants in Transportation Problems, Applications of Transportation problems.

(10 + 2) Hours

Unit- IV

Assignment Problem - Formulation of the Assignment problem, Solution of assignment problem using Hungarian method, unbalanced assignment problem, traveling salesman problem.

Game Theory - Formulation of games, two persons – Zero sum game, games with and without saddle point, Graphical solution (2Xn, mX2 game), dominance property, modified dominance property. **(08 + 3) Hours**.

Unit- V

Project Management Using Network Analysis - Network construction, introduction to critical path method, identification of critical path and project duration, Introduction to PERT- Estimation of project duration, estimation of free float, total float and independent float.

Crashing: least cost project scheduling, scheduling to targets at minimum cost.

QUEUING THEORY: Queuing system and their characteristics, The M/M/I Queuing system.

(12 + 3) Hours

Course Outcomes*:*

Upon completion of this course the student will be able to:

CO1: Explain different OR models used in Mgt. decision making, formulate Linear programming problem and solve using graphical method (Level-4).

CO2: Identify, formulate and solve linear programming problems using simplex method, Big M method, and dual simplex method (Level-3).

CO3: Formulate and solve given management problem as a transportation model (Level-4).

CO4: Formulate and solve given problem using assignment model (Hungarian method) and travelling salesman model (Little's method) and use game theory concepts for decision making (Level-3).

CO5: Apply network techniques like PERT, CPM for managing projects for minimum cost or duration (Level-5).

AUTOMATION IN MANUFACTURING SYSTEMS

Contact Hours/ Week	:3 (Lecture)	Credits	:3.0
Total Lecture Hours	:39	CIE Marks	:50
Total Tutorial Hours	:	SEE Marks	:50
Course Code	: 6RIME21		

Course Objectives:

1. To impart knowledge of Automation and different concepts of automation by developing mathematical models.
2. To expose students to automated flow lines, assembly lines, Line Balancing Techniques.
3. To impart basic knowledge of Flexible manufacturing system, material handling and storage systems used in manufacturing
4. To introduce the students to concepts of latest Trends in Automation and Cobot systems.

Unit 1

Introduction: Production systems: Facilities, Manufacturing Support systems, Definition of automation, Basic Elements of an Automated System, Types of automation, Levels in automation, Automation principles & Strategies, Reasons for automation, arguments for and against automation. Productivity Concepts Mathematical Models - Manufacturing lead time, components of operating time, utilization and availability, work-in-process.

Numerical on Productivity Concepts & Mathematical Models.

08 Hours

Unit- II

High Volume Production System: Automated Flow Line, Symbols & Notations Used In Automated Flowlines, Types of Flow Line Configurations, methods of work part transport, transfer mechanism, buffer storage, control functions, Analysis of Automated Flow lines without Internal Storage, Analysis of automated flow lines with storage buffer, Partial automation.

Numerical on Analysis of Automated Flow lines without and with storage buffer and Partial automation.

08 Hours

Unit- III

Assembly systems and line balancing: The assembly process, Assembly systems, Manual assembly line, Transfer of Work between Work Stations, Design for Automated Assembly, Types of Automated Assembly Systems, Part Feeding Devices, Analysis of Multistation Assembly Machines, Analysis of a Single Station Assembly Machine. Line Balancing: Terminology used in Line Balancing, Methods of line balancing.

Numerical on Methods of line balancing and automated assembly system.

08 Hours

Unit- IV

FMS – Components of FMS – Types – FMS workstation – Material handling and storage systems – FMS layout – Computer control systems – Application and benefits.

Automated Material Handling and Storage System: Function, Types of Material Handling Equipment, Analysis of automated material handling systems, automated conveyor systems, automated guided vehicle system, storage system Performance, Automated storage and retrieval systems, Carousel storage system work-in-process storage.

08 Hours

Unit- V

Latest Trends in Automation: Introduction, Development of modern industrial automation: Vertical integration of automation system, Horizontal integration of intellectualization-driven automation system, Networking, Mobile technology, Virtualization Current Trends in

Automation Systems, Modern Control Center, Application Areas of Automation System, Low cost Automation: Introduction to LCA, Technology and Methodology used for LCA, Advantages and limitations of LCA, Applications of LCA, Collaborative Robot Technology: Definitions and terminologies used, Benefits of HRC, Features, Functions, Safety Features and Advancements in Safe Robot Applications.

07 Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Explain importance of automation in manufacturing and analyze different productivity concepts in manufacturing.

CO2: Discuss the basic structure, constituents of automated flow lines and analyze their performance under various conditions.

CO3: Apply the basic concepts of assembly systems and perform assembly line balancing in different manufacturing situation.

CO4: Describe Flexible manufacturing system, automated material handling and storage systems used in manufacturing.

CO5: Discuss importance of collaborative robot technology and their applications and to Visualize and appreciate the modern trends in automation

ORGANIZATIONAL BEHAVIOUR

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50
Course Code	:6RIME22		

Course Objectives:

1. Study of now people act, think and feel in organizational settings.

2. Aware of challenges and opportunities in today's work force.

3.Strategy for improving group decision making.

4.Develop awareness of various leadership theories.

Unit- I

Introduction – Definition of organizational behavior, need for studying organizational behavior. Contributing discipline to the organizational behavior field: psychology, social psychology, sociology, anthropology.
Challenges and Opportunities for Organizational Behavior: Responding to globalization, managing work force diversity, improving quality and productivity, improving people skill, stimulating innovation and change.
The Individual: Ability, intellectual abilities, physical abilities. Biological characteristics. Learning, definition of learning, theories of learning, methods of shaping behavior. Schedules of reinforcement. Case examples. **08 Hours**

Unit- II

Personality and Values – Definition of personality, determinants of personality, major personality attributes influence organizational behavior.
Values: Definition of values, importance of values, types of values.
Attitude: Definition of attitudes, components of attitudes, sources of attitudes, types of attitudes – job satisfaction, job involvement, organizational commitment. Importance of attitudes to work place

diversity, sources of job satisfaction. Impact of dissatisfied and satisfied employees on the work place. Case examples.

07 Hours

Unit- III

Perception and Individual Decision Making: Definitions of perception, factors influencing perception, attribution theory. Frequently used short cuts in judging others. Specific application of shortcuts in organization.

Motivation – Definition of motivation, early theories of motivation-hierarchy of needs theory, theory X and theory Y, two factor theory, contemporary theories of motivation - McClelland's theory of needs, expectancy theory.

Motivation from concepts to application: The job characteristics model, jobs is redesigned, alternative work arrangement, employee's involvement, rewarding employees. Case examples.

08 Hours

Unit- IV

Foundation of Group Behaviour – Definition and classification of groups, factors influencing group formation, stages of group development.

Group Properties: Roles, norms, status, size and cohesiveness.

Group Decision Making: Group decision making process, group think and group shifts.

Group Decision Making Techniques: Nominal group techniques, brain storming technique, delphi techniques.

Understanding work teams: Definition of teams, differences between groups and teams, types of teams, creating effective teams, team and quality management. Case examples.

08 Hours

Unit- V

Basic Approaches to Leadership: Definition of leadership, theories of leadership-trait theories, behavioural theories, managerial grid theory, situational leadership theories.

Leadership styles, transactional and transformational leadership.

Organizational Culture: Definitions, characteristics of culture, types of culture. How employees learn culture. Creating an ethical organizational culture. Spirituality and organizational culture- definition of spirituality, characteristics of spiritual organization. Case examples.

08 Hours

Course Outcomes*:*

Upon completion of this course the student will be able to:

CO1: Justify the challenges and opportunities of organizational behaviour in today's work force. (Level-2)

CO2: Explain the concepts of personality, values and attitude and discuss issues related to personality and estimate the job satisfaction. (Level-1, 2)

CO3: Discuss the applications of theories of motivation under different scenarios and compare the application of motivation tools. (Level-2)

CO4: Define group and its properties and evaluate different group decision making techniques; distinguish group from team and explain the functioning of effective team. (Level-2)

CO5: Define leadership and explain various theories of leadership; discuss the ways to enhance organizational work culture. (Level-2)

Text Books:

1	Stephen P Robbins	Organizational Behavior,10th edition, Pearson Education Publications, ISBN-81-7808-5615.
2	Fred Luthan's	Organizational Behavior, 9th edition, Mc Graw Hill International Edition, ISBN-0-07-20412-1.

Reference Books:

1	Keith Davis	Human behavior at work, Prentice Hall India, 2007.
2	Robin Kolb	Organizational Psychology, TMK Publishing, 2002 company.

ENTERPRISE RESOURCE PLANNING

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50
Course Code	:6RIME23		

Course Objectives:

Students will be able to

1. Explore the fundamentals of ERP systems for business.
2. Apply ERP phases of implementations in industries.
3. Explain the functions of ERP modules.
4. Identify and compare the roles of different ERP vendors in the market.
5. Analyze and develop frame work for ERP solutions for industries.

Unit- I

ERP : An overview – Introduction , ERP, advantages of ERP, Enterprise – An overview – Introduction, Integrated management information. ERP : An overview, The role of the enterprise , Berrium modeling, integrated data model , Benefits of ERP, ERP related technologies – BPR, Data warehousing, Data mining, OLAP, Supply chain management.

08 hours

Unit- II

ERP – implementation: Introduction, Evolution of ERP, ERP implementation life cycle – Introduction, different phases of implementation, ERP implementation, implementation methodology – Evolution of ERP packages, hidden costs, organizing the implementation, vendors, consultants and users. Project management and monitoring.

. **08 hours**

Unit- III

ERP models – Introduction , finance model / financial accounting , controlling, investment management, treasury module, business

planning and budgeting , manufacturing modeling/ introduction and subsystems of manufacturing module, introduction and subsystems of human resource module , introduction and subsystems of materials management module, introduction and subsystems of sales and distribution module . **08 hours**

Unit- IV

ERP market place – market share, vendors, SAPAG, company profile, product and technology, R/3 an overview, R/3 system, R/3 application module, R/3 module SAP advantage.

People soft–company profile, business management solution, commercial solution, industry selection, people tool, people soft implementation tool kit.

BAAN – company profile, BAAN ERP modules, BAAN ERP tools,

Introduction to GD Edwards. **08 hours**

Unit- V

ERP- present and future- limitations of ERP systems, extend the power of ERP systems, ERP and E–commerce, E–commerce work flows, future directions in ERP – new modules and web enabling. **07 hours**

Course Outcomes (COs)

Upon completion of this course the student will be able to:

CO1: Identify and describe the different modules of ERP system and Technologies used in ERP (Level-2).

CO2: Illustrate the different phases of ERP implementation process (Level-2).

CO3: Identify role and importance of different ERP systems in the market (Level-2).

CO4: Analyze the process and apply the ERP concepts in given real time cases in industries (Level-3).

COMPUTER AIDED MECHANICAL DESIGN AND ANALYSIS –II

Contact Hours/ Week	: 3+3 (Lecture +Practical)	Credits:	3.0
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Course Code	: MEI61		

Course Objectives:

1. Main intent of the course is to better equip the students to about specific areas such as BIW and Trims.
2. It is designed to get the knowledge of car body structure in detail.
3. Understanding and applying the GD&T into the manufacturing drawings.
4. Basic knowledge of welding types and usages in assemblies.
5. It explains what is Design Failure Modes and Effects Analysis.
6. CADA emphasizes on the Trims, plastic parts and types of manufacturing them for various applications.

Unit- I

Requirement Specification in the Pre-Program Stage: Voice of customer/ Customer feedback, Competitor insight, Innovation, Project & quality planning, Legislation, System Strategy

Product life cycle and important gateways for BIW: Important design gateways, Prototype build, Production, Launch of vehicle

Identification of commodities for BIW: BIW Introduction, BIW commodities classification, BIW terminology, BIW assembly

Design concepts and considerations in BIW: What is BIW?, BIW Parts, What Drives a BIW Design?, Design Considerations for Sheet Metal Parts

BIW Materials and Grades (Steel, Aluminum, composites): Evolution to Modern Design, Basic material selection criteria for automotive, Classification of Steel grade and their properties, AL used in Automotive Domain and their properties, Composite used in Automotive Domain and it's application, Lightweight materials for future automotive industry.

Manufacturing - Sequence, Welding & Assembly: Introduction Assembly sequence, Assembly sequence : Body Shop : BIW Assembly,

Assembly Sequence : Paint Shop : BIW Painting, Assembly Sequence and Flow, Assembly sequence : Paint Shop : Trim & Final Assy.

Future Trends in BIW: Energy Storing Body Panels, Light Weight Vehicle Technology, Latest Joining Technologies Used In BIW.

09 Hours

Unit-II

GD & T for BIW: What is GD&T, Benefits of GD&T, International Standards of GD&T, Explain what is GD&T on drawing, Dimensional requirement, 3-2-1 Principle of location, Simulation of datum's for inspection, GD&T Symbols, Feature control frame.

Sheet metal Joining - Welds, Adhesives, TWBs: Sheet Metal Joining Process, Classification of Metal Joining process, Weld Types, Resistance Spot Welding (RSW), Tailor Welded Blank, Laser Beam Welding, Self-Piercing Rivets (SPRs), Adhesives, Conventional joining techniques.

06 Hours

Unit- III

Design Failure Modes and Effects Analysis: What is Design Failure Modes and Effects Analysis, DFMEA Objective, Overview of the DFMEA Process, DFMEA Benefits.

Design verification - CAE methods and Gateway supports: Introduction to Design Verification, Design verification Application and Preparation, Gateway support for design verification.

CAE Analysis - NVH, Crash & Durability: NVH Analysis, Crash Analysis, Durability Analysis

Test Validation & Assessment: What is Vehicle Physical Testing?, Crash Test Requirements-Frontal Testing, Rear & Side Impact Testing, Pedestrian testing & Roll over, Four post rig test, Wind Tunnel Testing.

09 Hours

Unit -IV

Product life cycle and important gateways for Trims

What is Product Life Cycle, Design Milestones, Different Types of Builds, Launch of Vehicle

Identification of commodities for Trims: What is a Trim?, Why trims are necessary in automotive vehicles?, Identification of different interior trim parts and their position in vehicle.

Design requirements and considerations: Vehicle regulations, Automotive safety-Frontal impact, Side impact, Rear impact, Design for environment

Trim Materials in Automotive: Material Classification and Properties, Plastic Materials and their Applications, Usage and Selection Criteri, Plastic Additives, Application in Instrument Panel Assembly

Design of Plastic part: Plastic part overview, Plastic Part design, The principles behind the Engineering Plastic parts. **06 Hours**

Unit- V

Design verification - CAE methods and Gateway supports: Introduction to Automotive Interior trims, Load cases carried out to validate Automotive interior trims, CAE gateway support

CAE Analysis - Moldflow of plastic parts, Crash & Durability: What is CAE?, Types of CAE Analysis on Automotive Interiors o Head Impact Analysis, Side Impact Analysis, Knee Impact Analysis, Durability Analysis, Creep Analysis, Moldflow Analysis, Applications of CAE

Manufacturing Process: Vacuum Forming, Injection Molding, Heat stacking, Extrusion blow molding.

Test Validation & Assessment : Introduction about Design Validation and verification, Various tests performed for design verification and validation, Case studies

Assembly Sequence: Assembly sequence of Side airbag, rear floor, clutch brake pedal assembly, headliner, pillar trims and seats

Future Trends and Future materials for Trims : Plastic as a material, Why plastics are future of automotive?, Necessity of lightweight materials. **09 Hours**

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: understand BIW and its aggregates.

CO2: explain the significance of various welding types and GD&T symbols.

CO3: understand assembly sequence in manufacturing plant.

CO4: explain various Material Classification and Properties.

CO5: explain the types of CAE analysis.

QUALITY ENGINEERING LABORATORY

Lab Hours/ Week	: 3	Credits	:1.5
SEE Marks:	:50	CIE Marks	:50
Course Code	:6RIMEL01		

Course Objectives:

1. To familiarize the students with practices in industries regarding quality control aspects and to test the goodness of fit.
2. To educate students regarding the usage of modern quality control procedures.
3. To enable students design sampling plan design.
4. To enable students understand Gauge R&R and perform simple experiments using experimental design

Unit- I

1. To test the Goodness of fit for the given quality characteristic using Uniform distribution
2. To test the Goodness of fit for the given quality characteristic using Binomial distribution
3. To test the Goodness of fit for the given quality characteristic using Poisson distribution
4. To test the Goodness of fit for the given quality characteristic using Normal distribution
5. Construction of control chart for variable quality characteristic
6. Construction of control chart for attribute quality characteristic
7. Assessing Process Capability of the given manufacturing process using Normal Probability paper method and process capability indices

Unit- II

1. Conduction of Repeatability and Reproducibility studies for appraiser and instrument using R&R Software
2. Experiments on Application of 7 QC Tools as applied to Manufacturing and Service Operations.
3. Attribute sampling Plans – Single and Double sampling plans.
4. Experiments on correlation and Simple linear regressions
5. Conduction of Design of Experiments – Fractional Factorial approach using catapult.
6. Exercises on FMEA
7. Exercises on QFD

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Test the goodness of fit for various probability distributions (Level-3).

CO2: Construct control charts for variables and attributes and draw appropriate conclusions(Level-4)

CO3: Assess the process capability of a given process using different approaches(Level-3)

CO4: Use 7 QC tools for solving Quality problems (Level-4)

CO5: Estimate the Gauge R&R (Level-3).

CO6: Design acceptance sampling plans (Level-3).

CO7: Use modern software like MINITAB, R and R studio in solving quality engineering problems (Level-7)

Reference Books:

1. D C Montgomery, Introduction to statistical Quality Control , 3rd Edition, John Wiley and Sons.

2. J M Juran, Frank M Gryna; Quality Planning & Analysis- Tata McGraw Hill, 3rd edn.,

3. Grant and Leavenworth, Statistical Quality Control - McGraw Hill

4. Minitab Software

MODELLING, SIMULATION AND ANALYSIS LABORATORY

Lab Hours/ Week	: 3	Credits:	1.5
SEE Marks:	:50	CIE Marks:	50
Course Code	:6RIMEL02		

Course Objectives:

1. Create Simulation Model for various real time scenarios (Manufacturing, Servicing Industry, Health Care, Retail Sectors) using Arena.
2. Conduct Analysis for various real time scenarios using Arena software.

Unit- I

1. Material Control**:** Experimental simulation inventory variation under different circumstances to evaluate average inventory, average long run stock outs per unit time, etc., simulation of simple problems using Excel.

Unit- II

2. Introduction to Simulation Packages
3. Understanding the Simulation Package
4. Identifying probability distributions for given data
5. Building simulation models for manufacturing operations (Electronic assembly – With Basic templates)
6. Building simulation models for manufacturing operations (Electronic assembly – With Common templates)
7. Building simulation models for manufacturing operations with transport System
8. Building simulation models for manufacturing operations with layout
9. Building simulation models for manufacturing operations with layout and transport System
10. Building simulation Models for banking service (Bank teller problem)
11. Building simulation Models for Mortgage application problem
12. Building simulation Models for food processing problem
13. Building simulation Models for Post office animation
14. Statistical Analysis of Simulation models (input analysis)

15. Statistical Analysis of Simulation models (output analysis)

Suggested Simulation Packages;

1. Ms- Excel
2. Promodel, Arena, Quest, Witness, Extend

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Identify, formulate, and solve engineering problems using MS-Excel (Level-4).

CO2: build simulation model for a given situation (level-4).

CO3: Use simulation software as a tool as to analyze and interpret data and make decision (Level-5).

Reference book:

1. Averill M Law, W David Kelton, Simulation Modelling & Analysis, McGraw Hill International Editions – Industrial Engineering series, 4th Edition, ISBN – 0-07-100803-9.

Scheme of Final Examination:

ONE question from Part A	15 Marks
ONE question from Part B	25 Marks
Viva-Voce	10 Marks

OF

VII & VIII Semesters B.E.

INDUSTRIAL ENGINEERING & MANAGEMENT

2022-23

Vision of the Department

To be a distinguished centre for the dissemination of knowledge and promoting research and consultancy in the field of Industrial Engineering and Management and for catering to the needs of the society.

Mission of the Department

1. To practice the philosophy of learning-teaching-learning and adopt the latest tools and techniques for the effective dissemination of knowledge in the field of Industrial Engineering and Management.
2. To collaborate with academic institutions, industry and research organizations to establish Centers of Excellence (COE) in emerging areas and promote research and consultancy.
3. To impart training for the overall development of students and inculcate commitment for social responsibility.

Program Educational Objectives (PEOs)

1. Graduates will excel in their chosen careers and successfully pursue higher education in Industrial Engineering and Management and related fields.
2. Graduates will manage the functioning of organization and enhance its competitiveness using contemporary tools in a socially acceptable way.
3. Graduates will demonstrate professionalism, ethical conduct, and societal responsibility and adapt to current trends by engaging in lifelong learning.

Programme Specific Outcomes (PSOs)

PSO1: Apply broad-based basic engineering and analytical tools for system design, analysis, performance evaluation and decision-making.

PSO2: Apply management concepts and principles for decision making in the area of operations, marketing, finance and human resource and analyse their impact.

PSO3: Apply the knowledge of materials, machining and manufacturing; analyse and evaluate the choices made.

PSO4: Apply the knowledge of industrial engineering for work system design and analyse, evaluate and create cost effective and safer systems and procedures.

Program Outcomes (POs)

Graduates in Industrial Engineering & Management will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Operations Management (7RIM01)

Contact Hours/ Week	:	4+1 (L+T)	Credits:	4.5
Total Lecture Hours	:	52	CIE Marks:	50
Total Tutorial Hours	:	13	SEE Marks:	50
Practical/ Week	:	--		

Unit-I

Operations Planning Concepts: Introduction to Operations Management, Operations Functions in Organizations, The Environment of Operations, Historical development, Framework for managing operations, The trend: Information and Non-manufacturing systems, Factors affecting productivity, International Dimensions of Productivity, Production systems decisions- a look ahead.

Operations Decision Making: Introduction, Management as a science, Characteristics of decisions, Framework for decision making, Decision methodology. (Problems on decision trees)

09+02-Hours

Unit-II

System Design and Capacity: Introduction, Manufacturing and service systems, Design and systems capacity, Capacity planning.

Forecasting Demand: Forecasting objectives and uses, forecasting variables, Opinion and Judgmental methods, Time series methods, Moving Average methods, Exponential smoothing, Trend adjusted Exponential Smoothing, Regression and correlation methods, Application and control of forecasts-Mean Absolute Deviation, Bias, and Tracking Signal.

11+3-Hours

Unit-III

Aggregate Planning and Master Scheduling: Introduction- planning and scheduling, Objectives of aggregate planning, Three Pure Strategies, Aggregate planning methods, Master scheduling objectives, Master scheduling methods.

Material and Capacity Requirements Planning: Overview: MRP and CRP, MRP: Underlying concepts, System parameters, MRP logic, System refinements, Capacity management, CRP activities.

12+4-Hours

Unit-IV

Scheduling and Controlling Production Activities: Introduction, PAC objectives and Data requirements, Loading –Finite and Infinite Capacity, Scheduling methodology, Priority sequencing, Capacity control.

Single Machine Scheduling/ Sequencing: Concept, measures of performance, SPT rule, Weighted SPT rule, EDD rule.

Flow –Shop Scheduling: Introduction, Johnson's rule for 'n' jobs on 2 and 3 machines, CDS heuristic.

Job-Shop Scheduling: Types of schedules, Heuristic procedure, scheduling 2 jobs on 'm' machines.

11+2-Hours

Unit-V

Lean Systems: Seven Wastes in Lean, Characteristics of Just-in-Time operations, Pull method of materials flow, consistently high quality, small lot sizes, Uniform workstation loads, Standardized

components and work methods, close supplier Ties, Flexible workforce, Line flows, Automated production, preventive maintenance, continuous improvement, The Kanban system, General operating rules, Determining the number of containers, Other Kanban Signals, JIT II, Lean Systems in Services, Strategic Implications of Lean systems, Competitive Priorities, Flows, Operational Benefits Implementation Issues, Organizational Consideration, Process considerations, Inventory and scheduling, Lean system across the organization. (Numerical on Calculation of Number of Kanbans, Takt Time).

9-Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1	:	Discuss how operations management has evolved, the trends in OM and factors affecting productivity and operations decision making
CO2	:	Apply various Forecasting techniques to estimate demand and assess System capacity.
CO3	:	Develop Aggregate planning; Master Production Schedule and Material Requirements Plan.
CO4	:	Perform Sequencing and Scheduling for given conditions.
CO5	:	Discuss the principles of lean operating systems.

CO – PO Mapping:

Logistics & Supply Chain Management (7RIM02)

Contact Hours/ Week	:	4 (L)	Credits:	4.0
Total Lecture Hours	:	52	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I

Introduction to supply chain management & building a strategic SCM framework : Definition and development of supply chain, global optimization, managing uncertainty & risk, the evolution of supply chain management, key issues and decision phases in supply chain management, process view of supply chain management, competitive & supply chain strategies, achieving strategic fit, drivers of supply chain performance & a framework for structuring drivers.

Case studies: Dell, LL Bean and Wal-Mart Supply chains

11- Hours

Unit-II

Inventory Management: Role of cycle inventory in supply chain, economies of scale to exploit fixed cost, aggregating multiple products in single order- lots are ordered independently and jointly, quantity discounting –single and double price breaks.

Managing uncertainty in supply chain: Role of safety stock in supply chain, determining appropriate level of safety inventory, impact of supply uncertainty on safety inventory, impact of aggregation on safety inventory, impact of replenishment policy on safety inventory.

Selective inventory control Techniques: ABC, FSN, VED Classification.

Problems on: EOQ, cycle inventory, safety stock calculations, ABC classification

11- Hours

Unit-III

Strategic alliances, procurement & outsourcing strategies: Introduction, a framework for strategic alliances, third party logistics, retailer- supplier partnerships, outsourcing benefits & risks.

Sourcing and Pricing Products: Role of Sourcing, Sources of supply and Supplier selection Vendor Rating supplier – scoring & assessment- supplier performance evaluation, selection & contracts. Design collaboration, procurement process

Revenue Management: Role of revenue management in the supply chain, revenue management for: multiple customer segments, perishable assets, seasonal demand, bulk & spot contracts

Problems on: Vendor rating

10- Hours

Unit-IV

Transportation in supply chain: Role of transportation, factors affecting transportation decisions. Modes of transportation and their performance characteristics, design options for transportation network, trade-off in transportation design, tailored transportation.

Network Design in Supply Chain: Role of facility decisions in supply chain, factors influencing network design decisions, frame work for supply chain design decisions, models and mathematical formulations for facility location and capacity allocation.

10- Hours

Unit-V
Role of IT in supply chain: Bullwhip effect, obstacles to coordination. Managerial levers to achieve co-ordination, Role of IT in supply chain, introduction to B2B, B2C, EDI, ERP, Customer Relationship Management. **Measuring supply chain performance**: Supply Chain Key Performance Indicators (KPIs). **Supply chain sustainability**: Green supply chain management-reverse logistics & Recycling. **New Treads in a supply chain**: Basic concepts & benefits of new cutting-edge technologies -Lean and Six sigma supply chain management, Block chain in supply chain, IOT in supply chain, AI in SCM. **Case study:** Wall mart supply chain
10- Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1	:	Illustrate the impact of supply chain activities and decisions on firm's performance.
CO2	:	Analyse inventory planning decisions, under demand and lead time variability and optimize total cost of inventory.
CO3	:	Describe the types and key successful factors of business partnerships to improve supply chain performance & develop optimized transportation plan for complex business operations.
CO4	:	Apply revenue management strategies to improve supply chain profitability and formulate mathematical models for optimizing network design decisions.
CO5	:	Integrate information technology systems, lean and green supply chain concepts to support supply chain management decisions.

Non-Traditional Machining (7RIME31)

Contact Hours/ Week	:	3 (L)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I
Introduction: Need for non-traditional machining methods-Classification of modern machining processes – considerations in process selection, applications and recent development.
8- Hours
Unit-II
Mechanical Processes: Ultra Sonic Machining (USM) - Working principles, equipment used, process parameters, Material Removal Rate (MRR), applications. Abrasive Jet Machining (AJM) - Working Principles, equipment used, process parameter, MRR, applications. Water Jet Machining- Working principles, equipment used, process parameters, MRR, applications.
8- Hours
Unit-III
Electro – Chemical Processes: Fundamentals of Electro Chemical Machining (ECM), Electro Chemical Grinding, Electro Chemical Honing and deburring process, Metal Removal Rate in ECM, Tool design, Surface finish and accuracy, economic aspects of ECM – Simple problems for estimation of metal removal rate. Fundamentals of chemical machining, advantages and applications.
8- Hours
Unit-IV
Thermal Processes–I: General Principle and applications of Electric Discharge Machining (EDM), Electric Discharge Grinding and electric discharge wire cutting processes – Power circuits for EDM, Mechanics of metal removal in EDM, Process parameters, selection of tool electrode and dielectric fluids, methods, surface finish and machining accuracy, characteristics of spark eroded surface and machine tool selection. Wire EDM, principle, applications.
8- Hours
Unit-V
Thermal Processes–II: Generation and control of electron beam for machining, theory of electron beam machining, comparison of thermal and non-thermal processes –General Principle and application of laser beam machining – thermal features, cutting speed and accuracy of cut. Application of plasma for machining, metal removal mechanism, process parameters, accuracy and surface finish and other applications of plasma in manufacturing industries. Chemical machining-principle maskants –etchants- applications. Magnetic abrasive finishing, Abrasive flow finishing.
7- Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1	:	Explain the role and importance of non-traditional machining in recent manufacturing process
CO2	:	Describe the working principles, parameters affecting the process and the application of USM, AJM, and WJM.
CO3	:	Explain the working principles of electro chemical machining and calculate MRR of the process
CO4	:	Explain the working principles of Electric Discharge machining
CO5	:	Explain the working principles of EDM, PAM and Chemical machining process

Lean Manufacturing System (7RIME32)

Contact Hours/ Week	:	3 (Lecture)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I
Introduction: SEVEN forms of waste and their description; Historical evolution of lean manufacturing; Global competition, Customer requirements, Requirements of other stake holders, Meaning of Lean Manufacturing System (LMS), Meaning of Value and waste, Need for LMS, Symptoms of underperforming organizations, Meeting the customer requirement, Elements of LMS.
8- Hours
Unit-II
Primary tools used in LMS: Meaning and Purpose of 5S Work place organization, 5S process – Sort, set in order, Shine, Standardize, Sustain, implementing 5S, Meaning and purpose of TPM, Pillars of TPM, Conditions for TPM success, TPM implementation process, Overall Equipment Effectiveness (OEE) and problems on computation of OEE.
8- Hours
Unit-III
Primary tools used in LMS Contd.: Process Mapping and Value Stream Mapping (VSM) – Need for process maps, advantages, types and its construction, steps in preparing VSM; Concept of work Cell and its design, Line balancing algorithms and problems.
8- Hours
Unit-IV
Secondary tools used in LMS: Cause and effect diagram, Pareto chart, Radar chart, Poke Yoke, Kanban, Automation, SMED, Standardized fixture, DFMA, JIT, Visual workplace, problems on Pareto analysis and computation of number of kanbans.
8- Hours
Unit-V
LMS Rules: Stability, Management, Standardized work, Pull system, Continuous improvement. Lean Implementation: Training, selecting the projects, preparing project charter, project implementation, Project review. Implementing LMS for higher productivity: Operator, process, machinery and equipment, workplace organization, Inventory, LMS Design Process
7- Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1	:	Describe the concepts of Lean Manufacturing to solve complex organizational problems
CO2	:	Identify and apply primary tools used in Lean Manufacturing to solve complex organizational problems and draw substantial conclusions.
CO3	:	Construct current state VSM and create future VSM by applying Lean concepts and principles.
CO4	:	Identify and apply secondary tools used in Lean Manufacturing to solve organizational problems and draw substantial conclusions
CO5	:	Describe the procedure involved in implementation of lean Manufacturing System for higher productivity.

Facilities Planning & Design (7RIME33)

Contact Hours/ Week	:	3 (Lecture)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I

Introduction to Facility Planning and Design: Definition, Importance of facility planning and design, Applications of facility planning, Characteristics of facility planning, objectives of facility planning, facility planning process.

Emerging trends in facilities Management: Outsourcing facilities management, Integrated value and related services, Workplace strategy, Internet of Things (IoT) evolution, Advent of robots, Augmented reality.

Facilities Design: 7 Management and planning tools - affinity diagram, interrelationship diagram, tree diagram, matrix diagram, contingency diagram, activity network diagram and prioritization matrix.

8- Hours

Unit-II

Plant Location and layouts: Facility location, Factors influencing plant location, Evaluating location alternatives- Locational break-even analysis, Center of gravity method and Transportation model, (Numerical problems).

Facilities layout: Types of Layouts their merits and demerits, Principles of plant layout.

8- Hours

Unit-III

Material Handling: Objectives and principles of Material handling, Unit load concept, classification of material handling equipment basic systems, Characteristics of material handling equipment, Layout procedures: Immer, Naddler, Muther and Apple James, Reed approaches to plant layout, Systematic Layout Planning (SLP)

8- Hours

Unit-IV

Space determination and area allocation: Factors for consideration in space planning, planning the space requirement for receiving, storage, production and shipping activity,

Area allocation: Establishing total space requirement, factors for consideration in area allocation, factors to be considered in planning for expansion. Six ways to expand a layout, Flexibility, Methods of obtaining the flexibility. Area allocation procedure, Introduction to Plot plan, Travel chart, blocks plan. Concept of single piece flow, uniform flow and MINOMI concept in TPS.

8- Hours

Unit-V

Construction of layout and Computerized Layout Planning: Construction of the Layout - Methods of constructing the layout, evaluation of layout, efficiency indices, presenting layout to management, implementing layout.

Computerized Layout Planning -Measurement scales, preference measurement, CRAFT, COFAD, PLANET, CORELAP, and ALDEP
7- Hours

Course Outcomes: Upon completion of this course the student will be able to:		
CO1	:	Explain facility planning process and its objectives and describe seven management and planning tools in designing a layout.
CO2	:	Describe factors influencing facility layout and use appropriate method for selection of right location.
CO3	:	Describe objectives, principles and approaches for designing effective material handling system.
CO4	:	Describe the procedure applied with space determination/area location and compute the area for a given condition.
CO5	:	Develop the skills to evaluate plant layouts using computerized layout planning procedures.

Design for Manufacturability (7RIME34)

Contact Hours/ Week	:	3 (Lecture)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I
Selection of materials for processes: Introduction, Advantages of applying DFMA, General requirements of early materials and process selection, Selection of Manufacturing processes, Process capabilities, shape attributes, material selection by Membership function modification and dimensionless ranking, computer based primary process/material selection.
7- Hours
Unit-II
Design Features: Engineering Design features Dimensioning, General Tolerance, Assembly limits, achieving larger machining tolerances, Screw threads, Ground surfaces, holes. Problems. Datum features – Functional datum, machining sequence, manufacturing datum, changing the datum. Examples.
8- Hours
Unit-III
Component Design: Casting Considerations – Pattern, Mould, parting line, cast holes, machined holes, identifying parting line, special sand cores, designing to obviate sand cores. Examples, Design for Injection Molding – Injection molding materials, Molding cycle, Systems, machine size, cycle time, cost estimation, Insert molding, Design guidelines.
8- Hours
Unit-IV
Design for Die casting and Powder metal processing: Die casting alloys, cycle, machines, dies, finishing, Assembly techniques, Design principles, Powder metallurgy processing, stages, compaction characteristics, Tooling, Sintering, Design guidelines.
8- Hours
Unit-V
GD&T: Symbols, three datum concepts of dimensioning, Straightness, concentricity, Run-out, Location Tolerance, Assembly of parts having concentric cylinders, Control of feature location by true position, Body of revolution, Roundness, Profile dimensioning, Tapers, Shaft of two diameters. Examples.
8- Hours

Course Outcomes:
Upon completion of this course the student will be able to:

CO1	:	Outline the appropriate design for economical production and select the materials
CO2	:	Evaluate the assembly limits, general tolerances and process parameters
CO3	:	Apply the concept of DFM for molding and machining
CO4	:	Evaluate the design considerations for casting and powder metallurgy process
CO5	:	Apply the concepts of Geometrical dimensioning, selection of materials and tolerance for engineering products

Supply Chain Laboratory (7RIML01)

Contact Hours/Week	:	0 (L)	Credits:	1.5
Total Lecture Hours	:	0	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	3 Hours		

Part-A (Solving Problems using Excel)
1. Evaluate Customer Service Level (CSL) and Product Fill Rate for a continuous review policy under which Q units are ordered when the quantity on hand drops to the Re-Order Point (ROP).
2. Evaluate safety inventory, given desired cycle service level or fill rate
3. Develop a Gravity Location Model to find locations that minimize the cost of transporting raw materials from suppliers and finished goods to the markets
4. Develop a Demand Allocation Model to allocate the demand from different markets to the various plants that minimize the total cost of facilities, transportation and inventory
5. Develop a Capacitated Plant Location Model to locate factories and then allocate demand to the open factories to minimize the total cost of facilities, transportation, and inventory
6. Develop a Capacitated Plant Location Model to identify the plants that are to be kept open, their capacity, and the allocation of regional demand to these plants to minimize the cost of meeting global demand

Part-B (Solving Problems using Arena software)
1. Creating Make Master, Group Master, Category Master and Item Master for various Engineering Designs.
2. Generating Bill of Materials for Various Engineering Designs
3. Creating supplier Master
4. Creating customer Master
5. Using Purchase Management System create A. Purchase Enquiry B. Purchase Quotation C. Purchase Order D. Gate Pass E. Material Inward Note F. Bill
6. Using Purchase Management System create A. Sales Enquiry B. Sales Quotation C. Sales Order D. Dispatch Instruction E. Packing Slip F. Invoice against Packing Slip G. Dispatch Instruction Report Generating various reports for confirmed orders

Open ended Exercises

1. Develop a 'Capacitated Plant Location Model with single sourcing' to locate factories and then allocate demand to the open factories satisfying the constraint of single sourcing, to minimize the total cost of facilities, transportation, and inventory.
2. Create an Aggregate Plan, to determine the production level, inventory level, and capacity level (internal and outsourced) for each period that maximizes the firm's profit over the planning horizon given the demand forecast for each period in the planning horizon

Suggested Softwares

Microsoft Excel for Part A and Sixth Sense ERP for Part B

Scheme of Examination

1. Part A: 20 Marks
2. Part B: 20 Marks
3. Viva Voce: 10 Marks
4. Total: 50 Marks

Course Outcomes:

Upon completion of this course the student will be able to:

CO1	:	Determine appropriate level of safety inventory under demand uncertainty
CO2	:	Design the Supply Chain network using gravity models or network optimization models
CO3	:	Creating Masters for items and generating Bill of Materials for Various Engineering Designs.
CO4	:	Creating Purchase order, work order and dispatch Instructions for different Items

CO – PO Mapping:

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4
CO1	3	3	3											3		
CO2	3	3	3											3		
CO3	3	3	3											3

Total Quality Management (8RIME41)

Contact Hours/ Week	:	3 (L)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I

Overview of Total Quality Management – History of TQM, Axioms of TQM, Contribution of quality Gurus – Deming's approach, Juran's quality trilogy, Crosby and quality treatment, Imai's Kaizen, Ishikawa's company Wide quality control and Fegenbaum's theory of TQC.

7- Hours

Unit-II

Evolution of Quality Concepts and Methods – Quality concepts, Development of four fitness's, evolution of methodology, evolution of company integration, quality of conformance versus quality of design from deviations to weaknesses to opportunities. Future fitness's, Four revolutions in management thinking and four levels of practice – customer focus, continuous improvement, total participation and societal networking. Focus on customers; change in work concept marketing and customers.

8- Hours

Unit-III

Continuous Improvement – Improvement as problem solving process; management by process, WV model of continuous improvement, process control and process improvement, process versus creativity. Reactive improvement; identifying the problem, standard steps and tools, seven steps case study, Seven Quality Control tools, management diagnosis of seven steps reactive improvement. General guidelines for managers diagnosing a Quality Improvement (QI) story, discussion on case study for diagnosis of the seven steps. Proactive improvement; introduction to proactive improvement, standard steps for proactive improvement, semantics, example- customer visitation, applying proactive improvement to develop new products –three stages and nine steps.

8- Hours

Unit-IV

Total Participation - Teamwork skill, dual function of work, teams and teamwork, principles for activating teamwork, creativity in team processes, initiation strategies, CEO involvement example strategies for TQM introduction. Infrastructure for mobilization, Goal setting (Vision/Mission), organization setting, training and E-education, promotional activities, diffusion of success stories, awards and incentives monitoring and diagnosis, phase-in, orientation phase, alignment phase, evolution of the parallel organization. Hoshin management; definition, phases in hosing management-strategic planning (Proactive), Hoshin deployment, controlling with metrics (Control), check and act (reactive). Hoshin management versus management by objectives, Hoshin

management and conventional business planning and alternative Hoshin deployment system, Hoshin management as "systems engineering" for alignment.
8- Hours
Unit-V
Societal Networking – Networking and societal diffusion – regional and nationwide networking infrastructure for networking, openness with real cases, change agents, center for quality management case study, dynamics of a societal learning system. TQM as learning system, keeping pace with the need for skill, a TQM model for skill development, summary of skill development
8- Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1	:	Explain the core concepts of TQM and contributions of various quality gurus to TQM.
CO2	:	Explain the concept of four fitness of quality and apply the concept of four revolutions in management thinking for effective quality management.
CO3	:	Apply the various tools and techniques of continuous improvement in solving quality related problems.
CO4	:	Apply the strategies for total participation of employees in solving quality related problems and hoshin deployment and skill development.
CO5	:	Apply networking concept for skill development, learning and change management.

Flexible Manufacturing Systems (8RIME42)

Contact Hours/ Week	:	3 (L)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I

Introduction: Flexible and rigid manufacturing, Concept of Flexible Manufacturing, Cell and Flexible Manufacturing system, Functions of a manufacturing cell, Types and components of FMS, Tests of flexibility, Group Technology and FMS, Optimization of FMS, Tasks in selection of FMS.

Control structure of FMS: Architecture of typical FMS, Automated work piece flow in FMS, Hierarchical control system architecture of FMS –Factory level, Cell level and Equipment level; Factory networks, Distributed Numerical Control (DNC), unmanned operation, FMS Diagnostics.

8- Hours

Unit-II

Production Scheduling and database concepts in FMS: Shop Floor Control system, phases in SFC, Variable route part programming system in FMS, dynamic scheduling in FMS, procedure, FMS application and flexibility –single product, single batch, n – batch scheduling problem – knowledge-based scheduling system. Performance analysis of FMS –measures, Deadlocks in automated manufacturing systems-handling deadlocks. Database Management Systems in FMS: Conceptual DBMS, types of data structures and their applications in FMS, Integrated DBMS in FMS and its implementation.

8- Hours

Unit-III

Group Technology (GT) & Cellular Layout: Introduction, objectives, definition, need, scope, part families -concept, & benefits. Production layout-types, features and applications.GT Layout - concept, need, benefits, comparison with conventional layout with examples. Parts classification and coding: GT-codification systems-types, method of coding and examples. Part features-concept, types and examples, Part family-concept, method to form and approach to form cell using part families. Types and comparison of cell: manual and automatic cell, assembly cell, Steps of cell design and cell layout.

7- Hours

Unit-IV

Tooling and fixturing in FMS: Tool holders for CNC machines, modular tooling, tool monitoring; preset, offset and wear compensation values, robotized tool assembly, tool database, tool management system, tool flow control in FMS. Fixturing in FMS: palletizing of parts, pallet pool, and flexible fixturing –principles and methodologies, standard fixtures, modular fixturing system –T-slot based and dowel pin based and their components; Computer aided fixture design –approaches, use of GT in fixture design –fixture design process, fixturing structure and fixturing information tree,

fixture database.

8- Hours

Unit-V

Designing FMS: Simulation–Need, techniques, inputs, procedure, performance Analysis. Flexible Assembly Systems: Basic concepts, classification, planning and scheduling in FAS, loading and scheduling in F.A. cells. Reconfigurable Manufacturing Systems: Definition, goals, elements, rationale, characteristics, principles, RMS and FMS.

Applications of FMS and Factory of The Future: FMS application in machining, sheet metal fabrication, prismatic component production –aerospace application – FMS development towards factories of the future – artificial intelligence and expert systems in FMS – design philosophy and characteristics for future.

Case studies: Typical FMS problems from research papers.

8- Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1	:	Describe the principles of flexible manufacturing system, control structures of FMS.
CO2	:	Discuss the concepts of production scheduling and DBMS integrated to FMS.
CO3	:	Discuss importance Group Technology (GT) & Cellular Layout in industries.
CO4	:	Apply the knowledge of tooling and fixturing in FMS
CO5	:	Explore the designing concepts and flexible assembly concepts used in FMS.

Productivity Engineering & Management (8RIME43)

Contact Hours/ Week	:	3 (L)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I

Definitions and basic concepts of productivity, the importance and role of productivity cycle, Productivity management, Elements of productivity management. Phases of productivity management, The Productivity cycle, Mendel's cycle-of-management process, Productivity index.

8- Hours

Unit-II

Productivity measurement: Productivity measurement hierarchy, Productivity measurement at national and industrial levels, Productivity measurement in companies & organizations, The system of productivity measurement: partial productivity, total factor productivity, total productivity measures.

7- Hours

Unit-III

Productivity evaluation, Productivity evaluation in companies & organizations, Total productivity change, and evaluation of total productivity between successive time periods & within a given time period.

7- Hours

Unit-IV

Productivity planning in companies and organizations, short term and long-term methods of

productivity planning, Productivity planning executives and their responsibilities, Total Productivity–profit model.

7- Hours

Unit-V

Productivity improvement in companies & organizations, Productivity improvement techniques (technology based, material based, employee based, product based and task-based productivity improvement), Improving productivity in software development, Creation and organization of the department of productivity management in a firm. Productivity improvement programmes and their implementation, Organisational structure for productivity improvement programmes

White-collar productivity measurements and evaluation techniques, evaluation of knowledge worker productivity

10- Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1	:	Apply the concepts of productivity in an organization
CO2	:	Measure productivity in an organization
CO3	:	Evaluate productivity of organization
CO4	:	Apply basic IE knowledge about productivity and plan for short term and long-term methods of productivity for organization
CO5	:	Apply Productivity Improvement in an organization

Human Factors in Engineering (8RIME44)

Contact Hours/ Week	:	3 (L)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I

Introduction: Introduction to Human Factors Engineering, the scope of human factors, the study of human factors as a science, Historical evolution of ergonomics, ergonomics and human factors engineering, Goals of human factors engineering. Introduction to research methods, an overview of research methods, experimental research methods Experimental design.

8- Hours

Unit-II

Visual Sensory Systems: The stimulus; light the receptor system; the eye ball and optic nerve, visual receptive system, contrast sensitivity, reading, colour sensation, night vision, Bottom-up vs top-down processing, depth perception, Visual search, detection, discrimination

6- Hours

Unit-III

Cognition: Information processing models, selective attention, Reception, Human Factor Guidelines in perception, Working Memory, Human factors Implications of working memory Limits, Long term memory, Organisation of information in ling term memory, episodic memory, Situation Awareness (SA), problem solving and troubleshooting, Metacognition and effort, Attention and Time sharing, mental effort and resource demand, task management and interruptions, addressing time sharing overload.

Decision Making: Decision making models; normative and descriptive decision-making models, Heuristics and biasness, Dependency of decision making on the decision context. Factors affecting decision making performance, improving human decision making. Displays & Controls: classifications of displays, thirteen principles of display design, alternates.

10- Hours

Unit-IV

Engineering Anthropometry and Work place Design: Human Variability and Statistics, anthropometric data, Structural and Functional data, Use of anthropometric data in design, General; Principles for workplace design; clearance requirement of the largest users, reach requirements of the smallest users, special requirements of maintenance people, adjustability requirements, visibility and normal line of slight, component arrangement, Design of standing and seated work areas, work surface; height, depth & inclination. Work posture risk assessment using OWAS.

8- Hours

Unit-V
Work Physiology: Muscle structure and metabolism, Circulatory and respiratory system, the respiratory system, Lung capacity, Lung capacity measurement using Spirometry. Measurement of workloads. Physical work capacity and whole-body fatigue, causes and Control of whole-body fatigue. Bio Energies. Stress and workloads. RSPM assessment.
7- Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1	:	Apply the basic knowledge of effect of factors like visual, auditory and cognitive on performance to design suitable work systems.
CO2	:	Analyse the factors affecting decision making and improve the same.
CO3	:	Analyse and calculate the level of risk in a job causing stress, fatigue and musculoskeletal disorders among the employees of an organisation and will design a suitable system to reduce the same.
CO4	:	Assess level of occupational environmental factors like heat stress, noise, vibration and RSPM in a company.

Management Information Systems &E-Commerce (8RIME51)

Contact Hours/ Week	:	3 (L)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I

Foundation Concepts: Information Systems, Introduction, The Real World of Information Systems, The IS Function, An IS Framework for Business Professionals, The Fundamental Roles of IS in Business, Trends in Information Systems, The Role of e-Business in Business, Types of Information Systems, Managerial Challenges of Information Technology, Developing IS Solutions Challenges of Ethics and IT.

System Concepts: A Foundation, Components or an Information System, System Activities, Storage of Data Resources, Control of System Performance, Output of Information Products, Fundamentals of Strategic Competitive Forces and Strategies, The Competitive Advantage of Information Technology.

8- Hours

Unit-II

Computer Systems: End User and Enterprise Computing, Types of Computer Systems, Computer Peripherals, Input, Output, and Storage Technologies. Computer Software: Introduction to Software, Types of Software, Data Resource Management, Managing Data Resources, Data Resource Management, Types of Databases, Telecommunications and Networks: Internet Applications, Business Use of the Internet, The Role of Intranets and Extranets, Telecommunication Networks, Telecommunication Alternatives, A Telecommunication Network Model, Types of Telecommunication Networks, Telecommunications Media, Tele communications processors, Internet work Processors, Telecommunications Software, Network Management.

8- Hours

Unit-III

Electronic Business Systems: Introduction, Cross-Functional Enterprise Applications, Enterprise Application Architecture, Enterprise Application Integration, Transaction Processing Systems, The Transaction Processing Cycle, Enterprise Collaboration Systems, Tools for Enterprise Collaboration, Functional Business Systems : Introduction, IT in Business, Sales Force Automation, Manufacturing Systems, Computer-Integrated Manufacturing, Human Resource Systems, HRM and the Internet, Customer Relationship Management, Enterprise Resource Planning, Electronic Data Interchange, Electronic Commerce, Fundamentals Introduction to e-Commerce, The Scope of e-Commerce, Essential e-Commerce Processes, Electronic Funds Transfer.

8- Hours

Unit-IV

Developing Business IT Strategies: Planning Fundamentals, Planning for Competitive

Advantage, SWOT Analysis, Business Models and Planning, Business/IT Planning, Implementation Challenges. Developing Business, IT Solutions, Feasibility Studies, IS Development, The Systems Approach, System thinking, The Systems Development Cycle, The Prototyping Process, Developing Business Systems, Implementing Business Systems, Management Challenges: Security and Ethical Challenges : Security, Ethical, and Societal, Challenges of IT, IT Security, Ethics, and Society, Ethical Responsibility of Business Professionals, Cyber Crime, Health Issues, Other Challenges, Internetworked Security Defenses

8- Hours

Unit-V

Emerging areas in Decision Support Systems: Management Information Systems, Online Analytical Processing, Optimization Analysis, What-lf Analysis, Sensitivity Analysis, Goal-Seeking Analysis, Using Decision Support Systems, Executive Information Systems.

Artificial Intelligence, Business, AI & Expert Systems, Components of an Expert System, Expert System Applications, Benefits of Expert Systems, Limitations of Expert Systems, Developing Expert Systems, Neural Networks, Fuzzy Logic Systems, Intelligent Agents, Genetic Algorithms, Virtual Reality, VR Applications, Fuzzy Logic in Business.

7- Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1	:	Explain the systems concepts of MIS.
CO2	:	Describe the role of Information system in business and explain information systems and components.
CO3	:	Explain the different types of IT infrastructure needed for MIS.
CO4	:	Explain Cross Functional enterprise application, application Architecture, application integration and enterprise collaboration.
CO5	:	Develop IT strategies and discuss the ethical and security issues in IT.
CO6	:	Apply the emerging decision support systems to business.

Reliability Engineering (8RIME52)

Contact Hours/ Week	:	3 (L)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I

Introduction - Concepts, terms, and definitions of reliability and related performance measure, Terminology in reliability, Failure rate, MTBF, Life test, importance of reliability, definition, meaning of adequate performance, reliability-engineering Programme and its scope, Typical applications., Reliability Management: Reliability goals & policies, economics of reliability, reliability data Collection , Component Life - Failure distribution function, reliability function and hazard rate function, interrelationships, MTTF, MTBF, bath tub curve (Mortality curve), conditional reliability function, constant and time dependent failure models.

8- Hours

Unit-II

Practical Failure Patterns - Failure behavior of mechanical, electrical, electronic parts, common failure distribution, Combinatorial Reliability (Reliability of Systems) - Reliability analysis of systems: (Success-Failure models only) Analysis of Series, parallel, series parallel and parallel series configurations. R out of n configurations, redundancy improvement factor and standby systems

9- Hours

Unit-III

Techniques for Complex Systems Reliability Evaluation: Inspection methods, event space methods, path tracing methods, decomposition methods, cut set methods, tie set methods. Design For Reliability - System effectiveness measures and life cycle cost analysis, reliability allocation,

methods for reliability in design, failure analysis, systems safety and fault tree analysis, multistate model. Failure mode effect and criticality analysis.

8- Hours

Unit-IV

Markov Models For System Reliability - Reliability analysis of state dependent systems, Markov analysis, stand by system analysis, Load sharing systems, Maintainability and Availability: Analysis of Down time, Repair Time distributions, maintainability, Maintenance increment, Design for maintainability. Availability analysis, Different forms of availability, system availability analysis, mission availability, Availability of stand-by system.

7- Hours

Unit-V

Analysis Failure Data - Types of life testing, data collection, Empirical methods, Estimation of Static life, types of life testing: Development of confidence intervals, acceptance test procedures for life estimation using exponential, Weibull and Gamma distribution models. Sequential life tests and acceptance criteria. Application and case studies: Case example involving redundancy, burning tests, preventive maintenance analysis. Repairable system analysis, Software reliability.

7- Hours

Course Outcomes:
Upon completion of this course the student will be able to:

CO1	:	Explain and evaluate reliability performance measure
CO2	:	Perform reliability analysis of system
CO3	:	Apply reliability techniques for complex systems
CO4	:	Analyze and develop Markov model for system reliability
CO5	:	Perform acceptance test procedures for life estimation using Exponential, Weibull and Gamma distribution models

Maintenance and Safety Engineering (8RIME53)

Contact Hours/ Week	:	3 (L)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I

Introduction to Maintenance System – Definition, scope, objective, functions and importance of maintenance system, type of maintenance system. Break down maintenance, preventive maintenance, predictive maintenance, planned maintenance, total productive maintenance, corrective maintenance, condition monitoring. Problems on selection of methods like preventive or breakdown maintenance. MTBF, MTTR, MWT.

Economics in Maintenance: Repair, replacement, repair complexity, finding out most optimal preventive maintenance frequency. Numerical treatment.

8- Hours

Unit-II

Maintenance of Machinery – Causes of machine failure, performance evaluation, complete overhauling of machines tools. Maintenance planning and scheduling, repair order control manpower requirement. Maintenance job analysis, spare parts control. Maintenance planning – planning of maintenance junctures, manpower allocation, long range planning, short range planning techniques and procedures. Estimation of maintenance work. Maintenance control

8- Hours

Unit-III

Computers in Maintenance: Features of computerized maintenance system, benefits of computerization, office automation.

Maintenance Information System: Classification of information system, operations information systems, management information systems, executive information systems. Features of good computerized work order system, applications of computers in maintenance work.

8- Hours

Unit-IV

Industrial Safety – Economic importance of accidents, types of safety organizations, analysis of accident record, accident investigations, analysis of accident safety standards for mechanical equipment. Electrical equipment and systems. Chemical hazards, material handling, exhaust system, welding. Plant housekeeping-building, aisles, passages, floors, tool cribs, washrooms, canteens. Fire handling equipments.

8- Hours

Unit-V

Occupational Safety: Concept of OSH, significance of OSH, assessment of OSH. Industrial pollution, dust control–mechanical dust collectors, wet type dust collector, electrostatic precipitator. Noise pollution control, noise measurement and noise control techniques. Safety standards: ISO 45000 series, objectives, features of ISO 45000 series.

7- Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1	:	Describe the different types of maintenance systems and their relevance
CO2	:	Describe maintenance planning and scheduling and the tools and procedures used in process; analyze the reasons for the machine failure
CO3	:	Illustrate the role of computers in maintenance and describe maintenance information systems
CO4	:	Debate the need for industrial safety system and categorize the various industry hazards and demonstrate how to prevent
CO5	:	Discuss the role of occupation safety standards and their recommendations for noise and pollution control

Industrial Hydraulics and Pneumatics (8RIME54)

Contact Hours/ Week	:	3 (L)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I

Introduction to Hydraulic Power and Pumps: Introduction to Hydraulic Power: Definition of hydraulic system, advantages, limitations, applications, Pascal's law, structure of hydraulic control system, problems on Pascal's law. The source of Hydraulic Power: Pumps Classification of pumps, pumping theory of positive displacement pumps, construction and working of Gear pumps, Vane pumps, Piston pumps, fixed and variable displacement pumps, Pump performance characteristics, pump Selection factors, problems on pumps

8- Hours

Unit-II

Hydraulic Actuators and Motors: Classification cylinder and hydraulic motors, Linear Hydraulic Actuators [cylinders], single and double acting cylinder, Mechanics of Hydraulic Cylinder Loading, mounting arrangements, cushioning, special types of cylinders, problems on cylinders, construction and working of rotary actuators such as gear, vane, piston motors, Hydraulic Motor Theoretical Torque, Power and Flow Rate, Hydraulic Motor Performance, problems, symbolic representation of hydraulic actuators (cylinders and motors).

8- Hours

Unit-III

Control Components in Hydraulic Systems: Classification of control valves, Directional Control Valves- Symbolic representation, constructional features of poppet, sliding spool, rotary type valves solenoid and pilot operated DCV, shuttle valve, check valves, Pressure control valves - types, direct operated types and pilot operated types. Flow Control Valves -compensated and non-compensated

FCV, needle valve, temperature compensated, pressure compensated, pressure and temperature compensated FCV, symbolic representation

8- Hours

Unit-IV

Hydraulic Circuit Design and Analysis: Control of Single and Double -Acting Hydraulic Cylinder, Regenerative circuit, Pump Unloading Circuit, Double Pump Hydraulic System, Counter balance Valve Application, Hydraulic Cylinder Sequencing Circuits, Automatic cylinder reciprocating system, Locked Cylinder using Pilot check Valve, Cylinder synchronizing circuit using different methods, factors affecting synchronization, Hydraulic circuit for force multiplication, Speed Control of Hydraulic Cylinder, Speed Control of Hydraulic Motors, Safety circuit, Accumulators, types, construction and applications with circuits.

8- Hours

Unit-V

Introduction to Pneumatic control, Actuators and control valves: Pneumatic Control Valves: DCV such as poppet, spool, suspended seat type slide valve, pressure control valves, flow control valves, types and construction, use of memory valve, Quick exhaust valve, time delay valve, shuttle valve, twin pressure valve, symbols.

Simple Pneumatic Control: Direct and indirect actuation pneumatic cylinders, speed control of cylinders - supply air throttling and Exhaust air throttling and Exhaust air throttling.

7- Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1	:	Explain the Fluid power and operation of different types of pumps.
CO2	:	Explain the features and functions of Hydraulic motors, actuators
CO3	:	Explains and design the flow Control Components and valve in Hydraulic Systems
CO4	:	Design the simple Hydraulic circuits and systems for industrial application
CO5	:	Explain working and identify of different pneumatic circuits and systems

Product Development for Six-Sigma (8RIME61)

Contact Hours/ Week	:	3 (L)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I

Design for quality: Taguchi's Approach to Quality, On-line and Off-line Quality Control, Quality Loss Function, System Design, Parameter Design, Design for Environment, Human factor design, Design for casting and forging, Causes of Variation.

7- Hours

Unit-II

Quality Function Deployment: Introduction, QFD team, benefits, voice of customer, organization of information, house of quality, QFD process Design of Experiments: Basic methods- Two factorial experiments-Extended method reduced tests and fractional experiments, orthogonality, base design method, higher dimensional fractional factorial design

8- Hours

Unit-III

Failure Mode Effect Analysis: Refining geometry and layout, Failure tree analysis, Defects and failure modes, Techniques of failure analysis, Field inspection of failure, Macroscopic and

Microscopic examination, Additional tests, Analysis of data and report of failure
8- Hours
Unit-IV
Statistical Consideration in Product Design and Development: Frequency distributions and Histograms- Run charts –stem and leaf plots- Pareto Diagrams-Cause and Effect Diagrams-Box plots- Probability distribution- Statistical Process control–Scatter diagrams – Multivariable charts.
8- Hours
Unit-V
Six Sigma: Overview, Basics and history of the approach for six sigma, Methodology and focus, the application of Six Sigma in production and in service industries, Relationship of Six Sigma and Lean Management, linking Six Sigma project goals with organizational strategy.
8- Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1	:	Identify the importance of various principles of quality in product or service
CO2	:	Use statistical tools in product development
CO3	:	Apply basic risk analysis and experiment design techniques into practical cases
CO4	:	Demonstrate knowledge about Six sigma, Design of Experiments

CO – PO Mapping:

Business Process Re-Engineering (8RIME62)

Contact Hours/ Week	:	3 (L)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I

Introduction - Concepts, terms, and definitions of reliability and related performance measure, Terminology in reliability, Failure rate, MTBF, Life test, importance of reliability, definition, meaning of adequate performance, reliability-engineering Programme and its scope, Typical applications., Reliability Management: Reliability goals & policies, economics of reliability, reliability data Collection , Component Life - Failure distribution function, reliability function and hazard rate function, interrelationships, MTTF, MTBF, bath tub curve (Mortality curve), conditional reliability function, constant and time dependent failure models.

8- Hours

Unit-II

Practical Failure Patterns - Failure behavior of mechanical, electrical, electronic parts, common failure distribution, Combinatorial Reliability (Reliability of Systems) - Reliability analysis of systems: (Success-Failure models only) Analysis of Series, parallel, series parallel and parallel series configurations. R out of n configurations, redundancy improvement factor and standby systems

8- Hours

Unit-III

Techniques for Complex Systems Reliability Evaluation: Inspection methods, event space methods, path tracing methods, decomposition methods, cut set methods, tie set methods. Design For Reliability - System effectiveness measures and life cycle cost analysis, reliability allocation, methods for reliability in design, failure analysis, systems safety and fault tree analysis, multistate model. Failure mode effect and criticality analysis.

8- Hours

Unit-IV

Markov Models For System Reliability - Reliability analysis of state dependent systems, Markov analysis, stand by system analysis, Load sharing systems, Maintainability and Availability: Analysis of Down time, Repair Time distributions, maintainability, Maintenance increment, Design for maintainability. Availability analysis, Different forms of availability, system availability analysis, mission availability, Availability of stand-by system.

8- Hours

Unit-V

Analysis Failure Data - Types of life testing, data collection, Empirical methods, Estimation of Static life, types of life testing: Development of confidence intervals, acceptance test procedures for life estimation using exponential, Weibull and Gamma distribution models. Sequential life tests and

acceptance criteria. Application and case studies: Case example involving redundancy, burning tests, preventive maintenance analysis. Repairable system analysis, Software reliability.

7- Hours

Course Outcomes:
Upon completion of this course the student will be able to:

CO1	:	Describe the business process Re- engineering concepts, principles and also its significance.
CO2	:	Discuss the various BPR methodologies used in Business processes.
CO3	:	Analyze the factors influencing successful implementation of BPR.
CO4	:	Compare and contrast BPR with the other process improvement techniques like TQM and Kaizen.
CO5	:	Explain the enablers of BPR and role of IT in BPR applied to both manufacturing and service industries.

Design of Experiments (8RIME63)

Contact Hours/ Week	:	3 (L)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I

Introduction: Modern quality control. Quality in engineering design. History of quality engineering: Japan versus U.S. track records. Overview of contents. Taguchi Approach to Quality: Definition of quality. Loss function. Off-line and on-line quality control. Taguchi's quality philosophy. Basic Designs – Completely Randomized Design, Randomized Block Design, Latin Square Designs.

8- Hours

Unit-II

Factorial Experimentation: Two Levels - Full Factorial Designs: Experimentation as a learning process. Traditional scientific experiments. Three-factor design, Replicating experiments, Factor interactions. Normal plots of estimated effects, Mechanical plating experiment. Two-factor design. Four-factor design. Fractional Factorial Designs: Blocking two-level designs. Other useful two-level designs.

8- Hours

Unit-III

Constructing Orthogonal Arrays: Counting degrees or freedom, selecting a standard orthogonal array, dummy level technique, and compound factor method. Linear graphs and interaction assignment, modification of linear graphs, column merging method, branching design. Strategy for constructing an orthogonal array. Comparison with the classical statistical experiment design.

8- Hours

Unit-IV

Steps In Robust Design: case study discussion. Noise factors and testing conditions. Quality characteristics and objective functions. Control factors and their levels. Matrix experiment and data analysis plan. Conducting the matrix experiment, data analysis, verification experiment and future plan.

8- Hours

Unit-V

Signal-To-Noise Ratio - Evaluation of sensitivity to noise. S/N ratios for static problems, SIN ratios for dynamic problems. Analysis of ordered categorical data. Minimizing variability and optimizing averages. Taguchi Inner and Outer Arrays -noise factors, experimental designs for control and noise factors. Illustrative example. Experimental designs for factors at three and four levels.

7- Hours

Course Outcomes: Upon completion of this course the student will be able to:		
CO1	:	Apply the Taguchi approach in quality engineering problems
CO2	:	Apply the principles of randomization, replication, and blocking to successfully analyze problems and as well perform the analysis of variance (ANOVA) in factorial experiments
CO3	:	Construct and analyze orthogonal arrays in their fields of study and work
CO4	:	Apply the robust design principles in characterization of new process and product
CO5	:	Determine the S/N ratio and interpret the results in optimization of the process

Product Design and Manufacturing (8RIME64)

Contact Hours/ Week	:	3 (L)	Credits:	3.0
Total Lecture Hours	:	39	CIE Marks:	50
Total Tutorial Hours	:	0	SEE Marks:	50
Practical/ Week	:	--		

Unit-I

Introduction: Characteristics of Successful Product Development, Design and Development of Products, Duration and Cost of Product Development, Challenges of Product Development

Development Process and Organization: A Generic Development Process, Concept Development: The Front-End Process, Adopting the Generic Product Development Process, AMF Development Process, Product Development Organizations, AMF Organization.

8- Hours

Unit-II

Product Planning: The Product Planning Process, Identify Opportunities, Evaluate and Prioritize Projects, Allocate Resources and Plan Timing, Complete Pre Project-Planning, Reflect all The Results and The Process.

Identifying Customer Needs: Gather Raw Data from Customers, Interpret Raw Data in Terms of Customer Needs, Organize the Needs into a Hierarchy, Establish the Relative Importance of Needs and Reflect on the Results and Process.

Product Specification: Specifications, Establishing the Specifications, Establishing Target Specifications, Setting the Final Specifications. Case study on QFD.

8- Hours

Unit-III

Concept Generation: The Activity of Concept Generation: Clarify the Problem, Search Externally, Search Internally, Explore Systematically and Reflect on the Results and Process.

Concept Selection: Overview of Methodology, Concept Screening and Concept Scoring

Concept Testing: Define the Purpose of Concept Test, choose a Survey Population, choose a Survey Format, Communicate the Concept, Measure Customer Response, Interpret the Result, Reflect on the Results and the Process. Case study on FMEA.

8- Hours

Unit-IV

Product Architecture: Product Architecture, Implications of the Architecture, Establishing the Architecture, Variety and Supply Chain Considerations, Platform Planning, Related System Level Design Issues.

Industrial Design: Assessing the Need for Industrial Design, The Impact of Industrial Design, Industrial Design Process, Managing the Industrial Design Process, Assesses the Quality of Industrial Design

7- Hours

Unit-V
Design for Environment: Life cycles, Environmental impact: Herman Miller's journey toward Design for Environment, Design for Environment process **Design for Manufacture:** Definition, Estimation of Manufacturing Cost, Reducing the Cost of Components, Assembly, Supporting Production, Impact of DFM decisions on Other Factors. **Prototyping:** Prototyping Basics, Principles of Prototyping, Technologies, Planning for Prototypes. **Robust Design:** DOE, Robust design process.
8- Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1	:	Explain the concepts and various phases of product development.
CO2	:	Identify the customer needs and articulate the product specifications.
CO3	:	Demonstrate creative thinking skills for idea generation, translate conceptual ideas into clear sketches and choose the best concept among the various alternatives available for developing a product.
CO4	:	Generate the product architecture and explain the need of industrial design in product development.
CO5	:	Design product for manufacturing feasibility with respect to assembly, production, quality, safety and explain the concepts of prototyping.

Course prescribed to Lateral Entry Diploma holders admitted to III semester B.E. programs													
1	NCMC	N3MATDP	Foundation of Engineering Mathematics - I	Maths	2	2	0		-	100	-	100	0
		AAP	AICTE Activity Points (Applicable for both Regular and Lateral Entry students)	40 hours community service to be documented and produced for the examination									

Note: **BSC**: Basic Science Course, **IPCC**: Integrated Professional Core Course; **PCC**: Professional Core Course,
HSMC: Humanity and Social Science & Management Courses, **AEC** –Ability Enhancement Courses. **UHV**- Universal Human Value Courses
L –Lecture, **T** – Tutorial, **P**- Practical/ Drawing, **S** – Self-Study Component, **CIE**: Continuous Internal Evaluation, **SEE**: Semester End Examination

NSH01 Balake Kannada is for students who can't speak, read and write Kannada.
NSH02 Samskrutika Kannada is for students who can speak, read and write Kannada.

Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with Practicals of the same course. Credit for IPCC can be 04 and its Teaching – Learning hours (L : T : P) can be considered as (3: 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from practical part of IPCC shall be included in the SEE question paper.

INT1 - Inter/Intra Institutional Internship: All the students admitted to engineering programs under the **lateral entry category** shall have to undergo mandatory INT1 Inter/Intra Institutional Internship of 03 weeks during the **intervening period of III and IV semesters**. The internship shall be slated for CIE only and will not have SEE. The letter grade earned through CIE shall be included in the IV semester grade card. The internship shall be considered for vertical progression and for the award of degree. Those, who do not take up / complete the internship shall be declared fail and shall have to complete subsequently after satisfying the internship requirements. The faculty coordinator or mentor shall monitor the students' internship progress and interact with them for the successful completion of the internship.

Non-Credit Mandatory Course (NCMC):

(A) Foundation of Engineering Mathematics - I & II

(1) These courses are prescribed for III and IV semesters respectively to **lateral entry Diploma holders** admitted to III semester of B.E. programs. They shall attend the classes during the respective semesters to complete all the formalities of the course and appear for the Continuous Internal Evaluation (CIE). In case, any student fails to register for the said course/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have secured an F grade. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks. **These courses are slated for CIE only and have no SEE.**

(2) Foundation of Engineering Mathematics I and II shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.

(3) Successful completion of the courses Foundation of Engineering Mathematics I and II shall be indicated as PP in the grade card. Non-completion of the courses Foundation of Engineering Mathematics I and II shall be indicated as NP.

(B) National Service Scheme/Physical Education (Sport and Athletics)/Yoga:

(1) Securing 40 % or more in CIE, 35 % or more marks in SEE and 40 % or more in the sum total of CIE + SEE leads to successful completion of the registered course.

(2) In case, students fail to secure 35 % marks in SEE, they have to appear for SEE during the subsequent examinations conducted by the Institute.

(3) In case, any student fails to register for NSS, PE or Yoga/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have not completed the requirements of the course. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks.

(4) Successful completion of the course shall be indicated as PP in the grade card. Non-completion of the course shall be indicated as NP.

(5) These courses shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.

Ability Enhancement Course – III (Offered by the Department)

N3CCSA01	**Unix and Shell Programming**	N3CCSA03	
N3CCSA02	**MS Office and Latex**	N3CCSA04	

SCHEME OF TEACHING AND EXAMINATION (160 Credits Scheme)

		AAP	AICTE Activity Points (Applicable for both Regular and Lateral Entry students)	40 hours community service to be documented and produced for the examination									

Note: **BSC**: Basic Science Course, **IPCC**: Integrated Professional Core Course; **PCC**: Professional Core Course,

HSMC: Humanity and Social Science & Management Courses, **AEC** –Ability Enhancement Courses. **AAP**- AICTE Activity Points

L –Lecture, **T** – Tutorial, **P**- Practical/ Drawing, **S** – Self-Study Component, **CIE**: Continuous Internal Evaluation, **SEE**: Semester End Examination

NSH01 Balake Kannada is for students who can't speak, read and write Kannada.
NSH02 Samskrutika Kannada is for students who can speak, read and write Kannada.

Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with Practicals of the same course. Credit for IPCC can be 04 and its Teaching – Learning hours (L : T : P) can be considered as (3: 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from practical part of IPCC shall be included in the SEE question paper.

Internship of 04 weeks during the intervening period of IV and V semesters; INT2 Innovation/ Entrepreneurship/ Societal based Internship.

(1) All the students shall have to undergo a mandatory internship of 04 weeks during the intervening period of IV and V semesters. **The internship shall be slated for CIE only and will not have SEE.** The letter grade earned through CIE shall be included in the VI semester grade card. The internship shall be considered as a head of passing and shall be considered for vertical progression and for the award of degree. Those, who do not take up / complete the internship shall be considered under F (fail) grade and shall have to complete subsequently after satisfying the internship requirements.

(2) **Innovation / Entrepreneurship Internship** shall be carried out at industry, State and Central Government / Non-government organizations (NGOs), micro, small, and medium enterprise (MSMEs), Innovation centres or Incubation centres. Innovation need not be a single major breakthrough; it can also be a series of small or incremental changes. Innovation of any kind can also happen outside of the business world. Entrepreneurship internships offers a chance to gain hands on experience in the world of entrepreneurship and helps to learn what it takes to run a small entrepreneurial business by performing intern duties with an established company. This experience can then be applied to future business endeavours. Start-ups and small companies are a preferred place to learn the business tactics for future entrepreneurs as learning how a small business operates will serve the intern well when he/she manages his/her own company. Entrepreneurship acts as a catalyst to open the minds to creativity and innovation. Entrepreneurship internship can be from several sectors, including technology, small and medium-sized, and the service sector.

(3) **Societal or social internship**. Urbanization is increasing on a global scale; and yet, half the world's population still resides in rural areas and is devoid of many things that urban population enjoy. Rural internship is a work-based activity in which students will have a chance to solve/reduce the problems of the rural place for better living. **As proposed under the AICTE rural internship programme, activities under Societal or social internship, particularly in rural areas, shall be considered for 40 points under AICTE activity point programme.**

Scheme of Teaching, Examination and Syllabus

B.E. COMPUTER SCIENCE & ENGINEERING

Batch: 2021-22

III SEMESTER

(Effective from the academic year 2022-2023)

B.E COMPUTER SCIENCE & ENGINEERING SEMESTER - III			
Mathematical Concepts for Information Technology			
Course Code	N3MATC	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	3

Course objectives:

This Course will enable students to:

1. To introduce the concept of analytic function, transformation for mapping.
2. To introduce the concept of complex variables to evaluate the integrals
3. To introduce the concept of partial differential equations, use separation of variable method to solve wave, heat and Laplace equations.
4. To develop and conduct appropriate experimentation, analyse and interpret data and use engineering judgment to draw conclusion.
5. To introduce the basic concepts and applications of probability in engineering

Module-1 : Complex Variables **8 Hours**

Functions of complex variable, Definition of Limit, Continuity, Differentiability. Analytic functions, Cauchy's-Reimann equation in Cartesian and polar forms (Statement only), Properties of analytic functions (Statement only). Geometrical representation of f(z)=w, Conformal transformation: w=ez, w=$z+\frac{1}{z}$, w=z2.

Module-2 : Complex Integration **8 Hours**

Bilinear transformation, Properties, Complex integration, Cauchy's theorem (with proof), Converse of Cauchy's theorem, Cauchy's integral formula (with proof), residues, residues theorem, calculation of residues.

Module-3 : Partial differential equations (P.D.E.) **8 Hours**

Formation of Partial Differential Equation, Solution of Langrange's Linear P.D.E. of the type Pp+Qq=R. Method of Separation of Variables. Applications of P.D.E.: Classification of PDE, solution of one dimensional heat wave and two dimensional Laplace's equation by the method of separation of variables.

Module-4 : Statistics **7 Hours**

Introduction, Definitions, Curve Fitting, equation of Straight line, parabola and exponential, correlation and regression, formula for correlation coefficient, regression lines and angle between the regression lines.

Module-5 : Probability Theory **8 Hours**

Terminology, Definition of probability, Probability and set notations, Addition law of probability, independent events, conditional probability, multiplication law of probability, Baye's theorem.

Course outcomes:

On successful completion of this course, students will be able to:

1. Determine continuity/differentiability/analyticity of a function and find the derivative of a function. Identify the transformation (L3,L1)
2. Evaluate a contour integral using Cauchy's integral formula. Compute singularities and also

the residues(L3).

3. Formulate and solve partial differential equations. Apply separation of variable method to solve wave, heat and Laplace equations (L4).
4. Apply least square method to fit a curve for the given data and evaluate the correlation coefficient and regression lines for the data (L3)
5. Determine the nature of the events and hence calculate the appropriate probabilities of the events (L3).

B.E COMPUTER SCIENCE & ENGINEERING

SEMESTER - III

OBJECT ORIENTED PROGRAMMING WITH C++

Course Code	N3CCSI01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:2)	SEE Marks	50
Credits	04	Exam Hours	3

Course objectives:

This Course will enable students to:

1. Make use of the fundamental concepts of object oriented programming.
2. **Develop** object oriented code by using C++ language.
3. **Create** and make use of objects from predefined class libraries.
4. **Develop** C++ classes from specifications.
5. Make use of interfaces, inheritance, and polymorphism as programming techniques.
6. Make use of exceptions for error free code.
7. **Develop** robust and reliable software using object oriented programming.

Module-1 **(8L+0Thrs)**

Principles of Object-Oriented Programming and Functions : A look at Procedure Oriented Programming, Object Oriented Programming Paradigm, Basic Concepts of Object Oriented Programming, Benefits of OOPS, Object Oriented Languages, Applications of OOP, Reference Variables, Operators in C++, Scope Resolution Operator, Memory Dereferencing Operators, Memory Management Operators, Manipulators, Function Prototyping, Call by Reference, Return by Reference, Inline Functions, Default Arguments, Const Arguments, Function Overloading.

Classes and Objects: C Structure Revisited, Specifying a Class, Defining Member Functions, A C++ Program with Class, Making an Outside Function Inline, Nesting of Member Functions, Private Member Functions, Arrays within a Class, Memory Allocation for Objects, Static Data Members, Static Member Functions, Array of Objects, Objects as Function Arguments, Friendly Functions, Returning Objects.

Practical questions on: Reference variables, Operators in C++, Scope Resolution Operator, Memory Dereferencing Operators, Memory Management Operators, Manipulators, Main Function, Function Prototyping, Function Definition, Call by Reference, Return by Reference, Inline Functions, Friend Function, Static Functions, Virtual Functions, Function Overloading, Classes and Objects, Nesting of Member Functions, Array of Objects, Objects as Function Arguments, Friend Functions and Returning Objects.

Module-2 **(8L+0T hrs)**

Constructors and Destructors: Constructors, Parameterized Constructors, Multiple Constructors in a Class, and Constructors with Default Arguments, Dynamic Initialization of Objects, Copy Constructors, Dynamic Constructors, and Destructors.

Operator overloading and type conversions: Introduction, Defining operator overloading, Overloading Unary and Binary operators, Overloading binary operators using friend function, Manipulation of strings using operators, Rules for overloading operators, type conversions.

Practical questions on: Parameterized Constructor, Constructors with Default Arguments, and Multiple Constructors in a Class, Dynamic Initialization of Objects, Copy Constructors, Dynamic Constructors, and Destructors

.

Module-3 **(8L+0T hrs)**

Inheritance: Introduction, Defining Derived Classes, Single Inheritance, Making a Private Member Inheritable, Multi-Level Inheritance, Multiple Inheritance, Hierarchical Inheritance, Hybrid Inheritance, Virtual Base Classes, Abstract Classes, Constructors in Derived classes, Nesting of Classes.

Pointers, **Virtual functions and polymorphism:** Introduction, Pointers, Pointers to Objects, This pointer, Pointers to Derived Classes, Virtual Functions, Pure Virtual Functions.

Practical questions on: Single Inheritance, Multi-Level Inheritance, Multiple Inheritance, Hierarchical Inheritance, Hybrid inheritance, Virtual Base Classes, Abstract Classes, Constructors in Derived Classes, Nesting of Classes, Pointers to Objects, This Pointer, Pointer to Derived Classes, Virtual Functions, Pure Virtual Functions.

Module-4 **(8L+0T hrs)**

Working with Files: Introduction, Classes for File Stream operations, opening and closing Files, detecting end of file, Open() file modes, File pointers and their manipulations, sequential input output operations, updating a File

Templates: Introduction, Class Templates, Class Templates with Multiple Parameters, Function Templates, Function Templates with Multiple Parameters, Overloading of Template Functions, Member Function Templates, Non-type Template Arguments.

Practical questions on: File opening, file closing, file manipulations, Class Templates, Class Templates with Multiple Parameters Function Templates, Function Templates with Multiple Parameters, Overloading Template Functions.

Module-5 **(7L+0T hrs)**

Exception handling: Introduction, Basics of Exception Handling, Exception Handling Mechanism, Throwing Mechanism, Catching Mechanism, Rethrowing an Exception, Specifying Exceptions, Exceptions in Constructors and Destructors, Exceptions in Operator Overloaded Functions

Introduction to the Standard Template Library: Introduction, Components of STL, Containers, Algorithms, Iterators, Application of Container Classes, Function Objects.

Practical questions on: Exception Handling Mechanism, Throwing Mechanism, Catching Mechanism, Rethrowing Mechanism, Exceptions in Constructors and Destructors, Exceptions in Overloaded Functions, Standard Template Library, Application of Container Classes and Function Objects .

Open Ended Experiments in OOP with C++

The Open Ended Experiments are introduced to enable the students to apply the programming concepts such as inheritance, encapsulation, polymorphism, exception handling, templates, STL. Implement and demonstrate the solution to the any real world problems.

Course outcomes:

On successful completion of this course, students will be able to:

1. Apply the object-oriented programming concepts to solve real world problems.
2. Develop and demonstrate the different overloading techniques.
3. Develop solutions for real world problems using inheritance and polymorphism concepts
4. Develop generic programming skills using templates
5. Apply the exception handling methodology for handling errors.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E COMPUTER SCIENCE & ENGINEERING SEMESTER - III			
DIGITAL CIRCUITS & COMPUTER ORGANIZATION			
Course Code	N3CCSI02	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:2)	SEE Marks	50
Credits	4	Exam Hours	3

Course objectives:

1. **Explain** the basic structure of a computer and how computer programs are organized, stored and executed at the machine level
2. **Identify** the data path elements needed to implement single bus and three bus organization of a processor
3. **Describe** the principles of hardwired and micro programmed control
4. **Explain** different techniques used to perform arithmetic operations
5. **Explain** the basic types of memory and cache mapping functions

Module-1 **(8L hrs)**

Basic Structure of Computer: Functional Units, Basic Operational Concepts, Bus Structures, Performance - Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement. Machine Instructions and Programs: Numbers, Arithmetic Operations and Characters - Number Representation, Addition of Positive Numbers, Addition and Subtraction of Signed Numbers, Overflow in Integer Arithmetic, Characters, Memory Location and Addresses - Byte Addressability, Big-endian and Little-endian Assignments, Word Alignment, Accessing Numbers, Characters, and Character Strings, Memory Operations, Instructions and Instruction Sequencing - Register Transfer Notation, Assembly Language Notation, Basic Instruction Types, Instruction Execution and Straight-Line Sequencing, Branching, Condition Codes.

Module-2 **(8L hrs)**

Addressing Modes - Implementation of Variables and Constants, Indirection and Pointers, Indexing and Arrays, Relative Addressing, Additional Modes, Basic Input and Output Operations. Stacks and Queues, Subroutines - Subroutine Nesting and the Processor Stack, Parameter Passing, The Stack Frame , Basic Processing Unit: Some Fundamental Concepts – Single Bus Organization: Register Transfers, Performing an Arithmetic or Logic operation, Fetching a Word from Memory, Storing a word in Memory.

Module-3 **(8L hrs)**

Basic Processing Unit: Execution of a Complete Instruction - Branch Instructions, Multiple Bus Organization, Hard wired Control - A Complete Processor, Micro programmed Control - Microinstructions. Arithmetic: Addition and Subtraction of Signed Numbers - Addition/Subtraction Logic Unit, Design of Fast Adders - Carry-Lookahead Addition.

Module-4 **(8L hrs)**

Arithmetic: Multiplication of Positive Numbers, Signed Operand Multiplication - Booth Algorithm, Fast Multiplication - Bit-Pair Recoding of Multipliers, Carry-Save Addition of Summands, Integer Division, Floating-point Numbers and Operations - IEEE Standard for Floating-Point Numbers, Arithmetic Operations on Floating-Point Numbers - Addition and Subtraction Operations, Implementing Floating-Point Operations.

Module-5 **(7L hrs)**
Memory System: Some Basic Concepts, Semiconductor RAM Memories - Internal Organization of Memory Chips, Static Memories, Asynchronous DRAMs, Synchronous DRAMs, Structure of Larger Memories, Memory System Considerations, Read Only Memories - ROM, PROM, EPROM, EEPROM, Flash Memory, Speed, Size, and Cost, Cache Memories -Mapping Functions
LAB COMPONENT
Week 1 : Introduction to digital trainer kits & verification of basic gates
Week 2 onwards in every lab the instructions and design of the following experiments to be taught during the first one hour of the lab. The second hour is to be utilized in conducting the experiments and verification of truth tables.
1. Design and implementation of a Half- adder and a full adder using minimum number of 2 input NAND gates 2. Given any 4-variable logic expression, simplify using Entered Variable Map and realize the simplified logic expression using 8:1 or (2) 4:1 Multiplexer IC. 3. Design and implement Full Adder and Full Subtractor using 4:1 MUX. 4. Design and implement full-adder and full-subtractor using a 74138 DECODER. **5.** Design and test one/ two-bit Magnitude Comparator and verify its true table. Realize a J-K Master/Slave Flip-Flop using NAND gates and verify its truth table. **6.** Design and implement a mod-n (n<8) Synchronous up Counter using J-K Flip-Flop Ics, display the result on discrete LEDs. **7.** Design and implement the following using 4-bit Shift register IC. i) Left Shift ii) SIPO iii) SISO iv) PIPO v) Ring Counter vi) Johnson counter **8.** Design and implement an Asynchronous Counter using Decade Counter IC to Count up from 0 to 9. Display the count value on 7 Segment LED display using BCD to 7 segment code converter IC. **9.** Design and implement a 3 stage Asynchronous Counter using a J-K Flip Flops to count from 0 to n.

Course outcomes:

On successful completion of this course, students will be able to:

1. **Illustrate** the basic operational concepts of a computer system and **discuss** its performance parameters
2. **Interpret** various addressing modes and **apply** the same to **design** solution to a given problem
3. **Discuss** basic processing unit to generate control signals and to **design** the control sequence for execution of an instruction
4. **Explain** the various arithmetic algorithms and **apply** the same to solve a given problem
5. **Describe** memory organization and **design** the solution to the given problem

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

SEMESTER – III

DATA STRUCTURES

Course Code	N3CCS01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	3.0	Exam Hours	3

Course objectives:

1. Discuss the concepts of structures, union, files and dynamic memory allocation techniques.
2. Describe the properties of various data structures such as Stacks, Queues, Lists, and Trees.
3. Implement the data structures such as Stacks, Queues, Lists, and Trees using C language.
4. Discuss the applications of various Data Structures.

Module-1 **(08L hrs)**

Structures and Unions: Defining a Structure, declaring Structure variables, accessing Structure members, Structure initialization, copying and comparing Structure variables, operations on individual members, array of Structures, array within Structure, Structure within Structure, Structures and Functions, Unions, size of structures.

File management in C: Defining and Opening a file, Closing a file, Input/Output operations on files - getc(), putc(), getw(), putw(), fscanf(), fprintf(), Error handling during I/O operations - feof(), ferror(), Random access to files - ftell(), rewind(), fseek(), Command line arguments.
(Text Book 1: 10, 12)

Module-2 **(08L hrs)**

The Stack: Definition and Examples, representing Stacks in C, Example: Infix, Postfix, and Prefix.
Recursion: Recursive Definition and Processes, Recursion in C, Writing recursive programs: The Towers of Hanoi Problem, Efficiency of Recursion.
Queues and Lists: The Queue and Its Sequential Representation: C implementation of Queues, Insertion, Deletion and Display operations, Types of Queues (Linear and Circular Queues)
Self-Study: Priority and Double Ended Queues (Only concepts).
(Text Book2: 2, 3.1, 3.2, 3.3(only the Towers of Hanoi Problem), 3.5. 4.1(excluding Queue as an ADT))

Module-3 **(08L hrs)**

Queues and Lists Continued
Dynamic memory allocation: malloc(), calloc(), realloc(), free().
(Text Book 1: 13.1-13.6)
Linked lists: Inserting and removing nodes from a list, linked implementation of stacks, getnode and freenode operations, linked implementation of queues, examples of list operation, list implementation of priority queues, header nodes.
Lists in C: allocating and freeing dynamic variables, linked lists using dynamic variables, queues as lists in C, examples of list operations in C, non-integer and non-homogeneous lists, Addition of two polynomials, implementing header nodes.
(Text Book2: 4.2, 4.3(except array implementation of list, Limitations of array implementation, comparing dynamic and array implementations of list))

Module-4 **(07L hrs)**

Other List Structures: Circular lists, stack as a Circular list, queue as a Circular list, primitive operations on circular lists, the Josephus problem, Doubly linked lists, Primitive operations on

Doubly linked list.
(Text Book2: 4.5(except addition of long positive integers using circular and doubly linked list))

Module-5 (08L hrs)

Trees: Operations on Binary Trees, Applications of Binary Trees, Binary Tree Representations: Node representation of Binary Trees, Internal and External Nodes, Implicit array representation of Binary Trees, Binary Tree Traversals in C.

Trees and Their applications: C Representations of Trees, Tree Traversals, General Expressions as Trees, Evaluating an Expression Tree, Constructing a Tree.

Self-Study: Threaded Binary Trees - definition and types.

(Text Book2: 5.1, 5.2, 5.5(except choosing Binary Tree Representation, Traversal using a Father field, Heterogeneous Binary Trees))

Course outcomes:

On successful completion of this course, students will be able to:

1. **Apply** advanced C programming techniques like pointers, structures, union and files to **develop** solution for a given problem
2. **Discuss** and **implement** different linear data structures like stacks and queues using static memory allocation technique
3. **Discuss** different types of linked lists and **implement** using dynamic memory allocation technique
4. **Discuss** non-linear data structures like trees and **implement** using dynamic memory allocation technique.
5. **Apply** the knowledge of stacks, queues, linked lists and trees to **design** and **develop** solutions to given problems

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E COMPUTER SCIENCE & ENGINEERING

SEMESTER – III

DATA STRUCTURES LABORATORY

Course Code	N3CCSL01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits	1	Exam Hours	3

Course objectives:

1. Design and implement different data structures.
2. Develop C programs for various applications of data structures.
3. Select appropriate data structure for a given problem.

Sl. no.	Programs
1	Develop a C program to create a sequential file for storing employee records with each record having following information: **Employee_Id**: Non-Zero Positive integer; **Name**: 25 Characters; **Department**: 25 Characters; **Salary**: Positive Integer; **Age**: Positive integer Write necessary functions to perform the following operations: a) Read the details of a record. b) Display all the records in the file. c) Search for a specific records based on Department. In case if the required record is not found, suitable message should be displayed.
2	Develop a C program to implement Stack of names to perform the push, pop and display operations.
3	Develop a C program to convert a valid infix expression to postfix.
4	Develop a C program to evaluate the given postfix expression.
5	Develop a C program to implement Linear Queue of characters to perform the insertion, deletion and display operations.
6	Develop a C program to implement Circular Queue of integers to perform the insertion, deletion and display operations.
7	Define a structure to represent a node in a Singly Linked List. Each node must contain following information: player name, team name and batting average. Develop a C program using functions to perform the following operations on a list of cricket players: a) Add a player at the end of the list. b) Search for a specific player and update his/her batting average if the player exists. c) Display the details of all the players.
8	Develop a C program to add two two-variable polynomials using Singly Linked list.
9	Develop a C program to construct two ordered singly linked lists using functions to perform following operations: a) Insert an element into a list. b) Merge the two lists. c) Display the contents of the list.
10	Define a structure to represent a node in a Linear Doubly Linked List. Each node must contain following information: Student name, USN, branch and year of admission. Develop a C program using functions to perform the following operations on a list of students: a) Add a student at the beginning of the list. b) Display the details of the students of a specified branch. c) Delete the student with specified USN.

	d) Display the details of all the students.
11	Develop a C program to implement Josephus problem using Circular Singly Linked List. Write necessary functions to perform the following operations: a) Add a soldier to the list. b) Delete a soldier from the list.
12	Develop a C program to perform the following operations: a) Construct a binary search tree of integers. b) Traverse the tree in Inorder. c) Delete a given node from the BST.
13	Develop a C program to construct an expression tree for a given postfix expression and evaluate the expression tree.

Open Ended Problems

These problems are introduced to make the students to apply the knowledge of Data Structures in solving real world problems. Following are the guidelines:

- Each team (3/4 students) from each batch should come up with the problem statement for an application of any of the data structures like files, stacks, queues, linked lists and trees.
- Faculty-incharge approves the problem based on the complexity of the problem chosen.
- Each team has to implement the problem statement within the deadline.

Implementation will be considered for Continuous Internal Evaluation (CIE) and it will be based on individual contribution of the students in each team.

Course outcomes:

On successful completion of this course, students will be able to:

1. **Design** and **develop** C programs by applying advanced C programming techniques like pointers, structures and files to solve a given problem
2. **Design** and **develop** C programs to implement linear data structures like stack, queue and explore its applications by **applying** the knowledge of static memory allocation technique
3. **Design** and **develop** C programs to implement linked lists and its types by applying the knowledge of dynamic memory allocation technique
4. **Apply** the knowledge of dynamic memory allocation technique to implement non-linear data structures like trees and to **design** and **develop** solutions for applications on trees

Conduct of Practical Examination:

- All laboratory experiments are to be included for practical examination.
- Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
- Students can pick one experiment from the questions lot prepared by the examiners.
- Change of experiment is allowed only once and 20% Marks is to be deducted.

B.E COMPUTER SCIENCE & ENGINEERING

SEMESTER - III

Universal Human Values, Social Connect and Responsibility

Course Code	NSH04	CIE Marks	50
Teaching Hours/Week (L:T:P)	(1:0:0)	SEE Marks	50
Credits	01	Exam Hours	2

Pre-requisites: Universal Human Values (conducted during induction programme)

Course objectives:

1. Explore about themselves (human beings), family, society and nature/existence.
2. Appreciate the harmony in the human being, family, society and nature/existence
3. Strengthen holistic perception of co-existence and mutual fulfilment among the four orders of nature.

Module-1 : Understanding Harmony in the Human Being - Harmony in self **5 Hours**

Understanding human being as a co-existence of the sentient 'I' and the material 'Body'; Understanding the needs of Self ('I') and 'Body' - happiness and physical facility; Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer); Understanding the characteristics and activities of 'I' and harmony in 'I'; Understanding the harmony of 'I' with the Body: Sanyam and Health, correct appraisal of Physical needs, meaning of Prosperity in detail, Include discussions to differentiate between i) Prosperity and accumulation. ii) Ensuring health vs dealing with disease

Module-2 : Understanding Harmony in the Family and Society - Harmony in Human-Human Relationship **4 Hours**

Understanding values in human - human relationship, meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness, Trust and Respect as the foundational values of relationship; Understanding the meaning of Trust, Difference between intention and competence; Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship; Understanding the harmony in the society (society being an extension of family)- Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals.

Module-3 : Understanding Harmony in the Nature and Existence - Whole-existence as Co-existence **4 Hours**

Understanding the harmony in the Nature; Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self-regulation in nature; Understanding Existence as Co-existence of mutually interacting units in all-pervasive space; Holistic perception of harmony at all levels of existence. Include discussions on-human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

Course outcomes:

On successful completion of the course, the students will be able to

1. Become more aware of themselves, and their surroundings (family, society, nature)
2. Become more responsible in life, and value human relationships and human society
3. Have better critical ability in handling problems and in finding sustainable solutions

Sl. No	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
Textbook

Reference Books				
1	Human Values'	Tripathi A.N.	New Age International Publisher	2003, ISBN: 81-224-1426-5

Evaluation Pattern:

Two Tests of 25 marks each and 45 minutes duration

SEE for 50 marks and examination duration is 90 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	45	25 marks	25 marks
Test-2	14th Week	45	25 marks	25 marks
CIE			50 marks	50 marks
SEE		90	50 marks	50 marks
Total			**100 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern may be hybrid type with MCQs and descriptive questions.*

- *10 Marks MCQs*
- *3 descriptive questions of 5 marks each*
- *All the questions are compulsory*

SEE: *SEE pattern may also be hybrid type with MCQs and descriptive questions.*

- *20 Marks MCQs*
- *1 descriptive question of 10 marks from each of the units (total 3 questions)*

  or

  2 questions of 5 marks from each of the units (total 6 questions)
- *All the questions are compulsory*

B.E COMPUTER SCIENCE & ENGINEERING

SEMESTER - III

Constitution of India and Professional Ethics

Course Code	NSH03	CIE Marks	50
Teaching Hours/Week (L:T:P)	(1:0:0)	SEE Marks	50
Credits	01	Exam Hours	2

Course objectives:

1. To introduce the students to the basic structure, fundamental rights and duties enshrined in the constitution of India.
2. To introduce to the system of governance at the centre and the states.
3. To enlighten the students about the method of amendment to the constitution and special provisions of constitution.
4. To enable the students to imbibe ethical practices and moral values.
5. To learn from the life story of leaders such as Sir M Visvesvaraya.

Module-1 : Introduction to Constitution of India **6 Hours**

Salient Features of Indian Constitution, Preamble to the Indian Constitution, Different kinds of fundamental rights, Directive Principles of State Policy, Categorical study of Directive Principles, Relationship between DPSP and Fundamental Rights, Fundamental Duties. Meaning and kinds of human rights and safeguards.

Module-2 : Union and State Governments **7 Hours**

Union and State Legislature: Composition and powers of Loksabha, Rajyasabha, Legislative Assembly and Legislative Council. Union and State Executive: The appointment and powers of President, Vice-president, Prime-Minister, Union Council of Ministers, Governor of State, Chief Minister of State and State Council of Ministers. Union and State Judiciary: The Composition and powers of Supreme Court and High Court.

Module-3 : Other Provisions of Constitution **5 Hours**

Method of amendment of constitution of India, 42nd and 44th amendment act. Special provisions relating to SC / ST, Women and Children and other backward classes. Electoral process related to the Election Commission of India: Composition, functioning and removal of the Election Commissioner(s).

Human Rights: Meaning, Kinds and Safeguard of Human Rights, State Human Rights Commission and National Human Rights Commission.

Part II -Professional Ethics

Module-4 : Professional Ethics and Human Values 4 Hours

Introduction, What is Ethics? Scope of Professional Ethics, Values and Characteristics, Types of values: Negative and positive values, Ethical values for Professional success. **Case Studies**: Ethical practices of the reputed Indian Companies: TATA Group, Wipro Technologies.

Module-5 : Professional Code of Conduct **4 Hours**

Introduction, Professional Code, Legal System, Ethical and Unethical practices, Making the Professional Code successful. Ethical values of Sir M. Visvesvaraya, Mahatma Gandhi and Swami Vivekananda.

Course outcomes: On successful completion of the course, the student will be able:

CO1: To orient students on the salient features of the Indian Constitution with special emphasis on fundamental rights and duties.

CO2: To provide an overview of the Union and State legislature, executive and judiciary.

CO3: To explain the importance of electoral process and help students appreciate the ethical practices in elections.

CO4: To facilitate the students to have a clear perspective of the Ethical values and their relevance in the present context of globalization.

CO5: To enable the students familiarize themselves with the ethical values proposed and practiced by the great leaders / eminent personalities with particular reference to Sir M. Visvesvaraya.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration

SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks

CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

B.E COMPUTER SCIENCE & ENGINEERING

SEMESTER – III

UNIX & SHELL PROGRAMMING

Course Code	N3CCSA01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(1:0:2)	SEE Marks	100
Credits	2 credits	Exam Hours	3 hrs

Course objectives:

1. To execute basic unix commands using bash shell
2. To program using shell scripting
3. To program in C to utilize unix services using the system call interface

Sl. no.	Experiments
	Basic Commands
1	Simple commands, recording sessions, Files, directories, pipes, redirection, links, locating files, Archiving
2	Simple filters, grep, sed
3	Running jobs in background, job control, priority, running jobs periodically, killing processes, customising the environment
	Shell Scripting
1	Basic constructs – read, if, test, case, expr, while, for
2	set, shift, export, eval, exec, strings, arrays
	System Call Interface with GDB
1	POSIX Standards, Process creation, Process control, non local branching, process accounting, race condition, orphan process, Zombie process
2	Signals, user defined signals, timers, signal sets, masking of signals, impact of signals on non-local branching
3	Inter-process communication : pipes, semaphores, queues

Self Study : Perl programming along with open ended problems.

Course outcomes:

On successful completion of this course, students will be able :

5. To interact with Unix operating system using command interface
6. To write shell scripts for various user requirements using Unix OS programming facility
7. To write C programs to utilise the Unix OS services using system calls.

Conduct of Practical Examination:

- All laboratory experiments are to be included for practical examination.
- Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
- Students can pick one experiment from the questions lot prepared by the examiners.
- Change of experiment is allowed only once and 20% Marks is to be deducted.

B.E COMPUTER SCIENCE & ENGINEERING

SEMESTER – III

MS OFFICE AND LATEX

Course Code	N3CCSA02	CIE Marks	50
TeachingHours/Week (L:T:P)	(1:0:2)	SEE Marks	50
Credits	2	Exam Hours	3

Course objectives:

1. Understand the basics of MS Office to prepare documents and small presentations,
2. Illustrate the features of spreadsheet/worksheet with various options.
3. Create simple presentations using templates with various options available.
4. Demonstrate the ability to apply application software in an office environment.
5. Usage of Latex tool to prepare quality documents.

Sl. no.	Experiments
1	Create a document using MS-Word with at least three paragraphs and perform the following operations: • With left and right margin of 0.75" and Top and Bottom margin of 1". • Insert page number in every page. • Centre the heading and make it bold, increase the font size. • Underline the specified words in the document and change them to italics. • Conduct the spell check and correct them suitably. • Exchange paragraphs 2 and 3 using cut and paste facility. • Put suitable headers and footers. • Find and replace the text. • To demonstrate Watermarking technique using ima • Make your documents protected by a password so that nobody changes it.
2	Create a document using MS-Word with at least two paragraphs and also create a power point presentation with minimum two slides. Include each slide a minimum of 4 to 5 lines of text. Then perform the following operations: • Count the number of words and lines in word document. • Using mail merge facility of MS-Word send a birthday invitation to 10 of your friends. • Insert page border and insert gutter of 1" in word document. • Create a time table of your class in the following format in MS-Word.

			Tea Break			Lunch Break			

- Create a hyperlink from the Power Point slide to the above time table created.
- Create a hyperlink from word to the power point document.

<table>
<tr><td></td><td></td></tr>
<tr><td>3</td><td>Following is the table of scores of basketball players using MS Excel.

<table>
<tr><th>Players</th><th>Team A</th><th>Team B</th></tr>
<tr><td>A</td><td>10</td><td>11</td></tr>
<tr><td>B</td><td>10</td><td>9</td></tr>
<tr><td>C</td><td>11</td><td>12</td></tr>
<tr><td>D</td><td>13</td><td>12</td></tr>
<tr><td>E</td><td>15</td><td>15</td></tr>
<tr><td>F</td><td>20</td><td>18</td></tr>
<tr><td>Average Score</td><td></td><td></td></tr>
<tr><td>Grade</td><td></td><td></td></tr>
</table>

Using the table, perform the following operations:
• Calculate the average-score of each team and assign grade for the team - if the average score of Team A is greater than Team B, then assign Grade ‘A’ to Team A or assign Grade ‘A’ to Team B.
• Draw a Bar Chart.
• Demonstrate Auto Format.
• Demonstrate relative reference and absolute reference formulation.</td></tr>
<tr><td>4</td><td>Using MS Excel create a table of five students for their marks scored in five subjects (max. marks 25).

<table>
<tr><th>Players</th><th>Team A</th><th>Team B</th></tr>
<tr><td>A</td><td>10</td><td>11</td></tr>
<tr><td>B</td><td>10</td><td>9</td></tr>
<tr><td>C</td><td>11</td><td>12</td></tr>
<tr><td>D</td><td>13</td><td>12</td></tr>
<tr><td>E</td><td>15</td><td>15</td></tr>
<tr><td>F</td><td>20</td><td>18</td></tr>
<tr><td>Average Score</td><td></td><td></td></tr>
<tr><td>Grade</td><td></td><td></td></tr>
</table>

Using the table, perform the following operations for the above data:
• Calculate the percentage of each student.
• Highlight the data cell with green color if a student scores above 20 and highlight with red color, if a student scores less than 10 using formatting toolbar.
• Draw a Column Bar chart.
• Demonstrate the filter option.</td></tr>
<tr><td>5</td><td>You are asked to make a presentation about your organization to the general public. Develop the presentation as specified below:
• Make a power point presentation consisting of the following 3 slides.
• Slide 1: Your organization Name and Mission. Insert a picture either from the clipart gallery or from the library of scanned images of your organization.
• Slide 2: Minimum 5 lines of text describing different departments in your organization. Create a word document describing the departments and give the link to the word document from this slide.
• Slide 3: Create organization chart of SIT with suitable data.</td></tr>
</table>

	• Give transition effects to each slide with automatically advancing to next slide (5 Sec.). • Demonstrate custom animation and action buttons for the slides. • Show presentation.
6	Make a Power point presentation on any topic of your interest. Create Master Slide with suitable slide design, slide layout, background color, slide number & date. Use this Master slide to demonstrate the following operations: • Give transition effects to each slide with automatically advancing to next slide (5 Sec). • Demonstrate how to use appropriate fonts, pictures and colors. • Demonstrate how to add charts and hyperlinks. • Demonstrate custom animations & action buttons for the slides. • Demonstrate organization chart with suitable data. • Show presentation.
7	Create a database using MS-Access to keep track of products purchased which has the attributes as pid, pname, price, city, country. Demonstrate the following : • Creating the table. • Inserting suitable values into the table. • Creating the forms. • Querying the database. • Generating suitable reports.
8	Create the database of a member of the Library using MS Acess having the fields like member¬_id, member_name, account_open_date, max_books_allowed, penalty_amount. Demonstrate the following • Creating the table. • Inserting suitable values into the table. • Creating the forms. • Querying the database. • Generating suitable reports.
9	Create a document using LATEX typesetting system with the following contents : • title page with author name • table of contents • header and footer • section containing text in paragraphs having certain words in bold ,italics, colouring & foot notes • section containing formulae for the following - Roots of a quadratic equation - Euler's number definition - Taylors series
10	Create a document using LATEX typesetting system with the following contents : • section containing lists • numbered lists • unordered lists • section containing image with a title • section containing table to display marks of 5 students in 5 subjects

Course outcomes:

On successful completion of this course, stuents will be able to:

1. Understand the basics features of MS Office tools such as MS Word, Excel, Power Point & Access and Latex tools.
2. Apply the knowledge of MS Office to solve given problems.
3. Apply the knowledge of Latex tool to prepare quality documentation.

Conduct of Practical Examination:

- All laboratory experiments are to be included for practical examination.
- Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
- Students can pick one experiment from the questions lot prepared by the examiners.
- Change of experiment is allowed only once and 20% Marks is to be deducted.

B.E COMPUTER SCIENCE & ENGINEERING

SEMESTER - III

Foundation of Engineering Mathematics - I

Course Code	N3MATDP	CIE Marks	100
Teaching Hours/Week (L:T:P)	(2:2:0)	SEE Marks	-
Credits	00	Exam Hours	-

Course objectives:

This Course will enable students to:

1. Known the behavior of the polar curve and its application.
2. Learn the notation of partial differentiation and determine the value of the Jacobians.
3. Learn how a function of single variable can be expanded as a Taylor's series and Maclaurin series and Handle the indeterminate form.
4. Learn how the vectors govern the physical models.
5. Known how the real word problems governed by the first order differential equations.

Module-1 : Differential Calculus-I **(5+5+) Hours**

Polar curves: angle between the radius vector and tangent, angle of intersection of polar curves. Pedal equation for polar curves. Curvature and radius of curvature in pedal form. (Without proof)

Module-2 : Differential Calculus –II **(6+6) Hours**

Partial differentiation: Partial derivatives, Total derivatives, differentiation of composite functions. Jacobians.

Module-3 : Differential Calculus –III **(5+5) Hours**

Taylor's and Maclaurin's series expansions for one variable (statement only). Indeterminate forms L' Hospital Rule (without proof) (Only $\frac{0}{0}, \frac{\infty}{\infty}, 0 \times \infty \; and \; \infty - \infty \; form$)

Module-4 : Vector Calculus **(5+5) Hours**

Vector Differentiation: scalar and vector fields, Gradient, directional derivative, divergence, curl-physical interpretation; solenoidal and irrotational vector fields-illustrative problems.

Module-5 : Differential Equations-I: **(5+5) Hours**

Solution of first order and first degree differential equations: Variable Separable, Linear differential equations and Exact differential equations.

Course outcomes: After the completion of this course, students will be able to:

1. Apply the knowledge of calculus to solve problems related to polar curves and its applications in determining the amount of bending of the curve. **(L1& L2)**
2. Learn the notation of partial differentiation to calculate rates of change of multivariate functions and solve problems related to composite functions. **(L1& L2)**
3. Illustrate the applications of multivariate calculus to understand the characteristics of vector field. 4.
4. Understand how a function of single variable can be expanded as a Taylor's series and Handle the indeterminate form **(L1& L2)**
5. Apply the analytical methods to solve first order and first degree differential equations and solve some Engineering problems. **(L1& L2)**

B.E. COMPUTER SCIENCE & ENGINEERING

Batch: 2021-22

IV SEMESTER

(Effective from the academic year 2022-2023)

B.E COMPUTER SCIENCE & ENGINEERING SEMESTER - IV			
Probability and its Applications for Information Technology			
Course Code	N4MATC	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	3

Course objectives:

This Course will enable students to:

1. To provide the foundations of probabilistic and statistical analysis mostly used in varied applications in engineering and science like disease modeling, climate prediction and computer networks etc.
2. To introduce the concept of a probability density function of a continuous random variable.
3. To deal with multiple random variables and introduction of the most important types of stochastic processes.
4. To investigate the variability in sample statistics from sample to sample, measure of central tendency and dispersion of sample statistics and pattern of variability of sample. To understand the fundamentals of coding theory, concept of source coding and channel coding theorem.

Module-1 : Analysis of Discrete Random Variables **8 Hours**

Discrete random variables, probability distribution and probability mass function, cumulative distributive functions, mean and variance of discrete random variable, discrete, binomial distribution, geometric distribution, negative binomial distribution and Poisson distribution.

Module-2 : Analysis of Continuous Random Variables **8 Hours**

Continuous random variable, probability distribution and probability density function, cumulative distributive functions, mean and variance of continuous random variable, continuous, exponential distribution, normal distribution, normal approximation to the Binomial and Poisson distributions

Module-3 : Joint Probability **8 Hours**

Joint probability distribution, discrete and independent random variables, expectation, covariance, correlation coefficient, probability vectors, stochastic matrices, fixed point matrices, regular stochastic matrices, Markov chains, higher transition probabilities, stationary distribution of regular Markov chains and absorbing states.

Module-4 : Information Theory **7 Hours**

Introduction, Entropy, Joint Entropy and Conditional Entropy, Relative Entropy and Mutual Information, Relationship Between Entropy and Mutual Information, Chain Rules for Entropy, Relative Entropy and Mutual Information, Jensen's Inequality and Its Consequences, Log Sum Inequality and Its Applications, Data-Processing Inequality, Sufficient Statistics, Fano's Inequality

Module-5 : Sampling Distribution **8 Hours**

Introduction, Objectives, sampling distribution, testing of hypothesis, level of significance, confidence limits, simple sampling of attributes, test of significance of large samples, comparison of large samples, sampling of variables, central limit theorem, confidence limits for unknown mean, test of significance for means of two large samples, Sampling of variables – small samples , Student's t-distribution.

Course outcomes:

On successful completion of this course, students will be able to:

1. Identify a random variable as discrete and appropriate probability distribution, its parameters(L1).
2. Identify a random variable as continuous and appropriate probability distribution, its parameters (L1).
3. Determine the joint probability distribution, its mean, variance and covariance. Calculate the transition matrix, fixed probability vector for a given Markov chain(L3).
4. Estimate the parameter of a population, important role of normal distribution as a sampling distribution (L2).
5. Apply concepts of probability in information theory and coding (L3).

B.E COMPUTER SCIENCE & ENGINERRING
SEMESTER - IV

DESIGN AND ANALYSIS OF ALGORITHMS

Course Code	N4CCSI01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:2)	SEE Marks	50
Credits	4	Exam Hours	3

Course objectives:

1. An introduction to the design and analysis of algorithms. (Synthesis)
2. Expose students to prove the correctness and analyse the running time of the basic algorithms. (Analysis)
3. To compare the running time of sorting and searching algorithms. (Comprehension)
4. Create an awareness of applying the algorithms and design techniques to solve problems. (application)

Module-1 **(08L)**

Introduction: Notion of algorithm, Fundamentals of Algorithmic Problem Solving, Fundamentals of the Analysis of Algorithm Efficiency: Analysis frame work, Asymptotic Notations and Basic Efficiency Classes, Mathematical Analysis of Non-recursive and Recursive Algorithms. [Chapters: 1.1, 1.2, 2.1-2.4]

Module-2 **(07L)**

Brute Force: Selection Sort and Bubble Sort, Sequential Search and Brute-Force String Matching.
Divide and Conquer: Mergesort, Quicksort, Binary Search. [Chapters: 3.1, 3.2, 4.1- 4.3]

Module-3 **(08L)**

Decrease and Conquer: Insertion Sort, Depth First Search, Breadth First Search, Topological Sorting, Algorithms for Generating Combinatorial Objects.
Transform and Conquer: Presorting, Balanced Search Trees: AVL Tree, Heaps and Heapsort. [Chapters: 5.1 – 5.4, 6.1, 6.3 (only AVL Trees),6.4]
Self Study : Algorithms for Generating Combinatorial Objects.

Module-4 **(08L)**

Dynamic Programming: Computing a Binomial Coefficient, Warshall's and Floyd's Algorithms, The Knapsack Problem.
Greedy Technique: Prim's Algorithm, Kruskal's Algorithm, Dijkstra's Algorithm. [Chapters: 8.1, 8.2, 8.4, 9.1-9.3]

Module-5 **(08L)**

Space and Time Tradeoffs: Sorting by Counting, Input Enhancement in String Matching: Horspool's Algorithm.
Limitations of Algorithm Power: P, NP and NP-Complete Problems.
Coping with the Limitations of Algorithm Power: Backtracking: N-Queens, Hamiltonian Circuit Problem, Subset-Sum Problem. [Chapters: 7.1,7.2, 10.3, 11.1]
Self Study : Limitations of Algorithm Power: P, NP and NP-Complete Problems.

Course outcomes:

On successful completion of this course, students will be able to:

1. Discuss the fundamental principles of analysis and design of algorithms.
2. Apply design techniques such as Brute -Force, Divide-and-Conquer, Decrease-and-Conquer, Transform-and-Conquer, Greedy, Dynamic programming, space & time trade-off and Backtracking to solve a given problem.
3. Design/Outline algorithms classified under different design techniques.
4. Analyse the complexity of a given algorithm.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

Integrated lab Syllabus

Course objectives:

1. An introduction to the design and analysis of algorithms. (Synthesis)
2. Expose students to prove the correctness and analyse the running time of the basic algorithms. (Analysis)
3. To compare the running time of sorting and searching algorithms. (Comprehension)
4. Create an awareness of applying the algorithms and design techniques to solve problems. (application)

Sl. no.	Programs
1	Programs on Brute Force Technique
2	Programs on Divide and Conquer Technique
3	Programs on Decrease and Conquer Technique
4	Programs on Transform and Conquer Technique

5	Programs on Dynamic Programming Technique
6	Programs on Greedy Technique
7	Programs on Space and Time Tradeoffs
8	Programs on Backtracking

Course outcomes:

Upon successful completion of this course, students will be able to:

1. **Design/Develop** a solution for the given problem using appropriate design techniques such as Brute-Force, Greedy, Dynamic Programming, Divide and Conquer, Decrease and Conquer, Transform and conquer and Backtracking.
2. **Analyze** the time complexity of the algorithms.
3. **Apply** various algorithmic design techniques to solve real world problems and demonstrate the same.

B.E COMPUTER SCIENCE & ENGINEERING SEMESTER - IV			
MICROCONTROLLER AND EMBEDDED SYSTEMS			
Course Code	N4CCSI02	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:2)	SEE Marks	50
Credits	4.0	Exam Hours	3

Course objectives:

This Course will enable students to:

1. Introduce the concept of architecture and programming of advanced embedded microcontrollers.
2. ARM family of microcontrollers that are widely used in design of real time sophisticated embedded systems like tablets, hand held devices, automation and industrial control systems.
3. It also covers writing Embedded C programming of LPC2148 for GPIO, ADC, DAC, UART, LCD, Timers.
4. It also explains the concepts of embedded system and its components.

Module-1 **(08L hrs)**

CHAPTER 1-EMBEDDED SYSTEM COMPONENTS: Embedded v/s General computing system, Classification of Embedded systems, Major applications and purpose of Embedded systems, Core of an Embedded System including all types of Processors, Controller and Memory.

CHAPTER 2-ARM EMBEDDED SYSTEMS: The RISC Design Philosophy, The ARM Design Philosophy, Embedded System Hardware, Embedded System Software.

Module-2 **(08L hrs)**

CHAPTER 3-ARM PROCESSOR FUNDAMENTALS: Registers, Current Program Status Register, Pipeline, Exceptions, Interrupts, and Vector Table Core Extensions, Architecture Revisions, ARM Processor Families, LPC2148 Microcontroller Architecture, LPC2148 Microcontroller Architecture, Memory Mapping, Register Description.

Module-3 **(08L hrs)**

CHAPTER 4-INTRODUCTION TO THE ARM INSTRUCTIONS SET: Data Processing Instructions and examples, Branch Instructions and examples, Load-Store Instructions and examples, Software Interrupt Instructions and examples, Program Status Register Instruction and examples. Programs: Addition, Multiplication, division and Subtraction of 16, 32-bit data, Example Programs: Looping, conditional programs like sum of memory elements, Loading Constants, Conditional Execution, and Example Programs.

Module-4 **(08L hrs)**

CHAPTER 5-INTERFACING Sensors, Actuators, GPIO, LED interfacing and programming in C,7 segment display interfacing and C program, stepper motor interfacing, Keyboard interfacing, Push button switch interfacing and programming in C.

Module-5 **(07L hrs)**

INTERFACING Cont… Data Conversions (ADC, DAC) interfacing and C program, Timers, Counters, Communication Protocols: UART, I2C (on board) SPI, CAN Programs using C

Course outcomes:

On successful completion of this course, students will be able to:

1. Describe the fundamental concept of Embedded System Architecture.
2. Describe the ARM processor architecture and its family.
3. Develop assembly language programs to perform specific tasks using ARM instructions.
4. Design and develop embedded C programs to interface external hardware with LPC214x microcontroller.
5. Design and develop the solutions for a problem using embedded system and demonstrate.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

Sl. No.	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year

3	ARM Assembly Language an Introduction	Gibson	John Wiley & Sons	Second Edition, 2007

Integrated Lab Syllabus

Course objectives:

This Course will enable students to:

1. Develop and test assembly language programs (ALP) using ARM7TDMI/LPC2148
2. Conduct the experiments on ARM7TDMI/LPC2148 evaluation board using evaluation version of Keil µvision tool.

Sl. no.	Programs
	PART A
	Conduct the following experiments by developing Assembly Language Program (ALP) for LPC2148 using Keil µvision-5 tool.
1	Develop an ALP to add two 64-bit numbers.
2	Develop an ALP to find the sum of first *n* natural numbers.

3	Develop an ALP to find the factorial of a non-zero number using subroutine.
4	Develop an ALP to add an array of *n* numbers.
5	Develop an ALP to find the square of a number (0-10) using Look-up table.
6	Develop an ALP to find the largest number in an array of 32-bit signed integers.
7	Develop an ALP to arrange a series of 32-bit unsigned numbers in ascending order.
8	Develop an ALP to count the number of ones and zeroes in two consecutive memory locations.

PART B

Conduct the following experiments on LPC2148 evaluation board by developing embedded C program using Keil µvision-5 and Flash Magic tools.

1	Develop an embedded C program to display the Hex digits 0 to F on a Seven-Segment display interface with an appropriate delay in between.
2	Develop an embedded C program to drive a Stepper motor Interface to rotate the motor in clockwise direction.
3	Develop an embedded C program to read the status of 8 input bits from the Logic Controller Interface and display 'FF' if it is even parity bits otherwise display 00. Also display number of 1's in the input data.
4	Develop an embedded C program to display "Hello World" message on a 2x16 character LCD interface.
5	Develop an embedded C program to generate triangular and square waveforms using the DAC Interface. (The output of the DAC is to be displayed on the CRO).
6	Develop an embedded C program to display the message "dEPt OF CSE" from right to left and left to right on a Seven Segment display interface.
7	Develop an embedded C program to drive a Stepper motor Interface to rotate the motor in anti-clockwise direction.
8	Develop an embedded C program to generate Half-rectified Sine waveform using DAC interface.

Course outcomes:

On successful completion of this course, students will be able to:

1. Summarize ARM instruction sets and comprehend the knowledge of how assembly language works.
2. Design and develop ARM assembly language programs using Keil tool.
3. Infer functioning of hardware devices and interfacing them to ARM microcontroller.
4. Design and develop embedded C code for interfacing different modules with ARM microcontroller using Keil and Flash Magic tools.

B.E COMPUTER SCIENCE & ENGINEERING SEMESTER - IV			
OPERATING SYSTEM			
Course Code	N4CCS01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	3	Exam Hours	03

Course objectives:

1. **Define** fundamental OS abstractions such as processes, threads, files etc, (L1-knowlegde).
2. **Visualize** the intricate relationship between an operating system and its underlying hardware (L1-knowlegde).
3. **Explain** scheduling algorithms, deadlock detection algorithms and memory management strategies (L2-Comphrension).
4. A**pply** the principles of concurrency and synchronization, to write concurrent programs/ software (L3-Application).

Module-1 **(08 hrs)**

INTRODUCTION: What operating systems do - User view, System view, Defining operating systems, Operating System Structure, Operating System Operations – Dual mode and multi-mode operation, Timer, Process Management; Memory Management; Storage Management; Protection and Security. [Textbook 1:chapteres 1.1, 1.4 to 1.9]

SYSTEM STRUCTURES: Operating System Services; System calls; Types of system calls; System programs; Operating System Structure –Simple structure, Layered approach, Micro kernels, Modules [Textbook 1: Chapters 2.1, 2.3 to 2.5, 2.7.4]

Self study : Hybrid Systems – Mac OS X, iOS, Android.[Textbook 1: Chapter 2.7.5]

Module-2 **(08 hrs)**

PROCESS: Process concept, Process state, Process control block, Process scheduling, Scheduling queues, Schedulers, Context switch, Operations on processes – Process creation and termination, Inter-process communication, Shared memory and message passing systems. [Textbook 1: Chapters 3.1 to 3.4]

PROCESS MANAGEMENT: Basic concepts, CPU scheduler, Preemptive and non-preemptive scheduling, Scheduling criteria, Scheduling algorithms – FCFS, SJF, Priority and Round robin scheduling, [Textbook 1: Chapters 6.1 to 6.3.4]

Self Study : Multi-level and multilevel feedback queue scheduling[Textbook 1: Chapter 6.3.5]

Module-3 **(08 hrs)**

THREADS: Overview, Benefits, Multi core Programming, Types of parallelism, Multi threading models. [Textbook 1: Chapters 4.1-4.3]

PROCESS SYNCHRONIZATION: Background, The Critical section problem, Peterson's solution, Synchronization hardware, Mutex locks, Semaphores, Classic problems of synchronization, Bounded buffer problem. [Textbook 1: Chapters 5.1 to 5.7.1]

Self-Study : Readers writer's problem, Dining philosopher's problem.[Textbook 1: Chapters 5.7.2 , 5.7.3]

Module-4 **(08 hrs)**

DEADLOCKS: System model, Deadlock characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock detection and recovery from deadlock. [Textbook 1:7.1-7.7]

MEMORY MANAGEMENT: Background, Basic hardware, Address binding, Logical and physical address, swapping, Dynamic loading and linking [Textbook 1: Chapters 8.1, 8.2]

Module-5 **(07 hrs)**

MEMORY MANAGEMENT: Contiguous memory allocation, Segmentation, Paging. [Textbook 1: 8.3, 8.4, 8.5]

VIRTUAL MEMORY MANAGEMENT: Basic concepts, Demand paging, Copy-on-write, Page replacement – FIFO, LRU, Optimal [Textbook 1:9.1-9.4]
Self-Study: Structure of page table, Hierarchical paging, Hashed paging, Inverted paging. [Textbook 1: Chapter 8.6]

7 Hours

NOTE: Self-study topics are assessed only in CIE-Quizzes/ Assignment

Course outcomes:
On successful completion of this course, students will be able to:

1. **Identify** the services, functions and structure of different operating systems.
2. **Apply and analyze** appropriate scheduling algorithm for process selection and execution.
3. **Identify and analyze** the techniques used to solve process synchronization issues.
4. **Apply and analyze** various deadlock prevention, avoidance, detection and recovery mechanisms to solve real world problems.
5. **Analyze** the performance of various memory management techniques and page replacement algorithms**.**

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

Sl. No.	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
Textbooks				
1	Operating System Concepts	Abraham Silberschatz, Peter Baer Galvin, Greg Gagne	Wiley-India,9th edition	2013

2	Operating Systems,	P.C.P. Bhatt	PHI	4th Edition, 2013

B.E COMPUTER SCIENCE & ENGINEERING

SEMESTER – IV

PYTHON PROGRAMMING LAB

Course Code	N4CCSL01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits	1.0	Exam Hours	3

Course objectives:

1. Implement Python programs with conditional statements, loops, and exception handling statements.
2. Represent compound data using Python lists, tuples, and dictionaries.
3. Read and write data from/to files/database in Python.
4. Write, test and debug simple Python programs for image processing, regular expression evaluation, and plotting graphs.
5. Use functions for structuring Python programs and establish client server communication.

Sl. no.	Experiments
1	Programs on lists, tuples, numpy arrays and dictionaries.
2	Programs on plotting graphs.
3	Programs on image processing.
4	Programs on regular expressions.
5	Programs on exception handling.
6	Programs on files operations.
7	Programs on client server communication.
8	Programs on pandas dataframes and database handling.

Course outcomes:

On successful completion of this course, students will be able to:

1. Design and develop programs to structure the compound data using lists, tuples, and dictionaries.
2. Design and develop programs for plotting graphs and image processing.
3. Design and develop programs for regular expression evaluation.
4. Design and develop programs to perform read and write operations over the files.
5. Design and develop programs on client server communication.
6. Design and develop programs on using databases and SQL.

Conduct of Practical Examination:

- Question bank consisting of experiments covering the above concepts will be announced for SEE during last working day of the semester.
- Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
- Students can pick one experiment from the questions lot prepared by the examiners.
- Change of experiment is allowed only once and 20% of the Marks to be deducted for the same.

B.E COMPUTER SCIENCE & ENGINEERING

Outcome Based Education (OBE) and Choice Based Credit System (CBCS)

SEMESTER – IV

JAVA PROGRAMMING (Practical)

Course Code	**N4CCSA01**	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits	1	Exam Hours	2

Course objectives:

1. Implement java programs to understand the principles of object-oriented programming.
2. Implement standalone programs using core Java classes and packages such as Threads, Exception, etc.
3. Develop programs on Java Swing GUI applications
4. Develop programs on Java Networking packages.
5. Develop Web applications using Servlets.

Sl. no.	Experiments
1	Design and develop simple applications using core java concepts – Control statements, Classes and Objects, Arrays, Strings.
2	Design and develop Real-time applications using OOP First principles – Encapsulation,Abstraction, Polymorphism, and Inheritance
3	Design and develop Multi-threaded applications using Thread class or Runnable Interface.
4	Design and develop GUI applications using Java Swing package
5	Design and develop Networking applications using Java Net package.
6	Design and develop Web applications using Java Servlets

Course outcomes:

On successful completion of this course, students will be able to:

1. Design and develop applications of Object-oriented programming concepts using Core Java.
2. Design and develop multi-threaded and GUI based applications using Java Threads and Java Swing packages.
3. Design and develop Networking applications using Java networking packages.
4. Design and develop Web applications using Java Servlet packages.

Conduction of Practical Examination:

1. All laboratory experiments are to be included for practical examination.
2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
3. Students can pick one experiment from the list of questions prepared by the examiners.
4. Change of experiment is allowed only once and 20% of Marks is to be deducted.

B.E COMPUTER SCIENCE & ENGINEERING
SEMESTER – IV

WEB PROGRAMMING LABORATORY

Course Code	**N4CCSA02**	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits	1	Exam Hours	2 Hrs

Course objectives:

1. To understand web development environment and methodology
2. To understand the web architecture and web languages
3. To develop an ability to design and implement websites
4. To develop the skills required for front-end and back-end development

Sl. no.	**Experiments** **Minimum of 2 exercises on each of the following topics**
1	HTML 5 and CSS 3
2	Java Script ES6
3	Bootstarp 4
4	Scopes and Closures
5	Develop a Server side programming using java Script: Node.Js
6	Implement CRUD Operation using MongoDB and Node.Js
7	Develop Client side Application using ReactJs
8	Implement MERN Stack

Course outcomes:

On successful completion of this course, students will be able to:

1. Develop web pages using HTML and Cascading Styles sheets
2. Create a robust Client-side validation with java script
3. Design dynamic data-driven Web sites using MongoDB and Node.js

Conduct of Practical Examination:

- All laboratory experiments are to be included for practical examination.
- Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
- Students can pick one experiment from the questions lot prepared by the examiners.
- Change of experiment is allowed only once and 20% Marks is to be deducted.

B.E COMPUTER SCIENCE AND ENGINEERING

SEMESTER – IV

CUDA PROGRAMMING (AEC)

Course Code	**N4CCSA0**3	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits	1	Exam Hours	2

Course objectives:

1. To program using Message Passing Paradigm
2. To program using shared address space
3. To program for GPUs using CUDA

Sl. no.	Experiments
	Message Passing Interface
1	Establish communication between nodes.
2	Receive selective messages.
4	Factorial of a huge number.
5	Sorting
6	Vector operation
7	Matrix operation
	OpenMP
1	One dimensional array
2	Two dimensional array
3	Synchronization among threads
4	Scheduling of threads
5	Workload sharing
	CUDA
1	Basic image processing operation
2	Text analysis
3	One dimensional array
4	Two dimensional array
5	Query device properties and handling errors

Course outcomes:

On successful completion of this course, students will be able to:

1. To implement and debug program using Message Passing Interface (MPI)
2. To implement and debug program using OpenMP to use shared address space
3. To implement and debug programs on GPU

Conduct of Practical Examination:

- All laboratory experiments are to be included for practical examination.
- Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
- Students can pick one experiment from the questions lot prepared by the examiners.
- Change of experiment is allowed only once and 20% Marks is to be deducted.

B.E COMPUTER SCIENCE & ENGINEERING

SEMESTER - IV

Foundations of Engineering Mathematics-II

Course Code	N4MATDP	CIE Marks	100
Teaching Hours/Week (L:T:P)	(2:2:0)	SEE Marks	-
Credits	0	Exam Hours	-

Course objectives:

This Course will enable students to:

1. Solve second and higher order differential equations.
2. Find the Laplace transform of the function f(t).
3. Find the Inverse Laplace transform of the function F(s).
4. Apply the knowledge of numerical methods in the models of various physical and engineering phenomena
5. Solve the integral by using standard integrals (Beta and Gamma) and multiple integrals

Module-1 : Linear Differential Equations (6+6) Hours

Solution of second and higher order equations with constant coefficients by inverse differential operator method, method of variation of parameters

Module-2 : Laplace Transform (5+5) Hours

Definition, Transforms of elementary functions, properties of Laplace Transform, Laplace Transform of $e^{at}\,f(t)$, $t^n\,f(t)$, $\frac{f(t)}{t}$, derivatives and Laplace Transform of Periodic functions'

Module-3 : Inverse Laplace Transform (5+5) Hours

Inverse Laplace Transform, Convolution theorem (without proof) and problems Applications –Solution of Linear differential equations using Laplace Transform.

Module-4 : Elementary Numerical Methods (5+5) Hours

Finite differences. Interpolation/extrapolation using Newton's forward and backward difference formulae, Newton's divided difference and Lagrange's formulae (All formulae without proof). Solution of polynomial and transcendental equations - Newton-Raphson method (only formula) – Illustrative examples.

Module-5 : Integral Calculus (5+5) Hours

Evaluation of double and triple Integrals, **Beta and Gamma functions**: Definition, relation between Beta and Gamma functions and simple problems.

Course outcomes:

After the completion of this course, students will be able to:

1. Explain various physical models through higher order differential equations and solve such linear ordinary differential equations. (L1& L2)
2. Understand the concept of Laplace transform and obtain Laplace transform of periodic functions and unit step functions. (L1& L2)
3. Apply the concept of Laplace transform in solving Linear Differential equations. (L1& L2)
4. Apply the Numerical methods to solve Algebraic and transcendental equations and find the polynomials by finite difference method. (L1& L2)
5. Apply the concept of to evaluate multiple integrals and Beta and Gamma functions (L1& L2)

ಬಳಕೆ ಕನ್ನಡ		Course Code:	NSH01
baLake Kannada (Kannada for Usage)			
Contact Hours/ Week	: 2 (T)	Credit :	1.0
Total Lecture Hours	: 0	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50

Course Learning Objectives:

- To create the awareness regarding the necessity of learning local language for comfortable and healthy life.
- To enable learners to Listen and understand the Kannada language properly.
- To speak, read and write Kannada language as per requirement.
- To train the learners for correct and polite conservation.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. ಬಳಕೆ ಕನ್ನಡವನ್ನು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಬೋಧಿಸಲು ವಿಟಿಯು ಸೂಚಿಸಿರುವ ಪಠ್ಯಪುಸ್ತಕಗಳನ್ನು ಉಪಯೋಗಿಸಬೇಕು.
2. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಉತ್ತೇಜಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.
3. ಪ್ರತಿ ವಿದ್ಯಾರ್ಥಿ ಪುಸ್ತಕವನ್ನು ತರಗತಿಯಲ್ಲಿ ಬಳಸುವಂತೆ ನೋಡಿಕೊಳ್ಳುವುದು ಮತ್ತು ಪ್ರತಿ ಪಾಠ ಮತ್ತು ಪ್ರವಚನಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟಂತೆ ಪೂರಕ ಚಟುವಟಿಕೆಗಳಿಗೆ ತೊಡಗಿಸತಕ್ಕದ್ದು.
4. ಡಿಜಿಟಲ್ ತಂತ್ರಜ್ಞಾನದ ಮುಖಾಂತರ ಇತ್ತೀಚೆಗೆ ಡಿಜಿಟಲೀಕರಣಗೊಂಡಿರುವ ಭಾಷೆ ಕಲಿಕೆಯ ವಿಧಾನಗಳನ್ನು ಪಿಪಿಟಿ ಮತ್ತು ದೃಶ್ಯ ಮಾಧ್ಯಮದ ಮುಖಾಂತರ ಚರ್ಚಿಸಲು ಕ್ರಮ ಕೈಗೊಳ್ಳುವುದು. ಇದರಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ತರಗತಿಯಲ್ಲಿ ಹೆಚ್ಚು ಏಕಾಗ್ರತೆಯಿಂದ ಪಾಠ ಕೇಳಲು ಮತ್ತು ಅಧ್ಯಯನದಲ್ಲಿ ತೊಡಗಲು ಅನುಕೂಲವಾಗುತ್ತದೆ.
5. ಭಾಷಾ ಕಲಿಕೆಯ ಪ್ರಯೋಗಾಲಯದ ಮುಖಾಂತರ ಬಹುಬೇಗ ಕನ್ನಡ ಭಾಷೆಯನ್ನು ಕಲಿಯಲು ಅನುಕೂಲವಾಗುವಂತೆ ಕಾರ್ಯಚಟುವಟಿಕೆಗಳನ್ನು ಮತ್ತು ಕ್ರಿಯಾ ಯೋಜನೆಗಳನ್ನು ರೂಪಿಸುವುದು.

Unit 1 (5 Hours):

1. Introduction, Necessity of learning a local language. Methods to learn the Kannada language.
2. Easy learning of a Kannada Language: A few tips. Hints for correct and polite conservation, Listening and Speaking Activities
3. Key to Transcription.
4. **ವೈಯಕ್ತಿಕ ಸ್ವಾಮ್ಯಸೂಚಕ/ಸಂಬಂಧಿತ ಸರ್ವನಾಮಗಳು ಮತ್ತು** ಪ್ರಶ್ನಾರ್ಥಕ **ಪದಗಳು** - Personal Pronouns, Possessive Forms, Interrogative words

Unit 2 (4 Hours):

1. **ನಾಮಪದಗಳ** ಸಂಬಂಧಾರ್ಥಕ **ರೂಪಗಳು, ಸಂದೇಹಾಸ್ಪದ ಪ್ರಶ್ನೆಗಳು ಮತ್ತು ಸಂಬಂಧವಾಚಕ ನಾಮಪದಗಳು -** Possessive forms of nouns, dubitive question and Relative nouns.
2. **ಗುಣ, ಪರಿಮಾಣ ಮತ್ತು** ವರ್ಣಬಣ್ಣ **ವಿಶೇಷಣಗಳು, ಸಂಖ್ಯಾವಾಚಕಗಳು** Qualitative, Quantitative and Colour Adjectives, Numerals
3. ಕಾರಕ ರೂಪಗಳು ಮತ್ತು ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು – ಸಪ್ತಮಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯ – (ಆ, ಅದು, ಅವು, ಅಲ್ಲಿ) Predictive Forms, Locative Case

Unit 3 (5 Hours):

1. ಚತುರ್ಥಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯದ ಬಳಕೆ ಮತ್ತು ಸಂಖ್ಯಾವಾಚಕಗಳು – Dative Cases, and Numerals
2. ಸಂಖ್ಯಾಗುಣವಾಚಕಗಳು ಮತ್ತು ಬಹುವಚನ ನಾಮರೂಪಗಳು – Ordinal numerals and Plural markers
3. ನ್ಯೂನ/ನಿಷೇಧಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು ಮತ್ತು ವರ್ಣ ಗುಣವಾಚಕಗಳು – Defective / Negative Verbs and Colour Adjectives

Unit 4 (6 Hours):

1. ಅಪ್ಪಣೆ/ಒಪ್ಪಿಗೆ, ನಿರ್ದೇಶನ, ಪ್ರೋತ್ಸಾಹ ಮತ್ತು ಒತ್ತಾಯ ಅರ್ಥರೂಪ ಪದಗಳು ಮತ್ತು ವಾಕ್ಯಗಳು Permission, Commands, encouraging and Urging words (Imperative words and sentences)
2. ಸಾಮಾನ್ಯ ಸಂಭಾಷಣೆಗಳಲ್ಲಿ ದ್ವಿತೀಯ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ಸಂಭವನೀಯ ಪ್ರಕಾರಗಳು Accusative Cases and Potential Forms used in General Communication
3. 'ಇರು ಮತ್ತು ಇರಲ್ಲ' ಸಹಾಯಕ ಕ್ರಿಯಾಪದಗಳು, ಸಂಭಾವ್ಯಸೂಚಕ ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು – Helping Verbs; "iru and iralla", Corresponding Future and Negation Verbs
4. ಹೋಲಿಕೆ (ತರ–ತಮ), ಸಂಬಂಧ ಸೂಚಕ ಮತ್ತು ವಸ್ತು ಸೂಚಕ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಪದಗಳ ಬಳಕೆ – Comparative, Relationship, Identification and Negation Words

Unit 5 (6 Hours):

1. ಕಾಲ ಮತ್ತು ಸಮಯದ ಹಾಗೂ ಕ್ರಿಯಾಪದಗಳ ವಿವಿಧ ಪ್ರಕಾರಗಳು – Different types of forms of Tense, Time and Verbs
2. –ದ್, –ತ್, –ತು, –ಇತು, –ಆಗಿ, –ಅಲ್ಲ, –ಗ್, –ಕ್, ಇದೆ, ಕ್ರಿಯಾ ಪ್ರತ್ಯಯಗಳೊಂದಿಗೆ ಭೂತ, ಭವಿಷ್ಯತ್ ಮತ್ತು ವರ್ತಮಾನ ಕಾಲ ವಾಕ್ಯ ರಚನೆ. Formation of Past, Future and Present Tense Sentences with Verb Forms
3. Kannada Vocabulary List: ಸಂಭಾಷಣೆಯಲ್ಲಿ ದಿನೋಪಯೋಗಿ ಕನ್ನಡ ಪದಗಳು – Kannada Words in Conversation.

ಬಳಕೆ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಅನುಕೂಲಗಳು ಮತ್ತು ಫಲಿತಾಂಶಗಳು: **Course Outcomes**

At the end of the Course, The Students will be able

1. To understand the necessity of learning of local language for comfortable life.
2. To Listen and understand the Kannada language properly.
3. To speak, read and write Kannada language as per requirement.
4. To communicate (converse) in Kannada language in their daily life with Kannada speakers.
5. To speak in polite conservation.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration

SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

TEXT BOOKS:

ಬಳಕೆ ಕನ್ನಡ – ಲೇಖಕರು: ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ		Course Code:	NSH02
Contact Hours/ Week	: 2 (T)	Credit :	1.0
Total Lecture Hours	: 0	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯ ಉದ್ದೇಶಗಳು:

೧. ವೃತ್ತಿಪರ ಪದವಿ ವಿದ್ಯಾರ್ಥಿಗಳಾಗಿರುವುದರಿಂದ ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.

೨. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಪ್ರಧಾನ ಭಾಗವಾದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳನ್ನು ಸಾಂಕೇತಿಕವಾಗಿ ಪರಿಚಯಿಸಿ ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ ಸಾಹಿತ್ಯ ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಅರಿವು ಹಾಗೂ ಆಸಕ್ತಿಯನ್ನು ಮೂಡಿಸುವುದು.

೩. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವನ್ನು ಹಾಗೂ ಅವರುಗಳು ಸಾಧಿಸಿದ ವಿಷಯಗಳನ್ನು ಪರಿಚಯಿಸುವುದು.

೪. ಕನ್ನಡ ಶಬ್ದ ಸಂಪತ್ತಿನ ಪರಿಚಯ ಮತ್ತು ಕನ್ನಡ ಭಾಷೆಯ ಬಳಕೆ ಹಾಗೂ ಕನ್ನಡದಲ್ಲಿ ಪತ್ರ ವ್ಯವಹಾರವನ್ನು ತಿಳಿಸಿಕೊಡುವುದು.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

೧. ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡವನ್ನು ಬೋಧಿಸಲು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಪ್ರಸ್ತುತ ಪುಸ್ತಕ ಆಧರಿಸಿ ಬ್ಲಾಕ್ ಬೋರ್ಡ್ ವಿಧಾನವನ್ನು ಅನುಸರಿಸುವುದು. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಪ್ರೇರೇಪಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.

೨. ಇತ್ತೀಚಿನ ತಂತ್ರಜ್ಞಾನದ ಅನುಕೂಲಗಳನ್ನು ಬಳಸಿಕೊಳ್ಳುವುದು – ಅಂದರೆ ಕವಿ–ಕಾವ್ಯ ಪರಿಚಯದಲ್ಲಿ ಕವಿಗಳ ಚಿತ್ರಣ ಮತ್ತು ಲೇಖನಗಳು ಮತ್ತು ಕಥೆಕಾವ್ಯಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟ ಧ್ವನಿ ಚಿತ್ರಗಳು, ಸಂಭಾಷಣೆಗಳು, ಈಗಾಗಲೇ ಇತರ ವಿಮರ್ಶಕರು ಬರೆದಿರುವ ವಿಮರ್ಶಾತ್ಮಕ ವಿಷಯಗಳನ್ನು ಪಿಪಿಟಿ, ಡಿಜಿಟಲ್ ಮಾಧ್ಯಮಗಳ ಮುಖಾಂತರ ವಿಶ್ಲೇಷಿಸುವುದು.

೩. ನವೀನ ಮಾದರಿಯ ಸಾಹಿತ್ಯ ಬೋಧನೆಗೆ ಸಂಬಂಧಪಟ್ಟ ವಿಧಾನಗಳನ್ನು ಶಿಕ್ಷಕರು ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಅನುಕೂಲವಾಗುವ ರೀತಿಯಲ್ಲಿ ಅಳವಡಿಸಿಕೊಳ್ಳಬಹುದು.

ಘಟಕ ೧: ಲೇಖನಗಳು (6 hours)

೧. ಕರ್ನಾಟಕ ಸಂಸ್ಕೃತಿ – ಹಂ.ಪ. ನಾಗರಾಜಯ್ಯ

೨. ಕರ್ನಾಟಕ ಏಕೀಕರಣ : ಒಂದು ಅಪೂರ್ವ ಚರಿತ್ರೆ – ಜಿ. ವೆಂಕಟಸುಬ್ಬಯ್ಯ

೩. ಆಡಳಿತ ಭಾಷೆಯಾಗಿ ಕನ್ನಡ – ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ ಮತ್ತು ಪ್ರೊ. ವಿ. ಕೇಶವಮೂರ್ತಿ

ಘಟಕ ೨: ಆಧುನಿಕ ಪೂರ್ವದ ಕಾವ್ಯ ಭಾಗ (5 hours)

೧. ವಚನಗಳು: ಬಸವಣ್ಣ, ಅಕ್ಕಮಹಾದೇವಿ, ಅಲ್ಲಮಪ್ರಭು, ಆಯ್ದಕ್ಕಿ ಮಾರಯ್ಯ, ಜೇಡರದಾಸಿಮಯ್ಯ, ಆಯ್ದಕ್ಕಿ ಲಕ್ಕಮ್ಮ

೨. ಕೀರ್ತನೆಗಳು: ಅದರಿಂದೇನೂ ಫಲ ಇದರಿಂದೇನು ಫಲ – ಪುರಂದರದಾಸರು
ತಲ್ಲಣಿಸದಿರು ಕಂಡ್ಯ ತಾಳು ಮನವೇ – ಕನಕದಾಸರು

೩. ತತ್ವಪದಗಳು: ಸಾವಿರ ಕೊಡಗಳ ಸುಟ್ಟು – ಶಿಶುನಾಳ ಶರೀಫ

ಘಟಕ ೩: ಆಧುನಿಕ ಕಾವ್ಯ ಭಾಗ (6 hours)

೧. ಡಿ.ವಿ.ಜಿ. ರವರ ಮಂಕುತಿಮ್ಮನ ಕಗ್ಗದಿಂದ ಆಯ್ದ ಕೆಲವು ಭಾಗಗಳು

೨. ಕುರುಡು ಕಾಂಚಾಣ: ದ.ರಾ. ಬೇಂದ್ರೆ

೩. ಹೊಸಬಾಳಿನ ಗೀತೆ: ಕುವೆಂಪು

ಘಟಕ ೪: ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯ (5 hours)

೧. ಡಾ. ಸರ್ ಎಂ. ವಿಶ್ವೇಶ್ವರಯ್ಯ : ವ್ಯಕ್ತಿ ಮತ್ತು ಐತಿಹ್ಯ – ಎ.ಎನ್. ಮೂರ್ತಿರಾವ್

೨. ಕರಕುಶಲ ಕಲೆಗಳು ಮತ್ತು ಪರಂಪರೆಯ ವಿಜ್ಞಾನ : ಕರೀಗೌಡ ಬೀಚನಹಳ್ಳಿ

ಘಟಕ ೫: ಕಥೆ ಮತ್ತು ಪ್ರವಾಸ ಕಥನ (4 hours)

೧. ಯುಗಾದಿ : ವಸುಧೇಂದ್ರ

೨. ಮೆಗಾನೆ ಎಂಬ ಗಿರಿಜನ ಪರ್ವತ : ಹಿ.ಚಿ. ಬೋರಲಿಂಗಯ್ಯ

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಪರಿಣಾಮಗಳು (Course Outcomes):

೧. ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯವಾಗುತ್ತದೆ.

೨. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳು ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಆಸಕ್ತಿಯು ಮೂಡುತ್ತದೆ.

೩. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

೪. ಕನ್ನಡ ಭಾಷಾಭ್ಯಾಸ, ಸಾಮಾನ್ಯ ಕನ್ನಡ ಹಾಗೂ ಆಡಳಿತ ಕನ್ನಡದ ಪದಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

TEXT BOOKS:

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ – ಡಾ. ಹಿ.ಚಿ. ಬೋರಲಿಂಗಯ್ಯ ಮತ್ತು ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

SCHEME & SYLLABUS

OF

V&VI SEMESTERS

B.E.

COMPUTER SCIENCE AND ENGINEERING

2022-23

Vision and Mission of the Institution:

Vision:

"To develop young minds in a learning environment of high academic ambience by synergizing spiritual values and technological competence".

Mission:

"To continuously strive for the total development of students by educating them in state-of-the-art technologies and helping them imbibe professional ethics and societal commitment, so that they emerge as competent professionals to meet the global challenges".

Vision and Mission of the Department:

Vision:

"To work towards the vision of the institution by building a strong teaching and research environment that is capable of responding to the challenges of the 21st century".

Mission:

"To prepare under graduate, graduate and research students for productive careers in industry and academia, through comprehensive educational programs, research in collaboration with industry & government, dissemination by scholarly publications and professional society & co-curricular activities".

Program Educational Objectives (PEOs)

Engineering graduates (CSE) will be able to:

1. Pursue successful careers in State/National/Multi-National companies as software developers by following sound professional and ethical practices in various cadres in key areas like networking, web design, cloud computing, big data processing, IoT, e-commerce, information security and so on.
2. Work effectively in multi-disciplinary and multi-cultural teams and demonstrate good soft skills.
3. Pursue higher education for a successful career in industry/academics/ research.
4. Pursue life-long learning, by anticipating trends in computer science and engineering, to excel in industry/academia or own a startup for a successful career as entrepreneur.

PROGRAM OUTCOMES

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability:** Understand the impact of the professional engineering solution in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes (PSOs)

1. **Computer based systems development**: Ability to apply the basic knowledge of database systems, computing, operating system, digital circuits, microcontroller, computer organization and architecture in the design of computer based systems.

2. **Software development**: Ability to specify, design and develop projects, application software and system software by using the knowledge of data structures, analysis and design of algorithm, programming languages, software engineering practices and open source tools.

3. **Computer communications and Internet applications**: Ability to design and develop network protocols and internet applications by incorporating the knowledge of computer networks, communication protocol engineering, cryptography and network security, distributed and cloud computing, data mining, big data analytics, ad hoc networks, storage area networks and wireless sensor networks.

VAC: Value Added Course

MANAGEMENT AND ENTREPRENEURSHIP

Contact Hours/Week	:	3+0+0	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	HSS06			

Course Objectives:

This course will enable students to:

- Understand the principles and functions of management.
- Analyze the importance of planning, organizing, staffing, leading and controlling organization.
- Understand and manage engineering design and quality
- Inculcate entrepreneurial qualities and understand the need of rural entrepreneurship
- Acquire knowledge about funding agencies, understand procedure in applying for funds and analyze the cases of successful entrepreneurs

Unit I

Introduction to Management: Definition of management, management skills, productivity and effectiveness, efficiency, functions and principles of management.

Planning: Nature of planning, types of plans- purpose of vision, mission, goals, objectives strategies, policies; steps in planning, MBO, Strategic planning

Organizing: Formal and informal organization, span of management, the structure and Process of organizing, Organizational structure: line and staff organization, Functional organization, matrix organization

8 Hours

Unit II

Staffing: Definition, systems approach to HRM, factors affecting staffing, recruitment and selection, job design, skill and characteristics of a manager, selection process and techniques.

Leading: Human factors in managing, motivation, Theory X and Y, the hierarchy of needs theory, leadership behaviour and styles.

Controlling: Basic control process, critical control points and standards, Benchmarking requirements for effective control.

9 Hours

UNIT - III

Managing Engineering Design and Development: Product and Technology Life Cycles, Nature of Research and Development, Research Strategy and organization, Nature of Engineering Design, Systems Engineering / New Product Development.

Managing Production/Operations: Types of production processes, Forecasting, Work measurement, Maintenance and Facilities (Plant) Engineering, Total Quality Management, Lean Manufacturing

Engineers in Marketing and service activities: Marketing and the Engineer, Engineers in Service organizations.

8 Hours

UNIT – IV

Entrepreneur & Entrepreneurship: Introduction, concept of Entrepreneur, characteristics of an entrepreneur, and qualities of an entrepreneur, functions of an entrepreneur, characteristics of entrepreneurship, factors affecting entrepreneurial growth. Entrepreneurship and economic development-rural, woman and social entrepreneurship

Financing and Institutional Support for Entrepreneurship: Startups, business plans, venture capitalists, angel investors, funding agencies -commercial banks, development banks, NBFCS and incubation centres. Innovations and project trends.

8 Hours

UNIT – V

Taxation benefits: Depreciation allowances, rehabilitation allowance, investment allowance and other tax concession benefits to an entrepreneur.

2 Case Studies from Stay Hungry and Stay Foolish – Rashmi Bansal, IIM Ahmedabad:

1) Success story of naukri.com by Sanjeev Bikhchandani
2) Success story of Make My Trip by Deep Kalra

6 Hours

TEXT BOOKS:

1.	Harold Koontz, Heinz Weihrich	Essentials of Management, McGraw Hill Education, 10th Edition, 2015
2.	Lucy C. Morse	Managing Engineering and Technology, Pearson Education, 6th Edition, 2015.
3.	S.S. Khanka	Entrepreneurial Development, S. Chand Publishing, 4th Edition, Reprint 2020. ISBN 978-81-219-1801-5

REFERENCE BOOKS:

1.	James A.F. Stoner, R. Edward Freeman, Daniel R. Gilbert	Management, Pearson Education, 6th Edition, 2018.
2.	Rashmi Bansal	Stay Hungry Stay Foolish, IIM Ahmedabad, 1st Edition, 2008.
3.	Rashmi Bansal	Connect the Dots, Bushfire Publishers, 1st Edition, 2019.

Course Outcomes:

After the completion of this course, students will be able to:

- Explain various functions of management (L2).
- Apply the knowledge of management principles and strategies in various functional areas. (L3).
- Manage engineering design and product development (L3).
- Describe entrepreneurship, its characteristics, and benefits and identify various funding sources for starting a business venture (L3).
- Explain various taxation benefits enjoyed by an entrepreneur and analyze the characteristics and strategies adopted by successful entrepreneurs. (L2 & L3)

DATABASE MANAGEMENT SYSTEMS

Contact Hours/Week	:	4+0+0(L+T+P)	Credits	:	4.0
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	5RCS01			

Course objectives:

This Course will enable students to:

1. Define a Database, characteristics and functions of Database Management System and distinguish between a Traditional File System and a Database System
2. Describe the Entity–Relationship (ER) modeling and model the real world database systems using Entity Relationship Diagrams (ERD) from the requirements specification
3. Apply the Relational Data Model, its Constraints and the Relational Database Schemas
4. Formulate queries in Relational Algebra & SQL (Knowledge)
5. Apply normalization techniques to normalize a database
6. Illustrate how a DBMS enforces recovery from failure and concurrency control

UNIT- I

DATABASES AND DATABASE USERS: Introduction; An example; characteristics of the database approach; actors on the scene; workers behind the scene; advantages of using the DBMS approach; A brief history of database Applications; when Not to use a DBMS.

3 Hrs

DATABASE SYSTEM – CONCEPTS AND ARCHITECTURE: Data models, schemas, and instances; three schema architecture and data independence; database languages and interfaces; the database system environment; centralized and client/server/architectures for DBMSs. Classification of database management system.

3 Hrs

ENTITY-RELATIONSHIP MODEL: Using High-Level Conceptual Data Models for Database Design; An Example Database Application; Entity Types, Entity Sets, Attributes and Keys; Relationship types, Relationship Sets, Roles and Structural Constraints; Weak Entity Types; Refining the ER Design for the COMPANY Database; ER Diagrams, Naming Conventions and Design Issues. **5 Hrs**

UNIT- II

RELATIONAL MODEL AND RELATIONAL ALGEBRA: Relational Model Concepts; Relational Model Constraints and Relational Database Schemas; Update Operations and Dealing with Constraint Violations; Unary Relational Operations: SELECT and PROJECT; Relational Algebra Operations from Set Theory; Binary Relational Operations: JOIN and DIVISION; Additional Relational Operations; Examples of Queries in Relational Algebra; Relational Database Design using ER-to-Relational Mapping.

9 Hrs

UNIT-III

SQL-THE RELATIONAL DATABASE STANDARD: SQL Data Definition and Data Types, Specifying Basic Constraints in SQL, Schema Change Statements in SQL; Basic Queries in SQL; More Complex SQL Queries; Insert, Delete and Update Statements in SQL;

Additional Features of SQL; Specifying General Constraints as Assertion; Views (Virtual Tables) in SQL; Database Programming: Issues and Techniques; Embedded SQL, Dynamic

11 Hrs

UNIT-IV

FUNCTIONAL DEPENDENCIES : Database Design Informal Design Guidelines for Relation Schemas Functional Dependencies: Inference Rules, Examples, Closure of X under F, Equivalence of sets of FDs, Minimal sets of Fds., Exercises on Equivalence of sets of FDs, Minimal sets of Fds., Normal Forms Based on Primary Keys, General Definitions of Second , Third Normal Forms, Boyce-Codd Normal Form , Exercises on Normal forms, Exercises on Normal forms, Properties of Relational Decompositions.

10 Hrs

UNIT-V

TRANSACTION PROCESSING CONCEPT: Introduction to transaction processing; transaction and system concepts; desirable properties of transactions, characterizing schedules based on recoverability and serializability; transaction support in SQL.

5 Hrs

CONCURRENCY CONTROL & DATABASE RECOVERY TECHNIQUES: Two phase locking techniques, Concurrency control based on Timestamp ordering; Recovery concepts; recovery based on deferred update and Immediate Update, Shadow Paging, ARIES Recovery Algorithm **6 Hrs**

.

TEXT BOOKS:

1.	Elmasri and Navathe.	Fundamentals of Database Systems. Pearson Education, 7th Edition,2016

REFERENCE BOOKS:

1.	Abraham Silberschatz, Henry F Korth ,Sudharshan.	Data base System Concepts. Mc GrawHil (Indian edition) 6th Edition,2013
2.	Raghu Ramakrishnan and Johannes Gehrke	Database Management Systems, McGraw-Hill Education, 3rd Edition,2014

Course outcomes:

After the completion of this course, students will be able to:

1. **Describe** the fundamentals of database technologies, Design an ER diagram and transform it to a relational model for a given database specification.
2. **Discuss** the relational model concepts and Design relational algebraic expressions for queries.
3. **Explain** the various concepts of SQL and Design SQL queries to perform CRUD (Create, Retrieve, Update and delete) operations on database.
4. **Discuss** the database design concepts such as functional dependency and solve the problems on minimal set, equivalence set.
5. **Discuss** the database design concepts such as Normalization, Relational decomposition and concepts of transaction processing. **Apply** the normalization techniques to improve database design.

DATA COMMUNICATION

Contact Hours/ Week	: 4+0+0 (L+T+P)	Credits :	4
Total Lecture Hours	: 52	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Course Code	: 5RCS02		

Course objectives:

This Course will enable students to:

1. Understand and Explain basic networking concepts with layers of network models.
2. Identify different types of transmission media and network devices.
3. To analyze and choose appropriate line coding, error detection and correction techniques in transmission of data.
4. Compare and contrast flow control and error control protocols.
5. Interpret random access protocols and Ethernet LAN standards.

UNIT - I

DATA COMMUNICATIONS AND NETWORK MODELS.

DATA COMMUNICATIONS: Components, Data Representation, Data Flow, NETWORKS, Network Criteria, Physical Structures, NETWORK TYPES, Local Area Network, Wide Area Network, Switching, The Internet, Accessing the Internet

PROTOCOL LAYERING, Scenarios, Principles of Protocol Layering, Logical Connections, CONTENTS, TCP/IP PROTOCOL SUITE, Layered Architecture, Layers in the TCP/IP Protocol Suite, Description of Each Layer, Encapsulation and Decapsulation, Addressing, Multiplexing and Demultiplexing, THE OSI MODEL, OSI versus TCP/IP, Lack of OSI Model's Success.

10 Hrs

UNIT – II

DATA AND SIGNALS: Analog and Digital Data, Analog and Digital Signals, Periodic and Non periodic, Periodic Analog Signals, Sine Wave, Phase, .3 Wavelength, Time and Frequency Domains, Composite Signals, Bandwidth, Digital Signals, Bit Rate, Bit Length, Digital Signal as a Composite Analog Signal, Transmission of Digital Signals, Transmission impairment, Attenuation, Distortion, Noise, Data Rate Limits, Noiseless Channel: Nyquist Bit Rate, Noisy Channel: Shannon Capacity, Using Both Limits, PERFORMANCE, Bandwidth, Throughput, Latency (Delay), Bandwidth-Delay Product, Jitter.

DIGITAL-TO-DIGITAL CONVERSION: Line Coding, Line Coding Schemes, Block Coding, Scrambling, Analog-To-Digital Conversion, Pulse Code Modulation (PCM), Delta Modulation (DM), TRANSMISSION MODES, Parallel Transmission, Serial Transmission.

DIGITAL-TO-ANALOG CONVERSION: Aspects of Digital-to-Analog Conversion, Amplitude Shift Keying, Frequency Shift Keying, Phase Shift Keying, Quadrature Amplitude Modulation.

12 Hrs

UNIT - III

ERROR DETECTION & CORRECTION AND TRANSMISSION MEDIA.

INTRODUCTION: Types of Errors, Redundancy, Detection versus Correction, Coding, BLOCK CODING, Error Detection, CYCLIC CODES, Cyclic Redundancy Check, Polynomials, Cyclic Code Encoder Using Polynomials, Cyclic Code Analysis, Advantages of Cyclic Codes, Other Cyclic Codes, Checksum, Concept, Other Approaches to the Checksum, Forward Error Correction, Using Hamming Distance, Using XOR, Chunk Interleaving, Combining Hamming Distance and Interleaving, Compounding High- and Low-Resolution Packet.

GUIDED MEDIA: Twisted-Pair Cable, Coaxial Cable, Fiber-Optic Cable, UNGUIDED MEDIA: Wireless, Radio Waves, Microwaves, Infrared. **10 Hrs**

Web Links for the topic :Guided and Unguided media:

1. https://www.geeksforgeeks.org/types-transmission-media/

2.https://www.slideshare.net/RajeshYadav330/guided-and-unguided-media-6585852

UNIT - IV

SWITCHING AND DATA LINK CONTROL (DLC)

SWITCHING: Introduction, Circuit switched networks, Packet switching, Structure of a switch.

DLC Services: Framing, Flow and Error Control, Connectionless and Connection- Oriented, Data-Link Layer Protocols, Simple Protocol, Stop-and-Wait Protocol, Piggybacking, HDLC, Configurations and Transfer Modes, Framing, Point-To-Point Protocol (PPP), Services, Framing, Transition Phases, Multiplexing. **10 Hrs**

UNIT - V

MEDIA ACCESS CONTROL (MAC)

RANDOM ACCESS**:** ALOHA, CSMA, CSMA/CD, CSMA/CA, CONTROLLED ACCESS: Reservation, Polling, Token Passing. CHANNELIZATION: FDMA, TDMA, CDMA.

WIRED LANS: Ethernet, Ethernet Protocol, IEEE Project, Ethernet Evolution, Standard Ethernet, Characteristics, Addressing, Access Method, Efficiency of Standard Ethernet, Implementation, Changes in the Standard. **10 Hrs**

Web Links for Ethernet Standards:

1. http://www.rhyshaden.com/eth_intr.htm

2. https://www.computernetworkingnotes.com/networking-tutorials/ethernet-standards-and-protocols-explained.html

3. https://www.scribd.com/document/189251933/Ethernet-Standards-pdf

TEXT BOOK

1.	Behrouz A. Forouzan	Data Communications and Networking. Tata McGraw-Hill.5th Edition (Chapters 1.1.- 1.3, 2.1 – 2.3, 3.1 – 3.6, 4.1 – 4.3, 5.1, 7.1-7.3, 8.1-8.4, 10.1 – 10.5, 11.1 – 11.4, 12.1 – 12.3, 13.1- 13.2)

REFERENCE BOOK

1.	Alberto Leon Garcia Indra Widjaja	Communication Networks : Fundamental Concepts & Key Architecture, Tata McGraw – Hill, 2nd Edition
2.	William Stallings	Data and Computer Communication. PHI, 5th Edition

Course outcomes:

After the completion of this course, students will be able to:

1. **Apply** basics of data communication and its components to understand computer networks technology. **Enumerate** the layers of TCP/IP and explain the functions of each layer.
2. **Analyze** and **Solve** problems on signals, Digital and Analog transmission.
3. **Experiment** with error detection and correction techniques and **explain** various transmission media.
4. **Design** multistage switch using basics of switching technology. **Analyze** various flow control and error control and channelization techniques.
5. **Analyze** various data link layer services and multiple access techniques.

SOFTWARE ENGINEERING

Contact Hours/Week	:	4+0+0(L+T+P)	Credits	:	4.0
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	5RCS03			

Course objectives:

This Course will enable students to:

1. Define the importance of software and process models in developing the large scale Software systems.
2. Identify the requirements for the software to be developed by various mechanisms and interpreting the same as structured, unambiguous, consistent, correct and clear SRS
3. Apply the various design techniques to choose the best architecture and user interface design
4. Design various test cases well in advance to make sure that it is considered in all dimensions
5. Apply analysis and design techniques to Web and Mobile apps.

UNIT – I

THE NATURE OF SOFTWARE: The Nature of Software, The Changing Nature of Software

SOFTWARE ENGINEERING: Defining the Discipline, The Software Process, Software Engineering Practice, Software Development Myths.

THE SOFTWARE PROCESS STRUCTURE: A Generic Process Model, Defining a Framework Activity, Identifying a Task set, Process Patterns, Process Assessment and Improvement.

PROCESS MODELS: Perspective Process Models, Specialized Process Models, The Unified Process, Personal and Team Process Models.

AGILE DEVELOPMENT: What is Agility, Agility and the Cost of Change, What is an Agile Process, Extreme Programming, Scrum. **12 Hrs**

UNIT – II

UNDERSTANDING REQUIREMENTS: Requirements Engineering, Establishing the Groundwork, Eliciting Requirements, Developing Use Cases, Building the Analysis Model, Negotiating Requirements and Validating Requirements.

REQUIREMENTS MODELING: SCENARIOS and CLASS BASED METHODs:
Requirements Analysis, Scenario-Based Modeling, UML Models That Supplement the Use Case, Identifying Analysis Classes, Specifying Attributes, Defining Operations, Class-Responsibility-Collaborator Modeling, Association and Dependencies, Analysis Packages.

REQUIREMENTS MODELING: BEHAVIOR, PATTERNS: Creating a Behavioral Model, Identifying Events with the Use Case, State Representations

11 Hrs

UNIT - III

DESIGN CONCEPTS: Design within the Context of Software Engineering, The Design Process, Design Concepts, The Design Model.

ARCHITECTURAL DESIGN: Software Architecture, Architectural Genres, Architectural Styles, Architectural considerations, Architectural Decisions, Architectural Design (Except 13.6.5 and 13.6.6), Assessing Alternative Architectural Designs.

COMPONENT-LEVEL DESIGN: What Is a Component, Designing Class-Based Components, Conducting Component-Level Design, Designing Traditional Components and Component-Based Development.

USER INTERFACE DESIGN: The Golden Rules, User interface Analysis and Design.

11 Hrs

UNIT - IV

SOFTWARE TESTING STRATEGIES: A Strategic Approach to Software Testing, Strategic Issues, Test Strategies for Conventional Software, Test Strategies for Object-Oriented Software, Validation Testing, System Testing and The Art of Debugging.

TESTING CONVENTIONAL APPLICATIONS: Software Testing Fundamentals, Internal and External Views of Testing, White-Box Testing, Basis Path Testing, Control Structure Testing and Black-Box Testing.

10 Hrs

UNIT - V

WEB AND MOBILE APPS ENGINEERING: Requirements Modeling for Web and Mobile Apps(11.5),Architectural Design for Web and Mobile Apps (13.6.5 and 13.6.6),Component-Level Design for Web and Mobile Apps(14.4 and 14.5),Web and Mobile Apps interface design(15.5).Test strategies for Web and Mobile Apps(22.5 and 22.6)

WEBAPP DESIGN: Design quality, goals, design pyramid, Web App interface, Aesthetic content, architectural, navigation and Component level designs.

MOBILEAPP DESIGN: Changes, developing mobile apps, mobile apps- design best practices, mobile environments, The Cloud, The applicability of Conventional software engineering. **8 Hrs**

TEXT BOOKS:

1	Roger S Pressman	Software Engineering- A Practitioner's Approach, 8th edition, TMH publication, 2014.

REFERENCE BOOKS:

1	Ian Sommerville	Software Engineering, Pearson Education limited, 8th Edition 2007.
2	Pankaj Jalote	An Integrated Approach to Software Engineering, Narosa Publications, 3rd Edition 2005.
3	Rajib Mall	Fundamentals of Software Engineering, PHI India Publications. 5th Edition ,2018.

Course outcomes:

After the completion of this course, students will be able to:

1. **Analyze** the process model chosen for the development of software and its merits and demerits
2. **Identify** the clear, correct and consistent requirements for the project
3. **Design** suitable data, architecture and user interface that copes with the requirements
4. **Estimate** the cyclomatic complexity and **design** the corresponding test cases.
5. **Conduc**t various integration testing approaches and note down pit falls in requirements, design and test cases
6. **Analyze** the requirements and design suitable components for Web and Mobile Apps

JAVA PROGRAMMING LABORATORY

Lab Hours/Week	:	2	Credits	:	1.5
Tutorial Hours/ Week	:	1	CIE Marks	:	50
Course Code	:	5RCSL01	SEE Marks	:	50

Course Contents:

1. Programs on packages
2. Programs on interfaces
3. Programs on multithreading and exception handling
4. Programs on applets
5. Programs on servlets
6. Programs on swings
7. Programs on JDBC
8. Programs on sockets

Note: Question bank for SEE will be announced on last working day of the semester.

TEXT BOOK

1.	Herbert Schildt	Java – The Complete Reference, Tata McGraw-Hill Publications, 11th Edition 2017.

Course Outcomes:

After the completion of the course, the student will be able to:

1. **Design, develop and execute** programs on classes, objects, packages, Principles of inheritance and polymorphism, encapsulation, method overloading, thread priority, exception handling.
2. **Design** and **develop** web application using servlets and applets.
3. **Design and develop** programs on GUI application using swings, to demonstrate JDBC for database transactions and client server communication.

DATABASE MANAGEMENT SYSTEMS LABORATORY

Lab Hours/Week	:	3	Credits	:	1.5
Tutorial Hours/ Week	:	--	CIE Marks	:	50
Course Code	:	5RCSL02	SEE Marks	:	50

1. Suppose a movie_studio has several film crews. The crews might be designated by a given studio as crew1, crew 2, and so on. However, other studios might use the same designations for crews, so the attribute crew_number is not a key for crews. Movie_studio holds the information like name, branch and several locations. Each crew holds information like sector and strength.

i. Establish the database by normalizing up to 3NF and considering all schema level constraints

ii. Write SQL insertion query to insert few tuples to all the relations

iii. List all movie studios which are not used a single crews.

iv. Retrieve the movie studio which uses highest strength crew.

v. Write a before insert trigger to check maximum number of crews to any studio is limited to 5.

vi. Write a procedure retrieve all crews used by specific studio.

2. The production company is organized into different studios. We store each studio's name branch and location; every studio must own at least one movie. We store each movie's title, sensor number and year of production. Star may act in any number of movies and we store each actors name and address.

i. Establish the database by normalizing up to 3NF and considering all schema level constraints

ii. Write SQL insertion query to insert few tuples to all the relations

iii. List all the studios of the movie "xyz";

iv. List all the actors , acted in a movie 'xyz'

v. Write a procedure to list all movies produced during the specific year.

vi. Write a deletion trigger, does not allow to deleting current year movies.

3. The production company is organized into different studios. We store each studio's name branch and location; a studio own any number of Cartoon-serials. We store each Cartoon-Serial's title, sensor number and year of production. Star may do voices in any number of Cartoon-Serials and we store each actors name and address.

i. Establish the database by normalizing up to 3NF and considering all schema level constraints

ii. Write SQL insertion query to insert few tuples to all the relations

iii. Find total no of actors, do voiced in a Cartoon-Serials 'xyz'

iv. Retrieve name of studio, location and Cartoon-Serials title in which star "abc" is voiced.

vii. Write a procedure to list all Cartoon-Serials produced during the specific year.

v. Write a deletion trigger, does not allow to deleting current year Cartoon-Serials.

4. Car marketing company wants keep track of marketed cars and their owner. Each car must be associated with a single owner and owner may have any number of cars. We store car's registration number, model &color and owner's name, address & SSN. We also store date of purchase of each car.

i. Establish the database by normalizing up to 3NF and considering all schema level constraints

ii. Write SQL insertion query to insert few tuples to all the relations

iii. Find a person who owns highest number of cars

iv. Retrieve persons and cars information purchased on the day 11-11-11

v. Write a insertion trigger to check date of purchase must be less than current date (must use system date)

vi. Write a procedure to list all cars and owner information purchased during the specific year.

5. Puppy pet shop wants to keep track of dogs and their owners. The person can buy maximum three pet dogs. We store person's name, SSN and address and dog's name, date of purchase and sex. The owner of the pet dogs will be identified by SSN since the dog's names are not distinct.

i. Establish the database by normalizing up to 3NF and considering all schema level constraints

ii. Write SQL insertion query to insert few tuples to all the relations

iii. List all pets owned by a person 'Abhiman'.

iv. List all persons who are not owned a single pet

v. Write a trigger to check the constraint that the person can buy maximum three pet dogs

vi. Write a procedure to list all dogs and owner details purchased on the specific date.

6. Education institute is managing the on line course enrollment system. Students can enroll maximum of six courses of their choice and a maximum student to be enrolled to any course is 60. We store student details like name, USN, semester and several addresses, course details like unique title, unique id and credits.

i. Establish the database by normalizing up to 3NF and considering all schema level constraints.

ii. Write SQL insertion query to insert few tuples to all the relations.

iii. Find number of students enrolled for the course 'DBMS'.

iv. Retrieve student names that are enrolled for data structure course but not enrolled for logic design.

v. Write a trigger to establish the constraint that the students can enroll maximum of six courses of their choice.

vi. Write a procedure to list all the courses enrolled by the seventh semester students.

7. The commercial bank wants keep track of the customer's account information. The each customer may have any number of accounts and account can be shared by any number of customers. The system will keep track of the date of last transaction. We store the following details.

a) Account: unique account-number, type and balance
b) Customer: unique customer-id, name and several addresses composed of street, city and state

i. Establish the database by normalizing up to 3NF and considering all schema level constraints
ii. Write SQL insertion query to insert few tuples to all the relations
iii. Add 5% interest to the customer who have less than 10000 balances and 6% interest to remaining customers.
iv. List joint accounts involving more than three customers
v. Write a insertion trigger to allow only current date for date of last transaction field.
vi. Write a procedure to find the customer who has highest number of accounts, the customer who has lowest balance, the customer who involved in most of joint accounts.

8. The commercial bank wants keep track of the customer's loan information. The customer can take any number of loans from the bank and loan will not be shared. The system will also keep track of the date of last transaction. We store the following details.

a) Customer: unique customer-id, name, Annual Income and several addresses composed of street, city and state
b) Loan: unique loan-number, type and amount

i. Establish the database by normalizing up to 3NF and considering all schema level constraints
ii. Write SQL insertion query to insert few tuples to all the relations
iii. Add 12% interest to the customer who have less than 50000 amounts and 14% interest to remaining customers.
iv. Retrieve the customers who have a single loan in a bank.
v. Write an insertion trigger to loan, that does not allow if the loan amount is more than two times of customer annual income.
vi. Write a procedure to retrieve all the loans of a specific customer.

9. The XYZ Book shop wants keep track of orders of the book. The book is composed of unique id, title, year of publication, single author and single publisher. Each order will be uniquely identified by order-id and may have any number of books. We keep track of quantity of each book ordered. We store the following details for author and publisher. AUTHOR: unique author-id, name, city, country

PUBLISHER: unique publisher-id, name, city, country.

i. Establish the database by normalizing up to 3NF
ii. Write SQL insertion query to insert few tuples to all the relations

iii. Find the author who has published highest number of books

iv. List the books published by specific publisher during the year 2011.

v. Write before insertion trigger to book to check year of publication should allow current year only.

vi. Write a procedure to list all the books published by a specific author during the specific year.

Course Outcomes:

After the completion of the course, the student will be able to:

1. **Apply** the knowledge of database management system development process and conduct the experiments using SQL queries to find the solution for given database problem.
2. **Analyz**e and design solutions for database system components to meet the specified needs of online transaction processing and information systems like Banking systems, Ticket Reservation systems etc..
3. **Develop** code for stored programs, triggers assertions and to generate reports.
4. **Contribute** to the team as a member, lead the team.

VI - SEMESTER COURSES

SOFTWARE PROJECT MANAGEMENT

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	HSS07A			

Course objectives:

This Course will enable students to:

1. Understand the basics of software project management concepts, principles and practices
2. Understand the different methods of estimation for software project.
3. Understand the basic concepts, principles and practices of software project scheduling and risk management.
4. Analyze a software project based on various review metrics with review guidelines.
5. Understand software project maintenance, reengineering and configuration management

UNIT - I

PRINCIPLES THAT GUIDE PRACTICE:

Software Engineering Knowledge, Core Principles – Principles That Guide Process, Principles That Guide Practice, Principles That Guide Each Framework Activity – Communication Principles, Planning Principles, Modeling Principles, Construction Principles, Deployment Principles, Work Practices

4 Hrs

PROJECT MANAGEMENT CONCEPTS:

The Management Spectrum – The People, The Products, The Process, The Project, People -The Stakeholders, Team Leaders, The Software Team, Agile Teams, Coordination And Communication Issues, The Product – Software Scope, Problem Decomposition, The Process – Melding The Products And The Process, Process Decomposition, The Project, The W5HH Principle, Critical Practices

3 Hrs

UNIT - II

PROCESS AND PROJECT METRICS:

Metrics In The Process And Project Domains -Process Metrics And Software Process Improvement, Project Metrics, Software Measurement – Size-Oriented Metrics, Function-Oriented Metrics, Reconciling LOC And FP Metrics, Object-Oriented Metrics, Use Cases- Oriented Metrics, Web App Project Metrics, Metrics For Software Quality – Measuring Quality ,Defect Removal Efficiency, Integrating Metrics With The Software Process - Arguments For Software Metrics, Establishing A Baseline, Metrics Collection Computation And Evaluation, Metrics For Small Organization, Establishing A Software Metrics Program

3 Hrs

ESTIMATION FOR SOFTWARE PROJECT:

Observations On Estimation, The Project Planning Process, Software Scope And Feasibility, Resources – Human Resources, Reusable Software Resources, Environmental Resources, Software Project Estimation, Decomposition Techniques – Software Sizing, Problem Based Estimation, An Example Of LOC Based Estimation, An Example Of FP – Based Estimation, Process-Based

Estimation, An Example Of Process- Based Estimation, Estimation With Use cases, An Example Of Estimation Using Use Case Points, Reconciling Estimates, Empirical Estimation Models – The Structure Of Estimation Models, The COCOMO II Model, The Software Equation, Estimation For Object -Oriented Projects, Specialized Estimation Techniques – Estimation For Agile Development, Estimation For Web App Development, The Make/Buy Decision- Creating A Decision Tree, Outsourcing. **5 Hrs**

UNIT - III

PROJECT SCHEDULING:

Basic concepts, Project Scheduling – Basic Principles - The Relationship Between People and Effort – Effort Distribution, Defining a Task Set for The Software Project – a Task Set Example – Refinement of Major Tasks, Defining a Task Network, Scheduling – Timeline Charts – Tracking The Schedule – Tracking Progress for an OO Project – Scheduling for Web App and Mobile Projects, Earned Value Analysis.

4 Hrs

RISK MANAGEMENT:

Reactive Verses Proactive Risk Strategies, Software Risks, Risk Identification – Assessing Overall Project Risk – Components and Drivers, Risk Projection – Developing a Risk Table – Assessing Risk Impact, Risk Refinement, Risk Mitigation, Monitoring, and Management, The RMMM Plan

3 Hrs

UNIT – IV

QUALITY CONCEPTS:

What is Quality? Software Quality – Garvin's Quality Dimensions, McColl's Quality Factors, ISO 9126 Quality Factors, Targeted Quality Factors, The Transition to a Quantitative View, The Software Quality Dilemma - "Good Enough" Software, The Cost Of Quality, Risks, Negligence and Liability, Quality and Security, The Impact Of Management Actions, Achieving Software Quality – Software Engineering Methods, Project Management Techniques, Quality Control, Quality Assurance

4 Hrs

REVIEW TECHNIQUES:

Cost Impact of Software Defects, Defect Amplification and Removal, Review Metrics and Their Use – Analysing Metrics, Cost-Effectiveness of Reviews, Reviews: a Formality Spectrum, Informal Reviews, Formal Technical Reviews – The Review Meeting, Review Reporting and Record Keeping, Review Guidelines, Sample- Driven Reviews, Post-mortem Evaluations

3 Hrs

SOFTWARE QUALITY ASSURANCE:

Background Issues, Elements of Software Quality Assurance, SQA Processes and Product Characteristics, SQA Tasks, Goals and Metrics – SQA Tasks, Goals Attributes and Metrics, Formal Approaches To SQA, Statistical Software Quality Assurance – A Generic Example, SixSigma for Software Engineering, Software Reliability – Measures of Reliability and Availability, Software Safety, The ISO 9000 Quality Standards, The SQA Plan

3 Hrs

UNIT – V

MAINTENANCE AND REENGINEERING:

Software Maintenance, Software Supportability, Reengineering, Business Process Reengineering -

Business Processes, A BPR Model, Software Reengineering – A Software Reengineering Process Model, Software Reengineering Activities, Reverse Engineering – Reverse Engineering to Understand Data, Reverse Engineering to Understand Processing, Reverse Engineering User Interfaces, Restructuring – Code Restructuring, Data Restructuring, Forward Engineering – Forward Engineering for Client Server Architectures, Forward Engineering for Object- Oriented Architectures, The Economics Of Reengineering

3 Hrs

SOFTWARE CONFIGURATION MANAGEMENT:

Software Configuration Management – An SCM Scenario, Elements of a Configuration Management System, Baselines, Software Configuration Items, Management of Dependencies And Changes, The SCM Repository – General Features and Content, SCM Features, The SCM Process – Identification of Objects In The Software Configuration, Version Control, Change Control, Impact Management, Configuration Audit, Status Reporting, Configuration Management for Web And Mobile Apps – Dominant Issues, Configuration Objects, Content Management, Change Management, Version Control, Auditing And Reporting **4 Hrs**

TEXT BOOKS:

1.	Roger S. Pressman, Bruce Maxim	Software Engineering: A Practitioner's Approach, McGraw Hill, 8th Edition, 2015

REFERENCE BOOKS:

1.	Hughes, Mike Cotterell, Rajib Mall	Software Project Management, McGraw Hill, 6th Edition 2018
2.	Watts Humphrey	Managing the Software Process, Pearson Education, New Delhi, 2000
3.	Pankaj Jalote	Software Project Management in Practice, Pearson Education, New Delhi, 2002.

Course outcomes:

After the completion of this course, students will be able to:

1. **Describ**e the basics of software project management concepts, principles and practices.
2. **Explain** and **apply** the different metrics and techniques to measure a software project.
3. **Explain** and **analyse** the different activities of a project scheduling with risk management.
4. **Explain** the quality concepts and analyse different review techniques for a software project.
5. **Describe** and apply software reengineering activities and SCM process on web and mobile applications

COMPUTER NETWORKS

Contact Hours/Week	:	4+0+0 (L+T+P)	Credits	:	4.0
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	6RCS01			

COURSE OBJECTIVES:

This Course will enable students to:

1. Introduces to congestion control and resource allocation. Explores various routing techniques for unicasting and multicasting.
2. Introduces internetworking and describes the key elements of the IP.
3. Analyze the transport-layer concepts: Transport-Layer services Reliable vs. un-reliable data transfer -TCP protocol -UDP protocol and QoS.
4. Explore various application layer protocols and addresses different mechanisms used to provide quality of service in IP.

UNIT-I

NETWORK LAYER: NETWORK-LAYER SERVICES: Packetizing, Routing and Forwarding Other Services. NETWORK-LAYER PERFORMANCE: Delay, Throughput, Packet loss. Congestion Control.IPV4 ADDRESSES: Address Space, Classfull Addressing, Classless Addressing, Dynamic Host Configuration Protocol (DHCP), Network Address Resolution (NAT). FORWARDING OF IP PACKETS: Forwarding Based on Destination Address, Forwarding Based on Label, Routers as Packet Switches.

10Hrs

UNIT-II

NETWORK LAYER PROTOCOLS:

INTERNET PROTOCOL (IP): Datagram Format, Fragmentation, Options, Security of IPv4 Datagrams.

UNICAST ROUTING: INTRODUCTION: General Idea, Least-Cost Routing. ROUTING ALGORITHMS: Distance-Vector Routing, Link-State Routing, Path-Vector Routing.

UNICAST ROUTING PROTOCOLS: Internet Structure, Routing Information Protocol (RIP), Open Shortest Path First (OSPF), Border Gateway Protocol Version 4 (BGP4).

10Hrs

UNIT-III

MULTICAST ROUTING: MULTICASTING BASICS: Multicast Addresses, Delivery at Data-Link Layer, Collecting Information about Groups, Multicast Forwarding, Two Approaches to Multicasting. INTRADOMAIN MULTICAST PROTOCOLS: Multicast Distance Vector (DVMRP), Multicast Link State (MOSPF), Protocol Independent Multicast (PIM).

NEXT GENERATION IP: IPv6 ADDRESSING: Representation, Address Space, Address Space Allocation, Auto configuration, Renumbering. THE IPv6 PROTOCOL: Packet Format, Extension Header, TRANSITION FROM IPv4 TO IPv6: Strategies, Use of IP Addresses. **10 Hrs**

UNIT-IV

TRANSPORT LAYER PROTOCOLS: INTRODUCTION: Services, Port Numbers. USER DATAGRAM PROTOCOL: User Datagram, UDP Services, UDP Applications. TRANSMISSION CONTROL PROTOCOL: TCP Services, TCP Features, Segment, A TCP Connection, State Transition Diagram, Windows in TCP, Flow Control, Error Control (**except Sender and Receiver FSMs**), TCP Congestion Control, TCP Timers.

10Hrs

UNIT-V

STANDARD CLIENT-SERVER PROTOCOLS AND QOS:

WORLD WIDE WEB AND HTTP: World Wide Web. Hypertext Transfer Protocol (HTTP). ELECTRONIC MAIL: Architecture, Web-Based Mail, E-Mail Security. DNS: Name Space, DNS in the Internet, Resolution, Caching, Resource Records, DNS Messages.

QUALITY OF SERVICE: DATA-FLOW CHARACTERISTICS: Definitions, Sensitivity of Applications, Flow Classes. FLOW CONTROL TO IMPROVE QOS; Scheduling, Traffic Shaping or Policing, Resource Reservation, Admission Control. INTEGRATED SERVICES (INTSERV): Flow Specification, Admission, Service Classes. Resource Reservation Protocol (RSVP), Problems with Integrated Services. DIFFERENTIATED SERVICES (DFFSERV): DS Field, Per-Hop Behavior, Traffic Conditioners.

12Hrs

TEXT BOOK:

1	Behrouz A. Forouzan	Data Communications and Networking, , McGraw-Hill Forouzan Networking Series, 5th Edition,

REFERENCE BOOKS:

1	James F Kurose and Keith W Ross	Computer Networking, A Top-Down Approach, Pearson Education, Sixth edition 2017.
2	Larry L Peterson and Brusce S Davie	Computer Networks, ELSEVIER, 6Th Edition
3	Andrew S Tanenbaum	Computer Networks, Pearson Education, 5th Edition
4	Mayank Dave	Computer Networks, Cengage Learning, 5th Edition

WEB RESOURCES:

Topics	Web Links
Wireshark a. Wireshark Website b. Wireshark Wiki c. Wireshark documentation	http://www.wireshark.org http://wiki.wireshark.org http://www.wireshark.org/docs/

Tcpdump a. Tcpdump Website b. Tcpdump Tutorial	 http://www.tcpdump.org/ https://opensource.com/article/18/10/introduction-tcpdump
C-net	http://www.csse.uwa.edu.au/cnet/
BGP Demo	https://www.bgp4.as/looking-glasses

COURSE OUTCOMES:

After the completion of the course, the student will be able to:

1. **Apply** the knowledge of Packet switching concepts in computer networking
2. **Identify** different categories of IP addresses and design subnets.
3. **Analyze** different Unicast and multicast routing mechanisms.
4. **Analyze** the transport-layer concepts and services -unreliable vs. reliable data transfer
5. **Examine** various network protocols and **Appraise** existing QoS and application layer protocol/s.

SYSTEM SOFTWARE AND COMPILER DESIGN

Contact Hours/Week	: 3 + 3 (Lecture + Lab)	Credits :	4.5
Total Lecture Hours	: 39	CIE Marks :	50
Laboratory Hours/ Week	: 3	SEE Marks :	50
Course Code	: 6RCS02		

Note: Four quizzes of theory are replaced by four lab tests. Each lab test is conducted for 15 marks and entered for corresponding quiz.

COURSE OBJECTIVES:

This Course will enable students to:

1. Introduce the major concept areas of language translation and compiler design.
2. Extend the knowledge of parser by parsing LL parser and LR parser.
3. Evaluate the ideas in syntax- directed definitions & Syntax – directed translations.
4. Use the knowledge gained for generating the intermediate code for a typical programming language.
5. Introduce the basic concepts of Assemblers, Macro processors, Linkers & Loaders.

UNIT-I

INTRODUCTION: Language processors, The structure of a Compiler, The Evolution of Programming Languages , The Move to Higher-level Languages, Impacts on Compilers **LEXICAL ANALYSIS:** The Role of Lexical Analyzer, Lexical Analysis Versus Parsing, Tokens, Patterns, and Lexemes, Attributes for Tokens, Lexical Errors, Input Buffering, Buffer Pairs, Sentinels, Specification of Tokens, Strings and Languages, Operations on Languages, Regular Expressions, Regular Definitions, Extensions of Regular Expressions.
[**Text book 1 :** 1.1,1.2, 1.3.1, 1.3.2, 3.1 to 3.3] **8 Hrs**

UNIT-II

LEXICAL ANALYSIS: Recognition of Tokens, Transition Diagrams, Recognition of Reserved Words and Identifiers, Completion of the Running Example, Architecture of a Transition-Diagram-Based Lexical Analyzer.

SYNTAX ANALYSIS : The role of parser, Representative Grammars, syntax error handling, error recovery strategies, Writing a grammar, lexical versus syntactic analysis, Eliminating ambiguity, Elimination of left-recursion, Left-factoring.
[**Text book 1 :** 3.4, 4.1, 4.3.1 to 4.3.4] **8 Hrs**

UNIT-III

TOP-DOWN PARSING: Introduction, Recursive-Descent Parsing, FIRST and FOLLOW, LL(1) grammars , Constructing a predictive parsing table , Non recursive Predictive Parsing, Error Recovery in Predictive Parsing: Panic mode Error Recovery and Phrase level Error Recovery
[**Text book 1 :** 4.4.1 to 4.4.5] **7Hrs**

UNIT-IV

BOTTOM-UP PARSING:, Reductions, Handle Pruning, Shift-reduce parsing and conflicts during Shift-reduce parsing, Introduction to LR Parsing: Simple LR, Why LR parsers?, Items and LR(0) automaton, Closure of Item Sets, The Function GOTO, LR(0) automaton for the expression grammar, The LR-Parsing Algorithm, Constructing SLR-parsing tables.

[**Text book 1**: 4.5.1 to 4.5.4,4.6.1 to 4.6.4] **8Hrs**

UNIT-V

SYNTAX-DIRECTED TRANSLATION: Syntax directed definitions, Inherited and synthesized attributes, evaluating an SDD at the nodes of the parse tree.

[**Text book 1** : 5.1.1 to 5.1.2]

INTERMEDIATE-CODE GENERATION: Three-address code – Addresses and instructions, Quadruples and Triples.

[**Text book 1** : 6.2.1 to 6.2.3]

INTRODUCTION TO SYSTEM SOFTWARE: Assemblers: Elements of Assembly Language programming, A Simple Assembly Scheme and Pass Structure of Assemblers.

Linkers and Loaders: Relocation, Linking and Loading Concepts.

[**Text book 2 :** 4.1 to 4.3, 7.1.1,7.1.27.1.3,7.6] **8Hrs**

TEXTBOOK(S):

1	Compilers- Principles, Techniques and Tools	Alfred V Aho, Monica S.Lam, Ravi Sethi, Jeffrey D Ullman, Pearson Education, 2nd Edition 2007. (Chapters 1.1 to 1.4, 3.1 to 3.4, 4.1,4.3 to 4.7, 5.1 to 5.2, 6.1to 6.3)
2	System Programming and Operating Systems	D M Dhamdhere , Mcgraw Hill. 2nd Revised Edition,, (Chapters 4.1 to 4.3, 5.1 to 5.3 , 7.1 and 7.6)

REFERENCE BOOKS:

1	Compiler Construction Principles & Practice	Kenneth C Louden, Thomson Education, 1997.
2	Modern Compiler Implementation in C	Andrew W Appel, First Edition, Cambridge University Press, 2010

LABORATORY CONTENT:

Programs on the Operating System concepts:

1. Process Scheduling.
2. Process Synchronization.
3. Deadlock Avoidance.
4. Memory allocation techniques.
5. Page Replacement Algorithms.

Programs on the Compiler Design concepts:

1. Lexical Analysis.
2. Context Free Grammars.
3. Left recursion and left factoring in top -down parsing.
4. FIRST all nonterminal in the given grammar.
5. Top-Down parsers.
6. LR(0) item set for the given grammar.

Note : Students have to implement the programs using C/C++.

COURSE OUTCOMES:

After the completion of the course, the student will be able to:

1. **Discuss** and **Apply** the fundamentals of compiler design to construct various components of modern compiler.
2. **Discuss** functions of lexical analyzer and **design** transition diagram based lexical analyzer.
3. A**nalyze** and **apply** the various forms of context free grammars for the construction of parsers.
4. **Design** LR (0), SLR (1) parsers by using the LR (0) items.
5. **Discuss** and Apply the techniques of Syntax Directed Translation and Intermediate Code Generation in the construction of compiler
6. **Describe** the functions of various system software's (loaders, linkers and assemblers)

COMPUTER NETWORKS LABORATORY

Lab Hours/Week	:	3	Credits	:	1.5
Course Code	:	6RCSL01	CIE Marks	:	50
			SEE Marks	:	50

NOTE: Students have to implement and execute all the listed programs. List of programs for SEE will be announced before the last working day of the semester.

I. Implement the following programs using C/C++ or equivalent on LINUX environment:

1. Implementation of flow control Mechanisms:
- Sliding Window
- Stop & Wait
- Go back N
- Selective Repeat

2. Implementation of Error Detection and Correction Mechanisms:
- Cyclic Redundancy Check
- Checksum
- Forward Error correction
- Hamming Code

3. Implementation of Routing algorithms:
- Link state
- Distance Vector

4. Implementation of congestion control algorithms:
- Leaky bucket
- Token bucket

5. Client server communication using Socket Programming:
- Implementation of unicast communication using TCP
- Implementation of unicast communication using UDP
- Implementation of unicast communication using FIFO
- Multicast application
  - Broadcast application

II. Simulate and analyze the performance of wired and wireless networks protocols using NS2/ NS3/ GNS3 simulator.

III. Open ended programs:

1. Understanding and using of commands like ifconfig, netstat, ping, arp, telnet, ftp, finger, traceroute, who is.
2. Using Wiresharktrace the following
   - Hypertext Transfer Protocol.
   - Trace File Transfer protocol, Trace Transmission control protocol
   - Trace Domain Name Server.
   - Trace Internet Protocol and Internet Control Message Protocol.
3. Using Wireshark observe data transferred in client server communication using UDP and identify the UDP datagram.
4. Using Wireshark observe Three Way Handshaking Connection Establishment,

Data Transfer and Three-Way Handshaking Connection Termination in client server communication using TCP.

5. Develop a packet capturing and filtering application using raw sockets.
6. Simulate a three nodes point – to – point network with duplex links between them. Set the queue size and vary the bandwidth and find the number of packets dropped.
7. Simulate a four node point-to-point network with the links connected as follows. n0-n2, n1-n2, and n2-n3. Apply TCP agent between n0-n3 and UDP agent between n1-n3. Apply relevant applications over TCP and UDP agents. Changing the parameters and determine the number of packets sent by TCP/UDP.
8. Simulate the different types of Internet traffic such as FTP and TELNET over a network and analyze the throughput.
9. Simulate an Ethernet LAN using n nodes (6-10), change error rate and data rate and compare the throughput.
10. Simulate an Ethernet LAN using n nodes and set multiple traffic nodes and determine the collision across different nodes.
11. Simulate the transmission of ping messages over a network topology consisting of 6 nodes and find the number of packets dropped due to congestion.
12. Simulate simple ESS with transmitting nodes in wire-less LAN and determine the performance with respect to transmission of packets.
13. Simulate simple ad-hoc network with transmitting nodes and determine the performance with respect to transmission of packets.
14. Design and configure a network with multiple subnets with wired and wireless LANs using required network devices. Configure the following services in the network- TELNET, SSH, FTP server, Web server, File server, DHCP server and DNS server.
15. Write a program for a HLDC frame to perform the following.
    i) Bit stuffing
    ii) Character stuffing.
16. Write a program to demonstrate communication with HTTP server using sockets.
17. Write a program to connect to DNS server to resolve the IP address.
18. Write a program to implement Simple Mail Transfer Protocol.

COURSE OUTCOMES:

After the completion of the course, the student will be able to:

1. **Implement and analyze** various flow control and congestion control mechanisms in network applications.
2. **Implement and analyze** error detection and correction techniques in network applications.
3. **Develop and Implement** network routing algorithms by applying network programming concepts.
4. **Implement** client server applications with TCP/UDP socket programming..
5. **Analyze** the performance of networking protocols usingNS2/NS3/GNS3 simulator for wired and wireless networks

MOBILE APPLICATION DEVELOPMENT LABORATORY

Lab Hours/Week	:	3	Credits	:	2.0
Tutorial Hours/Week	:	1	CIE Marks	:	50
Course Code	:	6RCSL02	SEE Marks	:	50

NOTE: Students have to implement and execute all the listed programs. However for the conduction of the lab exams only part A questions need to be asked as part B questions are for demonstration purpose only.

COURSE OBJECTIVES:

This Course will enable students to:

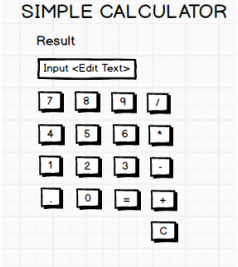
1. Learn to setup Android application development environment
2. Illustrate user interfaces for interacting with apps and triggering actions
3. Interpret tasks used in handling multiple activities
4. Identify options to save persistent application data
5. Appraise the role of security and performance in Android application.

LAB QUESTIONS:

PART – A

1 Create an application to design a Visiting Card. The Visiting card should have a company logo at the top right corner. The company name should be displayed in Capital letters, aligned to the center. Information like the name of the employee, job title, phone number, address, email, fax and the website address is to be displayed. Insert a horizontal line between the job title and the phone number.

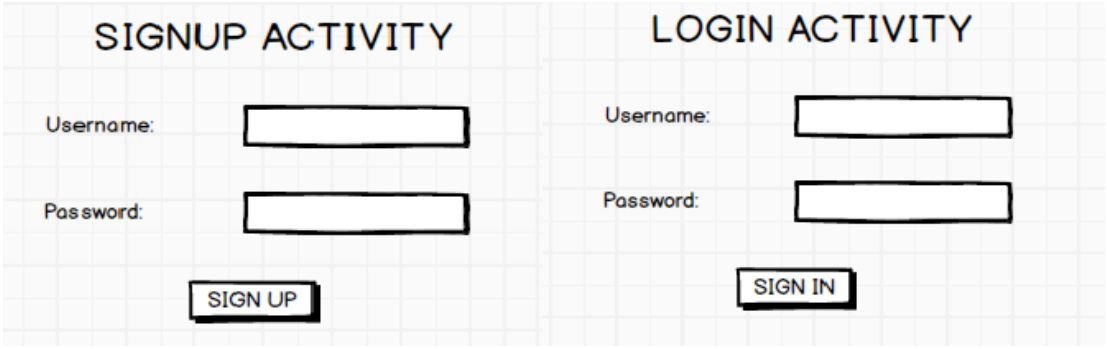
2 Develop an Android application using controls like Button, Text View, Edit Text for designing a calculator having basic functionality like Addition, Subtraction, Multiplication and Division.



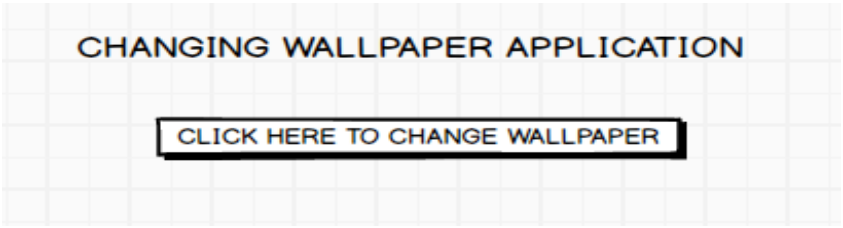
3 Create a SIGN Up activity with Username and Password. Validation of password should happen based on the following rules:

- Password should contain uppercase and lower case letters.
- Password should contain letters and numbers.
- Password should contain special characters.
- Minimum length of the password (the default value is8).

On successful **SIGN UP** proceed to the next Login activity. Here the user should **SIGN IN** using the Username and Password created during signup activity. If the Username and Password are matched then navigate to the next activity which displays a message saying "Successful Login" or else display a toast message saying "Login Failed". The user is given only two attempts and after that display a toast message saying "Failed Login Attempts" and disable the SIGN IN button. Use Bundle to transfer information from one activity to another.

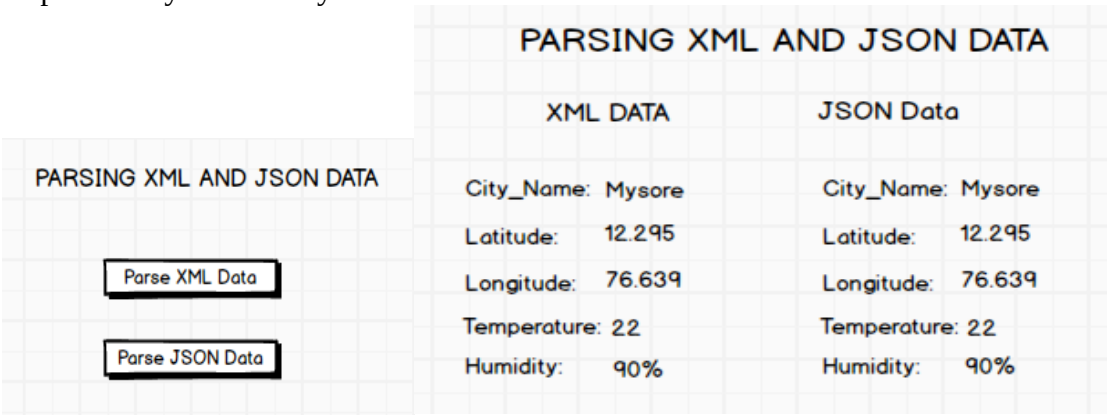


4 Develop an application to set an image as wallpaper. On click of a button, the wallpaper image should start to change randomly every 30 seconds.

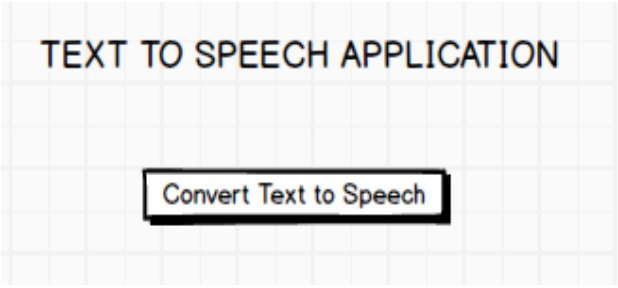


5 Write a program to create an activity with two buttons START and STOP. On pressing of the START button, the activity must start the counter by displaying the numbers from One and the counter must keep on counting until the STOP button is pressed. Display the counter value in a Text View control.

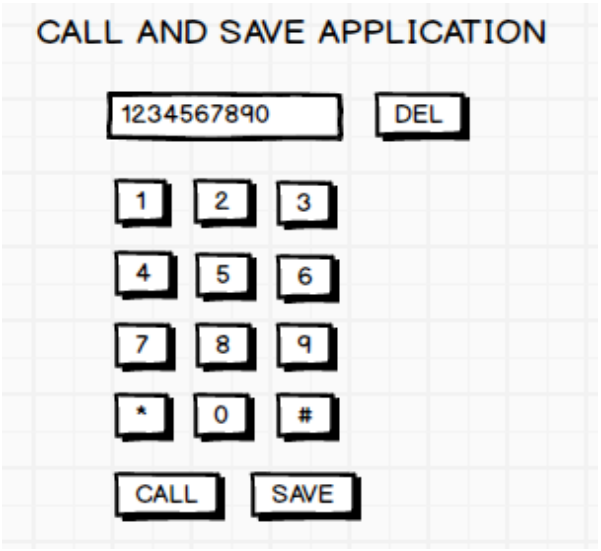
6 Create two files of XML and JSON type with values for City Name, Latitude, Longitude, Temperature and Humidity. Develop an application to create an activity with two buttons to parse the XML and JSON files which when clicked should display the data in their respective layouts side by side.



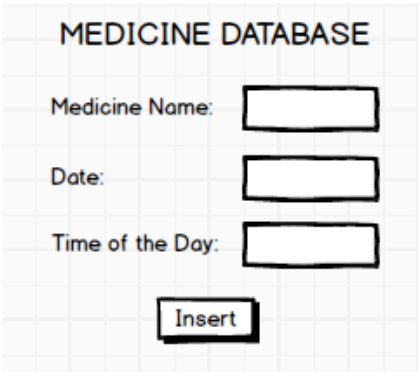
7 Develop a simple application with one Edit Text so that the user can write some text in it. Create a button called "Convert Text to Speech" that converts the user input text into voice.



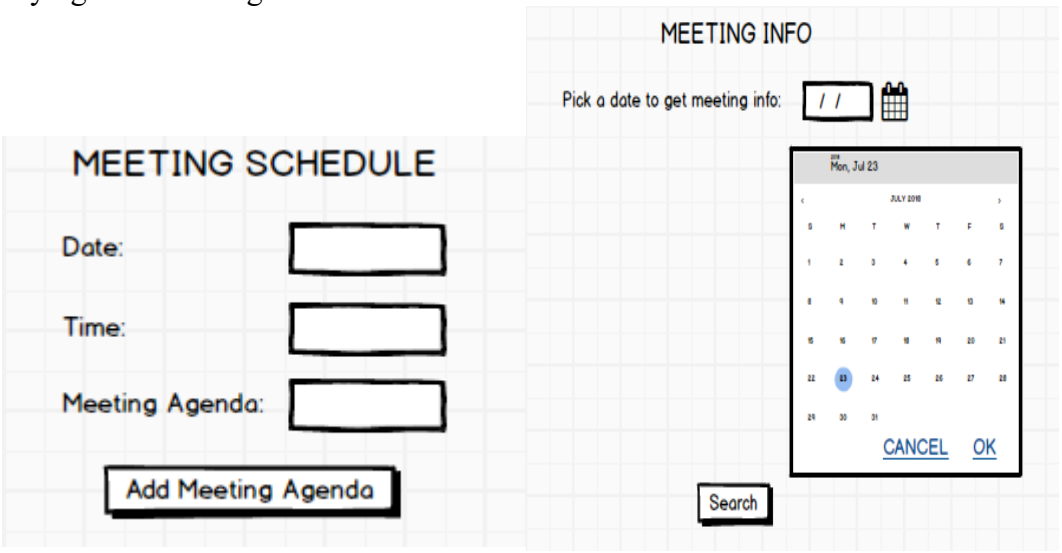
8 Create an activity like a phone dialer with CALL and SAVE buttons. On pressing the CALL button, it must call the phone number and on pressing the SAVE button it must save the number to the phonecontacts.



9 Write a program to enter Medicine Name, Date and Time of the Day as input from the user and store it in the SQLite database. Input for Time of the Day should be either Morning or Afternoon or Evening or Night. Trigger an alarm based on the Date and Time of the Day and display the Medicine Name.

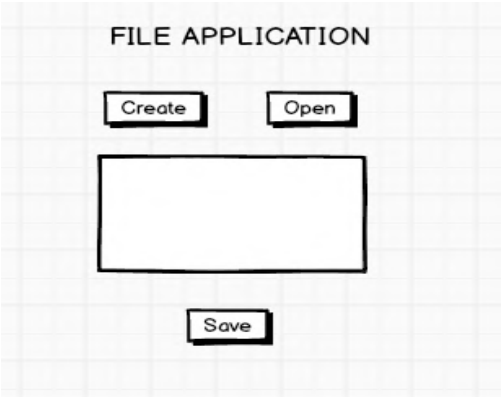


10 Develop a content provider application with an activity called "Meeting Schedule" which takes Date, Time and Meeting Agenda as input from the user and store this information into the SQLite database. Create another application with an activity called "Meeting Info" having Date Picker control, which on the selection of a date should display the Meeting Agenda information for that particular date, else it should display a toast message saying "No Meeting on this Date".



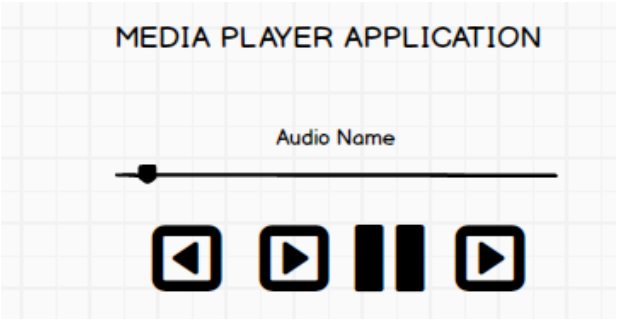
11 Create an application to receive an incoming SMS which is notified to the user. On clicking this SMS notification, the message content and the number should be displayed on the screen. Use appropriate emulator control to send the SMS message to your application.

12 Write a program to create an activity having a Text box, and also Save, Open and Create buttons. The user has to write some text in the Text box. On pressing the Create button the text should be saved as a text file in MkSDcard. On subsequent changes to the text, the Save button should be pressed to store the latest content to the same file. On pressing the Open button, it should display the contents from the previously stored files in the Text box. If the user tries to save the contents in the Textbox to a file without creating it, then a toast message has to be displayed saying "First Create a File".

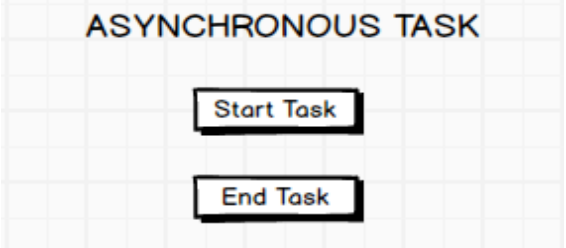


Part B

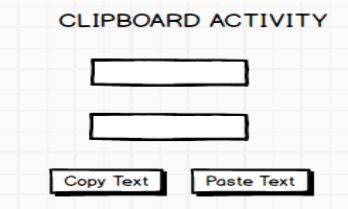
1 Create an application to demonstrate a basic media player that allows the user to Forward, Backward, Play and Pause an audio. Also, make use of the indicator in the seek bar to move the audio forward or backward as required.



2 Develop an application to demonstrate the use of Asynchronous tasks in android. The asynchronous task should implement the functionality of a simple moving banner. On pressing the **Start Task** button, the banner message should scroll from right to left. On pressing the **Stop Task** button, the banner message should stop. Let the banner message be "Demonstration of Asynchronous Task".



3 Develop an application that makes use of the clipboard framework for copying and pasting of the text. The activity consists of two Edit Text controls and two Buttons to trigger the copy and paste functionality.



4 Create an AIDL service that calculates Car Loan EMI. The formula to calculate EMI is

$E = P * (r(1+r)^n)/((1+r)^n-1)$,where

E = The EMI payable on the car loan

amount P = The Car loan Principal

Amount

r = The interest rate value computed on a monthly

basis n = The loan tenure in the form of months

The down payment amount has to be deducted from the principal amount paid towards buying the Car. Develop an application that makes use of this AIDL service to calculate the EMI. This application should have four Edit Text to read the Principal Amount, Down Payment, Interest Rate, Loan Term (in months) and a button named as "Calculate Monthly EMI". On click of this button, the result should be shown in a Text View. Also, calculate the EMI by varying the Loan Term and Interest Rate values.

2. Dawn Griffiths and David Griffiths, **"Head First Android Development",** 1st Edition, O'Reilly SPD Publishers, 2015. ISBN-13:978-9352131341
3. Bill Phillips, Chris Stewart and Kristin Marsicano, **"Android Programming: The Big Nerd Ranch Guide",** 3rd Edition, Big Nerd Ranch Guides, 2017. ISBN-13:978-0134706054

COURSE OUTCOMES:

After the completion of this course, students will be able to:

1. **Create**, test and **debug** Android application by setting up Android development environment.
2. **Implement** adaptive, responsive user interfaces that work across a wide range of devices.
3. **Infer** long running tasks and background work in Android applications.
4. **Demonstrate** methods in storing, sharing and retrieving data in Android applications.
5. **Infer** the role of permissions and security for Android applications.

Professional Electives

ADVANCED DATA STRUCTURES AND ALGORITHMS

Contact Hours/ Week	: 3 + 0 (Lecture + Tutorial)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50
Course Code	:RCSE39		

Course objectives:

This course will enable students to:

1. Knowledge: List, define and identify the different data structures and its uses.
2. Comprehension: Explain the relationship between data and operations on data structures.
3. Analysis: Compare and contrast the design and implementation of various operations on data structures.
4. Synthesis: Design efficient algorithms for data structures.
5. Evaluation: Evaluate the efficiency of the algorithms used to operate on various data structures.

UNIT I

Abstract Data Types and Trees:

Abstract Data Types (ADTs), List ADT, Vector and List in the STL, implementation of vector, implementation of list. B-trees **7 Hrs**

UNIT II

Hashing:

General idea, Hash function, Separate chaining, Hash tables without linked list, Rehashing, Extensible hashing. **8 Hrs**

UNIT -III

Priority Queues:

Heaps revisited – Model, simple implementations, Binary Heap. d-Heaps, Leftist Heaps, Skew Heaps, Binomial Queues

8 Hrs

UNIT – IV

Sorting: Shell sort, Quick sort, Indirect sorting, External sorting. **8 Hrs**

UNIT –V

Miscellaneous Data Structures:

Bottom-up and Top-down Splay trees, Red-Black Trees **8 Hrs**

TEXTBOOK:

1.	Mark Allen Weiss	Data Structures and Algorithm Analysis in C++, 3rd Edition, Pearson Education.

REFERENCE BOOKS:

1.	Thomas H. Cormen, Charles E. Leiserson, Ronal L. Rivest, Clifford Stein.	Introduction to Algorithms. Ed 2. PHI. 2006.
2.	Alfred V. Aho, John E. Hopcroft, Jeffrey D. Ullman	Data Structures and Algorithms.

Course Outcomes:

After the completion of this course, students will be able to:

1. Explain various data structures and its application in computer science.
2. Demonstrate how data structures are implemented using C++ Standard Template Library.
3. Analyze and Compare algorithms and techniques of implementing data structures using STL.
4. Design and Implement the complex data structures with algorithms.

WEB TECHNOLOGIES AND ITS APPLICATIONS

Contact Hours/Week	:	3 L	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	RCSE36			

Course objectives: This course will enable students to:

1. **Illustrate** the Semantic Structure of HTML and CSS
2. **Compose** forms and tables using HTML and CSS
3. **Design** Client-Side programs using JavaScript and Server-Side programs using PHP
4. **Infer** Object Oriented Programming capabilities of PHP
5. **Explore** backend database interactions with PHP and **Examine** JavaScript frameworks such as jQuery and PHPExpress

Course outcomes: After the completion of this course, students will be able to:

CO1: Apply the knowledge of HTML and CSS syntax and semantics to build web pages.

CO2: Construct and visually format tables and forms using HTML and CSS.

CO3: Develop Client-Side Scripts using JavaScript and Server-Side Scripts using PHP to generate and display the contents dynamically.

CO4: Appraise the principles of object oriented development using PHP

CO5: Apply the knowledge of MySQL database using PHP and Illustrate JavaScript frameworks like jQuery and PHPExpress which facilitates developer to focus on core features.

UNIT - I

Introduction to HTML, What is HTML and Where did it come from?, HTML Syntax, Semantic Markup, Structure of HTML Documents, Quick Tour of HTML Elements, HTML5 Semantic Structure Elements, Introduction to CSS, What is CSS, CSS Syntax, Location of Styles, Selectors, The Cascade: How Styles Interact, The Box Model, CSS Text Styling.

Chapters: 2.1 to 2.6, 3.1 to 3.7 **7 Hrs.**

UNIT - II

HTML Tables and Forms, Introducing Tables, Styling Tables, Introducing Forms, Form Control Elements, Table and Form Accessibility, Microformats, Advanced CSS: Layout, Normal Flow, Positioning Elements, Floating Elements, Constructing Multicolumn Layouts, Approaches to CSS Layout, Responsive Design, CSS Frameworks.

Chapters: 4.1 to 4.6, 5.1 to 5.7 **7 Hrs.**

UNIT - III

JavaScript: Client-Side Scripting, What is JavaScript and What can it do?, JavaScript Design Principles, Where does JavaScript Go?, Syntax, JavaScript Objects, The Document Object Model (DOM), JavaScript Events, Forms, Introduction to Server-Side Development with PHP, What is Server-Side Development, A Web Server's Responsibilities, Quick Tour of PHP, Program Control, Functions

Chapters: 6.1 to 6.8, 8.1 to 8.5 **7 Hrs.**

UNIT - IV

PHP Arrays and Superglobals, Arrays, $_GET and $_POST Superglobal Arrays, $_SERVER Array, $_Files Array, Reading/Writing Files, PHP Classes and Objects, Object-Oriented Overview, Classes and Objects in PHP, Object Oriented Design, Managing State: The Problem of State in Web Applications, Passing Information via Query Strings, Passing Information via the URL Path.

Chapters: 9.1 to 9.5, 10.1 to 10.3, 13.1 to 13.3 **8 Hrs.**

UNIT - V

Databases and web development, Managing a MySQL database, SQL, Database APIs, Accessing MySQL from PHP, PHPExpress: Installation, API, Controllers, Views

Chapters: 11.1 to 11.5

Cookies, Serialization, Session State, HTML5 Web Storage, Advanced JavaScript and jQuery, JavaScript Pseudo-Classes, jQuery Foundations, AJAX, Asynchronous File Transmission, Animation

Chapters: 13.4 to 13.7, 15.1 to 15.6 **10 Hrs.**

TEXT BOOK:

1.	Randy Connolly, Ricardo Hoar	"Fundamentals of Web Development", Pearson Education India, 1st Edition, ISBN:978-9332575271

REFERENCE BOOKS:

1.	Alexis Goldstein, Louis Lazaris, Estelle Weyl	"HTML5 & CSS3 for the Real World", SitePoint Pty. Ltd., 2nd Edition, 2015, ISBN: 978-0987467485
2.	Adrian W. West	"Practical Web Design for Absolute Beginners", Apress, Edition, 2016, ISBN: 978-1484219928
3.	Patrick Carey	"New Perspectives on HTML5 and CSS3", Cengage Learning, 7th Edition, 2017, ISBN: 978-1305503939
4.	Dimitar Ivanov	php-express PHP micro-framework inspired by Express.js https://riverside.github.io/php-express/

COURSE OUTCOMES : At the end of the course the student will be able to:

CO1: **Apply the knowledge of** HTML and CSS syntax and semantics to build web pages.

CO2: **Construct** and visually format tables and forms using HTML and CSS.

CO3: **Develop** Client-Side Scripts using JavaScript and Server-Side Scripts using PHP to generate and display the contents dynamically.

CO4: **Appraise** the principles of object oriented development using PHP

CO5: Apply the knowledge of MySQL database using PHP and **Illustrate** JavaScript frameworks like jQuery and PHPExpress which facilitates developer to focus on core features.

FOUNDATIONS OF DATA SCIENCE

Contact Hours/ Week	: 3 + 0 (Lecture + Tutorial)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50
Sub. Code	: RCSE31		

COURSE OBJECTIVES:

This Course will enable students to:

1 Describe the concept of data science, its scope in business and explain the available techniques. (L1, L2)
2 Understand Predictive modeling, explain supervised segmentation and given data set should be able to select (through solving) the attribute for segmentation using the available techniques. (L2, L3)
3 Explain the concept of Classification and classify (solve) a given data set. (L3)
4 Understand and describe the concept of similarity, neighbors and clustering and apply it for any real world data. (L3, L4)
5 Explain the concepts of mining text and other data science tasks and techniques. (L2, L4)

UNIT-1

Introduction: Data-Analytic Thinking: The Ubiquity of Data Opportunities, Example: Hurricane Frances, Example: Predicting Customer Churn. Data Science, Engineering, and Data-Driven Decision Making, Data Processing and "Big Data", Data and Data Science Capability as a Strategic Asset, Data-Analytic Thinking.

Business Problems and Data Science Solutions: From Business Problems to Data Mining Tasks, Supervised Versus Unsupervised Methods, Data Mining and Its Results, The Data Mining Process, Business Understanding, Data Understanding, Data Preparation, Modeling, Evaluation, Deployment, Other Analytics Techniques and Technologies: Statistics, Database Querying, Data Warehousing, Regression Analysis, Machine Learning and Data Mining

07 Hrs

UNIT -2

Introduction to Predictive Modeling: From Correlation to Supervised Segmentation Models, Induction, and Prediction, Supervised Segmentation, Selecting Informative Attributes Example: Attribute Selection with Information Gain, Supervised Segmentation with Tree-Structured Models, Visualizing Segmentations, Trees as Sets of Rules, Probability Estimation, Example: Addressing the Churn Problem with Tree Induction. **08 Hrs**

UNIT -3

Fitting a Model to Data: Classification via Mathematical Functions: Linear Discriminant Functions, Optimizing an Objective Function, An Example of Mining a Linear Discriminant from Data, Linear Discriminant Functions for Scoring and Ranking Instances, Support Vector Machines briefly, Regression via Mathematical Functions, Class Probability Estimation and Logistic "Regression". Logistic Regression: Some Technical Details. Example: Logistic Regression versus Tree Induction, Non Linear Functions, Support vector machines and Neural Networks

Over fitting and Its Avoidance: Fundamental Concepts, Exemplary Techniques, Regularization, Genaralization, Over fitting, Over fitting Examined. **08 Hrs**

UNIT - 4

Similarity, Neighbors, and Clusters: Similarity and Distance, Nearest-Neighbor Reasoning, Example: Whiskey Analytics, Nearest Neighbors for Predictive Modeling, How Many Neighbors and How Much Influence? Geometric Interpretation, Overfitting, and Complexity Control. Issues with Nearest-Neighbor Methods. Some important Technical Details Relating to Similarities and neighbors. Clustering, Example: Whiskey Analytics Revisited, Hierarchical Clustering, Nearest Neighbors Revisited: Clustering Around Centroids. Understanding the Results of Clustering **08 Hrs**

UNIT – 5

Decision Analytic Thinking I: What is a Good Model?: Evaluating Classifiers Plain Accuracy and its Problems, The confusion matrix, Problems with unbalanced Classes, Problems with Unequal Costs and Benefits.

Representing and Mining Text: Why Text Is Important? Why Text Is Difficult? Representation, Bag of Words, Term Frequency, Measuring Sparseness: Inverse Document Frequency, Combining Them: TFIDF, Example: Jazz Musicians

Other Data Science Tasks and Techniques: Co-occurrences and Associations: Finding Items That Go Together, Measuring Surprise: Lift and Leverage, Example: Beer and Lottery Tickets, Associations Among Facebook Likes, Profiling: Finding Typical Behavior, Link Prediction and Social Recommendation **08 Hrs**

TEXT BOOK:

1	Foster Provost and Tom Fawcett	Data Science for Business, Published by O'Reilly Media, Inc. July 2013: First Edition

REFERENCE BOOKS:

1	Doing Data Science	Rachel Schutt & Cathy O'Neil, O'Reilly Media, October 2013: First Edition
2	Practical Data Analysis	Hector Cuesta,PACKT Publishing, First published: October 2013
3.	Guide to Intelligent Data Analysis	Michael R. Berthold,Christian Borgelt, Frank Hijppner Frank Klawonn, Springer-Verlag London Limited 2010

Course Outcomes:

After the completion of the course, students will be able to

1. **Apply** the knowledge of mathematics to explain the concept of data science, the available techniques in data science and its scope in business.
2. **Develop** a Decision tree based on supervised segmentation and predict the class for a given data set by selecting (through solving) the attribute for segmentation using the available techniques.
3. **Analyze** the given data set, and solve a **problem** by performing Classification using the basics of mathematics and data science.
4. **Develop** solutions to group entities in data set and **apply** it for the given real world data using the basic **knowledge** of similarity, neighbors and clustering
5. **Analyze** the importance of mining text (social data) and **formulate** the association rules based on market basket analysis.

SOFTWARE INDUSTRY SKILLS FOR EXCELLENCE

Contact Hours/ Week	: 3 + 0 (Lecture + Tutorial)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50
Course Code	:RCSE41		

Course objectives:

This course will enable students to:

1. **Explain** the nature and dynamics of a software industry, roles and responsibilities of people and typical processes involved in designing, developing and maintaining software work products.
2. **Describe** various software architectures and patterns.
3. **Describe** various ways of learning new programming languages, frameworks, databases, integration technologies and utilities.
4. **Explain** different ways of quickly understanding pre-written code in unfamiliar contexts.
5. **Explain** innovation, its types and influences.
6. **Explain** various best practices that can be applied to excel in any given context within the software enterprise

UNIT I

Overview of knowledge industries – Organization of the software industry – Design of a typical software development house – Dynamics of the software industry – People involved in the software industry and their roles and responsibilities – Processes used in a software industry, both technical and non-technical – Software Process Maturity Models – Perceptions and realities of the software industry.

6 Hrs

UNIT II

Introduction to Software Architecture – Ways to describe software architectures –Architecture of a typical web application – Architecture of a typical SaaS – Architecture of a typical mobile application – Architecture of a typical embedded software system –
Architecture of various AI based applications – Architecture of a typical analytics driven application.

7 Hrs

UNIT -III

Name and high level features of current and futuristic technology stacks; front-end technologies; frameworks; programming languages; databases; DevOps; mobile applications; AI and ML libraries and tools; data analytics technologies; cloud: IaaS, cloud: PaaS and useful SaaS

7 Hrs

UNIT – IV

Introduction to the art of learning – Changing styles of learning – Techniques to learn about new technologies or unknown software systems at a higher level – Techniques to quickly learn someone else's code – Techniques to uncover hidden code – Learning from data – Non technical ways of learning – Web platforms available for continuous learning – Art of learning from peers – Learning through self-expression. **7 Hrs**

UNIT –V

Introduction to innovation – Myths and realities – Types of Innovation –Innovation within software enterprises – Team Innovations – Individual Innovation – Creating blue oceans – Examples from the industry. **4 Hrs**

Various ways of practicing learning – Mastering various front-end technologies – Mastering new programming languages – Mastering server side languages – Mastering unknown databases – Mastering tools and utilities **8 Hrs**

TEXTBOOK:

1.	Mahesha Pandit, Nitin Varma & Mahadeva Swamy	Super Techie: Ways to Excel in the Software Industry

Course Outcomes:

After the completion of this course, students will be able to:

- **Illustrate** the basic operational concepts of a software house and **discuss** its performance.
- **Explain** various software architectures and **apply** the same to **describe** any given software.
- **Name** and **describe a set** of currently active and futuristic technologies
- **Identify** and **classify** a given software technology and **benchmark** it with respect to the top-most technology of the class.
- **Explain** various techniques of learning and **apply** the same to learn an unfamiliar technology or software system
- **Explain** how organization, teams and individuals innovate.
- **Master** an unfamiliar front-end technology, new programming language, unfamiliar database, tool or a utility with relative ease.

ARTIFICIAL INTELLIGENCE

Contact Hours/ Week	: 3 + 0 (Lecture + Tutorial)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RCSE01	SEE Marks :	50

UNIT -1

What is AI? Acting humanly and thinking humanly, thinking rationally and acting rationally, Intelligent Agents: Agents and Environments, Good Behavior: The concept of Rationality: Rationality, Omniscience, Learning and autonomy, The nature of Environments: specifying the task environment, properties of task environments, The structure of Agents: Agent Programs, simple reflex agents, Model-based reflex agents, Goal-based agents, Utility-based agents, Learning agents, How the components of agents programme work, Solving problems by Searching: problem-solving agents, well-defined problems and solutions, Example problems.

Searching for Solutions: infrastructure for search algorithms, measuring problem-solving performance,. **9 Hrs**

UNIT - 2

Uninformed Search strategies: BFS, uninform-cost search, DFS, depth-limited search, iterative deepening depth-first search, bidirectional search, comparing uniformed search strategies, Informed search strategies: Greedy best-first search, A* search, Memory-bounded heuristic search, learning to search better, Constraint satisfaction problems: ; Example problem: Map coloring, Example problem: Job-shop scheduling, Variations on the CSP formalism, Constraint Propagation: Inference in CSPs: Node consistency, Arc consistency, Path consistency, *K*-consistency, Global constraints, Backtracking search for CSPs; Variable and value ordering, Interleaving search and inference, Intelligent backtracking: Looking backward **8 Hrs**

UNIT - 3

Knowledge-based agents; The wumpus world as an example world, Logic; propositional logic: a Very Simple logic A simple knowledge base, A simple inference procedure, Propositional theorem Proving: Inference and proofs, Proof by resolution, Horn clauses and definite clauses, Forward and backward chaining. First order logic: Syntax and semantics of first-order logic, Using first-order logic, Knowledge engineering in first-order logic. Inference In First-Order Logic: Propositional vs. First-order Inference, Unification and Lifting, Forward chaining: First-order definite clauses, A simple forward-chaining algorithm, Efficient forward chaining, backward chaining: A backward-chaining algorithm, Resolution: Conjunctive normal form for first-order logic, The resolution inference rule, Example proofs. **8 Hrs**

UNIT - 4

Knowledge Representation: Issues in Knowledge representation; Associationist Theories of Meaning; Semantic Nets; Frames, Conceptual graphs; Introduction to Conceptual Graphs, Types Individuals, and Names, The Type Hierarchy, Generalization and Specialization, Propositional Nodes, Conceptual Graphs and Logic Agent-based and distributed problem solving; Agent-Oriented Problem Solving: A Definition, Overview of expert system technology; The Design of Rule-Based Expert Systems, Selecting a Problem and the Knowledge Engineering Process, Rule-based expert systems: The Production System and Goal-Driven Problem Solving, Explanation and

Transparency in Goal-Driven Reasoning, Using the Production System for Data-Driven Reasoning, Heuristics and Control in Expert Systems. Planning; Introduction to Planning: Robotics, Using Planning Macros: STRIPS

7 Hrs

UNIT - 5

Reasoning in Uncertain situations: Logic-based abductive inference, Nonmonotonic reasoning, Truth Maintenance systems, The Stochastic approach to Uncertainty: Directed Graphical Model, d-separation, inference algorithm, discrete Markov process, hidden Markov Model.

7 Hrs

TEXT BOOK:

1	Stuart Russel Peter Norvig	A Modern Approach, 3rd Edition, Pearson Education, 2009. (For Unit I, II, and III Selected topics from Chapters 1, 2, 3, 4, 5, 7, 8 and 9).
2	George F Luger	Structures and Strategies for Complex Problem Solving 5th Edition, Pearson Education, 2011. (For Unit III, IV, and V: Selected topics from Chapters 7, 8, 9 and 10).

REFERENCE BOOKS:

1	Elaine Rich Kevin Knight	Artificial Intelligence -2nd Edition, Tata McGraw Hill, 1991.
2	Nils J. Nilsson Elsevier	Principles of Artificial Intelligence, 1980.

Course Outcomes:

After the completion of this course, students will be able to:

1 Analyze and develop artificial intelligent agents for simple applications.
2 Apply searching algorithms to develop artificial intelligence
3 Develop knowledge base sentences with propositional logic and first order logic.
4 Design AI representational system for reasoning about simple applications
5 Apply and analyze the stochastic approach to uncertainty

B.E COMPUTER SCIENCE AND ENGINEERING
Outcome Based Education (OBE) and Choice Based Credit System (CBCS)
SEMESTER - VI

CLOUD COMPUTING

Course Code	**RCSPE07**	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. The fundamental ideas behind Cloud Computing, its applicability; benefits, as well as current and future challenges.
2. Cloud computing stack and communication protocols.
3. Suitable architecture to incorporate in cloud computing models.
4. How virtualization helps to improve efficiency of cloud services.
5. Various security issues of cloud computing.

Module-1 **07 Hrs**

Defining Cloud Computing: Cloud Types, The NIST model, The Cloud Cube Model, Deployment models, Service models, Examining the Characteristics of Cloud Computing, Paradigm shift, Benefits of cloud computing, Disadvantages of cloud computing; Assessing the value proposition: Early adopters and new applications, the laws of cloud economics, cloud computing obstacles, behavioural factors relating to cloud adoption, measuring cloud computing costs, specifying SLAs.

Module-2 **09 Hrs**

Understanding Cloud Architecture: Exploring the Cloud Computing Stack, Composability, Infrastructure, Platforms, Virtual Appliances, Communication Protocols; Understanding Services and Applications by Type: Defining IaaS, Defining PaaS, Defining SaaS, Defining, IDaaS.

Module-3 **08 Hrs**

Understanding Abstraction and Virtualization: Using Virtualization Technologies, Load balancing and Virtualization, Understanding Hypervisors; Capacity Planning: Defining Baseline and Metrics, Baseline measurements, System metrics, Load testing, Resource ceilings, Server and instance types, Network Capacity, Scaling.

Module-4 **08 Hrs**

Understanding Amazon Web Services , Amazon Web Service Components and Services, Working with the Elastic Compute Cloud (EC2), Amazon Machine Images , Pricing models, System images and software, Creating an account and instance on EC2, Working with Amazon Storage Systems, Amazon Simple Storage System (S3) , Amazon Elastic Block Store (EBS) , CloudFront.

Module-5 **07 Hrs**

Understanding Cloud Security: Securing the Cloud, The security boundary, Security service boundary, Security mapping, Securing Data, Brokered cloud storage access, Storage location and `tenancy, Encryption, Auditing and compliance, Establishing Identity and Presence, Identity protocol standards, Windows Azure identity standards.

Course outcomes:

On successful completion of this course, students will be able to:

CO1: Explain the core concepts of the cloud computing paradigm: how and why this paradigm shift came about, the characteristics, advantages, challenges and associated cost.

CO2: Describe various models, platforms, virtual appliances and services in cloud computing.

CO3: Discuss abstraction and storage virtualization and outline their role in

enabling the cloud computing system model.

CO4: Explain Amazon Web Service Components and Services

CO4: Explain security concerns with respect to cloud computing.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

Sl. no.	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year

INTERNET OF THINGS

Contact Hours/Week	:	3 + 0 (L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	RCSE35			

Course objectives:

This course will enable students to:

1. Realize the evolution of IOT in Mobile Devices, Cloud & Sensor Networks.
2. Study the building blocks of IOT, its characteristics and application areas of IOT.
3. **Explore** and learn about Internet of Things with the help of preparing projects designed for Raspberry Pi.
4. Explore the architecture, its components and working of IOT components.

Unit - I

Introduction & Concepts: Introduction to Internet of Things, Definitions and Characteristics of IoT, Physical Design of IoT, Things in IoT, IoT Protocols, Logical Design of IoT, IoT Functional Blocks, IoT Communication Models, IoT Communication APIs, IoT Enabling Technologies, Wireless Sensor Networks, Cloud Computing, Big Data Analytics, Communication Protocols, Embedded Systems, IoT levels and Development Templates, IoT Level-1, IoT Level-2, IoT Level-3, IoT Level-4, IoT Level-5, IoT Level-6.

08 Hrs.

Unit - II

IoT Platform Design Methodology: Introduction, IoT Design Methodology: Step1: Purpose and requirement specification, Step2: Process Specification, Step 3: Domain Model Specification, Step 4: Information Model Specification, Step 5: Service Specification, Step 6: IoT Level Specification, Step 7: Function View Specification Step 9: Device and Component Integration, Step 10: Application Development. Case Study: Weather Monitoring.

08 Hrs.

Unit - III

Python Programming: Introduction, Installing Python, Python Data Types and Data Structures, Control Flow, Functions, Modules, Packages, File Handling, Date Time applications, Classes, Python Packages of Interest for IoT.

07 Hrs.

Unit – IV

Raspberry Pi : Basic Building Blocks - The Board, Linux on Raspberry Pi, Raspberry pi interfaces, programming Raspberry Pi with python

Case Studies (any 2 to be covered): Home Automation, Environment, Weather, Agriculture, Productivity Applications **08 Hrs.**

Unit - V

Cloud : IoT physical servers and cloud offerings: introduction to cloud storage models and communication Networks , frame work-django, designing a RESTful web API, amazon web services for IoT , SkyNetIoT messaging platforms

Data Analytics for IoT; Introduction Apache Hadoop, using Hadoop MapReduce for Batch Data Analysis **09 Hrs.**

TEXT BOOKS:

1.	Arshdeep Bahga, Vijay Madisetti	Internet Of Things-A Hands on Approach, University of Penn, http://www.internet-of-things-book.com/
2.	Adrian McEwen & Hakim Cassimally	Designing the Internet of Things, ISBN 978-81-265-5686-1 Wiley Publication.

REFERENCE BOOK:

1.	Ovidiu Vermesan, PeterFriess	Internet of Things : Converging Technologies for Smart Environmentsand Integrated Ecosystems. River Publishers Series in Communication.

Course outcomes:

After the completion of this course, students will be able to:

1. **Apply** the knowledge of the internet and computer network onto IoT paradigm.
2. **Synthesize** and **demonstrate** the IoT design methodology.
3. **Apply** the knowledge of python programming concepts as prerequisite to code raspberry pi model.
4. **Analyze** different configuration setups for connecting different types of sensors and upload the code on the board and **Develop** a solution for the case study given
5. **Apply** the knowledge of cloud communication and data analytics in Apache Hadoop platform.

SCHEME & SYLLABUS

OF

VII &VIII SEMESTERS

B.E.

COMPUTER SCIENCE AND ENGINEERING

2022-23

Vision and Mission of the Institution:

Vision:

"To develop young minds in a learning environment of high academic ambience by synergizing spiritual values and technological competence".

Mission:

"To continuously strive for the total development of students by educating them in state-of-the-art technologies and helping them imbibe professional ethics and societal commitment, so that they emerge as competent professionals to meet the global challenges".

Vision and Mission of the Department:

Vision:

"To work towards the vision of the institution by building a strong teaching and research environment that is capable of responding to the challenges of the 21st century".

Mission:

"To prepare under graduate, graduate and research students for productive careers in industry and academia, through comprehensive educational programs, research in collaboration with industry & government, dissemination by scholarly publications and professional society & co-curricular activities".

Program Educational Objectives (PEOs)

Engineering graduates (CSE) will be able to:

1. Pursue successful careers in State/National/Multi-National companies as software developers by following sound professional and ethical practices in various cadres in key areas like networking, web design, cloud computing, big data processing, IoT, e-commerce, information security and so on.
2. Work effectively in multi-disciplinary and multi-cultural teams and demonstrate good soft skills.
3. Pursue higher education for a successful career in industry/academics/ research.
4. Pursue life-long learning, by anticipating trends in computer science and engineering, to excel in industry/academia or own a startup for a successful career as entrepreneur.

PROGRAM OUTCOMES

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability:** Understand the impact of the professional engineering solution in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one‟s own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes (PSOs)

1. **Computer based systems development**: Ability to apply the basic knowledge of database systems, computing, operating system, digital circuits, microcontroller, computer organization and architecture in the design of computer based systems.

2. **Software development**: Ability to specify, design and develop projects, application software and system software by using the knowledge of data structures, analysis and design of algorithm, programming languages, software engineering practices and open source tools.

3. **Computer communications and Internet applications**: Ability to design and develop network protocols and internet applications by incorporating the knowledge of computer networks, communication protocol engineering, cryptography and network security, distributed and cloud computing, data mining, big data analytics, ad hoc networks, storage area networks and wireless sensor networks.

CRYPTOGRAPHY & NETWORK SECURITY

Contact Hours/Week	:	4+0+0(L+T+P)	Credits	:	4.0
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	7RCS01			

Course objectives:

This Course will enable students to:

- **Define** the basic concept of Cryptography and Network Security along with their mathematical models.
- **Explain** security issues, services, goals and mechanisms.
- To **illustrate** how to encrypt and decrypt messages using block ciphers and stream ciphers
- **Analyse** public key cryptosystems, authentication protocols and key agreement protocols
- **Develop** code to implement cryptographic algorithms

UNIT-1

COMPUTER AND NETWORK SECURITY CONCEPTS: Computer Security concepts, The OSI Security Architecture, Security Attacks, Services and Mechanisms, A Model of Network Security.

INTRODUCTION TO NUMBER THEORY: Prime Numbers, Fermat's and Euler's Theorems, Testing for Primality.

SYMMETRIC CIPHERS: Classical Encryption Techniques: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Rotor machine, Steganography. **10Hrs**

UNIT -2

BLOCK CIPHER AND THE DATA ENCRYPTION STANDARD: Traditional Block Cipher Structures, The Data EncryptionStandard, DES Example, Strength of DES, Block Cipher Design principles.

ADVANCED ENCRYPTION STANDARDS: Finite field Arithmetic, AES Structure, AES Transformation

Functions, AES key Expansion, An AES Example, AES Implementation.

BLOCK CIPHER OPERATION: Multiple Encryption and triple DES, Electronic Code Book, Cipher Block

Chaining Mode, Cipher Feedback Mode, Output feedback Mode, Counter Mode. **11Hrs**

UNIT -3

RANDOM BIT GENERATION AND STREAM CIPHERS: Principles of Pseudorandom Number Generation,

Pseudorandom Number Generators, Pseudorandom Number Generation using a block cipher, Stream Cipher,RC4.

ASYMMETRIC CIPHERS: Public Key Cryptography and RSA:Principles of Public-Key Cryptosystems,

The RSA Algorithm, Other Public Key Cryptosystems :Diffie-Hellman Key Exchange.

CRYPTOGRAPHIC DATAINTEGRITY ALGORITHMS: Cryptographic Hash

Functions: Applications of Cryptographic hash functions, Two simple hash Functions, Secure Hash Algorithm. **10Hrs**

UNIT – 4

MESSAGE AUTHENTICATION CODES: Authentication Requirements, Authentication Functions, Requirements for Message Authentication Codes, Security of MACs, MACs based on Hash Functions:HMAC.

DIGITAL SIGNATURES: Digital Signatures, NIST Digital Signature Algorithm.

KEY MANAGEMENT AND DISTRIBUTION: Symmetric Key distribution using Symmetric encryption, Symmetric Key distribution using Asymmetric encryption, Distribution of public keys, X.509certificates,Kerberos. **11Hrs**

UNIT-5

TRANSPORT-LEVEL SECURITY: Web Security considerations, Transport Layer Security, HTTPS, Secure Shell(SSH).

ELECTRONIC MAIL SECURITY: Internet Mail Architecture, Email Formats, Email Threats and Comprehensive Email Security, S/MIME, Pretty Good Privacy**.**

IP SECURITY: Overview, IP Security Policy. **10Hrs**

.

TEXT BOOK:

1	William Stallings.	Cryptography and Network Security, Seventh Edition, Prentice Hall of India, 2017 (Chapters 1.1-1.5, 1.8, 2.4-2.6, 3.1-3.5, 4.1-4.5, 6.1-6.6, 7.1-7.6, 8.1-8.5, 9.1-9.2, 10.1,11.1-11.2,11.5,12.1-12.5,13.1,13.4**,**14.1-14.4,15.3,17.1-17.4,19.1,19.5,20.1-20.2).

REFERENCE BOOKS:

1	CharlieKaufman, Radia Perlman, Mike Speciner,	Network Security: Private Communication in a Public World, Second Edition, Pearson Education Asia,2002
2	AtulKahate	Cryptography and Network Security, Tata Mc GrawHill,2003

Course outcomes:

After the completion of this course, students will be able to:

- **Apply** the knowledge of mathematics to perceive the foundations of Cryptography and network security and explain the security principles. {L1, L2}
- **Design** solutions for problems on classical encryption techniques and illustrate symmetric and asymmetric cryptographic algorithms. {L3}
- **Develop** solutions for problems on public key cryptosystems. {L5}
- **Analyse** different authentication protocols, integrity protocols and key agreement protocols. {L4}
- **Apply** the knowledge of engineering fundamentals to comprehend existing network security protocols. {L3}

MACHINE LEARNING TECHNIQUES

Contact Hours/Week	:	3+0+0(L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	7RCS02			

Course objectives:

This Course will enable students to:

1. Define machine learning and understand the basic theory underlying machine learning.
2. Differentiate supervised, unsupervised and reinforcement learning.
3. Understand the basic concepts of learning and decision trees.
4. Understand neural networks and genetic algorithms for problems appear in machine learning.
5. Understand the instant based learning and analytical learning.
6. Understand the reinforced learning.
7. Perform the statistical analysis of machine learning techniques.

UNIT-1

INTRODUCTION, CONCEPT LEARNING: Well Posed Learning problem, Designing Learning systems, Perspectives and Issues in machine learning, Concept Learning: Introduction, A Concept Learning Task, Concepts Learning Search, Version Spaces and Candidate Elimination Algorithm, Remarks on version space and Candidate Elimination. **8 Hrs.**

.

UNIT -2

BAYESIAN LEARNING: Introduction, Bayes Theorem, Bayes Theorem and Concept Learning, Maximum Likelihood and least squared error hypotheses, Minimum Description Length Principle, Bayes Optimal Classifier, and Naive Bayes Classifier, An Example: Learning to Classify Text, Bayesian Belief network, EM Algorithm- General Statements of EM Algorithm. **8 Hrs.**

UNIT -3

NEURAL NETWORKS: Introduction, Neural Network Representations, Appropriate problems for Neural Networks, Perceptrons, Multilayer Networks and Back Propagation Algorithms.

GENETIC ALGORITHMS: Motivation, Genetic Algorithms, Hypothesis Space Search, Genetic Programming. **8 Hrs.**

UNIT – 4

INSTANT BASED LEARNING: Introduction K- Nearest Neighbor Learning, Locally Weighted Regression, Radial Basis Functions.

ANALYTICAL LEARNING: Introduction, learning with Perfect Domain Theories, Remarks on Explanation Based Learning, Explanation Based Learning of Searching Control Knowledge.

8 Hrs

UNIT-5

REINFORCEMENT LEARNING: Introduction, Learning Task, Q-Learning, Nondeterministic Rewards and actions, Temporal Difference Learning, Generalizing from Examples, Relationship to Dynamic Programming. **7 Hrs.**

.

TEXT BOOK:

1.	Tom M. Mitchell	"Machine Learning", McGraw-Hill Education (INDIAN EDITION), 2013. (Chapters 1.1-1.3, 2.1-2.3,2.5,2.6, 4.1-4.5,6.1-6.4,6.6-6.7,6.9,6.10,6.11(6.11.1-6.11.4) ,6.12, 8.1-8.5,9.1-9.5, 11.1-11.4,13.1-13.7)

REFERENCE BOOKS:

1.	EthemAlpaydin	"Introduction to Machine Learning", 2nd Ed., PHI Learning Pvt. Ltd., 2013.
2.	T.Hastie, R. Tibshirani, J. H. Friedman	"The Elements of Statistical Learning", Springer; 1st edition, 2001.

Course outcomes:

After the completion of this course, students will be able to:

- Apply concept learning technique to choose best hypothesis for classification problems.
- Apply Bayesian models to infere for the given observed data.
- Apply effectively neural networks and genetic algorithm to provide solution for the given applications.
- Apply instant based learning and analytical learning to solve the given machine learning applications.
- Evaluate hypothesis and investigate instant based learning and reinforced learning.

CRYPTOGRAPHY AND NETWORK SECURITY LABORATORY

Lab Hours/Week	:	3	Credits	:	1.5
Course Code	:	7RCSL01	CIE Marks	:	50
			SEE Marks	:	50

Course objectives:

This Course will enable students to:

- Understand the concepts of Symmetric Algorithm, like Hill Cipher, Playfair and transposition technique.
- Get the overview of Block Cipher Algorithms(DES and AES)
- Understand the concept of stream cipher Algorithms, (RC4)
- Develop programs for Asymmetric Algorithms, like RSA and Diffie-Hellman key change.
- Understand and Implement DSS algorithm for signing and verification of messages between two parties and key agreement protocols.

Instructions:

The programs can be implemented using C/C++ programming language.

Questions:

1. Write a program to perform the following using Playfair cipher technique

(i) Encrypt a given message M with different keys {k1,k2,…,kn}. Print key and cipher text pair

(ii) Decrypt the cipher texts obtained in (i) to get back M

2. Write a program to perform the following using Hill cipher:

(i) Encrypt a message M with a given key matrix of size 2X2 and 3X3

(ii) Decrypt the cipher text obtained in (i) by computing inverse of the respective key matrix.

3. Perform encryption and decryption using mono-alphabetic cipher. The program should support the following :

i. Construct an input file named plaintext.txt (consisting of 1000 alphabets, without any space or special characters)

ii. Encrypt the characters of plaintext.txt and store the corresponding ciphertext characters in ciphertext.txt

iii. Compute the frequency of occurrence of each alphabet in both plaintext.txt and ciphertext.txt and tabulate the results as follows

Frequency	Plaintext character	Ciphertext character
12.34	A	X
.	.	.
.	.	.

4. Write a program to perform encryption and decryption using transposition technique with column permutation given as key.

5. Generate and print 48-bit keys for all sixteen roundsof DES algorithm, given a 64-bit initial key.

6. i. Given 64-bit output of $(i-1)^{th}$ round of DES, 48-bit i^{th} round key K_i and E table, find the 48-bit input for S-box.

ii. Given 48-bit input to S-box and permutation table P, find the 32-bit output R_i of i^{th} round of DES algorithm.

7. Consider the 128 bits initial key and expand it to 10 different keys each of size 128 bits using AES key expansion technique.

8. Consider a message of 16 bytes (128 bits) and perform XOR operation with an initial round key [W0, W1, W2, W3] of size 128 bits to generate a state array in AES. W.r.t generated state array of size 128 bits, perform the following operations in each round.

i. Byte substitution using S-Box
ii. ShiftRows using left shift

9. Implement the following with respect to RC4:

i. Print first *n* key bytes generated by key generation process.
ii. Illustrate encryption/decryption by accepting one byte data as input on the above generated keys.

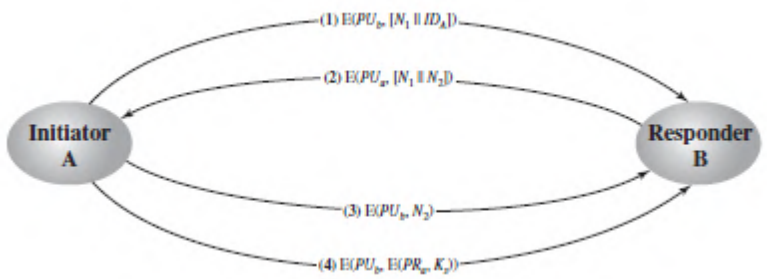
10. Write a program to generate large random number using BBS random number generator algorithm and check whether the generated number is prime or not using RABIN-MILLER primality testing algorithm.

11. Implement RSA algorithm to process blocks of plaintext (refer Figure 9.7 of the text book), where plaintext is a string of characters and let the block size be two characters. (Note : assign a unique code to each plain text character i.e., a=00, A=26). The program should support the following.

i. Accept string of characters as plaintext.
ii. Encryption takes plaintext and produces ciphertext characters
iii. Decryption takes ciphertext characters obtained in step ii and produces corresponding plaintext characters
iv. Display the result after each step.

12. Implement RSA algorithm using client-server concept. Using this illustrate secret key distribution scenario with confidentiality and authentication. The program should support the following :

i. Both client and server generates{PU, PR} and distributes PU to each other.
ii. Establish a secret key K between client and server by exchanging the messages as shown in below figure.



13. Compute common secret key between client and server using Diffie-Hellman key exchange technique. Perform encryption and decryption of message using the shared secret key (Use simple XOR operation to encrypt and decrypt the message.)

14. Implement DSS algorithm for signing and verification of messages between two parties (obtain H(M) using simple XOR method of hash computation on M).

Exploring Security Tools in first two labs:

1) Tool 1 - Wireshark

- Network Packet Analyzer
- Tries to capture the network packets and to display that packet data as detailed as possible
- Packet sniffer (Passive)
- Free and open source!
- Available for UNIX and Windows platforms
- Capture live packet data from a network interface

Applications

•To troubleshoot network problems

•To examine security problems

•To debug protocol implementations

•To learn network protocol internals

1. Open terminal **Type gksudowireshark**
2. Select capture in menu bar **select Interface (Ethernet)**
3. Open **browser and browse different sites**.
4. Click **stop button and analyze the sniffed packets**.

Exercise 1

1. List out the different protocols (at least 10) that appear in the protocol column of the Wireshark tool and identify to which layer of the OSI model the listed protocols belongs to?

2. Identify the IP address of the given machine. List (at least 5) different destination IP address in the destination IP address column and find their domain name?

3. Select a HTTP packet and observe what HTTP request method that it is used and identify the HTTP version.

4. What is the status code returned from the server to your browser?

5. When was the HTML file that you are retrieving last modified at the server?

6. Identify the first 2 packets (i.e. their packet numbers) containing HTTP GET request.

7. What is the time difference between first HTTP GET and the first HTTP response?

8. How many HTTP GET request messages were sent by your browser?

9. What is the time difference between the first and last HTTP GET requests?

10. In the HTTP server's response, look at the information sent about the server. What server software was used?

Exercise 2

1. Locate the DNS query and response messages. Are then sent over UDP or TCP?

2. What is the destination port for the DNS query message? What is the source port of DNS response message?

3. To what IP address is the DNS query message sent? Use ipconfig to determine the IP address of your local DNS server. Are these two IP addresses the same?

4. Examine the DNS query message. What "Type" of DNS query is it? Does the query message contain any "answers"?

5. Examine the DNS response message. How many "answers" are provided? What does each of these answers contain?

6. To which layer of OSI model the DNS protocol belongs to?

Exercise 3

1. What is the IP address and TCP port number used by your client computer (source)

2. Locate TCP 3-way handshaking and answer the following.

First TCP segment:	Second TCP segment:	Third TCP segment:
_ Source port:	_ Source port:	_ Source port:
_ Destination port	_ Destination port	_ Destination port
Which flags were set (check all that apply):	Which flags were set (check all that apply):	Which flags were set (check all that apply):
_ Acknowledgment	_ Acknowledgment	_ Acknowledgment
_ Push	_ Push	_ Push
_ Syn	_ Syn	_ Syn
_ Fin	_ Fin	_ Fin

3. What is the time taken for TCP handshaking?

4. What is the sequence number of the TCP SYN segment that is used to initiate the TCP connection between the client computer and destination?

Exercise 4

1. What is the time difference between the first ICMP echo request and reply packet?

2. Examine one of the ping request packet sent by your host. What are the ICMP type and code numbers?

3. What is the IP address of the source and destination host?

4. Note down the packet number, Identification (ID) field value and TTL value of the second ICMP echo request packet?

5. How many bytes are in the IP header? How many bytes are in the payload of the IP datagram?

6. Has this IP datagram been fragmented? Explain how you determined whether or not the datagram has been fragmented.

2) Tool 2 – Nmap

Nmap -Network Mapper

a) It is a free and open source utility for network discovery and security auditing.

Features:

- Port scanning
- host discovery.
- operating system detection.
- service version detection.
- network information about targets, such as DNS names, device types, and MAC addresses

b) A penetration test, also known as a pen test, is a simulated cyberattack against your computer system to check for exploitable vulnerabilities.

Explore the following filters/commands in Nmap tool

nmap target name(IP address)	scan a single system
nmap IP1 IP2	scan a multiple targets
nmap -sPIPaddress	Ping scan
nmap -O –PN IPaddress	operating system detection
nmap 192.168.43.*	multiple IP address
nmap –P 80 IPaddress	Port open
nmap –P 1-100 IPaddress	Range of ports

3) Tool 3- Snort

To verify the Snort version, type in snort -V and hit Enter.

Explore the snort rules given the below website

https://resources.infosecinstitute.com/topic/snort-rules-workshop-part-one/

Exercise 1: Snort as an IDS

alerttcp 192.168.x.x any -> $HOME_NET 21 (msg:"FTP connection attempt"; sid:1000002; rev:1;)

alerttcp $HOME_NET 21 -> any any (msg:"FTP failed login"; content:"Login or password incorrect"; sid:1000003; rev:1;)

COURSE OUTCOMES

After the completion of this course, students will be able to:

- Implement and execute Symmetric Algorithm, like Hill Cipher, Playfair and transposition technique.
- Implement and execute Block Cipher Algorithm.(DES, AES)
- Implement and execute stream cipher Algorithms, (RC4)
- Implement and execute Asymmetric Algorithms, like RSA and Diffie-Hellman key change.
- Implement DSS algorithm for signing and verification of messages between two parties and key agreement protocols.

MACHINE LEARNING TECHNIQUES LABORATORY

Lab Hours/Week	:	3	Credits	:	1.5
Tutorial Hours/Week	:	0	CIE Marks	:	50
Course Code	:	7RCSL02	SEE Marks	:	50

Course objectives:

This course will enable students to

- Gain knowledge about basic concepts and techniques of machine learning.
- Become familiar with classification, clustering and regression algorithms.
- Apply appropriate dataset to implement machine learning algorithms.
- Select and Develop programs using appropriate machine learning techniques as an open ended experiment in a team.

Instructions:

- The programs can be implemented using Python or Java programming language.
- The programs can be implemented using the built-in APIs of Python/Java.
- Required dataset can be generated by student while developing the solution

Lab Experiments:

1. Implement and demonstrate the **FIND-S algorithm** for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file.
2. . For a given set of training data examples stored in a .CSV file, implement and demonstrate the **Candidate-Elimination algorithm** to output a description of the set of all hypotheses consistent with the training examples
3. Build an Artificial Neural Network by implementing the **Back propagation algorithm** and test the same using appropriate data sets.
4. . Write a program to implement the **naïve Bayesian classifier** for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
5. Write a program to construct a **Bayesian network** considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set. You can use Java/Python ML library classes/API.
6. . Apply **EM algorithm** to cluster a set of data stored in a .CSV file. Use the same data set for clustering using ***k*-Means algorithm**. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library classes/API in the program.
7. Write a program to implement k-Nearest Neighbor algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.
8. Implement the non-parametric **Locally Weighted Regression algorithm** in order to fit data points. Select appropriate data set for your experiment and draw graphs.

Open ended problems:

- Teams comprising of 3/4 students from each batch shall be formed.
- Each team must select a real-world problem of their choice.
- Faculty in-charge shall approve the problem based on the relevance and appropriateness.
- Problem shall be implemented by selecting appropriate machine learning technique.
- Each team has to demonstrate the results along with presentation at the end of the semester and submit the report.

COURSE OUTCOMES

After the completion of this course, students will be able to:

- Gain knowledge on implementation procedures for the machine learning algorithms
- Design Java/Python programs for various Learning algorithms
- Identify and apply machine learning algorithms to solve real world problems.

PROFESSIONAL ELECTIVES

HIGH PERFORMANCE COMPUTING

Contact Hours/ Week	: 3 + 0 (Lecture + Tutorial)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RCSE26	SEE Marks :	50

Course objectives:

This Course will enable students to:

1. Discuss Physical Organization of Parallel Platforms.
2. Differentiate One-to-All broadcast and All-to-one Reduction.
3. List the principles that need to be considered while designing parallel algorithms using CUDA and OpenMP.
4. Describe the metrics used to evaluate the performance of parallel programs.
5. Illustrate send and receive operations in a MPI paradigm.
6. Designing asynchronous programming using OpenMP

UNIT I

Introduction to Parallel Computing: Motivating Parallelism, Scope of Parallel Computing **Introduction to HPC:** Parallel Programming Platforms: Implicit Parallelism: Trends in Microprocessor Architectures, Limitations of Memory System Performance, Dichotomy of Parallel Computing Platforms, Physical Organization of Parallel Platforms, Communication Costs in Parallel Machines. **07 Hrs**

UNIT II

Principles of Parallel Algorithm Design: Preliminaries, Decomposition Techniques, Characteristics of Tasks and Interactions, Mapping Techniques for Load Balancing, Methods for Containing Interaction Overheads, Parallel Algorithm Models.

Basic communication operations: One-to-All broadcast and All-to-one Reduction.

Analytical Modeling of Parallel Programs: Sources of Overhead in Parallel Programs, Performance Metrics for Parallel Systems, the Effect of Granularity on Performance.

08 Hrs

UNIT III

Programming using the Message-Passing Paradigm: Principles of Message-Passing Programming, The Building Blocks: Send and Receive Operations, MPI: the Message Passing Interface, Topologies and Embedding, Overlapping Communication with Computation, Collective Communication and Computation Operations, Groups and Communicators.

08 Hrs

UNIT IV

Why CUDA? Why NoW?: The Age of Parallel Processing, Central Processing Units, The Rise of GPU Computing, A brief history of GPUs, Early GPU computing, CUDA, What is CUDA architecture, using the CUDA architecture, Applications of CUDA, Medical Imaging, Computational Fluid Dynamics, Environmental Science, Introduction to CUDA C: A First Program, Hello world, A kernel call, Passing parameters, Querying devices, using device properties, Prallel Programming in CUDA C:CUDA parallel programming, Summing vectors, A fun example. **08 Hrs**

UNIT V

Programming Shared Address Space Platforms: Thread Basics, Why Threads? The POSIX Thread API,Thread Creation and Termination, Synchronization Primitives in Pthreads,Controlling Thread and Synchronization Attributes, Thread Cancellation, Composite Synchronization Constructs, Tips for Designing Asynchronous Programs,OpenMP: A Standard for Directive Based Parallel Programming.

08 Hrs

TEXTBOOKS

1	Ananth Grama,Anshul Gupta,Vipin kumar,George Karypis	Introduction to parallel computing, second edition, Pearson education publishers. (chapters 01,2.1-2.5,3,4.1.1-4.1.3, 5.1, 5.2, 5.3, 6,7)
2	Jason Sanders Edward Kandrot	CUDA by example, NVIDIA Corporation-2011(Chapters 1 ,3, and 4)

REFERENCE BOOKS:

1	Thomas Rauber and Gudula Runger	Parallel Programming for Multicore and cluster systems, Springer International Edition,2009
2	Hennessey and Patterson	Computer Architecture: A quantitative Approach, Morgan Kaufman Publishers
3	Michael J.Quin	"Parallel Programming in C with MPI and Open MP", McGraw Hill. (For MPI and Open MP)
4	D. E. Culler and J. P. Singh with A. Gupta.	Parallel Computer Architecture. Morgan- Kaufmann publishers

Course Outcomes:

After the completion of the course, students will be able to

1. Select and analyze the characteristics of various parallel computing platforms.
2. Choose a suitable platform for parallel computing.
3. Analyze simple parallel algorithm models.
4. Apply the principles of message-passing programming construct to solve engineering problems.
5. Design and develop parallel programs using CUDA and OpenMp programming interface

BIG DATA

ContactHours/Week	:3+0(Lecture+Tutorial)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50
Sub. Code	: RCSE32		

COURSE OBJECTIVES:

This Course will enable students to:

1. Describe the basic concepts , technology , evolution and applications of Big Data (L2)
2. Explain the architecture , components and technology of Big Data Ecosystem that can manage , process and analyze Big Data (L2)
3. Study how the data is stored in databases and data warehouses (L2)
4. Identify the importance of big data stack architecture in effective analysis of big data (L2)
5. Describe the basic MapReduce Programming Model and Apply it to solve real world application problems (L2,L3)
6. Describe the requirement of Hive & Oozie tools for Big Data access and monitoring (L2)

UNIT I

Getting an Overview of Big Data: What is Big Data? History of Data, Management – Evolution of Big Data, Structuring Big Data, Types of Data, Elements of Big Data, Volume, Velocity, Variety, Veracity, Big Data Analytics, Careers in Big data, Advantages of Big Data Analytics, Future of Big Data.

Exploring the Use of Big Data in Business Context: Use of Big Data in Social Networking, Business Intelligence, Marketing, Product Design and Development, Use of Big Data in Preventing Fraudulent Activities, Preventing Fraud Using Big Data Analytics, Use of Big Data in Retail Industry, Use of RFID Data in Retail

Introducing Technologies for Handling Big Data: Distributed and Parallel Computing for Big Data,How data models and computing models are different, Introducing Hadoop, HDFS and MapReduce, How does Hadoop Function? Cloud Computing and Big Data, Cloud Services for Big Data, In-Memory Computing Technology for Big Data

07 Hrs

UNIT II

Understanding Hadoop Ecosystem: Hadoop Ecosystem,Hadoop Distributed File System, HDFS Architecture, Concepts of Blocks in HDFS Architecture, NameNodes and DataNodes, The command line interface, Using HDFS Files , Hadoop specific File System Files, HDFS commands,The org.apache.hadoop.io.package,HDFS High Availability , Features of HDFS, MapReduce, Hadoop Yarn, Introducing HBase, HBase Architecture, Regions, Storing Bigdata with HBase, Interacting with the Hadoop Ecosystem, HBase in Operation –Programming with HBase, Combining HBase and HDFS, REST and Thrift, Data Integrity in HDFS, Features of HBase ,hive, Pig and Pig Latin, Sqoop, Zookeeper, Flume, Oozie.

Understanding Big Data Technology Foundations: Exploring the Big Data Stack, Data Sources Layer, Ingestion Layer, Storage Layer, Physical Infrastructure Layer, Platform Management Layer, Security Layer, Monitoring Layer, Analytics Engine, Visualization Layer, Big Data Applications, Virtualization and Big Data, Virtualization Approaches, Server virtualization, Application Virtualization, Network Virtualization, Processor and Memory Virtualization, Data and Storage Virtualization, Managing Virtualization with Hypervisor. Implementing Virtualization to work with

Big data. **08 Hrs**

UNIT III

Understanding MapReduce Fundamentals and HBase: The MapReduce Framework. Exploring the Features of MapReduce. Working of MapReduce. Exploring Map and Reduce Functions. Techniques to Optimize MapReduce Jobs. Hardware/Network Topology, Synchronization, File System. Uses of MapReduce. Role of HBase in Big Data Processing. Characteristics of HBase .

Storing Data in Databases and Data Warehouses: RDBMS and Big Data, CAP Theorem, Issues with the Relational Model, Non-Relational Database, Issues with the Non-Relational Model, Polyglot Persistence, Integrating Big Data with Traditional Data Warehouses, Big Data Analysis and Data Warehouse, Changing Deployment Models in Big Data Era **08 Hrs**

UNIT – IV

Processing Your Data with MapReduce: Recollecting the Concept of MapReduce Framework, Developing Simple MapReduce Application, Building the Application, Executing the Application, Points to Consider while Designing MapReduce.

Customizing MapReduce Execution:

Controlling MapReduce Execution with InputFormat, InputSplit, RecordReader, FileInputFormat, Implementing InputFormat for Compute-Intensive Applications, Implementing InputFormat to control the Number of Maps, Implementing InputFormat for Multiple HBase Tables, Reading Data with Custom RecordReader, Organizing Output Data with OutputFormats, Customizing Data with RecordWriter, Optimizing MapReduce Execution with Combiner, Controlling Reducer Execution with Partitioners **08 Hrs**

UNIT - V

Exploring Hive: Introducing Hive, Getting Started with Hive,Hive services, Hive Variables, Hive Properties, Hive Queries, Data Types in Hive, Built-In Functions in Hive, Hive DDL, Creating Databases, Viewing a Database, Dropping a Database, Altering Databases, Creating Tables, Creating a Table Using the Existing Schema, Dropping Tables, Altering Tables, Using Hive DDL Statements, Data Manipulation in Hive, Loading Files into Tables, Inserting Data into Tables, Update in Hive, Delete in Hive, Using Hive DML Statements, Data Retrieval Queries, Using the SELECT Command, Using the WHERE Clause, Using the GROUP BY Clause, Using the HAVING Clause, Using the LIMIT Clause, Executing HiveQL Queries, Using JOINS in Hive, Inner Joins, Outer Joins, Cartesian Product Joins, Map-Side Joins, Joining Tables

Using Oozie: Introducing Oozie, Main Functional Components of Oozie, Benefit of Oozie, Installing and Configuring Oozie, Understanding the Oozie Workflow, Execution of Asynchronous Actions in Oozie, Implementing the Oozie Workflow, Oozie Recovery Capabilities, Oozie Workflow Life Cycle, Oozie Coordinator, Types of Oozie Coordinator, Oozie Coordinator Lifecycle Operations, Oozie Bundle, Oozie Parameterization with EL, Workflow Functions, Coordinator Functions, Bundle Functions, EL Functions, Oozie Job Execution Model, Accessing Oozie, Oozie SLA, Event Status, SLA Status ,Oozie Activity, The Oozie SLA Subsystem, SLA Language Schema

8 Hrs

TEXT BOOK:

1	BIG DATA Black Book	D T Editorial Services, Dreamtech press 2016 Edition

REFERENCE BOOKS:

1	Big Data Glossary	Pete Warden, O'Reilly, 2011
2	Hadoop: The Definitive Guide	Tom White Third Edition, O'reilly Media, Fourth Edition,2015
3.	Big Data and Analytics	Seema Acharya,Subhashini Chellappan, Wiley India Publications, May 2015

COURSE OUTCOMES

After the completion of this course, students will be able to:

1. Apply the basic knowledge related to Big Data to explain its elements, its analytics, its usage in business context and computing in big data
2. Select and apply appropriate modern tools of Hadoop ecosystem to the solution of various problems in storage , processing , accessing , managing and analyzing the Bigdata
3. Design and Develop MapReduce programs to the solution of various real world application problems
4. Identify the importance of the different layers of Bigdata Stack architecture in effective analysis of Bigdata
5. Analyze the merits of using modern data warehouses against the limitations of Traditional Databases
6. Identify the requirement of Hive and Oozie tools for Bigdata access and monitoring

FOUNDATIONS OF BLOCKCHAIN

Contact Hours/Week	:	3 (L)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	RCSE37			

Course objectives:

This course will enable students to:

1. **Comprehend** the fundamentals of Blockchain and its organization.
2. **Describe** the underlying concepts of working of a Blockchain.
3. **Infer** the working principle of Bitcoin.
4. **Interpret** the working of Blockchain using Ethereum.
5. **Examine** possible business applications of Blockchain.

UNIT - I

Introduction to Blockchain, Backstory of Blockchain, What is Blockchain?, Centralized vs. Decentralized Systems, Centralized Systems, Decentralized Systems, Layers of Blockchain, Application Layer, Execution Layer, Semantic Layer, Propagation Layer, Consensus Layer, Why is Blockchain Important?, Limitations of Centralized Systems, Blockchain Adoption So Far, Blockchain Uses and Use Cases

T1 – Chapter 1 **8 Hrs.**

UNIT - II

Laying the Blockchain Foundation, Game Theory, Nash Equilibrium, Prisoner's Dilemma, Byzantine Generals' Problem, Zero-Sum Games, Why to Study Game Theory, Computer Science Engineering, The Blockchain, Merkle Trees, Putting It All Together, Properties of Blockchain Solutions, Blockchain Transactions, Distributed Consensus Mechanisms, Blockchain Applications, Scaling Blockchain, Off-Chain Computation, Sharding Blockchain State

T1 – Chapter 2 **8 Hrs.**

UNIT - III

The History of Money, Dawn of Bitcoin, What Is Bitcoin?, Working with Bitcoins, The Bitcoin Blockchain, Block Structure, The Genesis Block, The Bitcoin Network, Network Discovery for a New Node, Bitcoin Transactions, Consensus and Block Mining, Block Propagation, Putting It all Together, Bitcoin Scripts, Bitcoin Transactions Revisited, Scripts, Full Nodes vs. SPVs, Full Nodes, SPVs

T1 – Chapter 3 **8 Hrs.**

UNIT - IV

From Bitcoin to Ethereum, Ethereum as a Next-Gen Blockchain, Design Philosophy of Ethereum, Enter the Ethereum Blockchain, Ethereum Blockchain, Ethereum Accounts, Trie Usage, Merkle Patricia Tree, RLP Encoding, Ethereum Transaction and Message Structure, Ethereum State Transaction Function, Gas and Transaction Cost, Ethereum Smart Contracts, Contract Creation, Ethereum Virtual Machine and Code Execution, Ethereum Ecosystem, Swarm, Whisper, DApp, Development Components

T1 – Chapter 4 **8 Hrs.**

UNIT - V

Propelling Business with Blockchains , Recognizing Types of Market Friction, Information frictions, Interaction frictions, Innovation frictions, Moving Closer to Friction-Free Business Networks, Reducing information friction, Easing interaction friction, Easing innovation friction, Transforming Ecosystems through Increased Visibility, Blockchain in Action: Use Cases Financial Services, Trade finance, Post-trade clearing and settlement, Cross-border transactions, Trusted digital identity, Multinational Policy Management, Government, Supply Chain Management, Food safety, Global trade, Healthcare, Electronic medical records, Healthcare payment preauthorization

T2 – Chapter 3 & 4 **8 Hrs.**

TEXT BOOKS:

1.	Bikramaditya Singhal, Gautam Dhameja, Priyansu Sekhar Panda	Beginning Blockchain, Apress Media, 2018, ISBN 9781484234433
2.	Manav Gupta	Blockchain For Dummies, John Wiley & Sons, 2nd IBM Limited Edition, ISBN 9781119545934

REFERENCE BOOKS:

1.	Peter Lypovonyav	Blockchain for Business 2019, Packt Publishing Limited, 2019, ISBN 9781789956023
2.	Debajani Mohanty	Ethereum for Architects and Developers, Apress Media, 2018, ISBN 9781484240748

Course outcomes:

After the completion of this course, students will be able to:

1. **Explain** the fundamentals of Blockchain and its structure.
2. **Outline** the prerequisite concepts of Blockchain.
3. **Illustrate** the working of Bitcoin cryptocurrency.
4. **Demonstrate** the use of Ethereum in implementing Blockchain.
5. **Examine** potential business use cases of Blockchain

WEB TECHNOLOGIES AND ITS APPLICATIONS

Contact Hours/Week	:	3 L	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	RCSE36			

Course objectives: This course will enable students to:

1. **Illustrate** the Semantic Structure of HTML and CSS
2. **Compose** forms and tables using HTML and CSS
3. **Design** Client-Side programs using JavaScript and Server-Side programs using PHP
4. **Infer** Object Oriented Programming capabilities of PHP
5. **Explore** backend database interactions with PHP and **Examine** JavaScript frameworks such as jQuery and PHPExpress

Course outcomes: After the completion of this course, students will be able to:

CO1: Apply the knowledge of HTML and CSS syntax and semantics to build web pages.

CO2: Construct and visually format tables and forms using HTML and CSS.

CO3: Develop Client-Side Scripts using JavaScript and Server-Side Scripts using PHP to generate and display the contents dynamically.

CO4: Appraise the principles of object oriented development using PHP

CO5: Apply the knowledge of MySQL database using PHP and Illustrate JavaScript frameworks like jQuery and PHPExpress which facilitates developer to focus on core features.

UNIT - I

Introduction to HTML, What is HTML and Where did it come from?, HTML Syntax, Semantic Markup, Structure of HTML Documents, Quick Tour of HTML Elements, HTML5 Semantic Structure Elements, Introduction to CSS, What is CSS, CSS Syntax, Location of Styles, Selectors, The Cascade: How Styles Interact, The Box Model, CSS Text Styling.

Chapters: 2.1 to 2.6, 3.1 to 3.7 **7 Hrs.**

UNIT - II

HTML Tables and Forms, Introducing Tables, Styling Tables, Introducing Forms, Form Control Elements, Table and Form Accessibility, Microformats, Advanced CSS: Layout, Normal Flow, Positioning Elements, Floating Elements, Constructing Multicolumn Layouts, Approaches to CSS Layout, Responsive Design, CSS Frameworks.

Chapters: 4.1 to 4.6, 5.1 to 5.7 **7 Hrs.**

UNIT - III

JavaScript: Client-Side Scripting, What is JavaScript and What can it do?, JavaScript Design Principles, Where does JavaScript Go?, Syntax, JavaScript Objects, The Document Object Model (DOM), JavaScript Events, Forms, Introduction to Server-Side Development with PHP, What is Server-Side Development, A Web Server's Responsibilities, Quick Tour of PHP, Program Control, Functions

Chapters: 6.1 to 6.8, 8.1 to 8.5 **7 Hrs.**

UNIT - IV

PHP Arrays and Superglobals, Arrays, $_GET and $_POST Superglobal Arrays, $_SERVER Array, $_Files Array, Reading/Writing Files, PHP Classes and Objects, Object-Oriented Overview, Classes and Objects in PHP, Object Oriented Design, Managing State: The Problem of State in Web Applications, Passing Information via Query Strings, Passing Information via the URL Path.

Chapters: 9.1 to 9.5, 10.1 to 10.3, 13.1 to 13.3 **8 Hrs.**

UNIT - V

Databases and web development, Managing a MySQL database, SQL, Database APIs, Accessing MySQL from PHP, PHPExpress: Installation, API, Controllers, Views

Chapters: 11.1 to 11.5

Cookies, Serialization, Session State, HTML5 Web Storage, Advanced JavaScript and jQuery, JavaScript Pseudo-Classes, jQuery Foundations, AJAX, Asynchronous File Transmission, Animation

Chapters: 13.4 to 13.7, 15.1 to 15.6 **10 Hrs.**

TEXT BOOK:

1.	Randy Connolly, Ricardo Hoar	"Fundamentals of Web Development", Pearson Education India, 1st Edition, ISBN:978-9332575271

REFERENCE BOOKS:

1.	Alexis Goldstein, Louis Lazaris, Estelle Weyl	"HTML5 & CSS3 for the Real World", SitePoint Pty. Ltd., 2nd Edition, 2015, ISBN: 978-0987467485
2.	Adrian W. West	"Practical Web Design for Absolute Beginners", Apress, Edition, 2016, ISBN: 978-1484219928
3.	Patrick Carey	"New Perspectives on HTML5 and CSS3", Cengage Learning, 7th Edition, 2017, ISBN: 978-1305503939
4.	Dimitar Ivanov	php-express PHP micro-framework inspired by Express.js https://riverside.github.io/php-express/

COURSE OUTCOMES : At the end of the course the student will be able to:

CO1: **Apply the knowledge of** HTML and CSS syntax and semantics to build web pages.
CO2: **Construct** and visually format tables and forms using HTML and CSS.
CO3: **Develop** Client-Side Scripts using JavaScript and Server-Side Scripts using PHP to generate and display the contents dynamically.
CO4: **Appraise** the principles of object oriented development using PHP
CO5: Apply the knowledge of MySQL database using PHP and **Illustrate** JavaScript frameworks like jQuery and PHPExpress which facilitates developer to focus on core features.

ARTIFICIAL INTELLIGENCE

Contact Hours/ Week	: 3 + 0 (Lecture + Tutorial)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RCSE01	SEE Marks :	50

UNIT -1

What is AI? Acting humanly and thinking humanly, thinking rationally and acting rationally, Intelligent Agents: Agents and Environments, Good Behavior: The concept of Rationality: Rationality, Omniscience, Learning and autonomy, The nature of Environments: specifying the task environment, properties of task environments, The structure of Agents: Agent Programs, simple reflex agents, Model-based reflex agents, Goal-based agents, Utility-based agents, Learning agents, How the components of agents programme work, Solving problems by Searching: problem-solving agents, well-defined problems and solutions, Example problems.

Searching for Solutions: infrastructure for search algorithms, measuring problem-solving performance,. **9 Hrs**

UNIT - 2

Uninformed Search strategies: BFS, uninform-cost search, DFS, depth-limited search, iterative deepening depth-first search, bidirectional search, comparing uniformed search strategies, Informed search strategies: Greedy best-first search, A* search, Memory-bounded heuristic search, learning to search better, Constraint satisfaction problems: ; Example problem: Map coloring, Example problem: Job-shop scheduling, Variations on the CSP formalism, Constraint Propagation: Inference in CSPs: Node consistency, Arc consistency, Path consistency, *K*-consistency, Global constraints, Backtracking search for CSPs; Variable and value ordering, Interleaving search and inference, Intelligent backtracking: Looking backward **8 Hrs**

UNIT - 3

Knowledge-based agents; The wumpus world as an example world, Logic; propositional logic: a very simple logic A simple knowledge base, A simple inference procedure, propositional theorem proving: Inference and proofs, Proof by resolution, Horn clauses and definite clauses, Forward and backward chaining. First order logic: Syntax and semantics of first-order logic, Using first-order logic, Knowledge engineering in first-order logic. Inference In First-Order Logic: Propositional vs. First-order Inference, Unification and Lifting, Forward chaining: First-order definite clauses, A simple forward-chaining algorithm, Efficient forward chaining, backward chaining: A backward-chaining algorithm, Resolution: Conjunctive normal form for first-order logic, The resolution inference rule, Example proofs.

8 Hrs

UNIT - 4

Knowledge Representation: Issues in Knowledge representation; Associationist Theories of Meaning; Semantic Nets; Frames, Conceptual graphs; Introduction to Conceptual Graphs, Types Individuals, and Names, The Type Hierarchy, Generalization and Specialization, Propositional Nodes, Conceptual Graphs and Logic Agent-based and distributed problem solving; Agent-Oriented Problem Solving: A Definition, Overview of expert system technology; The Design of

Rule-Based Expert Systems, Selecting a Problem and the Knowledge Engineering Process, Rule-based expert systems: The Production System and Goal-Driven Problem Solving, Explanation and Transparency in Goal-Driven Reasoning, Using the Production System for Data-Driven Reasoning, Heuristics and Control in Expert Systems. Planning; Introduction to Planning: Robotics, Using Planning Macros: STRIPS

7 Hrs

UNIT - 5

Reasoning in Uncertain situations: Logic-based abductive inference, Nonmonotonic reasoning, Truth Maintenance systems, The Stochastic approach to Uncertainty: Directed Graphical Model, d-separation, inference algorithm, discrete Markov process, hidden Markov Model.

7 Hrs

TEXT BOOK:

1	Stuart Russel Peter Norvig	A Modern Approach, 3rd Edition, Pearson Education, 2009. (For Unit I, II, and III Selected topics from Chapters 1, 2, 3, 4, 5, 7, 8 and 9).
2	George F Luger	Structures and Strategies for Complex Problem Solving 5th Edition, Pearson Education, 2011. (For Unit III, IV, and V: Selected topics from Chapters 7, 8, 9 and 10).

REFERENCE BOOKS:

1	Elaine Rich Kevin Knight	Artificial Intelligence -2nd Edition, Tata McGraw Hill, 1991.
2	Nils J. Nilsson Elsevier	Principles of Artificial Intelligence, 1980.

Course Outcomes:

After the completion of this course, students will be able to:

1 Analyze and develop artificial intelligent agents for simple applications.
2 Apply searching algorithms to develop artificial intelligence
3 Develop knowledge base sentences with propositional logic and first order logic.
4 Design AI representational system for reasoning about simple applications
5 Apply and analyze the stochastic approach to uncertainty.

B.E COMPUTER SCIENCE AND ENGINEERING
Outcome Based Education (OBE) and Choice Based Credit System (CBCS)
SEMESTER - VI

CLOUD COMPUTING

Course Code	**RCSPE07**	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. The fundamental ideas behind Cloud Computing, its applicability; benefits, as well as current and future challenges.
2. Cloud computing stack and communication protocols.
3. Suitable architecture to incorporate in cloud computing models.
4. How virtualization helps to improve efficiency of cloud services.
5. Various security issues of cloud computing.

Module-1 **07 Hrs**

Defining Cloud Computing: Cloud Types, The NIST model, The Cloud Cube Model, Deployment models, Service models, Examining the Characteristics of Cloud Computing, Paradigm shift, Benefits of cloud computing, Disadvantages of cloud computing; Assessing the value proposition: Early adopters and new applications, the laws of cloud economics, cloud computing obstacles, behavioural factors relating to cloud adoption, measuring cloud computing costs, specifying SLAs.

Module-2 **09 Hrs**

Understanding Cloud Architecture: Exploring the Cloud Computing Stack, Composability, Infrastructure, Platforms, Virtual Appliances, Communication Protocols; Understanding Services and Applications by Type: Defining IaaS, Defining PaaS, Defining SaaS, Defining, IDaaS.

Module-3 **08 Hrs**

Understanding Abstraction and Virtualization: Using Virtualization Technologies, Load balancing and Virtualization, Understanding Hypervisors; Capacity Planning: Defining Baseline and Metrics, Baseline measurements, System metrics, Load testing, Resource ceilings, Server and instance types, Network Capacity, Scaling.

Module-4 **08 Hrs**

Understanding Amazon Web Services , Amazon Web Service Components and Services, Working with the Elastic Compute Cloud (EC2), Amazon Machine Images , Pricing models, System images and software, Creating an account and instance on EC2, Working with Amazon Storage Systems, Amazon Simple Storage System (S3) , Amazon Elastic Block Store (EBS) , CloudFront.

Module-5 **07 Hrs**

Understanding Cloud Security: Securing the Cloud, The security boundary, Security service boundary, Security mapping, Securing Data, Brokered cloud storage access, Storage location and `tenancy, Encryption, Auditing and compliance, Establishing Identity and Presence, Identity protocol standards, Windows Azure identity standards.

Course outcomes:

On successful completion of this course, students will be able to:

CO1: Explain the core concepts of the cloud computing paradigm: how and why this paradigm shift came about, the characteristics, advantages, challenges and associated cost.

CO2: Describe various models, platforms, virtual appliances and services in

cloud computing.

CO3: Discuss abstraction and storage virtualization and outline their role in enabling the cloud computing system model.

CO4: Explain Amazon Web Service Components and Services

CO4: Explain security concerns with respect to cloud computing.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

Sl. no.	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
Textbook				
1	Cloud Computing Bible	Barrie Sosinsky	Wiley Publishing Inc.	2011
Reference Books				
1	Cloud Computing and SOA Convergence in Your Enterprise:	David S. Linthicum	Addison-Wesley Professional	1st Edition
2	Distributed and Cloud Computing	Kai Hwang, Geoffrey C. Fox, and Jack J. Dongarra	Morgan Kaufman Publishers	2012
3	Enterprise Cloud Computing Technology Architecture	Gautam Shroff	Cambridge University Press	1st Edition
4	Cloud Computing, A Practical Approach	Toby Velte, Anthony Velte, Robert Elsenpeter	McGraw-Hill Education	1st Edition

WIRELESS SENSOR NETWORKS

Contact Hours/ Week	: 3 + 0 (Lecture + Tutorial)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RCSE11	SEE Marks :	100

UNIT- 1

Introduction: The vision of Ambient Intelligence, Application examples, Types of applications, Challenges for WSNs, Why are sensor networks different?, Enabling technologies Single node architecture, Hardware components **7 Hrs.**
Sections: 1.1 to 1.6, 2.1.1, 2.1.2, 2.1.3, 2.1.4 (except some examples of radio transceivers), 2.1.5, 2.1.6.

UNIT- 2

FUNDAMENTALS OF WSN ARCHITECTURE: Operating systems and execution environments, Network architecture, Sensor network scenarios, Optimization goals & figures of merit, Gateway concepts. **7 Hrs.**
Sections: 2.3.1, 2.3.2 , 2.3.3, 2.3.4, 2.3.5, 3.1, 3.2 ,3,5

UNIT- 3

LOCALISATION AND POSITIONING: Properties of localization and positioning procedures, Possible approaches, Mathematical basics for the lateration problem, Single-hop localization, Positioning in multihop environments, Impact of anchor placement
Sections: 9.1 to 9.6 **8 Hrs.**

UNIT- 4

ROUTING PROTOCOLS: Routing Protocols: Faces of forwarding and routing, Gossiping and agent-based unicast forwarding, Energy-efficient unicast, Broadcast and multicast, Geographic Routing **8 Hrs.**
Sections:1 1.1, 1 1.2 , 1 1.3.1, 11.3.4, 11.4.1 to 11.4.4, 11.5

UNIT- 5

TRANSPORT LAYER AND QUALITY OF SERVICE: The transport layer and QoS in wireless sensor networks, Reliable data transport, Block delivery, Congestion control and rate control. **9 Hrs.**
Sections: 13.1 , 13.3, 13.5, 13.6

TEXT BOOKS:

2.	Holger Karl Andreas Willig	"Protocols and Architectures for Wireless Sensor Networks" John Wiley & Sons, Ltd

REFERENCE BOOKS:

1.	Feng Zhao Leonidas Guibas	Wireless Sensor Networks – An Information Processing Approach, Elsevier, 2004
2.	Edgar H. Callaway	Wireless Sensor Networks Architectures and Protocols Auerbach Publications 2004

Course Outcomes:

After the completion of this course, students will be able to:

1	**Apply** the knowledge of the basic Computer Network operational methodologies onto the WSN paradigm.
2	Adequately **learn** and demonstrate how the architecture of the WSNs differ from the Computer Network
3	**Analyse** the various methods of Localization and Positioning with respect to nodes in the WSN application
4	**Apply** the knowledge of Routing protocols to fit the WSNs paradigm.
5	**Correlate** the QoS and Transport layer protocols of Computer Network with the requirements of WSNs paradigm.

STORAGE AREA NETWORKS

Contact Hours/ Week	: 3	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RCSE16	SEE Marks :	50

UNIT-1

Introduction: Server Centric IT Architecture and its Limitations; Storage – Centric IT Architecture and its advantages; Case study: Replacing a server with Storage Networks;.

Intelligent disk subsystems - 1: Architecture of Intelligent Disk Subsystems; Hard disks and Internal I/O Channels, JBOD, Storage virtualization using RAID and different RAID levels. **9 Hrs**

UNIT-2

Caching: Acceleration of Hard Disk Access

I/O Techniques: Intelligent disk subsystems; Availability of disk subsystems. The Physical I/O path from the CPU to the Storage System; SCSI. Fibre Channel Protocol Stack; Fibre Channel SAN; **7 Hrs**

UNIT -3

IP Storage: IP storage standarads, TCP/IP and ethernet as an I/P technology, Migration from SCSI and FC to IP strorage

Network attached storage: The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system.

File system: Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS. **8 Hrs**

UNIT-4

Storage virtualization: Definition of Storage virtualization; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network; Symmetric and Asymmetric storage virtualization in the Network Application of Storage Networks: Definition of the term ‘storage networks’, storage sharing. **7 Hrs**

UNIT-5

Application of Storage Networks (continued): availability of Data, adaptability and scalability of IT systems

Network Back-up: General conditions for Back-up, Network Back-up Services, Server components, Backup clients, performance gains and bottlenecks of network back-up, Limited opportunities for increased performance, Next generation Back-up, Back-up of file systems and databases. **8 Hrs.**

TEXT BOOK:

Storage Networks Explained – Ulf Troppens, Rainer Erkens and Wolfgang Muller, John Wiley & Sons, 2009.

REFERENCE BOOKS:

1. **Storage Networks: The Complete Reference** – Robert Spalding, Tata McGraw Hill, 2003.
2. **Storage Area Network Essentials: A Complete Guide to understanding and Implementing SANs** – Richard Barker and Paul Massiglia, John Wiley India, 2002.
3. 2.**Storage Networking Fundamentals** Marc Farley, Cisco Press, 2005.

Course Outcomes:

After the completion of the course, students will be able to:

1 **Analyze** the tradeoffs between Server Centric IT architecture and Storage Centric architecture, SAN and NAS architectures.

2 **Understand** the knowledge of IT Architectures, Disk Subsystems and **apply** the different RAID levels to address performance issues of SAN.

3 **Analyze** the different I/O techniques to realize the data exchange between computer and storage devices.

4 **Identify** the different protocols for the transmission of storage data traffic, **Recognize** the working methodologies of SAN and NAS and their comparisons.

5 **Analyze** the impact of Storage virtualization on various levels and **Identify** the different network back up services of the storage Network.

ADHOC WIRELESS NETWORKS

Contact Hours/ Week	: 3 + 0 (Lecture + Tutorial)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50
Sub. Code	: RCSE18		

UNIT–1

Introduction to Wireless Communication Technology: Fundamentals, The Electromagnetic Spectrum, Radio Propagation Mechanisms, Characteristics of the Wireless Channel.
Wireless LANs: Fundamentals of WLANs, IEEE 802.11 standard.
Wireless WANs: The Cellular Concept, Cellular Architecture, The First-Generation cellular Systems, The Second-Generation cellular Systems, The Third-Generation cellular Systems.
Wireless Internet: What is Wireless Internet? Mobile IP. **08 Hrs**

UNIT-2

Ad hoc Networks: Introduction, Issues in Ad hoc wireless networks, Ad hoc wireless internet.
MAC – 1: MAC Protocols for Ad hoc wireless Networks: Introduction, Issues in designing a MAC protocol for Ad hoc wireless Networks, Design goals of a MAC protocol for Ad hoc wireless Networks, Classification of MAC protocols, Contention based protocols, Contention based protocols with reservation mechanisms. **09 Hrs**

UNIT-3

Routing protocols for Ad hoc wireless Networks: Introduction, Issues in designing a routing protocol for Ad hoc wireless Networks, Classification of routing protocols, Table driven routing protocols, On-demand routing protocols, Hybrid routing protocols. **08 Hrs**

UNIT–4

Transport layer protocols for Ad hoc wireless Networks: Introduction, Issues in designing a transport layer protocol for Ad hoc wireless Networks, Design goals of a transport layer protocol for Ad hoc wireless Networks, Classification of transport layer solutions, TCP over Ad hoc wireless Networks.
Security: Security in wireless Ad hoc wireless Networks, Network security requirements, Issues & challenges in security provisioning, Network security attacks, Key management **07 Hrs**

UNIT–5

QoS: Quality of service in Ad hoc wireless Networks: Introduction, Issues and challenges in providing QoS in Ad hoc wireless Networks, Classification of QoS solutions, MAC layer solutions, network layer solutions. **07 Hrs**

TEXT BOOK:

C. Siva Ram Murthy & B. S. Manoj: Ad hoc Wireless Networks, 2nd Edition, Pearson Education, 2005
[Chapter 1: 1.1, 1.2, 1.3, 1.4. Chapter 2: 2.1, 2.2, 2.3. Chapter 3: 3.1, 3.2, 3.3, 3.4, 3.5, 3.6. Chapter 4: 4.1, 4.2, 4.3. Chapter 5, Chapter 6: 6.1-6.6, Chapter 7: 7.1 – 7.6, Chapter 9: 9.1, 9.2, 9.3, 9.4, 9.5, 9.7, 9.8, 9.9, 9.10, 9.11, Chapter 10: 10.1, 10.2, 10.3, 10.4, 10.5]

REFERENCE BOOKS:

1. Ozan K. Tonguz and Gianguigi Ferrari: Ad hoc Wireless Networks, John Wiley, 2007.
2. Xiuzhen Cheng, Xiao Hung, Ding-Zhu Du: Ad hoc Wireless Networking, Kluwer Academic Publishers, 2004.
3. C.K. Toh: Adhoc Mobile Wireless Networks- Protocols and Systems, Pearson Education, 2002.

CYBER SECURITY

Contact Hours/ Week	: 3 + 0 (Lecture + Tutorial)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50
Sub. Code	: RCSE28		

UNIT -1

Cyber Security Fundamentals: Network and Security Concepts, Information Assurance Fundamentals, Basic Cryptography, Symmetric Encryption, Public Key Encryption, The Domain Name System (DNS), Firewalls, Virtualization, Radio-Frequency Identification, Microsoft Windows Security Principles, Windows Tokens, Window Messaging, Windows Program Execution, The Windows Firewall **07 Hrs**

UNIT -2

Attacker Techniques and Motivations:

How Hackers Cover Their Tracks (Anti-forensics), How and Why Attackers Use Proxies, Tunneling Techniques, Fraud Techniques, Phishing, Smishing, Vishing and Mobile Malicious Code, Rogue Anti-Virus, Click Fraud, Threat Infrastructure, Botnets, Fast-Flux, Advanced Fast-Flux **08 Hrs**

UNIT -3

Exploitation: Techniques to Gain a Foothold, Shellcode, Integer Overflow, Vulnerabilities, Stack-Based Buffer Overflows, Format-String Vulnerabilities, SQL Injection, Malicious PDF Files, Race Conditions, Web Exploit Tools, DoS Conditions, Brute-Force and Dictionary Attacks, Misdirection, Reconnaissance and Disruption Methods, Cross-Site Scripting (XSS), Social Engineering, WarXing, DNS Amplification Attacks. **08 Hrs**

UNIT - 4

Malicious Code: Self-Replicating Malicious Code, Worms, Viruses, Evading Detection and Elevating Privileges, Obfuscation, Virtual Machine Obfuscation, Persistent Software Techniques, Rootkits, Spyware, Attacks against Privileged User Accounts and Escalation of Privileges, Token Kidnapping, Virtual Machine Detection, Stealing Information and Exploitation, Form Grabbing, Man-in-the-Middle Attacks, DLL Injection, Browser Helper Objects. **08 Hrs**

UNIT - 5

Defense and Analysis Techniques: Memory Forensics, Why Memory Forensics Is Important, Capabilities of Memory Forensics, Memory Analysis Frameworks, Dumping Physical Memory, Installing and Using Volatility, Finding Hidden Processes, Volatility Analyst Pack, Honeypots, Malicious Code Naming, Automated Malicious Code Analysis Systems, Passive Analysis, Active Analysis, Physical or Virtual Machines, Intrusion Detection Systems, Cyber Security Essentials.

Open Source Security Tools:

Port Scanners: Installing Nmap on Linux and windows.

Intrusion Detection Systems: Unique Features of Snort, Configuring Snort for Maximum performance.

Analysis and Management Tools: Using Databases and Web Servers to Manage Your Security Data.

Forensic Tools: Preparing for Good Forensic, Forensic Analysis Tools, Making Copies of Forensic and Creating and Logging into a Case. **08 Hrs**

TEXT BOOK:

1. James Graham, Richard Howard, Ryan Olson- Cyber Security Essentials CRC Press
2. Open Source Security Tools Practical Applications for Security by Tony Howlett.
   Web link:
   http://ptgmedia.pearsoncmg.com/images/0321194438/downloads/0321194438_book.pdf
   UNIT-5 Open Source Security tools: Chapter: 4, 7, 8 and 11 section from these chapters.

REFERENCE BOOKS:

1 James A. Lewis, Cyber security: turning national solutions into international cooperation
2 Dan Shoemaker, Ph.D., William Arthur Conklin, Wm Arthur Conklin, Cyber security: The Essential Body of Knowledge.
3 John Rittinghouse, PhD, William M. Hancock, PhD, Cyber security Operations Handbook

Course Outcomes:

After the completion of the course, students will be able to

1. Apply the cryptographic concepts underlying Cyber Security.
2. Analyze the techniques used by hackers to create frauds
3. Analyze the vulnerabilities in a network or in an application that will help hackers to build the attack.
4. Compare and analyze various types of malicious code
5. Demonstrate Memory Forensics as a defense technique for Cyber Security
6. Compare and analyze various types of Tools

FOUNDATIONS OF DATA SCIENCE

Contact Hours/ Week	: 3 + 0 (Lecture + Tutorial)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50
Sub. Code	: RCSE31		

COURSE OBJECTIVES:

This Course will enable students to:

1 Describe the concept of data science, its scope in business and explain the available techniques. (L1, L2)
2 Understand Predictive modeling, explain supervised segmentation and given data set should be able to select (through solving) the attribute for segmentation using the available techniques. (L2, L3)
3 Explain the concept of Classification and classify (solve) a given data set. (L3)
4 Understand and describe the concept of similarity, neighbors and clustering and apply it for any real world data. (L3, L4)
5 Explain the concepts of mining text and other data science tasks and techniques. (L2, L4)

UNIT-1

Introduction: Data-Analytic Thinking: The Ubiquity of Data Opportunities, Example: Hurricane Frances, Example: Predicting Customer Churn. Data Science, Engineering, and Data-Driven Decision Making, Data Processing and "Big Data", Data and Data Science Capability as a Strategic Asset, Data-Analytic Thinking.

Business Problems and Data Science Solutions: From Business Problems to Data Mining Tasks, Supervised Versus Unsupervised Methods, Data Mining and Its Results, The Data Mining Process, Business Understanding, Data Understanding, Data Preparation, Modeling, Evaluation, Deployment, Other Analytics Techniques and Technologies: Statistics, Database Querying, Data Warehousing, Regression Analysis, Machine Learning and Data Mining

07 Hrs

UNIT -2

Introduction to Predictive Modeling: From Correlation to Supervised Segmentation Models, Induction, and Prediction, Supervised Segmentation, Selecting Informative Attributes Example: Attribute Selection with Information Gain, Supervised Segmentation with Tree-Structured Models, Visualizing Segmentations, Trees as Sets of Rules, Probability Estimation, Example: Addressing the Churn Problem with Tree Induction. **08 Hrs**

UNIT -3

Fitting a Model to Data: Classification via Mathematical Functions: Linear Discriminant Functions, Optimizing an Objective Function, An Example of Mining a Linear Discriminant from Data, Linear Discriminant Functions for Scoring and Ranking Instances, Support Vector Machines briefly, Regression via Mathematical Functions, Class Probability Estimation and Logistic "Regression". Logistic Regression: Some Technical Details. Example: Logistic Regression versus Tree Induction, Non Linear Functions, Support vector machines and Neural Networks

Over fitting and Its Avoidance: Fundamental Concepts, Exemplary Techniques, Regularization, Genaralization, Over fitting, Over fitting Examined. **08 Hrs**

UNIT - 4

Similarity, Neighbors, and Clusters: Similarity and Distance, Nearest-Neighbor Reasoning, Example: Whiskey Analytics, Nearest Neighbors for Predictive Modeling, How Many Neighbors and How Much Influence? Geometric Interpretation, Overfitting, and Complexity Control. Issues with Nearest-Neighbor Methods. Some important Technical Details Relating to Similarities and neighbors. Clustering, Example: Whiskey Analytics Revisited, Hierarchical Clustering, Nearest Neighbors Revisited: Clustering Around Centroids. Understanding the Results of Clustering **08 Hrs**

UNIT – 5

Decision Analytic Thinking I: What is a Good Model?: Evaluating Classifiers Plain Accuracy and its Problems, The confusion matrix, Problems with unbalanced Classes, Problems with Unequal Costs and Benefits.

Representing and Mining Text: Why Text Is Important? Why Text Is Difficult? Representation, Bag of Words, Term Frequency, Measuring Sparseness: Inverse Document Frequency, Combining Them: TFIDF, Example: Jazz Musicians

Other Data Science Tasks and Techniques: Co-occurrences and Associations: Finding Items That Go Together, Measuring Surprise: Lift and Leverage, Example: Beer and Lottery Tickets, Associations Among Facebook Likes, Profiling: Finding Typical Behavior, Link Prediction and Social Recommendation **08 Hrs**

TEXT BOOK:

1	Foster Provost and Tom Fawcett	Data Science for Business, Published by O'Reilly Media, Inc. July 2013: First Edition

REFERENCE BOOKS:

1	Doing Data Science	Rachel Schutt & Cathy O'Neil, O'Reilly Media, October 2013: First Edition
2	Practical Data Analysis	Hector Cuesta,PACKT Publishing, First published: October 2013
3.	Guide to Intelligent Data Analysis	Michael R. Berthold,Christian Borgelt, Frank Hijppner Frank Klawonn, Springer-Verlag London Limited 2010

Course Outcomes:

After the completion of the course, students will be able to

1. **Apply** the knowledge of mathematics to explain the concept of data science, the available techniques in data science and its scope in business.
2. **Develop** a Decision tree based on supervised segmentation and predict the class for a given data set by selecting (through solving) the attribute for segmentation using the available techniques.
3. **Analyze** the given data set, and solve a **problem** by performing Classification using the basics of mathematics and data science.
4. **Develop** solutions to group entities in data set and **apply** it for the given real world data using the basic **knowledge** of similarity, neighbors and clustering
5. **Analyze** the importance of mining text (social data) and **formulate** the association rules based on market basket analysis.

ENTERPRISE CONTENT MANAGEMENT

Contact Hours/ Week	: 2 + 2 (Lecture + Practical)	Credits :	3.0
Total Lecture Hours	: 26	CIE Marks :	50
Total Lab Hours	: 26	SEE Marks :	50
Sub. Code	: RCSE33		

UNIT -1

WCM & AEM Introduction: AEM Terminology, Basic concepts

AEM Setup & Overview: Install and deploy AEM, Work with various Web Consoles, Work with User interfaces (UIs)

Web Framework: Understand REpresentational State Transfer (REST) architectural style, Apache Sling.

OSGi Framework:

Understand the concepts of OSGi and Apache Sling, Describe the AEM functional building blocks, Describe the Granite platform, Understand OSGi framework, Understand about OSGi bundles **5+5 Hrs.**

UNIT -2

Content Repository: Basic Concepts – JCR, Learn about the Java Content Repository (JCR), Understand the concepts of Apache Jackrabbit, Explore Adobe CRX, Understand the underlying repository structure

AEM – Developer UI: Content Authoring Overview, CRX Interface, CRXDE Lite Interface.

AEM – Templates & Components: Creating Project Structure, Introduction to Sightly, Creating Template & Page Component (JSP and Sightly), Creating Pages & Website Structure. **5+5 Hrs.**

UNIT -3

Sightly: Features of Sightly in AEM Development, Sightly Vs JSP, Building Blocks, Expressions & Statements.

AEM Authoring Framework – Components & Design: Modularize the template, Extend the component hierarchy, Assign a design, Create and include components in scripts.

AEM Authoring Framework – Dialog Boxes: Create dialog boxes for components, Create Design dialog boxes for global content, Use the Edit_Config property to enhance components

5+5 Hrs.

UNIT -4

Authoring Responsive and Mobile Pages: Define Responsive Design Work with Responsive page layout, Create a Mobile page, Add content to the Mobile page

DAM: Finding & Viewing Assets, Create a folder and upload assets to it, Edit an asset and it's properties, Add a content fragment and an asset to a page.

Adding New Content: Create a page, Insert a new paragraph, Edit the text paragraph, Add new components, Work with the Content Finder

Handling Page Properties: Describe Page Properties, Provide Multiple titles for a Page, Bulk Editing. **6+6 Hrs.**

UNIT -5

Workflows: Creating and Managing Workflows, Creating and Managing Launches.
Admin Basics: Roles, Users, Groups and Permissions(ACLs), Apache Felix Console Interface, Package Manager.
Agile Basics: Agile Basics for AEM Projects. **5+5 Hrs.**

Course Outcomes:

After the completion of the course, students will be able to

1. **Describe** the evolution and explosion of digital touchpoints and social media across all channels making the content relevant, engaging and unified experience.
2. **Develop** solutions to attract new audiences, deliver targeted content through actionable dat and social interactions.
3. **Explain** and **apply** AEM Content Repository, UI, Templates and components.
4. **Construct** user experience modules using AEM Authoring Framework
5. **Utilize** rich media assets and optimize multichannel outreach for increased click-throughs impacting conversions.
6. **Develop** responsive and mobile pages using layouts and designs and **Understand** the basics of Workflows and Administration in AEM.

INTERNET OF THINGS

Contact Hours/Week	:	3 + 0 (L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	RCSE35			

Course objectives:

This course will enable students to:

1. Realize the evolution of IOT in Mobile Devices, Cloud & Sensor Networks.
2. Study the building blocks of IOT, its characteristics and application areas of IOT.
3. **Explore** and learn about Internet of Things with the help of preparing projects designed for Raspberry Pi.
4. Explore the architecture, its components and working of IOT components.

Unit - I

Introduction & Concepts: Introduction to Internet of Things, Definitions and Characteristics of IoT, Physical Design of IoT, Things in IoT, IoT Protocols, Logical Design of IoT, IoT Functional Blocks, IoT Communication Models, IoT Communication APIs, IoT Enabling Technologies, Wireless Sensor Networks, Cloud Computing, Big Data Analytics, Communication Protocols, Embedded Systems, IoT levels and Development Templates, IoT Level-1, IoT Level-2, IoT Level-3, IoT Level-4, IoT Level-5, IoT Level-6.

08 Hrs.

Unit - II

IoT Platform Design Methodology: Introduction, IoT Design Methodology: Step1: Purpose and requirement specification, Step2: Process Specification, Step 3: Domain Model Specification, Step 4: Information Model Specification, Step 5: Service Specification, Step 6: IoT Level Specification, Step 7: Function View Specification Step 9: Device and Component Integration, Step 10: Application Development. Case Study: Weather Monitoring. **08 Hrs.**

Unit - III

Python Programming: Introduction, Installing Python, Python Data Types and Data Structures, Control Flow, Functions, Modules, Packages, File Handling, Date Time applications, Classes, Python Packages of Interest for IoT.

07 Hrs.

Unit – IV

Raspberry Pi : Basic Building Blocks - The Board, Linux on Raspberry Pi, Raspberry pi interfaces, programming Raspberry Pi with python

Case Studies (any 2 to be covered): Home Automation, Environment, Weather, Agriculture, Productivity Applications **08 Hrs.**

Unit - V

Cloud : IoT physical servers and cloud offerings: introduction to cloud storage models and communication Networks , frame work-django, designing a RESTful web API, amazon web services for IoT , SkyNetIoT messaging platforms

Data Analytics for IoT; Introduction Apache Hadoop, using Hadoop MapReduce for Batch Data Analysis **09 Hrs.**

TEXT BOOKS:

1.	Arshdeep Bahga, Vijay Madisetti	Internet Of Things-A Hands on Approach, University of Penn, http://www.internet-of-things-book.com/
2.	Adrian McEwen & Hakim Cassimally	Designing the Internet of Things, ISBN 978-81-265-5686-1 Wiley Publication.

REFERENCE BOOK:

1.	Ovidiu Vermesan, PeterFriess	Internet of Things : Converging Technologies for Smart Environmentsand Integrated Ecosystems. River Publishers Series in Communication.

Course outcomes:

After the completion of this course, students will be able to:

1. **Apply** the knowledge of the internet and computer network onto IoT paradigm.
2. **Synthesize** and **demonstrate** the IoT design methodology.
3. **Apply** the knowledge of python programming concepts as prerequisite to code raspberry pi model.
4. **Analyze** different configuration setups for connecting different types of sensors and upload the code on the board and **Develop** a solution for the case study given
5. **Apply** the knowledge of cloud communication and data analytics in Apache Hadoop platform.

PROJECT MANAGEMENT & FINANCE

Contact Hours/Week	:	3 (L)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Course Code	:	RCSE38	SEE Marks	:	50

Course objectives:

This course will enable students to:

1) Acquiring an ability to analyze, the process of Product and Project Life Cycle .(L1)
2) Analyzing Project Integration Management, Project Scope Management & Project Schedule Management. (L2)
3) Defining and Analyzing the concepts, purpose and significance of Project Cost Quality & Resource Management. (L2)
4) Analyzing the concepts of Project management and the methods of procurement, stakeholders and communication management. (L2)

Unit I

Introduction: Project, Program, and portfolio, Operations management, Product life cycle, Project life cycle, Project management life cycle, Ten Knowledge areas, Role of project manager and PMO, Ten Project Knowledge areas with their associated processes.
Project Integration Management: Develop project charter, Develop project management plan, Direct & manage project work, Monitor control project, Perform integrated change control, Close project / phase. (Section 4.1, 4.2, 4.3, 4.4, 4.5, 4.6, 4.7) **7 Hrs.**

UNIT - II

Project scope management: Plan scope management, Collect requirements, Define scope, Create WBS, Validate Scope, Control scope. (Section 5.1, 5.2, 5.3, 5.4, 5.4.1, 5.5, 5.6)

Project Schedule management: Plan schedule management, Define activities, Sequence activities, Estimate activity durations, Develop schedule, and Control schedule and Problems. (Section 6.1, 6.2, 6.3, 6.4, 6.4.1, 6.5, 6.5.2.2, 6.6) **8 Hrs.**

Unit III

Project cost management: Plan cost management, Estimate cost, Determine budget, and Control costs. (Section 7.1, 7.2, 7.2.1, 7.3, 7.4) and Problems.
Project quality management: Plan quality management, Manage quality and Control quality (Section 8.1, 8.2, 8.3)
Project resource management: Plan resource management, Estimate activity resources, Acquire resources, Develop team, Manage team and Control resources (Section 9.1, 9.2, 9.3, 9.4, 9.5, 9.6) **8 Hrs.**

Unit IV

Project communication management: Plan communication management plan, Manage communications and Monitor communications (Section 10.1, 10.2, 10.3)
Project risk management: Plan risk management, Identify risks, Perform qualitative risk analysis, Perform quantitative risk analysis, Plan risk responses, Implement risk responses and Monitor risks. (Section 11.1, 11.2, 11.3, 11.4, 11.5, 11.6, 11.7)
Project Procurement management: Plan procurement management, Conduct procurement, Control procurements. (Section 12.1, 12.2, 12.3) **8 Hrs.**

Unit V

Project stake holder management: Identify stake holders, Plan stake holder management, Manage stake holder engagement, and Monitor stake holder engagement.
A case study relevant to the domain knowledge of the department is taken up to explain the principles of the project management as brought out above. **8 Hrs.**

TEXT BOOKS:

1.	Project Management Book of Knowledge (PMBOK), 6th Edition, PMI, USA

REFERENCE BOOKS:

1	Prasanna Chandra, Project Planning: Analysis, Selection, Implementation and Review, MC-Graw Hill Education, 8th Edition, 2017.

Course Outcomes:

After the completion of the course, students will be able to

1. **Explain and analyze** the basic concepts of project management, roles of project managers and identify different stages involved in project planning
2. **Explain, analyze and Develop** Scope management Plan and Project Schedule based on approved project deliverables and milestones
3. **Describe, analyze and Design** the procedures for overall financial analysis of the project alongside the resource requirement and ideal quality
4. **Analyze, Identify and explain** the sources and processes for communication, risk management and procurement
5. **Describe** stakeholder management processes and **perform** stakeholder analysis using appropriate tools and techniques in order to align expectations and gain support for the project

SCHEME & SYLLABUS
OF
III & IV SEMESTER B.E.

INFORMATION SCIENCE & ENGINEERING

AY : 2022-2023

Vision of the Department:

To be a centre for quality education and research in Information Science and Engineering to create high quality professionals for catering to the need of the society.

Mission of the Department:

1) To enable students to acquire strong fundamental concepts related to the Information Science and Engineering through experiential learning.
2) To educate students towards state-of-the-art-technologies and multidisciplinary practices for a successful career by creating learning-teaching-learning ambience.
3) To inculcate life-long learning through innovation and research attitudes among students related to Information Science and Engineering.

Program Educational Objectives (PEOs):

The objectives of Information Science and Engineering degree program are to prepare students to meet the academic excellence, professionalism, and ability to solve a broad range of problems in rapidly changing technological, economic and social environment.

Graduates of the program will:

1. Pursue career as software engineer, project manager, data scientist, entrepreneur and pursue higher studies and research in Information Science and Engineering domains.
2. Apply mathematical, scientific and Information Science and Engineering knowledge with multidisciplinary approaches to solve real world problems.
3. Possess professionalism, ethical and societal responsibilities and engage in life-long learning through pursuit of skill development and certification courses in Information Science and Engineering.

Programme Outcomes (POs):

To achieve the above objectives, Information Science and Engineering degree programme strives to obtain the following outcomes which should be achieved by all graduates at the time of their graduation.

Engineering Graduates will be able to:

1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one’s own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Programme Specific Outcomes (PSOs):

1) Computing System: Demonstrate the knowledge of evolving hardware and/or software to develop solutions to real life computational problems with a focus on performance optimization.

2) Communication and Security: Design and develop solutions for providing efficient transmission, storage, security and privacy of data in diverse computing environment.

3) Information management: Apply tools and techniques for management of information system, data analysis and knowledge discovery in the process of decision making.

AY : 2022-2023
Batch 2021

SCHEMES

III - IV sem

160 Credit scheme

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

DEPARTMENT OF INFORMATION SCIENCE AND ENGINEERING

B.E. III Semester Academic Year 2022-2023 – NEP

SCHEME OF TEACHING AND EXAMINATION (160 Credits Scheme)

Sl. No.	Course and Course Code		Course Title	Teaching / Paper setting Dept.	Teaching hrs/week				Examination				Credits
					Lecture	Tutorial	Practical/ Drawing	Self-Study Component	Duration in hrs.	CIE Marks	SEE Marks	Total Marks	
					L	T	P	S					
1.	BSC	NMAT3C	Mathematical Concepts for Information Technology	Maths	3	-	-	-	3	50	50	100	3
2.	IPCC	NIS31	Analog and Digital Circuits (Integrated)	ISE	3	0	2	-	3	50	50	100	4
3.	IPCC	NIS32	Data Structures and Applications (Integrated)	ISE	3	0	2	S	3	50	50	100	4
4.	PCC	NIS33	Computer Organization	ISE	3	0	0	-	3	50	50	100	3
5.	PCC	NISL31	OOPs with C++ Lab	ISE	0	0	2	-	3	50	50	100	1
6.	UHV	NHS05	Universal Human Values, Social Connect and Responsibility	ISE	1	0	0	-	2	50	50	100	1
7.	HSMC	NHS01	Balake Kannada		1	0	0	-	2	50	50	100	1
		NHS02	Samskrutika Kannada										
		OR											
		NHS03	Constitution of India and Professional Ethics										
8.	AEC	AECIS3x	Ability Enhancement Course – III	ISE	1	0	2	-	3	50	50	100	2
			Total							**400**	**400**	**800**	**19**
9	NCMC		National Service Scheme (NSS)	NSS	All students have to register for any one of the courses namely National Service Scheme, Physical Education (PE) (Sports and Athletics) and Yoga with the concerned coordinator of the course during the first week of III semester. The activities shall be carried out from III semester to VIII semester (for 5 semesters). **SEE for the courses shall be conducted during VIII semester examinations** and the accumulated CIE marks shall be added to the SEE marks. Successful completion of the registered course is mandatory for award of the degree. The events shall be appropriately scheduled by Dean Academic and the same shall be reflected in the calendar prepared for the NSS, PE and Yoga activities.								
			Physical Education (PE) (Sports and Athletics)	PE									
			Yoga	Yoga									
Course prescribed to Lateral Entry Diploma holders admitted to III semester B.E. programs													
1	NCMC	NMATDIP3	Foundation of Engineering Mathematics - I	Maths	2	2	0	-	-	100	-	100	0
		AAP	AICTE Activity Points (Applicable for both Regular and Lateral Entry students)	40 hours community service to be documented and produced for the examination									

Note: **BSC**: Basic Science Course, **IPCC**: Integrated Professional Core Course; **PCC**: Professional Core Course,
HSMC: Humanity and Social Science & Management Courses, **AEC** –Ability Enhancement Courses. **UHV**- Universal Human Value Courses
L –Lecture, **T** – Tutorial, **P**- Practical/ Drawing, **S** – Self-Study Component, **CIE**: Continuous Internal Evaluation, **SEE**: Semester End Examination

NHS01 Balake Kannada is for students who can't speak, read and write Kannada.
NHS02 Samskrutika Kannada is for students who can speak, read and write Kannada.

Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with Practicals of the same course. Credit for IPCC can be 04 and its Teaching – Learning hours (L : T : P) can be considered as (3: 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from practical part of IPCC shall be included in the SEE question paper.

INT1 - Inter/Intra Institutional Internship: All the students admitted to engineering programs under the **lateral entry category** shall have to undergo mandatory INT1 Inter/Intra Institutional Internship of 03 weeks during the **intervening period of III and IV semesters**. The internship shall be slated for CIE only and will not have SEE. The letter grade earned through CIE shall be included in the IV semester grade card. The internship shall be considered for vertical progression and for the award of degree. Those, who do not take up / complete the internship shall be declared fail and shall have to complete subsequently after satisfying the internship requirements. The faculty coordinator or mentor shall monitor the students' internship progress and interact with them for the successful completion of the internship.

Non-Credit Mandatory Course (NCMC):

(A) Foundation of Engineering Mathematics - I & II

(1) These courses are prescribed for III and IV semesters respectively to **lateral entry Diploma holders** admitted to III semester of B.E. programs. They shall attend the classes during the respective semesters to complete all the formalities of the course and appear for the Continuous Internal Evaluation (CIE). In case, any student fails to register for the said course/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have secured an F grade. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks. **These courses are slated for CIE only and have no SEE.**

(2) Foundation of Engineering Mathematics I and II shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.

(3) Successful completion of the courses Foundation of Engineering Mathematics I and II shall be indicated as PP in the grade card. Non-completion of the courses Foundation of Engineering Mathematics I and II shall be indicated as NP.

(B) National Service Scheme/Physical Education (Sport and Athletics)/Yoga:

(1) Securing 40 % or more in CIE, 35 % or more marks in SEE and 40 % or more in the sum total of CIE + SEE leads to successful completion of the registered course.

(2) In case, students fail to secure 35 % marks in SEE, they have to appear for SEE during the subsequent examinations conducted by the Institute.

(3) In case, any student fails to register for NSS, PE or Yoga/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have not completed the requirements of the course. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks.

(4) Successful completion of the course shall be indicated as PP in the grade card. Non-completion of the course shall be indicated as NP.

(5) These courses shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.

Ability Enhancement Course – III (Offered by the Department)

AECIS31	Engineering Applications of MATLAB	AECIS33	Data Visualization- R Studio
AECIS32	Fundamentals of Animation Using Blender	AECIS34	UNIX AND SHELL Programming

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

DEPARTMENT OF INFORMATION SCIENCE AND ENGINEERING

		AAP	AICTE Activity Points (Applicable for both Regular and Lateral Entry students)	40 hours community service to be documented and produced for the examination									

Note: **BSC**: Basic Science Course, **IPCC**: Integrated Professional Core Course; **PCC**: Professional Core Course, **HSMC**: Humanity and Social Science & Management Courses, **AEC** –Ability Enhancement Courses. **AAP**- AICTE Activity Points
L –Lecture, **T** – Tutorial, **P**- Practical/ Drawing, **S** – Self-Study Component, **CIE**: Continuous Internal Evaluation, **SEE**: Semester End Examination
NHS01 Balake Kannada is for students who can't speak, read and write Kannada. **NHS02 Samskrutika Kannada** is for students who can speak, read and write Kannada.
Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with Practicals of the same course. Credit for IPCC can be 04 and its Teaching – Learning hours (L : T : P) can be considered as (3: 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from practical part of IPCC shall be included in the SEE question paper.
Internship of 04 weeks during the intervening period of IV and V semesters; INT2 Innovation/ Entrepreneurship/ Societal based Internship. (1) All the students shall have to undergo a mandatory internship of 04 weeks during the intervening period of IV and V semesters. **The internship shall be slated for CIE only and will not have SEE.** The letter grade earned through CIE shall be included in the VI semester grade card. The internship shall be considered as a head of passing and shall be considered for vertical progression and for the award of degree. Those, who do not take up / complete the internship shall be considered under F (fail) grade and shall have to complete subsequently after satisfying the internship requirements. (2) **Innovation / Entrepreneurship Internship** shall be carried out at industry, State and Central Government / Non-government organizations (NGOs), micro, small, and medium enterprise (MSMEs), Innovation centres or Incubation centres. Innovation need not be a single major breakthrough; it can also be a series of small or incremental changes. Innovation of any kind can also happen outside of the business world. Entrepreneurship internships offers a chance to gain hands on experience in the world of entrepreneurship and helps to learn what it takes to run a small entrepreneurial business by performing intern duties with an established company. This experience can then be applied to future business endeavours. Start-ups and small companies are a preferred place to learn the business tactics for future entrepreneurs as learning how a small business operates will serve the intern well when he/she manages his/her own company. Entrepreneurship acts as a catalyst to open the minds to creativity and innovation. Entrepreneurship internship can be from several sectors, including technology, small and medium-sized, and the service sector. (3) **Societal or social internship**. Urbanization is increasing on a global scale; and yet, half the world's population still resides in rural areas and is devoid of many things that urban population enjoy. Rural internship is a work-based activity in which students will have a chance to solve/reduce the problems of the rural place for better living. **As proposed under the AICTE rural internship programme, activities under Societal or social internship, particularly in rural areas, shall be considered for 40 points under AICTE activity point programme.**

III Semester Syllabus

MATHEMATICAL CONCEPTS FOR INFORMATION TECHNOLOGY

Contact Hours/Week	:	3L + 0T	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	NMAT3C			

Prerequisites: Engineering Mathematics-I and Engineering Mathematics-II.

Course objectives: This course will enable students to:	
1.	Introduce the concept of analytic function, transformation for mapping.
2.	Introduce the concept of complex variables to evaluate the integrals.
3.	Introduce the concept of partial differential equations, use separation of variable method to solve wave, heat and Laplace equations.
4.	Develop and conduct appropriate experimentation, analyze and interpret data and use engineering judgment to draw conclusion.
5.	Introduce the basic concepts and applications of probability in engineering.

UNIT-I

Complex Variables

Functions of complex variable, Definition of Limit, Continuity, Differentiability. Analytic functions, Cauchy's-Reimann equation in Cartesian and polar forms (Statement only), Properties of analytic functions (Statement only). Geometrical representation of f(z)=w, Conformal transformation: w=ez, $w=z+\frac{1}{z}$, w=z2.

8 Hours

UNIT-II

Complex Integration

Bilinear transformation, Properties, Complex integration, Cauchy's theorem (with proof), Converse of Cauchy's theorem, Cauchy's integral formula (with proof), residues, residues theorem, calculation of residues.

8 Hours

UNIT – III

Partial differential equations (P.D.E.)

Formation of Partial Differential Equation, Solution of Langrange's Linear P.D.E. of the type Pp+Qq=R. Method of Separation of Variables. Applications of P.D.E.: Classification of PDE, solution of one dimensional heat wave and two dimensional Laplace's equation by the method of separation of variables.

8 Hours

UNIT-IV

Statistics

Introduction, Definitions, Curve Fitting, equation of Straight line, parabola and exponential, correlation and regression, formula for correlation coefficient, regression lines and angle between the regression lines.

7 Hours

UNIT-V

Probability Theory

Basic terminology, Definition of probability, Probability and set notations, Addition law of probability, independent events, conditional probability, multiplication law of probability, Baye's theorem.

8 Hours

TEXT BOOK:		
1	B.S.Grewal	Higher Engineering Mathematics", 43rd edition, Khanna Publications, 2015. ISBN;978-81-7409-195-5

REFERENCE BOOK:		
1	Ramana .B.V	Higher Engineering Mathematics, latest edition, Tata-McGraw Hill, 2016, ISBN;0-07-053516-7
2	Erwin Kreyszig	Advanced Engineering Mathematics, 10th edition, Wiley Publications, 2015, ISBN;978-81-7409-195-5
3	C. Ray Wylie and Louis C. Barrett	Advanced Engineering Mathematics, 6th edition, Tata-McGraw Hill 2005
4	Louis A. Pipes and Lawrence R. Harvill	Applied Mathematics for Engineers and Physicist, 3rd edition, McGraw Hill 2014.

Course Outcomes: Upon completion of this course the student will be able to:	
CO1:	**Determine** continuity/differentiability/analyticity of a function and find the derivative of a function. Identify the transformation**.**
CO2:	**Evaluate** a contour integral using Cauchy's integral formula. Compute singularities and also the residues**.**
CO3:	**Formulate and solve** partial differential equations. Apply separation of variable method to solve wave, heat and Laplace equations.
CO4:	**Apply** least square method to fit a curve for the given data and evaluate the correlation coefficient and regression lines for the data.
CO5:	**Determine** the nature of the events and hence calculate the appropriate probabilities of the events.

ANALOG AND DIGITAL ELECTRONICS

Contact Hours/ Week	:	3L+0T	Credits	:	4.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00			
Sub. Code	:	NIS31	SEE Marks	:	50

Course objectives:

This course will enable students to:

1.	Understand the concepts of analog circuits designing using Op-Amps.
2.	Apply the different techniques of simplification of Boolean Expressions.
3.	Understand the concepts and operation of basic sequential logic Circuits.
4.	Understand the design concepts of sequential logic circuits.
5.	Understand the design of combinational and sequential circuits.

UNIT I

Introduction to Operational Amplifier: Ideal V/s Practical Opamp, Performance Parameters, Operational Amplifier Applications Circuits: Peak-Detector Circuit, Sample-and-Hold, Comparator, Active Filters, Non-Linear Amplifier, Relaxation Oscillator, Current-to-Voltage Converter, Voltage-to-Current Converter. Data Acquisition Systems: Digital-to-Analog Converters (DACs) and Analog-to-Digital Converters (ADCs)(Successive Approximation type only).

9 Hours

UNIT II

Simplification of Boolean Expressions:

Sum-of-Products Form, Simplifying Logic Circuits, Algebraic Simplification, Designing Combinational Logic Circuits, Karnaugh Map Method, Quine-McLuskey method, Decimal approach and VEM Techniques, Design of Combinational Logic Circuits to solve the real world problems.

8 Hours

UNIT III

FLIP-FLOPS and its Applications:

Basic Principle of Flip-Flop, Different types of Flip-Flops: RS FF, SR FF Clocked SR FF, JK FF, Master-Slave FF, D FF, T-FF and its applications and Inter conversion of FFs.

8 Hours

UNIT IV

Registers and Counters: **Registers:** Definition of Register, Basic Principles of Register, Shift-Registers, Uni-Directional Shift Register, Bi-Directional Shift Register, IC Shift-Register(IC74LS95). **Counters:** Definition of Counter, Classification of Counters, Asynchronous Counters (Ripple and Binary), Synchronous Counters, Design of Asynchronous and Synchronous Counters.
7 Hours
UNIT V
MSI Logic Circuits: Decoders: BCD-to-7-Segment Decoder/Drivers, Encoders, Multiplexers (Data Selectors), Multiplexer Applications, Demultiplexers (Data Distributors).
7 Hours

TEXT BOOK:		
1	Anil K Maini, Varsha Agarwal	Electronic Devices and Circuits, Wiley 2012
2	Ronald. J. Tocci, Neal S Widner, Gregory L Mocs	Digital Systems, Principles and Applications, 10th Edition, Pearson Publications.

REFERENCE BOOKS:		
1	David A. Bell	Electronic Devices and Circuits, Fifth Edition, Oxford University Press, 2010, ISBN-13-978-0-19-569340-9.
2.	Thomas L. Floyd	Digital Fundamentals, Eleventh Edition, Pearson, 2015, ISBN 10: 1-292-07598-8.
3.	S Salivahanan and S Arivazhagan	Digital Circuits and Design, Fourth Edition, Vikas Publishing House Pvt. Ltd.2012.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: **Design** analog circuits using Operational Amplifiers.
CO2: **Apply** simplification techniques to solve the problems.
CO3: **Solve** problems on data processing circuits.
CO4: **Design** the sequential logic circuits such as counters and registers for the specific needs.
CO5: **Design** combinational logic circuits to solve the real world problems.

PROGRAMS LIST:

1. Design and implement a differentiator and Miller integrator circuit using Operational Amplifier. Plot the transfer characteristic.
2. Design and implementation of Half-adder and Full adder using minimum number of NAND gates only.
3. Design and implement the given 3 variable SOP expression using dual 4:1 MUX IC74LS153.
4. Design and implement the Full adder and Full subtractor using decoder and other logic gates.
5. Implement the following using 4-bit shift register IC 74LS95.
   a) Right Shift b) SISO c) PIPO d) PISO e) SIPO
   f) Left Shift g) Ring Counter h) Johnson Counter
6. Design a sequence generator to generate the given sequence using shift Register IC and other gates.
7. Design and implement 3-stage Asynchronous (mod-8) counter using MS J-K flip flops IC7476.
8. Implement UP-Down pre-settable counter using IC 74LS190 for the given mod N.
9. Design and implement a 3-bit binary mod-n synchronous counter using MS J-K FF IC74LS76.
10. Implement asynchronous mod-8 counter using decade counter IC74LS90 and decoder IC7447 to display values from 0 to 9 using 7-segment display.

DATA STRUCTURES AND APPLICATIONS

Contact Hours/Week	:	3L + 2P	Credits	:	4.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	NIS32			

Course objectives:
This course will enable students to:

1. Describe the efficient data storage mechanisms for easy access.
2. Describe the properties of various data structures such as stacks, queues, lists, and trees.
3. Implement Stack and Queue data structures and their applications.
4. Design and implement various types of linked lists, trees and their applications.
5. Apply the knowledge in selecting an appropriate data structure for a problem to be solved.

UNIT I

Structures and Unions: Defining a Structure, declaring Structure variables, accessing Structure members, Structure initialization, copying and comparing Structure variables, operations on individual members, array of Structures, array within Structure, Structure within Structure, Structures and Functions, Unions, size of structures.
File management in C: Defining and Opening a file, Closing a file, Input/Output operations on files - getc(), putc(), getw(), putw(), fscanf(), fprintf(), Error handling during I/O operations - feof(), ferror(), Random access to files - ftell(), rewind(), fseek(), Command line arguments.
(Text Book 1: 10, 12)

8+5 Hours.

UNIT II

The Stack: Definition and Examples, representing Stacks in C, Infix, Applications of stacks: Postfix, and Prefix expressions, conversion and evaluation.
Recursion: Recursive Definition and Processes, Recursion in C, Writing recursive programs: The Towers of Hanoi Problem, Efficiency of Recursion.
Queues: The Queue and Its Sequential Representation: C implementation of Queues, Insertion, Deletion and Display operations, Types of Queues (Linear, Circular).
(Text Book2: 2, 3.1, 3.2, 3.3(only the Towers of Hanoi Problem), 3.5. 4.1(excluding Queue as an ADT))

8+5 Hours.

UNIT III

Dynamic memory allocation: malloc(), calloc(), realloc(), free().
(Text Book 1: 13.1-13.6)

Linked lists: Inserting and removing nodes from a list, linked implementation of stacks, getnode and freenode operations, linked implementation of queues, examples of list operation, list implementation of priority queues, header nodes.

Lists in C: allocating and freeing dynamic variables, linked lists using dynamic variables, queues as lists in C, examples of list operations in C, non-integer and non-homogeneous lists, Addition of two polynomials, implementing header nodes.

(Text Book2: 4.2, 4.3(except array implementation of list, Limitations of array implementation, comparing dynamic and array implementations of list))

8+5 Hours.

UNIT IV

Other List Structures: Circular lists, stack as a Circular list, queue as a Circular list, primitive operations on circular lists, the Josephus problem, header nodes, Doubly linked lists, Primitive operations on Doubly linked list.

(Text Book2: 4.5(except addition of long positive integers using circular and doubly linked list))

7+6 Hours.

UNIT V

Trees: Operations on Binary Trees, Applications of Binary Trees, Binary Tree Representations: Node representation of Binary Trees, Internal and External Nodes, Implicit array representation of Binary Trees, Binary Tree Traversals in C.

Trees and Their applications: C Representations of Trees, Tree Traversals, General Expressions as Trees, Evaluating an Expression Tree, Constructing a Tree.

(Text Book2: 5.1, 5.2, 5.5(except choosing Binary Tree Representation, Traversal using a Father field, Heterogeneous Binary Trees))

8+5 Hours.

Self-study Concepts:

Priority and Double Ended Queues
Threaded Binary Trees - definition and types

NOTE: Self-study topics are assessed only in CIE-Quizzes/ Assignments

TEXT BOOKS:

1.	E.Balagurusamy	Programming in ANSI C, 7th Edition, Tata McGraw-Hill Publications, 2017. (Unit I)
2.	Yedidyah Langsam, Moshe J. Augenstein, Aaron M. Tenenbaum	Data structures using C and C++, PHI/Pearson, 2nd Edition, 2015.

REFERENCE BOOKS:

1.	Horowitz, Sahni and Anderson-Freed	Fundamentals of Data Structures in C, 2nd Edition, Universities Press Pvt. Ltd., 2011

Course outcomes:

After the completion of this course, students will be able to:

1. **Apply** advanced C programming techniques like pointers, structures and files to develop solutions for given problems.
2. **Implement** different data structures like Stacks and Queues using static memory allocation technique.
3. **Implement** different types of Linked Lists using dynamic memory allocation technique.
4. **Apply** the knowledge of Stacks, Queues and linked lists to design and develop solutions to given problems.
5. **Implement** non-linear data structures such as trees and their applications using dynamic memory allocation technique.

PROGRAMS LIST

1. Write a C program to create a sequential file with at least five records, each record having the structure shown below:

EMPLOYEE_ID	NAME	DEPARTMENT	SALARY	AGE
Non-Zero Positive integer	25 Characters	25 Characters	Positive Integer	Positive integer

Write necessary functions to perform the following operations:

a) to display all the records in the file.
b) to search for a specific record based on EMPLOYEE_ID.

2. Develop and implement a STACK of integers using array and perform the following operations: (a) PUSH (b) POP (c) DISPLAY and (d)check whether the contents of stack form a palindrome.
3. Write a C program to convert
   (a) the given infix expression to postfix expression.
   (b) the given infix expression to prefix expression.
   (c) to evaluate a given prefix/postfix expression.

4. Develop and implement linear QUEUE of strings using array and perform the following operations: (a) insertion, (b) deletion and (c) display.
5. Develop and implement CIRCULAR QUEUE of integers using array and perform the following operations: (a) insertion, (b) deletion and (c) display.
6. Develop and implement singly linked list with integer data and perform the following operations:
   a) to insert a node at the end of the list.
   b) to delete the first node in the list.
   c) to insert a node at the specified position in the list (1**<=pos<=n** where **'n'** is the total number of nodes in the list & **'pos'** is the position where data is to be inserted).
   d) to display the contents of the list.
   e) to reverse a given list.

   [**NOTE:** either of the operations a, b, d & e or operations a, b, c & d must be specified in the examination].

7. Develop and implement two ***ordered singly linked lists*** with the following operations:
   a) insert into list1.
   b) insert into list2.
   c) to perform UNION of list1 and list2
   d) to perform INTERSECTION of list1 and list2
   e) display the contents of all three lists.
8. Develop and implement a STACK of integers using singly linked list and perform the following operations: (a) PUSH (b) POP (c) DISPLAY.
9. Develop and implement linear QUEUE of integers using singly linked list and perform the following operations: (a) insertion, (b) deletion and (c) display.
10. Develop and implement addition of two polynomials with two coefficients using singly linked lists.
11. Develop and implement doubly linked list with header node with the following operations: (Header node should maintain the count of number of nodes in the list after each operation).
    a) Insert a node at the end of the list.
    b) Insert a new node next to a node whose information field is specified.
    c) To delete first node if pointer to the last node is given.
    d) To delete a node whose information is given.
    e) To display the contents of the list.
    f) To swap n^{th} and m^{th} nodes in the list.
12. Develop and implement DEQUE using doubly linked list to perform the following operations: insertion, deletion and display.

13. Develop and implement binary search tree (BST) of integers to perform the following operations:
    a) Insert into a BST.
    b) Traverse the tree in inorder/ preorder/ postorder.
    c) Delete a given node from the BST.
14. Develop and implement an expression tree for a given valid postfix expression and evaluate the expression tree.

COMPUTER ORGANIZATION

Contact Hours/ Week	:	3 L+ 0 T	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Sub. Code	:	NIS33	SEE Marks	:	50

Course objectives:

This course will enable students to:

1.	Understand the basic organization and architecture of computer.
2.	Explore the ISA and use of different addressing modes to design assembly language programs.
3.	Write control sequences required for execution of instructions.
4.	Design arithmetic, logic and floating-point units for different data sizes.
5.	Demonstrate the working of memory hierarchy in computer.

UNIT I

Basic Structure of Computer: Functional Units, Basic Operational Concepts, Bus Structures, Performance - Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement. Machine Instructions and Programs: Numbers, Arithmetic Operations and Characters - Number Representation, Addition of Positive Numbers, Addition and Subtraction of Signed Numbers, Overflow in Integer Arithmetic, Characters, Memory Location and Addresses - Byte Addressability, Big-endian and Little-endian Assignments, Word Alignment, Accessing Numbers, Characters, and Character Strings, Memory Operations, Instructions and Instruction Sequencing - Register Transfer Notation, Assembly Language Notation, Basic Instruction Types, Instruction Execution and Straight-Line Sequencing, Branching, Condition Codes.

8 Hours

UNIT II

Addressing Modes - Implementation of Variables and Constants, Indirection and Pointers, Indexing and Arrays, Relative Addressing, Additional Modes, Basic Input and Output Operations. Stacks and Queues, Subroutines - Subroutine Nesting and the Processor Stack, Parameter Passing, The Stack Frame, Basic Processing Unit: Some Fundamental Concepts - Register Transfers, Performing an Arithmetic or Logic operation, Fetching a Word from Memory, Storing a word in Memory.

8 Hours

UNIT III
Basic Processing Unit: Execution of a Complete Instruction - Branch Instructions, Multiple Bus Organization, Hard wired Control - A Complete Processor, Micro programmed Control - Microinstructions. Arithmetic: Addition and Subtraction of Signed Numbers - Addition/Subtraction Logic Unit, Design of Fast Adders - Carry-Lookahead Addition.
8 Hours

UNIT IV
Arithmetic: Multiplication of Positive Numbers, Signed Operand Multiplication - Booth Algorithm, Fast Multiplication - Bit-Pair Recoding of Multipliers, Carry-Save Addition of Summands, Integer Division, Floating-point Numbers and Operations - IEEE Standard for Floating-Point Numbers, Arithmetic Operations on Floating-Point Numbers - Addition and Subtraction Operations,
8 Hours

UNIT V
Memory System: Some Basic Concepts, Semiconductor RAM Memories-Internal Organization of Memory Chips, Static Memories, Asynchronous DRAMs, Synchronous DRAMs, Structure of Larger Memories, Memory System Considerations, Read Only Memories-ROM, PROM, EPROM, EEPROM, Flash Memory, Speed, Size, and Cost, Cache Memories -Mapping Functions.
7 Hours

Self-Study Component

- Instruction Cycle
- Cache Mapping Problems
- Case study on multi core processor
- Basics of Interrupts

NOTE: Self-study topics are assessed only in CIE-Quizzes/ Assignments

TEXT BOOKS

1.	Carl Hamacher, Zvonko Vranesic, Safwat Zaky	Computer Organization. Ed 5. TMH. 2002. Chapters: 1.2, 1.3, 1.4, 1.6.1, 1.6.2, 1.6.4, 1.6.7, 2.1 to 2.9 (except 2.6), 7.1 to 7.5.1, 6.1 to 6.7.2, 4.1, 4.2.1 to 4.2.5, 4.4,4.5,5.1 to 5.4, 5.5.1, 5.5.2.

REFERENCE BOOKS		
1.	William Stallings	Computer Organization & Architecture. Ed7. PHI. 2006.
2.	Vincent P. Heuring & Harry F. Jordan	Computer Systems Design and Architecture. Ed2. Pearson Education. 2004.
3.	David A. Patterson, John L. Hennessy	Computer Organization and Design, The Hardware/Software Interface, Ed5, Elsevier Publication, 2016 ISBN Number, 9351073378

Course Outcomes: Upon completion of this course the student will be able to:	
CO1:	**Analyze** the performance of a basic computer system.
CO2:	**Apply** the knowledge of addressing modes to develop an efficient Assembly language code for a given problem.
CO3:	**Design** control sequence for the given instruction on different CPU bus structures.
CO4:	**Apply** appropriate technique to solve arithmetic related problems in computer.
CO5:	**Design** static or dynamic memory for different data sizes.

OOPS WITH C++ LABORATORY

Contact Hours/Week	:	2 P	Credits	:	1.0
Total Lecture Hours	:	-	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course Code	:	NISL31			

Course objectives:	
This course will enable students to:	
1.	The course provides the basic principles of object oriented programming using C++.
2.	The course introduces the topics such as classes, overloading, data abstraction, information hiding, encapsulation, inheritance, polymorphism and templates.
3.	The course briefly covers C++ implementation and object oriented considerations for software design.

1. Introduction to input output operations of C++

Reference variables, Enumerators, Accessing global variables, Memory dereferencing operations, Manipulators

2. Introduction to Functions of C++

Function prototyping and Function Definitions, Call by value and call by reference, Inline function, default arguments and const arguments, Function overloading.

3. Introduction to classes and objects

Definition of a class and member functions, Use of private functions and nested classes, Array of objects and passing object as arguments, Static data members and static member functions, Friend functions and friend classes, Returning objects

Examples:

A. Define a class batsman with the following specifications: Data members: batsman code, batsman name, innings, notOut, runs, average. Member Function: to compute batting average (calcavg()), read values for data members and invoke the function calcavg(). The function to display the data members on the screen in tabular form using manipulators and find out best batsman. Declare calcavg() as private member and invoke the same in read function. (batavg =runs/(innings-notOut)).

B. Write a C++ program to create a class called TIME. Accept two valid times in the form hh:mm:ss, validate the time and display the result. Illustrate the use of objects as function arguments and perform the addition of two times in the hours, minutes and seconds format. If the hour crosses more than 24, print in terms of days.

C. Write a C++ program to implement a simple calculator with basic operations addition, subtraction, multiplication and division using classes and objects. Use enumerated data type to select the operation and define all the member function as inline.

4. Introduction to Constructors and Destructors

Declaring and defining a constructor in the class, Usage of different types of constructors, Constructor Overloading, Constructors with default arguments, Dynamic Initialisation of Objects, Dynamic Constructors, Declaring and defining Destructors in Class.

5. Programs on Operator Overloading

Declaring and defining an operator function, Overloading Unary operators and Binary operators using member function and friend function

Examples:

A. Write a C++ program to create a class called complex. Implement the following operations by overloading the operators +, - and *. Read and display the complex number by overloading the operator >> and << respectively.
   i. Complex c3=c1+c2
   ii. Complex c3=c1-c2
   iii. Complex c3=c1*c2
   Where c1, c2 and c3 are objects of type complex.

B. Write a C++ program to create a class called STRING and implement the following operations by writing an appropriate constructor, an overloaded operator '+' and '>='and illustrate the use of friend function in operator overloading.
   i. STRING s1="SIT"
   ii. STRING s2="TUMAKURU"
   iii. STRING s3=s1+s2
   iv. Read the values for strings during run-time
   v. Compare any two strings in terms of length by overloading the operator ">=".

C. Write a C++ program to create a class called VOLUME to compute the volume of regular objects like Cube (a3), Cuboids (l*b*h), Sphere (4/3 pie r3) and Cone (1/3pie r2h). Declare the appropriate data members; overload the constructors to initialize the data members suitably. Write a friend function called compute() to find the volumes of objects. Also keep track of number of object created and destroyed using static data members.

D. Write a C++ program to do student mark analysis using static data member, default argument and friend function for class. Define a class student with data members USN, total, m1, m2, m3, name, grade, avg and static variable count. Member functions: to read data, to calculate average and grade and to display the data. Define one more class with name personal with data members address and mobile number and member functions to read data and to display. Include the following specification to the program,

- Define function by name grade_point (to raise flag for pass) with default value 50.
- Define printline function (to print a line) with default value 70 for range and '*'for line.
- Make display function as friend for both classes.
- Use static members to keep a count of passed students.

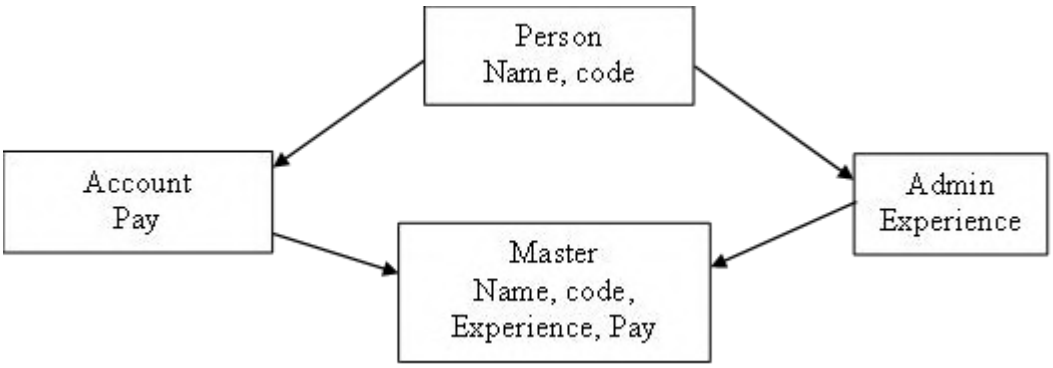
6. Introduction to Inheritance and Polymorphism

Definition of a basic lass and derived class, Different types of inheritance, Virtual base class, Abstract class, Constructors and destructors in inheritance, Private and protected data members and functions in inherited classes.

Examples:

A. Write a C++ program to create a class called STUDENT with data members USN, Name and Age. Using Inheritance, create the classes UGSTUDENT and PGSTUDENT having fields as Semester, Fees and Stipend. Enter the data for at least 5 students and validate the semester. Find the semester wise average age for all UG and PG students separately.

B. Consider a class diagram below. The class Master derives information from both Account and Admin classes which in turn derive information from the class person. Define all the four classes and write a program to create, update and display the information contained in Master objects. And also print appropriate messages if record is not present.



Create a base class called SHAPE. Derive three specific classes called triangle, rectangle and circle from base shape. Write C++ program to initialize base class data members, to compute and display the area of figures. Make member function as a virtual function and redefine this function in the derived classes to suit their requirements.

TEXT BOOKS		
1.	E Balagurusamy	Object Oriented Programming with C++, 5th Edition, Tata McGraw Hill, 2014. ISBN: 9780071072830

REFERENCE BOOKS		
1.	Herbert Schildt	The Complete reference C++, 4th Edition, Tata McGraw Hill, 2017. ISBN: 0-07-212124-6.
2.	Sourav Sahay	Object- Oriented Programming with C++, Oxford University Press, 2006. ISBN:9781628708547

Course Outcomes: Upon completion of this course the student will be able to:	
CO1:	**Apply** basic concepts of OOPs to develop programs.
CO2:	**Develop** programs to handle different types of overloading.
CO3:	**Develop** programs using different types of inheritance and polymorphism.

UNIVERSAL HUMAN VALUES SOCIAL CONNECT AND RESPONSIBILITIES

Contact Hours/Week	:	1 + 0 (L+T)	Credits	:	1.0

ENGINEERING APPLICATIONS OF MATLAB

Contact Hours/ Week	:	1L+2P	Credits	:	2.0
Total Lecture Hours	:	13	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Sub. Code	:	AECIS31			

Course objectives:
This course will enable students to:

1.	Understand the fundamental concepts of MATLAB Programming
2.	Apply the fundamental concepts of MATLAB.
3.	Create the MATLAB scripts.
4.	Debugging the applications and control the program behavior.
5.	Understand the concept of data visualization using the MATLAB.

1. An Overview of MATLAB

- MATLAB Interactive Sessions,
- Menus and the Toolbar,
- Arrays, Files, and Plots,
- Script Files and the Editor/Debugger.
- The MATLAB Help System and Problem-Solving Methodologies.

2L+4P Hours

2. Numeric, Cell, and Structure Arrays

- One and Two-Dimensional Numeric Array,
- Multidimensional Numeric Arrays,
- Element-by-Element Operations, Matrix Operations,
- Polynomial Operations Using Arrays, Cell Arrays and Structure Arrays.

2L+4P Hours

3. Functions and Files

- Elementary Mathematical Functions,
- User-Defined Functions,
- Additional Function Topics,
- Working with Data Files.

3L+6P Hours

4. Programming with MATLAB

- Program Design and Development,
- Relational Operators and Logical Variables,
- Logical Operators and Functions,
- Conditional Statements, for Loops, while Loops and switch Structure, Debugging MATLAB Programs, and Applications to

Simulation. **3L+6P Hours**
5. Advanced Plotting ➢ X-Y Plotting Functions, ➢ Additional Commands and Plot Types, ➢ Interactive Plotting in MATLAB, ➢ Three-Dimensional Plots. **3L+6P Hours**

3.	Sergey E. Lishevski	Engineering and Scientific Computations using MATLAB, John Wiley & Sons, Inc, 2003. ISBN:978-0-471-46200-2

Course Outcomes: Upon completion of this course the student will be able to:	
CO1:	**Apply** the fundamental concepts of MATLAB to **Solve** the problems.
CO2:	**Develop/Apply** MATLAB functions to **solve** the problem.
CO3:	**Design and develop** applications to **solve** the real-world problems **using** MATLAB tool.

INTRODUCTION TO BLENDER TOOL: ANIMATION AND 3D CREATION

Contact Hours/Week	:	1L+2P	Credits	:	2.0
Total Lecture Hours	:	13	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course Code	:	AECIS32			

Course objectives:
This course will enable students to:

1.	Understand the concept of Blender Software tool.
2.	Create an animation required for the applications.
3.	Create 3D text patterns for the applications.

1. **Exploring the Blender Interface**: Basic Key Commands, The Blender Screen, Window Types, The User Preferences Window, Open, Saving and Appending Files, Packing Data, Importing Objects (from other file formats)
2. **Working with Viewports (windows)**: Moving Around in 3D Space, Window and Button Control, Creating Viewports

3L+6P Hours

3. **Creating and Editing Objects**: Working with Basic Meshes, Using Main Modifiers to Manipulate Meshes, Edit Mode- Mesh Editing, The Tool Shelf, Proportional Editing, Joining/Separating Meshes, Boolean Operations
4. **Materials and Textures**: Basic Material Settings, Halo Settings, Basic Texture Settings, Using Images and Movies as Textures, Displacement Mapping

3L+6P Hours

5. **Setting Up a World:** Using Color, Stars and Mist, Creating a 3D Cloud Background, Using an Image in the Background
6. **Lighting and Cameras:** Camera Settings and Options, Lighting Types and Settings, Indirect Lighting

2L+4P Hours

7. **Render Settings**: Basic Setup Options, Rendering a JPEG Image, Creating an MPEG Movie File
8. **Ray-Tracing (mirror, transparency, shadows)**: Lighting and

Shadows, Reflection (mirror) and Refraction (transparency)
3L+6P Hours

9. Animation Basics: Basic Key-framing and Auto Key-framing, Working with the Graph Editor and Dope Sheet, Animating Materials, Lamps and World Settings (and more)
10. Adding 3D Text: Blender 3D Text Settings, Converting to a Mesh.
2L+4P Hours

TEXT BOOKS		
1	James Chronister	Blender Basics Classroom Tutorial, 5th Edition, 2017

REFERENCE BOOKS		
1	John M Blain	An Introduction to Blender 3D - A Book For Beginners, 2011
2.	Blender 3.2 Reference Manual, https://docs.blender.org/manual/en/latest/	

Course Outcomes: Upon completion of this course the student will be able to:	
CO1:	**Comprehend** the fundamental concept of Blender tool.
CO2:	**Design** an animation and adding a 3D text for the applications.
CO3:	**Apply** the Texture, Rendering, and Lighting source for an image.

DATA VISUALIZATION USING R

Contact Hours/Week	:	1L+2P	Credits	:	2.0
Total Lecture Hours	:	13	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course Code	:	AECIS33			

Course objectives:
This course will enable students to:

1.	Understand the different ways of representation of data.
2.	Design and create data visualizations plots.
3.	Conduct exploratory data analysis using data visualization.
4.	Identify opportunities for application of data visualization in various domains.

I Data Visualization

1. Introduction to R Programming: Overview of R Programming, Introduction to data visualization, Downloading and installing, Help of Function, Viewing documentation, General issues in R, Package Management

2 L+4P Hours

2. Data Inputting in R
- a. Data Types
- b. Sub-setting
- c. Writing data
- d. Reading from csv files
- e. Creating a vector and vector operation
- **f.** Initializing data frame

2 L+4P Hours

3. Exploring the data before visualization:
- a. Exploring Datasets Available in the R Base Package,
- **b.** Introduction to ggplot2 Package

1 L+2 P Hours

4. Ggplot for plots and graphs: Creating bar chart, dot plot, Histograms

1 L+2P Hours

5. Data analysis using Boxplots

1 L+2P Hours

6. Scatter plots for 2D and 3D data set **7.** Heat map and Map visualization **1 L+2P Hours**
II. Application-based data visualization:
1. Plotting single continuous variable, Plotting single discrete variable 2. Plotting two continuous variables, Plotting one continuous and one discrete variable **2 L+4P Hours**
3. Weather forecasting **4.** Social Networking **1 L+2P Hours**
5. Visualizing clusters using Dendograms 6. Remote sensing data analysis **2 L+4P Hours**

Course Outcomes: Upon completion of this course the student will be able to:	
CO1:	**Design and generate** different types of plots for various types of data available.
CO2:	**Apply** the appropriate data visualization methods to analyze the real-time application data.

CO3:	**Analyze** and **Evaluate** the effectiveness of data visualization to various domains of data analytics.

UNIX AND SHELL PROGRAMMING

Contact Hours/Week	:	1L+2P	Credits	:	2.0
Total Lecture Hours	:	13	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course Code	:	AECIS34			

Course objectives: This course will enable students to:	
1.	Describe the architecture of Unix Operating System and demonstrate the various UNIX commands along with their options and arguments.
2.	Apply suitable commands and filters for file processing.
3.	Solve Text processing problems using Regular Expressions tools like Grep.
4.	Develop shell scripts to automate tasks on a computer.

	Exercise Problems
1.	Introduction to Unix Operating System and demonstrate the basic general shell commands such as date, cal, who, uname, echo, Bc, man, history, exit. **2 L+4 P Hours**
2.	Illustrate the basic directory commands like pwd, mkdir, cd, rmdir. **1 L+2 P Hours**
3.	Understand the basic file commands like cat, cp, mv, rm, ls, wc, cmp, chmod. **1 L+2 P Hours**
4.	Query a data file using filter commands in UNIX such as head, tail, cut, tr, nl, pr, join. **2 L+4 P Hours**
5.	Search for a regular expression in a file using grep, sed command. **2 L+4 P Hours**
6.	Learn the various features and controls of VI editor like edit commands, navigation commands, the ex-mode.

	1 L+2 P Hours
7.	Understand shell programming and the conditional statements in it. **1 L+2 P Hours**
8.	Application of multi way branching in shell programming. **1 L+2 P Hours**
9.	Demonstration of numeric and string comparison in shell programming. **1 L+2 P Hours**
10.	Illustrate the different testing and loops in shell programming. **1L+2 P Hours**

TEXT BOOKS		
1.	Sumitabha Das.	Unix- concepts and applications, Ed 4. Tata McGraw-Hill. 2017, ISBN: 9780070635463.

Course Outcomes: Upon completion of this course the student will be able to:	
CO1:	**Analyze** the role of various components in the architecture of Unix Operating System and use the various UNIX commands to interact with the operating system.
CO2:	**Design** solutions for Text processing problems using Regular Expressions tools like grep and sed.
CO3:	**Develop** shell scripts to automate tasks on a computer.

FOUNDATIONS OF ENGINEERING MATHEMATICS-I

(For Lateral Entry students only)

Contact Hours/Week	:	2L + 2T	Credits	:	3.0
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Course Code	:	NMATDIP3			

Prerequisites: Basics in differential calculus, Integral calculus and vectors.

Course Learning Objectives: This course will enable students to master the basic tools of differential and vector calculus, Taylors series, Indeterminate forms (L' Hospital Rule) and differential equations and become skilled for solving problems in science and engineering.

Course objectives: This course will enable students to:

1. Known the behavior of the polar curve and its application.
2. Learn the notation of partial differentiation and determine the value of the Jacobians.
3. Learn how a function of single variable can be expanded as a Taylor's series and Maclaurin series and Handle the indeterminate form.
4. Learn how the vectors govern the physical models.
5. Known how the real word problems governed by the first order differential equations.

UNIT-I

Differential Calculus -I

Polar curves: angle between the radius vector and tangent, angle of intersection of polar curves. Pedal equation for polar curves. Curvature and radius of curvature in pedal form. (Without proof)

05+05 Hours

UNIT-II

Differential Calculus -II

Partial differentiation: Partial derivatives, Total derivatives, differentiation of composite functions. Jacobians.

06+06 Hours

UNIT-III

Differential Calculus –III:

Taylor′s and Maclaurin′s series expansions for one variable (statement only). Indeterminate forms L′ Hospital Rule (without proof) (Only 0/0, ∞/∞,0×∞ and ∞-∞ form)

05+05 Hours

UNIT-IV

Vector Calculus:

Vector Differentiation: scalar and vector fields, Gradient, directional derivative, divergence, curl-physical interpretation; solenoidal and irrotational vector fields-illustrative problems.

05+05 Hours

UNIT-V

Differential Equations-I:

Solution of first order and first degree differential equations: Variable Separable, Linear differential equations and Exact differential equations.

05+05 Hours

TEXT BOOKS:

1.	Erwin Kreyzig	Advanced Engineering Mathematics, 10th edition, Wiley Publications, 2016. ISBN: 978-81-265-0827-3.
2.	B. S. Grewal	Higher Engineering Mathematics, 43rd edition, Khanna Publications, 2015. ISBN;978-81-7409-195-5.

5.	Peter V.O 'Neil	Advanced Engineering Mathematics, 7th edition, CENGAGE Learning India Pvt. Ltd. Publishers, 2012. ISBN; 978- 81-315-0310-2.

Course Outcomes: Upon completion of this course the student will be able to:	
CO1:	**Identify** a random variable as discrete and appropriate probability distribution, its parameters.
CO2:	**Identify** a random variable as continuous and appropriate probability distribution, its parameters.
CO3:	**Determine** the joint probability distribution, its mean, variance and covariance. Calculate the transition matrix, fixed probability vector for a given Markov chain.
CO4:	**Estimate** the parameter of a population, important role of normal distribution as a sampling distribution.
CO5:	**Apply** concepts of probability in information theory and coding.

IV Semester Syllabus

PROBABILITY AND ITS APPLICATIONS FOR INFORMATION TECHNOLOGY

Contact Hours/Week	:	3L+ 0T	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	NMAT4B			

Prerequisites: Mathematical Concepts for Information Technology

Course objectives

This course will enable students to:

1. Provide the foundations of probabilistic and statistical analysis mostly used in varied applications in engineering and science like disease modeling, climate prediction and computer networks etc.
2. Introduce the concept of a probability density function of a continuous random variable.
3. Deal with multiple random variables and introduction of the most important types of stochastic processes.
4. Investigate the variability in sample statistics from sample to sample, measure of central tendency & dispersion of sample statistics and pattern of variability of sample.
5. Understand the fundamentals of coding theory, concept of source coding and channel coding theorem.

UNIT I

Analysis of Discrete Random Variables

Discrete random variables, probability distribution and probability mass function, cumulative distributive functions, mean and variance of discrete

random variable, discrete, binomial distribution, geometric distribution, negative binomial distribution and Poisson distribution.

8 Hours

UNIT II

Analysis of Continuous Random Variables

Continuous random variable, probability distribution and probability density function, cumulative distributive functions, mean and variance of continuous random variable, continuous, exponential distribution, normal distribution, normal approximation to the Binomial and Poisson distributions.

8 Hours

UNIT III

Joint Probability

Joint probability distribution, discrete and independent random variables, expectation, covariance, correlation coefficient, probability vectors, stochastic matrices, fixed point matrices, regular stochastic matrices, Markov chains, higher transition probabilities, stationary distribution of regular Markov chains and absorbing states.

8 Hours

UNIT IV

Information Theory

Introduction, Entropy, Joint Entropy and Conditional Entropy, Relative Entropy and Mutual Information, Relationship Between Entropy and Mutual Information, Chain Rules for Entropy, Relative Entropy and Mutual Information, Jensen's Inequality and Its Consequences, Log Sum Inequality and Its Applications, Data-Processing Inequality, Sufficient Statistics, Fano's Inequality.

7 Hours

UNIT V

Sampling Distribution

Introduction, Objectives, sampling distribution, testing of hypothesis, level of significance, confidence limits, simple sampling of attributes, test of significance of large samples, comparison of large samples, sampling of variables, central limit theorem, confidence limits for unknown mean, test of significance for means of two large samples, Sampling of variables – small samples , Student's t-distribution.

8 Hours

TEXT BOOKS:

6.	Robert G Gallager	Information theory and Reliable communication, 2nd edition, Wiley Publishers, 1968.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1:	**Identify** a random variable as discrete and appropriate probability distribution, its parameters.
CO2:	**Identify** a random variable as continuous and appropriate probability distribution, its parameters.
CO3:	**Determine** the joint probability distribution, its mean, variance and covariance. Calculate the transition matrix, fixed

	probability vector for a given Markov chain.
Co4:	**Estimate** the parameter of a population, important role of normal distribution as a sampling distribution.
CO5:	**Apply** concepts of probability in information theory and coding.

DESIGN AND ANALYSIS OF ALGORITHMS

Contact Hours/Week	:	3L + 2P	Credits	:	4.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course Code	:	NIS41			

Course objectives:

This course will:

1. Give an introduction to the design and analysis of algorithms. (Synthesis)
2. Expose students to prove the correctness and analyze the running time of the basic algorithms. (Analysis)
3. Enable students to compare the running time of sorting and searching algorithms. (Comprehension)
4. Create an awareness of applying the algorithms and design techniques to solve problems. (Application)

UNIT I

Introduction: Notion of algorithm, Fundamentals of Algorithmic Problem Solving, Fundamentals of the Analysis of Algorithm Efficiency: Analysis frame work, Asymptotic Notations and Basic Efficiency Classes, Mathematical Analysis of Non-recursive and Recursive Algorithms.
[Chapters: 1.1, 1.2, 2.1-2.4]

08 Hours.

UNIT II

Brute Force: Selection Sort and Bubble Sort, Sequential Search and Brute-Force String Matching.
Divide and Conquer: Mergesort, Quicksort, Binary Search.

[Chapters: 3.1, 3.2, 4.1- 4.3]

07 Hours.

UNIT III

Decrease and Conquer: Insertion Sort, Depth First Search, Breadth First Search, Topological Sorting, Algorithms for Generating Combinatorial Objects.

Transform and Conquer: Presorting, Balanced Search Trees: AVL Tree, Heaps and Heapsort. [Chapters: 5.1 – 5.4, 6.1, 6.3 (only AVL Trees),6.4]

08 Hours.

UNIT IV

Dynamic Programming: Computing a Binomial Coefficient, Warshall's and Floyd's Algorithms, The Knapsack Problem.

Greedy Technique: Prim's Algorithm, Kruskal's Algorithm, Dijkstra's Algorithm.[Chapters:8.1, 8.2, 8.4, 9.1-9.3]

08 Hours.

UNIT V

Space and Time Tradeoffs: Sorting by Counting, Input Enhancement in String Matching : Horspool's Algorithm.

Limitations of Algorithm Power: P, NP and NP-Complete Problems.

Coping with the Limitations of Algorithm Power: Backtracking: N-Queens, Hamiltonian Circuit Problem, Subset-Sum Problem. [Chapters: 7.1, 7.2, 10.3, 11.1]

08 Hours.

Self-Study Component:

The following topics must be studied by the students:

1. Algorithms for Generating Combinatorial Objects.
2. Limitations of Algorithm Power: P, NP and NP-Complete Problems.

NOTE: Self-study topics are assessed only in CIE-Quizzes/ Assignments

TEXT BOOKS:

1.	Anany Levitin.	Introduction to The Design & Analysis of Algorithms. Ed2. Pearson Education. 2011. ISBN: 81-7808-984-X

REFERENCE BOOKS:

1.	Ellis Horowitz, SatrajSahni and	Fundamentals of Computer Algorithms, University Press Pvt. Ltd, 2nd Edition, 2009.

	Rajasekharan.	

Course outcomes:

After the completion of this course, students will be able to:

1. **Identify** the fundamental principles of algorithm analysis and design and apply them in specific instances.
2. **Apply** design techniques such as brute force and divide-and-conquer to solve a given problem.
3. **Apply** design techniques such as decrease and conquer, transform and conquer to solve a given problem.
4. **Apply** the dynamic programming and greedy techniques to solve a given problem.
5. **Identify** the fundamental principles of space-and-time tradeoffs and apply the design techniques such as backtracking to solve a given problem.

PROGRAMS LIST:

1. Programs on Brute-Force
   a) Develop a recursive program to implement Linear Search
   b) Develop a program to find the maximum and minimum in a given list of n elements.

2. Programs on Divide and Conquer
   a) Develop a program to implement Merge Sort
   b) Develop a program to implement Quick Sort

3. Programs on Decrease and Conquer
   a) Develop a program to demonstrate Topological ordering of vertices in a given digraph.
   b) Develop a program to implement Insertion sort algorithm to sort a given set of elements
   c) Develop a program to implement to Print all nodes reachable from a given node in a digraph using Breadth First Search and Depth First Search

4. Program on Transform and Conquer
   a) Develop a program to implement to demonstrate Heap sort

5. Programs on Dynamic Programming
   a) Develop a program to implement 0/1 Knapsack problem.
   b) Develop a program to implement Compute the transitive closure of a given graph using Warshall's algorithm.
   c) Develop a program to implement All pair shortest path problem using Floyd's algorithm.

d) Find the Binomial Coefficient.

6. Programs on Greedy Technique
   a) Develop a program to implement Prim's algorithm to find minimum cost spanning tree of a given weighted graph.
   b) Develop a program to implement Kruskal's algorithm to find minimum cost spanning tree of a given weighted graph.

7. Programs on Space and Time tradeoff
   a) Develop a program to implement demonstrate string matching using Horspool's algorithm.
   b) Develop a program to perform Comparison counting sorting on a list of elements

8. Programs on Backtracking
   a) Implement a program to find a subset of a given set S = {s1, s2,.....,sn} of n positive integers whose sum is equal to a given positive integer d.
   For example, if S= {1, 2, 5, 6, 8} and d = 9 there are two solutions {1,2,6} and {1,8}.

   b) implement a program on n-Queen's problem.

ARM AND MICROCONTROLLER

Contact Hours/Week	:	3L + 2P	Credits	:	4.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course Code	:	NIS42			

Course objectives:
This course will enable students to:

1.	Understand the concept of architecture and programming of advanced embedded microcontrollers.
2.	Learn ARM family of microcontrollers that are widely used in design of real time sophisticated embedded systems like tablets, hand held devices, automation and industrial control systems.
3.	Write Embedded C programming of LPC2148 using GPIO, ADC, DAC, UART, LCD, Timers and etc.
4.	Acquire the knowledge of embedded system and its components.

UNIT I

CHAPTER 1 - EMBEDDED SYSTEM COMPONENTS: Embedded v/s General computing system, Classification of Embedded systems, Major applications and purpose of Embedded systems, Core of an Embedded System including all types of Processors, Controller and Memory.

CHAPTER 2 - ARM EMBEDDED SYSTEMS: The RISC Design Philosophy, The ARM Design Philosophy, Embedded System Hardware, Embedded System Software

8 Hours

UNIT II

CHAPTER 3-ARM PROCESSOR FUNDAMENTALS: Registers, Current Program Status Register, Pipeline, Exceptions, Interrupts, and Vector

Table, Core Extensions, Architecture Revisions, ARM Processor Families, LPC2148 Microcontroller Architecture, LPC2148 Microcontroller Architecture, Memory Mapping, Register Description.

8 Hours

UNIT III

CHAPTER 4-INTRODUCTION TO THE ARM INSTRUCTIONS SET: Data Processing Instructions and examples, Branch Instructions and examples, Load-Store Instructions and examples, Software Interrupt Instructions and examples, Program Status Register Instruction and examples. Programs: Addition, Multiplication, division and Subtraction of 16, 32-bit data, Example Programs: Looping, conditional programs like sum of memory elements, Loading Constants, Conditional Execution, and Example Programs.

8 Hours

UNIT IV

CHAPTER 5-INTERFACING Sensors**,** Actuators, GPIO, LED interfacing and programming in C**,**7 segment display interfacing and C program, stepper motor interfacing**,** Keyboard interfacing**,** Push button switch interfacing and programming in C.

8 Hours

UNIT V

INTERFACING Continued... Data Conversions (ADC, DAC), LCD interfacing and C program, Timers, Counters, Communication Protocols: UART, I2C and Programming in C.

7 Hours

PROGRAMS LIST:

1. Write an ALP to multiply two binary numbers.
2. Write an ALP to find the sum of first 10 integer numbers.
3. Write an ALP to find factorial of a number.
4. Write an ALP to add an array of numbers and store the result in internal RAM
5. Write an ALP to find the square of a number (1 to 10) using look-up table.
6. Write an ALP to find the largest/smallest number in an array of 32 numbers.
7. Write an ALP to arrange a series of 32-bit numbers in

ascending/descending order.

8. Write an ALP to count the number of ones and zeros in two consecutive memory locations.

Conduct the following experiments on LPC2148 evaluation board using evaluation version of Embedded C and Keil µvision-4 tool/compiler.

9. Interface a Stepper motor and rotate it in clockwise and anti-clockwise direction.
10. Interface a DAC and generate the following waveforms:
    a. Triangular b. Square c. Sin wave
11. Interface a 3x8 keyboard and display the key pressed on an LCD.
12. Determine Digital output for a given Analog input using Internal ADC of ARM controller.
13. Demonstrate the use of a Logic controller interface to toggle an LED On/Off.
14. Display the Hex digits 0 to F on a 7-segment LED interface, with an appropriate delay in between the digits.
15. Display “Hello World” message using Internal UART.

TEXT BOOKS		
1	Andrew N. Sloss, Dominic Symes, Chris Wright	ARM Systems Developer's Guide Designing and Optimizing System Software, Morgan Kaufmann Publishers, Elsevier Inc, 2004(Chapters 1, 2, 3)
2.	Shibu K V	Introduction to Embedded Systems, Second Edition, Tata McGraw Hill Education Private Limited, 2017. (Chapters 1.1 – 1.6 and 2.1 – 2.3)
3.	LPC214x User Manual – http://www.keil.com/dd/docs/datashts/philips/ (LPC2148, GPIO, Registers, Embedded components)	

REFERENCE BOOKS		
1	Steve Furber	ARM System on Chip Architecture, Second Edition, Pearson Education Limited, 2000.
2.	William Hohl, Christopher Hinds	ARM ASSEMBLY LANGUAGE Fundamentals and Techniques, Second Edition, CRC Press, 2015.
3.	Gibson	ARM Assembly Language an Introduction, Second Edition, 2007.

Course Outcomes:	
Upon completion of this course the student will be able to:	
CO1:	**Describe** the fundamental concept of Embedded System Architecture.
CO2:	**Describe** the ARM processor architecture and its family.
CO3:	**Develop** assembly language programs to perform specific tasks using ARM instructions.
CO4:	**Design** and **develop** embedded C programs to interface external hardware with LPC214x microcontroller.
CO5:	**Design** and **develop** the solutions for a problem using embedded system and demonstrate.

OPERATING SYSTEMS

Contact Hours/Week	:	3L + 0 T	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	NIS43			

Course objectives:	
This course will enable students to:	
1.	Define fundamental OS abstractions such as processes, threads, files etc.
2.	Visualize the intricate relationship between an operating system and its underlying hardware.
3.	Explain scheduling algorithms, deadlock detection algorithms and memory management strategies
4.	Apply the principles of concurrency and synchronization, to write concurrent programs/ software

UNIT I

INTRODUCTION: What operating systems do - User view, System view, Defining operating systems, Operating System Structure, Operating System Operations – Dual mode and multi-mode operation, Timer, Process Management; Memory Management; Storage Management; Protection and Security. [Textbook 1:chapteres 1.1, 1.4 to 1.9]

SYSTEM STRUCTURES: Operating System Services; System calls; Types of system calls; System programs; Operating System Structure –Simple structure, Layered approach, Micro kernels, Modules [Textbook 1: Chapters 2.1, 2.3 to 2.5, 2.7.4]

Self study : Hybrid Systems – Mac OS X, iOS, Android.[Textbook 1: Chapter 2.7.5]

8 Hours

UNIT II

PROCESS: Process concept, Process state, Process control block, Process scheduling, Scheduling queues, Schedulers, Context switch, Operations on processes – Process creation and termination, Inter-process communication, Shared memory and message passing systems. [Textbook 1: Chapters 3.1 to 3.4]

PROCESS MANAGEMENT: Basic concepts, CPU scheduler, Preemptive and non-preemptive scheduling, Scheduling criteria, Scheduling algorithms – FCFS, SJF, Priority and Round robin scheduling, [Textbook 1: Chapters 6.1 to 6.3.4]

Self Study : Multi-level and multilevel feedback queue scheduling[Textbook 1: Chapter 6.3.5]

8 Hours

UNIT III

THREADS: Overview, Benefits, Multi core Programming, Types of parallelism, Multi threading models. [Textbook 1: Chapters 4.1-4.3]

PROCESS SYNCHRONIZATION: Background, The Critical section problem, Petersons solution, Synchronization hardware, Mutex locks, Semaphores, Classic problems of synchronization, Bounded buffer problem. [Textbook 1: Chapters 5.1 to 5.7.1]

Self-Study : Readers writer's problem, Dining philosopher's problem.[Textbook 1: Chapters 5.7.2 , 5.7.3]

8 Hours

UNIT IV

DEADLOCKS: System model, Deadlock characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock detection and recovery from deadlock. [Textbook 1:7.1-7.7]

MEMORY MANAGEMENT: Background, Basic hardware, Address binding, Logical and physical address, swapping, Dynamic loading and linking [Textbook 1: Chapters 8.1, 8.2]

8 Hours

UNIT V

MEMORY MANAGEMENT: Contiguous memory allocation, Segmentation, Paging. [Textbook 1: 8.3, 8.4, 8.5]

VIRTUAL MEMORY MANAGEMENT: Basic concepts, Demand paging, Copy-on-write, Page replacement – FIFO, LRU, Optimal [Textbook 1:9.1-9.4]

Self-Study: Structure of page table, Hierarchical paging, Hashed

paging, Inverted paging. [Textbook 1: Chapter 8.6]
7 Hours
NOTE: Self-study topics are assessed only in CIE-Quizzes/ Assignment

TEXT BOOKS		
1	Abraham Silberschatz, Peter Baer Galvin, Greg Gagne	Operating System Concepts Wiley-India,9th Edition, 2013

REFERENCE BOOKS		
1	D.M Dhamdhere	Operating System - A Concept Based Approach, Tata McGraw- Hill, 2nd Edition, 2002
2.	P.C.P. Bhatt	Operating Systems, PHI 4th Edition, 2013

Course Outcomes: Upon completion of this course the student will be able to:	
CO1:	**Identify** the services, functions and structure of different operating systems.
CO2:	**Apply and analyze** appropriate scheduling algorithm for process selection and execution.
CO3:	**Identify and analyze** the techniques used to solve process synchronization issues.
CO4:	**Apply and analyze** various deadlock prevention, avoidance, detection and recovery mechanisms to solve real world problems.
CO5:	**Analyze** the performance of various memory management techniques and page replacement algorithms.

WEB DEVELOPMENT LABORATORY

Contact Hours/ Week	:	2P	Credits	:	1.0
Total Lecture Hours	:	26	CIE Marks	:	50
Sub. Code	:	NISL41	SEE Marks	:	50

Course objectives: This course will enable students to:	
1.	Understand the importance of the web as a medium of communication.
2.	Understand the principles of creating an effective web page, including an in-depth consideration of information architecture.
3.	Develop skills in analyzing the usability of a web site.
4.	Use JavaScript to access and use web services for dynamic content.
Exercise Problems	
1.	Design a HTML page and demonstrate how a form works. Create a form with two input fields a) Email (input type email) b) Password (input type password) c) Submit button. Change form method to POST & GET and note the difference between form submissions with different methods. Also note what happens when an action attribute is given in form. Make sure that form is not submitted if the input fields are empty. **4 Hours**
2.	Design a HTML page, learn and demonstrate how a table in HTML works. Create a table with appropriate headings and tags. Use your knowledge to design a table which looks exactly like your class routine. **2 Hours**
3.	Use Advanced CSS to create a good-looking HTML page (a signup page) with a form as created in Prog-1. Place SIT logo in the middle

	and use a background image as background. Implement both inline CSS and external CSS. **4 Hours**
4.	Using JavaScript and HTML, create a calculator which performs Addition, subtraction, multiplication, and division. Use document.getElementById("id").value to get and set value of input and output fields. **4 Hours**
5.	Use JavaScript and HTML to create a simple chat bot. Create a container with text area and button. Write JavaScript function to get text from text area and set text to chat container. Using if-else write some replies too. **2 Hours**
6.	Write JavaScript to validate the following fields of the Registration page. 1. First Name (Name should contain alphabets and the length should not be less than 6 characters). 2. Password (Password should not be less than 6 characters length). 3. E-mail id (should not contain any invalid character and must follow the standard pattern name@domain.com) 4. Mobile Number (Phone number should contain 10 digits only). 5. Last Name and Address (should not be empty). **2 Hours**
7.	Write a PHP program to accept data from the form created in program 3 and insert into MySQL database. Use mysqli_connect() and mysqli_query() to create connection and insert data. **2 Hours**
8.	Write a PHP program to fetch data from databases (inserted from program 6) and show it in a table. **2 Hours**
9.	Write a PHP program to store current date-time in a COOKIE and display the 'Last visited on' date-time on the web page upon reopening of the same page. **2 Hours**
10.	Write a PHP program to store page views count in SESSION, to increment the count on each refresh, and to show the count on web page. **2 Hours**

TEXT BOOK		
1	Randy Connolly, Ricardo Hoar	Fundamentals of Web Development, Pearson Education India, 2nd Edition,2018, ISBN:978-9332575271

Course Outcomes:	
Upon completion of this course the student will be able to:	
CO1:	**Apply** HTML and CSS to create web pages with advanced

	interactivity.
CO2:	**Implement** basic functions in JavaScript to understand client-side functionalities.
CO3:	**Develop** program in PHP to understand server-side functionalities.

JAVA PROGRAMMING LABORATORY

Contact Hours/Week	:	2P	Credits	:	1.0
Total Lecture Hours	:	00	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course Code	:	ATT			

Course objectives: This course will enable students to:	
1.	Learn why Java is useful for the design a desktop and web applications and how to implement object-oriented designs with Java.
2.	Acquire knowledge of exception handling in Java applications and design applications with threads in Java.
3.	Understand how to use Java APIs for program development and how to extend Java classes with inheritance and dynamic binding.
4.	Design a graphical user interface (GUI) using Java Applets.

1. Introduction to JAVA programming: Classes, Objects and Constructor.

Examples:

A. Write a program in Java with class Rectangle with the data fields width, length, area and color. The length, width and area are of double type and color is of string type. The methods are set_ length (), set_width (), set_ color (), and find_ area (). Create two object of Rectangle and compare their area and color. If area and color both

are the same for the objects then display “Matching Rectangles”, otherwise display “Non matching Rectangle”.

B. Consider you have a student class with data members usn, name, age, branch and sem. Use different type of constructors to initialize student objects and perform constructor overloading. Read marks of three different subjects and calculate average marks scored by each student.

2. Introduction to Inner Classes and Static Keyword

Examples:

A. With the help of an example demonstrate the use of static class, static function and static variable.

B. Consider you have an employeeDetail class with data members emp_id, emp_name, designation ,age and salary. Consider another class employeeSalary class within employee class with data members basic_sal,da and hra. Calculate the salary of each employee and display all the details (empDetails and salary) in the employeeDetail class using Nested classes concept(Static and Nonstatic)

3. Introduction to JAVA Inheritance and polymorphism.

Examples:

A. Write a program in Java to create a Player class. Inherit the classes Cricket _Player, Football _Player and Hockey_ Player from Player class.(Use abstract class as Player class).Assume your own data members and member functions.

B. Consider the trunk calls of a telephone exchange. A trunk call can be ordinary, urgent or lightning. The charges depend on the duration and the type of the call. Write a program using the concept of polymorphism in Java to calculate the charges.

4. Introduction to JAVA Package and Interface.

Examples:

A. Write a program to make a package Balance in which has Account class with Display_Balance method in it. Import Balance package in another program to access Display_Balance method of Account class.

B. Create the dynamic stack by implementing the interfaces that defines push() and pop() methods.

5. Introduction to JAVA Exception handling.

Examples:

A. On a single track two vehicles are running. As vehicles are going in same direction there is no problem. If the vehicles are running in different direction there is a chance of collision. To avoid collisions write a Java program using exception handling. You are free to make necessary assumptions.

B. Program to demonstrate how to extract information from an exception.

6. Introduction to JAVA Multithreading

Examples:

A. Write a Java program to create five threads with different priorities. Send two threads of the highest priority to sleep state. Check the aliveness of the threads and mark which thread is long lasting.

B. Write a multithreaded Java program to implement producer-consumer problem.

7. Introduction to JAVA Applets and Event handling.

Examples:

A. Create an applet to handle all mouse events.

B. Design an applet that accepts a parameter and scrolls the message repeatedly in the applet window. The banner applet has to display a different message each time it is executed.

TEXT BOOKS

1	Herbert Schildt	**Java the Complete Reference** -, 12th Edition, Tata McGraw Hill, 2021

REFERENCE BOOKS

1	Y. Daniel Liang	**Introduction To Java Programming: Comprehensive Version**, 1st Edition, Pearson India, 2018

Course Outcomes:	
Upon completion of this course the student will be able to:	
CO1:	**Apply** and **Develop** java programs that solve some simple problems based on object-oriented programming and basic building blocks of JAVA.
CO2:	**Demonstrate** java programs to design concurrent task and handling errors at run time.
CO3:	**Develop** an application to handle user information and request by user friendly GUI.

FOUNDATION OF ENGINEERING MATHEMATICS-II

(For Lateral Entry students only)

Contact Hours/Week	:	2L+ 2T	Credits	:	0.0
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Course Code	:	NMATDIP4			

Prerequisites: Basics in differential calculus, Integral calculus and vectors.

Course Learning Objectives: This course will facilitate the students with concrete foundation of ordinary differential equations, Laplace transforms, Integral calculus and numerical methods enabling them to acquire the knowledge of these mathematical tools.

Course objectives:	
This course will enable students to:	
1.	Solve second and higher order differential equations.
2.	Find the Laplace transform of the function f(t).
3.	Find the Inverse Laplace transform of the function F(s).
4.	Apply the knowledge of numerical methods in the models of various physical and engineering phenomena.
5.	Solve the integral by using standard integrals (Beta and Gamma) and multiple integrals.

UNIT-I

Linear Differential Equations:

Solution of second and higher order equations with constant coefficients by inverse differential operator method, method of variation of parameters.

6L+6T Hours

UNIT – II

Laplace Transform:

Definition, Transforms of elementary functions, properties of Laplace Transform, Laplace Transform of e^at f(t), t^n f(t) , (f(t))/t , derivatives and Laplace Transform of Periodic functions'

5L+5T Hours

UNIT-III

Inverse Laplace Transform:

Inverse Laplace Transform, Convolution theorem (without proof) and problems Applications –Solution of Linear differential equations using Laplace Transform.

5L+5T Hours

.

UNIT-IV

Elementary Numerical Methods

Finite differences. Interpolation/extrapolation using Newton's forward and backward difference formulae, Newton's divided difference and Lagrange's formulae (All formulae without proof). Solution of polynomial and transcendental equations - Newton-Raphson method (only formula) – Illustrative examples.

5L+5T Hours

UNIT-V

Integral Calculus:

Multiple integrals –Evaluation of double and triple Integrals, Beta and Gamma functions: Definition, relation between Beta and Gamma functions and simple problems.

5L+5T Hours

TEXT BOOKS:

1	Erwin Kreyzig	Advanced Engineering Mathematics", 10th edition, Wiley Publications, 2016. ISBN: 978-81-265-0827-3
2.	B. S. Grewal	Higher Engineering Mathematics", 43rd edition, Khanna Publications, 2015. ISBN;978-81-7409-195-5

REFERENCE BOOKS:

2.	Ramana .B.V	Higher Engineering Mathematics, 11th edition, Tata-McGraw Hill. 2010. ISBN;0-07-053516-7
3.	C.Ray Wylie, Louis. C. Barrett	Advanced Engineering Mathematics, 6th edition, Tata-McGraw Hill 2005.
4.	Louis A. Pipes and Lawrence R. Harvill	Applied Mathematics for Engineers and Physicists, 3rd edition, McGraw Hill, 2014
1.	Peter V. O'Neil	Advanced Engineering Mathematics, 7th edition, CENGAGE Learning India Pvt. Ltd. Publishers, 2012. ISBN; 978- 81-315-0310-2.

Course Outcomes: Upon completion of this course the student will be able to:	
CO1:	**Explain** various physical models through higher order differential equations and solve such linear ordinary differential equations.
CO2:	**Understand** the concept of Laplace transform and obtain Laplace transform of periodic functions and unit step functions.
CO3:	**Apply** the concept of Laplace transform in solving Linear Differential equations.
CO4:	**Apply** the Numerical methods to solve Algebraic and transcendental equations and find the polynomials by finite difference method.
Co5:	**Apply** the concept of to evaluate multiple integrals and Beta and Gamma functions.

SCHEME & SYLLABUS

OF

V & VI SEMESTER B.E.

INFORMATION SCIENCE & ENGINEERING

2022-23

Vision of the Department:
To be a centre for quality education and research in Information Science and Engineering to create high quality professionals for catering to the need of the society.

Mission of the Department:
1) To enable students to acquire strong fundamental concepts related to the Information Science and Engineering through experiential learning.
2) To educate students towards state-of-the-art-technologies and multidisciplinary practices for a successful career by creating learning-teaching-learning ambience.
3) To inculcate life-long learning through innovation and research attitudes among students related to Information Science and Engineering.

Program Educational Objectives (PEOs):

The objectives of Information Science and Engineering degree program are to prepare students to meet the academic excellence, professionalism, and ability to solve a broad range of problems in rapidly changing technological, economic and social environment.

Graduates of the program will:

1. Pursue career as software engineer, project manager, data scientist, entrepreneur and pursue higher studies and research in Information Science and Engineering domains.
2. Apply mathematical, scientific and Information Science and Engineering knowledge with multidisciplinary approaches to solve real world problems.
3. Possess professionalism, ethical and societal responsibilities and engage in life-long learning through pursuit of skill development and certification courses in Information Science and Engineering.

Programme Outcomes (POs):

To achieve the above objectives, Information Science and Engineering degree programme strives to obtain the following outcomes which should be achieved by all graduates at the time of their graduation.

Engineering Graduates will be able to:

1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. Communication: Communicate effectively on complex engineering activities with the engineering community and with

society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Programme Specific Outcomes (PSOs):

1) **Computing System**: Demonstrate the knowledge of evolving hardware and/or software to develop solutions to real life computational problems with a focus on performance optimization.

2) **Communication and Security**: Design and develop solutions for providing efficient transmission, storage, security and privacy of data in diverse computing environment.

3) **Information management**: Apply tools and techniques for management of information system, data analysis and knowledge discovery in the process of decision making.

MANAGEMENT AND ENTREPRENEURSHIP

Contact Hours/Week	:	3+0+0	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	HSS06			

Course Objectives: This course will enable students to:

1. Understand the principles and functions of management.
2. Analyze the importance of planning, organizing, staffing, leading and controlling organization.
3. Understand and manage engineering design and quality
4. Inculcate entrepreneurial qualities and understand the need of rural entrepreneurship
5. Acquire knowledge about funding agencies, understand procedure in applying for funds and analyze the cases of successful entrepreneurs

UNIT I

Introduction to Management: Definition of management, management skills, productivity and effectiveness, efficiency, functions and principles of management.

Planning: Nature of planning, types of plans- purpose of vision, mission, goals, objectives strategies, policies; steps in planning, MBO, Strategic planning

Organizing: Formal and informal organization, span of management, the structure and Process of organizing, Organizational structure: line and staff organization, Functional organization, matrix organization

8 Hours

UNIT II

Staffing: Definition, systems approach to HRM, factors affecting staffing, recruitment and selection, job design, skill and characteristics of a manager, selection process and techniques.

Leading: Human factors in managing, motivation, Theory X and Y, the hierarchy of needs theory, leadership behaviour and styles.

Controlling: Basic control process, critical control points and standards, Benchmarking requirements for effective control.

9 Hours

UNIT III

Managing Engineering Design and Development: Product and Technology Life Cycles, Nature of Research and Development, Research Strategy and organization, Nature of Engineering Design, Systems

Engineering / New Product Development.

Managing Production/Operations: Types of production processes, Forecasting, Work measurement, Maintenance and Facilities (Plant) Engineering, Total Quality Management, Lean Manufacturing

Engineers in Marketing and service activities: Marketing and the Engineer, Engineers in Service organizations.

8 Hours

UNIT IV

Entrepreneur & Entrepreneurship: Introduction, concept of Entrepreneur, characteristics of an entrepreneur, and qualities of an entrepreneur, functions of an entrepreneur, characteristics of entrepreneurship, factors affecting entrepreneurial growth. Entrepreneurship and economic development-rural, woman and social entrepreneurship

Financing and Institutional Support for Entrepreneurship: Startups, business plans, venture capitalists, angel investors, funding agencies -commercial banks, development banks, NBFCS and incubation centres. Innovations and project trends.

8 Hours

UNIT V

Taxation benefits: Depreciation allowances, rehabilitation allowance, investment allowance and other tax concession benefits to an entrepreneur.

2 Case Studies from Stay Hungry and Stay Foolish – Rashmi Bansal, IIM Ahmedabad:

1) Success story of naukri.com by Sanjeev Bikhchandani
2) Success story of Make My Trip by Deep Kalra

6 Hours

TEXT BOOKS:

1.	Harold Koontz, Heinz Weihrich	Essentials of Management, McGraw Hill Education, 10th Edition, 2015
2.	Lucy C. Morse	Managing Engineering and Technology, Pearson Education, 6th Edition, 2015.
3.	S.S. Khanka	Entrepreneurial Development, S. Chand Publishing, 4th Edition, Reprint 2020. ISBN 978-81-219-1801-5

REFERENCE BOOKS:

1.	James A.F. Stoner, R. Edward Freeman, Daniel R. Gilbert	Management, Pearson Education, 6th Edition, 2018.
2.	Rashmi Bansal	Stay Hungry Stay Foolish, IIM Ahmedabad, 1st Edition, 2008.
3.	Rashmi Bansal	Connect the Dots, Bushfire Publishers, 1st Edition, 2019.

Course Outcomes:

After the completion of this course, students will be able to:

CO1: Explain various functions of management (L2).

CO2: Apply the knowledge of management principles and strategies in various functional areas. (L3).

CO3: Manage engineering design and product development (L3).

CO4: Describe entrepreneurship, its characteristics, and benefits and identify various funding sources for starting a business venture (L3).

CO5: Explain various taxation benefits enjoyed by an entrepreneur and analyze the characteristics and strategies adopted by successful entrepreneurs. (L2 & L3)

DATA COMMUNICATION

Contact Hours/Week	:	4+0 (L+T)	Credits	:	4
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	5RIS01			

Course objectives:

This course will enable students to:

1. Understand the basic concepts of data communications and the layered architecture of TCP/IP protocol.
2. Learn digital signal transmission, encoding techniques and multiplexing techniques.
3. Study the concepts and techniques in error detection and correction.
4. Learn data link control and its related protocols.

UNIT I

Data Communications and Network Models: Data Communications: Components, Data Representation, Data Flow, Networks, Network Criteria, Physical Structures, Network Types, Local Area Network, Wide Area Network, Switching, The Internet, Accessing the Internet.

Protocol Layering, Scenarios, Principles of Protocol Layering, Logical Connections, Contents, TCP/IP Protocol Suite, Layered Architecture, Layers In the TCP/IP Protocol Suite, Description Of Each Layer, Encapsulation and Decapsulation, Addressing, Multiplexing and Demultiplexing, The OSI model, OSI versus TCP/IP, Lack of OSI Model's Success.

10 Hrs.

UNIT II

Data and Signals: Analog and Digital Data, Analog and Digital Signals, Periodic and Nonperiodic, Periodic Analog Signals- Sine Wave, Phase, Wavelength, Time and Frequency Domains, Composite Signals, Bandwidth, Digital Signals- Bit Rate, Bit Length, Digital Signal as a Composite Analog Signal, Transmission of Digital Signals, Transmission Impairment-Attenuation, Distortion, Noise, Data Rate Limits, Noiseless Channel: Nyquist Bit Rate, Noisy Channel: Shannon Capacity, Using Both Limits, Performance-Bandwidth, Throughput, Latency (Delay), Bandwidth-Delay Product, Jitter.

Digital-To-Digital Conversion: Line Coding, Line Coding Schemes, Block Coding, Scrambling.

Analog-To-Digital Conversion: Pulse Code Modulation (PCM, Delta

Modulation (DM), Transmission Modes, Parallel Transmission, Serial Transmission

12Hrs.

UNIT III

Digital-To-Analog Conversion: Aspects of Digital-to-Analog Conversion, Amplitude Shift Keying, Frequency Shift Keying, Phase Shift Keying, Quadrature Amplitude Modulation

Error Detection & Correction And Data Link Control: Introduction: Types Of Errors, Redundancy, Detection Versus Correction, Coding, Block Coding, Error Detection, Cyclic Codes, Cyclic Redundancy Check, Polynomials, Cyclic Code Encoder Using Polynomials, Cyclic Code Analysis, Advantages of Cyclic Codes, Other Cyclic Codes, Checksum, Concept, Other Approaches to the Checksum, Forward Error Correction, Using Hamming Distance, Using XOR, Chunk Interleaving, Combining Hamming Distance And Interleaving, Compounding High And Low-Resolution Packet.

10Hrs.

UNIT IV

Switching and Data Link Control (DLC): Introduction, Circuit switched networks, Packet switching, Structure of a switch,

DLC Services: Framing, Flow and Error Control, Connectionless and Connection-Oriented, Data-Link Layer Protocols, Simple Protocol, Stop-And-Wait Protocol, Piggybacking, HDLC, Configurations And Transfer Modes, Framing, Point-To-Point Protocol (PPP), Services, Framing, Transition Phases, Multiplexing

10 Hrs.

UNIT V

Media Access Control (MAC): Random Access: Aloha, CSMA, CSMA/CD, CSMA/CA, Controlled Access: Reservation, Polling, Token Passing. Channelization: FDMA, TDMA, CDMA

Wired LANs: Ethernet, Ethernet Protocol, IEEE Project, Ethernet Evolution, Standard Ethernet, Characteristics, Addressing, Access Method, Efficiency of Standard Ethernet, Implementation, Changes in the Standard.

10 Hrs.

TEXT BOOKS

1	Behrouz A. Forouzan	Data Communications and Networking, Tata McGraw-Hill, Ed.5. 2013. ISBN-10: 1259064751, ISBN-13: 978-1259064753

REFERENCE BOOKS

1	Alberto Leon Garcia	Communication Networks: Fundamental Concepts & key Architectures, Tata McGraw – Hill, Ed.10, 2004. ISBN 10: 0070595011 ISBN 13: 9780070595019
2	William Stallings	Data and Computer Communication, Pearson Education, Ed.10. 2013. ISBN-10: 1292014385, ISBN-13: 978-1292014388

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: **Describe** the basic of data and signal types with transmission principles

CO2: **Comprehend** the topologies, layered architecture and their protocol suites.

CO3: **Analyze** the working and adoption of modulation, and multiplexing techniques for real-world application.

CO4: **Apply** error detection and correction coding techniques, and switching for reliable data transmission in the network.

CO5: **Analyze** the principles of data communications and network models and apply the same to solve basic network engineering problems.

DATABASE MANAGEMENT SYSTEMS

Contact Hours/Week	:	4+0 (L+T)	Credits	:	4
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	5RIS02			

Course objectives:

This course will enable students to:

1. Learn basic concepts of database and database management systems.
2. Understand the fundamentals of relational system which includes data models, database architectures, database manipulations and ER diagram.
3. Get a comprehensive overview of Relational model and Relational algebra, Structured Query Language (SQL), construction of queries in relational algebra and SQL.
4. Learn the need of Normalization and the use of different types of Normalization.
5. Discuss concepts of Transaction management and NoSQL.

UNIT I

Databases and Database Users

Introduction, an example, characteristics of database approach. Actors on the screen, workers behind the scene. Advantages of using DBMS approach. A brief history of database applications, When not to use a DBMS.

Database System – Concepts and Architecture

Data models, schemas and instances, three-schema architecture and data independence. Database languages and interfaces. The database system environment. Centralized and client-server architectures. Classification of database management systems.

Entity-Relationship Model

Using high-level conceptual data models for database design, an example database application. Entity types, entity sets, attributes and keys, relationship types, relationship sets, roles and structural constraints, weak entity types, refining the er design for the company database. Er diagrams, naming conventions and design issues.

10 Hrs.

UNIT II

SQL-The Relational Database Standard

SQL data definition and data types, schema and catalog concepts in SQL, the create table command in SQL, attribute data types and domains in SQL. Specifying attribute constraints and attribute defaults, specifying key and referential integrity constraints. Specifying basic constraints in SQL: giving names to constraints, specifying constraints on tuples using check. Schema change statements in SQL: the drop command, the alter command. Basic queries in SQL: the select-from-where structure of basic SQL queries, ambiguous attribute names, aliasing, and tuple variables, unspecified where clause and use of the asterisk, tables as sets in SQL, substring pattern matching and arithmetic operators, ordering of query results. More complex SQL queries: comparisons involving null and three-valued logic, nested queries, tuples, and set/multi-set comparisons, correlated nested queries, the exists and unique functions in SQL. Explicit sets and renaming of attributes in SQL, joined tables in SQL, aggregate functions in SQL, grouping: the group by and having clauses, discussion and summary of SQL queries. Insert, delete statements in SQL, delete and update statements in SQL, additional features of SQL, specifying general constraints as assertion, views (virtual tables) in SQL.

11 Hrs.

UNIT III

Relational Model and Relational Algebra

Relational model concepts, relational model constraints and relational database schemas. Update operations, transactions and dealing with constraint violations. Unary relational operations select and project. Unary relational operations select and project. Relational algebra operations from set theory. Binary relational operations, join and division. Additional relational operations examples of queries in relational algebra. Relational database design using ER-to-relational mapping.

10Hrs.

UNIT IV

Database Design

Informal design guidelines for relation schemas semantics of the attributes, reducing the redundant information in tuples. Informal design guidelines for relation schemas reducing the null values in tuples, disallowing the possibility of generating spurious tuples. Definition of functional dependencies, inference rules for functional dependencies. Functional dependencies equivalence of sets of functional dependencies, minimal sets of functional dependencies.

Normal forms based on primary keys, normalization of relations, practical use of normal forms. General definitions of first and second normal forms, with examples. General definitions of third normal form with examples. Boyce-codd normal form, with examples.

11 Hrs.

UNIT V

Transaction Processing Concepts

Introduction to transaction processing single-user versus multi-user transactions, read and write operations and DBMS buffers. Need of concurrency control and recovery. Transaction and system concepts transaction states and additional operations, system log, commit point. Desirable properties of transactions – acid properties, characterizing schedules based on recoverability.

The Big Data Technology Landscape

NoSQL, Types of NoSQL Databases, Why NoSQL? Advantages of NoSQL, Use of NoSQL in Industry, SQL versus NoSQL.

Introduction to MangoDB

What is MongoDB? Why MongoDB? Terms used in RDBMS and MongoDB, Data types in MongoDB, MongoDB query language

10 Hrs.

TEXT BOOKS

1	Elmasri and Navathe	Fundamentals of Database Systems, Sixth Edition, Mc- GrawHill, 2017.
2	Seema Acharya and Subhashini Chellappan	Big Data and Analytics, First Edition, Wiley India Private Limited, 2015. (Chapters 4 - 4.1,6-6.1 to 6.5 (6.5.1-6.5.9))

REFERENCE BOOKS

1	Silberschatz, Korth and Sudharshan	Data base System Concepts, Sixth Edition, Mc-GrawHill, 2010.
2	Raghu Ramakrishnan and Johannes Gehrke.	Database Management Systems, Third Edition, McGraw-Hill, 2014.
3	Kyle Banker Peter Bakkum Shaun Verch Douglas Garrett Tim Hawkins	MongoDB Action, Second Edition, 2016.
4	Abraham Silberschatz, Henry F Korth, S Sudarshan	Database System Concepts, 7th Edition, McGraw Hill, 2019.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: **Describe** database concepts, architecture, applications and NoSQL concepts.

CO2: **Analyze** and **Design** of ER diagram based on application's data requirements.

CO3: **Create** relational algebraic and SQL queries for given schema.

CO4: **Apply** normalization techniques to a given database.

CO5: **Discuss** transaction processing concepts for given database.

SOFTWARE ENGINEERING AND TESTING

Contact Hours/Week	:	4+ 0 (L+T)	Credits	:	
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	5RIS03			

Course objectives:

This course will enable students to:

1. Understand Software Development Life Cycle and development models and Agile Software development.
2. Discuss an idea of using various process models in the software industry according to given circumstances.
3. Comprehend how Analysis, Design, Implementation, Testing and Maintenance processes are conducted in a software project.
4. Discuss the quality attributes of a good design process.
5. Discuss the fundamental concepts in software testing, including software testing objectives.
6. Gain knowledge on functional and structural testing methods and skills on how to use automation software testing tools.

UNIT I

SOFTWARE AND SOFTWARE ENGINEERING: The Nature of Software, Software Engineering, The Software Process, Software Engineering Practice.

THE SOFTWARE PROCESS: PROCESS MODELS: A Generic Process Model, Process Assessment and Improvement, Prescriptive Process Models: The Waterfall Model, Incremental Process Models, Evolutionary Process Models, Component-Based Development, The Formal Methods Model, Specialized Process models: The Unified Process models, XP model, Agile Models

12 Hours

UNIT II

UNDERSTANDING REQUIREMENTS: Definition of Requirements Engineering, Establishing the Groundwork, Eliciting Requirements, Developing Use Cases, Building the Requirements Model, Negotiating Requirements and Validating Requirements.

REQUIREMENTS MODELING: SCENARIOS, INFORMATION, AND ANALYSIS CLASSES: Requirements Analysis, Scenario-Based Modeling, UML Models That Supplement the Use Case, Data Modeling Concepts, Class-Based Modeling,

8 Hours

UNIT III

DESIGN CONCEPTS: Definition of software design, Characteristics of a Good software design, Design within the Context of Software Engineering, The Design Process, Design Concepts, The Design Model and problems on coupling and cohesion.

ARCHITECTURAL DESIGN: Software Architecture, Definition of software architecture, Architectural Genres, Architectural Styles, Architectural Design.

COMPONENT-LEVEL DESIGN: What Is a Component, Designing Class-Based Components, Conducting Component-Level Design, Designing Traditional Components and Component-Based Development.

USER INTERFACE DESIGN: Definition of User Interface, The Golden Rules, User Interface Analysis and Design.

12 Hours

UNIT IV

SOFTWARE TESTING STRATEGIES: A Strategic Approach to Software Testing, Strategic Issues, Test Strategies for Conventional Software, Validation Testing, System Testing and The Art of Debugging.

TESTING CONVENTIONAL APPLICATIONS: Software Testing Fundamentals, Internal and External Views of Testing, White-Box Testing, Basis Path Testing, Problems on Cyclomatic complexity.

PRODUCT METRICS: A Framework for Product Metrics, Metrics for the Requirements Model, Metrics for the Design Model-Architectural Design Metrics, Component-level Design metrics,

10 Hours

UNIT V

A PERSPECTIVE ON TESTING, EXAMPLES: Basic definitions, Test cases, Insights from a Venn diagram, Identifying test cases, Error and fault taxonomies, Levels of Testing, Examples: The triangle problem, The commission problem, NextDate function.

BOUNDARY VALUE TESTING: Boundary value analysis, Robustness testing, Worst-case testing, Special value testing, Examples,

THE EQUIVALENCE CLASS TESTING, Equivalence classes, Equivalence test cases for the triangle problem, NextDate function, The commission problem

DECISION TABLE-BASED TESTING: Decision tables, Test cases for the triangle problem NextDate function,

10 Hours

TEXT BOOKS

1	Roger. S. Pressman	Software Engineering-A Practitioners approach. 7thEdition, Tata-McGraw Hill. 2010

2	Paul C. Jorgensen	Software Testing, A Craftsman's Approach, 4th Edition, Auerbach Publications, 2014

REFERENCE BOOKS

1	Pankaj Jalote	An Integrated Approach to Software Engineering. Narosa Publications. 2019
2	Ilene Burnstein,	Practical software testing, Springer international edition. 2002

Course Outcomes:

Upon completion of this course the student will be able to:

CO1. **Comprehend** Software Development Life Cycle and its different phases.

CO2. **Apply and articulate** Requirements Engineering Techniques to paraphrase the actual requirements of applications.

CO3. **Apply** the fundamental concepts and principles of Software Design.

CO4. **Identify** various software testing techniques, strategies, and principles.

CO5. **Demonstrate** various levels of testing on real-time applications using appropriate techniques.

CO4. **Identify** various software testing techniques, strategies, and principles.

CO5. **Demonstrate** various levels of testing on real-time applications using appropriate techniques.

DBMS LABORATORY

Contact Hours/Week	:	3	Credits	:	1.5
Total Lecture Hours	:	-	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	5RISL1			

Course objectives:

This course will enable students to:

- Design and implement SQL queries in DBMS
- Design and implement NoSQL queries in DBMS
- Compare the performance of SQL and NoSQL queries

Part A: SQL Programming

1. Consider the following schema for a Library Database:

BOOK (Book_id, Title, Publisher_Name, Pub_Year)
BOOK_AUTHORS (Book_id, Author_Name)
PUBLISHER (Publisher_Name, Address, Phone)
BOOK_COPIES (Book_id, Branch_id, No-of-Copies)
BOOK_LENDING (Book_id, Branch_id, Card_No, Date_Out, Due_Date)
LIBRARY_BRANCH (Branch_id, Branch_Name, Address)

Write SQL queries to

a) Retrieve details of all books in the library – id, title, name of publisher, authors, number of copies in each branch, etc.

b) Get the particulars of borrowers who have borrowed more than 3 books from Jan 2018 to Jan 2019

c) Delete a book in BOOK table. Update the contents of other tables to reflect this data manipulation operation.

d) Partition the BOOK table based on year of publication. Demonstrate its working with a simple query.

e) Create a view of all books and its number of copies that are currently available in the Library.

2. Consider the following schema for Order Database:

SALESMAN (Salesman_id, Name, City, Commission)
CUSTOMER(Customer_id, Cust_Name, City, Grade, Salesman_id)
ORDERS (Ord_No, Purchase_Amt, Ord_Date, Customer_id,Salesman_id)

Write SQL queries to

a) Count the customers with grades above Bangalore's average.

b) Find the name and numbers of all salesmen who had more than one customer.

c) List all salesmen and indicate those who have and don't have customers in their cities (Use UNION operation).

d) Create a view that finds the salesman who has the customer with the highest order of a day.
e) Demonstrate the DELETE operation by removing salesman with id 1000. All his orders must also be deleted.

3. Consider the schema for Movie Database:
ACTOR (Act_id, Act_Name, Act_Gender)
DIRECTOR (Dir_id, Dir_Name, Dir_Phone)
MOVIES (Mov_id, Mov_Title, Mov_Year, Mov_Lang, Dir_id)
MOVIE_CAST (Act_id, Mov_id, Role)
RATING (Mov_id, Rev_Stars)

Write SQL queries to
a) List the titles of all movies directed by 'Mani ratnam'.
b) Find the movie names where one or more actors acted in two or more movies.
c) List all actors who acted in a movie before 2010 and also in a movie after 2017 (use JOIN operation).
d) Find the title of movies and number of stars for each movie that has at least one rating. Sort the result by movie title.
e) Update rating of all movies directed by 'Karan Johar' to 4.

4. Consider the schema for College Database:
STUDENT (USN, SName, Address, Phone, Gender)
SEMSEC (SSID, Sem, Sec)
CLASS (USN, SSID)
SUBJECT (Subcode, Title, Sem, Credits)
IAMARKS (USN, Subcode, SSID, Test1, Test2, Test3, FinalIA)

Write SQL queries to
a) List all the student details studying in fourth semester 'C' section.
b) Compute the total number of male and female students in each semester and in each section.
c) Create a view of Test1 marks of student USN '1SI20IS001' in all subjects.
d) Calculate the FinalIA (average of best two test marks) and update the corresponding table for all students.
e) Categorize students based on the following criterion:
If FinalIA = 17 to 20 then CAT = 'Outstanding'
If FinalIA = 12 to 16 then CAT = 'Average'
If FinalIA< 12 then CAT = 'Weak'
Give these details only for 8th semester A, B, and C section students.

5. Consider the schema for Company Database:
EMPLOYEE (SSN, Name, Address, Sex, Salary, SuperSSN, DNo)
DEPARTMENT (DNo, DName, MgrSSN, MgrStartDate)
DLOCATION (DNo,DLoc)
PROJECT (PNo, PName, PLocation, DNo)
WORKS_ON (SSN, PNo, Hours)

Write SQL queries to
a) Make a list of all project numbers for projects that involve an employee whose last name is 'Scott', either as a worker or as a manager of the department that controls the project.
b) Show the resulting salaries if every employee working on the 'IoT' project is given a 10 percent raise.
c) Find the sum of the salaries of all employees of the 'Accounts' department, as well as the maximum salary, the minimum salary, and the average salary in this department
d) Retrieve the name of each employee who works on all the projects controlled by department number 5 (use NOT EXISTS operator).
e) For each department that has more than five employees, retrieve the department number and the number of its employees who are making more than Rs. 6,00,000.

Part B: NoSQL Programming
1. Create the below tables, insert suitable tuples and perform the following operations using MongoDB
EMPLOYEE (SSN, Name, DeptNo)
ASSIGNED_TO (SSN , ProjectNo)
a. List all the employees of department "XYZ".
b. Name the employees working on Project Number 6.

2. Create the below tables, insert suitable tuples and perform the following operations using MongoDB
PART (PNO, PNAME, COLOUR),
SUPPLY (SNO, SNAME, PNO, ADDRESS)
a. Update the parts identifier
b. Display all suppliers who supply the part with part identifier: #PNO

3. Create the below tables, insert suitable tuples and perform the following operations using MongoDB
BOAT (BID, BNAME, COLOUR)
RESERVES (BID, SNAME, SID, DAY)
a. Obtain the number of boats obtained by sailor :#sname

b. Retrieve boats of color :"White"

4. Create the below tables, insert suitable tuples and perform the following operations using MongoDB
PART (PNO, PNAME, COLOUR)
SHIPMENT (PNO, WNO, WNAME, QUANTITY, DATE)
a. Find the parts shipped from warehouse :Wname"
b. List the total quantity supplied from each warehouse

5. Create the below tables, insert suitable tuples and perform the following operations using MongoDB
BOOK (ISBN, TITLE, AUTHOR, PUBLISHER)
BORROW (ISBN,USN,DATE)
a. Obtain the name of the student who has borrowed the book bearing ISBN "123".
b. Obtain the Names of students who have borrowed database books.

Open Ended Project

Develop a database application using Oracle/MySQL/NoSQL
a) Inventory Control System.
b) Material Requirement Processing.
c) Hospital Management System.
d) Railway Reservation System.
e) Personal Information System.
f) Web Based User Identification System.
g) Timetable Management System.
h) Hotel Management System and so on.

Please note the following conditions.
1.Mini project should give proper idea about the application for which it is developed.
2.Maximum 2 students per team. No team is allowed to do the same project.
3.The front end has to be created with any programming language with proper design.
4.Students must:
   a. Create schema and insert the records for each table. Add appropriate database constraints.
   b. Implement, analyze and evaluate the project developed for an application
   c. Create, update, delete and query on the database
   d. Demonstrate the working of different concepts of DBMS
5.Must be able to generate reports

Course Outcomes-COs

Upon successful completion of this course the student should be able to

CO1: Analyze and write SQL queries for the given relational database schema.

CO2: Demonstrate NoSQL queries for the given relational database schema.

CO3: Apply design techniques and concepts of DBMS to solve real world problems.

SOFTWARE ENGINEERING AND TESTING LAB

Contact Hours/Week	:	3	Credits	:	1.5
Total Lecture Hours	:	-	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	5RISL2			

Course Objectives

This course will enable students to:

1. Understand the software engineering methodologies involved in the phases for project development.
2. Discuss software process models such as the waterfall and evolutionary models.
3. Analyze software requirements and design the SRS document.
4. Describe the role of project management including planning, scheduling, risk management, etc. in software development.
5. Gain knowledge about open-source tools used for implementing software engineering methods.
6. Apply the software testing principles to test the project/problem.
7. Analyze and demonstrate the comparison of various testing strategies.
8. Conduct automation testing using suitable programming language and appropriate techniques.

Lab Programs

Part I ---Software Engineering

1. Write down the problem statement for a suggested system of relevance.
2. Do requirement analysis and develop Software Requirement Specification Sheet (SRS) for suggested system.
3. Prepare the function-oriented diagram: Data Flow Diagram (DFD) and Structured chart.
4. Perform the user‘s view analysis for the suggested system: Use case diagram.
5. Draw the structural view diagram for the system: Class diagram, object diagram.
6. Draw the behavioural view diagram: State-chart diagram, Activity diagram
7. Perform the behavioural view diagram for the suggested system: Sequence diagram, Collaboration diagram.
8. Perform various testing using the testing tool unit testing, integration testing for a sample code of the suggested system.

Prepare the following documents and develop the software project start-up, prototype model, using software engineering methodology for at least two real time scenarios or for the sample experiments.

1. Problem Analysis and Project Planning -Thorough study of the problem – Identify Project scope, Objectives and Infrastructure.
2. Software Requirement Analysis – Describe the individual Phases/modules of the project and Identify deliverables. Identify functional and non-functional requirements.
3. Data Modeling – Use work products – data dictionary.
4. Software Designing - Develop use case diagrams and activity diagrams, build and test class diagrams, sequence diagrams and add interface to class diagrams.
5. Prototype model – Develop the prototype of the product.

The SRS and prototype model should be submitted for evaluation for the selected topics from the following list.

List of Sample Experiments:

1. Course management system (CMS)
2. E-Bidding
3. Electronic Cash Counter
4. Insurance Management System
5. Healthcare Systems
6. Airlines management System

Duration: Three to Four labs

Part II ---Software Testing
Automation Testing

1 Write and test a program to automate Login, Logout pages.

2 Write and test a program to select the number of students who have scored less than 60 in any subject from the existing Spreadsheet to the new Spreadsheet.

3 Write and test program to calculate and testing the GCD of number using webpage.

4 Write and test a program to provide total number of objects present / available on the given path.

5 Write and Test a Program to search a 16-character license key from the provided input spreadsheet. Note: (Input spreadsheet must contain minimum 20 input data and duplicate entry may present)

6 Write testing program to get and print the placement information from the ISE department webpage.

1. Open sit.ac.in
2. Navigate to ISE department web page Scroll down

3. Click on placement information
4. Get the data and print

7 Generate an extent report for selenium program get and print the placement information from the ISE department webpage

8 Search for a book by using and operator in http://opac.sit.ac.in :8080/newgen 1 ibctxt/ and print all the results from first 2 pages.

9 Testing of SIT.IRINS website. Get and print the h-index data for each department in http: \\sit.irins.org/

Manual Testing

1 Design and develop a program in a language of your choice to solve the triangle problem defined as follows: Accept three integers which are supposed to be the three sides of a triangle and determine if the three values represent an equilateral triangle, isosceles triangle, scalene triangle, or they do not form a triangle at all. Assume that the upper limit for the size of any side is 10. Derive test cases for your program based on boundary-value analysis, execute the test cases and discuss the results.

Test Data: Enter the 3 Integer Value (a, b and c)

Pre-condition: $1 \le a \le 10$, $1 \le b \le 10$ and $1 \le c \le 10$ and $a < b + c$, $b < a + c$ and $c < a + b$

2 Design and develop a program in a language of your choice to solve the triangle problem defined as follows: Accept three integers which are supposed to be the three sides of a triangle and determine if the three values represent an equilateral triangle, isosceles triangle, scalene triangle, or they do not form a triangle at all. Assume that the upper limit for the size of any side is 10. Derive test cases for your program based on equivalence class partitioning analysis, execute the test cases and discuss the results.

Test Data: Enter the 3 Integer Value (a, b and c)

Pre-condition: $1 \le a \le 10$, $1 \le b \le 10$ and $1 \le c \le 10$ and $a < b + c$, $b < a + c$ and $c < a + b$

3 Design and develop a program in a language of your choice to solve the triangle problem defined as follows: Accept three integers which are supposed to be the three sides of a triangle and determine if the three values represent an equilateral triangle, isosceles triangle, scalene triangle, or they do not form a triangle at all. Assume that the upper limit for the size of any side is 10. Derive test cases for your program based on decision tables-based testing, execute the test cases and discuss the results.

Test Data : Enter the 3 Integer Value(a , b And c)

Pre-condition : $1 \le a \le 10$, $1 \le b \le 10$ and $1 \le c \le 10$ and $a < b + c$, $b < a + c$ and $c < a + b$

4 Design, develop, code and run the program in any suitable language to implement the NextDate function. Analyze it from the perspective of boundary-value analysis, derive different test cases, execute these test cases and discuss the test results.
Test data : Enter the three integer value
Pre-condition: Month 1 to 12, DAY 1 TO 31 AND YEAR 1812 TO 2014

5 Design, develop, code and run the program in any suitable language to implement the NextDate function. Analyze it from the perspective of Equivalence partition testing, derive different test cases, execute these test cases and discuss the test results.
Test data : Enter the three integer value
Pre-condition: Month 1 to 12, DAY 1 TO 31 AND YEAR 1812 TO 2014

6 Design, develop, code and run the program in any suitable language to implement the NextDate function. Analyze it from the perspective of decision table based testing, derive different test cases, execute these test cases and discuss the test results.
Test data : Enter the three integer value
Pre-condition: Month 1 to 12, DAY 1 TO 31 AND YEAR 1812 TO 2014

7 Design, develop, code and run the program in any suitable language to solve the commission problem. Analyze it from the perspective of boundary-value analysis testing, derive different test cases, execute these test cases and discuss the test results.
Test data : price Rs for lock - 45.0 , stock - 30.0 and barrel - 25.0
Sales = total lock * lock price + total stock * stock price + total barrel * barrel price
commission: 10% up to sales Rs 1000, 15 % of the next Rs 800 and
20 % on any sales in excess of 1800
Pre-condition: lock = -1 to exit and 1< =lock < = 70, 1<=stock <=80 and
1<=barrel<=90

8 Design, develop, code and run the program in any suitable language to solve the commission problem. Analyze it from the perspective of Equivalence partition testing, derive different test cases, execute these test cases and discuss the test results.
Test data : price Rs for lock - 45.0 , stock - 30.0 and barrel - 25.0
sales = total lock * lock price + total stock * stock price + total barrel * barrel price
commission: 10% up to sales Rs 1000, 15 % of the next Rs 800 and
20 % on any sales in excess of 1800

Pre-condition: lock = -1 to exit and 1< =lock < = 70, 1<=stock <=80 and 1<=barrel<=90

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Analyze and apply software engineering principles and techniques.

CO2: Develop an ability to design, develop, maintain and evaluate large-scale software systems.

CO3: Develop efficient, reliable, robust and cost-effective software solutions.

CO4: Design and apply the test cases for any problem using various testing strategies.

CO5: Develop solutions to the problems by using Open source Tools: StarUML / UMLGraph/

SOFT SKILLS

Contact Hours/ Week	: -	Credits :	0.0
Total Lecture Hours	: 36	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50
Sub. Code	: HSS08		

COURSE OBJECTIVES

- To make the students aware of the importance of soft skills in the present-day business world and work environment
- To learn the science behind picking up any skill quickly
- To help students realize as well as develop key soft skills interviewers look for – such as change management, professionalism, inter- and intra-personal skills, adaptability etc.
- To develop effective resumes (paper-based as well as video)
- To understand the importance of and create an effective digital footprint
- To provide simulated Group Discussion and Personal Interview experience based on the models adopted by reputed companies.
- To understand professional etiquette to be displayed in workplaces.
- To learn to introspect over one's strengths and weaknesses, and apply them effectively for career growth

METHODOLOGY

Interactive instructor led session with audio-visual aids / case studies

Day	#	**Topic**	**Sub-topics covered**	Duration (Hrs)
1	1	How to pick up skills faster?	1. Knowledge vs skill 2. Skill introspection 3. Skill acquisition 4. "The 10,000 hours rule" and the converse	2
	2	Interpersonal and Intrapersonal skill building	Social Interaction 1.Interpersonal Communication 2.Peer Communication 3.Bonding 4.Types of social interaction Emotional Management Responsibility 1.Types of responsibilities 2.Moral and personal responsibilities	2
	3	Professional etiquette	Workplace etiquette - meeting room, pantry, cubicle Dining etiquette Telephone etiquette Email and business correspondence etiquette	2
2	4	Change Management	Who moved my cheese? Tolerance of change and uncertainty	2

			Joining the bandwagon Adapting change for growth - overcoming inhibition Adapt to changes(tolerance of change and uncertainty) 5.Adaptability Curve Survivor syndrome	
	5	Creating a digital footprint	1.How what you post online / information online can affect people's and recruiter's perception about you 2. Usage of Linkedin to further one's career prospects 3.Managing content that one posts on platforms like Twitter, Facebook, Instagram etc. to create positive footprint about oneself Why is it important to leave a digital footprint?	2
	6	Time Management	Prioritization - Time Busters Procrastination Scheduling Multitasking Monitoring Working under pressure and adhering to deadlines	2
3	7	Group Discussion - Basics	1.Importance of GD round Skills assessed in a GD How to ace a GD Dos and donts in a GD Idea generation techniques One mock GD involving participation from 12 volunteers, facitilated by the trainer	2
	8	Personal Interview - Basics	Self-introduction practice. Body language – especially grooming – for personal interview. Personal interview – FAQs discussion.	2
	9	Building a resume from scratch	1.How to write a good and impressive Resume. 2. Important aspects of an impressive resume. 3.Sample template and formatting ideas.	2
4	10	Group Discussion - Advanced	GD sample Video with analysis and discussion. GD Dos and Don'ts – Worksheet practice. Roleplays for Dos and Don'ts. Idea generation – worksheet practice.	3
	11	Personal Interview - Advanced	1.Extensive discussion on PI FAQs. 2.Interview questions from based on resume –discussion. 3.PI Videos – discussion and analysis. 4. Highlighting successful answers for PI:3 questions. 5.Body language during a personal interview. 6.Unconventional types of interviews (Stress, panel, MR, guesstimation)	3
5	12	Resume Writing - Workshop (Drafting a paper-based as well as a video resume)	1. Resume writing – Worksheet practice. 2. 3 stage Resume drafting. 3. Rough draft-1. 4. Rough draft -2. 5. Fair draft. 6. Discussion on specific aspects of an	3

			7. impressive Resume. 8. Creating a video resume	
	13	Setting and achieving targets	Ambition, goal, passion and career objective –difference SMART goals and Action plans Obstacles -Failure management (case studies)	1.5
	14	Introspection	Identify your USP - Unique Selling Proposition Recognize your strengths and weakness (SWOT) Nurture strengths Fixing weakness Overcoming your complex Confidence building	1.5
6	15	Group Discussion - Mock	1.Mock Group Discussions featuring groups of 10 people, with each GD lasting for 15 minutes. 2. Detailed feedback for each participant 3.Introspection by the audience to add value to the GD	3
	16	Personal Interview - Mock	1.Mock personal interview for a sample set of candidates 2. Simulate the real personal interview experience. 3.Individual feedback and areas of improvements are shared.	3

ASSESSMENTS PROVIDED

The following assessments are integrated into the training programme to best judge a student's proficiency on soft skills.

1. Team building tasks (Inside training hours)
2. Participation in group activities (Inside training hours)
3. Psychometric test
4. Creating a resume
5. Creating an effective LinkedIn profile
6. Mock Group Discussion (Inside training hours)

REFERENCE MATERIAL

1. 'Who moved my Cheese?' by Spencer Johnson
2. 'Outliers' by Malcolm Gladwell
3. 'Emotional Intelligence' by Daniel Goleman
4. 'Road Less Travelled' by Scott Peck M.
5. 'How to win friends and influence people' by Dale Carnegie

Course Outcomes:

On successful completion of this course, students will be able to:

- Display key soft skills expected by recruiters
- Be able to apply scientific methods to learn any skill quickly
- Participate in Group Discussions and Personal Interviews effectively
- Create effective resumes that impress interviewers (paper-based as well as video)
- Apply professional etiquette to be displayed in various workplace scenarios
- Set and achieve targets – work-place based as well as personal

VI
SEMESTER

SOFTWARE PROJECT MANAGEMENT

Contact Hours/Week	:	3 + 0 (L+T)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	--	SEE Marks	:	50
Course Code	:	HSS07A			

Course objectives:

1. Understand the basics of software project management concepts, principles and practices
2. Understand the different methods of estimation for software project.
3. Understand the basic concepts, principles and practices of software project scheduling and risk management.
4. Analyze a software project based on various review metrics with review guidelines.
5. Understand software project maintenance, reengineering and configuration management

UNIT I

PRINCIPLES THAT GUIDE PRACTICE:

Software Engineering Knowledge, Core Principles – Principles That Guide Process, Principles That Guide Practice, Principles That Guide Each Framework Activity – Communication Principles, Planning Principles, Modelling Principles, Construction Principles, Deployment Principles, Work Practices

4Hrs

PROJECT MANAGEMENT CONCEPTS:

The Management Spectrum – The People, The Products, The Process, The Project, People -The Stakeholders, Team Leaders, The Software Team, Agile Teams, Coordination And Communication Issues, The Product – Software Scope, Problem Decomposition, The Process – Melding The Products And The Process, Process Decomposition, The Project, The W5HH Principle, Critical Practices

3Hrs

UNIT - II

PROCESS AND PROJECT METRICS:

Metrics In The Process And Project Domains -Process Metrics And Software Process Improvement, Project Metrics, Software Measurement – Size-Oriented Metrics, Function-Oriented Metrics, Reconciling LOC And FP Metrics, Object-Oriented Metrics, Use Cases- Oriented Metrics, Web App Project Metrics, Metrics For Software Quality – Measuring Quality, Defect Removal Efficiency, Integrating Metrics With The Software Process - Arguments For Software Metrics, Establishing A Baseline, Metrics Collection Computation And Evaluation, Metrics For Small Organization, Establishing A Software Metrics Program **3Hrs**

ESTIMATION FOR SOFTWARE PROJECT:

Observations On Estimation, The Project Planning Process, Software Scope And Feasibility, Resources – Human Resources, Reusable Software Resources, Environmental Resources, Software Project Estimation, Decomposition Techniques – Software Sizing, Problem Based Estimation, An Example Of LOC Based Estimation, An Example Of FP – Based Estimation, Process-Based Estimation, An Example Of Process- Based Estimation, Estimation With Use cases, An Example Of Estimation Using Use Case Points, Reconciling Estimates, Empirical Estimation Models – The Structure Of Estimation Models, The COCOMO II Model, The Software Equation, Estimation For Object -Oriented Projects, Specialized Estimation Techniques – Estimation For Agile Development, Estimation For Web App Development, The Make/Buy Decision- Creating A Decision Tree, Outsourcing.

5Hrs

UNIT - III

PROJECT SCHEDULING:

Basic concepts, Project Scheduling – Basic Principles - The Relationship Between People and Effort – Effort Distribution, Defining a Task Set for The Software Project – a Task Set Example – Refinement of Major Tasks, Defining a Task Network, Scheduling – Timeline Charts – Tracking The Schedule – Tracking Progress for an OO Project – Scheduling for Web App and Mobile Projects, Earned Value Analysis **4Hrs**

RISK MANAGEMENT:

Reactive Verses Proactive Risk Strategies, Software Risks, Risk Identification – Assessing Overall Project Risk – Components and Drivers, Risk Projection – Developing a Risk Table – Assessing Risk Impact, Risk Refinement, Risk Mitigation, Monitoring, and Management, The RMMM Plan **3Hrs**

UNIT – IV

QUALITY CONCEPTS:

What is Quality? Software Quality – Garvin's Quality Dimensions, McColl's Quality Factors, ISO 9126 Quality Factors, Targeted Quality Factors, The Transition to a Quantitative View, The Software Quality Dilemma - "Good Enough" Software, The Cost Of Quality, Risks, Negligence and Liability, Quality and Security, The Impact Of Management Actions, Achieving Software Quality – Software Engineering Methods, Project Management Techniques, Quality Control, Quality Assurance

4Hrs

REVIEW TECHNIQUES:

Cost Impact of Software Defects, Defect Amplification and Removal, Review Metrics and Their Use – Analysing Metrics, Cost-Effectiveness of Reviews, Reviews: a Formality Spectrum, Informal Reviews, Formal

Technical Reviews – The Review Meeting, Review Reporting and Record Keeping, Review Guidelines, Sample- Driven Reviews, Post-mortem Evaluations

3Hrs

SOFTWARE QUALITY ASSURANCE:

Background Issues, Elements of Software Quality Assurance, SQA Processes and Product Characteristics, SQA Tasks, Goals and Metrics – SQA Tasks, Goals Attributes and Metrics, Formal Approaches To SQA, Statistical Software Quality Assurance – A Generic Example, SixSigma for Software Engineering, Software Reliability – Measures of Reliability and Availability, Software Safety, The ISO 9000 Quality Standards, The SQA Plan

3Hrs

UNIT – V

MAINTENANCE AND REENGINEERING:

Software Maintenance, Software Supportability, Reengineering, Business Process Reengineering - Business Processes, A BPR Model, Software Reengineering – A Software Reengineering Process Model, Software Reengineering Activities, Reverse Engineering – Reverse Engineering to Understand Data, Reverse Engineering to Understand Processing, Reverse Engineering User Interfaces, Restructuring – Code Restructuring, Data Restructuring, Forward Engineering – Forward Engineering for Client Server Architectures, Forward Engineering for Object- Oriented Architectures, The Economics Of Reengineering

3Hrs

SOFTWARE CONFIGURATION MANAGEMENT:

Software Configuration Management – An SCM Scenario, Elements of a Configuration Management System, Baselines, Software Configuration Items, Management of Dependencies And Changes, The SCM Repository – General Features and Content, SCM Features, The SCM Process – Identification of Objects In The Software Configuration, Version Control, Change Control, Impact Management, Configuration Audit, Status Reporting, Configuration Management for Web And Mobile Apps – Dominant Issues, Configuration Objects, Content Management, Change Management, Version Control, Auditing And Reporting **4Hrs**

TEXT BOOKS:

1.	Roger S. Pressman, Bruce Maxim	Software Engineering: A Practitioner's Approach, McGraw Hill, 8th Edition, 2015

REFERENCE BOOKS:

1.	Bob Hughes, Mike Cotterell, Rajib Mall	Software Project Management, McGraw Hill, 6th Edition 2018
2.	Watts Humphrey	Managing the Software Process, Pearson

		Education, New Delhi, 2000
3.	Pankaj Jalote	Software Project Management in Practice, Pearson Education, New Delhi, 2002.

Course outcomes:

After the completion of this course, students will be able to:

CO1 : **Describ**e the basics of software project management concepts, principles and practices.

CO2 : **Explain** and **apply** the different metrics and techniques to measure a software project.

CO3 : **Explain** and **analyse** the different activities of a project scheduling with risk management.

CO4 : **Explain** the quality concepts and analyse different review techniques for a software project.

CO5 : **Describe** and apply software reengineering activities and SCM process on web and mobile applications

COMPUTER NETWORKS

Contact Hours/Week	:	4+1 (L+T)	Credits	:	4.5
Total Lecture Hours	:	4	CIE Marks	:	50
Total Tutorial Hours	:	52+13	SEE Marks	:	50
Course Code	:	6RIS01			

Course objectives:

This course will enable students to:

1. Understand the working of network layer and routing algorithms.
2. Compare the IPV4 and IPV6 network layer protocols.
3. Design subnet for any organization requirements
4. Understand the transport layer protocols, flow control techniques etc.
5. Describe the application layer protocols and their limitations

UNIT-I

NETWORK LAYER: NETWORK-LAYER SERVICES, Packetizing, Routing and Forwarding, Other Services, Packet switching, Datagram Approach: Connectionless Service, Virtual-Circuit Approach: Connection-Oriented Service, Network layer performance, Delay, Throughput, Packet Loss, Congestion Control,

IPV4 ADDRESSES: Address Space, Classful Addressing, Classless Addressing, Dynamic Host Configuration Protocol (DHCP), Network Address Resolution (NAT)

10 Hrs.

UNIT-II

FORWARDING OF IP PACKETS: Forwarding Based on Destination Address, Forwarding Based on Label, Routers as Packet Switches.

NETWORK LAYER PROTOCOLS: Internet Protocol (IP), Datagram Format, Fragmentation, Options, Security of IPv4 Datagrams

UNICAST ROUTING: INTRODUCTION, General Idea, Least-Cost Routing, ROUTING ALGORITHMS, Distance-Vector Routing, Link-State Routing, Path-Vector Routing, UNICAST ROUTING PROTOCOLS, Internet Structure, Routing Information Protocol (RIP), Open Shortest Path First (OSPF), Border Gateway Protocol Version 4 (BGP4).

10 Hrs.

UNIT-III

UNICAST ROUTING PROTOCOLS, Internet Structure, Routing Information Protocol (RIP), Open Shortest Path First (OSPF), Border Gateway Protocol Version 4 (BGP4).

MULTICASTING BASICS, Multicast Addresses, Delivery at Data-Link Layer, Collecting Information about Groups, Multicast Forwarding,

NEXT GENERATION IP: IPv6 ADDRESSING, Representation, Address Space, Address Space Allocation, Autoconfiguration, Renumbering, THE

IPv6 PROTOCOL, Packet Format, Extension Header, TRANSITION FROM IPv4 TO IPv6, Strategies, Use of IP Addresses.

10 Hrs.

UNIT-IV

TRANSPORT LAYER PROTOCOLS: INTRODUCTION, Services, Port Numbers, USER DATAGRAM PROTOCOL, User Datagram, UDP Services, UDP Applications, TRANSMISSION CONTROL PROTOCOL, TCP Services, TCP Features, Segment, A TCP Connection, State Transition Diagram, Windows in TCP, Flow Control, Error Control, TCP Congestion Control CONTENTS **10 Hrs.**

UNIT-V

STANDARD CLIENT-SERVER PROTOCOLS AND QoS: WORLD WIDE WEB AND HTTP-World Wide Web, HyperText Transfer Protocol (HTTP), FTP-Two Connections, Control Connection, Data Connection, Security for FTP, ELECTRONIC MAIL-Architecture, Web-Based Mail, E-Mail Security, TELNET, Local versus Remote Logging.

QUALITY OF SERVICE:
DATA-FLOW CHARACTERISTICS-Definitions, Sensitivity of Applications, Flow Classes, FLOW CONTROL TO IMPROVE QOS-Scheduling, Traffic Shaping or Policing, Resource Reservation, Admission Control.

12 Hrs.

TEXT BOOKS

1	Behrouz A. Forouzan	Data Communications and Networking, 5th edition, McGraw-Hill, 2013.

REFERENCE BOOKS:

1	Larry L Peterson and Bruce S Davie	Computer Networks: A Systems Approach, 5th Edition, Elsevier, Elsevier, 2012
2.	Alberto Leon-Garcia and Indra Widjaja	Communication Networks, 2nd edition, McGraw-Hill, 2003

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Design a subnet by applying IP addressing concepts.

CO2: Apply different routing protocols to select a best path in the network

CO3: Analyze different internet protocols with their protocol formats.

CO4: Analyze the performance and services provided by UDP and TCP protocols.

CO5: Illustrate different application layer protocols and their QoS and security requirements.

ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

Contact Hours/Week	:	4+1 (L+T)	Credits	:	4.5
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	13	SEE Marks	:	50
Course Code	:	6RIS02			

Course objectives:

This course will enable students to:

1. Understand fundamental concepts in Artificial Intelligence.
2. Be familiar with basic principles of AI such as problem solving, searching, knowledge representation and learning.
3. Explain the role of agents in AI and structure of the agents.
4. Analyze and identify significant characteristics of data sets.
5. Understand and implement the training, testing, and validation phases of learning algorithms.
6. Determine the computational complexity associated with development and execution of learning algorithms for a given data sets.

UNIT I

INTRODUCTION: What is AI? Acting humanly: The Turing Test approach, Thinking humanly: The cognitive modelling approach, Thinking rationally: The "laws of thought" approach, Acting rationally: The rational agent approach,

INTELLIGENT AGENTS: Agents and Environments, Rationality, Omniscience, learning, and autonomy, the nature of Environments: Specifying the task environment, Properties of task environments, The Structure of Agents; Agent programs, Simple reflex agents, Model-based reflex agents, Goal-based agents, Utility-based agents, Learning agents

SOLVING PROBLEMS BY SEARCHING: Problem-solving agents; Well-defined problems and solutions, Formulating problems, Example problems; Toy problems, Real-world problems,

10 Hrs.

UNIT II

SOLVING PROBLEMS BY SEARCHING (CONTD.): Searching for solution; Infrastructure for search algorithms, Measuring problem-solving performance, Uninformed search strategies, Uniform-cost search, Depth-limited search, Iterative deepening depth-first search, Bidirectional search,

ADVERSIAL SEARCH: Games, Optimal Decisions in Games; The minimax algorithm, Optimal decisions in multiplayer games, Alpha-

Beta Pruning;

CONSTRAINT SATISFACTION PROBLEMS: Defining Constraint satisfaction problems; Example problem: Map colouring, Example problem: Job-shop scheduling,

10 Hrs.

UNIT III
MACHINE LEARNING

INTRODUCTION: If Data had Mass, The Earth Would Be A Black Hole, Learning; Machine Learning, Types of Machine Learning, Supervised Learning; Regression, Classification, The Machine Learning Process, A Note on Programming,

PRELIMINARIES: Some Terminology; Weight Space, The Curse of Dimensionality, Knowing What You Know; Overfitting, Training, Testing, and Validation Sets, The Confusion Matrix, Accuracy Metrics, The Receiver Operator Characteristic (ROC) Curve, Unbalanced Datasets, Measurement Precision,: Testing Machine Learning Algorithms, Turning Data into Probabilities; Minimising Risk, Some Basic Statistics, The Bias-Variance Trade-off.

11 Hrs.

UNIT IV

DIMENSIONALITY REDUCTION: Linear Discriminant Analysis (LDA), Principal Components Analysis (PCA), Relation with the Multi-layer Perceptron, Kernel PCA, Methods Comparisons, Problems on LDA and PCA,

LEARNING WITH TREES: Using Decision Trees, Constructing Decision Trees, Classification and Regression Trees (CART); Gini Impurity, Regression in Trees, Classification Examples and Problems.

11 Hrs.

UNIT V

PROBABILISTIC LEARNING: Nearest Neighbour Methods

UNSUPERVISED LEARNING; CLUSTERING: Introduction, Hierarchical Clustering, Agglomerative Clustering, The single Linkage Algorithm, The complete linkage Algorithm, The Average Linkage Algorithm, Partitional Clustering, Forgy's Algorithm, The k-means Algorithm, Vector Quantization, The *K*-Means Algorithm, Isodata Algorithm, Problems.

10 Hrs.

TEXT BOOKS		
1	Stuart J. Russell and Peter Norvig	Artificial Intelligence, A Modern Approach, Third Edition, PearsonIndia Education Services, 2015 (UNIT I and II)
2.	Stephen Marsland	Machine Learning, An Algorithmic Perspective, Second Edition, CRC Press, 2015 (UNIT III and

		IV)
3.	Earl Gose, Richard Johnson Baugh, Steve Jost	Pattern Recognition, Image Analysis, Pearson Education, 1997 (UNIT V)

REFERENCE BOOKS		
1	Elaine Rich, Kevin Knight:	Artificial Intelligence, 3rdEdition, Tata McGraw Hill, 2009. ISBN: 9780070087705.
2	Christopher Bishop	"Pattern Recognition and Machine Learning", CBS Publishers & Distributors- New Delhi.2006
3	Tom M Mitchell	“Machine Learning”, McGraw-Hill, Inc. New York, NY, USA. 2013

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: **Understand** and **Explore** knowledge representation techniques and problem-solving strategies to common Artificial Intelligence (AI) applications.

CO2: **Discuss** the structure of the agents and different types of agents commonly used in AI.

CO3: **Differentiate** between machine learning algorithms based on learning criteria and parameter employed.

CO4: **Apply** and **illustrate** the significances of dimensionality reduction techniques for supervised and unsupervised problem solving.

CO5: **Design** applications to solve real world problems by **applying** machine learning algorithms such as classification, regression, and clustering

COMPUTER NETWORKS LABORATORY

Contact Hours/Week	:	3	Credits	:	1.5
Total Lecture Hours	:	-	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	6RISL1			

Course objectives:

This course will enable students to:

1. Understand resource requirements and packet loss in communication networks by simulating various protocols.
2. Describe network configuration using different network devices
3. Describe programs for error detection and correction
4. Understand client-server programs using the socket concepts.

Part – A

1. Configure and analyze the working of basic switch and switch interface setup using the packet tracer.
2. Configure and analyze the working of basic router/gateway setup using the packet tracer.
3. Configure the network of 4 nodes and update the port security using the packet tracer.
4. Configure VLAN on a small network of 4 switches using Packet Tracer.
5. Capture the live packets using Wireshark. Monitor, analyse and visualize the characteristics of HTTP, TCP, FTP, UDP and DNS packet.
6. Design network configuration for assigning IP address for different subnet using Switch/Router in GNS3.

Part – B

1. Write a program for error detecting code using CRC algorithm.
2. Write a program to implement Distance Vector routing algorithm to build a routing table for the given node.
3. Write a client server echo program using UDP socket and analysis the UDP packets by capturing the data using Wireshark.
4. Using TCP/IP sockets, write a client – server program, the client sends the file name and the server sends back the content of requested text file if present.
5. Using FIFO files as IPC channel, write a client – server program, the

client sends the file name and the server sends back the content of requested text file if present.

6. Using TCP/IP sockets, implement concurrent server to handle multiple requests by client at a time.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: **Analyze** the data from a live network or from captured file using Wireshark.

CO2: **Develop** and **analyze** the code for network algorithms using any programing languages

CO3: **Analyze** and demonstrate network utilities to diagnose TCP/IP problems and security issues.

CO4: **Analyze** the behavior of network/protocols under different conditions using a packet tracer.

ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING LAB

Contact Hours/Week	:	3	Credits	:	1.5
Total Lecture Hours	:	-	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	6RISL2			

Course objectives:

This course will enable students to:

1. Understand and apply searching strategies and agents followed in solving various problems in Artificial intelligence.
2. Demonstrate the working of the various dimensionality reduction techniques.
3. Design of the supervised machine learning algorithms for solving real world problems.
4. Design the unsupervised machine learning algorithms for solving real world problems.
5. Analyze and demonstrate the comparison between various machine learning algorithms.

Lab Programs

1 • Understanding of basics of Python programming.
• Understanding and execution of simple programs on python – Data types, indentations, loops in python, functions.

2 • Usage of python packages and libraries NumPy, Array indexing, Mathematical functions on arrays,
• Understanding of Pandas library and Data manipulations- Preprocessing, normalizations, Data visualization

3 Implementation of searching algorithms: Breadth first search, Iterative deepening depth-first search, Greedy best-first search,

4 Implementation of Tic-tac-tow game and minimax algorithm.

5 Implementation and demonstrate the Candidate-Elimination algorithm to demonstrate the concept of hypothesis and version space- Most specific and most generic hypothesis.

6 Implementation of the naïve Bayesian classifier and demonstrate the performance of the model with clear interpretation of confusion matrices and other performance metrics.

7 Implementation of linear and logistic regression techniques.

8 Implementation and demonstration of linear discriminant analysis technique for dimensionality reduction.

9 Implementation and demonstration of Principal component analysis technique for dimensionality reduction.

10 Implementation of the decision tree based ID3 algorithm. Demonstration of the working of CART.

11 Implementation of the k-Means algorithm. Also, demonstration of working of the same by using Expectation Maximization algorithm

12 Implementation of k-Nearest Neighbor algorithm to classify the iris data set.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Understand and apply searching strategies and agents followed in solving various problems in Artificial intelligence.

CO2: Demonstrate the working of the various dimensionality reduction techniques.

CO3: Design of the supervised machine learning algorithms for solving real world problems.

CO4: Design the unsupervised machine learning algorithms for solving real world problems.

CO5: Analyze and demonstrate the comparison between various machine learning algorithms.

APTITUDE RELATED ANALYTICAL SKILLS

Contact Hours/Week	:	-	Credits	:	1.0
Total Lecture Hours	:	36	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	ARAS			

Modules Covered:

Sl. No.	Module covered	Duration (in hrs.)
1	Quantitative Aptitude	16
2	Verbal Reasoning	08
3	Logical Reasoning	08
4	Test taking strategies to crack recruiter tests	02
5	Post-Training Assessment along with a	02
	Total Course	**36**

Methodology : Instructor led – Concepts with guided question-solving, assignments and homework assessments

Detailed syllabus:

1.Quantitative Aptitude (with focus on questions from top recruiters) – 16 hrs

a) Number System
- Classification of numbers
- Divisibility tests
- Power cycles and remainders
- Factors and multiples
- Applications of HCF and LCM

b) Profit and Loss, Partnerships and Averages
- Basic terminology in Profit and Loss
- Partnerships
- Averages and weighted averages
- Mixtures and alligations

c) Time and Work
- Working with different efficiencies
- Pipes and cisterns
- Work equivalence
- Division of wages

d) Time, Speed and Distance
- Basics of Time Speed and Distance
- Relative Speed
- Problems based on trains
- Problems based on boats and streams
- Problems based on Races

e) Percentages, Simple and Compound Interest
- Percentages as fractions and decimals
- Percentage increase / decrease
- Simple interest and compound interest

- Relationship between simple and compound interest

f) Permutation, Combination and Probability
- Fundamental counting principle
- Basics of permutation and combination
- Computation of permutation
- Circular permutation
- Computation of combination
- Probability

g) Logarithms, Progressions, Geometry and Quadratic Equations
- Logarithms
- Progressions – Arithmetic, Geometric and Harmonic
- Geometry
- Mensuration
- Quadratic equations

2.Verbal Reasoning (with focus on questions from top recruiters)–8 hrs

a) Reading Comprehension –
- Eyespan
- Speed reading techniques
- Types of questions
- Comprehension strategies

b) Sentence Correction –
- Subject-Verb Agreement
- Parallelism
- Modifiers
- Pronoun Antecedent Agreement
- Verb Time Sequence
- Comparison
- Determiners
- Prepositions

c) Vocabulary –
- Etymology of words
- Prefix and suffix
- Memory techniques to remember words
- Synonyms and antonyms
- Analogy

d) Sentence Completion and Para Jumbles –
- Sentence completion – single blank and double blank questions
- Parajumbles – Moving and anchored jumbles

3.Logical Reasoning (with focus on questions from top recruiters)- 8hrs

a) Coding and Decoding, Series, Analogy, Odd Man Out and Visual Reasoning
- Coding and decoding
- Number and alphabet series
- Analogy

- Odd man out
- Visual Reasoning

b) Data Arrangements and Blood Relations
- Linear, circular and distribution arrangements
- Blood Relations

c) Data interpretation and Data Sufficiency
- Tables
- Pie Charts
- Bar Graphs
- Data Sufficiency

d) Clocks, Calendars, Direction sense and Cubes
- Clocks
- Calendars (Conventional and shortcut methods to find day of a date)
- Cubes
- Direction Sense

4.Test taking strategies – 2 hrs

This module will focus on:
- Understanding patterns of tests (Adaptive, non adaptive, navigation – intra sectional, inter sectional)
- Best strategies to maximize scores and clear cut-offs
- Shortcut strategies on Quantitative Aptitude, Logical Reasoning as well as Verbal Ability to ace sections

5.Post Training Assessment with debrief – 2 hrs

An assessment that tests a student on all three sections of Aptitude, followed a detailed student-wise analysis based on:
- Cut-off
- Percentile w.r.t the batch
- Percentile w.r.t. the college
- Corrective measures to be taken to improve the score

In class, there will be a debrief on how the test should have been taken by an ideal test taker to navigate through the difficulties and ace the cut-off.

6.Tests outside training schedule

An ideal aptitude training course is a mix of classroom learning / guided question solving, followed by self-practice. The 'training duration' focuses mainly on laying strong foundations on concepts and ability to solve questions on major aptitude topics. Significant amount of practice is also provided to students through online tests in the form of:
1. Pre-Assessment test
2. Full-length practice tests
3. Company specific tests (patterns and question types of major recruiters should be given exposure to)

SCHEME & SYLLABUS

OF

VII & VIII SEMESTER B.E.

INFORMATION SCIENCE & ENGINEERING

2022-23

Vision of the Department:
To be a centre for quality education and research in Information Science and Engineering to create high quality professionals for catering to the need of the society.

Mission of the Department:
1) To enable students to acquire strong fundamental concepts related to the Information Science and Engineering through experiential learning.
2) To educate students towards state-of-the-art-technologies and multidisciplinary practices for a successful career by creating learning-teaching-learning ambience.
3) To inculcate life-long learning through innovation and research attitudes among students related to Information Science and Engineering.

Program Educational Objectives (PEOs):

The objectives of Information Science and Engineering degree program are to prepare students to meet the academic excellence, professionalism, and ability to solve a broad range of problems in rapidly changing technological, economic and social environment.

Graduates of the program will:

1. Pursue career as software engineer, project manager, data scientist, entrepreneur and pursue higher studies and research in Information Science and Engineering domains.
2. Apply mathematical, scientific and Information Science and Engineering knowledge with multidisciplinary approaches to solve real world problems.
3. Possess professionalism, ethical and societal responsibilities and engage in life-long learning through pursuit of skill development and certification courses in Information Science and Engineering.

Programme Outcomes (POs):

To achieve the above objectives, Information Science and Engineering degree programme strives to obtain the following outcomes which should be achieved by all graduates at the time of their graduation.

Engineering Graduates will be able to:

1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply

these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Programme Specific Outcomes (PSOs):

1) **Computing System:** Demonstrate the knowledge of evolving hardware and/or software to develop solutions to real life computational problems with a focus on performance optimization.

2) **Communication and Security:** Design and develop solutions for providing efficient transmission, storage, security and privacy of data in diverse computing environment.

3) **Information management:** Apply tools and techniques for management of information system, data analysis and knowledge discovery in the process of decision making.

Cryptography and Blockchain Technology

Contact Hours/ Week	: 4L+1T	Credits :	4.5
Total Lecture Hours	: 52+13	CIE Marks :	50
Sub. Code	: 7RIS01	SEE Marks :	50

Course Objectives:

This course will enable students to:

1. Understand the significance of number theory in cryptographic algorithms
2. Describe the working of different block ciphers
3. Discuss the structure of SHA 512 as an example for cryptographic hash function
4. Differentiate symmetric and asymmetric cryptographic algorithms and their applications
5. Understand the basics of blockchain technology

UNIT I

Introduction to Number Theory

Divisibility and the Division Algorithm, The Euclidean Algorithm, Modular Arithmetic, Prime Numbers, Fermat's and Euler's Theorems, Testing for Primality.

Computer Security concepts, The OSI Security Architecture, Security Services, Mechanisms and Attacks, A Model of Network Security.

SYMMETRIC CIPHERS: Classical Encryption Techniques: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Rotor machine, Steganography.

10 Hrs.

UNIT II

Block Ciphers and the Data Encryption Standard

Traditional Block Cipher Structure, The Data Encryption Standard, A DES Example, The Strength of DES, Block Cipher Design Principles,

Block Cipher Operation

Multiple Encryption and Triple DES, Electronic Codebook, Cipher Block Chaining Mode, Cipher Feedback Mode, Output Feedback Mode, Counter Mode

10 Hrs.

UNIT III

Random Bit Generation and Stream Ciphers

Principles of Pseudorandom Number Generation, Pseudorandom Number Generators, Pseudorandom Number Generation Using a Block Cipher, Stream Ciphers, RC4

Public-Key Cryptography and RSA

Principles of Public-Key Cryptosystems, The RSA Algorithm

10 Hrs.

UNIT IV

Other Public-Key Cryptosystems

Diffie-Hellman Key Exchange, Elgamal Cryptographic System, Elliptic Curve Arithmetic, Elliptic Curve Cryptography

Cryptographic Hash Functions

Applications of Cryptographic Hash Functions, Two Simple Hash Functions, Requirements and Security, Hash Functions Based on Cipher Block Chaining, Secure Hash Algorithm (SHA)

11 Hrs.

UNIT V

Blockchain

Distributed systems, The history of blockchain

Electronic cash

Introduction to blockchain

Various technical definitions of blockchains, Generic elements of a blockchain

Features of a blockchain, Applications of blockchain technology, Tiers of blockchain technology

Types of blockchain

Public blockchains, Private blockchains, Semi-private blockchains, Sidechains, Permissioned ledger, Distributed ledger, Shared ledger, Fully private and proprietary blockchains

Tokenized blockchains, Tokenless blockchains, Consensus in blockchain

CAP theorem and blockchain

Benefits and limitations of blockchain

Decentralization, Transparency and trust, Immutability, High availability, Highly secure, Simplification of current paradigms, Faster dealings, Cost saving, Challenges and limitations of blockchain technology

11 Hrs.

TEXT BOOKS

1	William Stallings	Cryptography and Network Security -Principles and Practices. 7th Edition, Prentice Hall of India. 2011.
2	Imran Bashir	Mastering Blockchain, Published by Packt Publishing Ltd. Birmingham B3 2PB, UK. ISBN 978-1-78712-544-5

REFERENCE BOOK

1	R. P. Feynman	Feynman lectures on computation. Penguin Books. 1996.
2	Jonathan Katz, Yehuda Lindell	Introduction to Modern Cryptography. Principles and Protocols, CRC Press.
3	Lesley Anne	Grey Level Visual Cryptography for General

	MacPherson	Access Structures, A thesis from University of Waterloo

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: **Apply** the concepts of number theory to **build** security mechanisms.

CO2: **Present** an overview of block cipher structure and analyze different block cipher operations.

CO3: **Illustrate** distribution of public keys and analyze security of multilevel encryption schemes.

CO4: **Paraphrase** authentication system by using various Message Authentication techniques.

CO5: **Identify** the elements, different types, benefits and limitations of blockchains.

Cyber Crime & Digital Forensics

Contact Hours/ Week:	4L+0T	Credits:	4.0
Total Lecture Hours:	52	CIE Marks:	50
Sub. Code:		SEE Marks:	50

Course objectives:

This course will enable students to:

1. Provide students with a comprehensive overview of collecting, investigating, preserving, and presenting evidence of cyber-crime left in digital storage devices.
2. Understand topics of forensic data examination of computers and digital storage media.
3. Investigate computers used for wrong-doing.
4. Understand file system basics and where hidden files may lie on the disk, as well as how to extract the data and preserve it for analysis.
5. Compare working of some Forensic tools.

UNIT I

Introduction to Cybercrime: Cybercrime: Definition and Origins of the Word, Cybercrime and information security, Who are Cybercriminals? Classifications of Cybercrimes, Cybercrime: The Legal Perspectives, Cybercrimes: An Indian Perspective, Cybercrime and the Indian ITA 2000, A Global Perspective on Cybercrimes, Cybercrime Era: Survival Mantra for the Netizens. Cyberoffenses: How Criminals Plan Them: How Criminals Plan the Attacks. Social Engineering, Cyberstalking, Cybercafé and Cybercrimes. Botnets: The Fuel for Cybercrime, Attack Vector, cloud Computing.

11 Hrs.

UNIT II

Cybercrime: Mobile and Wireless Devices: introduction, Proliferation of Mobile and Wireless Devices. Trends in Mobility, Credit Card frauds in Mobile and Wireless Computing Era, Security Challenges Posed by Mobile Devices, Registry Settings for Mobile Devices, Authentication Service Security, Attacks on Mobile/Cell Phones, Mobile Devices: Security Implications for Organizations, Organizational Measures for Handling Mobile, Organizational Security Policies and Measures in Mobile Computing Era, Laptops.

11Hrs.

UNIT III

Tools and Methods Used in Cybercrime: Introduction, Proxy Servers and Anonymizers, Phishing, Password Cracking, Key loggers and Spywares, virus and Worms. Trojan Horses and Backdoors, Steganography, DoS and DDoS Attacks, SQL Injection, Buffer Overflow, Attacks on Wireless Networks Phishing and Identity Theft: Introduction, Phishing, identity Theft (ID Theft)

10Hrs.

UNIT IV

Understanding Computer Forensic: Introduction, History of Cyberforensics, Digital Forensics Science. The Need for Computer Forensics, Cyberforensics and Digital Evidence, Forensics, Analysis of E-Mail, Digital Forensics Life Cycle, Chain of Custody Concept, Network Forensics. Approaching a Computer Forensics Investigation,

10Hrs.

UNIT V

Setting up a Computer Forensics Laboratory: Understanding the Requirements Computer Forensics. Forensics and Social Networking sites. The Security/Privacy Threats, Computer Forensics from Compliance. Perspective, Challenges in computer Forensics, special tools and Techniques, Forensics, Forensics Auditing, Anti Forensics.

10Hrs.

TEXT BOOKS		
1	Sunit Belapure and Nina Godbole.	Cyber Security: Understanding Cyber Crime, Computer Forensic And Legal Perspectives, Wiley India Pvt Ltd, ISBN: 978-81-265-2179, 2013.

REFERENCE BOOKS		
1	Bil Nelson, Amelia Philips and Christopher Steuart	Guide to Computer Forensics and Investigation, 4th Edition, Cengage Learning 2015.
2	Thomas J Mowbray	Cyber security Managing Systems, Conducting Testing, and Investigating Intrusions, by John Wiley & sons, ISBN: 978-1-118-84965, 2014.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: **Describe** fundamental concepts of cybercrime and Forensics.

CO2: **Analyze** motive and causes for cybercrime, detection and handling.

CO3: **Investigate** areas affected by cybercrime and investigation.

CO4: **Analyze** the need for Computer Forensics and digital evidence.

CO5: **Investigate** real world cases in the field of forensics.

Cyber Crime and Digital Forensics Lab

Lab Hours/ Week	: 3	Credits :	1.5
Sub. Code	: 7RISL1	CIE Marks :	50
		SEE Marks :	50

Course objectives:

This course will enable students to:

1. Acquire knowledge about different types of cyber-attacks.
2. Able to use different open source tools to detect vulnerabilities.
3. Perform analysis on files and folders using FTK Imager.

Lab Experiments

1. Identifying web vulnerabilities and Target Scanning using Nmap,
2. Identifying web vulnerabilities and Target Scanning using Zenmap
3. Generate malicious payload, distribute the payload to target system using Metasploit tool.
4. Attack on Target System (Based on Weaknesses identified during target scanning) using Metasploit tool.
5. To perform DNS Pharming attack using any method on computers in a LAN Environment.
6. Sniffing Website Credentials using Social Engineering Toolkit
7. Create virus and implement attack and analyse the effect of various viruses.
8. Program to perform DOS attack.
9. Program to perform DDOS attack.
10. Create a file on a USB drive and calculate its hash value like FTK Imager. Change the file and calculate the hash value again to compare the files.
11. Perform Escalation Attack and SQL Injection attack on web application.

Course Outcomes-COs

Upon successful completion of this course the student should be able to

1. **Identify** web vulnerabilities and target scanning on victim's machine.
2. **Implement** DNS Pharming attack, DOS and DDOS attack using appropriate tools.
3. **Analyse** the effect of sniffing and viruses on web applications using appropriate toolkits.

SCHEME & SYLLABUS

OF

III & IV SEMESTER

B.E.

Electronics & Telecommunication Engg.

2022 - 23

Vision of the Dept.:

To become center of excellence in Telecommunication Engineering and empower graduates to take up global challenges in emerging areas to harness technological competence while harmoniously blending with spiritual pursuits.

Mission of the Dept.

1. To provide best learning experience for students through excellent curriculum, industry collaboration and innovative teaching learning processes.
2. To create academic ambience for faculty and students by establishing high-quality R & D labs leading to quality research in Telecommunication Engineering and allied disciplines.
3. To produce graduates with technological competence, necessary professional skills and ethics.

Program Educational Objectives (PEOs)

The graduates of Telecommunication Engineering are able to:

- Build successful careers in industry, R&D Labs by applying mathematical, scientific and state-of-the-art Engineering knowledge with multidisciplinary approaches to solve real world problems in the fields of Electronics & Telecommunication Engineering and allied disciplines.
- Pursue higher education by lifelong learning in the areas of Electronics &Telecommunication Engineering and allied disciplines.
- Display professional and ethical attitude, spiritual values with effective communication skills and leadership qualities.

PROGRAM SPECIFIC OUTCOMES (PSOs):

- Apply and analyze the concepts of circuits and systems for real time challenges in the areas of electronic circuits, signal processing and VLSI/Embedded Systems.

- Identify, design and develop solutions for complex engineering problems related to, communication systems using analytical techniques, state of the art simulation tools and hardware

Engineering Mathematics– III (EC, TC, EE, IT)

Contact Hours/ Week	3 (L)	Credits	3
Total Lecture Hours	39	CIE Marks	50
Total Tutorial Hours	00	SEE Marks	50
Sub Code	NMAT3A	Semester	III

Prerequisites: Engineering Mathematics-I and Engineering Mathematics-II.

Course objective:

1. To introduce the concept of analytic function, transformation for mapping.
2. The concept of complex variables to evaluate the integrals.
3. Introduce partial differential equations, use separation of variable method to solve wave, heat and Laplace equations.
4. To develop and conduct appropriate experimentation, analyze and interpret data and use engineering judgment to draw conclusion.
5. Introduction of Finite difference approximation to derivatives to partial differential equations.

Course Outcomes:

Upon completion of this course the student will be able to:

1. Determine continuity/differentiability/analyticity of a function and find the derivative of a function. Identify the transformation (L3,L1)
2. Evaluate a contour integral using Cauchy's integral formula. Compute singularities and also the residues(L3).
3. Formulate and solve partial differential equations. Apply separation of variable method to solve wave, heat and Laplace equations (L4).
4. Apply least square method to fit a curve for the given data and evaluate the correlation coefficient and regression lines for the data (L3)
5. Compute the numerical solution of partial differential equations (L4).

UNIT-I :Complex Variables 8 Hours

Functions of complex variable, Definition of Limit, Continuity, Differentiability. Analytic functions, Cauchy's-Reimann equation in Cartesian and polar forms (Statement only), Properties of analytic functions (Statement only). Geometrical representation of $f(z)=w$, Conformal transformation: $w=e^z$, $w=z+\frac{1}{z}$, $w=z^2$.

UNIT-II: Complex Integration 8 Hours

Bilinear transformation, Properties, Complex integration, Cauchy's theorem (with proof), Converse of Cauchy's theorem, Cauchy's integral formula (with proof), residues, residues theorem, calculation of residues.

UNIT – III : Partial differential equations (P.D.E) 8 Hours

Formation of Partial Differential Equation, Solution of Langrange's Linear P.D.E. of the type Pp+Qq=R. Method of Separation of Variables. **Applications of P.D.E.:** Classification of PDE, Solution of one dimensional heat, wave and two dimensional Laplace's equations by the method of separation of variables.

UNIT-IV : Statistics **7 Hours**

Introduction, Definitions, Curve Fitting, equation of Straight line, parabola and exponential, correlation and regression, formula for correlation coefficient, regression lines and angle between the regression lines.

UNIT – V: Numerical Solutions to the Partial differential equations

8 Hours

Introduction, Finite difference approximation to derivatives, Elliptic equations, Solution of Laplace's equations, Parabolic equations, Solution of heat equation, Hyperbolic equations, Solution of wave equation.

DIGITAL ELECTRONICS CIRCUIT

Contact Hours/ Week :	3+0+2 (L+T+P)	Credits :	4.0
Total Lecture Hours :	39	CIE Marks :	50
Total Tutorial Hours :	00	SEE Marks :	50
Total Practical Hours :	26		
Sub. Code :	N3CES1		

Course Objectives

The objectives of this course are to study

1. The properties of basic gates and simplifications of Boolean expressions using K Maps.
2. The fundamentals of combinational & sequential circuits with design examples.
3. The functionality of various memory devices.
4. Verilog data types with operators and to develop Verilog codes for digital blocks in different modelling.

UNIT I

Properties of Logic Gates: Noise Margin, Fan-out, Propagation Delay, Power Dissipation. Voltage and current parameters.

Simplification of Boolean Expressions: Canonical forms, Karnaugh maps (3 and 4 variable)

Introduction to Verilog HDL: HDL basic concepts: Syntax & semantics, Data types, Operators, HDL modeling types, Developing HDL code for Logic Circuits using HDL program **08 Hours**

UNIT II

Combinational Logic Circuits: Binary adders and subtracters, Carry look-ahead adder, Decimal adders, Comparators- one bit and two bit, Decoders, Encoder, Multiplexer, Logic design using decoders and multiplexers. Modeling combinational logic circuits using dataflow, gate level and behavioral Verilog HDL program.

Self-study component: Decoder with 7-segment display, Parallel to serial conversion using MUX 08 Hours

UNIT III

Sequential Circuits: Basic bi-stable element, Latches- SR Latch using NAND gates, D Latch, Gated D Latch, Flip-flops – SR, D, JK and T, Characteristic equations, Flip flop conversions Registers: shift register- SISO, SIPO, PISO, Universal shift register, Counters: asynchronous and MOD counter, ring Counter and Johnson counter, Modeling sequential circuits using behavioral Verilog HDL program

Self-study component: Tasks in Verilog HDL 08 Hours

UNIT IV

Sequential Design: Introduction, Synchronous counter design, Mealy and Moore Models, Sequential circuit design using Mealy Model, Synchronous Sequential Circuit Analysis.

Self-study component: Develop Verilog code for sequence detector using Mealy model . **08 Hours**

UNIT V

Memory Devices: Memory types and terminology- Memory organization and operation, Memory reading and writing, RAMs, ROMs and PROMs. Read Only Memory-ROM organization, Rom timing, types of ROMs, Applications of ROMs, Semiconductor RAMs-Static RAMs, Dynamic RAMs, ROMs, Read-Write cycle of ROM and RAM.

Self-study component: Programmable logic Devices- PAL, PLA, PROM. **07 Hours**

TEXT BOOKS

1	Donald D. Givone	Digital Principles and Design, TATA McGraw-hill Edition 2017
2	A.Anand Kumar	Fundamentals of Digital circuits,PHI; 4th edition 2016
3	Samir Palnitkar	"Verilog HDL A guide to Digital Design and Synthesis" Second Edition, Pearson Education ,2003

REFERENCE BOOKS

1	Ronald J Tocci,	Digital Systems Principles and Applications,

	Neal S Widmer and Regory L Moss.	12th Edition, Pearson, 2017.
2	Charles H. Roth. Jr.	Digital Systems Design using Verilog, Thomson Learning, Inc, 1st edition 2015.
3	R D Sudhakar Samuel	Logic Design, Sanguine technical Publishers,2004

Course Outcomes: At the end of the course Student will be able to:

CO1: Apply the knowledge of K Maps for simplification of Boolean expressions and describe Verilog data types & operators
CO2: Design combinational circuits and develop dataflow, gate level and behavioral Verilog code.
CO3: Identify flip flops and analyze shift registers and asynchronous counters and develop behavioral Verilog code.
CO4: Analyze and design synchronous sequential circuits and develop behavioral Verilog code.
CO5: Analyze different memories and design of logic circuits using programmable logic devices.
CO6: Design and implement Digital circuit using MSI components along with Verilog HDL.

Pedagogy:	**Chalk and talk and PPT**
WEB Links & Video Lectures Video Links (e-resources)	**https://nptel.ac.in/courses/108106177** Online tool & Open source software: Multisim, GHDL https://nptel.ac.in/courses/108105132 https://nptel.ac.in/courses/117106086

DIGITAL ELECTRONICS LAB (Only for CIE)

List of experiments

Part-A Hardware Experiments:

1. Realization of Parallel Adder/ Subtractor
2. Multiplexer: Adder and Subtractor using MUX
3. Use of Decoder Chip To Drive Led Display
4. Realization of One Bit Magnitude Comparator
5. Design 3-bit up-counter using T-FF

Part-B Verilog Experiments

1. Write Verilog code for full adder using
(i) Dataflow description
(ii) Gate-level description
2. Write Verilog code for 4:1 MUX using
(i) Dataflow description
(ii) Gate-level description
(iii) Behavioral Description
3. Write Verilog code for 2:4 decoder using
(i) Dataflow description
(ii) Gate-level description
(iii) Behavioral Description
4. Write Verilog code for D FF, JK FF, T FF using Behavioral description

Write Verilog code for up/down counter

SIGNALS AND SYSTEMS

Contact Hours/ Week	:	3 +2 (L+P)	Credits	:	4.0
Lecture Hours	:	39	CIE Marks	:	50
Practical Hours	:	13	SEE Marks	:	50
Sub. Code	:	N3ETI01			

Course objective: To provide the fundamental concepts in signals and systems
like signal transforms, system convolution and describe linear operations on these.

Course Outcomes:

1. Analyze the basics properties of discrete time signals and systems.
2. Analyse the properties of discrete time signals & systems.
3. Identify Fourier representations and analyze the signals in time and frequency domain.
4. Apply Fourier representations to mixed signals and sampling theorem to discretize the analog signals.
5. Analyse discrete time signals & systems using Z transforms.

UNIT I

Introduction and classification of signals: Definition of signal and systems with examples, Elementary signals/Functions: Exponential, sinusoidal, step, impulse and ramp functions.

Basic operations on discrete time signals: Amplitude scaling, addition, multiplication, time scaling, time shift and time reversal. Expression of triangular, rectangular and other waveforms in terms of elementary signals.

Discrete time system classification and properties: Linear-nonlinear, time variant-invariant, causal-noncausal, static-dynamic, stable-unstable, invertible-noninvertible. **8+4 Hours**

UNIT II

Time domain representation of discrete time LTI Systems: Impulse response, convolution sum, computation of convolution sum using graphical method for two finite/infinite sequences (unit step and unit step, unit step and exponential, exponential and exponential, unit step and rectangular, rectangular and rectangular).

Discrete time LTI system Properties in terms of impulse response: Memory less, Causal, Stable, Invertible and Deconvolution, step response of an LTI system, and LTI system interconnection.

Difference equation representation of LTI systems: Difference equation representation and its solution by recursive method.

8+3 Hours

UNIT III

Fourier representations for signals: Introduction to Fourier series and Fourier transform (Qualitative analysis only).

Fourier representations for discrete time signals: Discrete time periodic signals: DFTS representation and properties of DTFS, Discrete time non-periodic signals: DTFT representation and properties of DTFT.

8+2 Hours

UNIT IV

Applications of Fourier representations: Frequency response of discrete time LTI systems, Solution of difference equation, Fourier transform representation of discrete time periodic signals (Relating the DTFT to DTFS), Sampling of continuous time signals.

Discrete Fourier Transform: Sampling of DTFT, DFT and inverse DFT.

7+2 Hours

UNIT V

The Z-Transforms: Z-transform, properties of the region of convergence, properties of the Z-transform, Inverse Z-transform by partial fraction expansion and long division method, Transform analysis of LTI system, Causality and stability, Unilateral Z-transform and its application.

8+2 Hours

Text Book:

1	Simon Haykin.	Signals and systems. Ed 2. John Wiley.

Reference Book:

1	Schaum Series.	Signals & Systems.
2	Oppenheim and Willsky.	Signals & Systems.
3	H P Hsu	Signals & Systems., Schaum Series. II Edn, 2017

PRACTICAL COMPONENT

1. MATLAB/Octave/Python program to generate discrete time signals
2. MATLAB/Octave/Python program to perform basic operations on the discrete time signals.
3. MATLAB/Octave/Python program to even and odd parts of discrete time signals.
4. MATLAB/Octave/Python program to find energy of discrete time signals.

5. MATLAB/Octave/ Python program to perform convolution sum and to verify the properties of convolution sum.
6. MATLAB/Octave/Python program to find the response of a LTI system.
7. MATLAB/Octave/Python program to compute the step response from the given impulse response.
8. MATLAB/Octave/Python program to solve the given difference equation.
9. MATLAB/Octave/Python program to find z-transform and inverse z-transform.
10. MATLAB/Octave/Python program to find residues and poles of z-domain signals.
11. MATLAB/Octave/Python program to find the poles and zeros of the system function H(z).
12. MATLAB/Octave/Python program to verify the important properties of z-transform.
13. MATLAB/Octave/Python program to compute and sketch the impulse response of the discrete time system governed by the given transfer function.
14. MATLAB/Octave/Python program to find DTFS/DTFT of the given discrete time signal. Also, sketch the magnitude and phase spectrum.
15. MATLAB/Octave/Python program to verify the sampling theorem.

ANALOG ELECTRONIC CIRCUITS

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: N3CES2	SEE Marks :	50

Course Objectives: To provide the conceptual and fundamentals of MOSFET based basic amplifiers. To enable students to write the small signal model, analyze the circuit to determine the voltage gain, input and output impedances. Introduction to basic ADC and DAC circuits. To provide skills to design power supplies and to know the importance of power amplifiers.

UNIT 1

Working Principle of MOS capacitor and MOSFET (1 hr), I-V characteristics of MOSFET, Small signal models (2hrs), Biasing of MOSFET amplifiers, Design of Common Source amplifier(2hrs), high frequency model, Miller's Theorem, frequency response of CS amplifier(3hrs).

7 Hours

UNIT 2

CG and CD and Cascode amplifiers (2 hrs), Current mirrors, amplifiers with active loads (2 hrs) The MOS differential pair and their small signal operation (2 hrs) Differential amplifiers with active load (3 hrs).

9 Hours

UNIT 3

OPAMP: Opamp as a black box, Various applications of op-amps like inverting and non-inverting amplifiers, voltage follower, summing amplifier (2 hrs), Integrators, differentiators (1hr), Instrumentation amplifier, Square wave generator (2 hrs), Schmitt trigger, Precision rectifier (2 hrs).

7 hours

UNIT 4

Linear ICs: 555 timer IC and its application Astable, Mono stable MV (2 hrs). PLL 565 IC (1 hr), **DAC:** basics (1 hr), binary weighted R-DAC and R-2R DAC (2hrs), **ADC:** DAC based ADC, Successive approximation ADC , Flash ADC (2 hrs)

8 hours

UNIT 5

Diode and its applications: Rectifier and power supply design (2 hrs), Clipping and clamping circuits (3 hrs). Power amplifiers: Classification, Class A, B, AB and class C power amplifiers. (3 hrs)

8 hours

Text Books:

1.	Behzad Razavi	*"Fundamentals of Microelectronics", 2 nd Edition,2013,Wiely*
2.	Adel S. Sedra, Kenneth Carless Smith,	*"Microelectronic Circuits", Oxford University. 6th Edition. 2014*
3.	Sergio Franco	Design with Operational amplifiers and Analog Integrated circuits, Third Edition, Mc Graw Hill

Note: 3 text books due to wide variety of topics, Normal font in the syllabus means text book 1, *Italic* is text book 2 and <u>underlined</u> is text book 3.

Course outcomes: Students will be

1. Able to understand the MOSFET structure, its working, small signal model
2. Able to design and analyze CS, CG, CD and Differential amplifiers
3. Able to understand the need of Power amplifiers and design Class A, Class B power amplifiers.
4. Able to design power supply and understand wave shaping circuits using diodes.
5. Able to design Opamp based amplifies, Schmitt triggers, generators, and rectifiers.
6. Able to design of circuits using 555, 565 ADC and DAC concepts.

ANALOG ELECTRONIC CIRCUITS LAB

Lab Hours/ Week	: 3	Credits :	1.5
Sub. Code	: N3ETL01	CIE Marks :	50
		SEE Marks :	50

Objectives: To understand the specifications, limitations of the circuit components. Able to relate the concepts learnt in the classroom by conducting relevant experiments by proper design and do parametric analysis. To enable students to know time and frequency response of the circuits to understand its real-time applications.

Course Outcomes:

1. Design and demonstration of power supply BJT amplifiers and Wave shaping circuits.
2. Design and demonstration Op amp based circuits
3.

Expt. set	**Details of the Experiments**	**Category**
1	Diode applications: Design and demonstration of Rectifier and voltage regulator (+5, ± 12V, 3.3 V), Wave shaping circuits (Clipping, Clamping circuits)	Hardware/ Remote Lab
2.	BJT Amplifiers- CE amplifier, CC amplifiers	Hardware/ Remote Lab
3.	Op-amp applications: Inverting, Non-inverting amplifier, Schmitt trigger, square wave generator	Hardware/ Remote Lab
4.	555 Timer Applications: Astable, Mono stable, Bi-stable Multi vibrators	Hardware/ Remote Lab
5.	DAC circuits	Hardware/ Remote Lab

6.	ADC circuits	Hardware/ Remote Lab

Foundations of Engineering Mathematics-I
(For Lateral Entry students)

Contact Hours/ Week	2(L)+2(T)	Credits	0
Total Lecture Hours	26	CIE Marks	100
Total Tutorial Hours	26	SEE Marks	00
Sub Code	NMATDIP3	Semester	III

Prerequisites: Basics in differential calculus, Integral calculus and vectors.
Course Learning Objectives: This course will enable students to master the basic tools of differential and vector calculus, Taylors series, Indeterminate forms (L' Hospital Rule) and differential equations and become skilled for solving problems in **s**cience and engineering.

Course objectives: This course will enable students to:
1. Known the behavior of the polar curve and its application.
2. Learn the notation of partial differentiation and determine the value of the Jacobians.
3. Learn how a function of single variable can be expanded as a Taylor's series and Maclaurin series and Handle the indeterminate form.
4. Learn how the vectors govern the physical models.
5. Known how the real word problems governed by the first order differential equations.

Course outcomes: After the completion of this course, students will be able to:
1. Apply the knowledge of calculus to solve problems related to polar curves and its applications in determining the amount of bending of the curve. **(L1& L2)**
2. Learn the notation of partial differentiation to calculate rates of change of multivariate functions and solve problems related to composite functions. **(L1& L2)**
3. Illustrate the applications of multivariate calculus to understand the characteristics of vector field. 4.
4. Understand how a function of single variable can be expanded as a Taylor's series and Handle the indeterminate form **(L1& L2)**

5. Apply the analytical methods to solve first order and first degree differential equations and solve some Engineering problems. **(L1& L2)**

UNIT-I: Differential Calculus-I: (5+5) Hours

Polar curves: angle between the radius vector and tangent, angle of intersection of polar curves. Pedal equation for polar curves. Curvature and radius of curvature in pedal form. (Without proof)

UNIT – II: Differential Calculus –II: (6+6) Hours

Partial differentiation: Partial derivatives, Total derivatives, differentiation of composite functions. Jacobians.

UNIT – III:

Differential Calculus –III: (5+5) Hours

Taylor's and Maclaurin's series expansions for one variable **(statement only).** Indeterminate forms L' Hospital Rule (without proof) (Only $\frac{0}{0}, \frac{\infty}{\infty}, 0 \times \infty \; and \; \infty - \infty \; form$)

UNIT-IV:

Vector Calculus: (5+5) Hours

Vector Differentiation: scalar and vector fields, Gradient, directional derivative, divergence, curl-physical interpretation; solenoidal and irrotational vector fields-illustrative problems.

UNIT-V:

Differential Equations-I: (5+5) Hours

Solution of first order and first degree differential equations: Variable Separable, Linear differential equations and Exact differential equations.

ಬಳಕೆ ಕನ್ನಡ

BaLake Kannada (Kannada for Usage)

Contact Hours/ Week	:	0(L) + 2(T) + 0 (P)	Credits	:	1.0
Total Lecture Hours	:	0	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Sub. Code	:	**NHS01**			

Course Learning Objectives:

- To create the awareness regarding the necessity of learning local language for comfortable and healthy life.
- To enable learners to Listen and understand the Kannada language properly.
- To speak, read and write Kannada language as per requirement.
- To train the learners for correct and polite conservation.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. ಬಳಕೆ ಕನ್ನಡವನ್ನು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಬೋಧಿಸಲು ವಿತಾವಿ ಸೂಚಿಸಿರುವ ಪಠ್ಯಪುಸ್ತಕಗಳನ್ನು ಉಪಯೋಗಿಸಬೇಕು.
2. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಉತ್ತೇಜಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.

3. ಪ್ರತಿ ವಿದ್ಯಾರ್ಥಿ ಪುಸ್ತಕವನ್ನು ತರಗತಿಯಲ್ಲಿ ಬಳಸುವಂತೆ ನೋಡಿಕೊಳ್ಳುವುದು ಮತ್ತು ಪ್ರತಿ ಪಾಠ ಮತ್ತು ಪ್ರವಚನಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟಂತೆ ಪೂರಕ ಚಟುವಟಿಕೆಗಳಿಗೆ ತೊಡಗಿಸತಕ್ಕದ್ದು.
4. ಡಿಜಿಟಲ್ ತಂತ್ರಜ್ಞಾನದ ಮುಖಾಂತರ ಇತ್ತೀಚೆಗೆ ಡಿಜಿಟಲೀಕರಣಗೊಂಡಿರುವ ಭಾಷೆ ಕಲಿಕೆಯ ವಿಧಾನಗಳನ್ನು ಪಿಪಿಟಿ ಮತ್ತು ದೃಶ್ಯ ಮಾಧ್ಯಮದ ಮುಖಾಂತರ ಚರ್ಚಿಸಲು ಕ್ರಮ ಕೈಗೊಳ್ಳುವುದು. ಇದರಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ತರಗತಿಯಲ್ಲಿ ಹೆಚ್ಚು ಏಕಾಗ್ರತೆಯಿಂದ ಪಾಠ ಕೇಳಲು ಮತ್ತು ಅಧ್ಯಯನದಲ್ಲಿ ತೊಡಗಲು ಅನುಕೂಲವಾಗುತ್ತದೆ.
5. ಭಾಷಾ ಕಲಿಕೆಯ ಪ್ರಯೋಗಾಲಯದ ಮುಖಾಂತರ ಬಹುಬೇಗ ಕನ್ನಡ ಭಾಷೆಯನ್ನು ಕಲಿಯಲು ಅನುಕೂಲವಾಗುವಂತೆ ಕಾರ್ಯಚಟುವಟಿಕೆಗಳನ್ನು ಮತ್ತು ಕ್ರಿಯಾ ಯೋಜನೆಗಳನ್ನು ರೂಪಿಸುವುದು.

UNIT 1

1. Introduction, Necessity of learning a local language. Methods to learn the Kannada language.
2. Easy learning of a Kannada Language: A few tips. Hints for correct and polite conservation, Listening and Speaking Activities
3. Key to Transcription.
4. ವೈಯಕ್ತಿಕ ಸ್ವಾಮ್ಯಸೂಚಕ/ಸಂಬಂಧಿತ ಸರ್ವನಾಮಗಳು ಮತ್ತು ಪ್ರಶ್ನಾರ್ಥಕ ಪದಗಳು - Personal Pronouns, Possessive Forms, Interrogative words 5 ಗಂಟೆಗಳು

UNIT 2

1. ನಾಮಪದಗಳ ಸಂಬಂಧಾರ್ಥಕ ರೂಪಗಳು, ಸಂದೇಹಾಸ್ಪದ ಪ್ರಶ್ನೆಗಳು ಮತ್ತು ಸಂಬಂಧವಾಚಕ ನಾಮಪದಗಳು - Possessive forms of nouns, dubitive question and Relative nouns.
2. ಗುಣ, ಪರಿಮಾಣ ಮತ್ತು ವರ್ಣಬಣ್ಣ ವಿಶೇಷಣಗಳು, ಸಂಖ್ಯಾವಾಚಕಗಳು Qualitative, Quantitative and Colour Adjectives, Numerals
3. ಕಾರಕ ರೂಪಗಳು ಮತ್ತು ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು - ಸಪ್ತಮಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯ - (ಆ, ಅದು, ಅವು, ಅಲ್ಲಿ) Predictive Forms, Locative Case 4 ಗಂಟೆಗಳು

UNIT 3

1. ಚತುರ್ಥಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯದ ಬಳಕೆ ಮತ್ತು ಸಂಖ್ಯಾವಾಚಕಗಳು - Dative Cases, and Numerals
2. ಸಂಖ್ಯಾಗುಣವಾಚಕಗಳು ಮತ್ತು ಬಹುವಚನ ನಾಮರೂಪಗಳು - Ordinal numerals and Plural markers
3. ನ್ಯೂನ/ನಿಷೇಧಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು ಮತ್ತು ವರ್ಣ ಗುಣವಾಚಕಗಳು - Defective / Negative Verbs and Colour Adjectives 5 ಗಂಟೆಗಳು

UNIT 4

1. ಅಪ್ಪಣೆ/ಒಪ್ಪಿಗೆ, ನಿರ್ದೇಶನ, ಪ್ರೋತ್ಸಾಹ ಮತ್ತು ಒತ್ತಾಯ ಅರ್ಥರೂಪ ಪದಗಳು ಮತ್ತು ವಾಕ್ಯಗಳು
   Permission, Commands, encouraging and Urging words (Imperative words and sentences)
2. ಸಾಮಾನ್ಯ ಸಂಭಾಷಣೆಗಳಲ್ಲಿ ದ್ವಿತೀಯ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ಸಂಭವನೀಯ ಪ್ರಕಾರಗಳು
   Accusative Cases and Potential Forms used in General Communication

3. 'ಇರು ಮತ್ತು ಇರಲ್ಲ' ಸಹಾಯಕ ಕ್ರಿಯಾಪದಗಳು, ಸಂಭಾವ್ಯಸೂಚಕ ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು - Helping Verbs; "iru and iralla", Corresponding Future and Negation Verbs
4. ಹೋಲಿಕೆ (ತರ-ತಮ), ಸಂಬಂಧ ಸೂಚಕ ಮತ್ತು ವಸ್ತು ಸೂಚಕ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಪದಗಳ ಬಳಕೆ - Comparative, Relationship, Identification and Negation Words 6 ಗಂಟೆಗಳು

UNIT 5

1. ಕಾಲ ಮತ್ತು ಸಮಯದ ಹಾಗೂ ಕ್ರಿಯಾಪದಗಳ ವಿವಿಧ ಪ್ರಕಾರಗಳು – Different types of forms of Tense, Time and Verbs
2. -ದ್, -ತ್, -ತು, -ಇತು, -ಆಗಿ, -ಅಲ್ಲ, -ಗ್, -ಕ್, ಇದೆ, ಕ್ರಿಯಾ ಪ್ರತ್ಯಯಗಳೊಂದಿಗೆ ಭೂತ, ಭವಿಷ್ಯತ್ ಮತ್ತು ವರ್ತಮಾನ ಕಾಲ ವಾಕ್ಯ ರಚನೆ. Formation of Past, Future and Present Tense Sentences with Verb Forms
3. Kannada Vocabulary List: ಸಂಭಾಷಣೆಯಲ್ಲಿ ದಿನೋಪಯೋಗಿ ಕನ್ನಡ ಪದಗಳು - Kannada Words in Conversation. 6 ಗಂಟೆಗಳು

ಬಳಕೆ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಅನುಕೂಲಗಳು ಮತ್ತು **ಫಲಿತಾಂಶಗಳು**:

Course Outcomes
At the end of the Course, The Students will be able to
CO1: Understand the necessity of learning of local language for comfortable life.
CO2: Listen and understand the Kannada language properly.
CO3: Speak, read and write Kannada language as per requirement.
CO4: Communicate (converse) in Kannada language in their daily life with Kannada speakers.
CO5: Speak in polite conservation.

TEXT BOOKS:

ಬಳಕೆ ಕನ್ನಡ - ಲೇಖಕರು: ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ

Contact Hours/ Week	:	0(L) + 2(T) + 0 (P)	Credits	:	1.0
Total Lecture Hours	:	0	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Sub. Code	:	**NHS02**			

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯ ಉದ್ದೇಶಗಳು:

1. ವೃತ್ತಿಪರ ಪದವಿ ವಿದ್ಯಾರ್ಥಿಗಳಾಗಿರುವುದರಿಂದ ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.

2. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಪ್ರಧಾನ ಭಾಗವಾದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳನ್ನು ಸಾಂಕೇತಿಕವಾಗಿ ಪರಿಚಯಿಸಿ ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ ಸಾಹಿತ್ಯ ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಅರಿವು ಹಾಗೂ ಆಸಕ್ತಿಯನ್ನು ಮೂಡಿಸುವುದು.
3. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವನ್ನು ಹಾಗೂ ಅವರುಗಳು ಸಾಧಿಸಿದ ವಿಷಯಗಳನ್ನು ಪರಿಚಯಿಸುವುದು.
4. ಕನ್ನಡ ಶಬ್ದ ಸಂಪತ್ತಿನ ಪರಿಚಯ ಮತ್ತು ಕನ್ನಡ ಭಾಷೆಯ ಬಳಕೆ ಹಾಗೂ ಕನ್ನಡದಲ್ಲಿ ಪತ್ರ ವ್ಯವಹಾರವನ್ನು ತಿಳಿಸಿಕೊಡುವುದು.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡವನ್ನು ಬೋಧಿಸಲು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಪ್ರಸ್ತುತ ಪುಸ್ತಕ ಆಧರಿಸಿ ಬ್ಲಾಕ್ ಬೋರ್ಡ್ ವಿಧಾನವನ್ನು ಅನುಸರಿಸುವುದು. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಪ್ರೇರೇಪಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.
2. ಇತ್ತೀಚಿನ ತಂತ್ರಜ್ಞಾನದ ಅನುಕೂಲಗಳನ್ನು ಬಳಸಿಕೊಳ್ಳುವುದು – ಅಂದರೆ ಕವಿ-ಕಾವ್ಯ ಪರಿಚಯದಲ್ಲಿ ಕವಿಗಳ ಚಿತ್ರಣ ಮತ್ತು ಲೇಖನಗಳು ಮತ್ತು ಕಥೆಕಾವ್ಯಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟ ಧ್ವನಿ ಚಿತ್ರಗಳು, ಸಂಭಾಷಣೆಗಳು, ಈಗಾಗಲೇ ಇತರ ವಿಮರ್ಶಕರು ಬರೆದಿರುವ ವಿಮರ್ಶಾತ್ಮಕ ವಿಷಯಗಳನ್ನು ಪಿಪಿಟಿ, ಡಿಜಿಟಲ್ ಮಾಧ್ಯಮಗಳ ಮುಖಾಂತರ ವಿಶ್ಲೇಷಿಸುವುದು.
3. ನವೀನ ಮಾದರಿಯ ಸಾಹಿತ್ಯ ಬೋಧನೆಗೆ ಸಂಬಂಧಪಟ್ಟ ವಿಧಾನಗಳನ್ನು ಶಿಕ್ಷಕರು ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಅನುಕೂಲವಾಗುವ ರೀತಿಯಲ್ಲಿ ಅಳವಡಿಸಿಕೊಳ್ಳಬಹುದು.

ಘಟಕ ೧: ಲೇಖನಗಳು

೧. ಕರ್ನಾಟಕ ಸಂಸ್ಕೃತಿ – ಹಂ.ಪ. ನಾಗರಾಜಯ್ಯ
೨. ಕರ್ನಾಟಕ ಏಕೀಕರಣ : ಒಂದು ಅಪೂವ ಚರಿತ್ರೆ – ಜಿ. ವೆಂಕಟಸುಬ್ಬಯ್ಯ
೩. ಆಡಳಿತ ಭಾಷೆಯಾಗಿ ಕನ್ನಡ – ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ ಮತ್ತು ಪ್ರೊ. ವಿ. ಕೇಶವಮೂರ್ತಿ

6 ಗಂಟೆಗಳು

ಘಟಕ 2: ಆಧುನಿಕ ಪೂರ್ವದ ಕಾವ್ಯ ಭಾಗ

೧. ವಚನಗಳು: ಬಸವಣ್ಣ, ಅಕ್ಕಮಹಾದೇವಿ, ಅಲ್ಲಮಪ್ರಭು, ಆಯ್ದಕ್ಕಿ ಮಾರಯ್ಯ, ಜೇಡರದಾಸಿಮಯ್ಯ, ಆಯ್ದಕ್ಕಿ ಲಕ್ಕಮ್ಮ
೨. ಕೀರ್ತನೆಗಳು: ಅದರಿಂದೇನೂ ಫಲ ಇದರಿಂದೇನು ಫಲ – ಪುರಂದರದಾಸರು
ತಲ್ಲಣಿಸದಿರು ಕಂಡ್ಯ ತಾಳು ಮನವೇ - ಕನಕದಾಸರು
೩. ತತ್ಪದಗಳು: ಸಾವಿರ ಕೊಡಗಳ ಸುಟ್ಟು - ಶಿಶುನಾಳ ಶರೀಫ

5 ಗಂಟೆಗಳು

ಘಟಕ 3: ಆಧುನಿಕ ಕಾವ್ಯ ಭಾಗ

1. ಡಿ.ವಿ.ಜಿ. ರವರ ಮಂಕುತಿಮ್ಮನ ಕಗ್ಗದಿಂದ ಆಯ್ದ ಕೆಲವು ಭಾಗಗಳು
2. ಕುರುಡು ಕಾಂಚಾಣ: ದ.ರಾ. ಬೇಂದ್ರೆ
3. ಹೊಸಬಾಳಿನ ಗೀತೆ: ಕುವೆಂಪು

6 ಗಂಟೆಗಳು

ಘಟಕ 4: ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯ

1. ಡಾ. ಸರ್ ಎಂ. ವಿಶ್ವೇಶ್ವರಯ್ಯ : ವ್ಯಕ್ತಿ ಮತ್ತು ಐತಿಹ್ಯ - ಎ.ಎನ್. ಮೂರ್ತಿರಾವ್
2. ಕರಕುಶಲ ಕಲೆಗಳು ಮತ್ತು ಪರಂಪರೆಯ ವಿಜ್ಞಾನ : ಕರೀಗೌಡ ಬೀಚನಹಳ್ಳಿ

5 ಗಂಟೆಗಳು

ಘಟಕ 5: ಕಥೆ ಮತ್ತು ಪ್ರವಾಸ ಕಥನ

1. ಯುಗಾದಿ : ವಸುಧೇಂದ್ರ
2. ಮೆಗಾನೆ ಎಂಬ ಗಿರಿಜನ ಪರ್ವತ : ಹಿ.ಚಿ. ಬೋರಲಿಂಗಯ್ಯ

4 ಗಂಟೆಗಳು

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಪರಿಣಾಮಗಳು (Course Outcomes):

CO1: ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯವಾಗುತ್ತದೆ.

CO2: ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳು ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಆಸಕ್ತಿಯು ಮೂಡುತ್ತದೆ.

CO3: ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

CO4: ಕನ್ನಡ ಭಾಷಾಭ್ಯಾಸ, ಸಾಮಾನ್ಯ ಕನ್ನಡ ಹಾಗೂ ಆಡಳಿತ ಕನ್ನಡದ ಪದಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

TEXT BOOKS:

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ - ಡಾ. ಹಿ.ಚಿ. ಬೋರಲಿಂಗಯ್ಯ ಮತ್ತು ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

CONSTITUTION OF INDIA AND PROFESSIONAL ETHICS		Course Code: **NHS03**	
Contact Hours/ Week	: 2 (T)	Credits	: 1.0
Total Lecture Hours	: 0	CIE Marks	: 50
Total Tutorial Hours	: 26	SEE Marks	: 50

Course Objectives:

- To introduce the students to the basic structure, fundamental rights and duties enshrined in the constitution of India.
- To introduce to the system of governance at the centre and the states.
- To enlighten the students about the method of amendment to the constitution and special provisions of constitution.
- To enable the students to imbibe ethical practices and moral values.
- To learn from the life story of leaders such as Sir M Visvesvaraya.

Part I: Constitution of India

Unit 1: Introduction to Constitution of India

Salient Features of Indian Constitution, Preamble to the Indian Constitution, Different kinds of fundamental rights, Directive Principles of State Policy, Categorical study of Directive Principles, Relationship between DPSP and Fundamental Rights, Fundamental Duties. Meaning and kinds of human rights and safeguards. **6 Hours.**

Unit 2: Union and State Governments

Union and State Legislature: Composition and powers of Loksabha, Rajyasabha, Legislative Assembly and Legislative Council. Union and State Executive: The appointment and powers of President, Vice-president, Prime-Minister, Union Council of Ministers, Governor of State, Chief Minister of State and State Council of Ministers. Union and State Judiciary: The Composition and powers of Supreme Court and High Court.

7 Hours.

Unit 3: Other Provisions of Constitution

Method of amendment of constitution of India, 42nd and 44th amendment act. Special provisions relating to SC / ST, Women and Children and other backward classes. Electoral process related to the Election Commission of India: Composition, functioning and removal of the Election Commissioner(s). Human Rights: Meaning, Kinds and Safeguard of Human Rights, State Human Rights Commission and National Human Rights Commission.

5 Hours.

Part II -Professional Ethics

Unit 4: Professional Ethics and Human Values

Introduction, What is Ethics? Scope of Professional Ethics, Values and Characteristics, Types of values: Negative and positive values, Ethical values for Professional success. ***Case Studies*:** Ethical practices of the reputed Indian Companies: TATA Group, Wipro Technologies. **4 Hours.**

Unit 5: Professional Code of Conduct

Introduction, Professional Code, Legal System, Ethical and Unethical practices, Making the Professional Code successful. Ethical values of Sir M. Visvesvaraya, Mahatma Gandhi and Swami Vivekananda. **4 Hours.**

Course Outcomes: On successful completion of the course, the student will be able to:

CO1: Explain the salient features of the Indian Constitution with special emphasis on fundamental rights and duties.

CO2: Describe the Union and State legislature, executive and judiciary.

CO3: Explain the importance of electoral process and help students to follow the ethical practices in elections.

CO4: Demonstrate a clear perspective of the Ethical values and their relevance in the present context of globalization.

CO5: Practice the ethical values proposed and practiced by the great leaders/eminent personalities with particular reference to Sir M. Visvesvaraya.

TEXT BOOKS:

Universal Human Values, Social Connect and Responsibility		Course Code: **NHS04**	
Contact Hours/Week	: 1(L)	Credits :	1.0
Total Lecture Hours	: 13	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50

Pre-requisites: Universal Human Values (conducted during induction programme)

Learning objectives:

1. Explore about themselves (human beings), family, society and nature/existence.
2. Appreciate the harmony in the human being, family, society and nature/existence
3. Strengthen holistic perception of co-existence and mutual fulfilment among the four orders of nature.

UNIT 1

Understanding Harmony in the Human Being - Harmony in self

Understanding human being as a co-existence of the sentient 'I' and the material 'Body'; Understanding the needs of Self ('I') and 'Body' - happiness and physical facility; Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer); Understanding the characteristics and activities of 'I' and harmony in 'I'; Understanding the harmony of 'I' with the Body: Sanyam and Health, correct appraisal of Physical needs, meaning of Prosperity in detail, Include discussions to differentiate between i)Prosperity

and accumulation. ii) Ensuring health vs dealing with disease

5 Hours.

UNIT 2

Understanding Harmony in the Family and Society -
Harmony in Human-Human Relationship

Understanding values in human - human relationship, meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness, Trust and Respect as the foundational values of relationship; Understanding the meaning of Trust, Difference between intention and competence; Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship; Understanding the harmony in the society (society being an extension of family)- Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals. **4 Hours**

UNIT 3

Understanding Harmony in the Nature and Existence -
Whole-existence as Co-existence

Understanding the harmony in the Nature; Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self-regulation in nature; Understanding Existence as Co-existence of mutually interacting units in all-pervasive space; Holistic perception of harmony at all levels of existence. Include discussions on-human being as cause of imbalance in nature (film “Home” can be used), pollution, depletion of resources and role of technology etc.

4 Hours.

Course Outcomes:

On successful completion of the course, the students will be able to

CO1 Become more aware of themselves, and their surroundings (family, society, nature)

CO2 Become more responsible in life, and value human relationships and human society

CO3 Develop critical ability in handling problems and in finding sustainable solutions

Text Book:

1. Gaur, R.R. & Sangal R – 'Foundation Course in Human Values and Professional Ethics; Presenting a universal approach to value education through self-exploration', Excel Books, Bangalore, 2016, ISBN: 978-8-174-46781-2

Reference Book:

2. Tripathi A.N. – 'Human Values', New Age International Publisher, 2003, ISBN: 81-224-1426-5

EMBEDDED SYSTEMS

Contact Hours/Week	:	3	Credits	:	4
Total Lecture Hours	:	40	CIE Marks	:	50
Total Lab Hours / Week	:	2	SEE Marks	:	50
Course Code	:	N4ETI01			

UNIT 1

Introduction to Embedded systems: Introduction, Embedded system Vs General purpose computing system, classification of embedded system, typical embedded system, core of embedded system, memory, sensors and actuators.(Text-1) Introduction to Microcontroller family, 8051 block diagram. (Text- 3)

Introduction to Internet of Things (IoT): Definition, vision, conceptual framework, Major components of IoT system. (Text-2)

7 Hours

UNIT 2

Introduction to Microcontroller: Features, architecture, programming model, pin description of the 8051, memory organization, register banks, stack, PSW, addressing modes and External memory interfacing (Program and Data Memory). (Text-3)

8 Hours

UNIT 3

Instruction set of 8051: Data transfer instructions, Arithmetic Instructions, Logical Instructions, Branch control instructions, Bit oriented instructions.
Application Programs: Incrementing, Decrementing, Addition, Subtraction, Multiplication and Division, Decimal Arithmetic, sorting programs. (Text-3)

8 Hours

UNIT 4

8051 Peripherals: I/O Ports: Input /output port structures of 8051, Programming of ports. **Timer/Counter:** Programming 8051 Timers, Counter Programming (Programming using Assembly language)
Serial Communication: Basics of Serial Communication, 8051 Connections to RS-232, and 8051 Serial port Programming. (Programming using Assembly language) (Text-3) **8 Hours**

UNIT 5

Interrupts: 8051 Interrupts, Programming Timer Interrupts, Programming External Hardware Interrupts, Programming the Serial Communication Interrupts, Interrupt Priority in the 8051. (Programming using Assembly language)
Interfacing with peripheral: Interfacing 8051 to LCD, DAC, ADC 0804 and keyboard. (Text-3) (Programming using Assembly language)

8 Hours

TEXT BOOKS:

1.	Shibu K V	Introduction to Embedded Systems, 2nd edition, Tata Mc Graw Hill Education Pvt. Ltd., 2017
2.	Raj Kamal	Internet of Things: Architecture And Design Principles, 1st edition, Mc Graw Hill Education Pvt. Ltd., 2017.

3.	Muhammad Ali Mazidi and Janice Gillespie Mazidi and Rollin D. McKinlay	The 8051 Microcontroller and Embedded Systems using assembly and C, II Edition Pearson, 2009.

REFERENCE BOOKS:

1.	Kenneth J. Ayala	The 8051 Microcontroller, Ed III, Thomson Delmar Learning, 2005

Course Outcomes:

After the completion of this course, students will be able to:

CO1 Apply the knowledge of engineering fundamentals to describe embedded systems and analyse the IoT conceptual framework.

CO2 Analyze the architectural features of 8051 and design memory interfacing.

CO3 Analyze the 8051 instruction set and develop the arithmetic and logical programs using the instructions in various addressing modes.

CO4 Analyze and develop the programming applications using timer/counter, I/O ports and serial communication.

CO5 Illustrates the interrupt concept in 8051 and develop ALP to interface the microcontroller with peripherals.

Integrated Lab

Objectives: This course will enable students to:

1. Develop and debug 8051 ALP to solve complex problems

2. Program Embedded system for IoT applications

Part A: 8051 Assembly Language Programming using Keil

1. Assembly Language Programs on addition, subtraction, multiplication, division of numbers.
2. Assembly Language Programs for searching and sorting of numbers, averaging of numbers.
3. Assembly Language Programs to find GCD, LCM, Counters.
4. ALP on Timers and serial communication

Part B: 8051 C programming Using Keil software (interfacing programs)

1. Interfacing programs using C: i) DAC ii) Keyboard and LCD

iii) Elevator iv) DC motor/stepper motor v) ADC

Study Experiments

Part C: IoT for sensor data acquisition using IoT Evaluation board Familiarization with arduino board and perform necessary software installation.

1. To interface LED/Buzzer with arduino and to write a program to turn on LED for 1sec after every 2 sec.
2. To interface push button/digital sensor (IR/LDR) with arduino and write a program to turn on LED when push button is pressed. Integrating temperature sensor and humidity sensor with IoT to read environmental readings.

Part C: open- ended experiments:

1. Design a home automation through integrating the required sensors using IoT.
2. Develop a calculator to perform arithmetic operations.
3. Generate different wave patterns using the DAC interface.

Course Outcomes: After the completion of this course, students will be able to:

1. Apply the knowledge of engineering fundamentals to design an algorithm for a given problem.
2. Create, implement and test the algorithms using 8051 ALP.
3. Design, implement and test C program for interfacing peripherals to 8051 microcontroller.
4. Design and integrate sensors through controllers to IoT for data acquisition.
5. Demonstrate the ability to provide efficient solutions for complex engineering problems in the area of embedded systems individually and working in a team.

CONTROL SYSTEMS

Contact Hours/Week	:	3 (L)	Credits	:	4.0
Total Lecture Hours	:	40	CIE Marks	:	50
Total Lab Hours	:	26	SEE Marks	:	50
Course Code	:	N4ETI02			

Course Objectives: This course will enable students to:

1. To understand concepts of the mathematical modeling, Definitions, Classification, Relative merits and demerits of open and closed loop systems, Linear and non-linear systems, Transfer function, Block diagrams reduction techniques and signal flow graphs applicable to electrical network.
2. Steady-state errors and error constants, Concepts and applications of P, PD, PI and PID types of control.
3. Feedback control and stability analysis in Time and Frequency domains: Definition, Routh-Hurwitz criterion and Root locus techniques
4. Stability analysis in Time and Frequency domains: Nyquist criterion, Bode plots, Relative stability, Gain margin and phase margins.
5. Compensation: Lead, Lag and lag-lead compensators, Design of compensating networks for specified control system performance. State Space Analysis: State models, State space equations, Transfer function, Transfer model, State space representation of dynamic systems.

UNIT 1

Modeling of linear-time-invariant Systems: Introduction to control system, Open loop and Closed loop systems. Mathematical models of physical systems–mechanical systems, Electrical systems.

- Translational and rotational systems
- Transfer function of Electrical networks, Relevant examples

signal flow graphs: signal Flow graph, Mason's gain formula applicable to electrical systems. **7 Hours**

UNIT 2

Time Response Analysis: Unit step response of first and second order linear-time-invariant systems, time domain specifications, transient response of second order linear-time-invariant systems, steady state error analysis.
Feedback Controllers: Design of feedback controllers based on time response applicable to electrical systems. Relevant examples. **8 Hours**

UNIT 3

Concept of Stability: **Frequency Response Analysis:** Routh-Hurwitz Criteria, Relative Stability analysis. **Root–Locus Techniques**: The root locus

concepts, Construction of Root-loci, effect of addition of poles and zeros to the linear time invariant systems and its applications to electrical systems. Relevant examples and applications. **8 Hours**

UNIT 4

Frequency-response analysis: Frequency domain specifications, Correlation between time and frequency response, Polar plots, Bode plots, Closed-loop frequency response(Transfer function) from Bode Plot, Nyquist stability, Relative stability using Nyquist Stability criterion-Gain and phase margin, Stability analysis in Electrical systems. Relevant examples and applications **8 Hours**

UNIT 5

System Compensation: Design of Lead compensator, Lag compensator, Lag-Lead compensation as applicable to electrical systems. Suitable examples and applications.

State variable analysis: Concepts of state, state space, state variable, state model of electrical systems, State equation, solution of state equation, state transition matrix. **8 Hours**

TEXT BOOKS:

1.	Richard C. Dorf and Robert H. Bishop	Modern Control Systems, Ed 13, Pearson Education, 2013, ISBN-10 : 0134407628 ISBN-13 : 978-0134407623
2.	Nagrath and Gopal M.	Control Systems Engineering. Ed 4, New Age International (P) Limited. 2005. ISBN 10: 8122422845ISBN 13: 9788122422849.

REFERENCE BOOKS:

1.	Ogata K.	Modern Control Engineering. Ed 4. Pearson Education Asia/PHI. 2002.
2.	Kuo C. Benjamin	Automatic Control Systems, Wiley; 9th edition, 2014 Language: English, ISBN 10: 9788126552337 ISBN-13: 978-8126552337

Course Outcomes: After the completion of this course, students will be able to:

1. **Formulate** the mathematical model for linear-time-invariant systems and **obtain** the transfer functions using block diagram reduction technique and signal flow graphs.
2. **Analyze** transient and steady state responses for first order and second order linear-time-invariant systems with standard signals. **Design and analyze** the performance of feedback controllers to improve the stability of linear-time-invariant systems.
3. **Analyze and interpret** the stability of linear-time invariant systems by applying RH criteria and root locus techniques.
4. **Analyze and interpret** the stability of linear-time-invariant systems in frequency domain analysis by Nyquist plot and Bode plot techniques.
5. **Design** of Lead, lag and lead-Lag compensators for improving the stability of linear-time-invariant systems and **develop** the state models for the linear-time-invariant systems.

Lab Components:

1. Verification of transfer function of Electrical and Electronic circuits.
2. Realization of Desired Transfer function using electrical circuits.
3. Verification voltage Amplifier transfer function
4. Verification of stability of amplifiers and condition for oscillations
5. Realization of RC and LC oscillators
6. I and II order RC filters

PRINCIPLES OF COMMUNICATION SYSTEMS

Contact Hours/ Week	: 3+2	Credits :	3+1
Total Lecture Hours	: 39	CIE Marks :	50

Sub. Code : N4ET01 SEE Marks : 50

Course Objectives: This course will enable the students to

1. Develop fundamentals of the communication system.
2. Analysis of continuous time modulation and demodulation techniques AM, FM & PM in both time and frequency domain.
3. Analyzing the effect of Additive white Gaussian noise in different receivers.
4. Analyze the conversion of analog signals to digital data and represent the digital data in digital formats.
5. Understand pulse shaping technique to reduce inter symbol interference.

UNIT 1

Amplitude Modulation: Conventional Amplitude Modulation, Double- Sideband Suppressed Carrier, Single-Sideband, Vestigial-Sideband, Implementation of AM Modulators and Demodulator: Power-Law Modulation, Switching Modulator, Balanced modulator, ring modulator, Envelop detector, Demodulation of DSB-SC AM Signal. Signal Multiplexing. Text-1

8 Hours

UNIT 2

Angle Modulation: Representation of FM and PM Signals, narrowband angle modulation, Spectral Characteristics of Angle-Modulated Signals, Angle modulation by sinusoidal signal, Implementation of Angle Modulators and Demodulators, Radio Broadcasting: AM/FM Radio Broadcasting Text-1

8 Hours

UNIT 3

Noise: Introduction, Shot noise, Thermal noise, White noise, Noise equivalent bandwidth, Narrowband noise, Noise figure, Equivalent noise temperature, Cascade connection of two-port networks.

Noise in Receivers: Introduction, Receiver model, Noise in DSB-SC receivers, Noise in AM receivers and Noise in FM receivers, FM threshold effect. Text-1 **7 Hours**

UNIT 4

Introduction to digital communication: Baseband Systems, The Sampling Theorem, Aliasing, Signal Interface for a Digital System, Sources of Corruption, Sampling and Quantizing Effects, Channel Effects, Signal-to- Noise Ratio for Quantized Pulses,

Pulse Code Modulation, Uniform and Non-uniform Quantization Statistics of Speech Amplitudes, Non-uniform Quantization, Companding Characteristics, Baseband Modulation, Waveform Representation of Binary Digits, PCM Waveform Types, Spectral Attributes of PCM Waveforms, Bits per PCM Word and Bits per Symbol. **Text 2** **8 Hours**

UNIT 5

Baseband demodulation/detection: Signals and Noise, Error-Performance Degradation in Communication Systems, Demodulation and Detection, Vectorial View of Signals and Noise, The Basic SNR Parameter for Digital Communication Systems, Detection of Binary Signals in Gaussian Noise, Maximum Likelihood Receiver Structure, Inter-symbol Interference, Pulse Shaping to Reduce ISI. **Text-2** **8 Hours**

Text Books:

1.	John G Proakis Masoud Salehi	Communication Systems Engineering, Second Edition
2.	Bernard Sklar	Digital Communications - Fundamentals and Applications", 2nd Edition Pearson Education (Asia) Ptv. Ltd, 2001.

Reference Books:

1.	Simon Haykin	An introduction to Analog and Digital communications, 2006, Wiley India.
2.	Lathi B.P. Modern	Digital and Analog communication systems. Ed 3. Oxford
3.	John G. Proakis	Digital Communications, 4th edition, McGraw Hill, 2001
4.	Simon Haykin	Digital Communications, John Wiley and Sons, 2013

Course Outcomes:

1. Applying engineering fundamentals analyze mathematical model, block diagram, circuit diagram of various amplitude modulation and demodulation techniques and infer their performance

parameters like power and bandwidth.
2. Elucidate the function block diagram of Angle modulation & demodulation and their modeling.
3. Analyze noise models related to various analog modulation techniques. Infer the noise effect in receivers of analog communication systems.
4. Analyze different sampling techniques and quantization mechanisms.
5. Analyze PCM technique for data transmission using appropriate line coding techniques and evaluate its performance by Eye diagram and SNR

EMBEDDED SYSTEMS LAB

Contact Hours/Week	:	3	Credits	:	1
CIE Marks	:	50	SEE Marks	:	50
Total Lab Hours / Week	:	3	Course Code	:	N4ETL01

PART A: GPIO Programming: C code to interface Controller to external devices
i) LED
ii) LCD
iii) Stepper motor
iv) Key pad
v) DC motor
vi) Seven segment Display

PART B: C Code to interface built-in Peripherals of Controller to external devices
Digital to Analog Converter (for analog waveform generation)
Analog to Digital Converter (for interfacing Sensors)
Universal Asynchronous Receiver Transmitter (for serial communication)
Timers (for time delay generation)
Pulse Width Modulator (for speed control of motors)
Interrupts (software and hardware)

PART C: C Code to interface sensors and communication between devices
Accelerometer to measure acceleration of object GPS sensor to determine position, etc.

I2C and SPI between microcontrollers (master-slave).

Course Outcomes:

1. Design and Develop microcontroller based Embedded solutions for IoT applications and validate using Keil Micro vision-4 tool.
2. Develop Embedded C codes for microcontroller to interface basic external hardware like LCD, Keypad, Motors, etc.
3. Develop solutions for interfacing sensors and actuators to microcontroller

Course Title	**Advanced Technical Training Lab in C , Data Structure , C++**		
Course Code	**N4CESL1**		
Contact Hours/W eek	0+0+3	Credits	1.0
Total Lecture Hours	0	CIE Marks	50
Total Practical Hours	36	SEE Marks	50

Course learning objectives (CLOs):

1. Build the logic for a given problem statement by using algorithms using fundamental concepts of the Programming Language C such as conditional statements, looping constructs, division, mod operations and string manipulation.
2. Implement the Data Structures such as Stacks, Queues, Lists, and Trees using C Programming language.
3. Implement the fundamental concepts of Object Oriented Programming Concepts, such as Classes, Objects, Abstraction, Encapsulation, Polymorphism, Constructors, Over Loading and Over Riding

Contents

1. Structure of a 'C' Program
   a. Main Function
   b. Input & Output
   c. C Tokens
2. Keyword and Identifiers
3. Operators
4. Variables
5. Control Statements

a. Conditional Statements
   - If
   - If-else
   - Simple
   - Nested
   - Multiple
   - switch

b. Looping Statements
   - while
   - do-while
   - for

6. Arrays
   - Single Dimensional
   - Two Dimensional
   - String as Character Arrays
7. Functions and Recursive Functions
8. Pointers
9. Structures and Unions
10. Enumerations
11. Files
12. Introduction to Data Structures
    a. Space Complexity
    b. Time Complexity

13. Classification of data structures
    a. Linear Data structures
    b. Non-Linear Data Structures
14. Array Versus Linked List
15. Linked List
    a. Single Linked List
    b. Double Linked List
    c. Circular Linked List
16. Stack
    a. Push
    b. Pop
17. Queue
    a. Enqueue
    b. Dequeue
18. Searching Techniques
    a. Linear Search
    b. Binary Search
19. Sorting Techniques
    a. Bubble Sort
    b. Insertion Sort
    c. Selection Sort

d. Merge Sort
e. Quick Sort

20. Tree
    a. Pre-Order
    b. In-Order
    c. Post-Order
21. Graph
    a. DFS
    b. BFS
22. Introduction to Object Oriented Programming and C++
23. Difference between C and C++
24. C++ Programming Structures and Input/output Functions
25. OOPs Concepts
    a) Class and Object
    b) Abstraction
    c) Encapsulation
    d) Inheritance
    e) Polymorphism
26. Implementation of the OOPs Concepts

Course Outcomes:

Upon successful completion of this course, the student should be able to:

CO1 Design and develop solutions for particular programming problems using the fundamental concepts of C Programming.

CO2 Implement different data structures like Stacks and Queues using static and dynamic memory allocation techniques.

CO3 Design & Implement Object oriented concepts of C++ programming such as Classes, Objects, Inheritance, polymorphism for a given problem statement.

Foundations of Engineering Mathematics-II
(For Lateral Entry students)

Contact Hours/ Week	2(L)+2(T)	Credits	0
Total Lecture Hours	26	CIE Marks	100
Total Tutorial Hours	26	SEE Marks	00
Sub Code	NMATDIP4	Semester	IV

Prerequisites: Basics in differential calculus, Integral calculus and vectors.

Course Learning Objectives: This course will facilitate the students with concrete foundation of ordinary differential equations, Laplace transforms, Integral calculus and numerical methods enabling them to acquire the knowledge of these mathematical tools.

Course objectives: This course will enable students to:

1. Solve second and higher order differential equations.

2. Find the Laplace transform of the function f(t).
3. Find the Inverse Laplace transform of the function F(s).
4. Apply the knowledge of numerical methods in the models of various physical and engineering phenomena
5. Solve the integral by using standard integrals (Beta and Gamma) and multiple integrals

Course outcomes: After the completion of this course, students will be able to:

1. Explain various physical models through higher order differential equations and solve such linear ordinary differential equations. **(L1& L2)**
2. Understand the concept of Laplace transform and obtain Laplace transform of periodic functions and unit step functions. **(L1& L2)**
3. Apply the concept of Laplace transform in solving Linear Differential equations. **(L1& L2)**
4. Apply the Numerical methods to solve Algebraic and transcendental equations and find the polynomials by finite difference method. **(L1& L2)**
5. Apply the concept of to evaluate multiple integrals and Beta and Gamma functions **(L1& L2)**

UNIT-I: Linear Differential Equations: (6+6) Hours

Solution of second and higher order equations with constant coefficients by inverse differential operator method, method of variation of parameters,

UNIT – II: Laplace Transform: (5+5) Hours

Definition, Transforms of elementary functions, properties of Laplace Transform, Laplace Transform of $e^{at} f(t)$, $t^n f(t)$ **,** $\frac{f(t)}{t}$ **,** derivatives and Laplace Transform of Periodic functions'

UNIT-III: Inverse Laplace Transform: (5+5) Hours

Inverse Laplace Transform, Convolution theorem (without proof) and problems Applications –Solution of Linear differential equations using Laplace Transform. .

UNIT-IV: Elementary Numerical Methods (5+5) Hours

Finite differences. Interpolation/extrapolation using Newton's forward and backward difference formulae, Newton's divided difference and Lagrange's formulae (All formulae without proof). Solution of polynomial and transcendental equations - Newton-Raphson method (only formula) – Illustrative examples.

UNIT-V: Integral Calculus: (5+5) Hours

Multiple integrals –Evaluation of double and triple Integrals, **Beta and Gamma functions**: Definition, relation between Beta and Gamma functions and simple problems.

Text Books:

SCHEME & SYLLABUS

OF

V & VI SEMESTER

B.E.

Electronics & Telecommunication Engg.

2022 - 23

Vision of the Dept.:

To become center of excellence in Telecommunication Engineering and empower graduates to take up global challenges in emerging areas to harness technological competence while harmoniously blending with spiritual pursuits.

Mission of the Dept.

1. To provide best learning experience for students through excellent curriculum, industry collaboration and innovative teaching learning processes.
2. To create academic ambience for faculty and students by establishing high-quality R & D labs leading to quality research in Telecommunication Engineering and allied disciplines.
3. To produce graduates with technological competence, necessary professional skills and ethics.

Program Educational Objectives (PEOs)

The graduates of Telecommunication Engineering are able to:

 Build successful careers in industry, R&D Labs by applying mathematical, scientific and state-of-the-art Engineering knowledge with multidisciplinary approaches to solve real world problems in the fields of Telecommunication Engineering and allied disciplines.

 Pursue higher education by lifelong learning in the areas of Telecommunication Engineering and allied disciplines.

 Display professional and ethical attitude, spiritual values with effective communication skills and leadership qualities.

PROGRAM SPECIFIC OUTCOMES (PSOs):

- Apply and analyze the concepts of circuits and systems for real time challenges in the areas of electronic circuits, signal processing and VLSI/Embedded Systems.
- Identify, design and develop solutions for complex engineering problems related to, communication systems using analytical techniques, state of the art simulation tools and hardware

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institute affiliated to Visvesvaraya Technological University, Belagavi, Approved by AICTE, New Delhi)

TELECOMMUNICATION NETWORKS

Contact Hours/Week	3 (L)	Credits	: 3.0
Total Lecture Hours	39	CIE Marks	: 50
Course Code	5RTE01	SEE Marks	: 50

Course Objectives: This course will enable students to:

1. Understand the fundamentals of telecommunication technology and usage of transmission medium for establishing communication.
2. To make use of the layered architecture in data communication and signaling systems.
3. Analyse the uses of broadband applications in multimedia streaming.
4. Understand solutions to various broadband access medium.
5. Analyse the standard techniques in wireless communications.

UNIT 1

Telecommunication Technology Fundamentals, Transmission medium & Establishing Communication Channels: Transmission lines, Types of network connections, The Electromagnetic spectrum and bandwidth, Analog and Digital Transmission and Multiplexing, Twisted pair, coaxial cable, Microwave, Satellite and Fiber optics, Establishing Connections, The PSTN versus the Internet.

8 Hours

UNIT 2

The PSTN, Data communication Basics & Wide Area Networking: The PSTN Infrastructure, The transport network infrastructure, Signaling systems, Intelligent networks, The Evolution of data communication, the data flow, OSI reference model, Circuit switched networks and packet switched networks**.**

8 Hours

UNIT 3

Next-generation Networks & Services: Broadband evolution, Multimedia networking requirements, Broadband infrastructure and architecture, Traditional internet applications like VPNs, Security, VoIP, Multimedia on the Internet: Streaming media.

8 Hours

UNIT 4

Broadband Access Solutions: xDSL- DSL, ADSL, VDSL, HFC-architecture, Cable modems and Digital TV devices, Fiber-FTTC and FTTH,PONs, Wireless Broadband access media-DBS, MMDS, LMDS, Free space optics, Unlicensed band, Emerging Media-Home PAN, Ethernet-in-the-loop, PLT. **7 Hours**

UNIT 5

Wireless Communications: Spectrum reuse- space division, Multiple access techniques, spread spectrum techniques, compression techniques, duplexing techniques, Wireless WANs-analog & digital cellular network architechture,CDPD,GSM,GPRS,EDGE,3G technology evolution, Wireless MANs-Wireless local loop applications and options, Wireless LANs & Wireless PANs-Bluetooth, Home RF. ……

8 Hours

TEXT BOOKS:

1.	Lillian Goleniewski	Telecommunications Essentials, Pearson, Edition, Year, ISBN 0-201-76032-0

REFERENCE BOOKS:

1.	Roger L Freeman	Fundamentals of Telecommunications, 2nd Edition, John Wiley & Sons, 2005
2.	Thiagarajan Vishvanathan	Telecommunications Switching systems & networks – PHI-2010

Course Outcomes: After the completion of this course, students will be able to:

1.Apply the fundamental concepts in building telecommunication network using various transmission medium and analyze establishing connection in PSTN networks.

2. Analyze the PSTN and transport network infrastructure, and to understand the OSI layered structure for data communication and apply switching techniques in WANs.

3.Analyze the multimedia streaming requirements and apply them to support best quality streaming applications.

4. Design and develop the solution for the broadband access technologies.

5.Analyze and understand the wireless communications technologies like WLANs, WMANs, WPANs and WWANs.

DIGITAL COMMUNICATION & CODING THEORY

Contact Hours/ Week	: 4	Credits	: 4
Total Lecture Hours	: 52	CIE Marks	: 50
Sub. Code	: 5RTE02	SEE Marks	: 50

Course objectives: This course will enable students to:

1. Understand the concepts of generation and detection of different digital modulation Techniques and their performance analysis
2. Study and realize various source coding techniques
3. Study and realize various channel coding techniques.

Course Outcomes: After completion of this course, students will be able to:

1. Apply and analyze different band pass modulation techniques for transmission of digital data and demodulation using coherent and non-coherent receivers.
2. Analyze and compare the performance parameters like BER, bandwidth, PSD for different digital modulation schemes.
3. Quantify amount of information of a discrete source and devise an optimal code for a discrete source satisfying various properties by selecting appropriate coding theorem.
4. Design and develop encoder and decoder circuit for error free communication using linear block codes.
5. Develop a binary cyclic encoder and decoder circuit for error free communication and perform encoding and decoding of convolution codes.

UNIT 1

Band pass Modulation/Demodulation-I: Why modulate? Digital Band pass modulation Techniques, PSK, FSK, ASK, APK, Detection of Signals in Gaussian Noise, Decision regions, Correlation receiver, Binary Decision threshold, Coherent Detection of PSK, Sample Matched filter, MPSK, FSK, Non coherent Detection- DPSK, FSK, Minimum tone spacing for O-FSK.

11 Hours

UNIT 2

Band pass Modulation/Demodulation-II: Quadrature implementation of a Modulator, D8PSK modulator and demodulator, Error performance for Binary systems: Coherent BPSK, Non-coherent DPSK , Coherent and Non-coherent FSK, Comparison, M-ary signal space and probability of error discussion for M-ary techniques.

Spread Spectrum Techniques: Beneficial attribute of spread spectrum system, PN sequence, DSSS, PG and Performance, FHSS-slow and fast, CDMA.

11 Hours

UNIT 3

Information Theory: Measure of Information, Entropy of Zero Memory Source, Properties of Entropy, Information Rate, Extension of Zero Memory Source, Sources with Finite Memory: Markov Sources**.**

Source Encoding: Properties of codes, Code Efficiency and Redundancy, Shannon's Noiseless Coding Theorem, Huffman Minimum Redundancy code.

Channels for Communication: Introduction to Communication Channels, Discrete Communication Channels, Entropy Function and Equivocation, Mutual Information, Properties of Mutual Information.

10 Hours

UNIT 4

Channels for Communication: Rate of Information Transmission Over a Discrete Channel, Capacity of a Discrete Memory less Channel, Shannon's Theorem on Channel Capacity, Symmetric channel, Binary erasure channel and Cascaded channels

Linear Block Codes: Introduction to Error Control Coding, Example of Error Control Coding, Methods of Controlling Errors, Types of Errors, Types of Codes, Linear Block Codes, Matrix Description of Linear Block Codes, Error Detection and Error Correction Capabilities of Linear Block Codes, Single Error Correcting Hamming Codes.

10 Hours

UNIT 5

Binary Cyclic Codes: Algebraic Structures of Cyclic Codes, Encoding using an (n-k) Bit Shift Register, Syndrome Calculation, Error Detection and Error Correction, Special Classes of Cyclic Codes: BCH Codes, RS Codes.

Convolution Codes: Encoding using Time Domain and Transfer Domain Approach, State Diagrams, Tree and Trellis diagrams.

10 Hours

DIGITAL SIGNAL PROCESSING

Contact Hours/ Week	: 4	Credits: 4
Total Lecture Hours	: 52	CIE Marks : 50
Total Tutorial Hours	:	SEE Marks : 50
Sub. Code	: 5RTE03	

Course Outcomes: After the completion of this course, students will be able to:

CO1: Represent and process information in digital domain as a function of time or frequency.

CO2: Compute the representation efficiently using FFT algorithms and linear filtering approaches.

CO3: Design a digital FIR filter for a given specification and realize using a given structure.

CO4: Design a digital IIR filter for a given specification and realize using a given structure.

CO5: Implement basic signal processing algorithms for applications in Communication and Signal Processing.

UNIT-1

Introduction to Digital Signal Processing: Basic elements of a Digital Signal Processing system, advantages of DSP over analog signal processing, Concept of frequency in continuous time and discrete-time domain (Section 1.3), Importance of Sampling (Section 1.4), Frequency ranges of natural signals,(Section 4.2.10).

Discrete Fourier Transform: Introduction, Fourier representations of finite- duration sequences, Properties of DFT, Linear convolution using DFT, Computation of Circular convolution and correlation, Relationship of DFT to other transforms, Spectral analysis using DFT.

Filtering of long sequences: Overlap-save method and overlap-add method.

12 Hours

UNIT-2

Efficient Computation of DFT – Fast Fourier Transform Algorithms: Decimation-in-time and decimation-in-frequency radix-2 FFT and IFFT algorithms, signal flow graphs, Efficient computation: 2, N point DFT from one N-point DFT, Increasing the resolution (2N point DFT from N point DFT), Linear filtering approach to computation of the DFT:- Goertzel algorithm and Chirp-z transform algorithm. Dual tone Multi frequency (DTMF) signal detection

Discrete Cosine Transform (DCT): Type-II DCT Pair, Properties of DCT and applications of DCT. (Qualitative analysis)

9 Hours

UNIT-3

Design and Realization of FIR Filters: Issues in filter design, importance of linear phase, Frequency response of linear phase FIR filters, Locations of zeros of FIR filters, Design techniques of FIR filters- Windowing method and Frequency sampling method.

Applications of FIR filters: Design of Hilbert transformer and Ideal differentiators. **9 Hours**

UNIT-4

Design of IIR filters: Elementary properties of IIR filters, Techniques for determining IIR filter coefficients, Frequency transformations in analog domain. Digital filter design from continuous time filters- Impulse invariant technique and Bilinear transformation methods. Comparison of FIR and IIR filters. (Butterworth and Chebyshev Filter tables can be used) **10 Hours**

UNIT-5

Basic structures for FIR systems: Direct, Cascade, Linear Phase and Frequency sampling structures.

Basic structures for IIR systems: Direct, Cascade, and Parallel structures.

Applications: Linear-time invariant systems as frequency selective filters: digital resonators, notch filters, comb filters, all-pass filters, Minimum phase systems, Maximum-phase and Mixed phase systems Musical sound processing: Single echo and multiple echo filters**.**

12 Hours

DIGITAL COMMUNCIATION AND CODING LAB

Lab Hours/ Week	: 3	Credits :	1.5
Sub. Code	: 5RTEL1	CIE Marks :	50
		SEE Marks :	50

Course Objectives: This course will enable the students to:

1. Design, Develop and Demonstrate analog communication systems using LabVIEW and USRP hardware.
2. Understand, realize and verify the sampling theorem, line codes for digital transmission using LabVIEW programming.
3. Understand, design, develop and demonstrate digital communication systems based on different band pass modulation techniques
4. Understand and realize the source coding techniques.
5. Understand and realize the channel coding techniques.

Part A

Simulation experiments using LabVIEW

1. Baseband & Band-pass modulations –ASK, PSK, FSK, QAM – Scatter plots.
2. Bandwidth utilization for rectangular pulse and raised cosine pulse for band-pass modulations.
3. ISI effect – Eye diagram study.
4. Generate bit stream and QPSK form of digital modulation.
5. Band-pass modulations ASK, PSK, QAM – Scatter plots using USRP kit.
6. Bandwidth utilization for rectangular pulse and raised cosine pulse for band-pass modulations using USRP kit.

Part B

Simulation experiments using SCI-LAB

1. Determination of entropy of a given source
2. Determination of various entropies and mutual information of a given channel (Noise free channel)
3. Determination of various entropies and mutual information of a given channel (Binary symmetric channel)
4. Generation and evaluation of variable length source coding (Huffman Coding and decoding)
5. Coding & decoding of Linear block codes
6. Coding and decoding of convolutional codes

Course Outcomes: After completion of this course, students will be able to:

1. Design and Develop digital communication systems based on different band pass modulation techniques using LabVIEW and analyze performances both at transmitter and receiver also live demonstrate the same using USRP hardware.
2. Realize the Source Coding Techniques and analyze their performance.
3. Realize the Channel Coding Techniques and analyze their performance.

DIGITAL SIGNAL PROCESSING LAB

Contact Hours/Week	:	3	Credits	:	1.5
Total Lecture Hours	:	-	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	5RTEL2			

Course Outcomes:

1. *Develop* codes to optimize the DFT processing time using FFT algorithm and *implement* applications of DFT.
2. *Develop, simulate* and *verify* solutions for signal processing applications.
3. *Design* and *demonstrate* filters for real time Audio signals using TMS320C6748 DSP processor.

Warm-up cycle using MATLAB/OCTAVE/SCILAB: (2 Lab Sessions)

1. Generation of basic continuous-time and discrete-time signals.
2. Generation single-tone and multi-tone signals.
3. Sampling of sinusoidal signals.
4. Linear convolution of two sequences.
5. Solution to Linear Constant Coefficient Difference Equation (I/II order systems only).
6. To compute the frequency response of a discrete time system and to comment on the stability of the system.

LIST OF EXPERIMENTS USING MATLAB/OCTAVE SCILAB: (6 Lab Sessions)

1. Computation of N-Point DFT using conventional DFT equation and FFT algorithm and comparison of their computational performance.
2. Applications of DFT for Linear filtering and Spectral Analysis.
3. Autocorrelation and its application for the estimation of period of noisy sinusoidal signals.
4. Generation of DTMF signals.
5. Application of Goertzel's algorithm for DTMF signal detection.
6. Generation of single and multiple echoes.
7. Design, implementation and verification of FIR LPF to meet given specifications using FDA Tool/Simulink/SCILAB.
8. Design, implementation and verification of IIR Butterworth/ Chebyshev LPF to meet the given specifications using FDA Tool/Simulink/SCILAB.
9. Applications of FIR filters: Ideal differentiator and Hilbert transformer.

LIST OF EXPERIMENTS USING DSP PROCESSOR TMS320C67xx:

(4 Lab Sessions)

1. Audio Loopback.
2. Verification of Sampling theorem.
3. Generation of Delay.
4. Generation of simple/multiple echo.
5. Generation of Sine wave.
6. FIR/IIR Filtering.

ADVANCED TECHNICAL TRAINING PROGRAM

Lab Hours/ Week	: 36 hours	Credits :	1
Sub. Code	: 5CESL	CIE Marks :	50
		SEE Marks :	50

COURSE OBJECTIVE:

- Strengthen their understanding of C, C++ and Data Structures
- Write effective codes on C and C++ Programming

OVERALL SYLLABUS BREAKUP:

S. No	Module name	Classroom (Hours)	Lab (Hours)	Total duration (Hours)
1	C Programming	12	3	15
2	C++ Programming	6	0	6
3	Data Structures	12	3	15
Total Hours		30	6	36

COURSE PLAN:

C Programming (15 hours)				
S. No	Topics covered	Learning outcome	Type of learning	Duration

1	Introduction of Programming Languages
	• Structure of a 'C' Program
	  • Main function
	  • Input & Output
	  • 'C' Tokens
	• Keywords and Identifiers
	• Operators
	• Constants
	• Variables
	• Data Types
	• Scope and Lifetime of Variables
	Control Statements, if, if else, if else if ladder, switch cases and related programs, Looping & Branching - for
		To make the student to a level where he/she will start thinking about the logics of programs and will be thorough with the basic syntax and semantics of C programming language.	Classroom	6

2	Emphasis on Concepts of Pointers with implementation and MCQs, Array pointers, Structure & Union , Functions, Recursion, Enum, Type def, structures , union • Memory Allocation, static and Dynamic allocation, Storage class • FILE structure • Opening and closing a File, open modes	Understanding the user defined datatypes Advanced concepts of C.	Classroom	6
3	C Programming Lab - I	Important programs implementation in company point of view. Getting familiar with different coding platforms.	Lab	3
	DATASTRUCTURES (15 Hours)			
1	Introduction to Data Structures: The factors that efficiency depends upon 1) Space complexity 2) Time complexity(step - count method) • Classification of data structures: • Linear data structures • Nonlinear data structures • Array vs. Linked List • Types of linked list : singly , doubly, circular (introduction) • Linked list Types of linked list: *a) Singly linked list :* Applications, Operations on singly linked list	To make the student familiarized with the core DS concepts. Sound conceptual understanding on linked lists and types, and applying them in programs.	Classroom	6

	• Inserting a node: into an empty list, at beginning, at the end, at intermediate • Deleting a node: form an empty list, at beginning, at the end, at intermediate • Traversal *b) Circular linked list:* • Applications, Operations on circular linked list *c) Doubly linked list:* Applications, Operations on doubly linked list • Difference between singly, doubly, circular Stack: • Push and Pop operation • Applications Q Queue: • Enqueue and Dequeue operation Types of queue: 1. Normal queue(already discussed) 2. Circular queue : need of circular queue, applications, ensue, deqeue 3. Priority queue : need of priority queue, applications 4. Double ended queue : types Applications of queue: 1. Client processing 2. Job scheduling 3. Music player			

2	Searching Techniques:
	• Linear Search (real life examples), explain the working with an example, Complexity Analysis
	• Binary Search:
	  • Need of binary search
	  • Working with example
	  • Complexity Analysis
	Sorting Techniques:
	• *Bubble sort:* Introduction, Explain with example,
		Programming strategies will be thoroughly explained for students	Classroom	6

	Applications, Complexity analysis.
	• *Insertion sort:* Introduction, Explain with example, Applications, Complexity analysis.
	• *Selection sort:* Introduction, Explain with example, Applications, Complexity analysis.
	• *Quick sort:* Introduction, Explain with example, Applications, Complexity analysis.
	• *Merge Sort:* Introduction, Explain with example, Applications, Complexity analysis.
	Tree:
	• Why do we need a tree as a data structure?
	• Applications
	• Binary tree: Introduction, types of tree, important equations.
	• BST
	• Traversal: Preorder, In order, Post order, Level Graph:
	• Introduction
	• Terminologies in a graph
	  • DFS
	  • BFS
	Strategies:
	• Greedy algorithm
	• Divide and Conquer
	• Dynamic programming:
	  • Shortest Path
	• Backtracking			

3	DS Programming Lab - I	Important DS programs implementation in company point of view.	LAB	3

TRANSMISSION LINE THEORY AND APPLICATIONS

Contact Hours/ Week	: 4	Credits :	4
Total Lecture Hours	: 52	CIE Marks :	50
Sub. Code	: 6RTE01	SEE Marks :	50

Pre – requisites

Basics of network analysis

Field theory, Maxwell's equations, time varying fields and Electromagnetic Waves

Objectives:

To provide a strong basis to enable the students to identify and solve engineering problems related to transmission lines at audio and RF and Microwave frequencies.

To train students to address the complexities of real transmission line problems and be able to analyze, design and formulate solutions.

To prepare students to apply transmission line theory to design various RF and microwave devices

Course Outcomes: At the end of the course the students are able to

1. Explain and find various parameters of electromagnetic waves propagating along the transmission lines (lossy and lossless) terminated with different types of loads
2. Solve problems *arising* in transmission lines at various situations using graphical (smith chart) and analytical methods and applications of transmission lines.
3. Design and analyze impedance matching networks consisting of lumped and distributed elements
4. Distinguish and compare construction and operation of different types of transmission lines and analyze the properties of microwave devices and circuits using S-parameters
5. Apply transmission line theory to analyze and design various resonators, and planar filters.

UNIT 1

Transmission Line Theory: Equivalent Circuits and behavior of components at microwave frequency. The lumped element circuit model for a transmission line-cascaded T sections, Transmission line equations and general solution, Physical interpretation of the solutions, Infinite line. Properties of wave propagation, the attenuation and phase shift, wavelength and velocity of propagation. Distortions in the line, the distortion less line, Reflection on a line not terminated in Z_0, Reflection coefficient, input impedance, Open and short circuited lines, Reflection loss, and Insertion loss. The line at radio frequencies: Parameters of open wire line and coaxial line at high frequencies.

Dissipation less or Lossless Lines: Line constants for lossless lines, Voltages and currents on lossless lines, Standing waves, Standing wave ratio, Input impedance of a lossless line; input impedance of open and short circuited lines, Reflection loss on a unmatched line.

11Hours Text Book –1

UNIT 2

Input impedance and applications- of ⅛ wavelength, ½ wave length and ¼ wavelength lines. **Smith chart**- Introduction, derivation of smith chart, smith chart circular scales, smith chart radial scales, the normalized impedance and- Admittance (ZY) smith chart. Applications of smith chart: Measurement of K, VSWR, Input impedance, unknown impedance using smith chart, Input impedance of open and short circuited lines, design of transmission line inductor and capacitors.

11 Hours Text Book -1

UNIT 3

Design of matching networks—definition of impedance matching, selection of matching network, goal of impedance matching, Impedance matching using Quarter wave transformer (QWT), and Single stub matching. L-Matching networks: Design of L-matching circuit using lumped elements, design of L-matching circuit using distributed elements. **10Hours Text Book -1**

UNIT 4

Planar Transmission lines and Waveguides: Stripline, Formula for Propagation Constant, Characteristic Impedance, and Attenuation, Micro-strip line, wave propagation in micro-strip Lines, Empirical formulas for effective dielectric constant, characteristic impedance, wavelength and attenuation factors, Waveguides: Rectangular waveguide- TE and TM modes, Dominant TE mode and its characteristics, Wave impedances. Scattering parameters, The Scattering Matrix N-port network, reciprocal, lossless and matched networks properties, A Shift in Reference Planes and phase shift property, ABCD parameters to s-parameters conversion.

10 Hours Text Book -2

UNIT 5

Transmission line Resonators – Series and parallel resonant circuits, Loaded and unloaded Q, Transmission line resonators: Short-Circuited $\lambda/2$ Line, Open-Circuited $\lambda/2$ Line), Microstrip Ring Resonator (No derivation for resonant frequencies). rectangular waveguide cavity resonators: Resonant Frequencies Field equations and mode sketches, expressions for cut off frequencies of rectangular wave guide. Excitation of resonators (No derivation). **Filter design by the insertion loss method:** Maximally Flat Low-Pass design, Equal-Ripple Low-Pass Filter

design, Linear Phase Low-Pass Filter design, Filter implementation using transmission lines: Richards' Transformation, Kuroda's Identities, Low-pass filter design using stubs.

10Hours Text Book -2

TEXT BOOKS:

1	Matthew. M. Radmanesh	"RF and microwave electronics illustrated", Pearson Edn Edition, 2004
2	D M Pozar	Microwave Engineering, III Edition, Wiley Student Edition., 2004

REFERENCE BOOKS:

DATA COMMUNICATIONS AND NETWORKING

Contact Hours/ Week	: 4	Credits :	4
Total Lecture Hours	: 52	CIE Marks :	50
Sub. Code	: 6RTE02	SEE Marks :	100

Course Objectives: This course will enable the students to:

1. Understand the functions of various layers in the network model (OSI, TCP/IP) for data communication.
2. Understand and realize, framing techniques, flow control, error control mechanisms and data link protocols
3. Describe the performance of inter-networking devices and IEEE standard frame formats used for Wired and Wireless LANs
4. Understand and realize the internet protocols I*pv4, Ipv6,* androuting protocols for network connectivity.
5. Design and realize TCP/UDP and basic network security protocols

UNIT 1

Network Models: TCP/IP Suite, Addressing.

Data Link Control: Framing, Flow and error control, Protocols, Noiseless channels and noisy channels, HDLC, Point-to-Point Protocol.

10 Hours

UNIT 2

Multiple Access: Random access, Controlled access, Channelization.

Wired LAN: Ethernet, IEEE standards, Standard Ethernet, Changes in the standards, Fast Ethernet, Gigabit Ethernet.

11 Hours

UNIT 3

Wireless LAN: IEEE 802.11, Bluetooth.

Connecting LANs Backbone Networks and Virtual LANs: Connecting devices, Backbone Networks, Virtual LANs.

Wireless WANs: Cellular Telephony, Hand off, evolution of cellular standards. **10 Hours**

UNIT 4

Network Layer- Logical addressing: Ipv4 addresses, Ipv6 addresses.

Internet Protocol: Ipv4, Ipv6, Transition from Ipv4 to Ipv6.

Routing Algorithms: The Optimality Principle, Shortest Path Routing, Flooding, Distance Vector Routing, Link State Routing, Hierarchical Routing. **11Hours**

UNIT 5

Transport Layer: Process to process delivery, UDP, TCP

Application Layer: DNS- Domain Name System, Electronic Mail, World Wide Web.

Network Security: Cryptography, Symmetric key Algorithms, Digital Signatures. IPSec, Firewall Network

10 Hours

TEXT BOOK:

1	Behrouz A. Forouzan	Data Communications and Networking, 4th Edition, Tata McGraw-Hill, 2006

REFERENCE BOOKS:

1	Andrew S Tanenbaum	Computer Networks – 4e, Pearson Education/PHI, 2003
2	William Stallings	Data and Computer Communication, 5e, Pearson Education, Asia.

Course Outcomes: After completion of this course, students will be able to:

1. Analyze features of the various layers of data communication and portray framing techniques, flow control, error control mechanisms and data link protocols.
2. Analyze the performance of inter- networking devices in Wired LANs using Ethernet standard.
3. Analyze and apply the IEEE standard frame formats used for Wireless LANs, Backbone networks and understand the cellular telephony standards.
4. Analyze Internet protocols I*pv4, Ipv6 and* routing protocols for network connectivity.
5. Design and develop a LAN Network system for the given scenario, by making use of TCP and UDP protocols, with the applications of network security protocols.

TELECOMMUNICATION SYSTEMS LAB

Lab Hours/ Week	: 3	Credits	:1.5
Sub. Code	: 6RTEL1	CIE Marks	:50
		SEE Marks	:50

Course Objectives: This course will enable the students to:

1. Demonstrate the interface various communication modules to different controllers using different platforms.
2. Infer the capabilities and limitations of various modules
3. Identify the best choice of communication module for the given application
4. Relate the theoretical concepts of Data communications with real time hardware.

PART A

(Interface of module and performance analysis)

1. Wi – Fi
2. Bluetooth
3. ZigBee
4. GSM
5. GPRS

(Interface and performance analysis)

PART B

1. Switches
2. Routers
3. Hubs
4. Modems

Course Outcomes: After completion of this course, students will be able to:

1. Experiment with various communication modules
2. Choose an appropriate module depending on the application
3. Develop a communication system for the given application
4. Construct different topology of networks.
5. Demonstrate real time implementation data communication network

DATA COMMUNCIATION AND NETWORKING LAB

Lab Hours/ Week	: 3	Credits :	1.5
Sub. Code	: 6RTEL2	CIE Marks :	50
		SEE Marks :	50

Course Objectives: This course will enable the students to:

1. Understand and realize the concepts of error detection and error correction using CRC, Hamming codes.
2. Realize the networking concepts with the help of spanning tree, Link state routing, client-server data communication algorithms
3. Demonstrate the network topology configuration

Understand and realize the wired and wireless network topology using NS-2

PART A

1. Realize a program to find transmitted data with CRC code, and error detection in received code using CRC for the given generator polynomial.
2. Design and Develop a Hamming algorithm to encode the given bits for transmission, and check for error bit in the received code.
3. Realize a spanning tree algorithm to find loop less path with 6 to 10 nodes.
4. For the given network graph, write a program to implement Link state routing algorithm to build a routing table for the given node.
5. Configure a network topology using Packet tracer software

PART B

1. Simulate the following topology using UDP agent. Find the bandwidth of link-n for no packet loss. Illustrate for packet loss and no packet loss. On other links let the packet size be A bytes with inter-packet gap of B millisecond. Have the simulation run for C second and CBR run from D to E second. Verify in nam the flow of packet. Find the number of packets dropped due congestion.
2. Determine the number of packets sent by TCP and UDP for the following topology. Apply TCP agent between link-1 and UDP between link-2. Apply relevant applications over TCP and UDP agents changing the parameter.
3. Simulate the following topology (star/mesh/ring). Find the number of packets dropped due congestion. Find the default packet size of
   CBR and FTP.

4. Simulate a Standard Ethernet LAN using n nodes (6-10), with and
   without error rate in a node n and compare the throughput.
5. Simulate a Fast Ethernet LAN using n nodes and set multiple traffic nodes and determine the collision across different nodes.

Study Experiments:

1. Study of different types of network cables and practically implement the cross wired cable and straight through cable using clamping tool
2. Study of network devices and IP addresses.
3. Study of basic network command and network configuration commands.

Course Outcomes: After completion of this course, students will be able to:

1. Develop C code to identify and correct the error in received digital data using CRC, Hamming codes.
2. Analyze the real time Communication network scenario by spanning tree, Link state routing algorithms to provide reliable data path. Client-server data communication using socket programming
3. Demonstrate the network topology configuration
4. Analyze the data communication in wired and wireless network topology using NS-2.

DIGITAL VLSI DESIGN

Contact Hours/ Week	: 3 (L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RTEE01	SEE Marks :	50

Course Outcomes:

1. Analysis of various processes in fabrication of MOSFETs and Digital circuits.
2. Design of mask layout analysis of transient response of digital circuits.
3. Realization of digital circuits using Ratioed Logic, Pass Transistor, Transmission Gate Logic, DCVSL, Dynamic Logic configurations.
4. Analysis of Arithmetic logic, combinational and sequential circuits
5. Analysis of various Memory cells and VLSI testing verification techniques.

UNIT 1

Issues and Challenges in Digital IC Design: general overview of design hierarchy, layers of abstraction, integration density and Moore's law, VLSI design styles; MOSFET fabrication: basic steps of fabrication, CMOS p-well and n-well processes, layout design rules,

8 Hours

UNIT 2

CMOS Inverter: MOS Device Model with Sub-micron Effects, VTC Parameters (DC Characteristics), CMOS Propagation Delay, Parasitic Capacitance Estimation, Layout of an Inverter, Switching, Short-Circuit and Leakage Components of Energy and Power; Interconnects: Resistance, Capacitance Estimation, delays, Buffer Chains, Low Swing Drivers, Power Distribution, and Performance Optimization of Digital Circuits by Logical Effort Sizing;.

8 Hours

UNIT 3

Combinational Logic Design: Static CMOS Construction, Ratioed Logic, Pass Transistor, Transmission Gate Logic, DCVSL, Dynamic Logic Design Considerations, noise considerations in dynamic design Power Dissipation in CMOS Logic, Sequential Circuits Design: Classification, Parameters, Static Latches and Register, Race Condition, Dynamic Latches and Registers,

8 Hours

UNIT 4

Design of arithmetic building blocks like adders Carry, look-ahead, linear carry-select, carry bypass and multipliers (Booth's multipliers;)

8 Hours

UNIT 5

Semiconductor memories: non-volatile and volatile memory devices, flash memories, SRAM Cell Design, Differential Sense Amplifiers, DRAM Design, Single Ended Sense Amplifier; Testing in VLSI: Defects, Fault Models, Path Sensitization, Scan, Built-in-self Test, IDDQ.

7 Hours

TEXT BOOK:

1	J.M. Rabaey, A. Chandrakasan and B. Nikolic	Digital Integrated Circuits- A Design Perspective, 2/e, Prentice Hall of India

REFERENCE BOOKS:

1	N. Weste and D. Harris,	CMOS VLSI Design: A Circuits and Systems Perspective, 3/e, Pearson Education India, 2007.
2	D. A. Hodges, H. G. Jackson, R. Saleh	Analysis and Design of Digital Integrated Circuits in Deep submicron Technology, 3/e, McGraw Hill,

EMBEDDED SYSTEMS

Contact Hours/Week	:	3	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Course Code	:	RTEE02	SEE Marks	:	50

Course Objectives: This course will enable students to:

1. Explain embedded systems overview and their design challenges.
2. Describe the Design & features of different types of processors.
3. Explain Types and composition of memory & Cache Architecture.
4. Understand Concepts of MPU & MMU.
5. Explain the Concepts of Interrupts, Survey of Software Architectures.

UNIT 1

Introduction: Embedded systems overview, Design challenge – Optimizing design metrics: Common design metrics, Time to market design metric, NRE &UNIT cost design metrics & Performance design metric. IC Technology & Design Technology.

7 Hours

UNIT 2

Custom Single Purpose Processors: Introduction, RT level combinational & sequential components, Custom Single Purpose Processor design , optimizing Custom Single Purpose Processors.

General purpose processors: Introduction, Basic Architecture , Operation, Programmer's, View & Development Environment.

Application Specific Instruction Set Processors (ASIPs):
Microcontrollers & Digital Signal Processors. Selecting a microprocessor

9 Hours

UNIT 3

Memory: Introduction, Memory write ability & storage permanence, Common memory
types, composing memory.

Cache: Introduction, Memory Hierarchy and Cache, Cache Mapping Techniques, Cache Replacement Policy, Cache write techniques.

7 Hours

UNIT 4

Memory Protection UNIT: Protected Regions, Concepts of initializing the MPU, Caches & Write buffer.

Memory Management UNIT: Virtual Memory, Details of the ARM MMU : Page Tables & Translation Look aside Buffer, Domains and memory Access permission, Caches and write buffer.

8 Hours

UNIT 5

Interrupts: Interrupt basics, Shared data problem & Interrupt latency.

Survey of Software Architectures: Round Robin, Round Robin with Interrupts, Function Queue- scheduling & RTOS architectures.

Introduction to RTOS: Tasks and states, scheduler, tasks and data, shared data problem, reentrancy, Semaphores and shared data, semaphore problems & semaphore variants.

8 Hours

Course Outcomes: After the completion of this course, students will be able to:

1. Explain the importance of embedded computing systems and their unique characteristic features. (L2)
2. Design the processors to carry ou simple computation.(L3)
3. Elucidate the types of memory and cache architectures. (L2)
4. Explain the importance of memory management and protection unit.(L2)
5. Compare various software architectures available for building the embedded software.(L3)

REAL TIME SYSTEMS

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	:RTEE05	SEE Marks :	50

Pre-requisite: Programming and Data Structures, Operating Systems, Computer Architecture and Organization, Database Systems.

Course objectives: This course enables the students to understand timing constraints and model it, Schedule real time tasks, handle resource sharing among real time tasks, describe commercial real time systems

Course Outcomes: At the end of the course students will be able to

1. Describe real time system and Model the timing constraints.(L2)
2. Analyze task schedulers of real time system (L4)
3. Interpret techniques of sharing resources among real time tasks(L3)
4. Apply concurrency control protocol in real time data base.(L2)
5. Compare the traditional and real time operating systems(L3)

UNIT 1

Introduction to real-time systems: What is Real Time, Applications of Real Time Systems, A basic model of Real time system, characteristics of real time systems, Safety and Reliability, Types of Real time asks, Timing Constraints, Modelling Timing Constraints.

8 Hours

UNIT 2

Real Time Task Scheduling :Basic Terminologies, Task Scheduling, Clock Driven Scheduling, Hybrid Scheduler, Event Driven Scheduling, Earliest Deadline First (EDF) Scheduling, Rate Monotonic Algorithm(RMA).Practical situational issues in using RMA.

9 Hours

UNIT 3

Handling Resource Sharing among Real Time Tasks: Resource Sharing, Priority Inversion, Priority Inheritance protocol, Highest Locker protocol, Priority ceiling protocol, Types of priority inversions under PCP

7 Hours

UNIT 4

Scheduling Real-Time Tasks in Multiprocessor and Distributed systems: Multi Processor task allocation, Dynamic allocation of tasks, Centralized Clock Synchronization, Distributed Clock Synchronization. Real Time Databases: Basic data base concepts, Real time data bases, Characteristics of temporal data, concurrency control in real time data bases. **8 Hours**

UNIT 5

Commercial Real time operating systems: Time services, Features of Real time operating system, Unix as real time operating system, Windows as real time operating system, POSIX, A survey of contemporary real time operating systems.

7 Hours

DSP ARCHITECTURE

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RTEE08	SEE Marks :	50

Pre-requisite: Digital Signal Processing, Microprocessors and Microcontrollers

Course Objectives:

To understand the hardware, software and tools required to implement signal processing algorithms

To design, compute and implement signal processing algorithms using assembly language programming on TMS320C54xx.

Course Outcomes:

1. *Apply* sampling rate conversion for multirate signal processing and *identify* suitable number representation for DSP processors.
2. *Analyze the basic architectural features of general DSP processors and their usage in programmable TMS320C54xx DSP processors.*
3. *Identify the appropriate addressing modes of DSP processors for data management.*
4. *Develop the code to implement FFT and digital filters using TMS320C54xx DSP processor.*
5. *Develop solutions for real time signal processing using inbuilt peripherals* of TMS320C54xx DSP processor.

UNIT 1

Introduction to Digital Signal Processing: Introduction, A Digital Signal-Processing System, The Sampling Process, Discrete Time Sequences, Discrete Fourier Transform (DFT) and Fast Fourier Transform (FFT), Linear Time-Invariant Systems, Digital Filters, Decimation and Interpolation. Number formats for signals and coefficients in DSP systems, Fixed point and floating point number representations, Dynamic range and precision, Sources of error in DSP implementation, Q notation for fixed point number representation.

8 Hours

UNIT 2

Architectures for Programmable Digital Signal-Processing Devices: Introduction, Basic Architectural Features, DSP Computational Building Blocks, Bus Architecture and Memory, Data Addressing Capabilities, Address Generation UNIT, Programmability an Program Execution, Speed Issues, Features for External Interfacing.

8 Hours

UNIT 3

Programmable Digital Signal Processors: Introduction, Commercial Digital Signal-processing Devices, Architecture of TMS320C54xx Digital Signal Processors, Data Addressing Modes of TMS320C54xx Processors, Memory Space of TMS320C54xx Processors, Program Control. **8 Hours**

UNIT 4

Programmable Digital Signal Processor:(Contd..)TMS320C54xx Instructions and Programming, On-Chip peripherals, Interrupts of TMS320C54xx Processors, Pipeline Operation of TMS320C54xx Processors.

Interfacing Parallel I/O Peripherals to Programmable DSP devices: Programmed I/O, Interrupts and I/O, Direct Memory Access (DMA).

7 Hours

UNIT 5

Implementations of Basic DSP Algorithms: Introduction, FIR Filters, IIR Filters, Interpolation Filters, Decimation Filters. **Implementation of FFT Algorithms**: Introduction, An FFT Algorithm for DFT Computation, A Butterfly Computation, Overflow and Scaling, Bit-Reversed Index Generation, FFT Implementation on the TMS320C54xx, Computation of the Signal Spectrum.

8 Hours

TEXT BOOK:

IMAGE PROCESSING

Contact Hours/Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	:RTEE10	SEE Marks :	50

Pre-requisite: Linear algebra, Signal processing fundamentals

Course Objectives:

1.To introduce Fundamental Concepts and tools for Image Processing.
2.To provide insight into the transforms used in digital image processing and transform domain processing.
3.To develop the ability to apply the transforms/tools for image enhancement, filtering and implement algorithms for restoration.
4.To study and compare the various approaches for image compressions.

Course Outcomes:

A student who successfully completes this course should be able to:
CO1: Demonstrate various steps and components used in digital image processing.
CO2: Develop Transform basis functions and Analyze Images in transform domain.
CO3: Apply image enhancement and restoration techniques in the spatial and frequency domains.
CO4: Identify and analyze redundancy in images and select a suitable compression technique for storage and transmission of images.
CO5: Develop image processing algorithms (individually or in team) using appropriate software tools.

UNIT 1

Digital Image Fundamentals: What is Digital Image Processing?, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Elements of Visual Perception, Image Sensing and Acquisition, Image Sampling and Quantization, Some Basic Relationships Between Pixels, An Introduction to Mathematical Tools Used in DIP.

8 Hours

UNIT 2

Image Transforms: Two-dimensional orthogonal &UNITary transforms, Properties of UNITary transforms, Two dimensional discrete Fourier transform, Discrete cosine transform, Hadamard transform, Haar transform, Slant transform, KL transform, Wavelet transforms.

8 Hours

UNIT 3

Intensity Transformations and Spatial Filtering: Some Basic Intensity Transformation Functions, Histogram Processing, Fundamentals of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters.

Filtering in Frequency Domain: Basics of Filtering in Frequency Domain, Image Smoothing Using Frequency Domain Filters, Image Sharpening Using Frequency Domain Filters, Selective Filtering. Color Image Processing: Color Fundamentals, Color Models, Pseudocolor Image Processing, Basics of Full-Color Image Processing.

9 Hours

UNIT 4

Image Restoration and Reconstruction: A Model of the Image Degradation/Restoration Process, Noise Models, Restoration in the Presence of Noise Only-Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear, Position-Invariant Degradations, Estimating the Degradation Function, Inverse Filtering, Minimum Mean Square Error (Wiener) Filtering, Geometric Mean Filter.

7 Hours

UNIT 5

Image Compression: Fundamentals-Coding Redundancy, Spatial and Temporal redundancy, Irrelevant Information, Measuring Image Information, Fidelity Criteria, Image Compression Models, Image Formats, Containers, and Compression Standards. Some Basic Compression Methods- Huffman Coding, Golomb Coding, Arithmetic Coding, LZW Coding, Run-Length Coding, Symbol Based Coding, Bit-Plane Coding, Block Transform Coding, Predictive Coding, Wavelet Coding. **7 Hours**

MULTIMEDIA COMMUNICATION

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RTEE11	SEE Marks :	50

Course Outcomes:

1. Analyze fundamental concepts of audio and video signals.
2. Apply lossless compression algorithms for text and image data.
3. Apply lossy compression algorithms for 1D and 2D signals.
4. Analyze image compression standards.
5. Analyze video compression standards like MPEG 1, 2, 4 and 7.

UNIT 1

Introduction to Multimedia, Graphics & Image Representation, Fundamental concepts in Video and audio: Definition of Multimedia, Multi-media and Hypermedia. Graphics/Image Data Types, Popular File Formats. Types of Video Signals, Analog Video, Digital Video, Digitization of sound, Quantization and Transmission of Audio. Text: Chapter 1, 1.1 1.2, Chapter 3, 3.1 & 3.2, Chapter 5, 5.1 to 5.3 and Chapter 6, 6.1 & 6.3. **8 Hours**

UNIT 2

Lossless compression algorithms: Introduction to lossless compression, Basic information theory, Run-length coding, Variable-length coding, Dictionary-Based Coding, Arithmetic coding, Lossless Image compression. Text: Chapter 7, 7.1 to 7.7.

7 Hours

UNIT 3

Lossy compression algorithms: Introduction to lossy compression, Distortion measures, Quantization, Transform coding, Wavelet-Based coding, Wavelet Packets, Embedded Zero tree of Wavelet Coefficients, SPIHT. Text: Chapter 8, 8.1 to 8.9.

7 Hours

UNIT 4

Image Compression Standards and MPEG Video Coding I: The JPEG standard, The JPEG2000 standard, The JPEG-LS standard, Bi-level Image compression standard, H.261, Overview of MPEG-1. (Text: Chapter 9, 9.1 to 9.4, Chapter 10, 10.1 to 10.4 and Chapter 11, 11.1 to 11.2)

8 Hours

UNIT 5

MPEG Video Coding II: MPEG-2, Overview MPEG-4, Object Based Visual Coding in MPEG-4, Synthetic Object coding in MPEG-4, MPEG-7. Text: Chapter 11, 11.3 Chapter 12, 12.1 to 12.3 & 12.6.

8 Hours

TEXT BOOK:

RANDOM PROCESSES

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RTEE13	SEE Marks :	50

Prerequisite: MAT1, MAT2

Course Outcomes:

1. Construct sample spaces of random experiments; identify and specify events, and perform set operations on events.
2. Construct simple Probability measures for discrete and random sample spaces
3. Compute conditional probability of events, and determine dependence/independence of events and able to apply Bayes's law and expected value, variance, and higher-order moments of random variables.
4. Analyze standard discrete random variables used in science and engineering, including Bernoulli, binomial, multinomial, geometric, and Poisson random variables. Learn elementary applications to traffic modeling.
5. Demonstrate experiments requiring some independent reading, programming, simulations and technical writing.

UNIT 1

Introduction to Probability Theory: Experiments sample space, Events, Axioms, Assigning probabilities, Joint and conditional probabilities, Baye's Theorem, Independence,

7 Hours

UNIT 2

Discrete Random Variables, EnggExample. Random Variables, Distributions, Density Functions: CDF, PDF, Gaussian random variable, Uniform Exponential ,Laplace, Gamma, Erlang, Chi-Square, Raleigh, Rician and Cauchy types of random variables.

8 Hours

UNIT 3

Operations on a Single R V: Expected value, EV of Random variables, EV of functions of Random variables, Central Moments, Conditional expected values.Characteristic functions, Probability generating functions, Moment generating functions, Engg applications, Scalar quantization, entropy and source coding.

8 Hours

UNIT 4

Pairs of Random variables, Joint CDF, joint PDF, Joint probability mass functions, Conditional Distribution, density and mass functions, EV involving pairs of Random variables, Independent Random variables, Complex Random variables, Engg Application. **8 Hours**

UNIT 5

Random Process: Definition and characterization, Mathematical tools for studying Random Processes, Stationary and Ergodic Random processes, Properties of ACF. Example Processes: Markov processes, Gaussian Processes, Poisson Processes, Engg application, Computer networks, Telephone networks.

8 Hours

RADAR SYSTEMS

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	:RTEE17	SEE Marks :	100

Course Outcomes: Upon successful completion of the course, students will be able to:

1. Analyze the working of Radar system and formulate design equations for target detection. (L3)
2. *Apply* the Doppler Effect concept to estimate the speed of moving targets and analyze various tracking techniques.. (L3)
3. *Elucidate* the noise and clutter effects associated in detection of Radar signal (L2)
4. *Explain* the antenna parameters and the system components of radar receiver (L2)
5. *Apply* the concepts of millimetre wave radar for some applications(L3)

UNIT 1

An Introduction to Radar: Basic Radar, The Simple Form of the Radar Equation, Radar Block Diagram, Radar Frequencies, Applications of Radar, The Radar Equation: Introduction, Detection of Signals in Noise, Receiver Noise and the Signal to Noise Ratio, Probabilities of Detection and False Alarm, Radar Cross section of Simple Targets, Transmitter Power, Pulse Repetition Frequency. System losses.

9 Hours

UNIT 2

MTI and Pulse Doppler Radar: Introduction to Doppler and MTI Radar, Delay Line Cancellers, Digital MTI Processing, Pulse Doppler Radar, Tracking Radar: Tracking with Radar, Mono-pulse Tracking, Conical Scan and Sequential Lobing, Tracking in Range.

8 Hours

UNIT 3

Detection of Signals in Noise: Introduction, Matched Filter Receiver, Detection Criteria, Detectors, Automatic Detection Radar Clutter: Introduction to Radar Clutter, Surface Clutter to Radar Equation.

7 Hours

UNIT 4

The Radar Antenna: Functions of Radar Antenna, Antenna Parameters, Reflector Antennas, Electronically Steered Phased Array Antennas, Radar Receiver: The Radar Receiver, Receiver Noise Figure, Super heterodyne Receiver , Duplexers

8 Hours

UNIT 5

Principles and Applications of Millimeter wave radar: Introduction, Propagation and scattering of millimetre length waves, Radar design principles, Remote sensing applications, and Security and Safety applications. **8 Hours**

BIOMEDICAL SIGNAL PROCESSING

Contact Hours/ Week	: 3	Credits: 3
Total Lecture Hours	: 39	CIE Marks : 50
Total Tutorial Hours	: 0	SEE Marks : 50
Sub. Code	: RTEE22	

Course Outcomes: After the completion of this course, students will be able to:

CO1: Differentiate origins and characteristics of some of the most commonly used biomedical signals like ECG, EEG, and EMG.

CO2: Identify important morphologies of ECG waveforms and their measurements. Develop techniques for estimating parameters that characterize various morphologies of the ECG waveform.

CO3: Use data reduction techniques for computerized medical signal processing systems.

CO4: Classify EEG patterns of clinical significance and human sleep EEG into various stages and use various tools for feature extraction of EEG signals using AR time series modeling.

CO5: Use adaptive techniques for eliminating noise interferences in processing of biomedical signals.

UNIT-1

INTRODUCTION TO BIOMEDICAL SIGNALS: Characteristics of medical data, Medical instrumentation system, Iterative definition of medicine, The nature of biomedical signals, Examples of biomedical signals: the action potential, origin of ECG, EEG, EMG, EOG and their characteristics, Objectives of biomedical signal analysis, Difficulties in biomedical signal analysis, Computer aided diagnosis.

7 Hours

UNIT-2

CORDIOLOGICAL SIGNAL PROCESSING: ECG data acquisition, ECG lead system, ECG QRS detection techniques: Power spectrum of the ECG, Bandpass filtering technique, Differentiation techniques, Template matching techniques, A QRS detection algorithm, Estimation of RR interval, ST segment analyzer, Portable arrhythmia monitor, Arrhythmia analysis monitoring, long term continuous ECG recording.

8 Hours

UNIT-3

SIGNAL AVERAGING: Basics of signal averaging, Signal averaging as a digital filter, A typical averager, Software for signal averaging.

DATA REDUCTION TECHNIQUES: Direct ECG data compression techniques: Turing point algorithm, AZTEC algorithm, CORTES and FAN algorithm. Other data compression techniques: Entropy coding, Huffman coding, Modified Huffman coding, Adaptive coding, Residual differencing, Run-length coding, and Differential pulse code modulation.

8 Hours

UNIT-4

NEUROLOGICAL SIGNAL PROCESSING: The brain and its potentials, The electrophysiological origin of brain waves, The EEG signal and its characteristics, EEG analysis, Detection of EEG rhythms, Coherence analysis of EEG channels, Detection of EEG spike-and-wave complexes. **Sleep EEG:** Data acquisition and Classification of sleep stages, Dynamics of sleep-wake transitions.

LINEAR PREDICTION THEORY: Introduction, The Autoregressive (AR) method, Recursive estimation of AR parameters: The Levinson's algorithm. Spectral error measure, Adaptive segmentation, Transient detection and elimination. ARMA Model.

8 Hours

UNIT-5

ADAPTIVE FILTERS: A review of Wiener filtering problem, Principle of an Adaptive filter, The steepest descent algorithm, the Widrow-Hoff least mean square adaptive algorithm, Adaptive noise canceller, Cancellation of 50Hz interference in ECG, Canceling Donor-heart interference in Heart-transplant electrocardiography, Cancellation of ECG signal from the electrical activity of the chest muscles, canceling of maternal ECG in fetal ECG, Cancellation of High frequency noise in Electro-surgery.

8 Hours

NANOSCALE DEVICE FABRICATION

Subject Code:	RTEE30	CIE Marks:	50
Hours/Week:	3	Exam Hours:	3
Total Hours/credits:	39/3	SEE Marks:	50

Course objectives:

In this course, students will be introduced to the foundations of micro/nanoscale fabrication with emphasis on understanding the nano-scale properties of materials and living systems, and then analysing their engineered products and processes. You will learn about the need and functioning of clean room facilities that are essential in nanotechnology enterprises. Applying the methods of fabrication technology, you will analyse the nano-electronics products. You will also learn about safety and safe working procedures in the domain of nanotechnology which all engineers must adhere to.

UNIT 1

Nanoscale science and technology: Explain the science and engineering behind nanotechnology. Understand nanoscale fabrication basics: electrostatic, hydrogen, Van der Waals, and shear interaction, surfactants, self-assembly, diffusion, absorption, and adsorption properties

8 Hours

UNIT 2

Nanotechnology facility development and safety: Building and equipment requirements; clean room technology; Air handling units, safety data sheet (SDS), cleanroom behaviour, hazard and safety. Waste disposal practices and guidelines.

7 Hours

UNIT 3

Nano scale fabrication process: CAD tools for device design; thin film deposition, doping, anneling, sintering, ion implantation, and characterization; photolithography and e-beam lithography: photo and e-beam resists, mask writing, exposure, development and inspection; etching techniques, mask pattern transfer on wafer-spin coating and baking, development and inspection. Metal layer evaporation and liftoff, insulation of the devices, opening of contact pad; and device packing on the system.

8 Hours

UNIT 4

Properties at nano scale: Electrical characterization of the fabricated devices: equipment and test, electrical and thermal conductivity, thermal expansion; reflectance, refractive index PL (semiconductor band gap, band structure, and impurity states), inspection and

morphological imaging (optical microscopes, electron microscopy, thermal analysis of the films, AFM, STEM, cryo-electron microscopy), material defect structures.

8 Hours

Unit 5

Nano scale device and applications: Types of nano scale devices, structures, and systems (CMOS, nano-transistors, Schottky device, nanowires based, lab-on-chip electrodes); System-on-Chip bonding and packaging (basic application only), micro-electro-mechanical-systems (MEMS)**.**

8 hours

Course Outcomes:

CO1: Understand the science and engineering behind the nano scale fabrication
CO2: Illustrate the requirements of clean-room specifications
CO3: Understand processes in in VLSI fabrication from thin-film deposition to packaging
CO4: Analysis of physical and electrical specifications of nano scale devices
CO5: Explore applications of Nano scale devices, structures and systems

Text Books:

MACHINE LEARNING

Contact Hours/ Week	: 3	Credits :	3
Total Lecture hours	: 39	CIE Marks :	50
Sub. Code	: TEPE32	SEE Marks :	50

UNIT 1

Introduction: What is machine learning? Examples of machine learning applications **Supervised Learning:** Learning a Class from Examples, VC- dimension, PAC learning, Noise, Learning multiple classes, Regression, Model selection and generalization, Dimensions of a Supervised Machine Learning Algorithm. **Bayesian Learning:** Classification, losses and risks, Discriminant functions**,** Utility Theory.

8 Hours

UNIT 2

Parametric Methods: Maximum Likelihood Estimation, Evaluating an estimator, Bayes' estimator, parametric classification, Regression.

Multivariate methods: Multivariate Data, Parameter Estimation, Estimation of Missing Values, Multivariate Normal Distribution.

8 Hours

UNIT 3

Dimensionality Reduction: Subset Selection, Principal components Analysis, Linear Discriminant Analysis. **Clustering:** Introduction, Mixture Densities, k- Means Clustering, Expectation-Maximization Algorithm, Mixtures of Latent Variable Models, Supervised Learning after Clustering, Hierarchical Clustering, Choosing the Number of Clusters.

8 Hours

UNIT 4

NonparametricMethods: Non-parametricDensityEstimation,Generalization to Multivariate Data, Nonparametric Classification. **Decision Trees:** Introduction, Univariate Trees, Pruning, Rule Extraction from Trees. **8 Hours**

UNIT 5

Linear Discrimination: Introduction, Generalizing the Linear Model, Geometry of the Linear Discriminant, Pairwise Separation, Support Vector Machines: Optimal separating Hyperplane.**MultilayerPerceptrons**:Introduction,ThePerceptron,TrainingaPerceptron, Learning Boolean Functions, Multilayer Perceptrons, Backpropagation Algorithm: Nonlinear regression. **7 Hours**

SATELLITE MISSION ANALYSIS AND DESIGN

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	:OE54	SEE Marks :	50

Course Objective: *Space Mission Analysis and Design,* known as **SMAD** provide a practical handbook for Space Mission Engineering -- the process of defining mission parameters and refining requirements to meet the often fuzzy objectives of a space mission at minimum cost and risk. This course provides a preliminary mission design covering all system aspects: orbit and constellation design, mission geometry, launch vehicle selection, and design of the spacecraft, payload, ground segment, and operations. The course gives a comprehensive knowledge about theory and practice, drawing on the insight and practical aspects of **SMAD**.

UNIT 1

The Space Mission Analysis and Design Process: Introduction and Overview, The Space Mission Life Cycle, Step 1: Definition of Mission Objectives, Step 2: Preliminary Estimate of Mission Needs, Requirements, and Constraints, Mission Characterization: Step 3: Identifying Alternative Mission Concepts, Step 4: Identifying Alternative Mission Architectures, Step 5: Identifying System Drivers, Step 6: Characterizing the Mission Architecture, Mission Evaluation, Step 7: Identification of Critical Requirements, Mission Analysis, Step 8: Mission Utility, Step 9: Mission Concept Selection.

8 Hours

UNIT 2

Requirements Definition: Role of Requirements in System Development, Requirements Analysis and Performance Budgeting, Requirements Documentation and Specifications, Summary: The Steps to a Requirements Baseline.

8 Hours

UNIT 3

Introduction to Astrodynamics: Keplerian Orbits, Orbit Perturbations, Orbit Manoeuvring, Launch Windows, Orbit Maintenance.

7 Hours

UNIT 4

Space Payload Design and Sizing: Payload Design and Sizing Process, Mission Requirements and Subject Trades, Background, Observation Payload Design, Observation Payload Sizing, Examples.

Spacecraft Design and Sizing: Requirements, Constraints and the Design Process, Spacecraft Configuration, Design Budgets, Designing the Spacecraft Bus, Integrating the Spacecraft Design, Examples.

9 Hours

UNIT 5

Spacecraft Subsystems: Attitude Determination and Control, Telemetry, Tracking and Command, Command and Data Handling, Power, Thermal, Structures and Mechanisms, Guidance and Navigation.

7 Hours

TEXT BOOKS:

1	James R. Wertz and Wiley J. Larson	Space Mission Analysis and Design (SMAD) - 3rd Ed.
2	C. Robert Welti	Satellite Basics for Everyone: An Illustrated Guide to Satellites for Non-Technical and Technical People, iUniverse (4 June 2012)

SATELLITE COMMUNICATION

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RTEE16	SEE Marks :	50/100

Course Outcomes (CO): At the end of the course, students will be able to:

1. Apply Kepler laws of planetary motion to develop orbital mechanics for a satellite.
2. Identify and analyze components of Losses during the signal propagation between earth station and satellite.
3. Perform computations to point the antenna towards a given communication satellites.
4. Design subsystems of Satellites and Earth Stations and establish the satellite communication links.
5. Apply appropriate tools and techniques for analyzing the performance of satellite communication systems.

UNIT 1

OVER VIEW OF SATELLITE SYSTEMS: Introduction, frequency allocation, INTELSAT. **ORBITS:** Introduction, Kepler laws, definitions, orbital elements, apogee and perigee heights, orbit perturbations, inclined orbits, calendars, universal time, sidereal time, orbital plane, local mean time and sun synchronous orbits, Geostationary orbit: Introduction, antenna, look angles, polar mount antenna, limits of visibility, earth eclipse of satellite, sun transit outage, launching orbits. **Text-1: Chap 1.1-3; 2.1-2.10; 3.1-3.8. & Text-2 7 Hours.**

UNIT 2

PROPAGATION IMPAIRMENTS AND SPACE LINK: Introduction, atmospheric losses, ionospheric effects, rain attenuation, other impairments. **SPACE LINK:** Introduction, EIRP, transmission losses, link power budget, system noise, CNR, uplink, down link, effects of rain, combined CNR. Intermodulation, Inter-satellite Links. **Text-1: Chapter 4.1-4.5; Chapter 12.1-12.12. & Text-2 8 Hours.**

UNIT 3

SUBSYSTEMS: SPACE SEGMENT- Introduction, power supply units, attitude control, station keeping, thermal control, TT&C, transponders, antenna subsystem. **EARTH SEGEMENT-** Introduction, receive only home TV system, outdoor unit, indoor unit, MATV, CATV, Tx – Rx earth station. **Text-1: Chap 7.1- 7.8; 8.1- 8-5. 8 Hours.**

UNIT 4

INTERFERENCE AND SATELLITE ACCESS: Introduction, interference between satellite circuits, Energy dispersal, coordination. Satellite access, single access, preassigned and Demand assigned FDMA, SCPC (spade system), Bandwidth and Power limited TWTA operation, TDMA, down link analysis, comparison of uplink power requirements for TDMA & FDMA, on board signal processing satellite switched TDMA, CDMA. **Text-1: Chapter 13.1-13.4; 14.1-14.10**

8 Hours.

UNIT 5

DBS, SATELLITE MOBILE AND SPECIALIZED SERVICES: Introduction, orbital spacing, power rating and number of transponders, frequency and polarization, transponder capacity, bit rates for digital TV, MPEG Compression, FEC, ODU and IDU, Link Analysis, HDTV, Video Frequency Bandwidth, satellite mobile services, VSAT, Radarsat, GPS, orbcomm and Iridium Satellite systems. Case study: Roof top antenna design and pointing for DTH reception, Satellite based ship/plane tracking **Text-1: Chapter 16; Chapter 17 & Text-2**

8 Hours.

2	Satellite Communication Systems Engineering	W. L. Pitchand, H. L. Suyderhoud, R. A. Nelson, 2nd Ed., Pearson Education., 2007.

Sub. Name: Telecommunication Networks **Sub. Code: 5RTE01**

CO	Statement	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PS01	PS02
CO1	Apply the fundamental concepts in building telecommunication network using various transmission medium and analyze establishing connection in PSTN networks.	**2**	**1**												**2**
CO2	Analyze the PSTN and transport network infrastructure, and to understand the OSI layered structure for data communication and apply switching techniques in WANs.	**2**	**1**												**2**
CO3	Analyze the multimedia streaming requirements and apply them to support best quality streaming applications.	**2**													**2**
CO4	Design and develop the solution for the broadband access technologies.	**2**													**2**
CO5	Analyze and understand the wireless communications technologies like WLANs, WMANs, WPANs and WWANs.	**2**	**1**							**2**	**1**				**2**
Maximum		**2**	**1**							**2**	**1**				**2**

Subject: Digital Communication & Coding Theory **Subject Code: 5RTE02**

CO	Statement	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PS02
CO1	Apply and analyze different band pass modulation techniques for transmission of digital data and demodulation using coherent and non-coherent receivers.	**3**	**2**	**1**											**3**
CO2	Analyze and compare the performance parameters like BER, bandwidth for different digital modulation schemes and understand the application of Spread spectrum.	**2**	**3**	**1**											**2**
CO3	Quantify amount of information of a discrete source and devise an optimal code for a discrete source satisfying various properties by selecting appropriate coding theorem.	**3**	**3**	**1**											**2**
CO4	Design and develop encoder and decoder circuit for error free communication using linear block codes.	**3**	**2**	**1**											**3**
CO5	Develop a binary cyclic encoder and decoder circuit for error free communication and perform encoding and decoding of convolution codes.	**3**	**2**	**1**											**3**
Maximum		**3**	**3**	**1**											**3**

Subject: Digital Signal Processing **Subject Code: 5RTE03**

CO	Statement	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PS01	PS02
CO1	Represent and process information in the digital domain as a function of time or frequency.	3	2	-	-	1	-	-	-	-	-	-	-	1	-
CO2	Compute DFT efficiently using FFT algorithms or linear filtering approaches appropriately to reduce the processing time.	3	2	-	-	1	-	-	-	-	-	-	-	1	-
CO3	Design and implement digital FIR filters using windowing technique.	3	2	2	-	1	-	-	-	-	-	-	-	2	-
CO4	Design and implement digital IIR filters using frequency transformation techniques.	3	2	2	-	1	-	-	-	-	-	-	-	2	-
CO5	Apply the DSP algorithms to provide solutions for DSP applications and Differentiate between stream, block, and vector processing in real time signal processing.	3	2	2	-	1	-	-	-	-	-	-	-	2	-
	Maximum	3	2	2	-	1	-	-	-	-	-	-	-	2	-

Subject: DCCT Lab **Subject Code: 5RTEL1**

CO	Statement	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO 1	Design and Develop digital communication systems based on different baseband and bandpass modulation techniques using LabVIEW	-	2	2	-	2	-	-	-	2	-	-	-	-	2
CO 2	Analyze performances both at transmitter and receiver of a digital communication system with various modulation techniques, and with demonstration using USRP hardware.	-	2	2	-	2	-	-	-	2	-	-	-	-	2
CO 3	Realize the various coding techniques in SCILAB, and Analyze performance with the various parameters	-	2	2	-	2	-	-	-	2	-	-	-	-	2
Maximum			2	2		2				2					2

Subject: DSP Lab **Subject Code: 5RTEL2**

CO	Statement	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PS01	PS02
CO 1	Develop codes to optimize the DFT processing time using FFT algorithm and implement applications of DFT.			2		2				2				1	
CO 2	Develop, simulate and verify solutions for signal processing applications.			2		2				2				2	
CO 3	Design and demonstrate filters for real time Audio signals using TMS320C6748 DSP processor.			2		2				2				2	
	Maximum			2		2				2				2	

Subject: Biomedical Signal Processing **Sub. Code: RTE22**

CO	Statement	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PS01	PS02
CO1	Differentiate origins and characteristics of some of the most commonly used biomedical signals like ECG, EEG, and EMG	3									1			2	
CO2	Identify important morphologies of ECG waveforms and their measurements. Develop techniques for estimating parameters that characterize various morphologies of the ECG waveform.	3												2	
CO3	Use data reduction techniques for computerized medical signal processing systems.	3	1											2	
CO4	Classify EEG patterns of clinical significance and human sleep EEG into various stages and use various tools for feature extraction of EEG signals using AR time series modeling.	3	1											2	
CO5	Use adaptive techniques for eliminating noise interferences in processing of biomedical signals.	3												2	
	Maximum	3	1	-	-	-	-	-	-	-	1	-	-	2	**-**

Subject: Satellite Communication RTEE16

CO Statements		PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	Apply Kepler laws of planetary motion to develop orbital mechanics for a satellite.	3	3												2
CO2	Identify and analyze components of Losses during the signal propagation between earth station and satellite.	3	3	2											2
CO3	Perform computations to point the antenna towards a given communication satellites.	3	2												3
CO4	Design subsystems of Satellites and Earth Stations for establishing satellite links.	3	3	3	2										3
CO5	Apply appropriate tools and techniques for analyzing the performance of satellite communication systems.	3	3	3	2										3
	MAX	**3**	**3**	**3**	**2**	**-**	**-**	**-**	**-**	**-**	**-**	**-**	**-**	**-**	**3**

Subject: Digital VLSI Design RTEE1

CO Statements		PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	Analysis of various processes in fabrication of MOSFETs and Digital circuits.	2	2	-	1	-	-	-	-	-	-	-	-	1	-
CO2	Design of mask layout analysis of transient response of digital circuits.	-	2	2	2	2	-	-	-	1	-	-	-	1	-
CO3	Realization of digital circuits using Ratioed Logic, Pass Transistor, Transmission Gate Logic, DCVSL, Dynamic Logic configurations.	-	3	2	1	2	-	-	-	1	-	-	-	1	-
CO4	Analysis of Arithmetic logic, combinational and sequential circuits	-	3	2	1	1	-	-	-	-	-	-	-	1	-
CO5	Analysis of various Memory cells and VLSI testing verification techniques.	-	2	-	-	-	-	-	-	-	-	-	-	1	-
	MAX	2	3	2	2	2	-	-	-	1	-	-	-	1	-

Subject: Image Processing RTEE10

	CO Statements	**PO1**	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**	**PSO1**	**PSO2**
CO1	Demonstrate various steps and components used in digital image processing.	2	2											3	
CO2	Develop Transform basis functions and Analyze Images in transform domain.	3	3		2									2	2
CO3	Apply image enhancement and restoration techniques in the spatial and frequency domains.	2	3	2		2									3
CO4	Identify and analyze redundancy in images and select a suitable compression technique for storage and transmission of images.	3	3			2									2
CO5	Develop image processing algorithms (individually or in team) using appropriate software tools.	3	3	2		2									2
	MAX	3	3	2	2	2	-	-	-	-	-	-	-	3	3

Subject: Transmission Line Theory and Application 6RTE01

CO Statements		PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	Analyze general transmission line and explain various parameters of EM waves propagating along the transmission lines	3	2											2	1
CO2	Solve problems arising in transmission lines at various situations using graphical (smith chart) and analytical methods	3	2											1	2
CO3	Design and analyze impedance matching networks consisting of lumped and distributed elements	1	2	3										1	2
CO4	Describe and compare construction and mode of operation of different types of transmission lines	2	2											2	1
CO5	Apply transmission line theory to analyze and design various microstrip and waveguide resonators	1	3	2										2	1
	MAX	3	3	3	-	-	-	-	-	-	-	-	-	2	2

Subject: Digital Communication and Networking 6RTE02

CO Statements		PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	Analyze features of the various layers of data communication, addressing mechanisms, multiplexing and transmission media.	2	2												
CO2	Analyze and portray framing techniques, flow control, error control mechanisms and data link control protocols.	2	2												2
CO3	Analyze multiple access protocols: random, controlled access protocols and channelization protocols.	2	2												
CO4	Analyze the performance of internetworking devices and IEEE standard frame formats used for Wired and Wireless LANs.	2	2												2
CO5	Analyze Internet protocols Ipv4, Ipv6 and routing protocols for network connectivity, TCP and UDP protocols. Design of LAN network system for a given scenario using subnet addressing.	2	2	2											2
	MAX	2	2	2	-	-	-	-	-	-	-	-	-	-	2

Subject: Embedded System RTEE02

CO Statements		PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	Explain the importance of embedded computing systems and their unique characteristic features.(L2)	2	2											1	
CO2	Design Single Purpose Processor used to carry out computation. (L3)	2	2	2										2	
CO3	Analyze General Purpose Processor used to carry out computation. (L2)	2	2	1										1	
CO4	Develop various memory structures & explain Cache Architecture. Explain the features of Memory Protection & Memory Management Units.(L3)	2	1												
CO5	Compare various software architectures available for building the embedded software.(L2)	2	1												
	MAX	2	2	2	-	-	-	-	-	-	-	-	-	2	-

Subject: DCN Lab 6RTEL2

CO Statements		PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	Develop C code to identify and correct the error in received digital data using CRC, Hamming codes.		2	2		1				2					1
CO2	Analyze the real time Communication network scenario by spanning tree, Link state routing algorithms to provide reliable data path. Client-server data communication using socket programming		2	2		1				2					1
CO3	Analyze the data communication in wired and wireless topology using NS-2.		2	2		2				2					2
	MAX	-	2	2	-	2	-	-	-	2	-	-	-	-	2

Subject: RFMCD RTEE18

CO Statements		PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	Describe the Microwave and Radar frequency bands (Bloom: Knowledge ;).	1													1
CO2	Demonstrate the technologies associated with MIC design (Bloom: Understand).	1	2												2
CO3	Illustrate the usage of S-parameters for microwave passive circuit design (Bloom: Apply).	1		2											2
CO4	Design the microwave passive circuit for given application (Bloom: Create).			2											2
CO5	Demonstrate the working of high power solid state devices, passive, high power active microwave devices (Bloom: Understand).	2	2												2
	MAX	2	2	2	-	-	-	-	-	-	-	-	-	-	2

SCHEME & SYLLABUS

OF

VII & VIII SEMESTER

B.E.

Electronics & Telecommunication Engg.

2022 - 23

Vision of the Dept.:

To become center of excellence in Telecommunication Engineering and empower graduates to take up global challenges in emerging areas to harness technological competence while harmoniously blending with spiritual pursuits.

Mission of the Dept.

1. To provide best learning experience for students through excellent curriculum, industry collaboration and innovative teaching learning processes.
2. To create academic ambience for faculty and students by establishing high-quality R & D labs leading to quality research in Telecommunication Engineering and allied disciplines.
3. To produce graduates with technological competence, necessary professional skills and ethics.

Program Educational Objectives (PEOs)

The graduates of Telecommunication Engineering are able to:

 Build successful careers in industry, R&D Labs by applying mathematical, scientific and state-of-the-art Engineering knowledge with multidisciplinary approaches to solve real world problems in the fields of Telecommunication Engineering and allied disciplines.

 Pursue higher education by lifelong learning in the areas of Telecommunication Engineering and allied disciplines.

 Display professional and ethical attitude, spiritual values with effective communication skills and leadership qualities.

PROGRAM SPECIFIC OUTCOMES (PSOs):

- Apply and analyze the concepts of circuits and systems for real time challenges in the areas of electronic circuits, signal processing and VLSI/Embedded Systems.
- Identify, design and develop solutions for complex engineering problems related to, communication systems using analytical techniques, state of the art simulation tools and hardware

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institute affiliated to Visvesvaraya Technological University, Belagavi, Approved by AICTE, New Delhi)

MICROWAVE ENGINEERING AND ANTENNAS DESIGN

Contact Hours/ Week	: 4+1	Credits : 4.5
Total Lecture Hours	: 52+13	CIE Marks : 50
Sub. Code	: 7RTE01	SEE Marks : 50

Microwave frequency spectrum have been increasingly used in many applications such as radio astronomy, cellular system, space navigation, radar systems, medical, and military applications. As a result of the of the fast growing microwave technology in research and industry, students who are preparing themselves for, and electronics engineers who are working in, the microwave area are need to understand the theory, design, analysis, and experiment of microwave devices and circuits. The objectives of this course is to provide

1. The operating principles, theory, analysis , design, and construction of microwave active and passive devices

2. The fundamental theory, operating principles and construction of antennas thereby providing relevant skills to design and analyze antennas for modern wireless communication systems.

Course outcomes:

At the completion of the course, students will be able to

CO1: Explain operating principle, theory, and construction of active devices used at RF and microwave frequencies

CO2: Analyze the properties of microwave devices and circuits using S-parameters and able to design planar microwave devices and filters

CO3: Explain various parameters of antennas & carryout investigation of link budget for radio wave propagation related to different applications and develop solutions to solve practical problems in antennas

CO4: Demonstrate the operating theory, construction, and effective design of antennas for various wireless applications

CO5: Analyze and apply antenna array theory to design antennas for modern wireless communication systems like Smart antenna systems and MIMO systems

UNIT 1

Microwave sources and detectors:

Microwave frequencies, advantages of microwaves, general and Industrial applications of microwaves. Reflex Klystron, Traveling Wave Tube, Magnetron, Gunn diode and its applications, PIN diode, Schottky barrier diodes (For all the device: only construction, operation, velocity modulation, transit time, current modulation, power output and efficiency, definition with explanation and end equations are included, derivations are excluded).

10Hours

UNIT 2

Passive microwave devices and circuits

Analysis of Wilkinson Power Divider, The Quadrature (90') Hybrid power divider, Coupled Line Directional Couplers. Lumped element Filter design using insertion loss method, Filter transformations, Impedance and Frequency Scaling, Bandpass and Bandstop Transformations. Filter implementation using transmission lines, Richards' Transformation, Kuroda's Identities, Low-pass filter design using stubs.

12Hours

UNIT 3

Antenna Parameters:

Basic antenna parameters:Power density, Radiation intensity, Directivity and Gain, Radiation Patterns, Beam width, resolution, Efficiency, Radiation resistance, input impedance, Effective aperture, Effective Height. Radiation machanisum, Antenna field zones. Relation between gain and directivity. The Radio communication link (Frii's transmission formula). Short dipole and thin linear antennas: Construction, current distribution radiation pattern, Field components, radiation pattern, radiation resistance of short dipole and $\lambda/2$ antennas (No derivation).

10Hours

UNIT 4

Broadband and resonant antennas:

Construction, design, operation and applications of Yagi-Udaantenna, Log periodic antenna, Helical antenna: Normal mode and axial mode operation, design procedure. The rectangular horn antenna, Flat sheet reflectors, Corner Reflector, The symmetric Parabolic reflector antenna. Rectangular microstrip antenna.

10Hours

UNIT 5

Arrays: Introduction, applications, factors which control the radiation properties of the arrays. Linear array of n isotropic point sources of equal amplitude and spacing: Array factor, Null directions, minor lobe maxima directions, Null and Half power beam widths. Array of two point sources. The principle of pattern multiplication. Planar array and array factor. Mutual impedance, introduction to phased arrays, Introduction to smart and MIMO antennas.

10 Hours

WIRELESS COMMUNICATION

Contact Hours/ Week	: 4	Credits :	4
Total Lecture Hours	: 52	CIE Marks :	50
Sub. Code	: 7RTE02	SEE Marks :	50

Prerequisites: Analog and Digital Communication, Telecommunication switching networks, Antennas and Propagation.

Objectives: At the end of the course, the students have

- A comprehensive understanding of wireless communication.
- A quantitative knowledge of basic wireless communication parameters and their design.
- Ability to perform and verify mobile link calculations. Ability to analyze/ apply the concepts to design wireless communication systems.
- Knowledge of latest developments in the field of wireless communication.

Course Outcomes:

1. Explain the requirement of up gradation in wireless communication standards; analyze cell shape, interference effects, frequency reuse and trunking theory concepts to increase the capacity of the system.
2. Evaluate power received/ path loss using different empirical/analytical models and propagation mechanisms for outdoor propagation models.
3. Analyze the Rayleigh fading channel and BER performance of various modulation techniques over wireless systems.
4. Analyze performance of AWGN and Fading channel using bit error rate and study different diversity techniques and equalizers to increase received signal quality.
5. Analyze the OFDM technique for 4G LTE systems and onwards, and Analyze the MIMO system for realizing the 5G Wireless communication

UNIT 1

Introduction to Wireless Communication Systems: Examples of Wireless Communication Systems, Introduction to 2G, 3G, 4G and 5G Wireless Standards. Introduction to Second and Third Generation Wireless Networks, WLL, WLANs, Bluetooth and PANs. The Cellular Concept – System Design Fundamentals: Introduction, Frequency Reuse, Channel Assignment Strategies, Handoff Strategies, Interference and System Capacity. Trunking and Grade of Service, Improving Coverage & Capacity in Cellular Systems

10 Hours

UNIT 2

Mobile Radio Propagation: Large Scale Path Loss Introduction to Mobile Radio Wave Propagation, Free Space Propagation Model, Relating Power to Electric Field, The Three Basic Propagation Mechanisms, Reflection, Ground Reflection (Two-Ray) Model, Diffraction, Scattering, Practical Link Budget Design Using Path Loss Models, Outdoor Propagation Models.

Mobile Radio Propagation: Small-Scale Fading and Multipath: Small- Scale Multipath Propagation, Impulse Response Model of a Multipath Channel, Small-Scale Multipath Measurements, Parameters of Mobile Multipath Channels, and Types of Small-Scale Fading **12 Hours**

UNIT 3

Principles of Wireless Communications: The wireless communication environment, Modelling of wireless channel, System model for narrowband signals, Rayleigh fading wireless channel, BER performance of wireless systems for various modulations, Intuition for BER in a fading channel, Channel estimation in wireless systems.

10 Hours

UNIT 4

Equalization: introduction, Fundamentals of Equalization, Linear and Non Linear Equalizers.

Diversity in Wireless Communications: Diversity Techniques, Multiple receive antenna system model, Symbol detection in multiple antenna systems, BER in multi-antenna wireless systems, Diversity Order.

Channel coding fundamentals.

10 Hours

UNIT 5

Orthogonal Frequency Division Multiplexing (OFDM): **Introduction to OFDM**, Subcarrier concept, OFDM signal generation, IFFT/FFT operations in OFDM, Addition of cyclic prefix, End-to-End system model for OFDM.

Multiple-Input Multiple-Output (MIMO): Introduction to MIMO, MIMO system model, MIMO Zero Forcing (ZF) Receiver, MIMO MMSE Receiver

10 Hours

MICROWAVE & ANTENNA LAB

Lab Hours/ Week	: 3	Credits :	1.5
Sub. Code	: 7RTEL1	CIE Marks :	50
		SEE Marks :	50

Course Outcomes:

1. Effectively use EM and circuit simulation tools to analyze the properties of microwave devices and circuits like resonators, power dividers and microstrip antenna
2. Conduct experiments using latest microwave sources and testing equipments to characterize the properties of microwave passive and active devices
3. Carryout measurements on transmission line and analyze practical problems related to transmission lines
4. Mode curves of Klystron
5. Find unknown Impedance of a load

Using Microstrip

1. Ring resonator
2. S- parameters for Branch line and Parallel line coupler
3. Radiation pattern for Yagi and dipole antenna

Using Microwave Office

1. To find input impedance for different loads
2. EM Structure of Ring resonator
3. S- parameters for Branch line and Parallel line coupler
4. Radiation pattern for Patch Antennas

Telecommunication Operations and Business Support System

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	:OE53/RTEE19	SEE Marks :	50

Pre-requisite for this course: Basic telecommunication networks concepts.

Objectives:

The objective of this subject is to introduce the International Telecom industry standard at college level.

This syllabus for telecommunication covers all the practical aspects a student should be equipped with to work successfully in a telecom industry. eTOM framework is an international telecom framework which is implemented across all the telecom companies around the world. OSS and BSS are a part of this framework.

This subject introduces the concepts of eTOM, OSS & BSS to the students and gives in depth insight on these topics.

Course Outcomes:

1. Illustrate the hierarchical structure of eTOM framework and outline the functions of process groupings to understand the nuances of Telecom business
2. Identify the functions of level 2 process grouping under Operations and analyze and illustrate the functionality of customer relationship management, service fulfillment and service provisioning in Telecom Industry.
3. Outline the types and importance of inventory management; illustrate the process of service assurance. Outline the Business support system components and CRM from Business viewpoint
4. Analyze the process of mediation, roaming and interconnect in various scenarios. Elucidate the rating model and rating engine in service tariff charges in telecom industry
5. Outline the various payment methods, workflow, payment types and dispute handling process and adjustments involved in the process. Illustrate the process of crediting a customer and follow up methods to recover the same. Elucidate the process of revenue assurance and types of frauds

UNIT 1

Introduction to eTOM Telecom framework: Introduction, purpose, Objective and strengths of eTOM framework-Level 0, eTOM process business framework-Level 1, Level 1- Operations vertical process grouping, Level 1- Operations horizontal process grouping, SIP vertical end-end process grouping, SIP horizontal functional process grouping, Enterprise management process groupings, External **6 Hours**

UNIT 2

Operational Support System: OSS basics, Communication service providers, Introduction to products and services, OSS components, CRM systems – types and functionalities.

Order/Service Fulfilment: *Order Management:* Introduction, types of orders, Order capture functionality

Order Processing : Order data verification, Order feasibility check, Customer eligibility check, Service provider eligibility check, Order decomposition, Order orchestration, Manage logical inventory, Network reservation, Service activation, Hardware activation, Service Provisioning. **8 Hours**

UNIT 3

Inventory Management: Number inventory, product inventory, customer data inventory, physical inventory, logical/network inventory, Service inventory.

Service Assurance: Proactive and Reactive service assurance, Advantages, QOS, SLA, OLA architecture, Fault Management, Trouble Ticket Management, and Network Performance Management

Intoduction to BSS: BSS components, High level processes of BSS, CRM (Customer Relationship Management) functionalities, CRM functional areas, CRM sales management, CRM Marketing management**.**

8 Hours

UNIT 4

Mediation, Roaming and Interconnect: Introduction, Event, UDR, CDR, CDR attributes, real time mediation, Functionalities of a mediation system, CDR processing, mediation for various scenarios – home subscribers, in-roaming, out-roaming, Interconnect CDRs. Introduction to roaming and interconnect, In-Network subscribers, Out-of-network subscribers, Tap-In files, Tap-out files, Point of interconnect.

Rating: Product and service modelling, Service tariff – types of charges, Basic functionalities of a rating engine, duplicate events, rejected events, real time rating, batch rating, re-rating events, partial rating, threshold and actions, rating time discounts

8 Hours

UNIT 5

Payments: Types of payment, payment workflow, single time payment multi invoice, multi payment – one invoice, over payment, under payment, payment transfer, payment refund, wrong payment posting, suspense account handling, , deposit, release and refund deposit, dispute handling, adjustments and types of adjustments.

Credit and Collections: Introduction, Debt customer, follow up modules and dunning actions associate with each customer bill, general follow up actions, Credit Scoring: concept and workflow, Credit Monitoring: concept and workflow, Credit Collections: concepts and workflow.

Revenue Assurance: Introduction, Revenue assurance architecture, Network-related leakage, Types of Fraud.

9 Hours

RF AND MICROWAVE CIRCUIT DESIGN

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	RTEE18	SEE Marks :	100

Course Outcomes:

1. Explain reasons for using RF/mw frequencies, limitations of lumped elements, silent futures of resonators, and their applications.
2. Explain the distributed (rather than lumped) analysis approach for various transmission line problems and analyze
3. Solve various transmission line problems and design impedance matching circuits using graphical (Smith chart) and analytical methods. the properties of RF/mw circuit using S parameters.
4. Design procedures and methods to evaluate the performance of amplifiers, mixer and detector circuits.
5. Analyse and design amplifiers, phase shifter, mixer and detector circuits operating at RF/mw frequencies and Use simulation tools

UNIT 1

Basics of RF and microwaves: Introduction- Properties of RF and Microwaves, reasons for using rf/microwaves, RF/microwave applications, low RF and high RF circuit design considerations. RF electronics: Introduction to component basics at RF/Microwave: wire, resistors, capacitors, Inductor, definitions- Decibel, Decibel watts, space factor, ripple, bandwidth, Resonance, circuit Q and loaded Q, insertion loss, impedance transformation. Text1: Chapter 5 and 6, Text2: Chapter 1 and 2. **7 Hours**

UNIT 2

The wave fundamentals: mathematical form of propagating waves, properties of waves, wave propagation on transmission line (TEM mode), reflection coefficient, lossless transmission lines, a generalized lossless transmission line circuit, Micro-strip line, Empirical Formulas, Two-port network representations: low-frequency parameters, high-frequency parameters, formulation of the s-parameters, properties of s-parameters, signal flow graphs (sfgs), applications of signal flow graphs (sfgs). Text1: Chapter 7, 8. **8 Hours**

UNIT 3

The Smith Chart: Description of the smith chart, Smith Chart Applications: distributed and lumped element circuit applications, input impedance determination, Design of matching networks: definition - matching, selection of a matching network, maximum average power transfer, design of matching circuits using lumped elements, matching network design using distributed elements, stub realization using microstrip lines. Text1: Chapter 10, 11.

8 Hours

UNIT 4

Microwave Frequency Conversion and control: detector losses, detector design, mixer types, conversion loss for ssb mixers, one diode mixer, phase shifters: delay line phase shifter, semiconductor phase shifters. Basic design consideration in active networks: Stability considerations: Stability Circles. Graphical Solution of Stability Criteria. Analytical Solution of Stability Criteria. Potentially Unstable Case. Noise considerations: Importance of Noise. Noise Definition. Sources of Noise. Thermal Noise Analysis. Noise Model of a Noisy Resistor. Equivalent Noise Temperature. Definitions of Noise Figure. Noise Figure of Cascaded Networks. Constant Noise Figure Circles. Text1: Chapter 19,20, 12, 14. **8 Hours**

UNIT 5

Gain considerations: Power Gain Concepts. A Special Case: Unilateral Transistor. The Mismatch Factor. Input and Output VSWR. Maximum Gain Design. Unilateral Case (Maximum Gain). Constant Gain Circles (Unilateral Case). Unilateral Figure of Merit. Bilateral Case. RF/microwave amplifiers design: Types of amplifiers. small-signal amplifiers. design of different types of amplifiers. small-signal amplifier design. design of different types of amplifiers, high-gain amplifier (hga) design, maximum-gain amplifier (mga) design, Text1: Chapter 13, 15.

8 Hours

SWITCHING LOGIC AND FINITE AUTOMATA THEORY

Contact HOURS/ Week	: 3	Credits :	3
Total Lecture HOURS	: 39	CIE Marks :	50
Sub. Code	: RTEE04	SEE Marks :	50

Course Objectives:

This subject enables the students to understand the threshold elements used in threshold circuits, able to determine whether or not a digital circuit operates correctly and of ensuring its correct operation even when some of its parts fail., study capabilities, minimization and transformation of sequential machines, study the structure of sequential machines, study fault detection

Course Outcomes:

1. Elucidate the properties notions of sets, relations, and partial ordering and lattice theory and explain properties of threshold elements and construct circuits by using threshold elements.
2. Determine whether a digital circuit operates correctly and able to ensure its correct operation.
3. Analyze the switching circuits and improve reliability, Minimize completely and incompletely specified sequential machines.
4. Analyze the behavior of finite state machine and do state-identification experiments.
5. Develop state assignment problem and complexity of sequential machines.

UNIT 1

Sets, Relations, and Lattices:

Threshold Logic: Introductory Concepts: Threshold element, capabilities and limitations of threshold logic, Elementary Properties, Synthesis of Threshold networks: Unate functions, Identification and realization of threshold functions, the map as a tool in synthesizing threshold networks.

8 Hours

UNIT 2

Reliable Design and Fault Diagnosis: Hazards,Fault Detection in Combinational Circuits, Fault-Location Experiments, Boolean Differences, Fault Detection by Path Sensitizing, Detection of Multiple Faults **7 Hours**

UNIT 3

Reliable Design: Failure-Tolerant Design, Quadded Logic

Sequential Machines: Capabilities, Minimization and Transformation: The Finite state model and definitions, capabilities and limitations of finite state machines, State equivalence and machine minimization: k-equivalence, the minimization Procedure, Machine equivalence, Simplification of incompletely specified machines.

8 Hours

UNIT 4

Structure of Sequential Machines: Introductory example, State assignment using partitions: closed partitions, The lattice of closed partitions, Reduction of output dependency, Input dependence and autonomous clocks, Covers and generation of closed partitions by state splitting: Covers, The implication graph, An application of state splitting to parallel decomposition. **8 Hours**

UNIT 5

State–Identification and Fault Detection Experiments: Experiments, Homing experiments, Distinguishing experiments, Machine identification, Fault detection experiments, Design of diagnosable machines, Second algorithm for the design of fault detection experiments. **8 Hours**

Text Books:

SATELLITE COMMUNICATION

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RTEE16	SEE Marks :	50/100

Course Outcomes (CO): At the end of the course, students will be able to:

C410.1 Apply Kepler laws of planetary motion to develop orbital mechanics for a satellite.

C410.2 Identify and analyze components of Losses during the signal propagation between earth station and satellite.

C410.3 Perform computations to point the antenna towards a given communication satellites.

C410.4 Design subsystems of Satellites and Earth Stations and establish the satellite communication links.

C410.5 Apply appropriate tools and techniques for analyzing the performance of satellite communication systems.

UNIT 1

OVER VIEW OF SATELLITE SYSTEMS: Introduction, frequency allocation, INTELSAT. **ORBITS:** Introduction, Kepler laws, definitions, orbital elements, apogee and perigee heights, orbit perturbations, inclined orbits, calendars, universal time, sidereal time, orbital plane, local mean time and sun synchronous orbits, Geostationary orbit: Introduction, antenna, look angles, polar mount antenna, limits of visibility, earth eclipse of satellite, sun transit outage, launching orbits. **Text-1: Chap 1.1-3; 2.1-2.10; 3.1-3.8. & Text-2 7 Hours.**

UNIT 2

PROPAGATION IMPAIRMENTS AND SPACE LINK: Introduction, atmospheric losses, ionospheric effects, rain attenuation, other impairments. **SPACE LINK:** Introduction, EIRP, transmission losses, link power budget, system noise, CNR, uplink, down link, effects of rain, combined CNR. Intermodulation, Inter-satellite Links. **Text-1: Chapter 4.1-4.5; Chapter 12.1-12.12. & Text-2 8 Hours.**

UNIT 3

SUBSYSTEMS: SPACE SEGMENT- Introduction, power supply units, attitude control, station keeping, thermal control, TT&C, transponders, antenna subsystem. **EARTH SEGEMENT-** Introduction, receive only home TV system, outdoor unit, indoor unit, MATV, CATV, Tx – Rx earth station. **Text-1: Chap 7.1- 7.8; 8.1- 8-5. 8 Hours.**

UNIT 4

INTERFERENCE AND SATELLITE ACCESS: Introduction, interference between satellite circuits, Energy dispersal, coordination. Satellite access, single access, preassigned and Demand assigned FDMA, SCPC (spade system), Bandwidth and Power limited TWTA operation, TDMA, down link analysis, comparison of uplink power requirements for TDMA & FDMA, on board signal processing satellite switched TDMA, CDMA. **Text-1: Chapter 13.1-13.4; 14.1-14.10**

8 Hours.

UNIT 5

DBS, SATELLITE MOBILE AND SPECIALIZED SERVICES: Introduction, orbital spacing, power rating and number of transponders, frequency and polarization, transponder capacity, bit rates for digital TV, MPEG Compression, FEC, ODU and IDU, Link Analysis, HDTV, Video Frequency Bandwidth, satellite mobile services, VSAT, Radarsat, GPS, orbcomm and Iridium Satellite systems. Case study: Roof top antenna design and pointing for DTH reception, Satellite based ship/plane tracking **Text-1: Chapter 16; Chapter 17 & Text-2**

8 Hours.

TEXT BOOKS:

1	Dennis Roddy	Satellite Communications, 4th Edition, McGraw- Hill International edition, 2006.
2	Satellite Communications	Timothy Pratt, Charles Bostian and Jeremy Allnutt, 2nd Edition, John Wiley Pvt. Ltd & Sons, 2008.

REFERENCE BOOKS:

1	Satellite Communication: Concepts and applications	K. N. Raja Rao, 2nd Ed. PHI, 2013.
2	Satellite Communication Systems Engineering	W. L. Pitchand, H. L. Suyderhoud, R. A. Nelson, 2nd Ed., Pearson Education., 2007.

OPTICAL FIBER COMMUNICATION

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RTEE15	SEE Marks :	50

Course Objectives: The objective of this course is to impart the students to the basics of optical communication system, the propagation of light through optical fiber, the losses that occur in the optical fiber, components and devices and system design.

Course Outcomes:

1. Explain the optical laws and design and analysis of different types of optical fibers.
2. Analyze the various losses and dispersion in optical fiber.
3. Classify the fiber optical sources and analyze the coupling techniques.
4. Classify the fiber optical detectors and familiar with the design considerations of optical receivers.
5. Analysis of optical components and design and analysis of optical networks.

UNIT 1

Introduction: The evolution of fiber optic systems, elements of an optical fiber transmission link, advantages of optical fiber communication, applications.

Optical Laws: Ray theory transmission, total internal reflection acceptance angle, numerical aperture and skew rays.

Electromagnetic Analysis: Electromagnetic mode theory and propagation, single mode and multimode fibers, TE and TM modes, b-V curves.

Optical fibers: Types of fiber based on structure, Fiber material, fiber cables and fiber fabrication.

9 Hours

UNIT 2

Transmission Characteristic of Optical Fiber

Attenuation: Absorption, scattering losses, bending losses.

Dispersion: Pulse broadening, Modal dispersion, bit rate-length product, waveguide dispersion, material dispersion and polarization Mode dispersion.

Optimization of Fiber: Dispersion shifted and dispersion flattened fibers, fractional power in the core, single mode fiber cut-off wavelength and mode field diameter. **7 Hours**

UNIT 3

Optical Sources and Power launching and Coupling

Optical Sources: sources for optical fiber communication, light emitting diode, internal and external quantum efficiencies, LED characteristics, LASER diode and Threshold condition.

Power launching and coupling: Source to fiber power launching, Lensing schemes, LED coupling to single mode fibers, fiber splicing.

8 Hours

UNIT 4

Optical detectors and Receiver Operation

Optical Detectors: Working principle and characteristics of detectors PIN and APD, noise analysis in detectors.

Receiver Operation: Receiver structure, bit error rate of optical receivers, and receiver performance.

Power Budgeting of fiber link: link power budget, rise time budget, transmission distance for single mode links.

8 Hours

UNIT 5

Optical Fiber Components and Optical Network

Optical fiber components: Directional coupler, power splitter, WDM coupler, polarization controllers, fiber Bragg gratings, Mach Zehnder Interferometer, erbium doped fiber amplifier.

Optical Networks: SONET and SDH standards, architecture of optical transport networks (OTNs), network topologies, Operational principle of WDM, WDM network elements and Architectures. **7 Hours**

Text Books:

1	Gerd Keiser	Optical Fiber Communication, 3rd Ed., MGH, 2000

Reference Books

1	G P Agarwal	"Fiber Optic Communication System", 4th Ed, John Wiley and sons, 2010

REMOTE SENSING

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RTEE12	SEE Marks :	5

Course Objectives:
To introduce concepts of remote sensors, data analysis techniques, satellite image analysis. At the end of the semester students should have a good understanding and basic skills of remote sensing.

Course Outcomes:

1. Explain the fundamental aspects of remote sensing and applications.
2. Analyze sensors for remote sensing applications.
3. Collect remote sensing data available using standard database and interpret image data.
4. Compare transforms and apply enhancement techniques for remote sensing applications.
5. Apply filtering techniques on images to extract and analyse information.

UNIT 1

Introduction: Introduction to Remote Sensing. Sun and atmosphere, concepts of signatures, remote sensing system, observing earth from space, Remote sensing history, IRS Programs, Legal and ethical aspects. Applications of Remote Sensing. Electromagnetic radiation: Parameters related to EM, Thermal radiation, Source of EM radiation for remote sensing, Physical basis of signatures.

Text 1.Chapters 1, 2, 3 and 4. **8 Hours**

UNIT 2

Overview of Sensors: Classification of remote sensors, selection of sensor parameters, various resolutions. Optical-Infrared Sensors: quality of image in optical systems, imaging mode, cameras, scanners, hyper spectral imager, measuring the third dimension, image quality aspects. Microwave sensors: antennas, active and passive microwave sensors, side looking radar, scatterometer.

Text 1.Chapters 5,6, and 7. **8 Hours**

UNIT 3

Platforms, data reception and analysis: Satellite platform for sensors. Data reception and data products: Data formats, Ground segment organization, data product generation, referencing scheme, data product output medium, IRS data products, Special Processing. Data analysis: Visual image analysis, Digital classification and accuracy.

Text 1.Chapters 9, 10. **8 Hours**

UNIT 4

Spectral Transforms: Introduction, feature space, multispectral ratios, principal components, tessellated-cap components, Contrast Enhancement using Global Transforms and local transforms, color image enhancement.

Text 2.Chapter 5 **8 Hours**

UNIT 5

Spatial Transforms: Introduction, An image model for spatial filtering, convolution filters, Fourier Transforms, Scale space transforms.

Text 2.Chapter 6 **7 Hours**

Text Books:

1	George Joseph	Fundamentals of Remote Sensing, 2nd Edn, University Press, 2005.
2	Robert ASchowengerdt	Remote Sensing: Models and Methods For Image Processing, Academic Press, 3rd Edn, 2009.

SPEECH PROCESSING

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Subject Code	: RTEE09	SEE Marks :	50

Pre-requisite : Signals and systems, Digital Signal Processing

Course Objective : i) To understand the characteristics of speech signal, ii) To apply signal processing concepts to speech signal, (iii) To get an insight into an application on speech recognition.

Course Outcomes:

1. Explain the mechanism of speech production & its representation digitally
2. Classify the phonemes depending upon the manner and place of articulation
3. Make use of short-term analysis for speech signals
4. Extract the information of the speech signals in terms of cepstral features Analyze the speech signals using linear predictive coding.
5. Compare the speech recognition system for given application

UNIT 1

Digital Models for the Speech Signal: Introduction, The process of speech production, The acoustic theory of speech production, Digital models for the speech signals **10 Hours**

UNIT 2

Time-Domain Models for Speech Processing: Introduction, Time-dependant processing of speech, Short-time energy and average magnitude, Short-time average zero-crossing rate, Speech vs. silence discrimination using energy and zero-crossings, Pitch period estimation using a parallel processing approach, The short-time autocorrelation function, The short-time average magnitude difference function, Pitch period estimation using the autocorrelation function.

Short-Time Fourier Analysis: Fourier transform interpretation, Linear filtering interpretation, Sampling rates of STFT in time and frequency, Filter bank summation method of short-time synthesis, Overlap addition method of short-time synthesis. **8 Hours**

UNIT 3

Homomorphic Speech Processing: Homomorphic systems for convolution, The complex spectrum of speech, Pitch detection, Formant estimation.

7 Hours

UNIT 4

Linear Prediction Analysis of Speech: Basic principles of linear predictive analysis, Computation of the gain for the model, Solution of the LPC equations, Comparisons between the methods of solution of the LPC analysis equations, Frequency domain interpretations of linear predictive analysis,

Synthesis of speech from linear predictive parameters, Applications of LPC parameters: pitch detection and formant analysis using LPC parameters.

7 Hours

UNIT 5

Automatic Speech Recognition: Speech recognition systems (Isolated word recognition, connected word recognition and large vocabulary word recognition), Hidden Markov Models, Types of HMM, Three basic problems of HMM. **7 Hours**

Text Book:

1	Lawrence R. Rabiner and Ronald W. Schafer	Digital processing of speech signals, Second Indian Reprint, Pearson Education 2005

Reference Books:

1	Thomas F. Quatieri	Discrete-time speech signal processing Principles and Practice, First Indian Reprint, Pearson Education 2004
2	Lawrence R. Rabiner, Biing-Hwang Juang, B. Yegnanarayana	Fundamentals of speech recognition, Pearson Education, 2009

MULTIMEDIA COMMUNICATION

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RTEE11	SEE Marks :	50

Course Outcomes:

1. Explain the definition of Multi-media and Hypermedia and apply the concepts of digitization of audio.
2. Apply and Analyze text data using lossless compression algorithms.
3. Apply lossy compression algorithms and transform coding and wave-let based coding for two dimensional data.
4. Compare JPEG and JPEG 2000 Standards.
5. Outline overview of MPEG-1 and MPEG-2. Interpret the MPEG video coding- II for MPEG-4 & 7.

UNIT 1

Introduction to Multimedia, Graphics & Image Representation, Fundamental concepts in Video and audio: Definition of Multimedia, Multi-media and Hypermedia. Graphics/Image Data Types, Popular File Formats. Types of Video Signals, Analog Video, Digital Video, Digitization of sound, Quantization and Transmission of Audio. Text: Chapter 1, 1.1 1.2, Chapter 3, 3.1 & 3.2, Chapter 5, 5.1 to 5.3 and Chapter 6, 6.1 & 6.3.

8 Hours

UNIT 2

Lossless compression algorithms: Introduction to lossless compression, Basic information theory, Run-length coding, Variable-length coding, Dictionary-Based Coding, Arithmetic coding, Lossless Image compression. Text: Chapter 7, 7.1 to 7.7.

7Hours

UNIT 3

Lossy compression algorithms: Introduction to lossy compression, Distortion measures, Quantization, Transform coding, Wavelet-Based coding, Wavelet Packets, Embedded Zero tree of Wavelet Coefficients, SPIHT. Text: Chapter 8, 8.1 to 8.9.

7Hours

UNIT 4

Image Compression Standards and MPEG Video Coding I: The JPEG standard, The JPEG2000 standard, The JPEG-LS standard, Bi-level Image compression standard, H.261, Overview of MPEG-1. (Text: Chapter 9, 9.1 to 9.4, Chapter 10, 10.1 to 10.4 and Chapter 11, 11.1 to 11.2)

8Hours

UNIT 5

MPEG Video Coding II: MPEG-2, Overview MPEG-4, Object Based Visual Coding in MPEG-4, Synthetic Object coding in MPEG-4, MPEG-7. Text: Chapter 11, 11.3 Chapter 12, 12.1 to 12.3 & 12.6.

8Hours

Reference Books

1	Khalid Sayood	Introduction to Data Compression: Third Edition, Morgan Kaufmann Publishers.

AD HOC WIRELESS NETWORKS

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RTEE22	SEE Marks :	50

Prerequisite: Data Communication Networks (DCN).

Course Outcomes: After the completion of this course students will be able to:

CO1: Explain the fundamental concepts and issues in Ad Hoc Wireless Networks

CO2: Analyze the MAC protocols of Ad Hoc Wireless Networks

CO3: Classify various Routing protocols of Ad Hoc Wireless Network

CO4: Identify and Analyze Routing protocols of Ad Hoc Wireless Networks

CO5: Analyze various transport layer protocols of Ad Hoc Wireless Networks

UNIT 1

AD HOC NETWORKS: Introduction, Application of Ad-Hoc wireless networks Issues in Ad hoc wireless networks, Ad hoc wireless internet. **6 Hours**

UNIT 2

MAC PROTOCOLS FOR AD HOC WIRELESS NETWORKS: Introduction,

Issues in designing a MAC protocol for Ad hoc wireless Networks, Design goals of a MAC protocol for Ad hoc wireless Networks, Classification of MAC protocols. Contention - based MAC protocols with scheduling mechanism, MAC protocols that use directional antennas, Other MAC protocols. **12 Hours**

UNIT 3

ROUTING PROTOCOLS FOR AD HOC WIRELESS NETWORKS-1:

Introduction, Issues in designing a routing protocol for Ad hoc wireless Networks, Classification of routing protocols, Table driven routing protocol, On-demand routing protocols **7 Hours**

UNIT 4

ROUTING PROTOCOLS FOR AD HOC WIRELESS NETWORKS-2:

Hybrid routing protocol, Routing protocols with effective flooding mechanisms, Hierarchical routing protocols, Power aware routing protocols. **6 Hours**

UNIT 5

TRANSPORT LAYER PROTOCOLS FOR ADHOC WIRELESS

NETWORKS: Introduction, Issues in designing a transport layer protocol for Ad hoc wireless Networks, Design goals of a transport layer protocol for Ad hoc wireless Networks. Classification of Transport layer solutions, TCP- over Ad hoc Wireless Networks,

SECURITY: Security in wireless Ad hoc wireless Networks, Network security requirements, Issues & challenges in security provisioning.

8 Hours

TEXT BOOK:

SCHEME & SYLLABUS

OF

III & IV SEMESTERS

(160 Credits)

B.E. BIOTECHNOLOGY

2022-23

VISION AND MISSION OF THE DEPARTMENT

VISION:

To be a center of excellence in education and research in Biotechnology to address the global challenges

MISSION:

1. To establish close collaboration with industry to offer industry-relevant curricula and pursue demand driven research.
2. To continuously upgrade the infrastructure to develop the state-of-the-art facilities for training and research.
3. To provide a good learning environment to help students imbibe professional ethics, communication skills, team spirit and societal commitment.
4. To offer skill development programs to enhance employability of graduates in collaboration with industry and Government support.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

Graduates from the Biotechnology program are expected to achieve the following Program Educational Objectives within a few years of graduation:

1. The graduates of the program are practicing engineering profession as clinical data coordinator, clinical research associate, IT system engineers, bioinformatics analyst, Quality controller and Quality assurance analyst, business development executive, research associate with a strong skill set as data analyst, product specialist, computer programmer, molecular biologist, good planning, communication and execution ability for IT and BT industries.

2. The graduates of the program are engaged in higher studies leading to professional degree in specific domain such as biological sciences, computational biology and also engaged in life-long learning.

3. The graduates of the program practice profession with high ethical and moral values and have developed good communication skills and leadership qualities while working as a member of the team or as a team leader.

PROGRAM SPECIFIC OUTCOMES (PSOs):

1. Students will be able to conduct the Upstream and Downstream experiments to produce, optimize, separate, purify and characterize biological compounds.
2. Students will be able to solve advanced biological problems with the technical skills of Bioinformatics, Biomolecular simulation, Proteomics and Genomics using computational techniques.
3. Students will be able to analyse Biopharmaceutical challenges of Biological systems by applying the concepts of Biological sciences.

PROGRAMME OUTCOMES (POs)

PO1	**Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
PO2	**Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering

	activities with an understanding of the limitations.
PO6	**The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	**Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	**Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	**Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	**Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	**Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one‟s own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	**Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

ENGINEERING MATHEMATICS - III

Contact Hours/Week	: 3 +0+0 (L+T+P)	Credits	: 3
Total Lecture Hours	: 39	CIE Marks	: 50
Course Code	: NMAT3D	SEE Marks	: 50

Course objectives:

1. Introduce the concept of analytic function, transformation for mapping.
2. Introduce the concept of complex variables to evaluate the
3. Introduce the concept of partial differential equations, use separation of variable method to solve wave, heat and Laplace
4. Solve the system of equation analytically and numerically.
5. Apply numerical methods to solve algebraic and transcendental equations.

Unit I

Complex Variables: Functions of complex variable, Definition of Limit, Continuity, Differentiability. Analytic functions, Cauchy‟s-Reimann equation in Cartesian and polar forms (Statement only), Properties of analytic functions (Statement only). Geometrical representation of $f(z)=w$, Conformal transformation: $w=e^z$, $w=z+\frac{1}{z}$, $w=z^2$.

8 Hrs

Unit II

Complex Integration: Bilinear transformation, Properties, Complex integration, Cauchy‟s theorem (with proof), Converse of Cauchy‟s theorem, Cauchy‟s integral formula (with proof), residues, residues theorem, calculation of residues.

8 Hrs

Unit III

Partial differential equations (P.D.E.): Formation of Partial Differential Equation, Solution of Langrange‟s Linear P.D.E. of the type Pp+Qq=R. Method of Separation of Variables.

Applications of P.D.E.: Classification of PDE, solution of one dimensional heat wave and two dimensional Laplace‟s equation by the method of separation of variables.

8 Hrs

Unit IV

System of linear algebraic equations: Rank of a matrix by echelon form, Consistency of a system of linear equations, Gauss elimination method, Gauss-Jordan method. Iterative methods - Jacobi, Gauss-Seidel iterative methods.

8 Hrs

Unit V

Roots of equation: Introduction, Bracketing methods – Bisection & Regula-falsi methods. Open methods – Secant method, Muller‟s method , .Eigen values and Eigen vectors-Rayleigh‟s Power Method.

7 Hrs

TEXT BOOKS:

1	B.S.Grewal	"Higher Engineering Mathematics", 43rd Edition, Khanna Publications, 2015. ISBN:978-81-7409-195-5.
2	B.S.Grewal	"Numerical Methods", 43rd Edition, Khanna Publications, 2014, 81-7409038-X

REFERENCE BOOKS:

3	Louis A. Pipes and Lawrence R. Harvill	"Applied Mathematics for Engineers and Physicists", 3rd Edition, McGraw Hill, 2014.

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Determine continuity/differentiability/analyticity of a function and find the derivative of a function. Identify the transformation.
CO2: Evaluate a contour integral using Cauchy's integral formula. Compute singularities and also the residues.
CO3: Formulate and solve partial differential equations. Apply separation of variable method to solve wave, heat and Laplace equations.
CO4: Solve the system of equation analytically and numerically.
CO5: Compute the roots of an algebraic and transcendental equation.

MICROBIOLOGY

Contact Hours/Week	: 3 +0+2 (L+T+P)	Credits	: 4
Total Lecture Hours	: 39 + 26	CIE Marks	: 50
Course Code	: NBT31 (IPCC)	SEE Marks	: 50

Course objectives:

1. Study basic structure of prokaryotes & eukaryotes, concepts of isolation and culturing of microorganisms.
2. Learn different types of microscopes and staining techniques.
3. Understand growth, reproduction and preservation of microbes.
4. Study enumeration of microorganisms, control of microbes and disease caused by them.
5. Understand general characteristics of virus, its classification & reproduction of viruses.

Unit I

History of Microbiology: Introduction, Scope of microbiology and branches, Origin of life: biogenesis and abiogenesis. Major contributions of Antony Van Leeuwenhoek, Louis Pasteur, Alexander Fleming, Robert Koch and Joseph Lister. Prokaryotes & Eukaryotes: Distinguishing features with diagrammatic illustrations. Types of microorganisms - Morphology and fine structure of Bacteria, viruses, Fungi, Algae, protozoa.

Culturing of Microorganisms: Culturing of bacteria, Nutritional requirements – physical and chemical, Different types of media – Solid, semisolid and broth; synthetic media, Special media- blood agar, Selective media, complex media, indicator media, differential media, transport media; anaerobic media- (thioglycolate, Robertson‟s media, micro aerophilic). Pure culture techniques – Serial dilution method, pour plate, spread plate, streak plate, lawn culture and stab culture.

8 Hrs

Unit II

Microscopy: Study of microscopes and its types – construction, working principle, working method and its applications; Bright Field Microscopy,

Dark-Field Microscopy, Phase Contrast Microscopy, Fluorescence Microscopy, Electron microscopy (SEM, TEM).

Staining of Microorganisms: Types of Stains- Acidic, Basic and Neutral Stain. Staining of microorganisms-simple staining, negative staining, Differential Staining-Gram staining and Acid-Fast Bacilli Staining, structural staining (endospore, capsule, flagella).

8 Hrs

Unit III

Reproduction and Growth of Microorganisms: Reproduction in Prokaryotes, modes of Cell Division- Binary Fission, Budding and Fragmentation, Continuous culture-Chemostat and Synchronous culture, Direct and Indirect measurement of growth, Factors affecting growth - Nitrogen content, Turbidometric, Nucleic Acid content. Growth principles of nutrition, influence of Environmental factors-pH, Temperature, Oxygen, Heavy metals and other compounds, Maintenance of cultures– periodic transfer, using mineral oil, lyophilization and low temperature.

8 Hrs

Unit IV

Control of Microorganisms: Definition used in microbial control methods, the pattern of microbial death.

Sterilization methods:
Physical methods: Heat - dry heat – flaming, red hot and hot air oven, moist heat- Pasteurization, autoclave, tyndallization, filtration, radiation – ionizing and non-ionizing.
Chemical methods: phenolics, alcohols, halogens, heavy metals, quaternary ammonium compounds, aldehydes, Sterilizing gases, chemotherapeutic agents.

Other Methods: Broad and narrow spectrum antibiotics and mode of action, antifungal and antiviral agents.

Microbial pathogens and pathogenesis: Common diseases caused by microbes, etiology, transmission and symptoms of the disease - Bacterial diseases: Typhoid, Tuberculosis.

8 Hrs

Unit V

Viruses: Morphology, Classification and Replication: General Characteristics of viruses: Basic morphology of viruses - Helical capsids, icosahedral capsids, virus with capsids of complex symmetry, Classification and nomenclature of bacteriophages: Bacteriophage life cycle: The lytic Life cycle -Virulent phages. The lysogenic Life Cycle-Temperate phages; Cultivation of viruses, Viroids, Virusoids and Prions. Viral diseases: Ebola, Hepatitis, Zika, COVID-19.

7 Hrs

3	Power and Daginawala	General Microbiology: Himalaya Publishing House, Vol I and Vol II, 5th Edition, 2009, 978-9350240892

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe characteristics of microorganisms and identify different types of media for culturing microbes.

CO2: Classify different types of microscopes and describe various types of staining techniques for observing microbes.

CO3: Describe the reproduction in microbes, factors affecting growth of microorganisms and their preservation methods.

CO4: Apply various types of microbial techniques for enumeration, control of microbes and identify microbes causing diseases.

CO5: Outline the morphology, life cycle and disease caused by viruses.

MICROBIOLGY LABORATORY

Contact Hours/Week	: 0 +0+2 (L+T+P)	Credits	: 0.0
Total Lecture Hours	: 26	CIE Marks	: 50
Course Code	: NBT31 (IPCC)	SEE Marks	: NA

Course Objectives:

1. Understand the basic approaches of isolation, culturing and identification of microorganisms.
2. Study basic staining techniques of microorganism and observation under microscope.
3. Study enumeration of microbes by different methods.
4. Understand the importance of biochemical tests, in classification of microbes.
5. Understand how to check the quality of water samples by performing an MPN test.

LIST OF EXPERIMENTS

1. Introduction: a. Aseptic techniques – Hot air oven, Autoclave, Laminar air flow, Incubator.
2. Media preparation – a. Broth and Agar b. Instrumentation, Handling and care of Microscope.
3. Isolation of microorganisms from soil sample by serial dilution method (Morphology – Bacteria and fungi - Mounting and identification.) A. Pour plate method, B. Streak plate method, C. Spread plate method.
4. a. Gram staining of bacteria.
   b. Measurement of size of cells by Micrometry.
5. a. Enumeration of total count. (Haemocytometer)
   b. Motility of Bacteria by hanging drop technique.
6. Growth curve of bacteria by turbidometry.
7. Measurement of fungal growth by linear determination.
8. Effect of temperature and PH on growth of bacteria.
9. Biochemical test: Catalase test, Starch Hydrolysis, Gelatin liquefaction.
10. Biochemical test: IMViC Test

11. Antibiotic susceptibility testing of bacteria.
12. Bacteriological examination of water by multiple tube fermentation tests.

3	Aneja R K.	Experiments in Microbiology, Plant Pathology and Biotechnology, New Age International Publisher, 5th Edition, 1957, 978-0967377360

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Apply microbiological techniques for isolation and identification of different types of microorganisms.
CO2: Demonstrate the procedures pertaining staining of microbes, identification and its movement.
CO3: Apply different types of enumeration techniques and determine the load of microorganisms present in samples.
CO4: Interpret and analyze the portability of drinking water, food samples from different sources.
CO5: Interpret and analyze the portability of drinking water, food samples from different sources.

BIOCHEMISTRY

Contact Hours/Week	: 3 +0+2 (L+T+P)	Credits	: 4
Total Hours	: 39 + 26	CIE Marks	: 50
Course Code	: NBT32 (IPCC)	SEE Marks	: 50

Course Objectives:

1. Learn about concentration of solutions and physical & biochemical properties of carbohydrates.
2. Study the basic structure, chemical and physical properties of biomolecules namely Lipids and proteins.
3. Know the structural aspects of nucleic acids and Describe the metabolism of the same.
4. Learn the metabolism of carbohydrates and lipids in the biological system.
5. Understand the metabolic reactions of proteins.

Unit I

Carbohydrates:

Basic Concepts: Introduction, Concentration of solutions, Simple problems on Concentration of solutions. Introduction to carbohydrates, sources of carbohydrates, three major size classes of carbohydrates (mono, di and polysaccharides), classification of monosaccharides based on number of C-atoms (classification based on functional groups: aldoses and Ketoses). Structural aspects of sugars: pyranose and furanose structures, reducing and non-reducing sugars, anomers. Structural and functional aspects of biologically important sugars: maltose, lactose, cellulose, sucrose, starch, glycogen, chitin.

8 Hrs

Unit II

Lipids, Proteins and Hormones:

Lipids: Introduction, types: storage, membrane and structural lipids (structure aspects and properties of each lipid).

Proteins:

Amino acids (Structure, classification, and properties of amino acids). Structural organization: Primary structure, Secondary structure, tertiary structure and quaternary structure of proteins. Important concepts related to amino acids: Zwitterions, pk_a and isoelectric point. Types of proteins: Globular, enzymatic, structural, transport proteins and others (Functional aspects only).

Hormones:

Biologically important hormones – vasopressin, oxytocin, erythropoietin.

8 Hrs

Unit III

Structure of Nucleic acids and its Metabolism:

Definition, purine & pyrimidines, nucleosides, nucleotides of DNA & RNA, base pairing, structure of DNA, Structure of RNA and types of RNA (m-RNA, r-RNA, t-RNA). Nucleic acid Metabolism: Biosynthesis and biodegradation of nucleotides.

8 Hrs

Unit IV

Metabolism & its regulation:

Carbohydrate Metabolism: Glycolysis- Metabolism & its regulation, aerobic and anaerobic pathway, TCA cycle, amphibolic role, anaplerotic reactions of TCA cycle. Gluconeogenesis and regulation. Biosynthesis & degradation of polysaccharides (glycogen).

Lipid Metabolism: Oxidation of fatty acids- α, β and ω types, Biosynthesis of even number saturated fatty acids, Cholesterol biosynthesis.

9 Hrs

Unit V

Amino acid metabolism: Biosynthesis of amino acids starting from acetyl CoA (with reference to Oxaloacetate family)-Asparagine, Threonine,

Methionine, and Lysine. Biodegradation of amino acids, deamination, transamination & urea cycle.

6 Hrs

TEXT BOOKS:

1	Nelson & Cox.	Lehninger‟s Principles of Biochemistry, W.H Freeman and Company, New York, 5th Edition, 2008, 978-1319108243
2	U. Satyanarayana and U. Chakrapani	Biochemistry, Books and allied (p) Ltd. Kolkata, 4th Edition, 2008, 978-9351529255

2	Donald Voet, Charlotte W. Pratt, Judith G. Voet	Principles of Biochemistry, Wiley Publication, 4th Edition, 2013, 978-1319108243

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Classify biological macro-molecules like carbohydrates according to their structural and functional properties.

CO2: Categorize biological macromolecules like Proteins and lipids according to their structural and functional properties.

CO3: Classify and analyze Nucleic acids according to their properties and describe the metabolic reactions of nucleic acids.

CO4: Describe the anabolic and catabolic reactions of carbohydrates and lipids occurring in the cells.

CO5: Analyze the anabolic and catabolic reactions of amino acids occurring in the cells.

BIOCHEMISTRY LABORATORY

Contact Hours/Week	: 0+0+2 (L+T+P)	Credits	: 0.0
Total Hours	: 26	CIE Marks	: 50
Course Code	: NBT32 (IPCC)	SEE Marks	: NA

Course Objectives:

1. Enhance the practical approaches in the estimation of biomolecules like carbohydrates and proteins.
2. Understand the concepts of biochemical processes in investigating the concentration of carbohydrate samples.
3. Study the biochemical methods to quantify the presence of proteins in the given samples.
4. Learn to determine the concentration of Urea and Iron in the given samples.
5. Learn to determine the concentration of hydrogen peroxide and Phenolic compound in the given samples.

LIST OF EXPERIMENTS:

1. Titration curve of amino acids.
2. Qualitative tests for carbohydrates.
3. Qualitative tests for proteins.
4. Estimation of blood sugar by O-Toluidine method.
5. Estimation of blood sugar by Folin-Wu method.
6. Determination of total carbohydrate by Anthrone method.
7. Estimation of inorganic phosphate by Fiske-Subbarao method.
8. Estimation of protein by Bradford‟s method and Lowry‟s method.
9. Estimation of urea by diacetylmonoxime (DAMO) method.
10. Estimation of iron from hemoglobin.
11. Estimation of total phenolic compounds.
12. Estimation of H_2O_2 using silver nanoparticles.

TEXT BOOKS:

1	Nelson & Cox.	Lehninger‟s Principles of Biochemistry, W.H Freeman and Company, New York, 5th Edition, 2008

1	Stryer	Biochemistry, W.H Freeman and company, 5th Edition, 2010.
2	Donald Voet, Charlotte W. Pratt, Judith G. Voet	Principles of Biochemistry, Wiley Publication,4th Edition,2013

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Identify the presence of amino acids and carbohydrates in samples by qualitative estimation.

CO2: Asses the carbohydrate content in samples by performing various biochemical procedures.

CO3: Interpret and analyze the biochemical methods for quantifying protein and inorganic phosphate in the samples.

CO4: Apply appropriate biochemical methods to identify the presence of urea in the samples.

CO5: Demonstrate the method of estimating iron, phenol, and hydrogen peroxide qualitatively.

BIOPROCESS ENGINEERING

Contact Hours/Week	: 3+0+0 (L+T+P)	Credits	: 3
Total Lecture Hours	: 39	CIE Marks	: 50
Course Code	: NBT33 (PCC)	SEE Marks	: 50

Course Objectives:

1. Learn about the basic concepts of fluid and analyze flow systems based on continuity, Bernoulli‟s equations for mass and energy balances.
2. Study the pressure drop and friction factor of a Newtonian fluid flowing through a circular pipe.
3. Understand the concepts of convection in heat transfer equipment such as double pipe heat exchanger and shell and tube heat exchanger.
4. Study the concepts of diffusion to identify and formulate criteria for selecting alternative separation technologies.
5. Learn the concepts of various mass transfer operations like extraction and drying.

Unit I

Fluid flow: Classification of fluids, Fluids in motion, Streamlines, Shear stress, Reynolds number, Hydrodynamic boundary layers, Boundary layer separation, Viscosity, Momentum transfer, Newtonian and Non-Newtonian fluids, Two-parameter models, Time-dependent viscosity, Viscosity measurements- Cone- and –Plate viscometer, Coaxial cylinder viscometer, Impeller viscometer, Use of viscometers in fermentation broths, Rheological properties of fermentation broths, Factors affecting broth viscosity. Turbulence-Nature of turbulent flow. Bernoulli‟s equation and applications.

8 Hrs

Unit II

Fluid Flow in conduits and Flow measuring devices: Flow of in-compressible Fluids in Conduits Estimation of pressure drop in Newtonian fluids under laminar flow (Hagen Poiseulle‟s equation) Friction factor and its significance, Moody‟s diagram and estimation of

friction factor. Measurement of fluid flow rates by orifice meter, venturimeter, rotameter, wet gas flow meter and magnetic flow meters-construction and working. Numerical problems on venturimeter and orificemeter. Principles of flow visualisation by particle image velocimetry and laser doppler anemometer. Transfer of fluids by pumps:- construction and working of centrifugal, reciprocating and peristaltic pumps**.**

8 Hrs

Unit III

Energy Balance and Heat Transfer:

Energy Balance: General energy balance equation. Procedures of enthalpy calculation. Enthalpy change in mixing. Heat of reaction for processes with biomass production -thermodynamics of cell growth, heat of reaction with and without oxygen as electron acceptor, mixed aerobic-anaerobic metabolism, heat of reaction in different cell cultures.

Heat transfer: Conduction: Basic law of conduction, Fourier‟s law, Thermal conductivity, Steady state unidirectional heat flow through single and multiple layer slabs with constant thermal conductivities. **Convection, and heat exchange equipment:** Heat transfer by natural and forced convection. Individual and overall heat transfer co-efficient (HTC), LMTD. Double pipe heat exchanger.

8 Hrs

Unit IV

Mass transfer: Molecular diffusion: Diffusion theory, Role of diffusion in Bioprocessing, Convective mass transfer: Liquid-solid mass transfer, Liquid-liquid mass transfer, Gas- Liquid mass transfer, Oxygen uptake in cell cultures: Factors affecting cellular oxygen demand, Oxygen transfer from gas bubble to cell, Factors affecting oxygen transfer in fermenters: bubbles, sparging, stirring, and medium properties, Antifoam agents, Temperature, Gas pressure and oxygen partial pressure, Presence of cells and macromolecules.

8 Hrs

Unit V

Mass transfer operations: Extraction, Distillation and Drying: Liquid extraction, liquid-liquid equilibria, choice of solvent, single stage extraction, multi stage cross current extraction. Distillation-Principles, Relative volatility, Simple distillation, Drying: drying rate curve, drying equipment – direct driers, indirect driers, freeze drying, drum driers, spray driers.

7 Hrs

TEXT BOOK:

1	Pauline M. Doron	Bioprocess Engineering Principles, Elsevier, 2nd Edition, 2013,978-0-12-220851-5

2	Mc Cabe W L and Smith	Unit Operations of Chemical Engineering, McGraw Hill. New York, Marcel Dekker Inc, 7th Edition, 1993, 0071247106

Course Outcomes: After the completion of this course students will be able to:

CO1: Illustrate the basic concepts of fluid and analyze flow systems based on continuity, Bernoulli‟s equations for mass and energy balances.

CO2: Estimate the pressure drop and friction factor of a Newtonian fluid flowing through a circular pipe.

CO3: Explain constructions and operation of heat transfer equipment such as double pipe heat exchanger and shell and tube heat

CO4: Apply the concepts of diffusion to identify and formulate criteria for selecting alternative separation techniques.

CO5: Describe various mass transfer operations like extraction and drying.

BIOPROCESS ENGINEERING LABORATORY

Contact Hours/Week	: 0+0+2 (L+T+P)	Credits	: 1.0
Total Lecture Hours	: 26	CIE Marks	: 50
Course Code	: NBTL31(PCC)	SEE Marks	: 50

Course Objectives:

1. Calibrate instruments used in unit operation.
2. Understand the principles of momentum, mass and heat transfer operation.
3. Know how to calculate coefficients, dimension numbers and mass transfer equipment/instrument.
4. Study the individual & overall H.T.C. of Heat transfer equipment.
5. Learn to determine the efficiency of distillation and extraction.

LIST OF EXPERIMENTS:

1. To calibrate the given Orifice meter and to find out its coefficient discharge.
2. Determine the diffusivity co-efficient of a given liquid to air.
3. Determine the percentage recovery of solute from a solution using a solvent in each stage of multistage cross current extraction.
4. To calibrate the given Venturi meter and to find out its coefficient discharge.
5. Estimate the vaporization efficiency and thermal efficiency for steam distillation.
6. Verify application of Rayleigh‟s equation for simple distillation.
7. Estimate the critical moisture content and equilibrium moisture content by drawing the rate of drying curve for a given sample.
8. To study the characteristics of a centrifugal pump.
9. Estimation of individual and overall heat transfer coefficient in a double pipe heat exchanger.
10. Estimate individual and overall heat transfer coefficient in a shell and tube exchanger.
11. To study the variation of friction factor with Reynolds number and to plot the universal resistance graph.
12. Determine the constants k and n of the Freundlich equation at room temperature, for the adsorption of acetic acid on activated carbon.

Course Outcomes: Upon completion of this course the student will be able to

CO1: Demonstrate understanding of working principles of momentum transfer, mass transfer and heat transfer devices.

CO2: Analyse the effect of experimental parameters of transport process devices and verify the same.

CO3: Application of appropriate relation in mass transfer equipment.

CO4: Evaluate the heat and mass transfer equipment.

CO5: Analyse the performance of centrifugal pump.

UNIVERSAL HUMAN VALUES, SOCIAL CONNECT AND RESPONSIBILITY

Contact Hours/Week	: 1+0+0 (L+T+P)	Credits	: 1.0
Total Lecture Hours	: 13	CIE Marks	: 50
Course Code	: NHS04	SEE Marks	: 50

Course Objectives:

1. Explore about themselves (human beings), family, society and nature/existence.
2. Appreciate the harmony in the human being, family, society and nature/existence.
3. Strengthen holistic perception of co-existence and mutual fulfilment among the four orders of nature.

Unit I

Understanding Harmony in the Human Being - Harmony in Self: Understanding human being as a co-existence of the sentient „I" and the material „Body"; Understanding the needs of Self („I") and „Body" - happiness and physical facility; Understanding the Body as an instrument of „I" (I being the doer, seer and enjoyer); Understanding the characteristics and activities of „I" and harmony in „I"; Understanding the harmony of 'I' with the Body: Sanyam and Health, correct appraisal of Physical needs, meaning of Prosperity in detail, Include discussions to differentiate between i) Prosperity and accumulation. ii) Ensuring health vs dealing with disease

5 Hrs

Unit II

Understanding Harmony in the Family and Society - Harmony in Human-Human Relationship: Understanding values in human - human relationship, meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness, Trust and Respect as the foundational values of relationship; Understanding the meaning of Trust, Difference between intention and competence; Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship; Understanding

the harmony in the society (society being an extension of family)- Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals.

4 Hrs

Unit III

Understanding Harmony in the Nature and Existence - Whole-existence as Co-existence: Understanding the harmony in the Nature; Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self-regulation in nature; Understanding Existence as Co-existence of mutually interacting units in all-pervasive space; Holistic perception of harmony at all levels of existence. Include discussions on-human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

4 Hrs

TEXT BOOKS:

1	Gaur, R.R. and Sangal R	'Foundation Course in Human Values and Professional Ethics; Presenting a universal approach to value education through self-exploration', Excel Books, Bangalore, 2016, 978-8-174-46781-2

REFERENCE BOOKS:

1	Tripathi A.N.	„Human Values', New Age International Publisher, 2003, 81-224-1426-5

Course Outcomes: Upon completion of this course the student will be able to

CO1: Become more aware of themselves, and their surroundings (family, society, nature)

CO2: Become more responsible in life, and value human relationships and human society.

CO3: Have better critical ability in handling problems and in finding sustainable solutions

CONSTITUTION OF INDIA AND PROFESSIONAL ETHICS

Contact Hours/Week	: 0+2+0 (L+T+P)	Credits	: 1.0
Total Lecture Hours	: 0	CIE Marks	: 50
Tutorial Hours	: 26	SEE Marks	: 50
Course Code	: NHS03		

Course Objectives:

1. Introduce the students to the basic structure, fundamental rights and duties enshrined in the constitution of India.
2. Introduce to the system of governance at the centre and the states.
3. Enlighten the students about the method of amendment to the constitution and special provisions of constitution.
4. Enable the students to imbibe ethical practices and moral values.
5. Learn from the life story of leaders such as Sir M Visvesvaraya.

Part I: Constitution of India

Unit I

Introduction to Constitution of India : Salient Features of Indian Constitution, Preamble to the Indian Constitution, Different kinds of fundamental rights, Directive Principles of State Policy, Categorical study of Directive Principles, Relationship between DPSP and Fundamental Rights, Fundamental Duties. Meaning and kinds of human rights and safeguards.

6 Hrs

Unit II

Union and State Governments:

Union and State Legislature: Composition and powers of Loksabha, Rajyasabha, Legislative Assembly and Legislative Council. Union and State Executive: The appointment and powers of President, Vice-president, Prime-Minister, Union Council of Ministers, Governor of State, Chief Minister of State and State Council of Ministers. Union and State

Judiciary: The Composition and powers of Supreme Court and High Court.

7 Hrs

Unit III

Other Provisions of Constitution: Method of amendment of constitution of India, 42nd and 44th amendment act. Special provisions relating to SC / ST, Women and Children and other backward classes. Electoral process related to the Election Commission of India: Composition, functioning and removal of the Election Commissioner(s).

Human Rights: Meaning, Kinds and Safeguard of Human Rights, State Human Rights Commission and National Human Rights Commission.

5 Hrs

Part II -Professional Ethics

Unit IV

Professional Ethics and Human Values: Introduction, What is Ethics? Scope of Professional Ethics, Values and Characteristics, Types of values: Negative and positive values, Ethical values for Professional success. ***Case Studies*:** Ethical practices of the reputed Indian Companies: TATA Group, Wipro Technologies.

4 Hrs

Unit V

Professional Code of Conduct: Introduction, Professional Code, Legal System, Ethical and Unethical practices, Making the Professional Code successful. Ethical values of Sir M. Visvesvaraya, Mahatma Gandhi and Swami Vivekananda.

4 Hrs

TEXT BOOKS:

1	J N Pandey	„Constitutional Law of India", 49th Edition, 2012, Central Law Agency Publishing, 2016 ISBN: 978-9384852412
2	S G Hunderker	„Business Ethics and Human Values", Excel Books, New Delhi, 2009, ISBN-978-8174467386

REFERENCE BOOKS:

1	D.D. Basu	„Shorter Constitution of India", 2nd Edition, Lexis Nexis, 2015, ISBNN: 978-9357434467.
2	D.D. Basu	„Commentary on the Indian Constitution" (Vol. 10), i.e, 2016, Butter worth"s, Wadhwa Nagar, Nagpur, 2016, ISBN: 978-9350356661.
3	OC Fcrrell, John Paul Fraedrich, Linda Ferrell	„Business Ethics: Ethical Decision Making and Cases", Biztantra, New Delhi, 2014, ISBN: 978: 1285423715.
4	Swami Vivekananda-	"My India: The India Eternal" – Ramakrishna Mission Institute of Culture, Kolkata, 1993.
5	M.V. Pylee	„Constitution of India", 5th Edition, Vikas Publishing House, New Delhi.

Course Outcomes: Upon completion of this course the student will be able to

CO1: Describe the salient features of the Indian Constitution with special emphasis on fundamental rights and duties.

CO2: Discuss an overview of the Union and State legislature, executive and judiciary.

CO3: Explain the importance of electoral process and help students appreciate the ethical practices in elections

CO4: Describe the perspective of the Ethical values and their relevance in the present context of globalization.

CO5: Apply the ethical values proposed and practiced by the great leaders / eminent personalities with particular reference to Sir M. Visvesvaraya.

BIOPROCESS CALCULATIONS

Contact Hours/Week	: 2+0+0 (L+T+P)	Credits	: 2.0
Total Lecture Hours	: 26	CIE Marks	: 50
Course Code	: AECBT31	SEE Marks	: 50

Course Objectives:

1. Introduce the principles and calculation techniques in bioprocess engineering.
2. Acquaint students with material and energy balance calculations.
3. Learn basic calculation techniques in bioprocesses involving cell growth and biochemical reactions.
4. Illustrate the significance of bypass, recycle, and purging operations in bioprocess calculations.
5. Introduce the concept of unsteady-state material and energy balance in bioprocess calculations.

Unit I

Units, Dimensions and Basic Chemical Calculations: Steps in a typical Bioprocess development and the need for engineering calculations. Physical variables, Units and dimensions, Unit conversion, conversion of equations, dimensional homogeneity in equations, equations without dimensional homogeneity.

5 Hrs

Unit II

Chemical composition: mole, mass; mole fraction, percent, ratio, mass fraction, percent, ratio, molarity, ppm; standard conditions and ideal gases, mixtures, average molecular weight.

5 Hrs

Unit III

Presentation and Analysis of Bioprocess Data: Errors in data and calculations: Significant figures, absolute and relative uncertainty,

propagation of errors, types of errors, statistical analysis. Presentation of experimental data. Bioprocess data analysis - Trends, testing mathematical models, Least-squares analysis, linear/nonlinear models.

5 Hrs

Unit IV

Material balance: Introduction to material (mass) balance, types of material balance (total & component), basis and tie components. Guidelines for material balance calculations. Material balance for mixing, extraction, distillation, and crystallization. Material balances with recycle, bypass, and purge streams without reaction.

5 Hrs

Unit V

Material balance with biochemical reaction: Stoichiometry concepts: Limiting and excess reactants, fractional and % conversion, Yield, extent of reaction and selectivity. Stoichiometry of cell growth and product formation - Growth stoichiometry and elemental balances, electron balances, biomass yield, product stoichiometry, theoretical oxygen demand, maximum possible yield. Material balances with recycle, bypass, and purge streams with reaction.

6 Hrs

Course Outcomes: Upon completion of this course the student will be able to

CO1: Demonstrate the knowledge of calculations in chemistry, physics, biology and mathematics and apply them to solve basic bioprocess engineering unit operations and processes.

CO2: Analyze problems related to bioprocess calculations and provide conclusions using the first principles of material and energy balance.

CO3: Develop solutions to basic and complex bioprocess calculations problems.

CO4: Communicate the solutions to bioprocess calculations problems effectively in both oral and written form.

CO5: Demonstrate the ability of identify, analyze and solve bioprocess calculation problems individually and in a team.

PROGRAMMING FOR ENGINEERS

Contact Hours/Week	: 2+0+0 (L+T+P)	Credits	: 2.0
Total Lecture Hours	: 26	CIE Marks	: 50
Course Code	: AECBT32	SEE Marks	: 50

Course Objectives:

1. Understand the basic Linux commands.
2. Ability to understand the fundamentals of computer networking and security.
3. Understand the basics of Python and its commands.
4. Learn how to use R Programming for handling the biological databases.
5. Understand the basics of MATLAB.

Unit I

Linux Environment: Introduction to Linux, basic commands (Navigation and Directory Control Commands. File Maintenance Commands, Display Commands, Print Commands etc), working with the files, file attributes, pipes, wildcards, working with processes working with basic editors (vi, emacs). Basic regular expressions, string search applications using regular expressions.

5 Hrs

Unit II

Computer Networking; Network and Data security: Fundamentals of networking: OSI Reference Model, TCP/IP, topologies and protocols, designing networks. Networking gadgets (Router, Switch, etc); Data Communication (ISDN, VPN, DSL, cable modem, cellular modem, etc); Communication Links (Wire pairs, Coaxial cables, Fiber optics, Microwave, Satellite, etc). Network security fundamentals: types of attacks, firewall, packet filtering. Classification of data security threats, protection mechanism (authentication, access control, access rules).

5 Hrs

Unit III

Introduction to Python: Simple values – Booleans, Integers, Floats and Strings, Expressions – Numerical operators, Logical Operations, String Operations, Names, Functions and Modules – Assigning Names, Defining the functions – Function parameters, Comments and Documentation, Assertions, Default parameter values, Using Modules – Importing, Python Files.

6 Hrs

Unit IV

Overview of the R language: Defining the R project, Obtaining R, Generating R codes, Scripts, Text editors for R, Graphical User Interfaces (GUIs) for R, Packages. R Objects and data structures: Variable classes, Vectors and matrices, Data frames and lists, Data sets included in R packages, Summarizing and exploring data, Reading data from external files, Storing data to external files, Creating and storing R workspaces.

5 Hrs

Unit V

Introduction to MAT Lab: molecular forces; Bioinformatics ToolBox, Statistics ToolBox, Distributed computing server, Signal Processing ToolBox. The MAT lab working environment. Variables, constants and reserved words. Arrays and matrices. Scripts. The debugger. Generating 2D and 3D Graphics. Simple statistical analysis. String manipulation. Boolean logic and if statements. Loops (while, for).

5 Hrs

TEXT BOOKS:

1.	Rajkumar Buyya	High Performance Cluster Computing: Programming and Applications, Prentice Hall, 1st Edition, 1999, 0130137855
2.	James D. Tisdall	Beginning Perl for Bioinformatics, O"Reilly, 1st Edition, 2001, 9780596000806

REFERENCE BOOKS:

1.	Michael J Quinn	Parallel programming in C with MPI and OpenMP, Tata McGraw-Hill, 1st Edition, 2003, 0072822562
2.	Ahmar Abbas	Grid Computing: A Practical Guide to Technology and Applications, Charles River Media, 1st Edition, 2003, 1584502762

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe the basic linux commands and various operating systems.

CO2: Classify the various multiple operating systems, systems software, network services and security.

CO3: Classify the PERL statements and syntaxes to analyze the data.

CO4: Apply the concept of R programming to solve statistical problems.

CO5: Analyze and demonstrate the use of MATLAB for data analysis.

GENETICS

Contact Hours/Week	: 2+0+0 (L+T+P)	Credits	: 2.0
Total Lecture Hours	: 26	CIE Marks	: 50
Course Code	: AECBT33	SEE Marks	: 50

Course Objectives:

1. Study the genetic analysis in model organisms.
2. Study the structure and function of chromosomes and the work of Mendel in understanding genetics.
3. Study the Principles underlying genetic interaction and to analyze genotypic and phenotypic variations.
4. Know about the Sex-Linked Inheritance in Humans.
5. Learn about Genetic Code and Gene Mutation: Variants, Effects.

Unit I

Model organisms in genetic analysis: Reproduction as the basis of heredity: Cell Division, evolutionary significance of meiosis, Neurospora, Drosophila, maize, Arabidopsis and human as model genetic organism.

5 Hrs

Unit II

Chromosomes: Journey from nucleic acid to chromosomes, ultra structure of chromosomes and Lamp-Brush chromosomes, Human chromosome and its analysis, aims and objectives Human Genome Project.

Genetics and Mendel concepts: Mendel‟s Laws, Monohybrid, Dihybrid, Trihybrid and Multi-hybrid cross, Test cross, Backcross. Other Allelic Relationships; Co-dominant allele, Incomplete dominance.

5 Hrs

Unit III

Genetic Interactions: Two factor interaction; 1) Epistatic Interaction: Dominant Epistasis, Recessive Epistasis, Duplicate Genes with Cumulative Effect, Duplicative Dominant Genes, Duplicate Recessive Genes, Dominant and Recessive Interactions. 2) Non-Epistatic Interactions. Three or more Factor Interactions. The Genetics of Sex: The Importance of Sex.

5 Hrs

Unit IV

Sex determining mechanisms: Sex Chromosome mechanism; Heterogametic males (XX-XY, XX-XO), Heterogametic Females (ZW-ZZ, ZO-ZZ), Genic Balance (Drosophila Melanogaster), Haplodiploidy, Single Gene effects.

Sex-Linked Inheritance: Sex-linked Inheritance; The Organ of Heredity, Chromosomes, Morphology, Classification (only X and Y chromosomes). Chromosomal disorders. Sex Linked Inheritance: Molecular Diseases, Hemoglobinpathies. Disorders of Coagulation, Color Blindness, Haemophilia.

5 Hrs

Unit V

Linkage and Recombination: Phases of linkage, Linkage Groups; complete and Incomplete, four strand Crossing over, detection of Linkage. crossing over: crossing over (Essential Features, Kinds, Mechanism).

Gene mutation and population genetics: Genetic Codes and Gene Mutation: Definition, Classification, Types of Mutagens – Chemical and Physical Mutagens mechanisms of Mutation. Numerical Problems Eugenics. Pedigree Analysis. Case study: Sickle cell anaemia. Polymorphism. Wright-Fisher model.

6 Hrs

TEXT BOOKS:

1.	Susan Elrod, William Stansfield.	Genetics, Schaum"s Out lines, 3rd Edition, 1991, 978-0071625036
2.	Gardner, Simmons, Snustad.	Principles of Genetics, Wiley India, 6th Edition, 2006, 978-8126510436
3.	Darnell J Lordes and H Balitimore.	Molecular cell Biology, Scientific American books USA, 4th Edition, 2015, 978-0815344643

2.	P.C.Winter, G.I.Hickey and H.L.Fletcher.	Instant notes in Genetics, Taylor and Francis Publishers, 10th Edition,1999, 978-0415693141

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe the genetic analysis and evolution of organisms

CO2: Identify the structure and function of chromosomes and Outline the human genome project and mendelian principles of genetics.

CO3: Analyze genetic interactions and to identify at phenotypic and genotypic variations.

CO4: Describe and Analyze sex-linked inheritance, linkage and recombination in cells.

CO5: Classify various gene mutations and models of population genetics.

CELL BIOLOGY

Contact Hours/Week	: 2+0+0 (L+T+P)	Credits	: 2.0
Total Lecture Hours	: 26	CIE Marks	: 50
Course Code	: AECBT34	SEE Marks	: 50

Course Objectives:

1. Study the structural and functional aspect of Eukaryotic and prokaryotic cells.
2. Learn about the nucleosome assembly, chromosome morphology and various types of chromosomes.
3. Describe the organization of genes and chromosomes with a special focus on its aberrations.
4. Know the fundamentals of cell cycle, cell to cell communication and cell signalling.
5. Understand the applications of cells in developmental biology.

Unit I

Cell organelles:

Structural organization and function of intracellular organelles – cell wall, Mitochondria, Ribosomes, Microbodies, peroxisome, Golgi bodies, lysosomes, Plastids, chloroplast, Endoplasmic reticulum, vacuoles, Structure and function of cytoskeleton and its role in motility.

6 Hrs

Unit II

Chromosomes: Chromosome morphology, fine structure, Dupraw model, Nucleosome model, Chemical organization of nucleosome – nucleoproteins, types of chromosomes based on centromere, karyotype and idiogram, Special types of chromosomes – salivary gland, lampbrush and B chromosome.

5 Hrs

Unit III

Organization of genes and chromosomes:

Operon, interrupted genes, structure of chromatin and chromosomes, unique and repetitive DNA, heterochromatin, euchromatin, transposons, Numerical aberrations of chromosomes -Aneuploidy and euploidy, Structural aberrations of chromosomes: deletion, duplication, inversion and translocation and their meiotic behaviour.

5 Hrs

Unit IV

Cell division and cell cycle:

Cell cycle regulation, steps and control of cell cycle, Stem cells – sources and applications, cell -cell interactions, interactions of cells with their environment, Cell signalling.

5 Hrs

Unit V

Developmental biology:

Introduction to developmental biology, Basic concepts of development, potency, commitment, specification, induction, competence, determination and differentiation, genomic equivalence and cytoplasmic determinants: imprinting mutants and transgenic analysis of development.

5 Hrs

TEXT BOOKS:

1.	Albert et al.	The Biology of the Cell, W. W. Norton & Company, 6th Edition, 2002,978-0815345244
2.	Cooper & Hausman	The Cell – A Molecular Approach; 3rd Edition, Sinauer Associates, Inc., U.S.2004,978-0878932146

3.	Gilbert, S.F., 1997	Developmental Biology, Sinauer, Associates Inc. 11th edition Massachusettes, 978-1605356044

REFERENCE BOOKS:

1.	George, M. Malacinski	Developmental genetics of higher organisms, Macmillan Publishing Co., 1st Edition, 1988, 978-0029487303

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe various cell organelles present in eukaryotic cells.

CO2: Identify the chemical aspects of nucleosome assembly and differentiate various types of chromosomes.

CO3: Analyze the organization of genes and chromosomes with a special focus on its aberrations.

CO4: Describe and analyze cell cycle, cell to cell communications and cell signaling.

CO5: Analyze and apply the concepts of cell theory on developmental biology.

2022-23

BIOSTATISTICS

Contact Hours/Week	: 3+0+0 (L+T+P)	Credits	: 3
Total Lecture Hours	: 39	CIE Marks	: 50
Course Code	: NMAT4	SEE Marks	: 50

Course Objectives:

1. Learn the concepts of random variable and probability distributions.
2. Learn the concepts of joint probability, stochastic process and genetic applications of probability.
3. Acquire the knowledge of sampling distributions and test of significance of samples.
4. Discuss the concepts of analysis of variance and optimization models relating to Biology and Medicine.
5. Learn to model problems relating to biology using mathematical concepts.

Unit I

Analysis of variance: Introduction, Assumption in the Analysis of variance, Technique of Analysis of variance, the basic Principal of ANOVA, Analysis of variance is One-way classification, Analysis of variance is Two-way classification.

8 Hrs

Unit II

Bi-variate distribution: Correlation and regression analysis (simple and linear) curve fitting (linear, non-linear and exponential). Standard deviation and standard error concepts and problems.

Probability: Axioms, models, conditional probability, Bayes rule, Genetic Applications of Probability, Hardy - Weinberg law, Wahlund's Principle, Forensic probability determination, Likelihood of paternity, Estimation of probabilities for multilocus/ multi-allele finger print systems. P- value and Q-value.

8 Hrs

Unit III

Statistical inference: Estimation theory and testing of hypothesis, point estimation, interval estimation, sample size determination, simultaneous confidence intervals, parametric and non-parametric distributions (T-test, F-test, Chi Squared distribution, goodness of fit test) analysis of variance (one-way and two-way classifications). Case studies of statistical designs of biological experiments (RCBD, RBD).

9 Hrs

Unit IV

Probability distributions: Discrete probability distributions - Binomial, Poisson, geometric – derivations. Central limit theorem. Continuous probability distribution – normal, exponential, gamma distributions, beta and Weibull distributions, T & F distributions.

Design of experiments: Sample surveys, comparisons groups and randomization, random assignments, single- and double-blind experiments, blocking and extraneous variables, limitations of experiments.

7 Hrs

Unit V

Case studies: Cigarette smoking, Lung cancer, endangered plants species, epidemics.

Biomodeling:

Microbial Growth in a Chemo stat, Growth Equations of Microbial populations, Models of Commensalisms, Mutualism, Predation and Mutation. Volterra‟s Model for n Interacting Species. Basic Models for Inheritance, Selection and Mutation Models, Genetic Inbreeding Models.

7 Hrs

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Technique of Analysis of variance, the basic, for one and two variables.

CO2: Describe different laws of probability.

CO3: Apply concepts of analysis of variance in inferring the statistical data.

CO4: Apply different methods in design of experiments

CO5: Outline the case studies of lung cancer, endangered plants species

UPSTREAM PROCESS TECHNOLOGY

Contact Hours/Week	: 3+0+2 (L+T+P)	Credits	: 4.0
Total Lecture Hours	: 39+26	CIE Marks	: 50
Course Code	: NBT41(IPCC)	SEE Marks	: 50

Course Objectives:

1. Learn the fermentation process and components of fermenter.
2. Explain the ingredients of fermentation media, requirements and types of sterilization techniques.
3. Understand the concepts of inoculum development and perform Microbial growth kinetics.
4. Study different types of strain improvement techniques and understand the metabolic pathways for the biosynthesis of industrial products.
5. Understand the knowledge to produce fermented products.

Unit I

Fermentation Concepts:
Introduction to fermentation History and development of fermentation, general requirements of the fermentation, range of fermentation processes, parts of a fermentation process- upstream and downstream processing, aerobic and anaerobic fermentation, solid state and submerged fermentation.

7 Hrs

Unit II

Media for industrial fermentations: Media ingredients, medium formulation, oxygen requirements, antifoams, medium optimization, Ingredients for mammalian cell culture and plant cell culture. Inoculum production for bacterial and fungal processes. Media sterilization, Batch Process (thermal death kinetics), continuous sterilization process; sterilization of fermenter and other ancillaries, filter sterilization of air and media.

8 Hrs

Unit III

Inoculum development for industrial fermentation & Microbial Kinetics: Introduction, Criteria for transfer of inoculum, development of inocula for bacterial processes, yeast processes and mycelial processes. Inoculum development for plant fermenter, aseptic method of inoculation, achievement and maintenance of aseptic conditions. Fermentation Material and Energy balance, Microbial growth kinetics: Microbial growth cycle, measurement of growth, Batch culture, continuous culture, fed-batch culture, applications and examples

8 Hrs

Unit IV

Strain improvement: The isolation and improvement of industrially important microorganisms: isolation of industrially important microorganisms, isolation methods utilizing selection of the desired characteristic. Improvement of industrial microorganisms. Metabolic Pathways for the Biosynthesis of Industrial Products: The Nature of Metabolic Pathways, Industrial Microbiological Products as Primary and Secondary Metabolites, Trophophase-idiophase Relationships in the Production of Secondary Products, Role of Secondary Metabolites in the Physiology of Organisms, Pathways for the Synthesis of Primary and Secondary Metabolites of Industrial Importance. Carbon Pathways for the Formation of Some Industrial Products Derived from Primary Metabolism.

8 Hrs

Unit V

Industrial production: Scale up of the fermentation process, Fermentation economics. Bioprocess validation Safety considerations. Fermented products - lactic acid, antibiotic production, ethanol fermentation. Industrial processes and products: Commercial microbial enzyme production: Small volume - production strategy for DNA polymerase from Thermus aquaticus and genetically modified Escherichia coli.). Bulk industrial enzyme production (Starch processing

enzymes and related carbohydrases). Health-care products: Recombinant therapeutic peptides and proteins (Production of recombinant human growth hormone and Production of recombinant human interferon). Microbial biomass production (Manufacture of baker‟s yeast), Single cell protein production and Mushrooms.

8 Hrs

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Apply the knowledge of fermentation components, parameters and types for producing aerobic and anaerobic products

CO2: Outline the components and requirements of media. Classify the sterilization techniques.

CO3: Apply appropriate strain improvement methods and classify metabolic pathways for the production of industrial products.

CO4: Apply appropriate strain improvement techniques and understand the metabolic pathways for the biosynthesis of industrial products.

CO5: Apply the fermentation process for the production of industrial products.

UPSTREAM PROCESS TECHNOLOGY LABORATORY

Contact Hours/Week	: 0+0+2 (L+T+P)	Credits	: 0.0
Total Lecture Hours	: 26	CIE Marks	: 50
Course Code	: NBT41(IPCC)	SEE Marks	: NA

Course Objectives:

1. Enhance the practical approaches in the media preparation and sterilization.
2. Understand the concepts of fermentation for the production of primary and secondary metabolites.
3. Learn the fermentation methods for the production of ethanol and wines.
4. Prepare the seed culture for fermentation.
5. Study the effect of media for producing mushroom.

List of Experiments:

1. Media Preparation and sterilization
2. Production of cellulase enzyme and estimation
3. Production of Secondary metabolite – Anthocyanin
4. Production and estimation of ethanol from fermented broth
5. Production and Estimation of citric acid from fermented broth
6. Production of amylase and estimation (from microbial species)
7. Production of 1,4 beta-endoxylenase from agricultural waste
8. Production of Encapsulated artificial seeds
9. Production of wine from fruit waste
10. Preparation of seed culture for fermentation
11. Replica plating for screening of auxotrophs/antibiotic resistant strain
12. Preparation of media for raising of pure culture of mushroom.

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Understand the fermentation media requirements and sterilization.
CO2: Production of primary and secondary metabolites.
CO3: Production and estimation of f ethanol and wine using fermentation methods.
CO4: Produce seed culture.
CO5: Demonstrate the method of producing mushroom.

MOLECULAR BIOLOGY AND GENETIC ENGINEERING

Contact Hours/Week	:	3+0+2 (L+T+P)	Credits	:	4
Total Lecture Hours	:	39 + 26	CIE Marks	:	50
Course Code	:	NBT42 (IPCC)	SEE Marks	:	50

Course objectives:

1. Study the information flow in the biological system and understand the concept of gene replication.
2. Acquire the knowledge of transcription in prokaryotes and eukaryotes.
3. Learn about translation mechanisms in prokaryotes and eukaryotes and study gene regulation.
4. Study the concept of gene transfer and gene transfer techniques.
5. Acquire the knowledge of Nucleic acid isolation, amplification and sequencing.

Unit I

Introduction: Information flow in biological systems: Central dogma and its reversal.

Replication: Introduction, Replication of DNA - General features, semi-conservative DNA replication in *E.coli*,Meselson and Stahl‟s experiment. Mechanism of DNA replication in Eukaryotes, multiple replication forks, initiation, elongation & termination, Models of replication – Rolling circle model, and Cairn‟s model. DNA damage and repair: Introduction & types of damage; DNA repair – introduction, types- Photoreactivation & SOS repair.

8 Hrs

Unit II

Transcription: Introduction. Concept of sense and antisense strands. Structure and function of bacterial RNA polymerase, sigma factor cycle. Transcription in Prokaryotes - initiation, elongation, termination (rho dependent and rho independent) Transcription in Eukaryotes.

Eukaryotic RNA Polymerases-I, II and III functions. Steps in transcription-initiation, elongation & termination (Pol II only).

Post-transcriptional modification of mRNA-capping, polyadenylation, splicing- excision of introns & splicing of exons (Only splicing by spliceosome is included). Transcription inhibitors.

8 Hrs

Unit III

Translation and Gene regulation: Introduction, definition, steps-activation of amino acid, Initiation, elongation & termination (Prokaryotes) Protein synthesis in eukaryotes - Initiation, elongation and termination Differences in pro- & eukaryotic protein synthesis. Inhibitors of translation.

Concept of gene regulation: Gene regulation in prokaryotes: positive versus negative regulation. Induction and repression system. Operon model – Lac Operon- positive regulation and negative regulation, mutations in lac operon, Trp-Operon - by an allosteric repressor protein and by an attenuator.

8 Hrs

Unit IV

Concept of Gene transfer and Gene Transfer Techniques : Vectors: plasmids and Classification of plasmids: Natural plasmid (ColE1) and artificial plasmid (pBR322 and PUC). Gene Transfer: Definition, Gene transfer techniques: Biological (Conjugation, Transformation, ansfection and transduction), Chemical method of Gene transfer (Calcium phosphate, DEAE dextran) and Mechanical (Electroporation, Microinjection and Gene gun).

7 Hrs

Unit V

Nucleic acid isolation, amplification and sequencing: Isolation and purification of nucleic acids: (DNA, RNA and plasmids), Polymerase chain reaction: Introduction to Primer and Probe. Preparation Probes, mechanism of PCR, variants of PCR (only RT-PCR and Q-PCR)

DNA Sequencing Methods: Definition of Sequencing Concept, Methods: Maxam and Gilbert method and Sanger, Automated DNA sequencing. Advantages and disadvantages. Recent trends in DNA Sequencing.

Application of Genetic engineering: Introduction, methods of Gene therapy (Ex vivo and Invivo; only one type for each), Genome editing using CRISPR/CAS9 technology.

8 Hrs

TEXT BOOKS:

1	Freifelder	Molecular Biology, Narosa Publications, 2nd Edition, 2005, 978-9350356675
2	David Freifelder	Freifelder‟s Essentials of Molecular Biology, Narosa Publications, 4th Edition, 2009, 978-9350346624

REFERENCE BOOKS:

3	Benjamin Lewin	Genes IV, Oxford university press, 4th Revised Edition,1990, 912-8952366323

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe the mechanism of DNA replication, DNA damage and DNA repair in prokaryotes and eukaryotes.

CO2: Illustrate the mechanism of transcription in prokaryotes & eukaryotes.

CO3: Describe the mechanism of translation in prokaryotes & eukaryotes and analyze gene regulation.

CO4: Interpret and analyze various concepts of Gene transfer between the cells.

CO5: Classify various types of DNA Sequencing Methods and its application in genetic engineering.

MOLECULAR BIOLOGY AND GENETIC ENGINEERING LABORATORY

Contact Hours/Week	:	0+0+2 (L+T+P)	Credits	:	0.0
Total Lecture Hours	:	26	CIE Marks	:	50
Course Code	:	NBT42 (IPCC)	SEE Marks	:	NA

Course objectives:

1. Study the divisional stages of a cell and learn about wild & mutant drosophila.
2. Study the isolation of plant protoplast by enzymatic method.
3. Acquire the knowledge of isolation of genomic DNA from plant, animal and microbial sources.
4. Understand the various techniques used for DNA separation.
5. Learn gene transfer technique using chemical methods followed by selection of recombinants.

List of Experiments:

1. Study of divisional stages in mitosis (squash preparation and staining– specimen: Onion root tip).
2. Study of divisional stages in meiosis (Permanent slides only).
3. Study of Drosophila mutants, Barr eye, vestigial wings, yellow body, white eye.
4. Isolation of plant protoplasts by enzymatic method and its fusion.
5. Isolation of plasmid DNA from E.coli.
6. Isolation of genomic DNA from Plant
7. Isolation of genomic DNA from microbial sources.
8. Agarose gel electrophoresis and quantification of nucleic acids (260/280 method spectrophotometric method).
9. Restriction mapping (Single or double digestion).
10. Separation of protein mixture on SDS-PAGE.
11. Study of conjugation in E.coli – Kit method
12. Transformation of E.coli cells – Calcium chloride method (Kit may be used). Selection of recombinants (Blue-White screening).

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Identify and analyze the divisional stages of cells and Drosophila mutants.

CO2: Demonstrate the process of isolation of plant protoplast and its fusion.

CO3: Determine DNA isolation from plant, animal and microbial sources.

CO4: Interpret restriction mapping and amplification techniques on DNA samples.

CO5: Execute bacterial conjugation and transformation to identify the developed recombinants using specific techniques.

BIOINFORMATICS

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Course Code	:	NBT43 (PCC)	SEE Marks	:	50

Course Objectives:

1. Understand the concepts of storage, update and retrieval of data from biological databases.
2. Conceptualize the importance of database similarity searching, understand database similarity searching algorithms and use of Mathematical and statistical models for sequence analysis.
3. Study the importance of multiple sequence alignment, protein motif and domain prediction in establishing evolutionary relationships.
4. Understand the concepts of phylogenetic analysis to cluster the closely related sequences.
5. Study the various protein structure prediction tools, Protein structure visualization tools and application of Bioinformatics in the various fields of Biotechnology.

Unit I

Introduction to Biological databases: Bioinformatics: (Definition of Bioinformatics, Goals, Scope, Application, Limitations and New Themes). Database: (Definition of database, Types), Biological Database: Databases (Primary, Secondary and Specialized), Interconnection between the databases, Fit falls of Biological databases. Nucleotide and Protein sequence and structure databases (NCBI, EMBL, DDBJ, Uniprot and PDB) Format of databases: (GenBank flat file, PDB format) Other Important Databases: KEGG, PubMed, PubChem, ZINC and any other newly created databases of importance.

8 Hrs

Unit II

Sequence Alignment and Database Similarity Searching: Sequence Alignment: Evolutionary Basis, Homology versus Similarity, Similarity versus Identity, Global alignment, Local alignment, Pairwise alignment: Alignment algorithm:

a) Pairwise: Dot matrix method
b) Dynamic programming Method (For both Local and Global Alignment. i.e. Needleman-Wunch & Smith Waterman), Gap Penalties.

Scoring Matrices: Nucleotide scoring matrices: Transitions and Transversions, Amino acid scoring matrices: PAM, BLOSUM, Comparison between PAM and BLOSUM,

Database Similarity Searching: BLAST. BLAST variants. Statistical significance. Low complexity Regions. FASTA and BLAST algorithms. Simple Dynamic programming Alignment problems.

8 Hrs

Unit III

Multiple sequence alignment, Protein Motif and Domain Prediction

Multiple sequence alignment: Scoring Function, exhaustive algorithms and Heuristic algorithms. Profiles and Hidden Markov Models: PSSM, Markov Model and HMM. Zeroth, First and Higher order HMM.

Protein Motif and Domain Prediction: Identification of Motif and Domains in MSA. PROSITE. Motif and Domain Databases using Statistical Models (PRINTS, BLOCKS and Pfam), Protein Family databases (COG), Sequence Logos, Problems on 0^{th}, 1^{st} and Higher order HMM.

8 Hrs

Unit IV

Molecular Phylogenetics: Phylogenetics Basics, Terminologies, Gene versus species phylogeny, Forms of tree representation. Tree

Construction: Choosing Molecular Markers. Alignment. Multiple Substitutions. Choosing Substitution Models (Jukes-Cantor Model).

Tree Building Methods (Distance based: UPGMA and Neighbor joining. Character Based Methods: Maximum Parsimony, Maximum Likelihood.) Assessing tree reliability: Bootstrapping. Phylogenetics software: PAUP, Phylip.

8 Hrs

Unit V

Protein structure prediction, comparison and Visualization:

Secondary structure prediction: Globular proteins: ab-initio, homology based. Protein structure comparison: intra-molecular method, intermolecular method. Protein structure building (Homology modelling), Protein structure comparison: SCOP and CATH Protein Structure Visualization: Pymol, Swiss PDB viewer, VMD and Discovery studio visualize.

Applications of Bioinformatics: Bioinformatics in pharmacy: drug discovery process, structure based and ligand-based drug design (CADD).

7 Hrs

TEXT BOOKS:

1	David W Mount	"Bioinformatics sequence and Genome analysis", Cold Spring Harbor Laboratory Press, 2nd Edition, 2013, 9989332257358

3	Attwood T K, D J Parry-Smith	Introduction to Bioinformatics, Pearson Education, 3rd Edition, 2005, 9789332447329

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe various biological databases and analyze file formats used in these databases.

CO2: Apply the concepts of sequence alignment algorithms to solve alignment problems to establish the relationship among various organisms.

CO3: Analyze various multiple sequence alignment concepts to identify protein families, motifs and domains.

CO4: Identify suitable molecular marker to construct and assess phylogenetic tree using various methods.

CO5: Apply the concepts of Bioinformatics in the area of drug discovery process, Pharmacokinetics and OMICS.

BIOLOGY FOR ENGINEERS

Contact Hours/Week	: 2+0+0 (L+T+P)	Credits	: 2
Total Lecture Hours	: 26	CIE Marks	: 50
Course Code	: BE	SEE Marks	: 50

Course objectives:

1. To familiarize the students with the basic biological concepts and their engineering applications.
2. To enable the students with an understanding of bio-design principles to create novel devices and structures.
3. To provide the students an appreciation of how biological systems can be re-designed as substitute products for natural systems.
4. To motivate the students develop the interdisciplinary vision of biological engineering.

General Instructions for Teaching-Learning

These are sample Strategies, which teacher can use to accelerate the attainment of the various course outcomes.

- Explanation via real life problem, situation modelling, and deliberation of solutions, hands-on sessions, reflective and questioning /inquiry-based teaching.
- Instructions with interactions in classroom lectures (physical/hybrid).
- Use of ICT tools, including YouTube videos, related MOOCs, AR/VR/MR tools.
- Flipped classroom sessions (~10% of the classes).
- Industrial visits, Guests talks and competitions for learning beyond the syllabus.
- Students" participation through audio-video based content creation for the syllabus (as assignments).
- Use of gamification tools (in both physical/hybrid classes) for creative learning outcomes.
- Students" seminars (in solo or group) /oral presentations.

Unit I

Biomolecules and Their Applications: Carbohydrates (cellulose-based water filters, PHA and PLA as bioplastics), Nucleic acids (DNA Vaccine for Rabies and RNA vaccines for Covid19, Forensics – DNA fingerprinting), Proteins (Proteins as food – whey protein and meat analogs, Plant based proteins), lipids (biodiesel, cleaning agents/detergents), Enzymes (glucose-oxidase in biosensors, ligninolytic enzyme in bio-bleaching).

5 Hrs

Unit II

Human Organ Systems and Bio Designs - 1: Brain as a CPU system (architecture, CNS and Peripheral Nervous System, signal transmission, EEG, Robotic arms for prosthetics. Engineering solutions for Parkinson‟s disease). Eye as a Camera system (architecture of rod and cone cells, optical corrections, cataract, lens materials, bionic eye).Heart as a pump system (architecture, electrical signaling - ECG monitoring and heart related issues, reasons for blockages of blood vessels, design of stents, pace makers, defibrillators).

5 Hrs

Unit III

Human Organ Systems and Bio-Designs - 2: Lungs as purification system (architecture, gas exchange mechanisms, spirometry, abnormal lung physiology - COPD, Ventilators, Heart-lung machine).Kidney as a filtration system (architecture, mechanism of filtration, CKD, dialysis systems). Muscular and Skeletal Systems as scaffolds (architecture, mechanisms, bioengineering solutions for muscular dystrophy and osteoporosis).

5 Hrs

Unit IV

Nature-Bioinspired Materials and Mechanisms: Echolocation (ultrasonography, sonars), Photosynthesis (photovoltaic cells, bionic leaf). Bird flying (GPS and aircrafts), Lotus leaf effect (Super hydrophobic

and self-cleaning surfaces), Plant burrs (Velcro), Shark skin (Friction reducing swim suits), Kingfisher beak (Bullet train). Human Blood substitutes - hemoglobin-based oxygen carriers (HBOCs) and perfluorocarbons (PFCs).

5 Hrs

Unit V

Trends in Bioengineering: Bio-printing techniques and materials, 3D printing of ear, bone and skin. 3D printed foods. Electrical tongue and electrical nose in food science, DNA origami and Biocomputing, Bio-imaging and Artificial Intelligence for disease diagnosis. Self- healing Bio-concrete (based on bacillus spores, calcium lactate nutrients and bio-mineralization processes) and Bio-remediation and Bio-mining via microbial surface adsorption (removal of heavy metals like Lead, Cadmium, Mercury, Arsenic).

6 Hrs

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Elucidate the basic biological concepts via relevant industrial applications and case studies.

CO2: Evaluate the principles of design and development, for exploring novel bioengineering projects.

CO3: Corroborate the concepts of bio-mimetics for specific requirements.

CO4: Explore innovative bio-based solutions for socially relevant problems.

CO5: Think critically towards exploring innovative biobased solutions for socially relevant problems.

Evaluation Pattern

Two Tests of 50 marks each and 90 minutes duration
SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

BIOINFORMATICS LABORATORY

Contact Hours/Week	:	0+0+2 (L+T+P)	Credits	:	1.0
Total Lecture Hours	:	20	CIE Marks	:	50
Course Code	:	NBTL41 (PCC)	SEE Marks	:	50

Course Objectives:

1. Understand the concepts of data retrieval from bibliographic databases and biological databases.
2. Learn the concepts of database similarity searching.
3. Conceptualize the importance of phylogenetic tree construction and gene prediction methods.
4. Study the concepts of protein secondary, tertiary structure prediction and visualization.
5. Understand the concepts of ligand design and its molecular docking with proteins.

List of Experiments:

1. Sequence retrieval from Nucleic Acid and Protein databases and Pairwise sequences comparison.
2. Sequence (BLAST) searches – Analysis of parameters affecting alignment.
3. Multiple sequences alignment and Protein motif analysis.
4. Evolutionary studies / Phylogenetic analysis – Analysis of parameters affecting trees
5. Gene Prediction for Prokaryotes and Eukaryotes genome.
6. Biomolecules structure visualization and analysis of various structural aspects.
7. Protein structure prediction and validation.
8. Ligand design using Marvin sketch and identification of biological activity using PASS Server.
9. ADMET and Drug likeliness Prediction for given ligand
10. Molecular Docking - Protein and Ligand.
11. Molecular Docking - Protein and Protein/Peptide & Post docking analysis
12. Open ended experiment

TEXT BOOKS:

1	David W Mount	"Bioinformatics sequence and Genome analysis", Cold Spring Harbor Laboratory Press, 2nd Edition, 2013,

3	Attwood T K, D J Parry-Smith	"Introduction to Bioinformatics", Pearson Education,5th Edition, 2005, 978047052812

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Interpret physicochemical properties of biomolecules and biological sequence retrieval for comparison.

CO2: Identify tree building methods to construct and assess the reliability of the phylogenetic trees.

CO3: Construct protein secondary and tertiary structural units to analyze and evaluate protein models

CO4: Design ligand molecules for the molecular docking process.

CO5: Interpret the use of molecular docking results used in computer aided drug design

SCHEME & SYLLABUS

OF

V & VI SEMESTERS

B.E. BIOTECHNOLOGY

2022-23

(175 credits scheme)

VISION AND MISSION OF THE DEPARTMENT

VISION:

To be a center of excellence in education and research in Biotechnology to address the global challenges

MISSION:

1. To establish close collaboration with industry to offer industry-relevant curricula and pursue demand driven research.
2. To continuously upgrade the infrastructure to develop the state-of-the-art facilities for training and research.
3. To provide a good learning environment to help students imbibe professional ethics, communication skills, team spirit and societal commitment.
4. To offer skill development programs to enhance employability of graduates in collaboration with industry and Government support.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

Graduates from the Biotechnology program are expected to achieve the following Program Educational Objectives within a few years of graduation:

1. The graduates of the program are practicing engineering profession as clinical data coordinator, clinical research associate, IT system engineers, bioinformatics analyst, Quality controller and Quality assurance analyst, business development executive, research associate with a strong skill set as data analyst, product specialist, computer programmer, molecular biologist, good planning, communication and execution ability for IT and BT industries.

2. The graduates of the program are engaged in higher studies leading to professional degree in specific domain such as biological sciences, computational biology and also engaged in life-long learning.

3. The graduates of the program practice profession with high ethical and moral values and have developed good communication skills and leadership qualities while working as a member of the team or as a team leader.

PROGRAM SPECIFIC OUTCOMES (PSOs):

1. Students will be able to conduct the Upstream and Downstream experiments to produce, optimize, separate, purify and characterize biological compounds.

2. Students will be able to solve advanced biological problems with the technical skills of Bioinformatics, Biomolecular simulation, Proteomics and Genomics using computational techniques.

3. Students will be able to analyse Biopharmaceutical challenges of Biological systems by applying the concepts of Biological sciences.

PROGRAMME OUTCOMES (POs)

PO1	**Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
PO2	**Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	**Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8	**Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	**Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	**Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	**Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	**Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

MANAGEMENT AND ENTREPRENEURSHIP

Contact Hours/ Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Subject Code	:	HSS06	SEE Marks	:	50

Course Objectives: The objectives of this course are

1 Understand the principles and functions of management.
2 Enable students to analyze the importance of staffing, leading and controlling organization.
3 Understand and manage engineering design and quality.
4 Inculcate entrepreneurial qualities and enable them to understand the need of rural entrepreneurship.
5 Acquire knowledge about funding agencies, understand procedure in applying for funds and analyze the case studies of successful entrepreneurs.

Unit I

Introduction to Management: Definition of management, management skills, productivity and effectiveness, efficiency, functions and principles of management.

Planning: Nature of planning, types of plans- purpose of vision, mission, goals, objectives strategies, policies; steps in planning, MBO, Strategic planning.

Organizing: Formal and informal organization, span of management, the structure and Process of organizing, Organizational structure: line and staff organization, Functional organization, matrix organization.

8 Hrs

Unit II

Staffing: Definition, systems approach to HRM, factors affecting staffing, recruitment and selection, job design, skill and characteristics of a manager, selection process and techniques.

Leading: Human factors in managing, motivation, Theory X and Y, the hierarchy of needs theory, leadership behaviour and styles.

Controlling: Basic control process, critical control points and standards, Benchmarking requirements for effective control.

9 Hrs

Unit III

Managing Engineering Design and Development: Product and Technology Life Cycles, Nature of Research and Development, Research Strategy and organization, Nature of Engineering Design, Systems Engineering / New Product Development.

Managing Production/Operations: Types of production processes, Forecasting, Work measurement, Maintenance and Facilities (Plant) Engineering, Total Quality Management, Lean Manufacturing

Engineers in Marketing and service activities: Marketing and the Engineer, Engineers in Service organizations.

8 Hrs

Unit IV

Entrepreneur & Entrepreneurship: Introduction, concept of Entrepreneur, characteristics of an entrepreneur, and qualities of an entrepreneur, functions of an entrepreneur, characteristics of entrepreneurship, factors affecting entrepreneurial growth. Entrepreneurship and economic development-rural, woman and social entrepreneurship

Financing and Institutional Support for Entrepreneurship: Startups, business plans, venture capitalists, angel investors, funding agencies - commercial banks, development banks, NBFCS and incubation centres. Innovations and project trends.

8 Hrs

Unit V

Taxation benefits: Depreciation allowances, rehabilitation allowance, investment allowance and other tax concession benefits to an entrepreneur.

Case Studies from Stay Hungry and Stay Foolish – Rashmi Bansal, IIM Ahmedabad:

1) Success story of naukri.com by Sanjeev Bikhchandani
2) Success story of Make My Trip by Deep Kalra

6 Hrs

TEXT BOOKS:

1.	Harold Koontz, Heinz Weihrich	Essentials of Management, McGraw Hill Education, 10th Edition, 2015
2.	Lucy C. Morse	Managing Engineering and Technology, Pearson Education, 6th Edition, 2015.
3.	S.S. Khanka	Entrepreneurial Development, S. Chand Publishing, 4th Edition, Reprint 2020.

		ISBN 978-81-219-1801-5

REFERENCE BOOKS:

1.	James A.F. Stoner, R. Edward Freeman, Daniel R. Gilbert	Management, Pearson Education, 6th Edition, 2018.
2.	Rashmi Bansal	Stay Hungry Stay Foolish, IIM Ahmedabad, 1st Edition, 2008.
3.	Rashmi Bansal	Connect the Dots, Bushfire Publishers, 1st Edition, 2019.

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe the concept of management and its functions

CO2: Apply management principles and strategies in various functional areas.

CO3: Analyze engineering design, product development and production systems.

CO4: Discuss entrepreneurship, its characteristics and benefits. Identify various funding sources for starting a business venture.

CO5: Explain various taxation benefits available for entrepreneur; Evaluate the characteristics and strategies adopted by successful entrepreneurs.

BIOINFORMATICS

Contact Hours/ Week	:	4+0+0 (L+T+P)	Credits	:	4
Total Lecture Hours	:	52	CIE Marks	:	50
Subject Code	:	5RBT01	SEE Marks	:	50

Course Objectives: The objectives of this course are

1. Understand the concepts of storage, update and retrieval of data from biological database.
2. Conceptualize the importance of database similarity searching, understand database similarity searching algorithms and use of Mathematical and statistical models for sequence analysis.
3. Study the importance of multiple sequence alignment, protein motif and domain prediction in establishing evolutionary relationship.
4. Understand the concepts of phylogenetic analysis to cluster the closely related sequences.
5. Study the various protein structure prediction tools, Protein structure visualization tools and application of Bioinformatics in the various fields of Biotechnology.

Unit I

Introduction to Biological databases: Bioinformatics: (Definition of Bioinformatics, Goals, Scope, Application, Limitations and New Themes). Database: (Definition of database, Types), Biological Database: Databases (Primary, Secondary and Specialized), Interconnection between the databases, Fit falls of Biological databases. Nucleotide and Protein sequence and structure databases (NCBI, EMBL, DDBJ, Uniprot and PDB) Format of databases: (GenBank flat file, FASTA Format, PIR Format, PDB format) Other Important Databases: KEGG, PubMed, OMIM, Medline, PubChem, ZINC and any other newly created databases of importance.

10 Hrs

Unit II

Sequence Alignment and Database Similarity Searching: Sequence Alignment: Evolutionary Basis, Homology versus Similarity, Similarity versus Identity, Global alignment, Local alignment, Pairwise alignment: **Alignment algorithm:**

a) Pairwise: Dot matrix method

b) Dynamic programming Method (For both Local and Global Alignment. i.e. Needleman-Wunch & Smith Waterman), Gap Penalties.

Scoring Matrices: Nucleotide scoring matrices: Transitions and Transversions, Amino acid scoring matrices: PAM, BLOSUM, Comparison between PAM and BLOSUM, Database Similarity Searching: BLAST. BLAST variants. Statistical significance. Low complexity Regions. BLAST output format. FASTA and BLAST algorithms. Simple Alignment problems.

10 Hrs

Unit III

Multiple sequence alignment, Motif, Domain and Gene Prediction: Scoring Function, exhaustive algorithms, Heuristic algorithms, practical issues. Profiles and Hidden Markov Models: PSSM. Profiles. Markov Model and HMM. Zeroth, First and Higher order HMM

Protein Motif and Domain Prediction: Identification of Motif and Domains in MSA. PROSITE. Motif and Domain Databases using Statistical Models (PRINTS, BLOCKS, ProDom, Pfam, SMART) Protein Family databases (COG). Motif Discovery and Sequence Logos. Problems on 0^{th} 1^{st} and Higher order HMM.

Gene prediction: Gene prediction in prokaryotes: Conventional determination of open reading frames (ORF), Markov model and HMM. Gene prediction in eukaryotes: an initio based program, neural networks.

12 Hrs

Unit IV

Molecular Phylogenetics: Phylogenetics Basics, Terminologies, Gene versus species phylogeny, Forms of tree representation. Tree Construction: Choosing Molecular Markers. Alignment. Multiple Substitutions. Choosing Substitution Models (Jukes-Cantor Model).

Tree Building Methods (Distance based: UPGMA and Neighbor joining. Character Based Methods: Maximum Parsimony, Maximum Likelihood.) Assessing tree reliability: Bootstrapping. Phylogenetics software's: PAUP, Phylip.

10 Hrs

Unit V

Protein structure prediction, comparison and Visualization:
Secondary structure predication: Globular proteins: ab-inition, homology based, neural networks method. Protein structure comparison: intra-molecular method, intermolecular method. Protein structure building (Homology modelling), Protein structure comparison: SCOP and CATH Protein Structure Visualization: Rasmol, Pymol, Jmol, CN3D, Swiss PDB viewer, Chimera and Discovery studio visualize.

Applications of Bioinformatics: Bioinformatics in pharmacy: drug discovery process, structure based and ligand based drug design (CADD). Pharmacokinetics: absorption, distribution, metabolism, excretion and toxicity of drugs. Application of Bioinformatics in OMICS.

10 Hrs

3	Attwood T K, D J Parry-Smith	Introduction to Bioinformatics, Pearson Education, 3rd Edition, 2005, 9789332447329

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe various biological databases and analyze file formats used in these databases.

CO2: Apply the concepts of sequence alignment algorithms to solve alignment problems to establish the relationship among various organisms.

CO3: Analyse various multiple sequence alignment concepts to identify protein families, motifs and domains.

CO4: Identify suitable molecular marker to construct and assess phylogenetic tree using various methods.
CO5: Apply the concepts of Bioinformatics in the area of drug discovery process, Pharmacokinetics and OMICS.

BIOREACTION ENGINEERING

Contact Hours/ Week	:	4+0+0 (L+T+P)	Credits	:	4
Total Lecture Hours	:	52	CIE Marks	:	50
Subject Code	:	5RBT02	SEE Marks	:	50

Course Objectives: The objectives of this course are to:

1. Understand the rate mechanism of reactions
2. Learn the various types of inhibition and kinetics of cell and enzyme
3. Study the effect of mass transfer on the cellular and enzymatic reactions
4. Understand the concepts and operations of bioreactors
5. Learn the immobilized cells reactions in chemostat and plug flow reactors and compare them.

Unit I

Homogeneous reactions: Introduction, Elementary and Nonelementary reactions, Representation of elementary reaction, Molecularity and order of reaction, Basic reaction theory: Reaction rate, Reaction kinetics, Reaction thermodynamics, Reaction yield, Effect of temperature on reaction rate, General reaction kinetics for biological systems, Zero-order kinetics, First order kinetics, Second order kinetics, Enzyme Kinetics, Michelis-Meneten kinetics, Lineweaver-burk plot, Eadie-Hofstee plot, Langmuir plot, Direct linear plot.

10 Hrs

Unit II

Regulation of enzyme activity: Reversible inhibition, Competitive inhibition, Noncompetitive inhibition, Uncompetitive inhibition, Partial inhibition, Irreversible inhibition, Numerical Conceptual Allosteric regulation, Kinetics of enzyme deactivation, Cell growth kinetics, Batch growth, Determining cell kinetic parameters from batch data. Kinetics of cell death.

10 Hrs

Unit III

Heterogeneous Reactions: Heterogeneous reactions in bioprocessing, Concentration gradients and reaction rates in solid catalysts, True and observed reaction rates, Interaction between mass transfer and reaction,

Internal mass transfer and reaction, Steady state shell mass balance, **Concentration Profile**-First order kinetics and spherical geometry.

10 Hrs

Unit IV

Reactor engineering- Bioreactor engineering in perspective, Bioreactor configuration-Stirred tank, Bubble column, Airlift reactor, Stirred and Air-driven reactors-comparison, Packed bed, Fluidised bed, Trickle bed, Disposable bioreactors.

Ideal reactor operation- Batch operation of a mixed reactor: Enzyme reaction, Cell culture, Total time for batch reaction cycle.

12 Hrs

Unit V

Chemostat Fed-batch operations of a mixed reactor, Continuous operation of a mixed reactor- Enzyme reaction, Cell culture, Chemostat with immobilized cells, Chemostat Cascade, Chemostat with cell recycle, Continuous operation of a plug flow reactor-Enzyme reaction, Cell culture. Comparison between Major models of reactor operation, Evaluation of Kinetic and yield parameters in chemostat culture.

10 Hrs

TEXT BOOKS:

1	Paulin M. Doran	Bioprocessing Engineering, Principles, Elsevier, 2nd Edition, 2012, 012220851X
2	Octave Levenspiel	Chemical Reaction Engineering, Wiley Publisher, 3rd Edition, 2006, 9788126510009

REFERENCE BOOKS:

2	Michael L. Shuler, FikretKargi	Basic Concepts in Bioprocess Engineering, Prentice Hall, 2nd Edition, 1992, 978-0130819086

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Classify types of reactions with respect to order, molecularity and MM kinetic equations.

CO2: Analyse the effects of inhibition and allosteric regulations on enzyme kinetics and determine kinetic parameters.

CO3: Describe the mechanism of internal mass transfer and reactions in solid biocatalyst.

CO4: Illustrate the various bioreactor configurations and also design the model for ideal reactor operations.

CO5: Design model for cell culture and enzymatic reaction in chemostat and PFR.

UPSTREAM AND DOWNSTREAM PROCESS TECHNOLOGY

Contact Hours/Week	:	4+0+0 (L+T+P)	Credits	:	4
Total Lecture Hours	:	52	CIE Marks	:	50
Course Code	:	5RBT03	SEE Marks	:	50

Course Objectives: The objectives of this course are

1. Understand the basic requirements of microbial and plant culture, culture techniques and also explicates the connection between stoichiometry of microbial growth and product formation.
2. Understand the basics of animal cell culture, maintenance and quantification techniques.
3. Study the culturing of animal cells, scale up of the cultures and to understand the transgenic methods and applications.
4. Apply appropriate unit operation for isolation, purification and characterization of product.
5. Evaluate different unit operations for product crystallization and Drying.

Unit I

Basics of upstream processing: Overview of fermentation process. The range of fermentation processes. The component parts of a fermentation process. Media for industrial fermentations: medium formulation, energy sources and factors influencing the choice of the source (Corbon, nitrogen). Examples of commonly used carbon and nitrogen sources. Oxygen requirements. Medium optimization. Sterilization: Batch and continuous sterilization process. Isolation of industrially important microorganisms, Improvement of industrial microorganisms. Production of industrially important metabolites penicillin, Vit B12, ethanol.

10 Hrs

Unit II

Animal Cell culture: History and development of animal tissue culture, Equipment and materials, Cell culture media - components of the medium, physical, chemical and metabolic functions of media. Role of serum and supplements, serum-free media, features and specifications of MEM, DMEM, RPMI and Ham's medium. Measurement of cell viability and cytotoxicity. Measuring parameters of growth – growth curves, PDT, Plating efficiency and factors influencing growth.

10 Hrs

Unit III

Cell lines and its culture: Primary culture, Establishment of Primary Culture, Development of cell lines, characterization of cell lines, maintenance and preservation of cell lines. Contamination -causes, detection and control, cell transformation – normal v/s. Transformed cells. Viral and chemical-mediated methods of cell immortalization, Scale-up of suspension cultures - Batch reactor, continuous culture, perfusion systems. Transgenic animals- retroviral, microinjection, and engineered embryonic stem cell method of transgenesis. Application of transgenic animals- biopharming, disease models, functional knockouts.

12 Hrs

Unit IV

Basics of downstream processing and Separation techniques: Role & Importance of downstream processing in biotechnological processes. Characteristics of biological mixtures, process design criteria for various classes of bioproducts (high volume, low value products and low volume, high value products), physicochemical basis of bio separation processes. Cell disruption methods for intracellular products, removal of insolubles, biomass (and particulate debris) separation techniques; flocculation and sedimentation, centrifugation and filtration methods.

10 Hrs

Unit V

Product Enrichment operations and Membrane Separation: Precipitation methods with salts, organic solvents, and polymers, extractive separations. Aqueous two-phase extraction, supercritical extraction; In situ product removal/integrated bio processing. Solute polarization and cake formation in membrane ultra-filtration – causes, consequences and control techniques; enzyme processing using ultra filtration membranes; separation by solvent membranes.

Final product formulation and finishing operations: Hybrid Separation Techniques (Membrane chromatography, Electrochromatography, etc). Crystallization – Principles, Nucleation, Crystal Growth – Kinetics, crystallization of proteins. Drying and lyophilization in final product formulation.

10 Hrs

3	Belter P. A., C ussier E. and Wei Shan Hu	Bioseparation - Downstream Processing for Biotechnology, Wiley Interscience Pub, 2nd Edition, 1988, 9680126578575

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Apply appropriate strategy for scale up of microbes, plants and animals to obtain product of interest.
CO2: Classify animal cell culture techniques for scale up.
CO3: Outline the various types of animal tissue culture techniques and culture conditions in animal cell culture.
CO4: Apply appropriate unit operation for isolation, purification and characterization of product
CO5: Evaluate different unit operations for product crystallization and drying

PROGRAMMING FOR ENGINEERS

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Course Code	:	5RBTE511	SEE Marks	:	50

Course Objectives: The objectives of this course are

1. Understand the basic Linux commands.
2. Organize the processing of large amounts of data from high-throughput biology experiments.
3. Learn the PERL environment and its programming fundamentals.
4. Understand the basics of Python as prelude for Biopython.
5. Learn how to use R Programming for handling the biological databases.

Unit I

Operating System Concepts and Linux Environment: Introduction to O.S., types of O.S., O.S services, system calls, system components, system structures, virtual machines. Linux: Introduction to Linux, basic commands (Navigation and Directory Control Commands. File Maintenance Commands, Display Commands, Print Commands etc), working with the files, file attributes, pipes, wildcards, working with processes working with basic editors (vi, emacs). Basic regular expressions, string search applications using regular expressions.

8 Hrs

Unit II

Computer Environment: Introduction: What is a grid? -Infrastructure of hardware and software -Main Projects and Applications –The Open Grid Forum -International Grid Trust Federation. Grid Architecture - Overview of Resource Managers - Overview of Grid Systems - Application Management: Grid Application Description Languages –Application Partitioning -Meta-scheduling –Mapping –Monitoring - Web Services - Grid Portals - Clouds. Cluster computing at a glance – cluster classifications-cluster middleware – cluster applications – cluster setup and administration – multi path communication – distributed shared memory - representative cluster system: Biowulf – RWC PC cluster II- Parallel Processing on Linux Clusters. Java for HPC: java and different flavors of parallel programming models. HPC program optimization. API. Remote Desktop in Windows and linux operating systems.

8 Hrs

Unit III

Awk / Shell Scripting Fundamentals: Execution, Fields and Records, Scripts, Operations, Patterns, Actions, Associative Arrays, String Functions, String Functions, Mathematical Functions, User – Defined Functions, Using System commands in awk, Applications, awk and grep, sed and awk. Unix Session, Standard Streams, Redirection, Pipes, Tee Command, Command Execution, Command-Line Editing, Quotes, Command Substitution, Job Control, Aliases, Variables, Predefined Variables, Options, Shell/Environment Customization.

8 Hrs

Unit IV

Introduction to Perl and Python:

An overview of Perl: Getting started, Statement blocks, ASCII, Unicode, Escape sequences, White spaces, Numerical data types, strings in Perl. Operators, Variables: special variables, regex (regular expression) variables, Input/output variables, File handle variables, error and system variables. Perl statements, Introduction to statements, Types - Input/Output statements, conditional statements, looping, and jumping statements.

Python: Simple values – Booleans, Integers, Floats and Strings, Expressions – Numerical operators, Logical Operations, String Operations, Names, Functions and Modules – Assigning Names, Defining the functions – Function parameters, Comments and Documentation, Assertions, Default parameter values, Using Modules – Importing, Python Files.

8 Hrs

Unit V

Introduction to R and MAT Lab :

Overview of the R language: Defining the R project, Obtaining R, Generating R codes, Scripts, Text editors for R, Graphical User Interfaces (GUIs) for R, Packages. R Objects and data structures: Variable classes, Vectors and matrices, Data frames and lists, Data sets included in R packages, Summarizing and exploring data, Reading data from external files, Storing data to external files, Creating and storing R workspaces. Manipulating objects in R: Mathematical operations, Basic matrix computation, Textual operations, Basic graphics.

Introduction to MAT Lab: molecular forces; Bioinformatics ToolBox, Statistics ToolBox, Distributed computing server, Signal Processing ToolBox. The MATlab working environment. Variables, constants and reserved words. Arrays and matrices. Scripts. The debugger. Generating 2D and 3D Graphics. Simple statistical analysis. String manipulation. Boolean logic and if statements. Loops (while, for). Functions & Files. Program design. MATlab structures. Complexity.

7 Hrs

TEXT BOOKS:

4.	Rajkumar Buyya	High Performance Cluster Computing: Programming and Applications, Prentice Hall, 1st Edition, 1999, 0130137855
5.	James D. Tisdall	Beginning Perl for Bioinformatics, O'Reilly, 1st Edition, 2001, 9780596000806

REFERENCE BOOKS:

4.	Michael J Quinn	Parallel programming in C with MPI and OpenMP, Tata McGraw-Hill, 1st Edition, 2003, 0072822562
5.	Ahmar Abbas	Grid Computing: A Practical Guide to Technology and Applications, Charles River Media, 1st Edition, 2003, 1584502762

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe the basic linux commands and various operating systems.
CO2: Classify the various multiple operating systems, systems software, network services and security.
CO3: Analyze and contrast different data types and regular expressions using operators and control structures.
CO4: Apply the concept of R programming to solve statistical problems.
CO5: Analyse and demonstrate the conversion of data encoding techniques using Python.

GREEN BIOTECHNOLOGY AND POLLUTION ABATEMENT

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Course Code	:	5RBTE512	SEE Marks	:	50

Course objectives: The objectives of this course are

1. Study different types of contaminants present in environment and their treatment.
2. Understand the significance of microorganism in removing pollutants from the environment.
3. Learn biotechnological processes for wastewater treatment.
4. Understand the role of genetic engineering in environmental pollution abatement.
5. Understand the importance of organisms in composting and Phytoremediation

Unit I

Bioremediation: Definition, approaches to bioremediation, environmental modification, microbial seeding. Bioengineering approaches to the bioremediation of pollutants – engineering of bioremediation processes – needs and limitations. Xenobiotics, biodegradation of lignin, hydrocarbons and plastic.

8 Hrs

Unit II

Bioremediation of contaminated soils: Diversity and magnitude of soil contaminants, criteria for bioremediation, biological mechanism of transformation, strategies for bioremediation, Case studies of bioremediation. Biodegradable organic pollutants - Pesticides, aerobic and anaerobic bacteria degradation, Co-metabolic degradation, degradative capacities of fungi.

8 Hrs

Unit III

Bioremediation of various ecosystems: Bioremediation of contaminated water (oil slicks, heavy metals), bioremediation of industrial wastes – distillery industry-processes and production in the distillery, characteristics of effluent and its treatment, textile industry- source and origin of dyes, characteristics of effluent, Environmental impact of dyes

and its intermediates and treatment, leather industry – processes and production, characteristics of effluent, Environmental impact of tannery effluents and treatment, paper and pulp manufacturing industry Processes and production.

8 Hrs

Unit IV

Bioremediation Techniques: Bioaerosols, Biofiltration, microbial control of environmental pollution – role of genetic engineering in environmental pollution abatement, catabolic plasmids as natural vectors, genetic engineering for augmenting pollution abatement in microbes and plants, use of immobilized microbes for waste recycling, immobilized enzymes in pollution abatement.

8 Hrs

Unit V

Composting and Phytoremediation: Exploitation of agricultural wastes for food, feed and fuel, humus formation, sludge composting, vermi composting, aerobic and anaerobic composting. Introduction to phytoremediation, phytoextraction, phytostabilization, phytoremediation of inorganics, translocation mechanisms for inorganics, plant accumulation.

7 Hrs

TEXT BOOKS:

2	Martin Alexander	Biodegradation and Bioremediation, Academic Press, 2nd Edition, 1999, 9780120498611

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe various methods of bioremediation techniques for treating xenobiotic compounds.
CO2: Identify and apply different approaches to treat contaminated soil.
CO3: Analyze different types of treatment for various industrial effluents.
CO4: Apply the concepts of genetic engineering techniques in removal of environmental pollutants.
CO5: Illustrate the role of microbes in treating agricultural waste and plants in removing heavy metals from contaminated places.

INDUSTRIAL BIOTECHNOLOGY

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Course Code	:	5RBTE513	SEE Marks	:	50

Course Objectives: The objectives of this course are:

1. Introduce the concept of Biotechnology industry and the players involved
2. Highlight the importance and methods involved in screening of industrial important microorganisms
3. Give an insight to manage metabolic processes at both molecular, cell and engineering level
4. Give an insight to Biofuels, production and scope
5. Understanding of Genetically modified organisms (GMO)

Unit I

Introduction to Industrial Biotechnology: Introduction to biotechnology industry, History of industrial biotechnology, the scope and impact of industrial biotechnology.

Fermentation process: An introduction to fermentation processes - the range of fermentation processes. Microorganisms used in Industrial Microbiological Processes - the isolation, preservation, Screening for productive strains and strain improvement in biotechnological organisms – manipulation of the genome of industrial organisms. Use of recombinant system for the improvement of industrial microorganisms. Media and materials required for industrial microbiological processes - sources, formulation, antifoams and optimization.

7 Hrs

Unit II

Metabolic Pathways for the Biosynthesis of Industrial Products: The nature of metabolic pathways, Industrial microbiological products as primary and secondary metabolites. Trophophase-idiophase relationships in the production of secondary products. Role of secondary metabolites in the physiology of organisms. Pathways for the synthesis of primary and secondary metabolites of industrial importance. Carbon pathways for the formation of some industrial products derived from primary metabolism.

8 Hrs

Unit III

Industrial Biotechnology in the Chemical and Pharmaceutical Industries: Carbon pathways for the formation of products of microbial secondary metabolism. Mechanisms enabling microorganisms to avoid overproduction of primary metabolic products through enzyme regulation. Bypassing of regulatory mechanisms for the over-production of primary metabolites. Regulation of overproduction in secondary metabolites. Industrial products produced by microorganisms - enzymes (amylase), organic acids (lactic acid). Production of important antibiotics - penicillin, cephalosporins. Production of vitamins B12 & baker's yeast production and hormones. Microbial transformation of steroids and sterols.

8 Hrs

Unit IV

Biofuels Industry: Introduction to biofuels, present conversion pathways, biodiesel production from vegetable oils and fats: esterification processes, properties of vegetable oil esters, hydrogenation processes. Ethanol and ETBE Production: ethanol production from sugar and starch. ETBE production, properties of ethanol and ETBE. The need for new developments, lignocellulosic biomass resources, production of ethanol from lignocellulosic biomass: overall conversion scheme, biomass pretreatment, enzymatic hydrolysis, fermentation of glucose and pentoses. Production of biofuels through the thermochemical pathway: present status, pyrolysis and torrefaction, production of synthesis motor fuels from biomass, biorefineries, biofuels and sustainability.

8 Hrs

Unit V

Environmental, Economic Aspects and Societal issues: Introduction, generic approach: methodology, process design of industrial biotechnology routes, technology assumptions for industrial biotechnology routes, energy use. Environmental impacts methodology: system boundaries, allocation and system expansion, production of fermentable sugar. Life cycle inventory, environmental indicators, process economics, prices of fermentable sugars, prices of utilities and auxiliaries. Societal Issues in Industrial Biotechnology: The impact of industrial biotechnology: the influence on society, political, industrial, economic, and scientific drivers and obstacles. Public perceptions of industrial biotechnology: present public perception of industrial biotechnology. Public perception to policy

development. Industrial reactions to labeling of gm food products. Development of public interaction. Criteria for communication, novel approaches to communication. A case study – Bt cotton and GMO insulin.

8 Hrs

TEXT BOOKS:

1	Prescott and Dunn	Industrial Microbiology, Agrobios (India), 1st Edition, 2006, 9345578475
2	L.E.Casida	Industrial Microbiology- First edition, New age international (p) Ltd., 5th Edition, 2007, 9335578469

2	Christoph Wittmann, James C. Liao	Industrial Biotechnology: Products and Processes (Advanced Biotechnology), Wiley, 2016, 1st Edition, 978-3527341818.

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe the current status of industrial biotechnology and also analyse the microbial fermentation process.
CO2: Illustrate the metabolic pathways for the production of primary and secondary metabolites.
CO3: Outline various regulatory mechanisms for the production industrial products.
CO4: Outline the biodiesel production from various sources.
CO5: Analyse the impact of industrial biotechnology on environment and public health.

BIOINFORMATICS LABORATORY

Lab Hrs./ Week	:	0+0+3 (L+T+P)	Credits	:	1.5
Sub. Code	:	5RBTL01	CIE Marks	:	50
			SEE Marks	:	50

Course Objectives: The objectives of this course are

1. Understand the concepts of data retrieval form bibliographic databases and biological database.
2. Understand the concepts of database similarity searching.
3. Conceptualize the importance of phylogenetic tree construction and gene prediction methods.
4. Study the concepts of protein secondary, tertiary structure prediction and visualization.
5. Understand the concepts of ligand design and its molecular docking with proteins.

List of Experiments:

1. Scientific article retrieval from bibliography database and working with referencing format.
2. Analysis of physicochemical properties of Nucleic acid and Protein.
3. Sequence retrieval from Nucleic Acid and Protein databases and Pair wise sequences comparison.
4. Sequence (FASTA and BLAST) searches – Analysis of parameters affecting alignment.
5. Multiple sequences alignment and Protein motif analysis.
6. Gene Prediction for Prokaryotes and Eukaryotes genome.
7. Evolutionary studies / Phylogenetic analysis – Analysis of parameters affecting trees.
8. Bio-molecules structure visualization and analysis
9. Secondary structure prediction of Proteins.
10. Protein structure prediction and validation.
11. Ligand design using Marvin sketch and identification of biological activity using PASS Server.
12. Molecular Docking using Autodock.
13. Molecular Docking using Autodock Vina.
14. ADMET Prediction for given LIGAND.

TEXT BOOKS:

3	Attwood T K, D J Parry-Smith	"Introduction to Bioinformatics", Pearson Education, 5th Edition, 2005, 978047052812

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Interpret physicochemical properties of biomolecules and biological sequence retrieval for comparison.
CO2: Identify tree building methods to construct and assess the reliability of the phylogenetic tree.
CO3: Construct protein secondary and tertiary structural units to analyze and evaluate protein models.
CO4: Design ligand molecules for the molecular docking process.
CO5: Interpret the use of molecular docking results in computer aided drug design.

UPSTREAM AND DOWNSTREAM PROCESS TECHNOLOGY LABORATORY

Lab Hrs./ Week	:	0+0+3 (L+T+P)	Credits	:	1.5
Sub. Code	:	5RBTL02	CIE Marks	:	50
			SEE Marks	:	50

Course Objectives: The objectives of this course are

1. Understand the components of fermentation media and sterilization process.
2. Conduct the Basic Techniques of Isolation & Purification of Products at Commercial Scale from Fermented Broth
3. Understand the Product Enrichment Operations
4. Understand cell disruption techniques
5. Learn the handling of HPLC and Fermenter

List of Experiments:

1. Media Preparation and sterilisation
2. Estimation of Lycopene from Tomato
3. Production of Secondary metabolite – Anthocyanin.
4. Shake flask studies; Comparison of yield in synthetic and complex media.
5. Protein isolation using cell disruption techniques.
6. Solid-liquid separation methods: Centrifugation.
7. Product enrichment operations: Precipitation – $(NH_4)_2$ SO_4 fractionation of a protein.
8. Product enrichment operations: Two – phase aqueous extraction.
9. Separation of Amino acids / Carbohydrates by TLC.
10. Production and Estimation of ethanol from fermented broth.
11. Production and Estimation of Citric acid from fermented broth.
12. Hands on operations and troubleshooting of preparative and analytical HPLC
13. Determination and separation of phenolic compound by preparative HPLC.
14. Operations and maintenance of 20Ltr. Fermentor

Course Outcomes: Upon completion of this course the student will be able to

CO1: Analyze the components of medium and sterilization effect
CO2: Estimate the production of secondary metabolites from plants
CO3: Determine the percentage of alcohol and citric acid in the fermentation product
CO4: Analyze the amino acid separation on the TLC plate
CO5: Determine the phenolic compounds from HPLC

MINI –PROJECT

Contact Hrs./ Week	: 02	Credits :	0
Sub. Code	: 5RBTP01		

Mini-project work will be started at the beginning of the semester. The students are doing the literature, prerequired experiments in connected to the projects allotted/selected by them. Students have to give the presentation on progress of Mini-project work once in a month. The progress of the Mini-project will be evaluated by the Department Project Evaluation Committee (DPEC).

VI Semester Syllabus
2022-23

PROJECT MANAGEMENT

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Course Code	:	HSS07E	SEE Marks	:	50

Course Objectives: The objectives of this course are

1. Manage the scope, cost, timing, and quality of the project, at all times focused on project success as defined by project stakeholders.
2. Apply project management practices to the launch of new programs, initiatives, products, services, and events relative to the needs of stakeholders
3. Identify project goals, constraints, deliverables, performance criteria, control needs, and resource requirements in consultation with stakeholders.
4. Implement project management knowledge, processes, lifecycle and the embodied concepts, tools and techniques in order to achieve project success.
5. Interact with team and stakeholders in a professional manner, respecting differences, to ensure a collaborative project environment. Manage & monitor communication.

Unit I

Introduction: Project, Program, and portfolio, Operations management, Product life cycle, Project life cycle, Project management life cycle, Ten Knowledge areas, Role of project manager and PMO, Ten Project Knowledge areas with their associated processes.

Project Integration Management: Develop project charter, Develop project management plan, Direct & manage project work, Monitor control project, Perform integrated change control, Close project / phase.

7 Hrs

Unit II

Project scope management: Plan scope management, Collect requirements, Define scope, Create WBS, Validate Scope, Control scope.

Project Schedule management: Plan schedule management, Define activities, Sequence activities, Estimate activity durations, Develop schedule, and Control schedule.

8 Hrs

Unit III

Project cost management: Plan cost management, Estimate cost, Determine budget, and Control costs.

Project quality management: Plan quality management, Manage quality and Control quality.

Project resource management: Plan resource management, Estimate activity resources, Acquire resources, Develop team, Manage team and Control resources.

8 Hrs

Unit IV

Project communication management: Plan communication management plan, Manage communications and Monitor communications.

Project risk management: Plan risk management, Identify risks, Perform qualitative risk analysis, Perform quantitative risk analysis, Plan risk responses, Implement risk responses and Monitor risks.

Project Procurement management: Plan procurement management, Conduct procurement, Control procurements.

8 Hrs

Unit V

Project stake holder management: Identify stake holders, Plan stake holder management, Manage stake holder engagement, and Monitor stake holder engagement. A case study relevant to the domain knowledge of the department is taken up to explain the principles of the project management as brought out above.

8 Hrs

TEXTBOOKS:

1	Ghattas, R.G. & Mc Kee, S.L.	"Practical Project Management", Pearson Education Asia, 2008, ISBN: 978-8131707418

REFERENCE BOOKS:

1	Prasanna Chandra.	Project Planning: Analysis, Selection, Implementation and Review, MC- Graw Hill Education, 8E, 2017, ISBN: 9789332902572.

Course Outcomes: After the completion of the course the student will be able to:

CO1: Manage the scope, cost, timing, and quality of the project, at all times focused on project success as defined by project stakeholders.

CO2: Identify project goals, constraints, deliverables, performance criteria, control needs, and resource requirements in consultation with stakeholders.

CO3: Implement project management knowledge, processes, lifecycle and the embodied concepts, tools and techniques in order to achieve project success.

CO4: Interact with team and stakeholders in a professional manner, respecting differences, to ensure a collaborative project environment.

CO5: Apply project management practices to the launch of new programs, initiatives, products, services, and events relative to the needs of stakeholders.

IMMUNOLOGY AND IMMUNOTECHNOLOGY

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Course Code	:	6RBT01	SEE Marks	:	50

Course Objectives: The objectives of this course are

1. Study the different types of cells and organs of immune system
2. Understand the importance of B-cell and T-cell functions in immune response.
3. Learn the concepts of tolerance, hypersensitivity reactions and autoimmune diseases.
4. Study the mechanism of transplantation and role of immunosuppressant.
5. Understand the concepts of immunological techniques in diagnosis of diseases.

Unit I

The Immune System: Introduction - anatomy of immune system, cells and organs of the immune system - Primary and secondary Lymphoid organs, antigens, different characteristics of antigens, mitogens, hapten, immunogen and adjuvants.

Classification of Immune Responses: Types of immune responses – Racial, special and individual, Classification of immune system – innate - Skin and mucosal surface, Physiological Barriers, Phagocytic Barriers, Inflammation and adaptive immunity.

8 Hrs

Unit II

Humoral Mediated Immunity: B-lymphocytes and their activation - T-cell dependent activation and T-cell independent activation; structure and function of immunoglobulins, immunoglobulin classes and subclasses, idiotypes and anti-idiotypic antibodies, genetic control of antibody production.

Cell-Mediated Immunity: Thymus derived lymphocytes (T cells) - their ontogeny and types- T_H cells, T_S cells, Tc cells and T_D cells, mechanisms of T cell activation ,MHC Complex – Structure, classification and its biological role, antigen presenting cells (APC) – professional and non-professional, macrophages, dendritic cells, langerhans cells, mechanism

of phagocytosis, Antigen processing and presentation – class I and class II MHC.

8 Hrs

Unit III

Immune Regulation and Tolerance: Complement activation - classical, properdin and lectin pathway and their biological functions – complement fixation test, cytokines and their role in immune response, immunotolerance and its types - Low zone, High zone, Classical and Infectious tolerance, Theories of Tolerance Induction – central and peripheral, Hypersensitivity & its types - immediate and delayed type; Coombs' and Cell classification.

Immunological Disorder: Overview of Auto immunity; criteria and causes of autoimmune diseases - Autoimmune haemolytic anemia, myasthenia gravis and rheumatoid arthritis.

8 Hrs

Unit IV

Transplantation Immunology: Immunological basis of graft and its types - autograft, allograft, isograft and xenograft, types of rejection – hyperacute, acute and chronic and mechanism of graft rejection, role of HLA in graft rejection; cellular and molecular mechanism – direct and indirect presentation, tissue typing, immunosuppression - definition and immunosuppressive drugs – glucocorticoids, cytostatics, antibodies and drugs on immunophilins.

Tumor of the Immune System: Tumor specific antigens and its types – TSA and TAA, tumor potent immune response – NK cells and Macrophages.

8 Hrs

Unit V

Molecular Immunology: Application of PCR technology to produce antibodies, Production of monoclonal and polyclonal antibodies and their applications. Stem cells isolation, culturing and applications to immunology.

Immunological Techniques: Antigen antibody interaction – Precipitation reactions, Agglutination reactions, Blood typing- A, B, ABO & Rh, principles and applications of ELISA, Radioimmunoassay (RIA), immuno-

electrophoresis, Immunofluorescence, chemiluminescence assays and flow cytometry.

7 Hrs

TEXT BOOKS:

1	Kuby	Immunology, W. H. Freeman & Company, 8th Edition, 2018, 1319114709
2	Ashim K Chakravarthy	Immunology & Immunotechnology, Oxford University Press, 1st Edition, 2011, 9780195676884

2	Abul Abbas Andrew Lichtman Shiv Pillai	Cellular and Molecular Immunology, Elsevier, 9th Edition, 2017, 9780323479783

Course Outcomes: Upon completion of this course the student will be able to

CO1: Classify and describe the functions of the cells and organs of the immune system in defensive mechanism.
CO2: Illustrate the immune response against infectious antigens.
CO3: Interpret and analyse the role of complement system and tolerance against foreign elements and compare different types of hypersensitivity reactions.
CO4: Analyse the mechanism of graft rejection in transplantation and the importance of immunosuppressant.
CO5: Outline the concepts of vaccine and antibody production and apply immunological techniques to diagnose diseases.

BIOMOLECULAR SIMULATIONS

Contact Hrs./ Week	: 3+0+0 (L+T+P)	Credits:	3
Total Lecture Hrs.	: 39	CIE Marks:	50
Sub. Code	: 6RBT02	SEE Marks:	50

Course Objectives: The objectives of this course are

1. Study the basic concepts of molecular dynamics (MD) simulations.
2. Learn molecular mechanics force filed and atomic interactions.
3. Understand the preparation of system for molecular dynamics simulation and its minimization.
4. Learn ensemble system and its associated concepts.
5. Understand the applications of molecular dynamics simulations.

Unit I

Basic concepts of Molecular dynamics simulations: Structural aspects of Biomolecules: Nucleic acids, Proteins, Lipids and Carbohydrates. A brief history of computer simulations; Motivation to perform computer simulation; Introduction to molecular dynamics simulation, Principles of Molecular dynamics simulation: Newtons laws of motions, assumptions in Molecular dynamics simulation; Global Molecular dynamics algorithm; Preparation of Biomolecules for Molecular dynamics simulation: Proteins, Lipids, Nucleic acids and Carbohydrates. Protein modelling (Homology modelling only), Ligand preparation for molecular dynamics simulations and Preparation of the Protein-ligand complex. Protein Solvation: Necessity of solvation, Implicit solvation, explicit solvation. Adding Ions: Necessity of adding ions, points to remember while adding ions. Comparison between all-atom, united-atom and coarse-grained simulations.

8 Hrs

Unit II

Molecular mechanics force field: Bond theory: Bonded and non-bonded interactions in biomolecules, Simple Molecular mechanics force field: Four-component model (inter and intra molecular components); Properties of force fields; Bonded and non-bonded terms in force fields: Bond stretching, Angle bending, Torsion angle, Electrostatic interactions, Van der Waals interactions (Lennard-Jones potential) (only expressions with graphs for bonded and non-bonded terms except Bond stretching where derivation is also included). A simple force filed model for the simulation of liquid water, Force field parameterization, Transferability of force field parameters. Preparation of force filed parameters of Ligand molecules,

tools to prepare force filed parameters for ligands. List of force fields for different Biomolecules.

8 Hrs

Unit III

Energy Minimization and ensemble systems: Essentiality of energy minimization; Energy minimization techniques: Non-derivative energy minimization (simplex method and sequential univariate method) and derivative energy minimizations methods (Steepest descents method, line search in one dimension method, and conjugate gradients minimization) System equilibration: Ensembles; Microcanonical ensemble, canonical ensemble, Isothermal-Isobaric ensemble, Grand canonical ensemble; Production run in Molecular dynamics simulation. Simple packages of Molecular dynamics simulation and its force fields: GROMACS, AMBER, and NAMD.

8 Hrs

Unit IV

Molecular dynamics (MD) simulation method: A simple molecular dynamics simulation; Interaction potential and Reduced Units; Time averages and ensemble averages, Calculation of simple thermodynamic properties; Radial distribution function; Phase space; Setting up and running simulation; Choosing the initial configuration; Boundaries and periodic boundary condition; Truncating potential and minimum image convention; Long range forces; System initialization: A simple MD algorithm; Calculation of forces; Numerical integration: Verlet algorithm, Velocity Verlet algorithm, Leap frog algorithm, and Predictor Corrector algorithm.

8 Hrs

Unit V

Applications of MD simulations: Simple analysis of MD simulations: RMSD (Root mean square deviation), RMSF (Root mean square fluctuation), Secondary structure prediction, H-bond analysis, MMPBSA (Molecular mechanics Poisson-Boltzmann surface area) analysis, Analysis of protein cavities, Protein domain's orientation analysis, SASA (Solvent accessible surface area), RDF (Radial distribution function), Rg (Radius of gyration)**.** MD simulations for Protein-ligand interactions (One case study);

MD simulations for protein domain movement (One case study); MD simulations lipid bilayer and Biphasic system (One case study).

Note: Scientific articles used as case study, will be open access and freely available journals.

7 Hrs

TEXT BOOKS:

1	Andrew R. Leach	Molecular Modeling: Principles and Applications, Pearson, 5th Edition, 2013, 97801956884

REFERENCE BOOKS:

1	Ben Leimkuhler, C Matthews	Molecular Dynamics, Springer International publishing, 4th Edition, 2015, 87801956884
2	Guy FanacisMongelli	Molecular dynamics simulations: Key operations in GROMACS, Walter de Gruyter, 7th Edition, 2018, 87801956884
3	D. C. Rapaport	The Art of Molecular Dynamics Simulation, Cambridge University Press, 6th Edition, 2004, 97801957884

Course Outcomes: Upon completion of this course the student will be able to

CO1: Analyse the concepts at molecular mechanics scale using biomolecular structures.
CO2: Apply the appropriate force field method for MD simulations using the force field parameters.
CO3: Classify various energy minimization and system equilibration methods for molecular dynamics simulations.
CO4: Interpret and analyse the aspects of simulation box for system preparation.
CO5: Apply and interpret the various analysis methods used to evaluate the simulated trajectory.

RESEARCH METHODOLOGY, BIOSAFETY AND BIOETHICS

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Course Code	:	6RBT03	SEE Marks	:	50

Course objectives: The objectives of this course are

1. To understand research methodology, research design and methods.
2. Provide a knowledge on developing a research plan
3. Gain insights into ethical issues and genetically modified organism
4. Provide knowledge on bioethics, biosafety and risk assessment.
5. Discuss the concepts of intellectual property rights and patenting.

Unit I

Introduction to research: Science & research. Basic & applied research, steps in research meaning, objectives and characteristics of research - research methods vs methodology - types of research - descriptive vs. analytical, applied vs. fundamental, quantitative vs. qualitative, conceptual vs. empirical - research process. Criteria of good research. Developing a research plan.

7 Hrs

Unit II

Research design and methods: Research design – basic principles. Need of research design. Features of good design, important concepts relating to research design. Observation and facts, laws and theories. Prediction and explanation, induction, deduction, development of models. Developing a research plan - exploration, description, diagnosis, and experimentation. Determining experimental and sample designs.

7 Hrs

Unit III

Biosafety-Regulatory Framework for GMOs in India & at International Level:

Regulatory framework in India governing GMOs-Recombinant DNA Advisory Committee (RDAC), Institutional Biosafety Committee (IBSC), Review Committee on Genetic Manipulation, Genetic Engineering Approval Committee (GEAC), Recombinant DNA Guidelines (1990), Revised Guidelines for Research in Transgenic Plants (1998), Seed Policy

(2002), Prevention Food Adulteration Act (1955), The Food Safety and Standards Bill (2005), Plant Quarantine Order (2003), Regulation for Import of GM Products Under Foreign Trade Policy (2006-2007), National Environment Policy (2006). Rules for the manufacture, use/import/export and storage of hazardous microorganisms/genetically engineered organisms or cells (Ministry of Environment and Forests Notification, (1989). Convention of Biological Diversity (1992) – Cartagena Protocol on Biosafety – Objectives and salient features of Cartagena Protocol. Understand the legal steps involved in progressing a new drug to market. Grasping the current regulatory acts and safety norms of the modern pharmaceutical industries.

8 Hrs

Unit IV

Bioethics:

Patenting live microorganism, Human Genome project and ethical issues, Animal cloning, human cloning and their ethical issues. Experimenting on animals. Public education of producing transgenic organism, legal and socioeconomic impacts of biotechnology, testing drugs on human volunteers, Hazardous materials used in biotechnology, their handling and disposal.

8 Hrs

Unit V

Intellectual Property Rights: Introduction and the need for intellectual property right (IPR) - Kinds of Intellectual Property Rights: Patent, Copyright, Trade Mark, Design, Geographical Indication, Plant Varieties and Layout Design – Genetic Resources and Traditional Knowledge – Trade Secret - IPR in India : Genesis and development – IPR in abroad - Major International Instruments concerning Intellectual Property Rights: Paris Convention, 1883, the Berne Convention, 1886, the Universal Copyright Convention, 1952, the WIPO Convention, 1967,the Patent Co-operation Treaty, 1970, the TRIPS Agreement, 1994 India`s New National IP Policy, 2016 – Govt. of India step towards promoting IPR – Govt. Schemes in IPR – Career Opportunities in IP - IPR in current scenario with case studies.

9 Hrs

TEXT BOOKS:

1	C.R. Kothari and Gaurav Garg	Research Methodology: Methods and Techniques, New age international Publisher, 4th Edition, 2019, 9386649225
2	Sateesh M. K	Bioethics & Biosafety, IK Publishers, 2nd Edition, 2008, 9788190675703
3	T. M Murray and M.J. Mehlman	Encyclopedia of Ethical, Legal and Policy issues in Biotechnology, Wiley, 3rd Edition, 2000, 9780471176121

1	Zvonimir Koporc	Ethics and Integrity in Health and Life Sciences Research, Emerald Publishing Limited, 4th Edition, 2018, 1787435725
2	Padraig Murphy	Biotechnology, Education and Life Politics: Debating genetic futures from school to society, Routledge, 1st Edition, 2014, 0415707358

Course outcomes: Upon completion of this course, the students will be able to

CO1: Classify the types of research and apply the knowledge to develop research plan

CO2: Identify the research design and describe the research plan

CO3: Describe the various ethical issues and principles in production of GMO's

CO4: Classify biosafety levels for handling microorganisms and also describe the roles of biosafety guidelines

CO5: Classify the types of intellectual property (IP) and Apply IPs to protect new research outcome

SYNTHETIC AND SYSTEM BIOLOGY

Contact Hrs./ Week	: 3+0+0 (L+T+P)	Credits:	3
Total Lecture Hrs.	: 39	CIE Marks:	50
Sub. Code	: 6RBTE611	SEE Marks:	50

Course Objectives: The objectives of this course are

1. To understand research methodology, research design and methods.
2. Provide knowledge on developing a research plan.
3. Gain insights into ethical issues and genetically modified organism.
4. Provide knowledge on bioethics, biosafety and risk assessment.
5. Discuss the concepts of intellectual property rights and patenting.

Unit I

Introduction to Synthetic biology & Systems biology:
Introduction to synthetic biology. Background of Gene Regulatory Mechanisms (Gene Parts- Gene Structure, Promoters, Terminators, Enhancers, Inducers, Repressors, Transcription Factors, Co-factors, transcriptional and post-transcriptional regulation, post-translational modifications). Genetic Engineering and Genome Editing Various Omics & role in systems biology - genomics, proteomics, transcriptomics, metabolomics.

7 Hrs

Unit II

Elements of synthetic biology - Tools, circuits, BioBricks:
Gene shuffling for large scale pathway assembly and engineering; Choices for microbial hosts for industrial applications– bacteria, yeast, insect. Gene editing methods – CRISPR/Cas; Gene sequencing – Pyrosequencing, Nanopore sequencing. Bacterial circuits: feedback, feed-forward, toggle switch, signal propagators and band filter, synchronized oscillators. Introduction to Bio Bricks & its applications. Microarrays & systems biology - a basic introduction.

8 Hrs

Unit III

Mathematical Modelling and Simulation: Noise in Gene Expression. Mathematical Modeling and Simulation. Biosensors. Application of software tools for modelling gene expression. Various markup languages

used in systems biology. Introduction to various metabolic pathway databases.

8 Hrs

Unit IV

Commercial Applications: Biomedicine, Biomaterials, Biofuels and Bioremediation; Production of artemisinin as case study. Building the new bio-economy. Introduction to Biofoundries & circuits. Role of automation and robotics in biofactories; Green chemistry - use of plants for engineering biologics & small molecules. Biosurfactants as an example of microbial cell factory-based production. Global events & competitions- iGEM, synbiobeta.

9 Hrs

Unit V

Regulations & ethics: Current Governance and Regulation. Synthetic biology regulation and governance: Lessons from TAPIC for the United States, European Union, and Singapore. Environmental, Ethical and Social Aspects. Biosecurity. Humans and Nature: The Prospect of Synthesizing Living Things. Private Concerns and Public Engagement. The Effects on People: Risks and Potential Benefits. Distribution and Representation: Concerns about Justice. Engineering and ethical perspectives in synthetic biology. Rigorous, robust and predictable designs, public engagement and a modern ethical framework. Ethical and philosophical challenges in synthetic biology.

7 Hrs

TEXT BOOKS:

1	Uri Alon	An Introduction to Systems Biology: Design Principles of Biological Circuits, Chapman & Hall/CRC, 2nd Edition, 2019, 9781439837177.
2	Christina Smolke	Synthetic Biology: Parts, Devices and Applications (Advanced Biotechnology), Wiley, 1st Edition, 2018, 978-0-470-71397-6

2	Markus Schmidt	Synthetic Biology: The Technoscience and its Societal Consequences, Springer, 2nd Edition, 2009, 978-9048126774

Course Outcome: Upon completion of this course the student will be able to:

CO1: Classify various dynamic programming algorithms on biological systems.
CO2: Describe signal transduction at cell membranes and other signaling pathways.
CO3: Analyze signal transduction databases applications for laboratory and research use.
CO4: Interpret and analyze the simulation of whole cell and biological cell modelling.
CO5: Apply molecular modeling software to analyze the interactions in bio-molecules.

CHEMICAL EQUIPMENT DESIGN

Contact Hrs./ Week	: 3+0+0 (L+T+P)	Credits	: 3
Total Lecture Hrs.	: 39	CIE Marks	: 50
Sub. Code	: 6RBTE612	SEE Marks	: 50

Course Objectives: The objectives of this course are

1. Explain the fundamental and mechanical design of equipment
2. Understand concept of designing the fermenter/reactor
3. Learn the validation of evaporator design results.
4. Study the designing of the Heat exchanger
5. Study design aspects of distillation in industries.

Unit I

Introduction: Basic considerations in design. General design procedure. Various components of process equipment. Design Considerations: Material selection. Factors affecting design. Vessel Component Design: Types of supports for vessels - Bracket, Lug, Leg, Saddle and Skirt supports. Design of flanges & nozzles – Classification of flanges. Flange thickness calculation. Design of vessel closures – Flat plates, Formed heads, Elliptical & Hemispherical heads.

7 Hrs

Unit II

Reaction Vessels/Fermenter: Design of jackets. Design of reaction tanks with agitation and jacket. Types of agitators, baffles. Power requirement calculations. Design of tank dimensions and agitation system components. Drive calculations & selection of accessories. Numerical conceptual.

8 Hrs

Unit III

Design of Evaporator: Design of Evaporator – Single effect, Numerical conceptual.

8 Hrs

Unit IV

Heat exchanger: Design of Shell and Tube Heat exchanger and pressure drop calculations, Numerical conceptual.

8 Hrs

Unit V

Distillation Column: Introduction, reflux considerations, total reflux, minimum reflux, optimum reflux ratio, feed point location, McCabe-Thiele method – procedure, Distillation column design, Plate Contactors-Bubble Cap, sieve plate, Valve plates, Diameter of column. Numerical conceptual.

8 Hrs

TEXT BOOKS:

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe the concepts of basic fundamentals of design of equipment.
CO2: Design of fermenter/reactor
CO3: Design of evaporator according to the process conditions
CO4: Design of Heat Exchanger at different loads
CO5: Design of Distillation column according to the feed conditions

BIOPHARMACEUTICAL MANUFACTURING TECHNOLOGY AND QUALITY CONTROL

Contact Hrs./ Week	: 3+0+0 (L+T+P)	Credits	: 3
Total Lecture Hrs.	: 39	CIE Marks	: 50
Sub. Code	: 6RBTE613	SEE Marks	: 50

Course Objectives: This course will enable students to

1. Understand the concept of biopharmaceuticals manufacturing science.
2. Insight into the pharmacokinetic and Pharmacodynamic profile of new drug candidates.
3. Learn the principles of immunodiagnostics and other molecular biological tools.
4. Insight to manufacturing guidelines.
5. Understand the biopharmaceutical industry and role of CRO.

Unit I

Introduction to Pharmaceutical Biotechnology: scope, Development of drugs and pharmaceutical industry-organic therapeutic agent's uses and economics, regulatory bodies, introduction to drugs and cosmetics act, overview and important schedule C and C1, schedule M, Schedule Y.

7 Hrs

Unit II

Pharmacokinetics and Pharmacodynamics: Introduction to pharmacokinetics and pharmacodynamics, Drug metabolism- half-life of drugs, physico chemical principles, Biotransformation/pharmacokinetic studies, elimination and distribution of protein therapeutics, pharmacodynamics principles.

8 Hrs

Unit III

Recent Advances in Pharmaceutical Biotechnology: Introduction to nutraceuticals, edible vaccines, Introduction to Health Bioinformatics, pharmacogenomics. Commercially available important diagnostic kits, diagnostic kits for detection of blood sugar, HIV, Malaria etc, recent advances in diagnostic kits.

8 Hrs

Unit IV

Manufacturing Principles: Manufacturing facilities, Clean room concept introduction to recombinant DNA technology and production of important therapeutic biopharmaceutical like haemopoietic growth factors

(interleukins, erythropoietin's), therapeutic hormones (insulin, human growth factor) and blood products.

8 Hrs

Unit V

Formulations of Biopharmaceutical, Analysis and Control: Manufacturing facilities, excipients used in parental formulations, shelf life of protein based pharmaceuticals, delivery of protein (rate controlled, target specific, site specific, soluble carrier system etc) Analytical methods for the tests for various drugs and pharmaceuticals, different packaging techniques, quality control.

8 Hrs

2	Signore AA, Jacobs T.	Good Design Practices for GMP Pharmaceutical Facilities, CRC Press, 2nd Edition, 9781482258905

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Correlate the importance of Pharmacy with other basic science for development of novel therapeutics and diagnostics.
CO2: Assess pharmacokinetic and Pharmacodynamic profile of new drug candidates.
CO3: Comprehend the principles of immunodiagnostics or other molecular biological tools for disease management.
CO4: Apply GMP / GLP guidelines in development or processing of Biopharmaceuticals.
CO5: Competent to serve in Pharmaceutical Industry/clinical research organization.

IMMUNOLOGY AND IMMUNOTECHNOLOGY LABORATORY

Lab Hours/ Week	: 0+0+3 (L+T+P)	Credits	: 1.5
Course Code	: 6RBTL01	CIE Marks	: 50
		SEE Marks	: 50

Course Objectives: The objectives of this course are

1. Study the importance of antigen-antibody interaction in various techniques.
2. Understand the basic concept of Blood Grouping and Rh typing.
3. Isolate and identify different types of lymphocytes from blood sample.
4. Study the basics of blotting technique and their importance in diagnosis of antigen/antibody.
5. Study different type of body fluids for the presence antibodies and antigens like blood, urine and saliva.

List of Experiments:

1. Agglutination techniques: (a) Blood group identification (b) Rh typing.
2. Separation of Lymphocytes from blood.
3. Total red blood cell (RBC) count using hemocytometer (micro dilution & macro dilution method).
4. Total white blood cell (WBC) count.
5. Ouchterlony double diffusion: antigen-antibody patterns.
6. Radial immunodiffusion.
7. Countercurrent immunoelectrophoresis.
8. Rocket immunoelectrophoresis.
9. Dot Elisa.
10. Western Blot.
11. Southern Blot – Demo
12. Northern Blot - Demo
13. Latex Agglutination
14. Alkaline Hemoglobin Electrophoresis

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe the immunotechnique which are used as diagnostic tools in detection of various diseases.
CO2: Analyse and interpret the basic concept of Blood Grouping and Rh typing.
CO3: Isolate and identify different types of lymphocytes from blood sample.
CO4: Explain the principle blotting technique and their importance in diagnosis of antigen /antibody.
CO5: Analyse variety of body fluids for the presence antibodies and antigens like blood, urine and saliva.

BIOMOLECULAR SIMULATIONS LABORATORY

Lab Hours/ Week	: 0+0+3 (L+T+P)	Credits	: 1.5
Sub. Code	: 6RBTL02	CIE Marks	: 50
		SEE Marks	: 50

Course Objectives: The objectives of this course are

1. Study the basic concepts in preparing the protein, ligand and other bio molecular system.
2. Perform the preparation of Protein-ligand complex followed by system minimization.
3. Learn to perform system equilibration and molecular dynamics production run.
4. Learn the basic analysis tools and perform molecular dynamics simulation in Desmond.
5. Perform the complete molecular dynamics simulation using GROMACS.

List of experiments:

1. Protein preparation and Protein modelling using Modeller and other tools.
2. Ligand Preparation and preparation of Ligand force field.
3. Preparing other Biomolecules for Molecular dynamics simulation for GROMACS simulation package
4. Preparation of the protein-ligand complex, Vacuum Minimization, periodic boundary condition, system solvation, adding ions and energy minimization
5. System equilibration in NVT and NPT ensemble system and production run
6. RMSD, RMSF, Rg, SASA and Secondary structure analysis
7. Hydrogen bond, Protein pocket analysis
8. MMPBSA analysis on simulation trajectory
9. PCA analysis on simulation trajectory
10. Simple protein simulation using Desmond
11. A simple protein-ligand simulation using GROMACS
12. Result analysis on protein simulation using Desmond
13. Result analysis on protein simulation using GROMACS

TEXT BOOKS:

3	D. C. Rapaport	The art of molecular dynamics simulation, Cambridge university press, 6th Edition, 2004, 97801957884

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Prepare the protein, ligand and bio molecular system suitable for performing molecular dynamics simulation.
CO2: Perform basic MD operations to prepare protein-ligand complex followed by system minimization.
CO3: Carryout system equilibration of ensemble systems and perform molecular dynamics simulation using GROMACS package.
CO4: Use various data analysis tools to validate the system. Also, perform similar kind of analysis using DESMOND.
CO5: Independently perform an open-ended experiment.

MINI –PROJECT

Contact Hrs./ Week	: 03	Credits :	2
Sub. Code	: 6RBTP01		

Mini-project work will be started at the beginning of the semester. The students are doing the literature, prerequired experiments in connected to the projects allotted/selected by them. Students have to give the presentation on progress of Mini-project work once in a month. The progress of the Mini-project will be evaluated by the Department Project Evaluation Committee (DPEC).

SCHEME & SYLLABUS

OF

VII & VIII SEMESTERS

B.E. BIOTECHNOLOGY

2022-23

(175 credits scheme)

VISION AND MISSION OF THE DEPARTMENT

VISION:

To be a center of excellence in education and research in Biotechnology to address the global challenges

MISSION:

1. To establish close collaboration with industry to offer industry-relevant curricula and pursue demand driven research.
2. To continuously upgrade the infrastructure to develop the state-of-the-art facilities for training and research.
3. To provide a good learning environment to help students imbibe professional ethics, communication skills, team spirit and societal commitment.
4. To offer skill development programs to enhance employability of graduates in collaboration with industry and Government support.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

Graduates from the Biotechnology program are expected to achieve the following Program Educational Objectives within a few years of graduation:

1. The graduates of the program are practicing engineering profession as clinical data coordinator, clinical research associate, IT system engineers, bioinformatics analyst, Quality controller and Quality assurance analyst, business development executive, research associate with a strong skill set as data analyst, product specialist, computer programmer, molecular biologist, good planning, communication and execution ability for IT and BT industries.

2. The graduates of the program are engaged in higher studies leading to professional degree in specific domain such as biological sciences, computational biology and also engaged in life-long learning.

3. The graduates of the program practice profession with high ethical and moral values and have developed good communication skills and leadership qualities while working as a member of the team or as a team leader.

PROGRAM SPECIFIC OUTCOMES (PSOs):

1. Students will be able to conduct the Upstream and Downstream experiments to produce, optimize, separate, purify and characterize biological compounds.

2. Students will be able to solve advanced biological problems with the technical skills of Bioinformatics, Biomolecular simulation, Proteomics and Genomics using computational techniques.
3. Students will be able to analyse Biopharmaceutical challenges of Biological systems by applying the concepts of Biological sciences.

PROGRAMME OUTCOMES (POs)

PO1	**Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
PO2	**Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	**Environment and sustainability:** Understand the impact of the

	professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	**Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	**Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	**Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	**Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	**Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

BIOPROCESS CONTROL AND AUTOMATION

Contact Hours/ Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Subject Code	:	7RBT02	SEE Marks	:	50

Course Objectives: The objectives of this course are

1. Understand the concepts of first order systems and its response for various types of input.
2. Conceptualize the importance of interacting and Non-interacting systems.
3. Study the importance various controllers and final control elements.
4. Understand the concepts of Open loop system and Closed loop system.
5. Study the various criteria involved in stability of a system and performing stability test.

Unit I

Introduction: The Laplace transform definition, transforms of simple functions, inversions by partial fractions, initial-value theorem, final value theorem. First order systems: Mercury in glass thermometer, liquid level system, liquid level process with constant flow outlet, Response of first order system for step, pulse, impulse and sinusoidal changes in input, linearization, conceptual numerical.

8 Hrs

Unit II

First order systems in series: Interacting system, non-interacting systems, generalization of several non interacting systems in series. Dynamic response to step, pulse and impulse inputs for interacting and non-interacting systems; conceptual numerical. Second order systems: Second order systems with transfer functions (spring-damper, control valve), response of second order system to step, pulse/impulse and sinusoidal input – Over damped, under damped and critically damped condition of second order system, transportation lag.

8 Hrs

Unit III

Controllers and Final control elements: Block diagram, negative feedback versus positive feedback, development of block diagram, measuring element, final control elements, Actuators, Positioners, Valve body, Valve plugs, Characteristics of final control elements, controllers – two position control, proportional control, derivative control, integral control, P-I (proportional-integral) control, P-D (proportional- derivative) control, P-I-D (proportional-integral-derivative) control, conceptual numerical.

7 Hrs

Unit IV

Closed loop control systems: Standard block diagram symbols, overall transfer function for single loop systems, overall transfer function for change in set point, overall transfer function for multiloop control systems, servo and regulatory problems. Transient response of first and second order processes for set point changes and load changes with proportional and PI controllers, conceptual numerical.

7 Hrs

Unit V

Controller design and stability: Concept of stability, definition of stability, Criteria for stability, Routh test for stability, routh array, theorems of the routh test concept of Root locus (basics), plotting the root locus diagram, rules for plotting the root locus diagram, Introduction to frequency response, substitution rule, generalization, transportation lag, Bode criteria for stability, gain and phase margins, Conceptual.

9 Hrs

TEXT BOOKS:

1	Donald R Coughanowr	Process System analysis and Control – 2nd Edition, McGraw Hill, 1991. 0-07-l 00807-l
2	George Stephanopoulos	Chemical Process Control—new edition, Prentice-Hall of India, 2008, 8172484030

REFERENCE BOOKS:

1	Seborg, Edger, Mellichamp, Doyle	Process dynamics and Control, 3rd edition, John Wiley and Sons, 9780470128671
2	Jonathan Love	Process Automation Handbook, A Guide to Theory and Practice, 2007, 978-1-84628-282-9,

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Apply the mathematical concept of laplace transform to obtain the transfer function of various first order systems like thermometer and liquid level process.

CO2: Describe and develop the transfer functions associated with second order systems for different inputs.

CO3: Describe block diagram and various types of controllers for process control operations.

CO4: Analyse the transient responses for various first and second order systems for set point and load changes.

CO5: Apply different tests to the control systems to interpret the stability.

GENOMICS AND PROTEOMICS

Contact Hrs/ Week	: 4+0+0 (L+T+P)	Credits:	4
Total Lecture Hrs	: 52	CIE Marks:	50
Sub. Code	: 7RBT03	SEE Marks:	50

Course Objectives: The objectives of this course are

1. Understand the genomics and proteomics sequencing techniques
2. Classify the genome analysis techniques
3. Understand the concepts of mass spectrometry and its approaches for obtaining protein sequence information
4. Classify the types of proteomics approaches for quantifying protein expressions
5. Apply bioinformatics tools/software for data genomic and proteomic analysis

Unit I

Introduction to Genomics Major Differences between Eukaryotic and Bacteria and Archaea. General features of Eukaryotic genomce and chromosomes. C value paradox, organization of eukaryotic genomes into chromosomes. Analysis if chromosomes using Genome Browser, BioMart and biomaRt. Analysis of chromosome by the ENCODE project (scope and conclusions). Eukaryotic genome (noncoding and repetitive DNA sequence, Transposan derived repeats). Processed pseudogenes, simple sequence repeats and segmental duplications. Gene content of eukaryotic chromosomes, finding genes in eukaryotic genomes. Resources for studying Protein coding-genes (RefSeq, UCSC genes and GENCODE.)

10 Hrs

Unit II

Sequencing Technologies: Genome Sequencing & Genome Projects: DNA sequencing methods: Sanger dideoxy method, Maxam Gilbert method, Pyrosequencing, Automated Fluorescence method, Nanopore. Introduction to Next Generation Sequencing technology (NGS).

Significant applications of NGS technologies. Comparison of NGS technologies with Sanger sequencing. Workflow of NGS experiments (from experimental design to analysis) – the experimental design and sample preparation, generating sequence data to FASTQ analysis and Genome assembly. Software: FASTQC and velvet. Genome analysis: Main types of genome analysis: Denovo sequencing, requencing, transcriptome and epigenetics. Large scale –model organism sequencing projects: 1001 genome project, genome 10k project, Drosophila genetic reference panel, 1000 fungal genome project, mouse genome project and million mutation project.

10 Hrs

Unit III

Introduction to Proteomics: The life cycle of a protein. Proteomics: introduction, basic principles of proteomics. The origin and scope of proteomics. Proteomics and the new biology. The Proteome and the Genome. Deducing the proteome from the genome. Overview of analytical proteomics. Evolution from protein chemistry to proteomics. Protein sequencing and techniques: Protein sequencing by Edman technique. Molecular biology techniques mass spectrometry techniques. Mass spectrometry-based methods for protein identification: Proteomics approaches: The bottom-up approach and top-down methods. Overview of mass spectrometry-based proteomics. Steps involved in proteomics. Ionization techniques: MALDI and ESI: Concepts, principles and methodology.

10 Hrs

Unit IV

Mass spectrometry: basic principles and instrumentation. Schematic representation of a mass spectrometer. Mass analysers, ion trap and LTQ orbitrap. Quantitative proteomics and protein modifications: Protein quantification: Introduction, types of quantification, principles, and methodology. Isobaric tagging for relative and absolute quantitation (iTRAQ), Tandem mass tag (TMT), stable isotope labelling by amino acids in cell. Posttranslational modification: introduction, types of posttranslational modification. Application of proteomics to study post-translated protein modifications

12 Hrs

Unit V

Bioinformatics analysis of genomics and proteomics data:

Concepts of Genomic and proteomics data, file formats, public databases, analysing genome and proteome data. Functional analysis of genomics and proteomics data: GO term identification and enrichment analysis, pathway analysis, analysis of protein-protein-interactions. Protein domain and motif analysis. Bioinformatics for quantitative temporal, spatial, interaction, phenotypic and proteomics.

10 Hrs

3	Gibson G & Muse SV	A Primer of Genome Science, Sinauer Associates, 2nd Edition, 2004, 978-1025101156

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe the concept of genomics and proteomics

CO2: Outline the genome analysis and genome projects.
CO3: Describe proteomics data acquisition methods and differentiate proteomics and genomics
CO4: Classify proteomics approaches and analyze the components of mass spectrometry for protein sequencing
CO5: Apply genome and proteome annotation and data analysis pipeline.

COMPUTER AIDED DRUG DESIGN

Contact Hrs./ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hrs.	: 39	CIE Marks :	50
Sub. Code	: 7RBTE711	SEE Marks :	50

Course Objectives: The objectives of this course are

1. Study the basics of silico drug design and computer assisted lead molecule design
2. Understand the role of molecular recognition in drug discovery process
3. Study the molecular simulation and dynamics of biomolecules
4. Learn how to identify potential lead compounds.
5. Understand different approaches in *silico* drug design.

Unit I

Insilico Drug Design and Computer Assisted New Lead Design: Drug design and discovery: an overview. Introduction, historical perspective, drug compounds, reparation and organization for drug seeking, common stages in the drug seeking campaign, sources of hits, leads and candidate drugs, Natural products: higher plant and animal products, combinatorial libraries, Lead optimization. Introduction, Basic Concepts, Molecular Recognition by Receptor and Ligand Design, Active Conformation, Approaches to Discover New Functions, Approaches to the Cases with known and unknown receptor structureIntroduction to drug metabolism, toxicity and pharmacokinetics, toxicology considerations, problems and drawbacks on drug discovery and development.

8 Hrs

Unit II

Role of molecular recognition in drug design: Introduction, thermodynamic considerations of drug binding, physical basis of intermolecular interactions: enthalpic contributions, entropic contributions, total energy of intermolecular interactions, estimating individual group components in ligand-receptor interactions and co-operativity, rules of thumb.

9 Hrs

Unit III

Molecular Modeling and Simulation: Basic principles of molecular modeling, Steps in molecular modeling - Constructing an Initial Model, Refining the Model, Manipulating the Model, Visualization. Structure Generation or Retrieval, Structure Visualization, Conformation Generation, Deriving Bioactive Conformations, Molecule Superposition and Alignment, Deriving the Pharmacophoric Pattern, Receptor Mapping, Estimating Biological Activities, Molecular Interactions: Docking, Calculation of Molecular Properties, Energy Calculations (no derivation),Examples of Small Molecular Modeling Work, Nicotinic Ligands, Sigma Ligands, Antimalarial Agents and Basic principles of molecular dynamics simulation techniques. Types of programs available for molecular modeling-scope and limitations-interpretation of results.

8 Hrs

Unit IV

Stereochemistry in drug design: Introduction, stereoisomer, origin of stereospecificity in molecular recognition, importance of stereochemistry in drug design, methods of obtaining pure stereoisomer: resolution of racemates by crystallization of diastereomers, enantioselective chromatography, analytical methods of determining purity of stereoisomer: optical rotation, NMR spectroscopy, gas chromatography, capillary electrophoresis, mass spectroscopy.

8 Hrs

Unit V

Design and applications of prodrugs: The prodrug concept: definition, barriers to drug action, prodrug design in an industrial setting. Choice and function of the pro-moiety: cleavability of the prodrug bond, modification of physicochemical properties, macromolecular transport vectors. Bioreversible derivatives for various functional groups: Esters as a prodrugs for compounds containing carboxyl or hydroxyl groups, prodrugs for amides, imides and other NH-acidic compounds, prodrugs for amines, carbonyl groups, drug activation from intermolecular cyclization reactions, cyclic prodrugs involving two functional groups of the drug, applications of prodrug.

6 Hrs

TEXT BOOKS:

1	Povl Krogsgaard and Larsen	Molecular modelling, Multivista Global Ltd., 1st Edition, 2002, 978-0298789424
2	Andrew R Leach	Molecular modelling: Principles and Applications, Pearson Education ltd., 2nd Edition, 2001, 978-0198129436

REFERENCE BOOKS:

1	Ben Leimkuhler, C Matthews	Molecular Dynamics, Springer International publishing, 3rd Edition, 2015, 978-0298129456

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe the process of *In Silico* drug design and computer assisted lead design.

CO2: Analyze the inter-molecular interaction and role of molecular recognition in drug design

CO3: Describe the steps involved in molecular modeling and simulation

CO4: Analyze the methods of determining the stereo-chemistry in drug design.

CO5: Apply the principles of pro drug design and its application in various pharmaceutical industries.

ENZYME TECHNOLOGY

Contact Hours/ Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Subject Code	:	7RBTE712	SEE Marks	:	50

Course Objectives: The objectives of this course are

1. Understand the classification of enzymes and factors affecting enzyme action such as apoenzyme, prosthetic group, co-factors.
2. Learn the kinetics of enzyme catalyzed reactions.
3. Study different mechanisms of enzyme actions with or without cofactors.
4. Understand different production, immobilization and purification methods of enzymes.
5. Learn the applications of enzymes in the industries, in scientific research and in clinical Diagnosis.

Unit I

Introduction to Enzymes:

History of Enzymology: Nomenclature and classification of enzymes; Holoenzyme, Apoenzyme, Cofactor, Coenzyme, Prosthetic group; Enzyme Activity Unit, Turn Over number and other catalytic Bio-molecules. Isozymes and Allosteric Enzymes, Biological Roles of enzymes Activation Energy of enzymes, Chemical nature of enzymes and Active Sites of enzyme and identification of Functional Groups at active sites, Conceptual Numericals.

8 Hrs

Unit II

Kinetics of Enzyme Catalyzed Reactions:

Introduction to Bioenergetics, methods used for investigating the Kinetics of Enzyme Catalyzed Reactions; Principles that explain Catalytic Power and Substrate Specificity of enzymes; Michaelis-Menten equation, Vmax and Km; Enzyme Inhibition, types of Enzyme Inhibitions, and Determination of Ki; Kinetics of Single Substrate and Multi-Substrate Reactions. Regulatory enzymes; Allosteric enzymes and their mode of action, Conceptual Numericals.

9 Hrs

Unit III

Mechanism of Enzyme Action

Effect of enzyme on the Rate and Equilibrium of a reaction, Factors responsible for Catalytic Efficiency of enzyme, Proximity and Orientation Effect, Covalent Catalysis, Strain and Distortion Theory, Mechanism of Action of Enzymes without Cofactors (Lysozyme and Glyceraldehydes 3-Phosphate Dehydrogenases), Mechanism of action of enzymes with Cofactors / Coenzymes, Conceptual Numericals.

7 Hrs

Unit IV

Enzyme production, purification and immobilization

Strategies used for Enzyme Production, Isolation and Purification, Characterization of an Enzymes. Determination of the Molecular Weight (Mr) and the Number of Sub-Units of an enzyme, Immobilization of Enzymes: Concepts, Different Methods of Immobilization, Characterization of Immobilized Enzymes and Application of Immobilized Enzymes.

8 Hrs

Unit V

Industrial Application of enzymes

Industrial Applications of enzymes in Cheese Making and Brewing; Impact of Genetic Engineering on Enzyme Production; Types of Extremeophiles Enzymes and their Applications. Industrial use of Carbohydrases, Proteases and Lipases, Uses of Enzymes in Detergent, Leather, Petroleum, Food and Pharmaceutical Industry.

7 Hrs

TEXT BOOKS:

1	Nicholas C. Price and Lewis Stevens	Fundamentals of Enzymology: Oxford University Press, 3rd edition, 2010, 9780198552970

Course Outcomes: Upon completion of this course the student will be able to:

CO1:Describe the classification of enzymes, chemical nature, enzyme activation and its biological roles.
CO2:Analyze the kinetics of enzyme catalyzed reaction in the presence of substrates and inhibitors.
CO3:Analyze the mechanism of enzyme action and predict the effect of various factors responsible for catalytic efficiency.
CO4:Apply the strategies for production, purification, characterization and immobilization of enzymes
CO5:Identify the applications of enzymes in various industries.

FOOD BIOTECHNOLOGY

Contact Hrs/Week	:	3	Credits	:	3
Total Lecture Hrs	:	39	CIE Marks	:	50
Course Code	:	7RBTE713	SEE Marks	:	50

Course objectives: The objectives of this course are

1. Recognize the various constituents of food, intrinsic and extrinsic parameters that influences the food.
2. Understand the Characteristics, manufacturing process and role of biotechnology in food industry.
3. Acquire comprehensive knowledge of sources of microorganisms found in foods and their detection.
4. Apply the different types to food preservation techniques.
5. Analyze the principles of fluid foods and measurement of various rheological properties.

Unit I

Food science: Introduction, constituents of food, colloidal systems in food, stability of colloidal systems, types of food starches, soluble fiber (pectin, gums, mucilage), protein rich foods, popular fats and oils in foods, factors leading to rancidity and reversion, prevention of rancidity, commercial uses of fats and oils.

Intrinsic and extrinsic parameters of foods: Minerals in foods. Aroma compounds in foods, Food flavours, Browning reactions, Food additives Vitamins, amino acids, minerals. Aroma substances flavour enhancers (monosodium glutamate, nucleotides). Sugar substitutes (sorbitol Sweeteners-saccharin, cyclamate). Food colours. Anti-nutritional factors and food contaminants. Chemical changes during processing of volatile compounds.

8 Hrs

Unit II

Food preservation: Food Preservation using irradiation: Characteristics of radiations in food preservation, Principles underlying the destruction of microorganisms by Irradiation, Processing of foods for Irradiation, application of radiation. Legal status of food irradiation, effect of irradiation on food constituents; food preservation with low temperatures, food preservation with high temperatures, preservation of foods by drying.

8 Hrs

Unit III

Microorganisms in foods: Primary Sources of microorganisms found in foods, Synopsis of Common Food-borne bacteria, genera of Molds, genera of Yeasts. Microbial spoilage of vegetables, fruits, fresh and processed meats, poultry, and seafood.

Detection of microorganisms: Culture, Microscopic and sampling Methods; SPC, Membrane Filters, Microscope colony Counts, Agar Droplets, Dry Films, Most probable Numbers (MPN), Dye-reduction, Roll Tubes, Direct Microscopic Count (DMC), Microbiological examination of surfaces, Air Sampling, Metabolically Injured Organisms, Enumeration and detection of food-borne organisms.

8 Hrs

Unit IV

Food industry: Characteristics of Food Industry. Food manufacturing& processing: Objectives of food processing, effect of processing on food constituents, methods of evaluation of food, proximate analysis of food constituents, Nutritional value, labelling of constituents (soya foods, organic foods, dietary foods (for individuals, for specific groups), nutritional food supplements). Food packaging, edible films. Factors influencing food product development: marketing, and promotional strategies, Market Place, ecologically sustainable production; Risks and benefits of food industry.

Biotechnology in food industry: Applications of Biotechnology to food industry, impact on nutritional quality, utilization of enzymes (hydrolases and lipases), application of immobilized enzymes in food industry, economic aspects, enzyme generation for flavour and aroma compounds, flavour lipid modifications. Tissue Culture techniques, microbial transformations, regulatory and social aspects of BT.

7 Hrs

Unit V

Food technology: Properties of fluid foods, Measurement of rheological parameters, properties of granular food and powders, properties of solids foods. Measurement of food texture. Thermal properties of frozen foods. Prediction of freezing rates: Qualitative explanation via Plank's equation, and Neumann problem. Food freezing equipment: Air blast freezers, Plate freezers and immersion freezers. Food dehydration: Estimation of drying time, constant rate period and falling rate period dehydration.

Equipment: fixed tray dehydration, cabinet drying, tunnel drying. Freeze Dehydration, calculation of drying times, Industrial freeze-drying. Equipment related to pulping, Fruit juice extraction, Dehulling, and distillation. Conceptual numerical.

8 Hrs

TEXT BOOKS:

1	William C. Frazier, Dennis C. Westhoff, N.M. Vanitha	Food Microbiology, McGraw Hill. 5th Edition, 2017, 978-1259062513.
2	Jay, James M, Loessner, Martin J, Golden, David A.	Modern Food Microbiology, Springer. 7th Edition. 2006, 978-0-387-23413-7.

REFERENCE BOOKS:

2	S. Bielecki, J. Polak, J. Tramper. Elsevier,	Food Biotechnology, Elsevier Science Ltd, 1st Edition, 2000, 978-0444505194.

Course outcomes: Upon completion of this course the student will be able to:

CO1: Describe the various constituents of food, intrinsic and extrinsic parameters that influences the food.
CO2: Explain the Characteristics, manufacturing process and role of biotechnology in food industry.
CO3: Analyze the different types of Sources of microorganisms found in Foods and their detection.
CO4: Apply different types to food preservation techniques for various types of food products.
CO5: Illustrate the principles of fluid foods and measurement of various rheological properties.

BIOPROCESS CONTROL AND AUTOMATION LABORATORY

Contact Hours/ Week	:	0+0+3 (L+T+P)	Credits	:	1.5
Subject Code	:	7RBTL02	CIE Marks	:	50
			SEE Marks	:	50

Course Objectives: The objectives of this course are

1. Understand the concepts of various types of transducers and working principle.
2. Understand the dynamics of first order system for various types of input.
3. Study the importance of interacting and Non-interacting systems for various input types.
4. Study the importance various controllers and final control elements
5. Understand the concepts of various controllers in process control.

List of Experiments:

1. Characteristics of Transducers (Temperature).
2. Characteristics of Transducers (Pressure).
3. Characteristics of Transducers (Flow).
5. Dynamics of First order system (mercury thermometer) for step input and impulse input.
6. Non-interacting system responses to step / pulse input
7. Interacting System responses to step / pulse input
8. Temperature controller – responses to set point / load change
9. pH controller – responses to set point / load change
10. Tuning of Flow controller (ZN and CC methods) and responses of tuned P, PI and PID Controllers.
11. Tuning of Pressure controller (ZN and CC methods) and responses of tuned P, PI and PID controllers

TEXT BOOKS:

1	Donald R Coughanowr	Process System Analysis and Control – 2nd Edition, McGraw Hill, 1991, 9340470128456

2	George Stephanopoulos	Chemical Process Control—New Edition, Prentice-Hall of India,2008, 9234470128435

REFERENCE BOOKS:

2	Jonathan Love	Process Automation Handbook, A Guide to Theory and Practice, 978-1-84628-282-9, 2007.

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Interpret the response of various types transducers.

CO2: Solve various problems associated with first order system in series.

CO3: Solve various problems associated with interacting and Non interacting systems.

CO4: Choose suitable controllers and final control element for any process control operations (like flow, pressure, pH, Temperature).

CO5: Address the use of closed loop system in controlling any processes using P, PI, PD, PID controllers.

GENOMICS AND PROTEOMICS LABORATORY

Contact Hours/ Week :	0+0+3 (L+T+P)	Credits:	1.5
Subject Code :	7RBTL03	CIE Marks:	50
		SEE Marks:	50

Course Objectives: The objectives of this course are

1. To Learn protein sample preparation techniques
2. Understand the genome and proteome databases and file format
3. Perform the genomics and proteomics data quality analysis
4. Perform Geneontology analysis
5. Apply Bioconductor R for data analysis

List of Experiments:

1. Protein sample preparation - isolation of proteins from bacterial culture
2. Insoultion digestion – reduction, alkylation and digestion of proteins
3. Working with SRA database for uploading and downloading genomics data
4. Working with PRIDE database for uploading and downloading proteomics data
5. NGS raw data quality checking and validation
6. NGS raw data trimming and validation
7. De novo assembly for RNA data sets
8. Functional analysis of Genomic and proteomics data sets using Gene ontology (GO)
9. Differential expression analysis of Gene / protein list
10. Integrated transcriptomic and proteomics data analysis and protein-protein interaction analysis
11. References genome alignment of Whole Genome (WGS) data sets
12. References genome alignment of Whole Exome (WES) data sets
13. Working with genome browser and genome visualization
14. Demo on CLC genomic workbench

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Able to apply cell disruption methods, isolate proteins and separate on gel
CO2: Identify and analyse raw data generated by next generation sequencing technology.
CO3: Analyse and assembly of raw genomic data derived from next generation sequencing technology.
CO4: Analysis and interpretation of reference genome alignment of raw genomics data.
CO5: Analyse the differentially expressed genes / proteins

MAJOR PROJECT

Contact Hrs./ Week	: 0+0+4 (L+T+P)	Credits :	2
Sub. Code	: 7RBTP01		

Major project work will be started at the beginning of the semester. The students are doing the literature, prerequired experiments in connected to the projects allotted/selected by them. Students have to give the presentation on progress of Major project work once in a month. The progress of the Major project will be evaluated by the Department Project Evaluation Committee (DPEC).

VIII Semester Syllabus
2022-23

INDUSTRIAL SAFETY ENGINEERING

Contact Hours/ Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Subject Code	:	8RBTE812	SEE Marks	:	50

Course Objectives: The objectives of this course are

1. Understand and evaluate appropriate strategies designed to mitigate risk.
2. Understand all reasonably practicable measures to prevent accidents in nuclear installations and to mitigate their consequences.
3. Study the hazards in erection, commissioning, storage, handling, etc, of chemical industries.
4. Understand different types of storage and transportation.
5. Familiarize with various types of operations in industries.

Unit I

Safety in process design and pressure system design: Design process, conceptual design and detail design, assessment, inherently safer design chemical reactor, types, batch reactors, reaction hazard evaluation, assessment, reactor safety, operating conditions, unit operations and equipment, utilities. Pressure system, pressure vessel design, standards and codes- pipe works and valves- heat exchangers- process machinery- over pressure protection, pressure relief devices and design, fire relief, vacuum and thermal relief, special situations, disposal- flare and vent systems failures in pressure system.

8 Hrs

Unit II

Plant commissioning and inspection: Commissioning phases and organization, pre-commissioning documents, process commissioning, commissioning problems, post commissioning documentation. Plant inspection, pressure vessel, pressure piping system, non-destructive testing, pressure testing, leak testing and monitoring- plant monitoring, performance monitoring, condition, vibration, corrosion, acoustic emission-pipe line inspection.

8 Hrs

Unit III

Plant maintenance, modification and emergency planning: Management of maintenance, hazards- preparation for maintenance, isolation, purging, cleaning, confined spaces, permit system- maintenance equipment- hot works- tank cleaning, repair and demolition- online repairs- maintenance of protective devices- modification of plant, problems- controls of modifications. Emergency planning, disaster planning, onsite emergency- offsite emergency.

7 Hrs

Unit IV

STORAGES AND TRASPORTATION: General consideration, petroleum product storages, storage tanks and vessel- storages layout segregation, separating distance, secondary containment- venting and relief, atmospheric vent, pressure, vacuum valves, flame arrestors, fire relief- fire prevention and protection LPG storages, pressure storages, layout, instrumentation, vapourizer, refrigerated storages LNG storages, hydrogen storages, toxic storages, chlorine storages, ammonia storages, other chemical storages- underground storages- loading and unloading facilities- drum and cylinder storage- ware house, storage hazard assessment of LPG and LNG Hazards during transportation – pipeline transport.

7 Hrs

Unit V

PLANT OPERATIONS: Operating discipline, operating procedure and inspection, format, emergency procedures hand over, permit system- start up, and shut down operation, refinery units- operation of fired heaters, driers, storage- operating activities and hazards- trip systems- exposure of personnel. Specific safety consideration for Cement, paper, pharmaceutical, petroleum, petro- chemical, rubber, fertilizer and distilleries.

9 Hrs

TEXT BOOKS:

2	Green, A.E	High Risk Safety Technology", John Wiley and Sons, 1984, 998-1427801212

Course Outcomes: Upon completion of this course, the students will be able to:

CO1: Recommend safety parameters required for the design process of equipment

CO2: Develop safety precautions to be followed in the erection and commissioning of Plants

CO3: Develop emergency preparedness plans for various industries at toxic release scenario

CO4: Plan and develop storage and transportation for various products.

CO5: Develop standard operating procedures for plant operations

NANOBIOTECHNOLOGY

Contact Hours/ Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Subject Code	:	8RBTE813	SEE Marks	:	50

Course Objectives: The objectives of this course are

1. Learn the concept of various types of microscopes to investigate the materials in the Nanoscale.
2. Learn the process of preparation of various types of nanomaterials.
3. Familiarise the diversity in the nanosystems which helps in the synthesis.
4. Learn the interaction between biomolecules & nanoparticle surfaces (Nano-Bio interface).
5. Study the basics of nanomedicine & application of nanotechnology in diagnostics, sensing and therapy.

Unit I

Investigating and manipulating materials in the Nanoscale: Introduction: Nanotechnology definition, History of Nanotechnology, Areas covered by Nanotechnology, Nano and Nature, Investigating and manipulating materials in the Nanoscale: Electron Microscopies; scanning electron microscopy (Basics, Principal Elements, working), transmission electron microscopy (Basics, Principal Elements, working). Scanning probe microscopies; scanning tunneling microscopy, atomic force microscopy, Optical Microscopies; Confocal microscopy, Other kinds of microscopies; Secondary ion mass spectroscopy, photo electron spectroscopy, X-ray diffraction.

9 Hrs

Unit II

Diversity in Nanosystems: Fullerenes: Introduction, Discovery and early years (The experimental setup used to discover C_{60}), synthesis and purification of fullerenes, Chemistry of fullerenes in condensed phase, orientational ordering, Pressure effect, Optical properties, some unusual properties. Carbon nanotubes: Introduction, synthesis and purification, Filling of nanotubes, Mechanism of Growth, Electronic structure, Transport properties, Mechanical properties, Physical properties, Application, Application in the area of biotechnology.

7 Hrs

Unit III

Nonomaterials and nanosystems: Quantum dots: Introduction, synthesis of Quantum dots (general strategies, synthesis in confined media, molecular precursor, modification of the surface of the nanocrystals), study of quantum dots using absorption emission spectroscopy, uses. Nanoshells: Introduction, types of Nanoshells (oxide nanoshells, metal nanoshells, nanoshells from liposomes), properties (reactions inside the silica shell, incorporation of molecules inside the nanoshells, modification of silica shell for immunoassays), characterization (transmission electron microscopy, optical spectroscopy), applications (ion selective films, blood immunoassay and cancer detection and therapy).

8 Hrs

Unit IV

Evolving interfaces of Nano: Nanobiology: Introduction, interaction between biomolecules and nanoparticle surfaces, influence of electrostatic interaction in the binding of proteins with nanoparticles, the electronic effect of biomolecules nanoparticle interaction, different types of inorganic materials used for the synthesis of hybrid nano-bio assemblies (Nobel metal materials, semiconductor nanocrystals, magnetic nanoparticles), applications of nano in biology (biological imaging using semiconductor nanocrystals, immune fluorescent biomarker imaging, immunogold labeling, diagnostic applications of immune-targeted nanoparticles, Targeted drug delivery using nanoparticle), Nanobiosensors- A step towards real time imaging and understanding of biological events.

8 Hrs

Unit V

Nanomedicine: Introduction, approach to develop Nanomedicine, Various kinds of systems in use (Nano shells, Nanopores), Nanodrug administration (Nanoparticle drug system for oral administration, nanoparticle drug system for ocular administration), Nanotechnology in diagnostics applications, materials for use in diagnostic and therapeutic applications (gold nanoparticle, quantum dots, magnetic nanoparticles).

7 Hrs

TEXT BOOK:

1.	T.Pradeep	Nano-The essentials, Wiley-Liss, 2nd Edition, 2005, 978-0565122578

2.	Christof M. Niemeyer	Nanobiotechnology- Concepts, Applications and Perspectives, John Wiley & Sons, 2nd Edition, 2004, 978-0565122578

Course Outcomes: Upon completion of this course, the students will be able to:

CO1: Describe various types of microscopes used to analyze nano scale materials.
CO2: Illustrate the surface chemistry, properties and applications of Fullerenes and nanotube.
CO3: Illustrate the surface chemistry, properties and applications of Quantum dots and nanoshells.
CO4: Analyze the evolving interfaces between Nano and Bio in Nano-bio assemblies for various nanobiology applications.
CO5: Interpret and analyze various approaches to prepare nanomedicine.

PLANT AND ANIMAL BT

Contact Hrs/ Week	: 3+0+0 (L+T+P)	Credits:	3
Total Lecture Hrs	: 39	CIE Marks:	50
Sub. Code	: 8RBTE814	SEE Marks:	50

Course Objectives: The objectives of this course are:

1. Understand the basic requirements of plant tissue culture, culture techniques and suitable environment.
2. Study the concepts of micropropagation in tissue culture and crop improvement.
3. Understand the basics of animal cell tissue culture and types of cell line culture and maintenance.
4. Learn scale up of animal cell culture and characterization of cell lines.
5. Understand the application of animal cell culture for production of therapeutic products.

Unit I

Introduction to plant tissue culture: History, Scope and Concepts of basic techniques in plant tissue culture. Sterilization - filter, heat, wet and chemical method. Media preparation-inorganic nutrients, organic supplements, carbon source, vitamins, gelling agents, phytohormones and growth regulators, composition of commonly used culture media (MS and Gamborg's). Types of plant tissue culture – callus and suspension culture, single cell culture – techniques, shoot and root culture, somatic embryo culture, endosperm culture, meristem culture, another culture and haploid production, protoplast culture, somatic hybridization and their applications.

8 Hrs

Unit II

Micropropagation: Micropropagation, general technique of micropropagation, factors affecting morphogenesis and proliferation rate, technical problems in micropropagation. Production of virus free plants by meristem and shoot-tip culture, somatic embryogenesis - process of somatic embryogenesis, structure, stages of embryo development, factors affecting embryogenesis, production of artificial seeds and cryopreservation.

7 Hrs

Unit III

Animal Cell culture: History and development of animal tissue culture, Equipment and materials, Principles of sterilization techniques. Sources and types of tissues, balanced salt solutions. Cell culture media - components of the medium, physical, chemical and metabolic functions of media. Role of serum and supplements, serum-free media, features and specifications of MEM, DMEM, RPMI and Ham's medium. Role of antibiotics in media. Measurement of cell viability and cytotoxicity. Measuring parameters of growth – growth curve, PDT, Plating efficiency and factors influencing growth.

8 Hrs

Unit IV

Cell lines and its culture: Primary culture, Establishment of Primary Culture, Development of cell lines, characterization of cell lines, maintenance and preservation of cell lines. Contamination -causes, detection and control, cell transformation – normal v/s. Transformed cells, growth characteristics of transformed cells. Viral and chemical-mediated methods of cell immortalization, Scale-up of suspension culture - Batch reactor, continuous culture perfusion systems. Scale-up of monolayer cultures – roller bottles, Nunc cell factory, micro-carrier cultures, organotypic culture, factors affecting culture and perspectives.

8 Hrs

Unit V

Cell line Techniques and Transgenic Animals: Quantitation: Haemocytometer, electronic counting, Measurement of cytotoxicity. Dye exclusion and inclusion tests, MTT based assay. Transgenic animals- retroviral, microinjection, and engineered embryonic stem cell method of transgenesis. Application of transgenic animals- biopharming, disease models, functional knockouts. Concepts of tissue engineering - skin, liver.

8 Hrs

TEXT BOOKS:

2	Reinert J and Yeoman MM	Plant Cell and Tissue Culture- A Laboratory manual, Springer, 2nd Edition,1990, 978-1302785835

Course Outcomes: Upon completion of this course, the student will be able to:

CO1: Describe various types of plant tissue culture techniques and culture conditions.
CO2: Classify different methods of micropropagation in plant tissue culture and cryopreservation.
CO3: Analyze various types of animal tissue culture techniques, culture conditions and their preservation.
CO4: Classify different types of cell lines and describe the characterization of cell lines.
CO5: Analyze cloning techniques for production of transgenic animals in the production of therapeutic products.

BIOLOGICAL NETWORK ANALYSIS

Contact Hours/ Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Subject Code	:	8RBTE821	SEE Marks	:	50

Course Objectives: The objectives of this course are

1. Learn the Mathematical fundamentals in network biology.
2. Learn the Network types and structural comparison.
3. Familiarise Network dynamics, evolution, simulation and control.
4. Analyse the Flow analysis and Link & node predictions.
5. Study the Network Construction methods.

Unit I

Mathematical fundamentals in network biology: Fundamentals of graph theory: Definitions and concepts, Topological definition of graph, Graph algorithms: Matrix representation of graph, computer storage of graph and graph algorithms, Fundamentals of network theory: Network topology, Random and complex networks, network analysis, basic algorithms, other fundamentals: Bayes' rule, Linear regression, randomization, bootstrap and monte carlo methods, Optimization methods.

8 Hrs

Unit II

Network types and structural comparison: Identification of crucial nodes and subnetworks/modules, Feature of crucial models, Indices and methods of crucial nodes, Identification of subnetworks, Detection of network types, Comparison of network structure, nonparametric statistic comparison of network structure, nonparametric statistic comparison of community structure, network matrix based methods and other methods.

7 Hrs

Unit III

Network dynamics, evolution, simulation and control: Network dynamics: Differential equations and motion stability, Network robustness and sensitivity analysis, Network control: Conventional control and new perspective control, Network evolution: Network evolution model, network evolution algorithm - based on node attraction,

Phase recognition, Self-organization: Basic concepts, theories and principles, existing algorithms, self-organization in life sciences,

8 Hrs

Unit IV

Flow analysis and Link & node predictions: Flux balance analysis, flow indices for ecological network analysis, Link prediction: sampling-based methods, linear correlation analysis for finding interactions, Partial correlation of general correction measures, combines use of linear correlation and ranked correlation. Link prediction: Structure and perturbation bases method, Node prediction.

7 Hrs

Unit V

Network Construction: Construction of biological networks, prediction methods of protein-protein interaction, gene coexpression network analysis, classification based machine learning, stastitic network, Homogenecity test, Network construction based on power law. Pharmalogical and toxicological networks, ecological networks and Microscopic networks.

9 Hrs

Course Outcomes: Upon completion of this course, the students will be able to:

CO1: Analyse the concept of mathematical fundamentals in network biology.

CO2: Describe the concepts of network types and structural comparison.
CO3: Deduce the network dynamics, evolution, simulation and control.
CO4: Interpret the use of Flow analysis and Link & node predictions in network biology.
CO5: Describe the Network Construction methods.

PLANT UTILITIES

Contact Hours/ Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Subject Code	:	8RBTE822	SEE Marks	:	50

Course objectives: The objectives of this course are

1. Learn the knowledge for selection of different utilities.
2. Understand the cost estimation related to capital investment and plant overhead cost.
3. Describe the Profitability; understand the alternative investments and replacements.
4. Analyse and understand the measurement systems.
5. Learn the methods of liquid level measurement.

Unit I

Process Design Development & General Design Considerations: Process design and development, flow diagrams, marketability of the product, availability of technology, raw materials, equipment design-specification and manufacturing/procurement, human resources, land and utilities, site characteristics, waste disposal, government regulations and other legal restrictions, community factors and other factors affecting investment and production costs. Depreciation & interest and investment cost: Time value of Money, Types of Interests, Nominal and effective interest rates, Continuous interest, annuities, Perpetuities, Depreciation, Types of depreciation, Methods for estimating depreciation. (PO1-M Knowledge transfer: Apply the Knowledge of Mathematics, basic science)

8 Hrs

Unit II

Cost Estimation: Capital Investments: Fixed capital investments including land, building, equipment and utilities, installation costs, working capital investment. Cost indius. Manufacturing costs: Direct production costs (including raw materials, human resources, maintenance and repair, operating supplies, power and other utilities, royalties, etc.,), fixed charges, Plant Overhead cost: Administration, safety and other auxiliary services, payroll overhead, warehouse and storage facilities.

9 Hrs

Unit III

Profitability, Alternative Investments and Replacements: Profitability, basis for evaluating project profitability, Methods for profitability evaluation, Alternative investments, Replacement analysis: Replacement models, Break-Even analysis: Meaning and importance of Break-even point, Break-even chart and analysis.

7 Hrs

Unit IV

Measurement Systems or Elements of Measurement Instruments: Measurement and its aim, primary and secondary element, manipulating and functioning elements, static characteristics, calibration, Accuracy, Precision, repeatability, drift, sensitivity, resolution, Dead Zone, Static Error.

8 Hrs

Unit V

Level Measurement : Methods of Liquid level measurement, Direct Methods: Sight Glass, Float, Displacer, Indirect Methods: Pressure Gauge, Air Trap, Diaphragm box, Air Purge, Radioactive, Ultrasonic, Capacitive Solid level Measurement, Solid level Measurement.

7 Hrs

3	Dr. Mujawar	Plant Utilities, Nirali Prakashan, Publication, 2nd Edition, 2004, 978-1025101156

Course outcomes: Upon completion of this course the student will be able to:

CO1: Apply the process design, raw materials required and estimate the depreciation cost.

CO2: Identify to estimate the capital, manufacturing and overhead cost to run the plant.

CO3: Estimate the profitability from the investment and provide break even chart analysis.

CO4: Apply the methods measurement instruments for accurate calibration and analysis.

CO5: Describe the level measurement for solid and liquid operations.

CLINICAL TRIALS AND DATA MANAGEMENT

Contact Hrs/ Week	: 3+0+0 (L+T+P)	Credits :	3
Total Lecture Hrs	: 39	CIE Marks :	50
Sub. Code	: 8RBTE823	SEE Marks :	50

Course Objectives: The objectives of this course are

1. Impart knowledge in principles and practices of clinical trials and basic concepts in Ethical issues in research
2. Get an understanding about what clinical research are and how they are classified and conducted
3. Study the recruitment and regulations procedure of subjects for the clinical study
4. Study the role and responsibilities of Investigator, Clinical research associate, Clinical coordinator and Data manager in executing the trials
5. Study the various stages of clinical trials design, project management, resource management and data handling

Unit I

Introduction: Introduction to Clinical Trials: scope of clinical trial, clinical trials Phases, Phase I studies; Phase II studies; Phase III/IV studies Introduction to ethics of Clinical Trials. Study Population: Definition of study population, Issues on generalization. History of clinical trials, Basic principles, Clinical trial, Designing clinical trial: Planning steps (Develop a hypothesis for research, Define the objectives and Establishment, Define the variables needed, Define the study population, finalize the objective into testable hypothesis Predict error and bias, Selection of appropriate study design, Determination of sample size), Execution steps: Data collection process, Data entry and management and Publication.

8 Hrs

Unit II

An introduction to Biostatistics: Introduction: General Considerations; Clarity, comparability and Generalisability. Issues in randomization: Reasons for randomization, types of randomized studies, alternative to randomized studies. Study objective; study design. Randomization; Randomization techniques, Simple randomization, block randomization, Stratified randomization. Blinding: types of studies classified on the basis of blinding, methods of achieving double blinding.

Sample size: measurements scale, statistical significance. Overview of Hypothesis testing: the goals of statistical inference, basic concepts in hypothesis testing.

7 Hrs

Unit III

Informed Consent Process: Introduction, the history of informed consent and the system of subject protection, Basic principles; autonamy, benificience, justice. Informed consent process, preparing the informed consent document, checklist, ensuring readability of the informed sheet and the consent form, special considerations. Role of CRC and CRA in clinical trials : The clinical research associate and coordinator, who can be a CRC/CRA, the sites where CRC/CRA works, responsibilities; general responsibilities; capacity building, trial related responsibilities; site identification, pre-trial documentation, IRB, regulatory, financial, administrative, training of the site staff, informed consent forms, site initiation visit, investigators meeting screening and recruitment, scheduling of visit, accountability, laboratory, monitoring. Skills of being a good CRC/CRA; watch, listen, document and report.

9 Hrs

Unit IV

Data Management in Clinical Research: Introduction: Overview of Clinical Data Management (CDM), Kinds of Data, Data Management plan, Data capture and collection: Paper CRF based studied based study, Data Privacy. CRF Design: Paper based and electronic based CRF process, CRF login and inventory. Clinical Database. Data entry: double entry, single entry. Data Review and Validation: Point by Point Checks, Missing Data or blank field Checks, Data consistency Checks Laboratory Data and range Checks, Discrete value group dispensary Checks, Header Inconsistency Checks, Missing page Checks and CRF tracking, Protocol validation Checks, continuity Data Checks, coding Checks, external Data Checks, textual Data Checks, SAE Reconciliation Checks. Discrepancy Management (brief), Database closure, Quality assurance, Data storage and archival and recent advances in CDM.

8 Hrs

Unit V

Literature Survey and Research Proposal Writing: Searching the literature: Library sources; search engines, databases, search strategies, limiting the search using logical operators, broadening the search, sensitivity and specificity of literature searches, finding references for evidence- based practice, review and abstracts for evidence- based practice. Research Proposal: Introduction, working plan for developing a research proposal; the research plan (title, abstract, statement of the research problem, statement of the purpose of the study, method, literature cited, documentation of informed consent), plan for administrative support (budget; personnel, equipment, facilities and suppliers, resources and environment, personnel; qualifications, time commitment, job descriptions, consultant). Protocol review and grant approval: brief of protocol review and funding by National Institute for Health.

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Outline and design the phases of clinical trial used in the process of drug discovery.

CO2: Classify the types of randomization and blinding.

CO3: Describe the roles of Clinical Research Coordinator, Clinical Research Associate and data manager.

CO4: Analyze clinical trials data management process

CO5: Illustrate the Literature Review process and Research Proposal.

METABOLIC ENGINEERING

Contact Hrs/Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hrs	:	39	CIE Marks	:	50
Course Code	:	8RBTE831	SEE Marks	:	50

Course objectives: The objectives of this course are

1. Understand the central metabolic reactions and regulations in cellular metabolism.
2. Recognize how complex regulatory mechanisms at multiple levels control the dynamics of the cellular metabolism.
3. Apply modern scientific tools for engineering microbial pathway.
4. Understand the Computational modelling of biological networks.
5. Acquire successful engineering strategies used for the production of commercially important primary and secondary metabolites or recombinant proteins.

Unit I

Introduction to metabolic engineering and its importance: Introduction to metabolism, catabolism, anabolism. Key differences between metabolic controls of prokaryotes and eukaryotes. Stoichiometry of cellular reactions, enzyme kinetics, reaction rates, dynamic mass balance, yield coefficients and linear rate equations, the black box model, elementary balance, heat balance different models for cellular Reactions-Induction-Jacob Monod Model and its regulation, differential regulation by isoenzymes, concerted or cumulative feedback regulation. Regulation in branched pathways, permeability and transport of metabolites.

8 Hrs

Unit II

Metabolic flux analysis: Building stoichiometric matrix; Steady state and pseudo steady state assumptions; Using different optimizing functions to solve linear programming problem; understanding flux cone and constraints; Introducing additional constraints from thermodynamics

8 Hrs

Unit III

Tools in Metabolic Engineering: Improving Protein functions by Directed Evolution-Engineering DNA and RNA Regulatory Regions through Random Mutagenesis and Screening-Evolving Pathways and Genomes for the Production of Natural and Novel Compounds-Models Predicting Optimized Strategies for Protein Evolution-Application of Emerging Technologies to Metabolic Engineering: Genome-Wide Technologies: DNA Microarrays, Phenotypic Microarrays, and Proteomics, Monitoring and Measuring the Metabolome- In Silico Models for Metabolic Systems Engineering. Experimental determination of metabolic fluxes C13 labeling, NMR and GC-MS based methods for flux determination.

8 Hrs

Unit IV

Computational modelling of biological networks: Introduction to MATLAB. Synthetic circuit design, metabolic flux analysis. MOMA (Minimization of Metabolic Adjustment), iFBA (Integrated Flux Balance Analysis), dFBA; Enhancement of product yield and productivity.

7 Hrs

Unit V

Industrial applications: Pathway engineering strategies for over production of some commercially important primary and secondary metabolites (.g. Amino acids, organic acids, alcohols and therapeutic compounds)or industrially relevant enzymes and recombinant proteins, bioconversion- applications and factors affecting bioconversion, mixed or sequential bioconversions, regulation of enzyme production, strain selection and improvement, the modification of existing or the introduction of entirely new metabolic pathways.

8 Hrs

Course outcomes: Upon completion of this course, the students will be able to:

CO1: Describe the central metabolic reactions and regulations in cellular metabolism.

CO2: Explain how complex regulatory mechanisms at multiple levels control the dynamics of the cellular metabolism.

CO3: Analyze modern scientific tools for engineering microbial pathway.

CO4: Apply the Computational modelling of biological networks.

CO5: Illustrate the successful engineering strategies used for the production of commercially important primary and secondary metabolites or recombinant proteins.

BIOPHARMACEUTICALS AND REGULATORY AFFAIRS

Contact Hrs./ Week	: 3+0+0 (L+T+P)	Credits	: 03
Total Lecture Hrs.	: 39	CIE Marks	: 50
Sub. Code	: 8RBTE832	SEE Marks	: 50

Course Objectives: The objectives of this course are

1. Study the basic concepts of biopharmaceuticals and understand the various system used as expression system.
2. Understand the necessities of drug manufacturing process.
3. Learn the concepts of vaccines production and antisense technology.
4. Study the concepts of clean room and its importance in manufacturing pharma products.
5. Understand the importance of regulatory affairs in pharma industries.

Unit I

Biopharmaceuticals: Introduction to Biopharmaceuticals and pharmaceutical biotechnology, History of the pharmaceutical industry, the age of biopharmaceuticals, Biopharmaceuticals: Status and future prospects, Traditional pharmaceuticals of biological origin. Sources of biopharmaceuticals: *E.coli* as a source of recombinant, therapeutic proteins, Expression of recombinant proteins in animal cell culture system. Host-Vector Interactions in *E.coli,* parameters influencing the productivity of Recombinant *E.coli* Cultivations. Additional production systems: yeasts, fungal production systems, transgenic animals, transgenic plants, Insect cell-based systems. Production of final product, cell banking systems, upstream processing, microbial cell fermentation. Mammalian cell culture systems.

8 Hrs

Unit II

The drug manufacturing process: The manufacturing facility: Clean rooms, cleaning, decontamination and sanitation (CDS), CDS of the general manufacturing area, water for biopharmaceutical processing, generation of purified water and water for injections (WFI), distribution system for WFI.

Blood products and therapeutic enzymes: Disease transmission: Whole blood, platelets and red blood cells, blood substitutes, dextrans,

albumin, gelatin. Haemostasis - The coagulation pathway: Study of the coagulation factors which promote the blood clotting process, terminal steps of coagulation pathway, clotting disorders.

7 Hrs

Unit III

Vaccines: Vaccine technology–Traditional vaccine preparations (attenuated, dead or inactive bacteria; attenuated and inactivated viral vaccines); Toxoids, antigen-based and other vaccine preparations; The impact of genetic engineering on vaccine technology – peptide vaccines and Vaccine vectors; Development of an AIDS vaccine and difficulties associated with vaccine development; Cancer vaccines. Nucleic acid and therapeutics: Gene therapy-basic approach, vectors used in gene therapy (Retroviral vectors, manufacture of viral vectors), Gene therapy and genetic disease. Anti-sense technology – antisense oligonucleotides, uses, advantages and disadvantages of 'Oligos', delivery and cellular uptake of oligonucleotides.

8 Hrs

Unit IV

Cleanroom: What is a Cleanroom? The Need for Clean rooms, Types of Cleanrooms, What is Cleanroom Technology? Basis of Clean room Standards, Federal Standard 209. Airborne Particle Counters, Measurement of Particle Concentrations (IS0 14644- 1) - Sample locations and number, Airborne sampling volume, Acceptance criteria, Microbial Counts - Microbial Sampling of the Air - Impaction onto agar, Microbial Deposition onto Surfaces, Microbial Surface Sampling – Contact surface sampling, Swabbing, Personnel sampling Operating a Clean room: Contamination Control - Identification of Sources and Routes of Contamination - Sources of contamination. Clean room Disciplines, Clean room Clothing, Routes and Sources of Microbial Dispersion, Types of Clean room clothing.

8 Hrs

Unit V

Quality life cycle: Introduction; Good laboratory practice (GLP) -GLP in Europe, GLP in the UK, GLP in the USA; Good clinical practice (GCP) - GCP in the USA, GCP in Europe, ICH guidelines on GCP, Good manufacturing practice (GMP); Good distribution practice (GDP). Quality

assurance and control - Introduction; Relationship between quality management, QA, GMP and QC; Definition of quality management; Definition of quality assurance; Definition of quality control; Responsibilities of QA –QA requirements in EU, PIC/S, WHO and FDA; Responsibilities of QC. Quality systems: ISO 9000 series; ISO 14000 series. Good manufacturing practice - Definition of GMP; Different versions of GMP (UK,European Union, USA, Australia, WHO, Arab World); Responsibilities under GMP; Rules versus guidelines. Good distribution practice - Principles of GDP; Quality system.

3	Linderson, D'Elia, Nelson	Bioprocess Engineering: Systems, Equipments and Facilities, Wiley-Interscience, 1st Edition, 1994, 978-0471035442.

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Describe different types of expression system used in production of biopharmaceutical products.

CO2: Analyze the various requirements of drug manufacturing process and describe the importance of blood products.

CO3: Classify different methods involved in vaccine production and interpret the concepts of gene therapy and antisense technology in treating human diseases.
CO4: Apply various methods involved in sterilizing or disinfecting the biopharmaceutical manufacturing facility.
CO5: Apply the concepts of ISO, various regulatory bodies, quality control and quality assurance in biopharmaceutical industry.

BIOSIMILARS

Contact Hrs/Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hrs	:	39	CIE Marks	:	50
Course Code	:	8RBTE833	SEE Marks	:	50

Course objectives: The objectives of this course are

1. Recognize the difference between biosimilar and biologics, their regulatory challenges.
2. Acquire knowledge about various types of biological compounds as biosimilar drugs.
3. Analyze the various method of characterizing biosimilar molecules.
4. Apply the concepts of immunology and study the effects of biosimilar.
5. Understand the role of Biotech companies in the production of biosimilar products.

Unit I

Introduction to Biopharma: Generics in Biopharma, definition of biologics, biosimilar, super biologics, differences between chemical genetics and biosimilar, The developmental and regulatory challenges in biosimilar development, Prerequisites for Biosimilar development, Biosimilar market potential.

8 Hrs

Unit II

Types of biosimilar drugs: Peptides, proteins, antibodies, Enzymes, Vaccines, Nucleic acid based therapies (DNA, RNA, etc), Cell based therapies (including stem cells).

8 Hrs

Unit II

Characterization methods: Aggregation- precipitation, floccule strength, precipitate ageing & kinetics, adsorption of proteins & peptides on surfaces, effect of temperature on protein structure, hydration & thermal stability of proteins - solid powders, suspension on non-aqueous solvents, reversed micelles, aqueous solution of polyols, analytical and spectrophotometric characterization of proteins, protein sequencing and structure determination.

8 Hrs

Unit IV

Bioequivalence studies: Immunogenicity & allergenicity of biosimilars; factors affecting immunogenicity - structural, post-translational modifications, formulations, impurities, manufacturing and formulation methods for biosimilars; types of bioequivalence (average, population, individual), experimental designs & statistical considerations for bioequivalence studies (Non-replicated designs – General Linear Model, Replicated crossover designs), introduction to "ORANGE BOOK" & "PURPLE BOOK".

8 Hrs

Unit IV

Case studies: Indian companies working in this space & their product pipeline (Biocon, Intas, Dr Reddy's, Reliance, Bharat Biotech, Lupin, Cipla, Shanta, etc); products - Erythropoietin, growth hormone, granulocyte stimulating factors, interferons, streptokinase, monoclonal antibodies.

OPEN ELECTIVE COURSES

OBJECT ORIENTED PROGRAMMING WITH C++

Course Code: **OE01**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Use the fundamental concepts of object-oriented programming.
CO2: Write object-oriented code by using C++ language.
CO3: Implement C++ classes from specifications.
CO4: Create and use objects from predefined class libraries.
CO5: Use interfaces inheritance, exception handling and polymorphism as programming techniques.
CO6: Understand the advantage of code re-usability and develop reusable codes.

Unit-1

PRINCIPLES OF OBJECT ORIENTED PROGRAMMING: A look at procedure Oriented programming, object oriented programming paradigm, basic concepts of OOP, Benefits of OOP, OO languages, A sample program, structure of C++ program.

TOKENS, EXPRESSIONS AND CONTROL STRUCTURES: Tokens, keywords, identifiers & constants, basic data types, user defines and derived data type, symbolic constants, type compatibility, declaration & initialization of variables, reference variables, operators, manipulators, type cast operators, control structures. **8 Hrs.**

Unit-2

FUNCTIONS IN C++: The main(), function prototyping, Inline function, Default arguments, const arguments, function overloading.

CLASSES AND OBJECTS: C structures, specifying class, member functions, Inline functions, nesting of member function, private member functions, arrays within a class, memory allocation for objects, static data members and member functions, arrays of objects, objects as function arguments, Friendly functions, returning objects. **8 Hrs.**

Unit-3

CONSTRUCTORS AND DESTRUCTORS: constructors, parameterized constructors, multiple constructors in a class, constructors with default arguments, dynamic initialization of objects, copy constructors, const

objects, destructors**.**

OPERATOR OVERLOADING: Defining operator overloading, overloading unary and binary operators, overloading using friends, rules for overloading operators. **8 Hrs.**

Unit-4

Type conversions: Basic to Class type, class to basic type, one class to another class type, A data conversion example.

INHERITANCE: Introduction, defining derived classes, single inheritance, making private member inheritable, multilevel, multiple, hierarchical, hybrid inheritance, virtual base classes. **7 Hrs.**

Unit-5

VIRTUAL FUNCTIONS AND POLYMORPHISM: 'this' pointer, virtual functions-calling a virtual function through base class reference, pure virtual functions-abstract classes, using virtual functions.

TEMPLATES: class templates, class templates with multiple parameters, function templates, function templates with multiple parameters, overloading of template functions, member function templates, Non-type template arguments. **8 Hrs.**

TEXT BOOK:

1. Object oriented programming with C++, E Balagurusamy, 4th Ed, TMH.

REFERENCE BOOKS:

1. The Complete Reference C++, Herbert Schildt, 4th Edition, TMH.
2. C++ Primer, Stanley B. Lippman, Josee Lajoie, Barbara E. Moo, 4th Edition, Addison Wesley, 2005.
3. Object-Oriented Programming with C++, Sourav Sahay, Oxford University Press, 2006.

DATA STRUCTURES USING C

Course Code: **OE02**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Objectives:

The objectives of the course are:

- To learn about memory representation of various data structures.
- To understand the difference between static and dynamic memory allocations.
- To understand the basic operations and implementation of different data structures – Stacks, queues, linked list and nonlinear data structures binary trees and graphs.

Course Outcomes - COs

Upon successful completion of the course the student will be able to:

CO1: Apply advanced C programming techniques like pointers, structures and files to develop solution for particular Programming problems.

CO2: Implement different data structures like Stacks and Queues using static memory allocation & apply stacks and queues for various applications

CO3: Design and Implement data structures that make use of memory efficiently by employing dynamic memory allocation technique.

CO4: Design and implement nonlinear data structures: trees and graphs. Apply non-linear data structures for various applications.

Unit 1

Introduction to Structures, union, files, pointers: Arrays, Structures and unions, initialization of arrays and structures. Arrays of structures, Pointers: Declaring and initializing pointers, pointer and arrays (using pointers: find product of array elements, find smallest, find largest element in array, searching key in array etc.) pointer and structures. Passing structures to functions (addition of two complex numbers, display employee/student details using pointers and structures). File Management: Defining and opening a file, closing a file, Basic I/O operations on files (, create and display the contents of employee file, copying one file to another, find number of vowels and consonants in input file, count number of characters, words, lines in input file command line arguments (find least element among n arguments, sum of n arguments, search a key in given arguments, display the n city names passed as command line parameters etc.). **8 Hrs.**

Unit 2

Stacks and queues: Primitive operations of stack: push, pop, peep. C Program for stack operations. Applications of Stack evaluation of postfix expression, conversion of infix to postfix (only algorithms) and recursion. C programs for recursive functions (Fibonacci series generation, factorial of

a number, Binary search in C, sum of individual digits of input number, product of two numbers)

Queues: The queue and its sequential representation, Circular queue. C Program to implement simple queues and circular queues using arrays. Definition of priority queues (ascending and descending) and Double ended queues (input restricted and output restricted queues). **8 Hrs.**

Unit 3

Singly Linked list: Dynamic memory allocations, singly linked list, basic operations on singly linked list (insert (at last position, first position, after a given key), delete (delete first node, last node, deletion based on key), search a key.

C implementation of stacks, simple queues, ascending priority queues using singly linked list. Use of header nodes. **8 Hrs.**

Unit 4

Doubly and Circular Linked list: Doubly linked list, C implementation of basic operations of doubly linked list -insert (at last position, first position, after a key), delete (first node, last node, deletion based on key), and search based on key. Implementing Stack and queues using doubly linked list.

Basic operations on Circular singly linked list (create, delete first node, search key, search) in C. Introduction to circular doubly linked list.

8 Hrs.

Unit 5

Nonlinear Data structures: Linear vs nonlinear data structures, Binary trees, types of binary trees definition with examples (complete binary tree, almost complete binary tree, strictly, Binary search tree, binary expression trees, threaded binary trees). Binary tree Representation: sequential and linked list. C implementation for construction of BST and three travels methods: preorder, inorder and postorder, searching a node in a BST. Graphs representation using adjacency matrix and adjacency list. Graph traversal using BST and DFS (**no implementation for graphs** traversals).

7 Hrs.

TEXT BOOKS:

1. Data Structures using C and C++ by Yedidyah Langsam and Moshe J. Augenstein and Aaron M Tenanbaum, 2nd Edition, Pearson Education Asia, 2002.
2. Programming in ANSI C. Ed.4, E Balaguruswamy Tata Mc-graw Hill, 2007.

REFERENCE BOOKS:

1. Theory and Problems of Data Structures by Seymour Lipschutz, Schaums outline series, MC Graw Hill publications.

UNIX & SHELL PROGRAMMING

Course Code: **OE03**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

1. **Describe** the architecture of Unix Operating System and demonstrate the various UNIX commands along with their options and arguments.
2. **Apply** suitable commands for file processing on bash shell.
3. **Understand** the file attributes and the shell structure.
4. **Apply** various filters and understand the concept of process.
5. **Demonstrate** and apply the concepts of UNIX through shell scripts.

Course Outcomes:

After the completion of this course, students will be able to:

CO1: Apply the various commands to interact with the UNIX operating system and understand the role of various components of Unix Operating System

CO2: Apply the knowledge of bash shell and its support to work with the UNIX file system.

CO3: Apply filters for file processing on bash shell

CO4: Design solutions for Text processing problems using simple filters and Regular Expressions tools like Grep.

CO5: Develop suitable Shell scripts to solve computing problems

Unit I

THE UNIX OPERATING SYSTEM, ARCHITECTURE 8 Hrs.

The UNIX Architecture and salient features. Locating Commands, Internal and External Commands, Flexibility of Command Usage, **man**: Browsing and Manual Pages On-line, Understanding the man Documentation.

cal: The Calendar, **date**: Displaying and System Date, **echo**: Displaying a Message, **printf**: An Alternative to **echo,** **bc**: The Calculator, **script**: Recording Your Session, **passwd**: Changing Your Password, **who**: Who Are the Users?, **uname**: Knowing Your Machine's Characteristics, **tty**: Knowing Your Terminal, **stty**: Displaying and Setting Terminal Characteristics **(Ch 2.1-2.8, 3.1-3.5, 3.9-3.13)**

Unit II

FILE SYSTEM and SOME FILE HANDLING COMMANDS 8 Hrs.

Basics of File. What's in a Filename? The Parent-Child Relationship, The HOME Variable: The Home Directory, **pwd**: Checking Your Current

Directory, **cd**: Changing the Current Directory, **mkdir**: Making Directories, **rmdir**: Removing Directories, Absolute Pathnames, Relative Pathnames, **Is**: Listing Directory Contents, The UNIX File System.

cat: Displaying and Creating Files, **cp**: Copying a File, **rm**: Deleting Files, **mv**: Renaming Files, **more**: Paging Output, The lp Subsystem: Printing a File, **file**: Knowing the File Types, **wc**: Counting Lines, Words and Characters, **od**: Displaying Data in Octal, The **spell** and **ispell**, **cmp**: Comparing Two Files, **comm**: What is Common?, **diff**: Converting One File to Other, **(Ch 4.1-4.12, 5.1-5.12)**

Unit III

BASIC FILE ATTRIBUTES 8 Hrs.

ls – l: Listing File Attributes, The –d Option: Listing Directory Attributes, File Ownership, File Permissions, **chmod**: Changing File Permissions, Directory Permissions, Changing File Ownership.

THE SHELL

The Shell's Interpretive Cycle, Pattern Matching – The Wild-cards, Escaping and Quoting, Redirection: The Three Standard Files,/dev/null and /dev/tty:Two Special Files, Pipes, **tee**: Creating a Tee, Command Substitution, Shell Variables **(Ch 6.1-6.7, 8.1-8.10)**

Unit IV

THE PROCESS and Filters 8 Hrs.

Process Basics, **ps**: Process Status, System Processes (-e or –a), Mechanism of Process Creation, Internal and External Commands, Running Jobs in Background, **nice**: Job Execution with Low Priority, Killing Processes with Signals, Job Control.

SIMPLE FILTERS

pr: Paginating Files, **head**: Displaying the Beginning of a File, **tail**: Displaying the End of a File, **cut**: Slitting a File Vertically, **paste**: Pasting Files, **sort**: Ordering a File, **uniq**: Locate Repeated and Non repeated Lines, **tr**: Translating Characters, An Example: Displaying a Word-count List.

FILTERS USING REGULAR EXPRESSIONS

grep: Searching for a Pattern, Basic Regular Expressions (BRE)–An Introduction, Extended Regular Expressions (ERE) and **egrep**

REGULAR EXPRESSIONS: Atoms, Operators. **grep**: Operation, grep Family, Examples, Searching for File Content, **(Ch9.1-9.10,12.1-12.10,13)**

Unit V

Essential SHELL Programming: Shell Scripts, **read:** Making script interactive, Using Command line arguments, **exit** and Exit Status of command, the logical operator && || --Conditional execution, the **if** conditional, using **test** and [ ] to evaluate expressions, the **case** Conditional, **expr:** Computation and String handling, $0: Calling a script by different names, **while:** Looping, **for:** Looping with a list, **set** and **shift**: Manipulating the positional parameters, **(Ch 14)**

COMPUTER ORGANIZATION

Course Code: **OE04**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Discuss/Explain the fundamental concepts and various issues related to the operation and performance of computer system.

CO2: Determine/estimate/evaluate the performance parameters of computer system.

CO3: Apply the knowledge of addressing modes, addressing machines to design/develop an Assembly Language Program (ALP) for different addressing machines for the given High Level Language (HLL) Statement or to solve the problems.

CO4: Apply the arithmetic algorithms to solve problems in computer arithmetic.

CO5: Design/solve/propose simple solutions to the problems related to CPU organization, I/O Organization and Memory Organization.

Unit-1

Basic Structure of Computer: Functional Units, Basic Operational Concepts, Bus Structures, Performance- Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement. Machine Instructions and Programs: Numbers, Memory Operations, Instructions and Instruction Sequencing, Addressing Modes. **8 Hrs.**

Unit-2

Stacks and Queues, Subroutines, Basic Processing Unit: Single bus organization, Execution of a Complete Instruction, Multiple Bus Organization, Hard wired Control and Micro programmed Control Unit. **8 Hrs.**

Unit-3

Arithmetic: Multiplication of Positive Numbers, Signed Operand Multiplication, Fast Multiplication, Integer Division, Floating Point Numbers. **8 Hrs.**

Unit-4

Input/Output Organization: Accessing I/O Devices, Interrupts- Interrupt Hardware, Enabling and Disabling Interrupts, Handling Multiple Devices, Controlling Device Requests, Exceptions, Direct Memory Access, Bus Arbitrations. **8 Hrs.**

Unit-5

Memory System: Basic Concepts, Semiconductor RAM Memories, Read Only Memories, Speed, Size and Cost, Introduction to cache Memory and its mapping. **7 Hrs.**

TEXT BOOK:

1	Carl Hamacher, Zvonko Vranesic, Safwat Zaky.	Computer Organization. Ed 5. TMH. 2002. Chapters: 1.2, 1.3, 1.4, 1.6.1, 1.6.2, 1.6.4, 1.6.7, 2.1 to 2.9(except 2.6 and 2.7), 7.1 to 7.5.1, 6.3 to 6.7.2, 4.1, 4.2.1 to 4.2.5, 4.4, 5.1 to 5.4, 5.5.1, 5.5.2.

REFERENCE BOOKS:

2	Vincent P. Heuring & Harry F. Jordan	Computer Systems Design and Architecture. Ed2. Pearson Education. 2004.

STATISTICAL COMPUTING

Course Code: **OE05**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Apply the basic concepts of probability and statistics in engineering models, various ways of data collections, interpretations and models.

CO2: Apply the methods of moments, methods of maximum likelihood to make decisions or to draw conclusions about a population using the information contained in a sample from the population drawing conclusion.

CO3: Apply hypothesis testing on the mean of a normal distribution using either a z-test or a t-test produce and test hypothesis on the variance or standard deviation of a normal distribution. Determine the p-value approach for making decision in hypothesis test. Explain and use the relationship between confidence intervals and hypothesis tests.

CO4: Apply simple linear regression for building empirical models to engineering and scientific data. Determine how the method of least square is used to estimate the parameters in a linear regression model. Derive the regression model to make a prediction of a future observation and construct an appropriate prediction interval on the future observation. Apply the correlation model. (Level-2,4 & 5).

CO5: Determine the regression model to estimate the mean response and to make predictions and to construct confidence intervals and prediction intervals.

Unit-1

The Role of Statistics in Engineering (Data Summary and Presentation): Statistical Thinking, Collecting data, Statistical Modeling Frame work, Measure of Central Tendency and Variance, Importance of Data Summary and Display, Tabular and Graphical display. **8 Hrs.**

Unit-2

Point Estimation: Sampling distributions and the central Limit Theorem. General concept of Point Estimation-Unbiased Estimators, Variance of a Point Estimation, Standard error (reporting a point estimate), Mean square error of an estimator. Method of Point estimators: Method of moment, method of Maximum likelihood, Bayesian Estimation of parameters.

8 Hrs.

Unit-3

Statistical Inference for a Single Sample and Two Samples: Hypothesis testing, Inference on the mean of a population (Variance known and unknown), Inference on the variance of a normal population, Inference on a Population Proportions, Testing for goodness of Fit, Inference for a

difference in Means, Variances known, Inference for a difference in means of two normal distributions, Variances unknown, Inference on the variances of two normal Populations, Inference on two population proportions. **8 Hrs.**

Unit-4

Simple Linear Regression and Correlation: Simple Linear Regression, Properties of Least Square Estimators and Estimation of variance, Common abuses of regression, Prediction of new observations, assessing the adequacy of regression model, Analysis of Variance. **6 Hrs.**

Unit-5

Multiple Linear Regression Model: Introduction, Least Squares Estimation of the Parameters. Matrix approach to Multiple Linear Regression, Properties of the Least Squares Estimators. **Hypothesis Tests in Multiple Linear Regression**: Tests for significance of regression, Tests on Individual regression Coefficients and Subsets of Coefficients. **Confidence Intervals in Multiple Linear Regression**: Confidence Interval on Individual Regression Coefficients, Confidence interval on the Mean Response. Prediction of New observations. Model Adequacy Checking: Residual Analysis, Influential Observations. **Aspects of Multiple Regression Modelling**: Polynomial Regression models, Categorical Regressors and Indicator Variable, Selection of Variables and Model Building, Multi co-linearity. **10 Hrs.**

OPERATIONS RESEARCH

Course Code: **OE06**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes (COs):

Upon successful completion of this course, student will be able to:

CO1: Define OR models and formulate linear programming models and solve using graphical method.

CO2: Identify, formulate and solve linear programming using simplex, big-m and dual simplex method.

CO3: Formulate and solve given management problem as a transportation model.

CO4: Formulate and solve given problem using assignment and travelling salesman problem and use game theory concepts for decision making.

CO5: Apply network techniques like PERT, CPM for managing projects for minimum cost or duration.

Unit-1

Introduction: Definition of OR, historical development, phases of OR study, features and limitations of OR.

Linear programming- Mathematical formulation, standard form, solution space, types of solution-feasible, basic, optimal, infeasible, multiple, pseudo-optimal, graphical method.

Simplex method: Standard form, the simplex table, Big M-method (Charnes Penalty Method). **8 Hrs.**

Unit-2

Duality theory, Dual Simplex method: Concept of duality, General rules for converting primal to its dual, duality & dual simplex method, advantages of duality, dual simplex method, advantages of dual simplex method. **8 Hrs.**

Unit-3

Transportation model: The transportation algorithm, Initial basic feasible solution using North-West corner method, Matrix Minima method and VAM method, Optimal solution using Modified distribution method (MODI), Unbalanced transportation problems, Degeneracy in transportation, Applications of transportation problem. **8 Hrs.**

Unit-4

Assignment problem: Formulation, solution to assignment problems using Hungarian method, unbalanced assignment problem, restriction in assignment problems, Traveling salesman problem. Application of assignment problems.

Game Theory-Introduction, pure strategy, mixed strategy, optimal strategy, Max min and Min max strategy, saddle point, arithmetic method, Dominance rule, Modified dominance rule, Graphical method. **8 Hrs.**

Unit-5

Network techniques: Network diagram representation, rules for drawing network diagram, common errors in drawing network diagram, Fulkerson's i-j Rule.

Project/ Program Review Technique (PERT): Event times, slack, critical path, PERT procedure. Determination of probability of completion of project, project planning using Critical Path Method (CPM), activity times, float, crashing of networks, normal time, crash time, normal cost, crash cost, cost slope, optimum schedule, minimum cost schedule.

8 Hrs.

LINEAR ALGEBRA

Course Code: **OE07**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Prerequisite: MAT1, MAT2

Course Learning Objectives:

- To master techniques for solving system of linear equations.
- Develop a strong foundation in linear systems and maps, and analytical mathematics that will provide a basis for advanced studies in engineering, physics, and mathematics.
- Provide an introduction into representations and approximations within infinite-dimensional spaces.
- To build on the background in Euclidian space and formalize it with vector space Theory.
- To develop an appreciation for using linear methods in a variety of applications.
- To relate linear methods to other areas of mathematics such as calculus and differential equations.

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Apply the numerical methods to solve Systems of linear equations, row reduction and Echelon form, vector equations, Matrix equation, solution sets of linear systems, Linear independence (L3).

CO2: Solve the linear transformations, Matrix of a linear transformation. Matrix operations, Inverse of a matrix, characterization of invertible matrices, partitioned matrices, matrix factorizations, Determinants: Introduction, Properties, volume and linear transformations(L3).

CO3: Determine the Vector spaces and subspaces, Null spaces, column spaces, linear transformations, linearly independent sets, bases, dimension of a vector space, rank, change of basis (L3).

CO4: Determine and Describe characteristic equation, diagonalization, Eigen vectors and linear transformations, Complex Eigen values. Orthogonality- Inner product, length, and orthogonality, orthogonal sets, orthogonal projections (L1, L3).

CO5: Determine and Describe Gram-Schmidt process, least squares problems, Inner product spaces, diagonalization of symmetric matrices, quadratic forms (L1, L3).

Unit-1

Linear equations: Systems of linear equations, row reduction and Echelon form, vector equations, Matrix equation, solution sets of linear systems, Linear independence. **8 Hrs.**

Unit-2

Matrix Algebra: Introduction to linear transformations, Matrix of a linear transformation. Matrix operations, Inverse of a matrix, characterization of invertible matrices, partitioned matrices, matrix factorizations. **8 Hrs.**

Unit-3

Vector spaces: Vector spaces and subspaces, Null spaces, column spaces, linear transformations, linearly independent sets, bases, dimension of a vector space, rank, change of basis. **8 Hrs.**

Unit-4

Eigen values, Eigen vectors and Orthogonality: Introduction, characteristic equation, diagonalization, Eigen vectors and linear transformations, Complex Eigen values. Orthogonality- Inner product, length, and orthogonality, orthogonal sets, orthogonal projections. **8 Hrs.**

Unit-5

Orthogonality and least squares: Gram-Schmidt process, least squares problems, Inner product spaces, diagonalization of symmetric matrices, quadratic forms. **8 Hrs.**

ENGINEERING OPTIMIZATION TECHNIQUES

Course Code: **OE09**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Define and apply EO type's models and formulate linear programming and Non-linear models.

CO2: Identify and solve linear programming using One-Dimensional methods.

CO3: Formulate and solve Non –Linear unconstrained optimization problems.

CO4: Formulate and solve given problem using SLP and penalty methods to solve constrained optimization problems.

CO5: Apply techniques like GA and Neural Network methods to solve optimization problems.

Unit-1

Introduction: Optimization Techniques, Engineering Applications, Statement of an Optimization problem – design vector – design constraints – constraint surface – objective function – objective function surfaces – classification of Optimization problems and optimization Techniques. **8 Hrs.**

Unit-2

Nonlinear Programming I: One-Dimensional Minimization

Introduction: Unimodal Function, Elimination Methods: Unrestricted Search, Exhaustive search, Exhaustive search, Dichotomous Search, Fibonacci Method, Golden section Method, Interpolation Methods: Quadratic Interpolation Method, Cubic interpolation Method, Direct Root Method. **8 Hrs.**

Unit-3

Nonlinear Programming II: Unconstrained optimization Techniques

Introduction: Standard form of the problem and basic terminology, Direct search method- Random search method, Random jumping method, Random walk method Indirect search method-Gadient of a function, Steepest Descent (Cauchy) method, Conjugate gradient method, Newton's method, Application to engineering problems. **8 Hrs.**

Unit-4

Nonlinear Programming III: Constrained Optimization Techniques

Introduction, Standard form of the problem and basic terminology; Direct method: Sequential Linear Programming; Generalized Reduced gradient method, Methods of feasible direction Indirect method: Penalty function method Interior and exterior penalty function method, Check for convergence Application to engineering problems. **8 Hrs.**

Unit-5

Non-traditional methods of Optimization:
Introduction to non-traditional methods, Genetic Algorithm: Introduction, Representation of design variables, objective function and constraints, Genetic operators and numerical results. Introduction to Neural network based optimization. **8 Hrs.**

TEXT BOOK:

1. Engineering Optimization (Theory and Practice) by Singiresu S. Rao., New Age International (P) Limited, Publishers., New Delhi, 3rd edition – 2002.

3. Introductory Operations Research" by H.S. Kasene & K.D. Kumar, Springer (India), Pvt. Ltd.

NON-CONVENTIONAL ENERGY SOURCES

Course Code: **OE10**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Identify, Describe and estimate the types of energy sources.

CO2: Explain the principle and performance of Solar collectors.

CO3: Classify, Analyze and Design of Biogas digesters, Develop expressions for forces on wind turbine blades, Calculate the efficiency of wind turbines.

CO4: Classify and evaluate the wind turbine performance. Distinguish between the Mini and Micro-Hydel systems.

CO5: Discuss different types of Geothermal systems.

CO6: Describe and compare different types of Tidal, OTEC and Wave energy systems.

Unit-1

Introduction to Energy Sources: World Energy Features, Indian Energy Scene, Conventional and non-conventional energy sources, Prospects of renewable energy sources.

Solar Energy Source: Introduction, Solar constant, radiation on Earth's surface, Radiation.

geometry, Radiation measurements, Radiation data, Average solar radiation, radiation on tilted surfaces, Problems. **8 Hrs.**

Unit-2

Solar Energy collectors: Principle of conversion of energy, Flat plate collector, Transmissivity of cover system, Collector energy balance equation, Thermal Analysis of FPC, Useful heat gain, Focusing collectors, advantages and disadvantages, Factors affecting collector performance, Problems.

Application of Solar Energy: Solar Water Heating, Heating and Cooling of Buildings, Thermo electric conversion, Power generation, PV cells, Solar distillation, Pumping, Cooking, Hydrogen production. **10 Hrs.**

Unit-3

Wind Energy: Principle of energy conversion, Power generation, Forces on blades, energy estimation, Wind data, Components of WECS, Classification of WECS, Advantages and Disadvantages, Types of Wind machines, Performance of Wind machines, Applications of wind energy. Problems

Energy from Biomass: Conversion technology, Factors affecting gas

generation, classification of biogas plants, Advantages and disadvantages of different types of plants, Problems. **8 Hrs.**

Unit -4

Fuel Cells: Design and Principle of operation, Classification, Types, Advantages and disadvantages, Conversion efficiency, Types of electrodes, Work output and EMF of Fuel Cells, Applications of Fuel Cells.

Thermo Nuclear Fusion Energy: Fusion Reactions, Requirements, Plasma, Magnetic and Inertial Confinement fusion, Muon Catalyzed Fusion, Characteristics of D-T Reaction, Advantages of Nuclear Fusion, Fusion Hybrid, Cold Fusion. **7 Hrs.**

Unit-5

Principles of working: Geothermal, OTEC, Tidal, Waves, and Hydrogen (Generation and Application) **6 Hrs.**

TEXT BOOK:

1. "Non-conventional energy sources" by G.D.Rai Khanna Publishers.

REFERENCE BOOKS:

1. "Solar Energy" by S.P.Sukhatme, Tata McGraw-Hill Publishing Co. Ltd.
2. "Solar Energy" by G.D.Rai Khanna Publishers.
3. "Fundamentals of Renewable Energy Systems" by D. Mukherjee and S. Chakrabarti, New Age International Publishers.
4. "Non-Conventional Energy Resources" by D.S. Chauhan and S.K.Srivastava, New Age International Publishers.

ARTIFICIAL NEURAL NETWORKS

Course Code: **OE17**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Describe the basic concepts of Neural networks.

CO2: Analyze different learning algorithm used in Neural Networks

CO3: Characterize single layer perceptron and multilayer perceptron.

CO4: Examine the Radial basis function to solve given problem.

CO5: Implement algorithm to classify different data sets and analyze.

Unit-1

Introduction: What is a neural network? Human Brain, Models of a neuron, Neural networks viewed as directed graphs, feedback, network architectures, knowledge representation, Artificial intelligence and neural networks. **7 Hrs.**

Unit-2

Learning Processes: Introduction, Error correction algorithm, Memory based learning, Competitive learning, Boltzmann learning, Learning with a teacher, Learning without a teacher, Learning tasks, Memory, Adaptation. **8 Hrs.**

Unit-3

Single Layer Perceptions: Introductions, Adaptive filtering problem, Unconstrained optimization techniques, Least mean square algorithm, learning curves, Perceptron, perceptron convergence theorem, relation between the perceptron and Bayes classifier for Gaussian environment. **7 Hrs.**

Unit-4

Multilayer Perceptions: Introduction, some preliminaries, Back Propagation Algorithm, The two passes of computation, Activation function, Rate of learning, Sequential and Batch modes of training, Summary of the Back-Propagation Algorithm, XOR problem, Heuristics for making the Back–Propagation Algorithm perform better, Output Representation and Decision Rule. **8 Hrs.**

Unit-5

Radial Basis Function Networks: Introduction, Covers theorem on the separability of patterns, Interpolation problem, Supervised learning as an ill-posed hypersurface reconstruction problem, Regularization theory, Regularization Networks, Hopfield networks. **9 Hrs.**

TEXT BOOK:

1	Simon Haykin	Neural networks A Comprehensive foundation,1994.

FUZZY LOGIC AND ENGINEERING APPLICATIONS

Course Code: **OE18**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Learning Objectives:

- To get a overall view of fuzzy logic by going through basic concepts
- To study about developing fuzzy sets / membership functions.
- To understand principles of fuzzy relations and operations on fuzzy relations.
- To get clear idea about the development of membership functions
- To study the concepts and steps of developing fuzzy inference system
- To understand modeling of natural processes and engineering systems with fuzzy automated methods.
- To go through fuzzy clustering algorithm.

Course outcomes:

Upon successful completion of this course, student will be able to:

CO1: Analyze uncertainty in data / information available to them.
CO2: Realize the importance of fuzzy sets, to decide on type of membership function be developed for given set of data, get clear understanding of linguistic variables.
CO3: Develop fuzzy rules connecting antecedents and consequents.
CO4: Develop a suitable fuzzy inference system for the given domain/ or their domain of interest.
CO5: Develop predictive models using automated fuzzy systems.
CO6: Form clusters within the given data set using FCM and to be able to analyze the clusters.

Unit-1

INTRODUCTION: Historical perspective, utility of fuzzy systems, limitations of fuzzy systems, statistics and random processes, uncertainty in information, fuzzy sets and membership, chance versus fuzziness, sets as points in Hypercube.

CLASSICAL SETS AND FUZZY SETS: classical sets, operations on them, mapping of classical sets to functions, fuzzy sets, fuzzy set operations, properties of fuzzy sets, non-interactive fuzzy sets. **12 Hrs.**

Unit-2

CLASSICAL RELATIONS AND FUZZY RELATIONS: Cartesian Product, Crisp Relations - Cardinality of Crisp Relations, Operations on Crisp Relations, and Properties of Crisp Relations, Composition. Fuzzy Relations - Cardinality of Fuzzy Relations, Operations on Fuzzy Relations, Properties of Fuzzy Relations, Fuzzy Cartesian Product and Composition, Non interactive Fuzzy Sets. Tolerance and Equivalence Relations – Crisp

Equivalence Relation, Crisp Tolerance Relation, Fuzzy Tolerance and Equivalence Relations. Value Assignments - Cosine Amplitude, Max-min Method, Other Similarity methods.

Development of membership Functions: Membership value assignments, intuition, inference, rank ordering, neural networks, and genetic algorithms, inductive. **6 Hrs.**

Unit-3

MEMBERSHIP FUNCTIONS: Features of the Membership Functions, Standard Forms and Boundaries, Fuzzification, defuzzification to crisp sets, Lambda-Cuts for Fuzzy Sets, Lambda-Cuts for Fuzzy Relations, Defuzzification Methods. Problems on defuzzification. **10 Hrs.**

Unit- 4

FUZZY ARITHMETIC AND THE EXTENSION PRINCIPLE: Crisp Functions, Mapping and Relations, Functions of fuzzy Sets – Extension Principle, Fuzzy Transform (Mapping), Practical Considerations. Fuzzy Numbers Interval Analysis in Arithmetic, Approximate Methods of Extension - Vertex method, DSW Algorithm, Restricted DSW Algorithm, Comparisons. Fuzzy Vectors.

FUZZY SYSTEMS: Natural Language, Linguistic Hedges, Rule-Based Systems, Graphical Techniques of Inference. **7 Hrs.**

Unit-5

FUZZY CLASSIFICATION: Classification by equivalence relations, fuzzy relations, cluster analysis, cluster validity, C-means clustering, hard-c means (HCM), fuzzy c-means (FCM), fuzzy c-means algorithm, classification metric, hardening the fuzzy partition and similarity relations from clustering. **8 Hrs.**

TEXT BOOK:

REMOTE SENSING AND GIS

Course Code: **OE20**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Objectives: This course introduces the basic concepts of remote sensing systems and data acquisition. This course covers energy interaction and make proper choice of sensors and platforms, basic concepts of visual image interpretation and analysis, basic concepts of GIS and spatial data management, skills in image processing techniques and also covers the application of RS, GIS & GPS in various engineering fields.

Course Outcomes (COs)

Upon successful completion of this course, student will be able to:

CO1: Explain the concept of remote sensing and techniques of data acquisition.

CO2: Visually interpret the remote sensing data and analyze the digital data by image processing method.

CO3: Compute data for planning and conducting land coverage analysis like vegetation, water and soil etc.

CO4: Apply Remote sensing, GIS & GPS applications in various engineering projects.

Unit-1

Basic principles of remote sensing:

Concepts of remote sensing; Characteristics of electro- magnetic radiation; electromagnetic spectrum; Interaction between matter and electro-magnetic radiation; Wave length regions of electro- magnetic radiation; types of remote sensing with respect to wave length regions; Definition of radiometry; Black body radiation; Reflectance; Spectral reflectance of land covers; Spectral characteristics of solar radiation. **8 Hrs.**

Unit-2

Platforms and Sensors:

Types of platforms; Atmospheric condition and altitude; Atmospheric windows; Atmospheric scattering; Types of satellite such as Indian Remote Sensing (IRS) satellites, Landsat, Spot, ERS, Radarsat, Ikonos, Quickbird and Ocean Color Monitoring (OCM) etc.; Geostationary satellite, Polar orbit satellites, Meteorological satellite. Types of sensors: active and passive sensors, Thermal sensors, Microwaves sensors, Atmospheric sensors, Sonar sensors, Cameras for remote sensing. Sensors resolutions: Spectral, Spatial, Radiometric and Temporal resolutions. **8 Hrs.**

Unit-3

Visual Image interpretation (VIP) and analysis:

Fundamentals of satellite image interpretation; elements of interpretation. Types of imaging: Panchromatic, Multispectral, Hyper- spectral and Stereo

images. Techniques of visual interpretation; Generation of thematic maps such as Soil map, Litho- logical map, Drainage map, Land use and Land Cover map. Application of remote sensing in water resources, Urban planning, environmental assessment etc. **8 Hrs.**

Unit-4

Geographical Information Systems (GIS)/Geospatial Technology:

Introduction; GIS definitions and terminology; GIS categories; Components of GIS; Fundamental operations of GIS; Data collection; input and output; GIS data types: Raster and Vector data; Spatial and non spatial data: layered based GIS; Feature based GIS mapping; Map coordinate system; Map projection; Map elements; Map features; Georeferencing; Digitization; GIS software; GIS applications. Working principles of GPS and its applications. **8 Hrs.**

Unit-5

Digital Image Processing (DIP):

Digital data manipulation and analysis, preprocessing stages of image: rectification, radiometric correction, atmospheric correction, geometric correction. Image enhancement; spatial feature manipulation; Image classification techniques: Supervised classification and unsupervised classification. False Colored Composite (FCC); Image subset; Image mosaics; Overview of Erdas Imagine software. **8 Hrs.**

TEXT BOOKS:

1. Lillesand and Kiefer "Principles of Remote sensing and Image Interpretation, John Wiley and Sons.
2. Peter A Burrough Reacheal A McDonnel, Principles of GIS (Oxford).

REFERENCE BOOKS:

1. John R Jenson "Introductory Digital Image Processing", Verlag (NY).
2. Floyd F Sabins, W. H. Freeman and Company (NY) "Remote sensing - Principles & Interpretation", II Edition.

RELATIONAL DATABASE MANAGEMENT SYSTEMS (RDBMS)

Course Code: **OE24**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Process the data in a database and its different working environments; explain the basics of database in terms of hardware architecture, software applications, data models being followed and its real time applications.

CO2: Store, Organize and Select the data; describe the basics of Entity Relationship model and its importance during initial stages of database design process.

CO3: Write Structural Query Language statements with various syntaxes for database applications.

CO4: Design database by using Normalization process with normal forms.

CO5: Explain database transactions and its various management techniques in working environment of real time database application.

Unit–1

Introduction:

Introduction; An example; Characteristics of Database approach; Actors on the screen; Workers behind the scene; Advantages of using DBMS approach; A brief history of database applications; when not to use a DBMS. Data models, schemas and instances; Three-schema architecture and data independence; Database languages and interfaces; The database system environment; Centralized and client-server architectures; Classification of Database Management systems.

Entity-Relationship Model:

Using High-Level Conceptual Data Models for Database Design; An Example Database Application; Entity Types, Entity Sets, Attributes and Keys; Relationship types, Relationship Sets, Roles and Structural Constraints; Weak Entity Types; Refining the ER Design; ER Diagrams, Naming Conventions and Design Issues; Relationship types of degree higher than two. **8 Hrs.**

Unit–2

Relational Model and Relational Algebra:

Relational Model Concepts; Relational Model Constraints and Relational Database Schemas; Update Operations, Transactions and dealing with constraint violations; Unary Relational Operations: SELECT and PROJECT;

Relational Algebra Operations from Set Theory; Binary Relational Operations: JOIN and DIVISION; Additional Relational Operations; Examples of Queries in Relational Algebra; Relational Database Design Using ER- to-Relational Mapping. **7 Hrs.**

Unit – 3

SQL:

SQL Data Definition and Data Types; Specifying constraints in SQL; Schema change statements in SQL; Basic queries in SQL; More complex SQL Queries. Insert, Delete and Update statements in SQL; Specifying general constraints as Assertions and Triggers; Views (Virtual Tables) in SQL; Additional features of SQL; **12 Hrs.**

Unit–4

Database Design:

Informal Design Guidelines for Relation Schemas; Functional Dependencies; Normal Forms Based on Primary Keys; General Definitions of Second and Third Normal Forms; Boyce-Codd Normal Form.

Properties of Relational Decompositions; Algorithms for Relational Database Schema Design, Multi valued Dependencies and Fourth Normal Form; Join Dependencies and Fifth Normal Form; Inclusion Dependencies; Other Dependencies and Normal Forms. **6 Hrs.**

Unit–5

Transaction Management

The ACID Properties; Transactions and Schedules; Concurrent Execution of Transactions; Lock- Based Concurrency Control; Performance of locking; Transaction support in SQL; Introduction to crash recovery. 2PL serializability and recoverability; Introduction to lock management; Lock conversions; Dealing with Deadlocks; specialized locking techniques Concurrency control without locking to ARIES;

The log; Other recovery – related data structures; The write –ahead Log protocol; Check pointing; recovering from a system crash; Media recovery; Other algorithms and Interaction with concurrency control. **7 Hrs.**

TEXT BOOKS:

1. Elmasri and Navathe: Fundamentals of Database Systems, 5th Edition, Addison-Wesley, 2007, (Chapters 1, 2, 3 except 3.8, 5, 6.1 to 6.5, 7.1, 8, 10,11)
2. Raghu Ramakrishnan and Johannes Gehrke: Database Management Systems, 3rd Edition, McGrawHill, 2003. (Chapters 16, 17.1, 17.2, 18)

REFERENCE BOOKS:

1. Silberschatz, Korth and Sudharshan: Data base System Concepts, 5th Edition, Mc-GrawHill, 2006.
2. C.J. Date, A. Kannan, S. Swamynatham: A Introduction to Database Systems, 8th Edition, Pearson education, 2006.

ADVANCE JAVA PROGRAMMING

Course Code: **OE25**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Describe multi-tier architecture and best practices of J2EE.

CO2: Explain various J2EE design patterns and integration of Java IDL into J2EE application.

CO3: Develop Java Server Pages and explore Spring Framework.

CO4: Describe application objects and then wire them with their dependencies using Springs XML based configuration and Design JavaMail API and J2EE features that protect the application.

Unit-1

J2EE Overview and its Best practices:

J2EE Multi-tier Architecture: Distributive System, The Tier, J2EE Multi-Tier Architecture, Client Tier Implementation, Web Tier Implementation, Enterprise JavaBeans Tier Implementation, Enterprise Information system tier Implementation.

J2EE Best practices: Enterprise Application Strategy, The Enterprise Application, clients, session Management, Web Tier and java server Pages, Enterprise JavaBeans Tier, the myth of using Inheritance, Maintainable Classes, Performance Enhancements, Power of Interfaces, power of Threads, Power of Notification. **9 Hrs.**

Unit-2

J2EE Design Patterns and Frameworks: The Pattern Concept, Pattern Catalog: Handle-Forward Pattern, Translator pattern, Distributor Pattern, Broadcaster Pattern, Zero Sum Pattern, Status Flag Pattern, Sequencer pattern, Behavior Separation Pattern, Consolidator Pattern, Simplicity Pattern, Stealth Pattern.

Java Interface Definition Language and CORBA: The Concept of Object Request Brokerage, Java IDL and CORBA, The IDL Interface, The Client Side, The Server Side, Running the Code. **8 Hrs.**

Unit-3

Java Server pages and J2EE Security: Java Server pages: JSP: Installation, JSP Tags: Variables and objects, Methods, Control Statements, Loops Tomcat, Request Strings: Parsing Other Information, User Sessions, Cookies, Session Objects.

Core Spring: Springing into action :Simplifying Java development, Containing your beans, Surveying the Spring landscape.

7 Hrs.

Unit-4

Spring Wiring beans: Declaring beans, Injecting into bean properties, Wiring with expressions. **Minimizing XML configuration in Spring:** Automatically wiring bean properties,Wiring with annotations, Automatically discovering beans, Using Spring's Java-based configuration

Aspect-oriented Spring: What's aspect-oriented programming, Selecting join points with pointcuts, Declaring aspects in XML, Annotating aspects, Injecting AspectJ aspects. **8 Hrs.**

Unit-5

JavaMail API and Java Interface Definition Language and CORBA:

JavaMail: JavaMail API and Java Activation Framework, Protocols, Exceptions, Send Email Messages, Retrieving Email Message, Deleting Email Messages, Replying to and Forwarding an Email Message, Sending attachments, Receiving Attachments, Searching an Email Folder.

Security: J2EE Security Concepts, JVM Security, Security Management, JAVA API Security, Browser Security, Web Services Security

7 Hrs.

TEXT BOOKS:

1. The Complete Reference, **J2EE**, Jim Keogh, Tata McGraw-Hill, 2008 (Chapter 2, 3, 4, 11, 13, 14, 17).
2. Spring In Action, 3rd Edition, By Craig Walls, Manning Publications Co. (Chapter 1,2,3,4)

REFERENCE BOOKS:

1	Rod Johnson	Expert One-on-One J2EE Design and Development
2	Dan Malks, Deepak Alur, and John Crupi	Core J2EE Patterns: Best Practices and Design Strategies
3	Alef Arendsen and Juergen Hoeller	Professional Java Development with the Spring Framework
4	Daniel Rubio, Gary Mak, and Josh Long	Spring Recipes: A Problem-Solution Approach
5	Clarence Ho and Rob Harrop	Pro Spring 3

COMPOSITE MATERIALS

Course Code: **OE26**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

In Composite materials, materials are combined in such a way as to enable us to make better use of their virtues while minimizing to some extent the effects of their deficiencies. This course is intended to impart thorough knowledge of processing aspects of composite materials, properties and their applications.

Course Learning Objectives:

- Understanding composite materials and how they are classified?
- Different manufacturing/processing methods used for producing PMC's and MMC's.
- Introducing various physical, mechanical and elevated temperature properties of MMC's.
- Knowledge about testing methods used for physical and mechanical evaluation of composites.

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Apply the knowledge of materials in differentiating composite materials from conventional materials [**L_1 and L_2 – PO1-L].**

CO2: Identify matrices, reinforcements and methods used for processing of FRP's, MMC's **[L3-PO2-L].**

CO3: Describe the various methods used for cutting of cured and uncured composites and explain the different welding methods employed in FRPs and MMC's to achieve joining in composites **(L_1 and L_2)**.

CO4: Apply rule of mixture for predicting the longitudinal and transverse properties (Mechanical and Physical) for a given combination of matrix and reinforcement **[L_4 – PO1-M].**

CO5: Demonstrate the problems associated with recycling of composites and to provide possible solutions **[L3 –PO7-L].**

Unit-1

INTRODUCTION TO COMPOSITE MATERIALS

What are composites materials?, Broad Classification and Characteristics of Composite materials, Measurement of mechanical advantage of composites, Advantages and Limitations of Composite Materials, Detailed Classification of Composite Materials, Fibre Reinforced Composites, Introduction and Factors Influencing, Discontinuous Reinforcements, Whiskers, Particulates, Continuous Reinforcements, Natural & Metallic Organic, Ceramic, Glass Fibres, Aramid Fibres, Carbon Fibres, and Boron Fibres, Polymer Matrices, Metallic Matrices, Ceramic Matrices, Importance,

Types of Interfaces, Wettability and bonding, Types of bonding in composites. **07 Hrs.**

Unit-2

POLYMER MATRIX COMPOSITES – PROCESSING

Introduction to Polymer matrix composites, Classification of Processing methods, Open mould processes, Hand Lay-up method, Spray -up Moulding, Advantages & Limitations of Spray up moulding Introduction to prepegs, Manufacturing of prepegs, Closed mould processes, Bag Moulding, Vacuum Bag, Pressure bag, and Autoclave moulding, Principle Winding methods, Winding materials and patterns, Mandrels and Variables affecting, Advantages and limitations, Introduction, Principle, Steps and Key elements, Advantages and Disadvantages, Compression moulding, Bulk Moulding, Sheet moulding, Preforms, Advantages, Resin Transfer Moulding, Introduction, Process, Advantages and Limitations, Vacuum Assisted Resin Transfer molding, Injection Moulding, Blow Moulding, Glass Fibre Reinforced Composites, Carbon Fibre Reinforced Composites.

09 Hrs.

Unit-3

METAL MATRIX COMPOSITES – PROCESSING & PROPERTIES

Introduction, Definition, Advantages over monolithic and PMC's, Characteristics of MMC's, Matrices Classification of MMC's, Types of Metal Matrices, Aluminium and its alloys, Ti and its alloys, Mg, Cu and its alloys, Processing of MMC's, Need for developing MMC's, Powder Metallurgy method of processing, Solid State methods, Diffusion Bonding of MMC"s, High energy rate forming, Liquid State methods - Melt stirring, Compo/Rheo Casting, Liquid Melt Infiltration, Squeeze casting, Spray Deposition methods, Insitu fabrication method, Properties: General properties, Physical properties, CTE, Density, Thermal Deformation Resistance, Mechanical properties and testing, Ductility, Young's modulus, Strength, High temperature properties, Ductility and Strength, Creep, Fatigue, Commercial MMC's. **08 Hrs.**

Unit-4

FABRICATION OF COMPOSITE MATERIALS

Machining of Composites – Introduction, Objectives/Purposes of Machining, Challenges during Machining of Composites, Failure Mode during Machining of Composites, Types of Machining Operations Cutting uncured composites by conventional method, Water Jet cutting, Laser beam Cutting, Reciprocating Knife Cutting, Steel Rule Die Cutting, Cutting of cured composites, Abrasive Jet cutting, Machining of FRP'S and other PMC's,

Joining of Composites: Introduction, Adhesive Bonding, Failure Modes in Adhesive Bonding, Basic Science of Adhesive Bonding, Adsorption Theory, Mechanical Theory, Types of Adhesives, Advantages and limitations of Adhesive Bonding. Mechanical Joints, Advantages of Mechanical Joints, Disadvantages of Mechanical Joints, Failure Modes in a Bolted Joint, Preparation for the Bolted Joint, Friction and Ultrasonic welding of FRP's Welding. **09 Hrs.**

Unit-5

MECHANICAL ANALYSIS OF COMPOSITES AND RECYCLING OF COMPOSITES

Mechanical analysis of Composites : Longitudinal strength and modulus (Iso Strain, Critical Volume fraction of fibers, Transverse strength and modulus (Iso Stress), Minimum volume fraction of the fibre, Expression for finding strength and modulus for discontinuous fibers, Numericals on finding Density, Modulus and Strength Calculations using rule of mixture, Numericals on finding Transverse elastic modulus, Comparison of Transverse and longitudinal strength and modulus,, Stress strain curves, PMC's,, MMC's. Recycling of Composites; Introduction, Categories of Dealing with Wastes, Land-filling or Burying, Incineration or Burning Recycling, Recycling Methods: Regrinding and Pyrolysis. Introduction to Carbon-Carbon and Nano-composites. **09 Hrs.**

TEXT BOOKS:

1) Composite Science and Engineering by K.K.Chawala Springer Verlag 1998.
2) Composites Manufacturing -materials, product, and process - Sanjay K. Mazumdar – CRC press,2002.
3) Composite Materials: Engineering and Science – F. L. Mathew and R. D. Rawlings, Woodhead Publishing Limited.

SOFTWARE ENGINEERING

Course Code: **OE29**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course outcome:

Upon successful completion of this course, student will be able to:

- **CO1:** Explain the importance of systematic approach in engineering the software.
- **CO2:** Choose a software model that would implement the customer requirements.
- **CO3:** Identify and choose the suitable Architecture for problem.
- **CO4:** Evaluate the chosen Architecture for the problem.
- **CO5:** Distinguish between different tests that are to be done to validate software.

Unit-1

INTRODUCTION AND SOFTWARE PROCESSES

Introduction: Role and importance of software engineering, Professional and ethical responsibility. Software processes: Software process models, Process iteration, Process activities, The Rational Unified Process, Computer-aided Software Engineering. **7 Hrs.**

Unit-2

SOFTWARE REQUIREMENT

Software requirements: Functional and non-functional requirements, User requirements, System requirements, Interface specification, The software requirements document. Requirement engineering processes: Feasibility studies, Requirement elicitation and analysis, Requirements validation, Requirements management.

Case study: Banking, Hospital & Industry. 7 Hrs.

Unit-3

SOFTWARE DESIGN

Design concepts: Design with the context of software engineering, The design process, Design concepts, The design model. Architectural design: Software architecture, Architectural genres, Architectural styles, Architectural design, Assessing alternative architectural designs, Architectural mapping using data flow. [Text Book-2]

Case study: Banking, Hospital & Industry. 9 Hrs.

Unit-4

SOFTWARE VERIFICATION AND VALIDATION

Verification and Validation: Planning verification and validation, Software inspections, Automated static analysis, Verification and formal methods.

Software Testing: System Testing, Component Testing, Test case design, Test automation. **7 Hrs.**

Unit-5

SOFTWARE MANAGEMENT

Managing people: Selecting staff, Motivating people, Managing groups, The People Capability Maturity model. Software Cost Estimation: Software productivity, Estimation techniques, Algorithmic cost modeling, Project duration and staffing. Configuration management: Configuration management planning, Change management, Version and release management, System building and CASE tool for configuration management. **9 Hrs.**

Case study: Requirement document preparation, Design and Software testing for a case will be carried out by Industrial Competency Lab of SIT (faculty) in par with industry practice. **(7 + 6) Hrs.**

Outcome:

Students are capable of managing the software product development process in software development industries.

TEXT BOOKS:

1	Ian Sommerville	Software Engineering, Pearson Education, Ltd published by Dorling Kindersley (India) Pvt Ltd (seventh edition).
2	Roger S Pressman	Software Engineering, McGraw-Hill (seventh edition).

REFERENCE BOOKS:

C# AND.NET TECHNOLOGIES

Course Code: **OE33**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course outcomes:

Upon successful completion of this course, student will be able to:

CO1: Describe the concept of OOP as well as the purpose and usage principles of inheritance, polymorphism, encapsulation and method overloading.

CO2: Identify classes, objects, members of a class and the relationships among them needed for a specific problem.

CO3: Write .NET program using threads, event handling and input output utilities. Develop programs using the .NET Collection API as well as the .NET standard class library.

CO4: Be able to Employ a hierarchy of .NET classes to provide a solution to a given set of requirements.

CO5: Demonstrate the ability to use database connection and client server interaction using .NET.

CO6: Write Interfaced programming and continue their studies on advanced .NET concepts.

CO7: Write Windows Collections and Namespaces to implement windows applications.

Unit-1

The Philosophy of .NET:

Understanding the Previous State of Affairs, The .NET Solution, The Building Blocks of the .NET Platform, The Role of the .Net Base Class Libraries, What C# Brings to the Table, Additional .NET-Aware Programming Languages, An Overview of .NET Binaries. The Role of the Common Intermediate Language, The Role of .NET Type Metadata, The Role of the Assembly Manifest. Compiling CIL to Platform-Specific Instruction, Understanding the Common Type System, Understanding the Common Language Specification, Understanding the Common Language Runtime.

A Tour of the .Net Namespaces- Accessing a Namespace Programmatically.

Building C# Applications: The Role of the Command Line Compiler (csc.exe), Building C# Application Using csc.exe. Working with csc.exe Response Files, Generating Bug Reports, C# "Preprocessor" Directives- **Specifying code regions, Conditional code compilation, Issuing warnings and errors**. The System.Environment Class. **7 Hrs.**

Unit-2

C# Language Fundamentals:

The Anatomy of a Basic C# Class, Creating Objects: Constructor Basics. The Composition of a C# Application, Default Assignment and Variable Scope. The C# Member Variable Initialization Syntax, Basic Input and Output with the Console Class, Understanding Value Types and Reference Types, The Master Node: System. Object, The System Data Types (and C# Aliases). Converting Between Value Types and Reference Types: Boxing and Unboxing.

Defining Custom Class Methods, understanding Static Methods, Method Parameter Modifiers. Array Manipulation in C#, String Manipulation in C#. C# Enumerations.

Defining Structures in C#. Defining Custom Namespaces. **8 Hrs.**

Unit-3

Object-Oriented Programming with C#:

Formal Definition of the C# Class, Definition the "Default Public Interface" of a Type, Recapping the Pillars of OOP. The First Pillars: C#'s Encapsulation Services.

Pseudo-Encapsulation: Creating Read-Only Fields, The Second Pillar: C#'s Inheritance Supports, keeping Family Secrets: The "protected" Keyword. Nested Type Definitions, The Third Pillar: C#'s Polymorphic Support. Casting Between Types.

Exceptions and Object Lifetime:

Ode to Errors, Bugs, and Exceptions, The Role of .NET Exception Handling, The System.Exception Base Class, Throwing a Generic Exception. Catching Exception, CLR System-Level Exception (System.SystemException), Custom Application-Level Exception (System. Application Exception). Handling Multiple Exceptions, The Finally Block, Dynamically Identifying Application- and System-Level Exceptions.

Understanding Object Lifetime, The CIL of "new", The Basics of Garbage Collection, Finalizing a Type. The finalization Process, Building an Ad Hoc Destruction Method, Garbage Collection Optimizations, The System. GC Type. **8 Hrs.**

Unit-4

Interfaces and Collections:

Defining Interfaces Using C#, Invoking Interface Members at the Object Level, Exercising the Shapes Hierarchy.Understanding Explicit Interface Implementation, Interfaces As Polymorphic Agents, Building Interface Hierarchies. Building a Custom Enumerator. (IEnumerable and IEnumerator), Building Cloneable Objects (ICloneable), Building

Comparable Objects (I Comparable). Exploring the System. Collections Namespace.

Delegates:

Understanding the .NET Delegate Type, Members of System.Multicast Delegate. The Simplest Possible Delegate Example. Understanding Asynchronous Delegates. **8 Hrs.**

Unit-5

Advanced C# Type Construction Techniques:

The Advanced Keywords of C#, A Catalog of C# Keywords, Building a Custom Indexer, A Variation of the Cars Indexer. Overloading Operators. Understanding Custom Type Conversion, Creating Custom Conversion Routines. Defining Implicit Conversion Routines.

Understanding .NET Assembles:

An Overview of .NET Assembly, Building a Single File Test Assembly, A C# Client Application. Building the Multifile Assembly, Using the Multifile Assembly, Understanding Private Assemblies, Understanding Shared Assembly, Understanding Strong Names, Building a Shared Assembly.

8 Hrs.

TEXT BOOK:

1	Andrew Troelsen.	C# and the .Net Platform, Second Edition, Dreamtech Press, India, 2007.

REFERENCE BOOK:

1	Herbert Schildt	C#, The Complete Reference, Tata McGraw Hill, 2004.

JAVA PROGRAMMING

Course Code: **OE34**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Describe the concept of OOP as well as the purpose and usage principles of inheritance, polymorphism, encapsulation and method overloading.

CO2: Identify classes, objects, members of a class and the relationships among them needed for a specific problem.

CO3: Write java program using threads, event handling and input output utilities. Develop programs using the Java Collection API as well as the Java standard class library.

CO4: Demonstrate the ability to use Threads and synchronization in java.

CO5: Explain and write input – output programming in java and applications using Applets.

Unit-1

INTRODUCTION TO JAVA

The Java Revolution: Revolutionary programming language Rich object environment, Object Oriented Fundamentals: Object Oriented Programming, How Java is better than C++

Java Language Introduction:

hello world program, lexical issues and introduction Types: Simple types array Operators: arithmetic, integer, bit wise, relational, Boolean logical, operator precedence. flow control: if else, break, switch, return. Looping - while, do while, for, comma statements, continue. **8 Hrs.**

Unit-2

Classes, packages and interfaces

Classes: Object references, Instance variables, the new operator, the dot operator, method calling, this operator, constructor, method overloading inheritance, super Dynamic method dispatch static, abstract Packages: the package statement, compiling classes in packages, the import statement, access protection.

Interfaces: the interface statement, the implements statement, variables in interfaces. **9 Hrs.**

Unit-3

String and Exception Handling

String Handling: Constructors, special string syntax character extraction, comparison, index string copy modifications string Buffer, append, insert. Exception handling: Fundamentals, exception types, uncaught exceptions, try and catch multiple catch clauses, nested try statements, throw, throws, finally. **7 Hrs.**

Unit-4

Threads, synchronization and Utilities

synchronization: Single threaded event loop, thread, runnable, thread priorities, the java thread model Status/Deviationinter thread communication. Utilities: Simple type wrappers, enumerations, runtime, date, system, math, random. **7 Hrs.**

Unit-5

Input/Output and Applets

Input-Output: IO streams, File, file streams, StringBufferInputStream. Applets: HTML Applet tage, syntax, passing parameters, getParameter, appletcontext and showdocument, applet initialization, repainting, color methods, fonts.

8 Hrs.

TEXT BOOK:

1. Patrick Naughton The Java Hand Book, TMH, Eleventh Reprint, 2002.

REFERENCE BOOKS:

1. Mahesh P.Matha, Core Java – A comprehensive study, PHI, EE edition.

BUSINESS INTELLIGENCE

Course Code: **OE38**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcome:

Upon successful completion of this course, student will be able to:

CO1: Identify the characteristics, sources, challenges and management of digital data with knowledge of business view of Information technology applications.

CO2: Analyze the role of OLTP and OLAP systems in business intelligence by understanding its features, architectures, data models and operations on data.

CO3: Describe the basic concepts of business intelligence, BI component framework, BI applications, roles and responsibilities.

CO4: Identify the KPIs for given scenario, define measurement terminologies and explain data quality, data profiling, data integration and dimensional modelling (including fact and dimension tables) with respect to Data warehousing.

CO5: Describe the basics of enterprise reporting for data visualization and usage of KPIs, metrics for performance management in organization

Unit-1

Business View of Information Technology Applications: Business Enterprise, Functions and Core Business Processes, Baldrige Business Excellence Framework, Purpose of Using IT in Business, Application development Approaches, Information Users and Their Requirements.

Introduction to digital data and its types – structured, semi-structured and unstructured. **8 Hrs.**

Unit-2

Introduction to OLTP and OLAP, OLAP Architectures (MOLAP, ROLAP, HOLAP), Data Models for OLTP and OLAP, OLAP operations.

Introduction to Business Intelligence: BI Definitions & Concepts, BI Framework, who is BI for? Data Warehousing concepts and its role in BI, BI Infrastructure Components – BI Process, BI Technology, BI users, Business Applications of BI, BI best practices. **8 Hrs.**

Unit-3

Basics of Data Integration: Concepts of data integration, needs and advantages of using data integration, Need for Data Warehouse, Definition,

Goals, Benefits, Use, Components, Data Marts, Ralph Kimball's AND W.H. Inmon's Approach, Extraction, Transformation & Loading, introduction to common data integration approaches, Meta data - types and sources, Introduction to data quality, data profiling concepts and applications, introduction to ETL using Pentaho data Integration (formerly Kettle)

7 Hrs.

Unit-4

Multi-dimensional Data Modeling: Introduction to data and dimension modeling, multidimensional data model, ER Modeling vs. multi dimensional modeling, concepts of dimensions, facts, cubes, attribute, hierarchies, star and snowflake schema, Dimensional modeling life cycle.

Measures, Metrics and KPIs: Understanding Measures and Performance, Role of Metrics, KPIs. **8 Hrs.**

Unit-5

Basics of Enterprise Reporting: Reporting perspectives, Report standardization and present practices, Enterprises reporting characteristics in OLAP world, balanced scorecard, enterprise dashboard, balanced scorecard vs. enterprise dashboard, the buzz behind analysis: Funnel analysis, distribution channel analysis, performance analysis, enterprise reporting using MS Access / MS Excel, best practices in the design of enterprise dashboards. **8 Hrs.**

TEXT BOOK:

1. R N Prasad and Seema Acharya, Fundamentals of Business Analytics, Wiley India, August 2011.

REFERENCE BOOKS:

1. David Loshin, Business Intelligence, Morgan Kaufmann Publishers, 2003.
2. Roland Bouman, Jos van Dongen, Pentaho Solutions: Business Intelligence and Data Warehousing with Pentaho and MySQL, Wiley Publications.

OPERATING SYSTEM

Course Code: **OE39**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: To provide students with a strong foundation in the mathematical, scientific and computational fundamentals necessary to formulate, solve and analyze IT related problems.

CO2: To develop an ability to analyze the requirements of the software, understand the technical specifications, design and provide novel engineering solutions and efficient product designs.

CO3: To provide exposure to emerging cutting-edge technologies, adequate training & opportunities to work as teams on multidisciplinary projects with effective communication skills and leadership qualities.

CO4: To prepare the students for a successful career and work with values & social concern bridging the digital divide and meeting the requirements of Indian and multinational companies.

CO5: To promote student awareness on the life-long learning and to introduce them to professional ethics and codes of professional practice.

Unit-1

INTRODUCTION: What operating systems do; Operating System Structure; Operating System Operations; Process Management; Memory Management; Storage Management; Protection and Security; Distributed System; Special Purpose Systems; Computing environments. (Ref. Chapter 1 -1.1, 1.4-1.12)

SYSTEM STRUCTURES: Operating System Services; User-Operating System interface; System calls; Types of system calls; System programs; Operating System design and implementation; Operating System Structure. (Ref. Chapter 2 -2.1-2.7)

PROCESS: Process concept; Operations on processes
(Ref. Chapter 3 -3.1-3.4) **8 Hrs.**

Unit-2

PROCESS MANAGEMENT: Basic concepts; Scheduling criteria; Scheduling algorithms; Multiple-Processor Scheduling. (Ref. Chapter 5 -5.1-5.4). **8 Hrs.**

Unit-3

DEADLOCKS: System model; Deadlock characterization; Methods for handling deadlocks; Deadlock prevention; Deadlock avoidance; Deadlock detection and recovery from deadlock. (Ref. Chapter 7 -7.1-7.7). **7 Hrs.**

Unit-4

MEMORY MANAGEMENT: Background; Swapping; Contiguous memory allocation; Paging; Structure of page table; Segmentation.
(Ref. Chapter 8 -8.1-8.6) **8 Hrs.**

Unit-5

VIRTUAL MEMORY MANAGEMENT: Background; Demand paging; Copy-on-write; Page replacement; Allocation of frames; Thrashing
(Ref. Chapter 9 -9.1-9.6)

FILE SYSTEM : File concept; Access methods.
(Ref. Chapter 11- 11.1, 11.2) **8 Hrs.**

TEXT BOOK:

1	Abraham Silberschatz, Peter Baer Galvin, Greg Gagne	Operating System Principles, 7th edition, Wiley-India, 2006.

MATHEMATICAL MODELING

Course Code: **OE40**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Prerequisites: Differential Equations, Curve fitting.

Course objectives:

1. To make the student to *identify* the physical situation(s) which can be modeled as a difference equation and hence predict the future by finding its *solution*.
2. To introduce the systematic procedure to *derive* the mathematical model using the well-defined physical laws.
3. To make the student to analyse the data, identify the type of curve to be fit and justify the fit through the parameters of fit.
4. To introduce the concept of probability to develop the mathematical model for the situation.
5. To make the student to apply the concept of differential equation to develop the mathematical model for the given situation.

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: identify the physical situation(s) which can be modelled as a difference equation and hence predict the future by finding its solution.

CO2: introduce the systematic procedure to derive the mathematical model using the well-defined physical laws.

CO3: analyse the data, identify the type of curve to be fit and justify the fit through the parameters of fit.

CO4: introduce the concept of probability to develop the mathematical model for the situation.

CO5: apply the concept of differential equation to develop the mathematical model for the given situation.

Unit-1

Modeling Change

Introduction, Testing for proportionality, Modeling change with difference equations, Example 1: A savings certificate, Example 2: Mortgaging a home, Approximating Change with Difference equations, Example 1: Growth of a Yeast culture, Example 2: Growth of a Yeast culture revisited, Example 3: Decay of Digoxin in the blood stream, Solutions to Dynamical systems, Example 1: A savings certificate revisited, Example 2:Seavage treatment, Example 3: Prescription for Digoxin, Systems of Difference equations, Example1: A car rental company, Example 2: The battle of Trafalgar, Example 3: Travelers' Tendencies at a Regional Airport., Example 4: Discrete Epidemic Models. **9 Hrs.**

Unit-2

The Modeling Process, Proportionality, and Geometric Similarity

The Modeling Process, Proportionality and Geometric similarity: Introduction, Mathematical Models, Example: Vehicular stopping distance, Modeling using proportionality, Example: Kepler's third law, Modeling using geometric similarity, Example1: Rain drops from a motionless cloud, Example 2: Modeling a bass fishing derby, Automobile Gasoline Mileage, Body weight and height strength and Agility. **8 Hrs.**

Unit-3

Model fitting

Introduction, Fitting models to data graphically - Visual Model Fitting with the Original Data, Transforming the Data. Analytic methods of model fitting - Chebyshev Approximation Criterion, Minimizing the Sum of the Absolute Deviations, Least-Squares Criterion, Relating the Criteria. Applying the least squares criterion- Fitting a Straight Line, Fitting a Power Curve, Transformed Least Squares Fit, Choosing a best model, Example: Vehicular stopping distance **7 Hrs.**

Unit-4

Discrete Probabilistic Modeling

Introduction, Probabilistic modeling with discrete systems, Example 1: Rental car company revisited, Example 2: Voting tendencies, Modeling component and system reliability, Example1: series systems, Example 2: Parallel systems, Example3: Series and Parallel combinations. Linear Regression, Example 1: Ponderosa pines, Example 2: The bass fishing derby revisited. **8 Hrs.**

Unit-5

Modeling with a differential equations

Introduction- The Derivative as a Rate of Change, The Derivative as the Slope of the Tangent Line. Population growth, Prescribing Drug Dosage, Breaking distance revisited. Graphical solutions of Autonomous differential equations, Example: Drawing a phase line and sketching solution curves, Numerical approximation methods - First-Order Initial Value Problems, Approximating Solutions to Initial Value Problems: Example 1: Using Euler's method, Example 2: A saving certificate revisited. **7 Hrs.**

TEXT BOOK:

1. Frank.R.Giordano, William.P.Fox, Steven B. Horton and Brooks Cole, "A First course in Mathematical modeling", 5th Edition, 2013. [Chapters – 1,2,3,6 and 11].

REFERENCE BOOKS:

1. Neil Gerschenfeld, "The nature of Mathematical Modeling", Cambridge University press, 1999.
2. A.C. Fowler, "Mathematical Models in applied sciences", Cambridge University press, 1997.

DATA ANALYTICS

Course Code: **OE41**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course learning objectives:

To gain knowledge of data using location, shape and dispersion methods

To gain knowledge of different types of data, data visualization

To gain knowledge of correlation between data

To gain knowledge of time series analysis

To gain knowledge of hypothesis testing (Z and T test, chi-square test)

Course Outcomes (CO)

Upon successful completion of this course, student will be able to:

CO1: Apply various locations, shape and dispersion measures and interpret the results for better understanding of data.

CO2: Use various visualization techniques and interpret the plots for understanding data.

CO3: Apply different types of correlation among data to interpret the association among data and interpret the outcome.

CO4: Apply various time series forecasting method for prediction and interpret the outcome.

CO5: Apply various types of hypothesis testing and interpret the outcome.

Unit 1

Difference between descriptive & inferential statistics, data mining and intelligent data analysis. Data and knowledge, Data Understanding: Attribute Understanding, Data Quality. Statistics: Terms and Notations, Descriptive Statistics – Tabular and Graphical Representations (problems on frequency tables) Characteristic Measures for one dimensional data – Locations measures, Dispersion measures, Shape measures, Box plots (numerical problems) Data Visualization –Methods for one and two attributes (histogram, Box plot, stem and leaf plot, Scatter plot) **9 Hrs.**

Unit-2

Characteristics Measures for Multidimensional Data: Correlation Analysis (problems on Pearson's correlations coefficient, Ranks correlation – Spearman's and Kendall's tau rank correlation coefficient), Visualization Methods for Higher dimensional data (Principle component analysis, Parallel Coordinates, Radar and Star plots). Outlier Detection for single and multidimensional data, a checklist for data understanding.

Linear Regression, Multiple regressions – multivariate data, partial correlation coefficients, multiple correlations. **8 Hrs.**

Unit - 3

Time series Analysis: Importance of Time series analysis, components of a time series, Trend of time series using method of simple moving average, simple weighted moving average, centred moving average, median smoothening, weighted moving centred average method, method of least square, linear regression method for forecasting, and exponential smoothing (simple and adjusted). Forecasting using seasonal indexing.

9 Hrs.

Unit - 4

Testing of Hypothesis – Introduction to hypothesis testing, Procedure of testing hypothesis, Type I error, Tails of a test, Z test and t test - Lower Tail Test of Population Mean with known Variance , Upper Tail Test of Population Mean with known Variance, Two-Tailed Test of Population Mean with Known Variance, Lower Tail Test of Population Mean with Unknown Variance, Upper Tail Test of Population Mean with Unknown Variance, Two-Tailed Test of Population Mean with Unknown Variance
Chi-square distribution- properties, the goodness of fit test, test of independence, Chi-square as test of homogeneity. **8 Hrs.**

Unit 5

Data Preparation: Select Data – Feature Selection, Dimensionality Reduction Record Selection. Clean data – improve data quality, missing values. Construct data – Provide operability, assure impartiality (Data transformation). Data Integration: Vertical and Horizontal data integration (different types of joins). Data analysis process- CRISP-DM process.

5 Hrs.

INTEGRATED PRODUCT DESIGN & INTELLECTUAL PROPERTY RIGHTS

Course Code:**OE42**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Objectives:

1) Competence with a set of tools and methods for product design and development.
2) Awareness of the role of multiple functions in creating a new product (e.g. market needs industrial design, engineering, production).
3) Ability to coordinate multiple, interdisciplinary tasks in order to achieve a common objective for developing products.
4) Awareness about the essence of Intellectual property rights in the New Product Development.

Course Out comes:
The students will be able to:

CO1: Identify the need of developing a new product.

CO2: Design and develop the new product or improve existing product.

CO3: Develop of a working prototype.

CO4: Explain product development principles in developing new products.

CO5: Protect the designed products through IPR.

Unit-1

Introduction: characteristics of Successful product development, who designs and develops products? Duration & cost of product development, challenges of product development.

Development process: A Generic development process, concept development: the front-end process, adapting the generic product development process, AMF Development process.

Identifying customer needs: Gather raw data from customers, Interpret raw data in terms of customers needs, QFD (Quality Function Deployment)

9 Hrs.

Unit-2

Concept generation: The activity of concept generation-A 5 step method: Clarify the problem, search externally, search internally, explore systematically, and reflect on the results and process.

Concept selection: concept screening & concept scoring: preparing the selection matrix, rate the concepts, ranking the concepts, combine and improving the concepts, selecting the concepts.

Concept testing: Seven step methods for testing product concept: Define the purpose, choosing a survey population, survey format, communicating

the concept, measure the customer response, interpret the results, and reflecting the results. **9 Hrs.**

Unit-3

Industrial Design: Introduction of Industrial Design, Assessing the need for Industrial Design, its importance in product development, ergonomic needs, Aesthetic needs, Industrial Design process, Management of Industrial design process, assessing the quality of Industrial Design process: Investigation of customer needs, conceptualisation, Management of Industrial design process, Assessing the quality of Industrial Design.

8 Hrs.

Unit-4

Design for Manufacturing (DFM): Definition of DFM, Cross functional Team, Implementing DFM throughout the Product Development process.

Overview of the DFM process: Estimating the manufacturing cost, Cost reduction process, reducing the cost of assembly, reducing the cost of supporting production, Impact of DFM decisions on other factors.

8 Hrs.

Unit-5

Prototyping: Definition of prototype, Types of prototype, significance of prototype, prototyping Technologies-3D computer modelling, free foam fabrication.

Patent & Intellectual property: Definition of Intellectual property, Overview of patents, utility patents, preparing an invention disclosure: Formulating a strategy and plan, studying prior inventions, outline claims, Description of the invention, refining claims, pursue application, and reflect on the results. **8 Hrs.**

TEXT BOOK:

1. Product Design and Development: Karl. T. Ulrich, Steven D. Eppinger, Irwin McGraw Hill- 2009.

REFERENCE BOOKS:

1. Product Design and Manufacturing: A.C.Chitale and R.C.Guptha, PH1-2008.

2. Product Design for Manufacture and Assembly: Geoffery Boothroyd, Peter Dew Hurst and Winston Knight. McGraw Hill- 2008.

RAPID PROTOTYPING AND MEMS

Course Code: **OE43**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Explain the concept of Rapid Prototyping & its application.

CO2: Describe different RP techniques, RP Machines and RP tooling.

CO3: Elucidate the advantage of having RP in Time Compression Engineering.

CO4: Explain basics of MEMS and micromachining technologies

CO5: Explain the working of micro sensors and micro actuators.

Unit-1

Need for the compression in product development, history and development of RP systems, Survey of applications, Growth of RP industry, and classification of RP systems. Stereo lithography Principle, Process parameter, Process details, Data preparation, data files, machine details and application. **8 Hrs**.

Unit-2

Type of machines and process, laser sintering, principle of operation, process parameters, applications. Fusion deposition modeling, process parameter and applications. Principle, of operation of LOM system, process details, application. Working of Solid ground curing system, machine details, applications CONCEPTS MODELERS: Thermo jet printer, Sander's model marker, 3-D printer. Genisys Xs printer, JP system 5, object Quadra system. **10 Hrs**.

Unit-3

Indirect Rapid tooling – Metal deposition tools, Silicone rubber tooling, epoxy tools. Direct Rapid Tooling- Classification, Direct ACESTM Injection moulds, LOM tools and DTM Rapid Tool TM process.

Rapid prototyping process optimization - Factors influencing accuracy (Data preparation, Part building, part finishing), influence of build orientation. **8 Hrs.**

Unit-4

MEMS- Introduction to MEMS, Definitions and classifications, history, applications, Miniaturization issues, Microsystems versus MEMS, Microfabrication and Integrated Microsystems (micromechanical structures, microsensors and microactuators). **7 Hrs.**

Unit-5

Micromachining Technologies–Photolithography, Etching, Thin-film deposition (evaporation, sputtering and chemical vapor deposition), Classification of micro sensors and micro actuators, An overview of Silicon capacitive accelerometer, Piezoresistive pressure sensor, Electrostatic comb-drive. **8 Hrs.**

TEXT BOOKS:

1. D.T.Pham & S.S.Dimov, Rapid Manufacturing" Springer-Verlag, London, 2001.
2. G.K. Ananthasuresh, et.al., “MICRO and smart SYSTEMS”, Wiley, India, 2010.

CONSTRUCTION PLANNING AND SCHEDULING

Course Code: **OE44**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Prerequisites : Building Materials and Construction, Building Planning & CAD

Objectives: the objective of this course is to introduce the students to concepts and categories of projects, project management function, and role of manager, scheduling, monitoring and control of project, time-cost relationship, resource allocation, time value of money, Monte Carlo simulation and tree diagrams, value analysis.

Course Outcome:

Upon successful completion of this course, student will be able to:

CO1: Convert scope of Work into activities and develop construction plan including preconstruction, construction and procurement activities.

CO2: Prepare, analyse and update bar charts and Critical Path Method schedule.

CO3: Assign and analyze resource requirements of a project.

CO4: Perform time/cost trade-off analyses.

CO5: Control costs by applying the Earned Value Analysis and other progress metrics.

CO6: Build effective communication and presentation skills by submission of bids for term project.

Unit-1

Introduction, Construction Projects–Concept, Project Categories, Characteristics of project, Project Life Cycle Phase, Project Management Function & Role of Project Manager. **7 Hrs.**

Unit-2

Introduction to construction planning, scheduling, monitoring and control. Project Planning –Scope, Planning, Process, Objectives, Types of project plans, Resource planning process. **8 Hrs.**

Self Study: Calculation of Activity Duration, Quantity Take-off

Unit-3

Project Scheduling- Introduction, Scheduling network analysis using CPM method & PERT & related problems. Precedence network (A-O-A network, A-O-N network). Creating the Logic Diagram, Precedence Diagrams & Example. Float and its project implications. **8 Hrs.**

Self Study: Logic diagrams on implying Leads and Lags.

Unit-4

Time- cost relationship, Direct & Indirect cost. Resource allocation, Resource Smoothening & resource leveling & related problems. Time in contract provisions:-Time value of money, Contract cash disbursement, contract provision that impact cash flow. Owner policies & practices that impact cash flow, cash flow analysis and The Sports Complex. **8 Hrs.**

Self Study: Application of the Sports complex in Cash flow

Unit-5

Earned value analysis, linear scheduling, Monte Carlo simulation & related problems. Impact of Scheduling on Productivity.CPM in dispute resolution. Working with subcontractors. **8 Hrs.**

Self Study: Game theory applications in decision making process

Term Project that includes: Create a Tree Diagram WBS, Defining Dependencies, Quantity Take Off, Determine Durations, Create and Assign Resources, Develop Cash flow, Update the Schedule. Earned Value Analysis, Generating Reports.

TEXT BOOK:

ELEMENTS OF CONSTRUCTION PROJECT MANAGEMENT

Course Code: **OE46**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Prerequisites : Construction Planning and Scheduling

Objectives : The objectives of this course is to expose the students to elements of construction project management including types of contracts, tender course, applicability of various types of contracts, construction economics, concepts of breakeven analysis, financial management, construction safety, legal requirements, safety remedies for dust, vibration, noise, lead poisoning, construction quality management, TQM, risk management and strategic planning.

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Select materials, vendors and participants and set the project timeline and help the client to develop project proposal and in its presentation.

CO2: Allocate Keep job on budget and for documenting any changes that result in a budget.

CO3: Identify client error or change in specification and issue a change order.

CO4: Identify scope of safety management on site and therefore reducing the construction Injuries.

CO5: Guide effective resource deployment and also support value creation and preservation of these resources.

Unit-1

Contract Management- Definition, Types of contracts: Classification Based on–Tendering Process, Economic Consideration, Tasks Involved; Main and Sub Contracts, Features, Merits, Demerits, Applicability of the various types of contracts.

Breach of contract: Definition and Classification, Common Breaches by–Principal, Contractor, Damage Assessment, Claims for Damages, Dispute resolution: General, Methods for dispute resolution –Negotiations, Mediation, Conciliation, Dispute Resolution Boards, Arbitration, Litigation/ Adjudication by courts. **7 Hrs.**

Self Study: Quantum Meruit, Force Majeure.

Unit-2

Construction Economics- Industrial Development, Matters related to Construction Industry, Market Demand and Supply, Economics of Scale, Cost Concepts and Break Even Analysis.

Financial Management: Meaning, scope and importance–Investment evaluation- capital budgeting, Budgets and Budgetary Control.

Financial Accounting: Meaning and Importance **7 Hrs.**

Self Study: Theory of Costs, Theory of Production.

Unit-3

Construction Safety Engineering and Management- meaning and scope, Technological aspects, Organizational aspects, Behavioral aspects, Safety rules in Construction, Legal requirements, Reporting occurrence of accidents and hazards, Action to be taken by site engineer in case of accidents, Safety remedies for common hazards (Dust, Vibration, Lead poisoning, Noise, Movement, Material, Lighting), Safety in Use of Construction equipments. **8 Hrs.**

Self Study: ISI Standards for safety for building and Civil Engineering Projects.

Unit-4

Construction Quality Management- Understanding quality, TQM philosophy: Concept of Deming, Juran, Crosby, Imai, Ishikawa, Taguchi, Shingo philosophies.

TQM Tools: An overview of Flowcharts, Check sheets, Histogram, Cause and effect diagrams, Pareto diagram, Scatter diagram and Control charts.

Implementing TQM: TQM and management of change, Planning and implementation of TQM, Sustained improvement, TQM models in practice. **9 Hrs.**

Self Study: ISO 9000 quality systems, ISO 14001 quality systems.

Unit-5

Risk Management- Introduction, Risk Management in Construction Industry, key terms and definitions, Risk Identification, Risk Analysis and Evaluation, Risk Response and Monitoring, Risk review and Learning, Risk communication and Consultation, Risk Management Application techniques, Risk Management misconceptions, Relationship between Risk Management and strategic Planning. **8 Hrs.**

Self Study: Quantification of risk in construction Projects.

TEXT BOOKS:

1	Frank Harris and Ronald McCaffer	Modern Construction management, 7th Ed., Wiley Blackwell Publication, 2013.

PROGRAMMING WITH PYTHON

Course Code: **OE48**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

The Objectives of this course are:

- To get familiar in writing simple programs using python language
- To understand various data structures provided by python library including string, list, dictionary etc.,
- To teach different libraries for scientific and graphics applications
- To motivate the students to build real-world applications using oops, files and exception handling provided by python
- To understand basic database concepts, SQL using python.

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1 : Describe the basic building blocks in python to construct small to large scale applications.

CO2 : Get the knowledge of applying the necessary data structures includes list, tuple, sets and dictionary in the required fields.

CO3 : Analyze, design and implement the problems in terms of real-world objects using OOPs technology.

CO4 : Evaluate and handle the errors during runtime when large volume of data from data structure, file and data base is involved in a program.

CO5 : Handling SQL using Python.

Unit -1

Introduction

Python Introduction, History of Python, Python features, Python Installation, Running Python, Simple Programs, Python Identifiers, Reserved words, Lines and Indentation, Multi line statements, Quotation in Python, Comments in Python, Command line arguments, Assigning values to the variables, Multiple assignment, Standard data types, Type Conversion, Operators in Python, Operators Precedence, Decision Making, Looping, Loop Control statement. **(Chapter 1, 2,4,5)**

Functions: Defining and calling a function, functions with/ without return values, positional and keyword arguments, passing arguments by reference values, scope of variables, default arguments, returning multiple values, recursive functions. **(chapter 6)**

Case study: return sum of digits of number, check number is palindrome or not, conversion of Celsius to Fahrenheit and Fahrenheit to celcius, Twin

prime, converting hexadecimals to decimals, function to counts the number of letters in a string (without built function),

Case Study: prime number generation, Armstrong, Ramanujan numbers, Fibonacci series, multiplication table, GCD of two numbers, reverse of a number (not restricted to) **9 Hrs.**

Unit-2

Python Built-in Data Structures:

String: The str class, creating strings, string operators: slice, concatenation, in and not in, built in testing strings using built in function searching substrings, converting strings, stripping whitespace characters from a strings, formatting strings. **(chapter 8). Case study:** function to find the number of occurrences of a specified character, check password is valid/invalid(not restricted to)

List Basics: creating lists, list is a sequence type: functions for lists, index operator, list slicing, (+,*, and in/not in) operators, traversing elements of lists, comparing list, list methods, splitting a string into a list, inputting lists, shifting list, copying lists, passing lists to functions, returning a list from a functions. Searching lists (linear search and binary search), Sorting lists (selection sort, insertion sort). Multidimensional lists: processing tow dimensional lists: initializing list with input values and with random values, printing 2d lists, passing 2d list to functions, 3d list. Case study on 1d and 2d lists. **(chapter 10,11)**

Tuples: introduction, Accessing values, Tuple functions.

Sets: Creating sets, manipulating and accessing sets, subset and superset, equality test, set operations.

Dictionary- Introduction, creating dictionary, adding, modifying and retrieving values of dictionary, deleting items, traversing keys of dictionary, dictionary built in functions. Case study on tuples, set and dictionary. **(chapter 14)** **9 Hrs.**

Unit-3

Object Oriented Programming

Defining classes for objects: defining classes, constructing objects, assessing memes of objects, the self parameter, hiding data fields. Inheritance: super classes and subclasses. Overriding methods, object class. Polymorphism and dynamic binding. The isinstance function, Designing classes: is_a and has_a relationship, multiple inheritance. **(chapter7 and 12)**

Case Study: (not restricted to) Demonstrate classes and inheritance (account transactions details of the customer using Account class and student mark details of UG, PG & Research Student and Mark classes)

case study for polymorphism and dynamic binding. Designing class for stacks. **9 Hrs.**

Unit-4

Files & Exception Handling

Files, Text Input and Output: Opening a file, writing data, reading data, appending data, writing and reading numeric data. File dialogs, Retrieving Data from the web. Case study: Counting each letter in a file, copy data from a source file to a target file and count the number of lines and characters in the file (stored in disk)/file from a URL on internet.

Exception Handling: try/except block, finally. Raising Exception. Processing exceptions using exception objects, defining custom exception classes. Case study: calculate the area of a circle using exception handling, solve quadratic equation using exception handling (not restricted to).

(Chapter 13) **07 Hrs.**

Unit-5

Using databases and SQL in python

Database, Creating a database table, four basic SQL commands INSERT, SELECT, UPDATE, and DELETE (chapter 15 from Python for Everybody, Exploring Data Using Python 3 text book) **05 Hrs.**

TEXT BOOKS:

1. Introduction to Programming using Python, Y. Deniel Liang, Pearson, 2013. (Chapter 1,2,4,5,6, 7, 8,10, 11,12, 13,14).
2. Python for Everybody, Exploring Data Using Python 3, Charles R. Severance, CreateSpace Independent Publishing Platform, 2016 (chapter 15).

JAVA FUNDAMENTALS

Course Code: **OE49**

(for CSE students only)

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: **Describe** the concept of OOP as well as the purpose and usage principles of inheritance, polymorphism, encapsulation and method overloading.

CO2: **Identify** classes, objects, members of a class and the relationships among them needed for a specific problem.

CO3: **Write** java program using threads, event handling and input output utilities. Develop programs using the Java Collection API as well as the Java standard class library.

CO4: **Demonstrate** the ability to use Threads and synchronization in java.

CO5: **Explain and write** input – output programming in java and applications using Applets.

Unit-1

INTRODUCTION TO JAVA:

Java's lineage, how java changed the internet, java's magic, servlets, the java Buzzwords, the evolution of java, java SE 8, a first simple program, data types, variables, arrays, the unsigned right shift operator, for-each version of the for loop.

Introducing Classes:

Class fundamentals, declaring objects, assigning object reference variables introducing methods, adding a method to the box class, returning a value, adding a method that takes parameters, constructors, parameterized constructors, the this keyword, instance variable hiding, garbage collection, the finalize( ) method, a stack class. **8 Hrs.**

Unit-2

A Closer Look at Methods and Classes:

Overloading methods, overloading constructors, using objects as parameters, a closer look at argument passing, returning objects, recursion, introducing access control, understanding static, introducing final, arrays revisited, introducing nested and inner classes, exploring the string class, using command-line arguments, varargs: variable-length arguments, overloading vararg methods, varargs and ambiguity.

Inheritance:
Inheritance Basics, member access and inheritance, a more practical example, a Superclass variable Can Reference a Subclass Object Using super, Using super to call superclass constructors, A second use for super, creating a multilevel hierarchy, when constructors are executed, method overriding, dynamic method dispatch, why overridden methods?, applying method overriding, using abstract classes, using final with inheritance, using final to prevent overriding, using final to prevent inheritance, The object class. **9 Hrs.**

Unit-3

Packages and Interfaces:
Packages, defining a package, finding packages and classpath, a short package example, access protection, an access example, importing packages, interfaces, defining an interface, implementing interfaces, nested interfaces, applying interfaces, variables in interfaces, interfaces can be extended, default interface methods, default method fundamentals, a more practical example, multiple inheritance issues, use static methods in an interface, final thoughts on packages and interfaces.

Exception Handling:
Exception-handling fundamentals, exception types, uncaught exceptions, using try and catch, displaying a description of an exception, multiple catch clauses, nested try statements, throw, throws, finally, java's built-in exceptions, creating your own exception subclasses, chained exceptions, three recently added exception features, using exceptions. **7 Hrs.**

Unit-4

Multithreaded Programming:
The java Thread model, Thread priorities, synchronization, messaging, the thread class and the runnable interface, the main thread, creating a thread, implementing runnable, extending thread, choosing an approach, creating multiple threads, using isAlive( ) and join( ), thread priorities, synchronization, using synchronized methods, the synchronized statement, interthread communication deadlock, suspending, resuming, and stopping Threads.

.

Event Handling:
Two event handling mechanisms, The delegation event model, Event Classes, The ActionEvent Class, The AdjustmentEvent Class, The ComponentEvent class, the ContainerEvent Class, The The MouseEvent Class, The MouseWheelEvent Class, EventListener Interfaces, The ActionListener Interface, The AdjustmentListener Interface, The ContainerListener Interface, The KeyListener Interface, The MouseListener Interface, The MouseMotionListener Interface, The MouseWheelListener Interface, the TextListener Interface, The WindowFocusListener Interface, The WindowListener Interface, Adapter Classes, Inner Classes. **7 Hrs.**

Unit-5

Introducing the AWT: Working with Windows, Graphics, and Text:
Introducing the AWT: working with windows, graphics, and text, AWT classes, window fundamentals, component, container, panel, window, frame, canvas, working with frame windows, setting the window's dimensions, hiding and showing a window, setting a window's title, closing a frame window, creating a frame window in an AWT-based applet, creating a windowed program, displaying information within a window.

AWT control fundamentals, adding and removing control, responding to controls, the HeadlessException, labels, using buttons, handling buttons, applying check boxes, handling check boxes, choice controls, handling choice lists, using lists, handling lists, using a TextField, handling a TextField, Using a TextArea. Understanding layout managers, FlowLayout, BorderLayout, using insets, GridLayout, CardLayout, GridBagLayout, dialog boxes, FileDialog. **8 Hrs.**

TEXT BOOK:

1	Herbert Schildt	Java the Complete Reference, 9th Edition, Tata McGraw Hill, 2007.

REFERENCE BOOKS:

1	Y. Daniel Liang	Introduction to JAVA Programming, 6th Edition, Pearson Education, 2007.
2	Stephanie Bodoff, et.al.	The J2EE Tutorial, 2nd Edition, Pearson Education, 2004.

ADVANCED DATA STRUCTURES AND ALGORITHMS

Course Code: **OE50**

(for CSE students only)

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Explain various data structures and its application in computer science.
CO2: Demonstrate how data structures are implemented using C++ Standard Template Library.
CO3: Analyze and Compare algorithms and techniques of implementing data structures using STL.
CO4: Design and Implement the complex data structures with algorithms.

Unit-1

Abstract Data Types and Trees:
Abstract Data Types (ADTs), List ADT, Vector and List in the STL, implementation of vector, implementation of list. B-trees. **7 Hrs.**

Unit-2

Hashing:
General idea, Hash function, Separate chaining, Hash tables without linked list, Rehashing, Extensible hashing. **8 Hrs.**

Unit-3

Priority Queues:
Heaps revisited – Model, simple implementations, Binary Heap. d-Heaps, Leftist Heaps, Skew Heaps, Binomial Queues. **8 Hrs.**

Unit-4

Sorting:
Shell sort, Quick sort, Indirect sorting, External sorting. **8 Hrs.**

Unit-5

Miscellaneous Data Structures:
Bottom-up and Top-down Splay trees, Red-Black Trees **8 Hrs.**

TEXT BOOK:

1.	Mark Allen Weiss	Data Structures and Algorithm Analysis in C++, 3rd Edition, Pearson Education.

REFERENCES:

1.	Thomas H. Cormen, Charles E. Leiserson, Ronal L. Rivest, Clifford Stein.	Introduction to Algorithms. Ed 2. PHI. 2006.

COMBINATORICS

Course Code: **OE51**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Prerequisites:
Students must be familiar with basic concepts of Set Theory, proof techniques, such as mathematical induction, proof by contradiction.

Course objective:
The course aims to introduce students to discrete mathematics, a fundamental part of mathematics with many applications in computer science and related areas. The course provides an introduction to combinatorics, the cornerstone of discrete mathematics.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Apply the techniques of counting to identify the number of ways in which a given task can be accomplished without list all the possibilities explicitly.

CO2: Identify the different physical situations in which principle of inclusion and exclusion can be used for counting.

CO3: Derive the generating function for the given situation and evaluate the required coefficient.

CO4: Solve the first order recurrence relation and interpret the solution.

CO5: Solve the first order recurrence relation and interpret the solution.

Unit –1

Fundamental Principles of Counting: The Rules of Sum and Product, Permutations (linear, circular, identical objects), Combinations – The Binomial Theorem, Combinations with Repetition, The Catalan Numbers. **8 Hrs.**

Unit –2

The Principle of Inclusion and Exclusion: The Principle of Inclusion and Exclusion, Generalizations of the Principle. Derangements – Nothing is in its Right Place, Rook Polynomials, Arrangements with forbidden positions. **8 Hrs.**

Unit-3

Generating Functions: Introductory Examples, Definition and Examples – Calculational Techniques, Partitions of Integers. The Exponential Generating Function, The Summation Operator. **8 Hrs.**

Unit-4

Recurrence Relations: First Order Linear Recurrence Relation The First Order Linear Homogeneous Recurrence Relation with Constant

Coefficients, The Non-homogeneous Recurrence Relation, The Method of Generating Functions. **7 Hrs.**

Unit-5

Recurrence Relations: Second Order Linear Recurrence Relation The Second Order Linear Homogeneous Recurrence Relation with Constant Coefficients, The Non-homogeneous second order recurrence relation, The Method of Generating Functions. **8 Hrs.**

TEXT BOOKS:

1. Ralph P. Grimaldi, "Discrete and Combinatorial Mathematics", 5th Edition, *Pearson Education*, 2012. (Chapter 11, Chapter 12.1-12.4, Chapter 13, Chapter 1.1-1.4, Chapter 8.1-8.4, Chapter 9.1 to 9.5 Chapter 10.1 -10.4).
2. Alan Tucker, "Applied Combinatorics", 5th Edition, Wiley-India, 2011

REFERENCE BOOKS:

1. Dr. D.S. Chandrasekharaiah, "Graph Theory and Combinatorics", Prism, 2005.
2. Richard A. Brualdi, "Introductory Combinatorics", 5th Edition, Pearson Prentice Hall, 2014.

CLOUD COMPUTING

Course Code: **OE52**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course objectives:

This course will enable the students to learn:

1. the fundamental ideas behind Cloud Computing, its applicability; benefits, as well as current and future challenges.
2. cloud computing stack and communication protocols.
3. suitable architecture to incorporate in cloud computing models.
4. how virtualization helps to improve efficiency of cloud services.
5. various security issues of cloud computing.

Course Outcomes:

After successfully completing this course, the student will be able to:

CO1: Explain the core concepts of the cloud computing paradigm: how and why this paradigm shift came about, the characteristics, advantages, challenges and associated cost.

CO2: Describe various models, platforms, virtual appliances and services in cloud computing.

CO3: Discuss abstraction and storage virtualization and outline their role in enabling the cloud computing system model.

CO4: Explain abstraction, hypervisor, load balancing and application portability for the cloud computing applications with respect to virtualization.

CO5: Discuss the SOA framework, SOA management tools, and the relationship between SOA and cloud computing, cloud security concerns and Identity protocol standards.

Unit-1

Defining Cloud Computing: Cloud Types, The NIST model, The Cloud Cube Model, Deployment models, Service models, Examining the Characteristics of Cloud Computing, Paradigm shift, Benefits of cloud computing, Disadvantages of cloud computing; Assessing the value proposition: Early adopters and new applications, the laws of cloudonomics, cloud computing obstacles, behavioural factors relating to cloud adoption, measuring cloud computing costs, specifying SLAs. **07 Hrs.**

Unit-2

Understanding Cloud Architecture: Exploring the Cloud Computing Stack, Composability, Infrastructure, Platforms, Virtual Appliances, Communication Protocols; Understanding Services and Applications by Type: Defining IaaS, Defining PaaS, Defining SaaS, Defining, IDaaS.

08 Hrs.

Unit-3

Understanding Abstraction and Virtualization: Using Virtualization Technologies, Load balancing and Virtualization, Understanding Hypervisors; Capacity Planning: Defining Baseline and Metrics, Baseline measurements, System metrics, Load testing, Resource ceilings, Server and instance types, Network Capacity, Scaling **08 Hrs.**

Unit-4

Understanding Service Oriented Architecture: Introducing Service Oriented Architecture, Event-driven SOA or SOA 2.0, The Enterprise Service Bus, Service catalogs, Defining SOA Communications, Business Process Execution Language, Business process modeling, Managing and Monitoring SOA, SOA management tools, SOA security, The Open Cloud Consortium, Relating SOA and Cloud Computing. **08 Hrs.**

Unit-5

Understanding Cloud Security: Securing the Cloud, the security boundary, Security service boundary, Security mapping, Securing Data, Brokered cloud storage access, Storage location and `tenancy, Encryption, Auditing and compliance, Establishing Identity and Presence, Identity protocol standards, Windows Azure identity standards.

Communicating with the Cloud: Using Instant Messaging, Exploring SMS or micro-blogs, learning about collaboration software, Exploring the world of social networking **08 Hrs.**

TELECOMMUNICATION OPERATIONS AND BUSINESS SUPPORT SYSTEM

Course Code: **OE53**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Pre-requisite for this course: Basic telecommunication networks concepts.

Objectives:

The objective of this subject is to introduce the International Telecom industry standard at college level.

This syllabus for telecommunication covers all the practical aspects a student should be equipped with to work successfully in a telecom industry. eTOM framework is an international telecom framework which is implemented across all the telecom companies around the world. OSS and BSS are a part of this framework.

This subject introduces the concepts of eTOM, OSS & BSS to the students and gives in depth insight on these topics.

Course Outcomes:

CO1: Illustrate the hierarchical structure of eTOM framework and outline the functions of process groupings to understand the nuances of Telecom business

CO2: Identify the functions of level 2 process grouping under Operations and analyze and illustrate the functionality of customer relationship management, service fulfillment and service provisioning in Telecom Industry.

CO3: Outline the types and importance of inventory management; illustrate the process of service assurance. Outline the Business support system components and CRM from Business viewpoint

CO4: Analyze the process of mediation, roaming and interconnect in various scenarios. Elucidate the rating model and rating engine in service tariff charges in telecom industry

CO5: Outline the various payment methods, workflow, payment types and dispute handling process and adjustments involved in the process. Illustrate the process of crediting a customer and follow up methods to recover the same. Elucidate the process of revenue assurance and types of frauds.

Unit-1

Introduction to eTOM Telecom framework: Introduction and purpose, eTOM process business framework-Level 0, eTOM process business framework-Level 1, Level 1- Operations vertical process grouping, Level 1- Operations horizontal process grouping, SIP vertical end-end process

grouping, SIP horizontal functional process grouping, Enterprise management process groupings, External environment, benefits of eTOM framework. **6 Hrs.**

Unit-2

Operational Support System: OSS basics, Introduction to products and services, OSS components, CRM systems – types and functionalities, Introduction to OSS processes.

Order/Service Fulfilment: *Order Management:* Introduction, types of orders, Order capture functionality – Lead time, address verification, number reservation, engineer visit, booking engineer appointment.

Service Provisioning : Order data verification, Order feasibility check, Customer eligibility check, Service provider eligibility check, Order decomposition, Order orchestration, Manage logical inventory, Network reservation, Service activation, Hardware activation.

8 Hrs.

Unit-3

Inventory Management: Number inventory, product inventory, customer data inventory, physical inventory, logical/network inventory, Service inventory.

Service Assurance: Proactive service assurance, Reactive service assurance, Customer and network Fault & Trouble Ticket Management, Network Performance Management

Introduction to BSS: BSS components, High level processes of BSS, BSS intersection with eTOM, CRM (Customer Relationship Management) functionalities, CRM functional areas, CRM sales management, CRM Marketing management**.** **8 Hrs.**

Unit-4

Mediation, Roaming and Interconnect: Introduction, Event, UDR, CDR, CDR attributes, real time mediation, Functionalities of a mediation system, CDR processing, mediation for various scenarios – home subscribers, in-roaming, out-roaming, international roaming (within and outside own service provider network), national roaming (within and outside own service provider network), Interconnect CDRs. Introduction to roaming and interconnect, In-Network subscribers, Out-of-network subscribers, Tap-In files, Tap-out files, Point of interconnect.

Rating: Product and service modelling, Service tariff – types of charges, Basic functionalities of a rating engine, duplicate events, rejected events, real time rating, batch rating, re-rating events, partial rating, threshold and actions, rating time discounts. **8 Hrs.**

Unit-5

Payments: Types of payment, payment workflow, single time payment multi invoice, multi payment – one invoice, over payment, under payment, payment transfer, payment refund, wrong payment posting, suspense account handling, deposit, release and refund deposit, dispute handling, adjustments and types of adjustments.

Credit and Collections: Introduction, Debt customer, follow up modules and dunning actions associate with each customer bill, general follow up actions, Credit Scoring: concept and workflow, Credit Monitoring: concept and workflow, Credit Collections: concepts and workflow.
Revenue Assurance: Introduction, Revenue assurance architecture, Network-related leakage, Types of Fraud. **9 Hrs.**

TEXT BOOKS:

1	OSS/BSS for converged Telecommunication networks: A Practical Approach	Rahul Wargad

SATELLITE MISSION ANALYSIS AND DESIGN

Course Code: **OE54**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Objective: *Space Mission Analysis and Design,* known as **SMAD** provide a practical handbook for Space Mission Engineering -- the process of defining mission parameters and refining requirements to meet the often-fuzzy objectives of a space mission at minimum cost and risk. This course provides a preliminary mission design covering all system aspects: orbit and constellation design, mission geometry, launch vehicle selection, and design of the spacecraft, payload, ground segment, and operations. The course gives a comprehensive knowledge about theory and practice, drawing on the insight and practical aspects of **SMAD**.

Unit-1

The Space Mission Analysis and Design Process: Introduction and Overview, The Space Mission Life Cycle, Step 1: Definition of Mission Objectives, Step 2: Preliminary Estimate of Mission Needs, Requirements, and Constraints, Mission Characterization: Step 3: Identifying Alternative Mission Concepts, Step 4: Identifying Alternative Mission Architectures, Step 5: Identifying System Drivers, Step 6: Characterizing the Mission Architecture, Mission Evaluation, Step 7: Identification of Critical Requirements, Mission Analysis, Step 8: Mission Utility, Step 9: Mission Concept Selection. **8 Hrs.**

Unit-2

Requirements Definition: Role of Requirements in System Development, Requirements Analysis and Performance Budgeting, Requirements Documentation and Specifications, Summary: The Steps to a Requirements Baseline. **8 Hrs.**

Unit-3

Introduction to Astrodynamics: Keplerian Orbits, Orbit Perturbations, Orbit Manoeuvring, Launch Windows, Orbit Maintenance. **7 Hrs.**

Unit-4

Space Payload Design and Sizing: Payload Design and Sizing Process, Mission Requirements and Subject Trades, Background, Observation Payload Design, Observation Payload Sizing, Examples.

Spacecraft Design and Sizing: Requirements, Constraints and the Design Process, Spacecraft Configuration, DesignBudgets, Designing the Spacecraft Bus, Integrating the Spacecraft Design, Examples. **9 Hrs.**

Unit-5

Spacecraft Subsystems: Attitude Determination and Control, Telemetry, Tracking and Command, Command and Data Handling, Power, Thermal, Structures and Mechanisms, Guidance and Navigation. **7 Hrs.**

TEXT BOOKS:

1	James R. Wertz and Wiley J. Larson	Space Mission Analysis and Design (SMAD) - 3rd Ed.
2	C. Robert Welti	Satellite Basics for Everyone: An Illustrated Guide to Satellites for Non-Technical and Technical People, iUniverse (4 June 2012)

METAL ADDITIVE MANUFACTURING & ADDITIVE ENGINEERING

Course Code: **OE55**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

After undergoing this course student will be able to:

CO1. Explicate the importance, principles, and applications of additive manufacturing.

CO2. Select and discuss suitable metal additive manufacturing process based on material and component features.

CO3. Suggest and explicate materials for specific applications of metal AM parts and analyse DFAM.

CO4. Enumerate the Characterization methods for metal AM parts and Analyse the challenges in metal AM.

CO5. Analyse Quality management, Cost and value proposition for Metal AM.

UNIT – I

AM Processes: Introduction to Additive Manufacturing: Overview, need and importance of additive manufacturing process in product development, materials for additive manufacturing technology, Classification of Processes, ASTM terminology, Direct and Indirect Applications in Strategic and Core Engineering Sectors,

Steps involved in designing for additive manufacturing: CAD model preparation, part orientation and support generation, model slicing and tool path generation. **8 Hrs**

Note: *Delivery by Wipro 3D and Institution Experts at the Institution Theoretical concepts supported by real-world AM Parts (aero, defence, satellites, energy, automotive, electronics, manufacturing & tooling).*

UNIT – II

Guidelines for process selection: Introduction, selection methods for a part, challenges of selection, example system for preliminary selection, production planning and control

Metal AM Processes: Laser beam melting, electron beam melting, directed energy deposition and binder jetting. Process physics, materials and process simulation, Additive manufacturing process optimization. **8 Hrs**

Note: *Delivery by Wipro 3D Experts at the Institution and at the Wipro 3D Technology Centre.*

UNIT – III

Material Science for AM: Material selection for metal AM processes and characterisation (particle size, distribution and flow rate). New material development and adaptation.

Analysis of Metal AM powders using industry-grade ONH analyser

Laser physics – Impact of melting and solidification rates on micro structure and mechanical properties.

Design for Additive Manufacturing (DFAM): Core DFAM concepts and objectives. Design methods and case studies for monolithic & biomimetic structures, lattices & light weighting. Support geometries and scan strategies. Topology optimisation: Simulation driven design and industry grade solvers.

10 Hrs

Note: *Delivery by Wipro 3D Experts and Institution Experts at the Institution*
Immersion tour of the Material Testing Laboratory of Wipro 3D.
Topology optimisation: Simulation driven design and industry grade solvers.
One day Visit to Wipro 3D Bangalore.

UNIT – IV

Characterization Methods for AM Parts: Various characterization techniques as applied to metal AM parts to determine its suitability. Probable defects encountered in AM parts.
Post Processing: Industrial practices of ensuring part strength and integrity, surface quality, dimensional and geometric fidelity.
Challenges in additive manufacturing:
Errors in prototyping, Support material removal methods, curing procedure, accuracy and surface finish enhancement, assembly of components, machining strategy, preparation for use as a pattern, property enhancements using non-thermal and thermal techniques.

8 Hrs

Note: *Delivery by Wipro 3D Experts at the Institution. Immersion at Wipro3D technology centre.*
One day Visit to Wipro 3D Bangalore.

UNIT – V

Quality Management System: ASTM and ISO/AS standards and industrial practices.
Metrology and measurements on industrial AM parts.
Cost and Value Proposition for Additive Manufacturing: Capturing the value of AM for academic-industry partnerships with reference to design innovations, R&D projects, consultancy proposals, entrepreneurship development and IP creation.
Case studies: Aerospace, Energy, Medical, Industry, Automotive and car racing and Consumer products **8 Hrs**

Note: *Delivery by Wipro 3D Experts at the Institution.*
One day Visit to Wipro 3D Bangalore.

NUMERICAL METHODS AND PROGRAMING

Course Code: **OE56**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Objectives: This Course will enable students to

1. Fundamentals of creating mathematical *models* of *physical systems* and implementation on computers to analyze the *system* both to gain insight and make predictions.
2. Art of numerical computation. The theory and derivation of computational techniques, *error analysis.*
3. *Solve the equations* involving *linear* and *non-linear* system.
4. To learn about interpolation polynomials.
5. To understand the concept of piece wise and *spline* approximation.

Course Outcomes: Upon the successful completion of the course, students will be able to:

CO1: Become familiar with *modeling* and *simulation* as an engineering design process; Learn to *program* in *MATLAB (L2,L3).*

CO2: Apply numerical methods to find solution of algebraic equations using different methods Under different conditions, (L2,L3,L4).

CO3: S*olve linear and non-linear equations* using algebra and MATLAB Code. (L3,L4).

CO4: Apply the interpolation and inverse interpolation to estimate solution. Implement them in MATLAB (L3).

CO5: Apply *piecewise and spline interpolation.* Implement them in MATLAB (L4).

UNIT-1

MODELLING OF PHYSICAL SYSTEMS AND MATLAB PROGRAMMING:

Mathematical modeling, modelling of ODE: Bungee jumper problem, RLC circuit, analytical solution of Bungee jumper problem. Matlab environment, assignment, mathematical operators, built-in functions, plots. Programming with Matlab: M-files, input-output, structured programming, nesting and indentation, passing functions to M-files. Implementation of physical systems using Matlab. **08 Hrs**

UNIT-2

ERROR ANALYSIS AND ROOT FINDING:

Introduction to Error, definition, types of errors, round-off errors, accuracy and precision. Truncation errors and Taylor series. Total numerical error. Definition of algebraic and transcendental equations, root, geometrical interpretation, root finding methods. Bracketing methods: Bisection and Regula-Falsi methods, problems and implementation using Matalb. Open

Methods: Newton-Raphson and Secant methods, problems and implementation using Matlab. **08 Hrs**

UNIT-3

SOLUTION OF LINEAR AND NON-LINEAR SYSTEMS:

Matrix representation of linear algebraic system. Iterative methods: Jacobi method, Gauss-Seidel method, problems, implementation using Matlab. Non-linear Systems: Successive substitution method and Newton-Raphson method. **08 Hrs**

UNIT-4

POLYNOMIAL INTERPOLATION:

Introduction to interpolation, Newton's interpolation, Lagrange's interpolation, Inverse interpolation, Its merits and demerits, Implementation using Matlab. **08 Hrs**

UNIT-5

PIECEWISE INTERPOLATION AND SPLINES:

Introduction to piecewise interpolation and splines, linear splines, quadratic splines, cubic splines with all three types of end conditions. Implementation using Matalb. **07 Hrs**

INTRODUCTION TO ARTIFICIAL INTELLIGENCE

Course Code: **OE57**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Objectives: The primary objective of this course is to introduce the basic principles, techniques, and applications of Artificial Intelligence specifically to students of non-IT branches. Emphasis will be placed on the teaching of these fundamentals, not on providing a mastery of specific software tools or programming environments. Specific objectives are to:

- Gain a historical perspective of AI and its foundations.
- Become familiar with basic principles of AI toward problem solving, inference, perception, knowledge representation, and learning.
- Investigate applications of AI techniques in artificial neural networks and other machine learning models.
- Explore the current scope, potential, limitations, and implications of intelligent systems.

Unit-1

Introduction: A brief history of AI, strong methods and weak methods, uses and limitations, AI in future, knowledge representation, the need for good representation, semantic nets, inheritance and frames. General applications of AI in various engineering domains. **7 Hrs.**

Unit-2

Search methodologies: Problem solving as search, data driven /goal driven search, depth first search, breadth first search, problem solving as search, properties of such methods, why humans use depth first search, illustrative examples (traversing a Maze, searching for gift), informed and uninformed methods of searching. Illustrative real world problems of engineering interest. **8 Hrs.**

Unit-3

Introduction to Machine Learning: Concept learning, general-to-specific ordering, version spaces, inductive bias, general to specific ordering, version spaces, supervised learning, unsupervised learning, reinforcement learning. Illustrative real world examples of machine learning of engineering interest. **8 Hrs.**

Unit-4

Artificial Neural networks: Introduction, neurons, perceptrons, the capabilities of a single perceptron, multilayer neural networks, capabilities of multilayer neural networks, back propagation, unsupervised learning

networks, kohonen maps. Illustrative real world examples on applications of neural networks in various engineering domains. **8 Hrs.**

Unit-5

Learning under uncertainty and ambiguity: fuzzy logic, linguistic variables, fuzzy sets, membership functions, fuzzy set operations, fuzzy expert systems, fuzzification, defuzzification, fuzzy rules, fuzzy inferences. Illustrative examples of engineering applications of fuzzy logic. **8 Hrs.**

TEXT BOOKS:

1	Stuart Russell and Peter Norvig	Applied Numerical Methods with MATLAB for Engineers and Scientists, 2nd Edition, By Tata McGraw Hill Company ISBN: 978-1259027437
	Ben Coppin,	Artificial Intelligence Illuminated, Narosa Publications, 2014.

REFERENCE BOOKS:

1	David. L.Poole , Alan K. Mackworth	Artificial Intelligence a Modren Approach, Third edition, Pearson Education, III edition, 2010.
2	Kevin Warwick	Artificial Intelligence-The Basics, Routledge Publications, USA,2012
3	AI Lecture Series, available at : https://www.youtube.com/watch?v=3MVD1-lCYQs&list=PLZ83ehWf497zb6iXk5Qa37qNDriZRH0u3	

Course Outcomes: After the completion of this course, students will be able to:

CO1: Demonstrate fundamental understanding of the history of artificial intelligence (AI) and its foundations.

CO2: Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning.

CO3: Demonstrate awareness and a fundamental understanding of various applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models.

CO4: Identify candidate problems exclusive to a particular engineering discipline that can be addressed under the ambit of AI.

CO5: Demonstrate an ability to share in discussions of AI, its current scope and limitations, and societal implications.

ESSENTIALS OF NCC

Course Code: **OE58**

Contact Hours/ Week	:	3+0+0 (L+T+P)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
			SEE Marks	:	50

The objectives of this course are:

1. Understand the importance of NCC Organization, Armed Forces and National Integration & Awareness.
2. Conceptualize the importance of Personality Development & Leadership.
3. Study the importance of various adventure activities in NCC.
4. Understand the importance of Environment Awareness & Conservation, Social Awareness & Community development and Disaster Management.
5. Study the general and technical concepts of Weapons training, Map Reading and Field Craft & Battle Craft.

Unit I

NCC Organisation, Armed Forces and National Integration & Awareness:

Introduction to NCC organisation, important basic aspects of drill including ceremonial drill, drill with arms and words of command.

Introduction and general information about the Armed Forces. Organisation of Army, Task & Role of Fighting Arms, Supporting Arms & Services. Modes of Entry to Army, Honours and Awards, Concept of Integrated Defence Staff. Biographies of renowned Generals. Indian Army War Heroes – PVCs.

The concepts of National Interests, Objectives and Integration, unity in diversity and cultural heritage of India. National Integration Council, Contribution of Youth in Nation Building. **7 Hrs**

Unit II

Personality Development & Leadership -I :

Introduction to Personality Development, Leadership with emphasis on self-awareness, life/ soft skills, time management and character building.

Factors Influencing / shaping Personality, Self-Awareness, Interpersonal relationship and communication, Communication Skills. Leadership Traits, Types of Leadership. **8 Hrs**

Unit III

Personality Development & Leadership –II:

Attitude and Time Management. Effects of Leadership with historical examples. Stress Management Skills, Interview Skills, Importance of Group / Team Work, Influencing Skills, Body Language, Social Skills, Values / Code of Ethics.

Introduction to various Adventure activities such as Para Sailing, Slithering, Rock Climbing, Cycling/ trekking. **8 Hrs**

Unit IV

Environment Awareness & Conservation, Social Awareness & Community development and Disaster Management:

Basic understanding of environment conservation and waste management. Understanding of social service and its needs, knowledge about the weaker sections of our society and their requirements, about NGOs and contribution of youth towards social welfare.

Drug Abuse & Trafficking, Civic Responsibilities. Role of youth in Counter Terrorism, Corruption and Social Evils .

RTI & RTE, Provisions of Protection of Children from Sexual Harassment Act 2012

Civil Defence Organization and its duties, Assistance during Natural/Other Calamities Health & Hygiene: Health, hygiene, sanitation, diseases and an elementary knowledge of First-Aid and Nursing. Physical & Mental Health. Introduction to Yoga & Exercises. **8 Hrs**

Unit V

Weapons, Map Reading, Field Craft & Battle Craft and Latest trends in the field of communications:

Understanding of maps and map reading instruments. Basics of Field Craft and Battle Craft. Introduction to trends in the field of communications in Indian army.

Introduction to characteristics and capabilities of Infantry weapons, Infantry Company Support Weapons and Infantry Battalion support weapons. **8 Hrs**

Text Books:

1.	DG NCC	NCC Cadets Handbook – Common, Directorate General of NCC, New Delhi.
2.	DG NCC	NCC Cadets Handbook – Special, Directorate General of NCC, New Delhi.

2.	Gautam Sharma	"Valour and Sacrifice: Famous Regiments of the Indian Army", Allied Publishers, 1990.
3.	Warren G. Bennis	"On Becoming a Leader", Perseus Books, 1989.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Develop qualities like Character, Comradeship, Discipline, Leadership, Secular Outlook, Spirit of Adventure, ethics and Ideals of Selfless Service.

CO2: Identify Good Leadership traits and apply the same in all walks of life and be always available for the service of the Nation.

CO3: Analyze the issues related to conservation of Environment, Social & Community development and Disaster Management and equipped themselves to provide solutions.

CO4: Analyze the concepts of Weapons, Map Reading, Field Craft & Battle Craft and apply the same during difficult times to find the solutions.

CO5: Identify the importance of the defence system and get motivated to join the defence forces.

HUMANITIES & SOCIAL SCIENCE COURSES

PRINCIPLES OF MANAGEMENT

Course Code: **HS04**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes (COs)

Upon successful completion of this course, student will be able to:

CO1: Explain skills, functions, and goals of managers, characteristics of companies, globalization trends, and concepts of production, efficiency and effectiveness. Evaluation of management and recent contribution to the management.

CO2: Describe the concepts of planning, objectives, (quantitative and qualitative), guidelines for setting objectives.

CO3: Explain the various aspects of organizational aspects.

CO4: Explain various aspects (staffing and selection etc.) of human resource management.

CO5: Explain various types of theories of motivations, motivations techniques, and also basic control process. The use of information technology.

Unit-1

Introduction to Management: Introduction to Principles of Management, Definition, Functions Of Management & Managerial Functions at Different Levels, Management Skills & Functions Of Managers and management, Goals Of All Managers, Characteristics Of Excellent Companies, Advances in Technologies & Trends in Globalization, Productivity, Effectiveness & Efficiency, Managing as Science or Art, Evolution of Management Thought Contribution to management by Pioneers- Frederick Taylor, Henry L Gantt. Frank and Lillian Gilbert, Henry FAYOL System Approach to the Management Process. **6 Hrs.**

Unit-2

Planning: Nature of planning, types of plans. Steps in planning, objectives, nature of objectives, Hierarchy of objectives how to set objectives, quantitative objectives, qualitative objectives guidelines for setting objectives, involving concepts in management by objectives (MBO) benefits and weaknesses of objectives of MBO. **6 Hrs.**

Unit-3

Organizing: Importance of organization, formal & informal organization, organizational division, organizational level and span of management, an organizational environment for enterpreneuring & intrapreneuring, reengineering the organization, the structure & process of organizing, organizational structure, departmentation by enterprise function, its advantages and disadvantages, departmentation by territory or geography, its advantages and disadvantages, departmentation by customer group, departmentation by product, their advantages and disadvantages, matrix

organization, line and staff organization and their advantages and disadvantages. **7 Hrs.**

Unit-4

Staffing: Authority and power, empowerment, line and /staff concepts & functional authority. Decentralization of authority, delegation of authority, art of delegation recentralization of authority definition -staffing, system approach to HRM, factors affecting staffing. Situational factors affecting staffing, matching the persons with job.

System approach to selection, personal characteristics of manager, job design skill and qualification needed in managers, matching qualification with position requirements. Selection process, selection technique & selection instruments case study on staffing.

08 Hrs.

Unit-5

Leading and Controlling: Human factors in managing, motivation, theory x and y, the hierarchy of needs theory Hygiene approach theory, Hertzberg's motivation – Hygiene theory, expectancy theory of motivation special motivational technique, job enrichment, job enlargement definition of leadership, ingredients of leadership, trait approaches to leadership, leadership behavior and styles. Situational or contingency approach to leadership, path – goal approach to leadership transactional and transformational leadership approach basic control process, critical control points, standards and benchmarking control as a feedback system, real time information and control feed forward or preventive control requirement, effective control management audits and accounting firms bureaucratic-control, control techniques-budget, time event net work analysis, the use of information technology, the use of computers in handling information. **12 Hrs.**

TEXT BOOK:

1. Heinz Weihrich, Mark V Cannice and Harold Koontz, Management: A Global and entrepreneurial perspective, New Delhi, TMH publishing, 2008 (12th Edition)

REFERENCE BOOKS:

1. Steven L. Mc Shane, Mary Ann Von Glinow, Radha R Sharma, Organizational behavior. New Delhi, TMH publishing, 2008
2. Peter F. Drunker, Management: Tasks, Responsibilities, Practices, Bombay, Allied, 1996.

ENGINEERING ECONOMICS

Course Code: **HS06**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Understand the role of engineering economic analysis as a decision-making and management/planning tool.
CO2: Identify and apply various alternative evaluation methods that are commonly used in economic decision-making processes faced by engineers.
CO3: Apply the Rate of Return concept in selection of the best alternative projects among the many.
CO4: Analyze Classical depreciation methods to calculate the annual depreciation charge and book value over the asset's life.
CO5: Apply the replacement analysis technique to identify when to replace the assets.

Unit-1

Introduction to Engineering Economics – Engineering & Economics, Problem solving & Decision making, Interest & Time value of money, Reasons for interest, Simple interest, Compound interest Nominal interest Rates Effective interest rates, Interest rate from Lenders & Borrowers point of view, Cash Flow Diagrams, Compound interest rate factors, Compound interest factor (single payment), Present -worth factor (single payment), Compound-amount factor(uniform series), Capital recovery factor (uniform series), Sinking fund factor(uniform series)Series, Present-worth factor (uniform series), Arithmetic gradient conversion factor.

08 Hrs.

Unit-2

Present Worth Comparisons – Conditions for present worth comparisons, Basic present worth comparison patterns, Present worth Equivalence, Net present worth, Present-worth Comparison of assets that have unequal lives, Problems on Present-worth Comparison of assets that have unequal lives, Comparison of assets that have infinite lives, Future worth comparisons. **08 Hrs.**

Unit-3

Equivalent Annual Worth Comparisons & Rate of Return – Utilization of Annual worth comparison method, Capital recovery Calculation, Situation for EAW Comparison, Consideration of Asset life, Problems, Comparison of Assets with Equal lives, problems, Comparison of Assets with Unequal lives, problems, Comparison of Assets with Perpetual Life, problems, Use of sinking fund, Rate of Return calculations, Rates of return, Minimum Acceptable rate of return, Internal rate of return, Calculation of IRR,

problems, Misconceptions, Ranking of Alternatives by Individual IRR values, Alternatives with unequal lives, Problems. **08 Hrs.**

Unit-4

Depreciation - Causes for depreciation, Basic methods of computing Depreciation charges, Computing Book value. Straight-line method, Problems, Sinking fund method, Problems

Declining-Balance Method, Problems, Double declining balance method, Problems, Sum of year's digits method, Problems. **08 Hrs.**

Unit-5

Replacement Analysis –Introduction, Deterioration, Economic life for cycle replacements, Group & individual replacement and Problems **07 Hrs.**

TEXT BOOK:

1. James L. Riggs "Engineering Economics" TMH 4th edition.

REFERENCE BOOKS:

1. Gerald J. Thuesen "Engineering Economy" PHI 9th Edition.
2. E. Paul De Garmo "Engineering Economy" Macmillan, 8th Edition.

HUMAN RESOURCE MANAGEMENT

Course Code: **HS07**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Learning objectives:

To familiarize with practical issues involved in planning and developing Human Resources and the practices of evaluating, rewarding and retaining human resources.

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Explain the functions of HR and Discuss the challenges in HR in 21st Century.

CO2: Identify the strategic role of Human Resource Management; evaluate the performance of human resource; perform job analysis and compensation management.

CO3: Perform training needs analysis and identify the nature of training and evaluation.

CO4: Explain the strategic role of performance assessment; conduct human resource audit and develop human resource information system.

CO5: Explain the role of Human resource in multinational organizations; design training, analyse the factors in fixing compensation and incentives for expatriate.

Unit-1

INTRODUCITON TO HUMAN RESOURCE MANAGEMENT:

Human Resource Management: Concept, Theory and Practice. H.R. Challenges - Critical importance of H.R in the 21st century. Managerial and operative functions of H.R. H.R. and the implementations of the business decisions. **8 Hrs.**

Unit-2

STRATEGIC HUMAN RESOURCE MANAGEMENT AND PLANNING:

Strategic Human Resource Management - Human Resource Planning-Transforming H.R. Staff and Structure - Integrating H.R. into Strategic planning - Measuring Human Resource Management. H.R. balanced score card. Job Analysis-Decision making issues in selection -Compensation management. **8 Hrs.**

Unit-3

LEARNING, TRAINING AND DEVELOPMENT:

Learning and Performance - Training cycle - Training Needs Analysis - Design and Development - On the job and Off the job training-Evaluation levels, Purpose - Utility of training. **8 Hrs.**

Unit-4

PERFORMANCE EVALUATION:

Performance assessment and management process. Strategic importance of performance assessment - Feedback and Results. Human Resource Audit. Human Resource Information System. **8 Hrs.**

Unit-5

MANAGING HUMAN RESOURCES IN MULTINATIONAL CORPORATIONS:

Managing Human Resources in Multinational Organizations. H.R. in a foreign subsidiary, Expatriate manager - Training expatriates - Compensation and incentives to expatriates. Adding value in the global business environment. **8 Hrs.**

CASE STUDIES:

1. Human Resource at Leah's Bakery. (pp.37 in Cynthia Fisher, **Human Resource Management**)
2. Jamback Enterprises. (pp.87 in the above mentioned book)
3. Innova Health System (pp.273, in the above mentioned book)
4. The Delta Intelligence Test. (pp. 312-314, in the above mentioned book)
5. The office Equipment Company (pp. 781-782 in the above mentioned book)

TEXT BOOK:

1. Cynthia D Fisher, Lyle F. Schoenfeldt, and James B. Shan, **Human Resource Management**, Delhi, Biztautra, 2009.

REFERENCE BOOKS:

1. Dipak Kumar Bhattacharya, **Human Resource Management**, New Delhi, Excel Books, 2009-2nd Ed.
2. David, A Decenzo and Stephen P. Robbins, **Human Resource Management**, New York, John Wiley, 2011-5th Ed.
3. Gary Dessler, **Human Resource Management,** New Delhi, Prentice-Hall India (PHI), 2015-15th Ed., Pearson.
4. L loyal L. Byars and Leaslie W. Rue, **Human Resource Management**, Chicago, Fruein, 2004-7th Ed., Tata McGraw Hill.
5. Udai Pareek and T.V. Rao, **Designing and Managing Human Resource Systems**, New Delhi, Oxford –IBH, 2006, 3rd Ed.

ENTREPRENEURSHIP DEVELOPMENT

Course Code:**HS09**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1 : Describe qualities required by entrepreneur and differentiate entrepreneurs from entrepreneurship.
CO2 : Identify, review literature, analyze, and conduct investigation to the problems of development of rural entrepreneurship and also able to develop and provide solutions to the rural problems.
CO3 : Identify, select, formulate and analyze the project and prepare the project report as per the guidelines given by the government.
CO4 : Demonstrate and apply the knowledge of project management and analyse and evaluate selection of the projects by using project appraisal techniques.
CO5 : Explain the role of different financing institution and their assistance in setting up SSI.

Unit-1

Entrepreneur: Introduction, concept of Entrepreneur, characteristics of an entrepreneur, qualities of an entrepreneur, Distinction between an entrepreneur and a manager, functions of an entrepreneur, types of entrepreneur.

Entrepreneurship: Concept of entrepreneurship, nature and characteristics of entrepreneurship, scope of entrepreneurship, factors affecting entrepreneurial growth: economic factors, non-economic factors and government factors. **08 Hrs.**

Unit-2

Rural entrepreneurship: meaning and need, problems of rural entrepreneurship, rural industrialization in retrospect, development of rural entrepreneurship Entrepreneurial motivation: introduction to motivation, meaning of motivation, motivational process, motivation theories, McClelland's acquired need theory, motivating factors, entrepreneurship development programme, objectives of entrepreneurship development programme. **08 Hrs.**

Unit-3

Project identification and selection: Introduction, Meaning and Definition of project, Project identification, project selection project formulation: meaning of Project report, significance of project, contents of project report, formulation and preparation of a project report, steps or guidelines in the preparation of a project report, common errors in project formulation. **08 Hrs.**

Unit-4

Project appraisal: concept of project appraisal, methods of project appraisal. Financing of project: Need for financial planning, sources of finance, capital structure, term loans, sources of short-term finance, capitalization venture capital and export finance**.** Lease and hire purchase: types of lease agreements, concept of hire purchase, procedure for hire purchase. Taxation benefits to small-scale industry: depreciation, rehabilitation allowance, investment allowance, tax concessions.

08 Hrs.

Unit-5

Small scale industries: definition characteristics, need, objectives, scope role of SSI in economic development, advantages of SSI steps to start SSI Government policy towards SSI different policies of SSI, support for SSI during 5 years plan, liberalization privatization globalization on SSI. Effect of WTO-GATT supporting agencies of Govt. Financial Assistance by the various Financial Institutions to industries: Introduction, IFCI, ICICI, LIC, UTI, IDBI, SIDBI, NSIC, Basic procedure that industries should follow while borrowing loans from the various financial institution. **07 Hrs.**

TEXT BOOKS:

1. Entrepreneurship Development - S S Khanka - S Chand & Co
2. Entrepreneurship Development- S. Anil Kumar, S. C. Poornima, Mini. K. Abraham, K. Jayashree, New Age International Pvt Ltd Publishers

REFERENCE BOOKS:

1. Entrepreneurship Development - Small Business Enterprises Poornima M Charantimath - Pearson Education –2006.
2. Dynamics of Entrepreneurial Development & Management -Vasant Desai-Himalaya Publishing House.

PRINCIPLES AND PRACTICES OF MARKETING

Course Code:**HS10**

Contact Hours/ Week	: 3	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course outcomes:

Upon successful completion of this course, student will be able to:

CO1: Explain conceptual framework on marketing.

CO2: Explain the consumer buying behavior and analyse the factors influencing the buying behavior.

CO3: Explain the concepts of product and branding.

CO4: Explain the importance of pricing, competitive analysis and develop appropriate pricing strategies.

CO5: Explain the importance of promotion and marketing communication and creative use of media.

Unit-1

Introduction to Marketing: Needs, wants and demands. Marketing management practice. Marketing management philosophies: The production concept, The product concept, The selling concept, The marketing concept, The societal marketing concept. The marketing process, Strategy, marketing and planning. The marketing mix, The marketing plan, Marketing organization, Marketing control. The New Environment with Internet and advancements in Telecom sector. How Business and Marketing are changing. The marketing environment: The company's microenvironment, The company's microenvironment, Rural marketing environment in India and rural marketing. **8 Hrs.**

Unit-2

Consumer markets: Models of consumer behaviour, Consumer decision process, Business markets: Characteristics of business markets. A model of business buyer behaviour, Market segmentation; Segmenting consumer markets, Segmenting business markets, Developing market segments, Requirements for effective segmentation, Market targeting, Segment strategy, Differentiation, Differentiating markets, Product positioning, Positioning strategies, Selecting the right competitive advantages, Communicating and delivering the chosen position. **8 Hrs.**

Unit-3

Product and Branding: Define a product. Levels of product, Product classifications, Packaging/Labeling: Packaging as a marketing tool, requirement of good packaging, Role of labelling in packaging, Product decisions, Branding strategy, Brand equity, Managing brands New-product development and product life-cycle strategies: Innovation and new-product development strategy, New-product development process.

Marketing Services: Nature and characteristics of a service. Defining services and the service mix, Service characteristics, Marketing strategies for service films. **8 Hrs.**

Unit-4

Pricing: Define Price. Factors to consider when setting prices, Internal factors affecting pricing decisions, External factors affecting pricing decisions, General pricing approaches, Cost-based pricing, Value-based pricing, Competition-based pricing, New-product pricing strategies, Market-skimming pricing, Market-penetration pricing, Product-mix pricing strategies, Price-adjustment strategies, Psychological pricing, Promotional pricing, Geographical pricing, Price changes.

Managing marketing channels: Supply chains and the value delivery network, The nature and importance of marketing channels, How channel members add value, Selecting channel members, Managing and motivating channel members, Evaluating channel members. **8 Hrs.**

Unit-5

Advertising and Sales Promotion: Integrated marketing communication strategy, The changing communications environment, The need for integrated marketing communications. A view of the communication process, Steps in developing effective communication. Setting the total promotion budget and mix. Socially responsible marketing communication.

Advertising: Important decisions in advertising, Setting advertising objectives.

Setting the advertising budget, Developing advertising strategy, Evaluating advertising Sales Promotion: Rapid growth of sales promotion, Setting sales promotion objectives Major sales promotion tools, Developing the sales promotion programme.

Public relations: The role and impact of public relations, Major public relations tools.

Personal selling: The nature of personal selling, The personal selling process, Steps in the selling process, Direct marketing, Case studies in Indian context only. **(7 hours)**

TEXT BOOK:

Philip Kotler, Kevin Lane Keller, Abraham, Koshy and Mithileswar Jha, 'Marketing Management', Pearson, 14th Edition, 2013.

REFERENCE BOOKS:

1 Tapan Panda, Marketing Management, Excel Publication, 2nd Edition, 2006.
2 Dr. K. Karunakaran, Marketing Management (text & Cases in Indian Context), HPH, 2013.

POLLUTION CONTROL ENGINEERING

Course Code:**HS16**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes :

Upon successful completion of this course, student will be able to:

CO1: To analyze and solve industrial pollution problems by applying mathematics, engineering principles, computer skills, and natural sciences to pollution control engineering practice and using modern engineering techniques, skills, and tools to identify, formulate and solve pollution control engineering problems;

CO2: Apply knowledge and skills from a broad education in order to understand impacts of pollution on environment. solutions in a global, societal, and environmental context consistent with principles of sustainable development;

CO3: Professionally practice in environmental engineering and will demonstrate abilities to communicate and work effectively in an ethical manner on professional teams, exhibiting a commitment to lifelong learning and professional development in industry, government, and /or academia.

Mapping of course outcomes with program outcomes:

		Program Outcomes											
		1	2	3	4	5	6	7	8	9	10	11	12
COs	1	■						■					
	2						■						
	3		■					■	■		■		■

Unit–1

Introduction: Importance of environment for mankind, Biosphere, hydrologic cycles and nutrient cycles, damages from environmental pollution, legislation of environmental problems. **6 Hrs.**

Unit-2

Waste Water Treatment: Evaluation, classification and characterization of wastewater, preliminary primary, secondary and tertiary treatments of wastewaters, sludge treatment and disposal. Treatment of wastewater: from typical industries like pulp and paper, dairy, brewery, tannery and textile processing units. **9 Hrs.**

Unit-3

Air Pollution Treatment: Nature of air pollution, classification of air pollutants, source of air pollutants, air quality criteria and standards, methods of estimation of pollutants, air pollution from thermal power station, cement industries and from automobiles. Control methods and equipment for particulate emission and gaseous pollutants. **9 Hrs.**

Unit-4

Solid Waste Treatment: The classification and microbiology of solid wastes: properties of solid waste engineered system for solid waste management, solid waste generation, onsite handling, storage, collection for solid waste, transfer and transport, composting, sanitary and land filling. Thermal processes, regeneration and recycling. **9 Hrs.**

Unit-5

Noise Control: Noise control criteria, administrative and engineering controls, acoustic absorptive materials. **6 Hrs.**

TEXT BOOKS:

1. C.S.Rao, "Environmental Pollution Control Engg.". New Age International, 3rd ed., 2018.
2. S.P. Mahajan – "Pollution Control in Process Industries" –Tata McGraw Hill, 1999.

REFERENCE BOOKS:

1. Chapters on waste water treatment Air pollution, Solid Waste treatment and Noise in Chemical Plants in CHEMTECH – I Chemical Engg. Education Development Centre, 1975.
2. H.C. Perkins, Air pollution, McGraw Hill, 1974.
3. D.J. Hagery et.al., "Solid Waste Management", Van Nostrand Reinhold, 1973.
4. Lund, H.F., "Industrial Pollution Control Handbook", McGraw hill, 1971.
5. Duerden, "Noise Abatement", Butterworth, 1970.
6. Davis, "Introduction to Environmental Engg". 3rd edn., McGraw hill, 1998.

BEHAVIOURAL SCIENCE

Course Code: **HS19**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

COURSE OUTCOMES:

Upon successful completion of this course, student will be able to:

- **CO1 :** Discuss the capabilities of effective organization and challenges of leading
- **CO2 :** Explain the management process, skills and describe nature of challenges and controlling human behavior
- **CO3 :** Discuss personality and their major attributes, values, attitude and perception and their impact on organization.
- **CO4 :** Adopt different motivation theories to different work situations.
- **CO5 :** Identify different types of groups, properties of group and apply group decision making techniques and resolve conflict
- **CO6 :** Describe different leadership theories, styles, organizational development and culture.

Unit-1

Management: An applied behavioral Approach, Organization as a source of competitive advantages, capabilities of effective organization, challenges of leading an organization, successful V/s unsuccessful sciences. Management defines, management process, skills of a manager, organization as a social system, Ingredients for effective human skills, understanding behavior, predicting behavior, directing, changing and controlling behavior. **8 Hrs.**

Unit-2

Personality and Values: Definition of personality, determinants of personality, major personality attributes influence behavior.

Values: Definition of Values, importance of values, types of values.

Attitude: Definition of attitudes, components of attitudes, sources of attitudes, types of attitudes, job satisfaction, job involvement, organizational commitment. Importance of attitudes to work place diversity, sources of job satisfaction. Impact of dissatisfied and satisfied employees on the work place, emotional intelligence.

Perception: Definition of perception, factors influencing perception, attribution theory, frequently used shortcuts in judging others, Specific application of shortcuts in organization. **9 Hrs.**

Unit-3

Motivation & Behaviour: Theories of behavior, goal oriented behavior, the casual science, motives, goals, motive strength, change in motive strength, categories of activities.

Motivating Environment: The Hawthorne Studies, theories of motivation-hierarchy of needs theory, theory X and theory Y, motivation - Hygiene theory, argyries immaturity - maturity theory - transactional analysis.

8 Hrs.

Unit-4

Foundation of group behaviours: Definition and classification of groups, factors influencing group formation, stages of group development.
Group Properties: Roles, norms, status, size and group cohesiveness. Group Decision Making: Group decision making process, group think and group shifts. Group Decision Making Techniques: Nominal group techniques, brain storming technique, Delphi techniques.
Understanding Work Teams: Definitions of teams, differences between groups and teams, types of teams, creating effective teams, team and quality management, effectiveness of small teams.
Conflict Management: Definition of conflict, functional and dysfunctions conflict, stages of conflict process.
Negotiation: Negotiation strategies, negotiation process, issues in negotiation. **9 Hrs.**

Unit-5

Basic Approaches to Leadership: Definition of leadership, theories of leadership-trait theories, behavioural theories, managerial grid theory, situational leadership theories and leadership styles, transactional and transformational leadership.
Organizational Change: Approaches to organizational change
Organizational Development: Definition of organizational development features of organizational development. Organizational Development Technique: Sensitivity training, survey feedback, team building, quality work life (QWL)
Organizational Culture: Definition, characteristics of culture, types of culture, how employees learn culture, creating an ethical organizational culture. **8 Hrs.**

TEXT BOOKS:

1. Paul Hershy Kenneth H. Blanchard. Dewey Johnson - Management of organizational Behaviour: Leading human Resources 9th Edition 2011.
2. Stephen P Robbins - Organizational Behaviour 12th Edition Phy-ISBN-81-203- 3090-0.

REFERENCE BOOKS:

1. Keith Davis - Human Behaviour at work - Prentice Hall India 2007.
2. Robin Kolb - Organizational Psychology-TMK Publishing 2002 Company, Behaviour 12th Edition Phi- ISBN 81-203-3090-0.

ENVIRONMENTAL STUDIES

Course Code: **HS22**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Objectives: This course introduces the students to the problems of depletion of natural resources due to deforestation, agricultural practices, and adverse environmental effects, pesticides, soil erosion, mining. Different types of energy-renewable, non-renewable and energy conservation, impact of environmental pollution on water quality, air quality, soil pollution and noise pollution, solid waste management-disposal, treatment of different types of solid waste including sanitary waste, e-waste, biomedical waste, societal impact of environmental issues-ozone layer depletion, GHG effect, water conservation and harvesting and environmental protection.

Course Outcomes (COs)

Upon successful completion of this course, student will be able to:

CO1: Describe the impacts of modern agriculture (pesticides and fertilizers), mining and deforestation on the environment.

CO2: Describe the need for the conservation of energy and the renewable energy sources and design elementary renewable energy systems.

CO3: Describes the sources, types and impacts of pollutants on natural attributes (air, water, land) and its effects on habitats(health).

CO4: Describe generation, safe disposal of solid waste. Byproducts recovery by recycling for beneficial use of community.

CO5: Describe the effects of global warming, acid rain on environment, importance of rain water harvesting, environment protection laws to conserve natural attributes for sustainable development.

Unit-1

Introduction:

- Components of Environment and their interactions.
- Definition of ecology, Ecosystem and types

Natural Resources:

- Forest resources-Deforestation, causes of deforestation, environmental effects of deforestation and solutions.
- Water resources, world's water reserves, Hydrological cycle.
- Food resources, global food problems, food security, adverse effects of modern agriculture.
- Pesticides, problems of pesticide, Alternative methods of insect control. Organic farming, advantages of organic fertilizers.
- Land resources, land degradation. Soil erosion, causes and prevention. Soil conservation and its types.
- Mineral resources of India, Mining, adverse effects of mining and social damages of mining. **7 Hrs.**

Self Study: Computation of runoff from water resources, impact of pesticides on health and safety.

Problems on: Computation of average rainfall over a basin using arithmetic average, Thiessen Polygon and Isohyetal method, infiltration and evaporation.

Unit-2

Energy and resources:

- Definition, Types of energy-Renewable, non renewable & sustainable energy sources. Advantages and disadvantages of various energy types.
- Renewable energy sources- solar energy, Wind energy, Tidal energy, Ocean thermal energy. Geothermal energy
- Hydro electric power, Biomass energy, Hydrogen energy and Thermal power-definition and production environmental impacts.
- Conservation of energy- Tips to save energy. **8 Hrs.**

Problems on: Solar energy output of a photovoltaic systems, wind power hitting a wind turbine, Tidal energy calculations and problems on turbines.

Self Study: Evaluation of energy conservation due to various alternate energy sources.

Unit-3

Environmental pollution:

- Definition of pollution, Sources of pollution- Natural sources, Manmade (artificial) or Anthropogenic sources.
- Pollutant, Classification of pollutants-Based on the form they exist, biological degradability, their existence and on their origin.
- Human activities and their effects on environment (Agriculture, Industrialization, Urbanization and Mining)
- Air pollution-Definition, composition of clean air, sources of air pollution-air pollutants. Effect of air pollution on humans, animals and plants. Aesthetic loss due to air pollution, Effect of air pollution on climate.
- Water quality–Definition of potable water, wholesome water, polluted water & contaminated water. Water pollution, sources of water pollution. Common impurities in water (physical, chemical and bacteriological) Effects of some impurities (Colour, Taste and odour, Turbidity, Total solids pH, Hardness Chlorides, fluorides & nitrates).
- Soil pollution, Sources of soil pollution, Effects of soil pollution, control of soil pollution.
- Noise pollution, sources of noise, measurement of noise, effect of noise and noise control. **8 Hrs.**

Problems on: pH calculations, hardness calculations. Calculation of characteristics of mixture when waste water is discharged in to rivers and problems on air pollution and noise pollution.

Self Study: Evaluation of extent of air pollution, water pollution and soil and noise pollution in certain localities and their conformity with relevant standards.

Unit-4

Solid Waste Management

- Definition-Refuse, Garbage, Rubbish, Ash, Agricultural wastes,

Construction and demolition wastes, Industrial wastes and Biomedical wastes.

- Necessity of safe disposal of solid waste. Impacts of solid wastes on human health and environment.
- Classification of solid wastes. Quantity and composition of municipal solid waste. Collection of solid waste (door to door collection, community storage system, kerb side collection, block collection).
- Disposal of solid waste-Sanitary land-filling, Shredding and pulverization. Disposal of solid waste- Composting including Vermicomposting, Indore and Bangalore method of composting.
- E-waste problems and solutions for E-waste. Technology for processing printed circuit boards.
- Biomedical wastes-impacts on human health. Colour coding. Collection of sharp wastes. Labelling for identification. Storage, Treatment and disposal of biomedical wastes -Chemical disinfection, Autoclaving, Hydroclaving, Microwaving and Incineration. **8 Hrs.**

Self Study: Evaluation of quality of solid waste from various sources before and after treatment.

Problems on: Solid waste generation from various source, e-waste and bio-medical waste.

Unit-5

Social issues and the environment:

- From Unsustainable to sustainable development. Some important issues on energy utilization in urban planning.
- Water conservation methods. Recycling of water. Rainwater harvesting-methods of rainwater harvesting.
- Acid rain and effects of acid rain.
- Ozone layer depletion. Impacts of Ozone depletion. Steps to protect the Ozone layer.
- Greenhouse effect, global warming and climate change.
- Environmental protection laws in India-Central and state pollution control boards-their functions. The water (prevention and control of pollution) Act, 1974. The air (prevention and control of pollution) Act, 1981. The Environment (protection) Act, 1986. The wildlife protection Act 1971. The Forest (conservation) Act 1980. **8 Hrs.**

Problems on: Carbon foot print calculation and rainwater harvesting.

Self Study: Computation of carbon foot print due to various environmental protection.

TEXT BOOKS:

1	Benny Joseph	Environmental Studies, 2005 The McGraw-Hill companies.
2	Snathosh Kumar Garg, Rajeshwari Garg and Dr Ranjani Garg	Ecological and Environmental Studies, edition 3rd 2010 Khanna Publishers.

REFERENCE BOOK:

1	Erach Bharucha	Environmental studies for Undergraduate Courses, edition 1st 2013 University Press.

CYBER LAW & CYBER FORENSICS

Course Code: **HS23**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Outcomes:
Upon successful completion of this course, student will be able to:

CO1: Explain cyber crime

CO2: Describe the various categories of Cybercrimes

CO3: Summarize information about Cybercrimes against persons

CO4: Discuss comprehensive law on Cybercrime today

CO5: Explain any recent case which demonstrates the importance of having Cyberlaw on Cybercrime within the national jurisdictions of countries

Unit-1

INTRODUCTION TO LAW & LEGAL SYSTEM:
Understanding law and legal system in general, The Indian legal system, How to find appropriate law? Sources of Law, Law of Torts (Civil Laws), Law of Contract, Criminal Law, Law of property, Miscellaneous. **8 Hrs.**

Unit-2

LAW OF CYBER CRIMES IN INDIA :
Fundamental of computer, Internet and Mobile technologies, Cyber Crimes –The Technical perspective, Cyber Crimes–The Legal Perspective, Behavioural Aspects of Cyber Crimes, Technical aspects of digital evidence, Legal aspects of Digital Evidence. **8 Hrs.**

Unit-3

LAW OF CYBER SPACE:
Law of digital contracts, technology and law of electronic signatures, IPR issues in cyber space, privacy and freedom of speech issues in cyber space, cyber judicial system under information technology act 2008, legal issues of e-business. **8 Hrs.**

Unit-4

CYBER CRIMES AND THE SOCIETY:
Cyber jurisprudence and Jurisdictional issues, Information Society and Impact of Cyber Crimes, Basic concepts of Information Security, Cyber Law Compliance Issues in Industry and E–Governance, Cyber Terrorism and Cyber Warfare Issues, International Approach to Regulation of Cyberspace. **8 Hrs.**

Unit - 5

CYBER CRIME INVESTIGATION AND E- SECURITY: 7 Hrs.
Cyber crimes under IPC, Cr.P.C and Indian Evidence Law - Cyber crimes under the Information Technology Act, 2000- Cyber crimes under International Law – Hacking, Child Pornography, Cyber Stalking, Denial of

service Attack, Virus Dissemination, Software Piracy, Internet Relay Chat (IRC) Crime, Credit Card Fraud, Net Extortion, Phishing etc - Cyber Terrorism,- Violation of Privacy on Internet - Data Protection and Privacy, Legal Remedies for Cyber Crimes, Cyber Police Stations, Indian Courts and Jurisdiction.

TEXT BOOKS:

1.	Marjie T. Britza	Computer Forensic & Cyber Crime: An Introduction.
2.	Karnika Seth	Cyber Laws in the Information Technology Age.

BASIC COURSE IN ENTREPRENEURSHIP

Course Code: **HS24**

Contact Hours/ Week	: 3 (L)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Objectives

1. To make students self-discover their innate flow, entrepreneurial style, and identify problems worth solving thereby becoming entrepreneurs.
2. To handhold participants on lean methodology to craft value proposition and get ready with lean canvas.
3. To create solution demo by conducting customer interviews and finding problem-solution fit for building Minimum Viable Product (MVP).
4. To make students understand cost structure, pricing, revenue types and importance of adopting shared leadership to build good team
5. To help participants build a strong brand and identify various sales channels for their products and services.
6. To take students through basics of business regulations and other legal terms along-with understanding of Intellectual Property Rights.

Course Outcomes:

Upon successful completion of this course, student will be able to:

CO1: Discuss the skills required for Entrepreneurship.
CO2: Perform market segmentation, targeting and positioning the product.
CO3: Develop lean canvas models and validate MVP.
CO4: PERFORM costing and develop pricing policies.
CO5: explain branding and its techniques.
CO6: Discuss business regulations and the need for Intellectual Property Rights.

Unit–1

Self-Discovery and Opportunity Discovery

Concept of Entrepreneur and Entrepreneurship**,** Finding the Flow; Effectuation; Identifying the Effectuation principles used in activities; Identifying Problem Worth Solving; Design Thinking; Brainstorming; Presenting the Identified problems; Identifying the Entrepreneurial Style.

8 Hrs.

Unit–2

Customer, Solution and Lean Methodology

Customers and Markets; Segmentation and Targeting; Identifying Jobs, Pains, and Gains and Early Adopters; Crafting Value Proposition Canvas (VPC); Presenting VPC; Basics of Business Model and Lean Approach; Sketching the Lean Canvas; Risks and Assumptions; Presenting Lean Canvas. **9 Hrs.**

Unit-3

Problem-Solution Fit and Building MVP (Minimum Viable Product)

Blue Ocean Strategy - Plotting the Strategy Canvas; Four Action Framework: Eliminate-Reduce-Raise-Create Grid of Blue Ocean Strategy;

Building Solution Demo and Conducting Solution Interviews; Problem-Solution Fit; Building MVP; Product-Market Fit; Presenting MVP. **7 Hrs.**

Unit-4

Financial Planning & Team Building

Cost Structure - Estimating Costs;Revenues and Pricing: Revenue Streams, Revenue Types, Identifying Secondary Revenue Streams, Estimating Revenue and Price; Profitability Checks; Bootstrapping and Initial Financing; Practising Pitch; Shared Leadership; Hiring and Fitment, Team Role and Responsibilities. **7 Hrs.**

Unit-5

Marketing, Sales, Regulations and Intellectual Property

Positioning and Branding; Channels; Sales Planning; Project Management; Basics of Business Regulations; How to Get Help to Get Started; Patents, Trademark, Licensing, Contracts; Common Legal mistakes, Types of Permits, Tax Registration Documents, Compliance; Infringement and Remedies, Ownership and Transfer.

8 Hrs.

COMMUNICATIVE ENGLISH

Course Code: **HSS03** **Credits: 2.0**
Course Code: **HSS11DIP** **Credit: 0.0**

Contact Hours/ Week	: (0+2+2)	CIE Marks :	50
Total Lecture Hours	: 52	SEE Marks :	50

COURSE OBJECTIVES

To Enable students to:

a. Use clear and coherent English to express ideas and share information.
b. Provide clear orientation to understand strategies involved in improving LSRW skills.
c. Use accurate grammar and vocabulary in speech and writing.
d. Accurately understand and interpret lectures and discussions and a variety of reading material in the form of books, business context articles, reports etc.
e. Use globally comprehensible pronunciation with minimal influence of Indian accents.
f. Lead and participate in group discussions.
g. Present information and ideas using the professional presentation format.
h. Use body language and apply key soft skills required for confident speaking ability appropriately.
i. Write formal letters, e-mail messages and reports as per workplace requirements.
j. Communicate effectively during job interviews.
k. Expose students to wide variety of avenues of English communication through effective lab sessions.

COURSE MODULES

The course will focus on developing competencies on key modules / skills as follows.

1. Introduction to Communicative English – 2 hours
2. Essential Grammar and Vocabulary for Communicative English–11 hours
3. Listening Skills – 10 hours
4. Speaking Skills – 15 hours
5. Reading Skills – 6 hours
6. Writing Skills – 8 hours

In addition to these, there will be a few foundation sessions that will introduce the course, a general session on how to use the e-learning platform, as well as sessions on how to exploit writing on social media towards effective career boost. The course is suggested to be a blended learning, predominantly practical interspersed with instructions. (Theoretical background).

Unit-1

INTRODUCTION TO COMMUNICATIVE ENGLISH 2 Hrs.

- Importance of English:
  - In professional contexts.
  - As a language of connectivity.
  - As a medium for conducting business
  - Expectations by today's recruiters.
- English for engineers:
  - Key skills – Listening, Reading, Writing and Speaking.

- How important are the key skills and how they are tested by recruiters and used in careers?
- Introduction to the e-learning platform.
- User credentials for the e-learning platform shared.
- Tutorial on how to use the platform during the programme.

- Detailed schedule, orientation and expectations of the blended learning programme.

Unit-2

ESSENTIAL GRAMMAR AND VOCABULARY FOR COMMUNICATIVE ENGLISH 11 Hrs.

- Essential grammar:
  - Articles and Determiners
  - Nouns and Pronouns
  - Pronoun-Antecedent Agreement
  - Adjectives and Adverbs
  - Punctuations
  - Subject-Verb Agreement
  - Tenses
  - Conjunctions and Interjections
  - Classification of sentences
- Essential vocabulary:
  - Usage of the right word in the right context – importance while drafting business correspondence, creating resumes, creating social media profiles etc.
  - Building vocabulary – Prefix / suffix, memory techniques, miscellaneous vocabulary (homonyms, heteronyms and homophones)
  - Use of acronyms and abbreviations.

Unit-3

LISTENING SKILLS 10 Hrs.

- Understanding accents and pronunciation
- Retrieving factual information
- Role-play and conversation-activity based sessions to foster ability to interpret a conversation and summarize, answer question on it and convey the contextual meaning to an outsider
- Listening to required information in conversations
- Listening to monologues, telephonic conversations and discussions
- Taking notes in an organized manner
- Understanding and paraphrasing theme of a conversation/discussion
- Distinguishing fact and opinion
- Identifying speaker attitude and feeling
- Exposure to Business English conversations

Unit-4

SPEAKING SKILLS 15 Hrs.

- Introducing oneself and provide personal information
- Providing persuasive responses
- Asking and answering rational questions
- Using tactful, polite and assertive explanation
- Planning and preparing effective presentations
- Delivering presentations
- Participating in a discussion – Dos and Don'ts
- Participating in a discussion – Mock
- Presenting creative ideas
- Narration skills
- Speaking over a telephone – associated etiquette

Phonetics:

- Understanding right pronunciations and sounds
- Word stress
- Pitfalls of mispronounced words in professional contexts – case studies
- Pace and pause for clarity
- Intonation for communicating attitude and feeling

Associated soft skills:

- Body Language for being a confident speaker
- Displaying interpersonal skills while participating in discussions
- Understanding right and wrong instances of soft skills to be displayed through video-based learning

Unit-5

READING SKILLS **6 Hrs.**

- Increasing eye-span and other speed-reading techniques
- Skimming, scanning, searching for gist
- Understanding context and theme of passages
- Understanding tone of the author
- Navigating speed-breakers (new words) in a passage
- Reading Comprehension exercises of Business English standard

Unit-6

WRITING SKILLS **8 Hrs.**

- Pitfalls of poor writing skills – Impact discussed in professional as well as recruitment contexts
- Essentials of good writing skills
  - Clear ideation
  - Simple sentences
  - Coherent structure
  - Correct punctuations
  - Ability to make a write-up understandable from a point of no context
- Email / memo / note writing
  - Format to be followed
  - Language and tone to be used
- Book review
- Creative writing
- Applying writing skills on social media

ASSESSMENTS:

In addition to in-class assessments that are part of the syllabus to test students on key areas, internal and external assessments will focus on testing the students on the different modules:

1. Reading Ability (Reading comprehension)
2. Writing Ability (Writing note, email, reports / proposals)
3. Speaking Skills (Extempore / Mock Discussion)
4. Listening Skills (Listening comprehension)

REFERENCE MATERIAL:

1. "Word Power Made Easy" by Normal Lewis.
2. "Business Communication Today" by Courtland L Bovee and John V Thill.
3. "Oxford Guide to Plain English" by Martin Cutts.

MANAGEMENT AND ENTREPRENEURSHIP

Course Code: **HSS06**

Contact Hours/ Week	: 3+0+0	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Understand the principles and functions of management.
2. Analyze the importance of planning, organizing, staffing, leading and controlling organization.
3. Understand and manage engineering design and quality.
4. Inculcate entrepreneurial qualities and understand the need of rural entrepreneurship.
5. Acquire knowledge about funding agencies, understand procedure in applying for funds and analyze the cases of successful entrepreneurs.

Unit-1

Introduction to Management: Definition of management, management skills, productivity and effectiveness, efficiency, functions and principles of management.

Planning: Nature of planning, types of plans- purpose of vision, mission, goals, objectives strategies, policies; steps in planning, MBO, Strategic planning

Organizing: Formal and informal organization, span of management, the structure and Process of organizing, Organizational structure: line and staff organization, Functional organization, matrix organization. **8 Hours**

Unit-2

Staffing: Definition, systems approach to HRM, factors affecting staffing, recruitment and selection, job design, skill and characteristics of a manager, selection process and techniques.

Leading: Human factors in managing, motivation, Theory X and Y, the hierarchy of needs theory, leadership behaviour and styles.

Controlling: Basic control process, critical control points and standards, Benchmarking requirements for effective control. **9 Hours**

UNIT - 3

Managing Engineering Design and Development: Product and Technology Life Cycles, Nature of Research and Development, Research Strategy and organization, Nature of Engineering Design, Systems Engineering / New Product Development.

Managing Production/Operations: Types of production processes, Forecasting, Work measurement, Maintenance and Facilities (Plant) Engineering, Total Quality Management, Lean Manufacturing

Engineers in Marketing and service activities: Marketing and the Engineer, Engineers in Service organizations. **8 Hours**

UNIT-4

Entrepreneur & Entrepreneurship: Introduction, concept of Entrepreneur, characteristics of an entrepreneur, and qualities of an entrepreneur, functions of an entrepreneur, characteristics of entrepreneurship, factors affecting entrepreneurial growth. Entrepreneurship and economic development-rural, woman and social entrepreneurship.

Financing and Institutional Support for Entrepreneurship: Startups, business plans, venture capitalists, angel investors, funding agencies - commercial banks, development banks, NBFCS and incubation centres. Innovations and project trends. **8 Hours**

UNIT-5

Taxation benefits: Depreciation allowances, rehabilitation allowance, investment allowance and other tax concession benefits to an entrepreneur.

2 Case Studies from Stay Hungry and Stay Foolish – Rashmi Bansal, IIM Ahmedabad:

1) Success story of naukri.com by Sanjeev Bikhchandani
2) Success story of Make My Trip by Deep Kalra. **6 Hours**

TEXT BOOKS:

2.	Harold Koontz, Heinz Weihrich	Essentials of Management, McGraw Hill Education, 10th Edition, 2015
3.	Lucy C. Morse	Managing Engineering and Technology, Pearson Education, 6th Edition, 2015.
4.	S.S. Khanka	Entrepreneurial Development, S. Chand Publishing, 4th Edition, Reprint 2020. ISBN 978-81-219-1801-5

REFERENCE BOOKS:

1	James A.F. Stoner, R. Edward Freeman, Daniel R. Gilbert	Management, Pearson Education, 6th Edition, 2018.
2	Rashmi Bansal	Stay Hungry Stay Foolish, IIM Ahmedabad, 1st Edition, 2008.
3	Rashmi Bansal	Connect the Dots, Bushfire Publishers, 1st Edition, 2019.

Course Outcomes: After the completion of this course, students will be able to:

CO1: Explain various functions of management (L2).
CO2: Apply the knowledge of management principles and strategies in various functional areas. (L3).
CO3: Manage engineering design and product development (L3).
CO4: Describe entrepreneurship, its characteristics, and benefits and identify various funding sources for starting a business venture (L3).
CO5: Explain various taxation benefits enjoyed by an entrepreneur and analyze the characteristics and strategies adopted by successful entrepreneurs. (L2 & L3)

PROJECT MANAGEMENT

Course Code: **HSS07A**

(For CSE, ISE, AI&DS Branches)

Contact Hours/ Week	: 3+0 (L+T)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course objectives:

1. Understand the basics of software project management concepts, principles and practices
2. Understand the different methods of estimation for software project.
3. Understand the basic concepts, principles and practices of software project scheduling and risk management.
4. Analyze a software project based on various review metrics with review guidelines.
5. Understand software project maintenance, reengineering and configuration management.

UNIT-1

PRINCIPLES THAT GUIDE PRACTICE:

Software Engineering Knowledge, Core Principles – Principles That Guide Process, Principles That Guide Practice, Principles That Guide Each Framework Activity – Communication Principles, Planning Principles, Modelling Principles, Construction Principles, Deployment Principles, Work Practices. **4Hrs**

PROJECT MANAGEMENT CONCEPTS:

The Management Spectrum – The People, The Products, The Process, The Project, People -The Stakeholders, Team Leaders, The Software Team, Agile Teams, Coordination And Communication Issues, The Product – Software Scope, Problem Decomposition, The Process – Melding The Products And The Process, Process Decomposition, The Project, The W5HH Principle, Critical Practices. **3Hrs**

UNIT-2

PROCESS AND PROJECT METRICS:

Metrics In The Process And Project Domains -Process Metrics And Software Process Improvement, Project Metrics, Software Measurement – Size-Oriented Metrics, Function-Oriented Metrics, Reconciling LOC And FP Metrics, Object-Oriented Metrics, Use Cases- Oriented Metrics, Web App Project Metrics, Metrics For Software Quality – Measuring Quality, Defect Removal Efficiency, Integrating Metrics With The Software Process - Arguments For Software Metrics, Establishing A Baseline, Metrics Collection Computation And Evaluation, Metrics For Small Organization, Establishing A Software Metrics Program **3Hrs**

ESTIMATION FOR SOFTWARE PROJECT:

Observations On Estimation, The Project Planning Process, Software Scope And Feasibility, Resources – Human Resources, Reusable Software Resources, Environmental Resources, Software Project Estimation, Decomposition Techniques – Software Sizing, Problem Based Estimation, An Example Of LOC Based Estimation, An Example Of FP – Based Estimation, Process-Based Estimation, An Example Of Process- Based Estimation, Estimation With Use cases, An Example Of Estimation Using Use Case Points, Reconciling Estimates, Empirical Estimation Models – The Structure Of Estimation Models, The COCOMO II Model, The Software Equation, Estimation For Object -Oriented Projects, Specialized Estimation Techniques – Estimation For Agile Development, Estimation For Web App Development, The Make/Buy Decision- Creating A Decision Tree, Outsourcing. **5Hrs**

UNIT-3

PROJECT SCHEDULING:

Basic concepts, Project Scheduling – Basic Principles - The Relationship Between People and Effort – Effort Distribution, Defining a Task Set for The Software Project – a Task Set Example – Refinement of Major Tasks, Defining a Task Network, Scheduling – Timeline Charts – Tracking The Schedule – Tracking Progress for an OO Project – Scheduling for Web App and Mobile Projects, Earned Value Analysis. **4Hrs**

RISK MANAGEMENT:

Reactive Verses Proactive Risk Strategies, Software Risks, Risk Identification – Assessing Overall Project Risk – Components and Drivers, Risk Projection – Developing a Risk Table – Assessing Risk Impact, Risk Refinement, Risk Mitigation, Monitoring, and Management, The RMMM Plan. **3Hrs**

UNIT–4

QUALITY CONCEPTS:

What is Quality? Software Quality – Garvin's Quality Dimensions, McColl's Quality Factors, ISO 9126 Quality Factors, Targeted Quality Factors, The Transition to a Quantitative View, The Software Quality Dilemma - "Good Enough" Software, The Cost Of Quality, Risks, Negligence and Liability, Quality and Security, The Impact Of Management Actions, Achieving Software Quality – Software Engineering Methods, Project Management Techniques, Quality Control, Quality Assurance. **4Hrs**

REVIEW TECHNIQUES:

Cost Impact of Software Defects, Defect Amplification and Removal, Review Metrics and Their Use – Analysing Metrics, Cost-Effectiveness of Reviews,

Reviews: a Formality Spectrum, Informal Reviews, Formal Technical Reviews – The Review Meeting, Review Reporting and Record Keeping, Review Guidelines, Sample- Driven Reviews, Post-mortem Evaluations **3Hrs**

SOFTWARE QUALITY ASSURANCE:

Background Issues, Elements of Software Quality Assurance, SQA Processes and Product Characteristics, SQA Tasks, Goals and Metrics – SQA Tasks, Goals Attributes and Metrics, Formal Approaches To SQA, Statistical Software Quality Assurance – A Generic Example, SixSigma for Software Engineering, Software Reliability – Measures of Reliability and Availability, Software Safety, The ISO 9000 Quality Standards, The SQA Plan. **3Hrs**

UNIT–5

MAINTENANCE AND REENGINEERING:

Software Maintenance, Software Supportability, Reengineering, Business Process Reengineering - Business Processes, A BPR Model, Software Reengineering – A Software Reengineering Process Model, Software Reengineering Activities, Reverse Engineering – Reverse Engineering to Understand Data, Reverse Engineering to Understand Processing, Reverse Engineering User Interfaces, Restructuring – Code Restructuring, Data Restructuring, Forward Engineering – Forward Engineering for Client Server Architectures, Forward Engineering for Object- Oriented Architectures, The Economics Of Reengineering. **3Hrs**

SOFTWARE CONFIGURATION MANAGEMENT:

Software Configuration Management – An SCM Scenario, Elements of a Configuration Management System, Baselines, Software Configuration Items, Management of Dependencies And Changes, The SCM Repository – General Features and Content, SCM Features, The SCM Process – Identification of Objects In The Software Configuration, Version Control, Change Control, Impact Management, Configuration Audit, Status Reporting, Configuration Management for Web And Mobile Apps – Dominant Issues, Configuration Objects, Content Management, Change Management, Version Control, Auditing And Reporting. **4Hrs**

TEXT BOOK:

1.	Roger S. Pressman, Bruce Maxim	Software Engineering: A Practitioner's Approach, McGraw Hill, 8th Edition, 2015.

REFERENCE BOOKS:

1.	Bob Hughes, Mike Cotterell, Rajib Mall	Software Project Management, McGraw Hill, 6th Edition, 2018
2.	Watts Humphrey	Managing the Software Process, Pearson Education, New Delhi, 2000
3.	Pankaj Jalote	Software Project Management in Practice, Pearson Education, New Delhi, 2002.

Course outcomes: After the completion of this course, students will be able to:

CO1 : Describe the basics of software project management concepts, principles and practices.

CO2 : Explain and **apply** the different metrics and techniques to measure a software project.

CO3 : Explain and **analyse** the different activities of a project scheduling with risk management.

CO4 : Explain the quality concepts and analyse different review techniques for a software project.

CO5 : Describe and apply software reengineering activities and SCM process on web and mobile applications.

PROJECT MANAGEMENT

Course Code: **HSS07B**

(For EEE, ECE, EIE, ETE Branches)

Contact Hours/ Week	: 3+0 (L+T)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Objectives: This course will enable students to:

This course will enable students to:

1. To understand the scope, timing and quality of the project, at all-time focused on project success as defined by stake holders.
2. To Identify and analysis the project goals, constraints, deliverables, performance criteria, control needs and resource requirement in consultation with stake holders.
3. To implement the process of project management, life cycle and the embodied concepts, tools and techniques in order to achieve project success.
4. To understand the team efforts and stakeholders in professional manner, respecting differences, to ensure a collaborative project environment
5. To apply project management practices to be launch of new Programs, initiatives, products, services and events relative to the needs of stakeholders.

Unit-1

Introduction: Project, Program, and portfolio, Operations management, Product life cycle, Project life cycle, Project management life cycle, Ten Knowledge areas, Role of project manager and PMO, Ten Project Knowledge areas with their associated processes

Project Integration Management: Develop project charter, Develop project management plan, Direct & manage project work, Monitor control project, Perform integrated change control, Close project / phase. **7 Hrs**

Unit-2

Project scope management: Plan scope management, Collect requirements, Define scope, Create WBS, Validate Scope, Control scope

Project Schedule management: Plan schedule management, Define activities, Sequence activities, Estimate activity durations, Develop schedule, and Control schedule. **8 Hrs**

Unit-3

Project cost management: Plan cost management, Estimate cost, Determine budget, and Control costs.

Project quality management: Plan quality management, Manage quality and Control quality

Project resource management: Plan resource management, Estimate activity resources, Acquire resources, Develop team, Manage team and Control resources **8 Hrs**

Unit-4

Project communication management: Plan communication management plan, Manage communications and Monitor communications

Project risk management: Plan risk management, Identify risks, Perform qualitative risk analysis, Perform quantitative risk analysis, Plan risk responses, Implement risk responses and Monitor risks.

Project Procurement management: Plan procurement management, Conduct procurement, Control procurements. **8 Hrs**

Unit-5

Project stake holder management: Identify stake holders, Plan stake holder management, Manage stake holder engagement, and Monitor stake holder engagement.

A case study relevant to the domain knowledge of the department is taken up to explain the principles of the project management as brought out above. **8 Hrs**

TEXT BOOK:

1	PMBOK	Project Management Book of Knowledge 6th Edition, PMI, USA

REFERENCE BOOK:

1	Prasanna Chandra	Project Planning: Analysis, Selection, Implementation and Review, MC- Graw Hill Education, 8th Edition, 2017.

Course Outcomes: After the completion of this course, student will be able to:

CO1: Outline the procedure for analyzing a project

CO2: Define the rational of work break structure.

CO3: Illustrate the use of network techniques for successful project implementation.

CO4: Design the procedure for overall financial analysis of the project alongside the resources requirement and ideal quality.

CO5: Identify the sources and process for communication, risk management and procurement

CO6: Build a comprehensive plan for the stakeholder management.

PROJECT MANAGEMENT

Course Code: **HSS07C**

(For ME, IEM Branches)

Contact Hours/ Week	: 3	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Learning Objectives of this course are:

With the concept of managing Big Projects under costs and time constraints, it is imperative, that people working in manufacturing/ process/service industry have a very good understanding of the general and advanced concepts of Project Management. It is with this motivation that this course is designed, to meet the demand in the market from, UG students coming from a variety of fields, be it Engineering or Management.

CLO 1: Explain the role, importance and Concepts of Project Management

CLO 2: Describe importance of Generation and Screening of Project Ideas

CLO 3: Apply Tools & Techniques of Project Management in handling projects.

CLO 4: Explain the importance of coordination, communication and scheduling and controlling of project management

CLO 5: Explain how the Performance Measures are being carried out in Project Management

Unit-1

Concepts of Project Management: Concepts of a Project, Portfolio, Program, Categories of projects, Phases of project life cycle, Roles and responsibility of project leader, tools and techniques for project management Planning, Organizing and staffing the project team, Skills / abilities required for project manager, ten knowledge Areas, Authorities and responsibilities of project manager, Project organization and types, accountability in project execution, controls, tendering and selection of contractors. **09 Hrs**

Unit-2

Generation and Screening of Project Ideas: Generation of Ideas, Create WBS, Monitoring the Environment, Corporate Appraisal, Scouting for project ideas, Sources of positive net present value. Capital expenditures: Importance and difficulties, Phases of capital Budgeting, Levels of decision making, Facts of Project Analysis

Feasibility Study: A schematic diagram, Objectives of Capital Budgeting.

07 Hrs

Unit-3

Market & Demand Analysis: Situational Analysis and Specifications of Objectives, Collection of Secondary Information, conduct of Market Survey, Characterization of the Market, Demand Forecasting, and Market Planning. Administrative aspects of capital investment.

Tools & Techniques of Project Management: Bar (GANTT) chart, bar chart for combined activities, logic diagrams and networks, Critical path method (CPM) Project evaluation and review Techniques (PERT) Planning. (Numerical problems) **08 Hrs**

Unit-4

Project Scheduling, co-ordination and control: Project implementation scheduling, effective time management, different scheduling techniques, resources allocation method. PLM concepts.

Project direction, communication in a project, MIS project co-ordination, role of MIS in project control, Performance-control, schedule- control, cost -Control. **07 Hrs**

Unit-5

Performance Measures in Project Management: Performance indicators, Performance improvement for the CM & DM companies for better project management, project management and environment.

Project Management Models and Certifications: An Introduction to SEI, CMM model and Project Management Institute USA – Importance of the same for the Industry and practitioners.

Case Studies on Project Management: Case studies covering project planning, scheduling, communication, use of tools & techniques, project model, performance measurement, (Related to industrial projects) **8 Hrs**

Assignment: Any two case studies by using MS software.

Text Books:

1. Prasanna Chandra, Project planning analysis, selection, implementation & review, ISBNO-07-462049-5, 2002.
2. Harold Kerzner, Project Management a system approach to planning scheduling & controlling, CBS publishers and Distributors, 2002.
3. Project Management by S Choudhury, Mc Graw Hill Education (India) Pvt. Ltd. New Delhi, 2016

Reference Books:

1. Beningston Lawrence, Project Management, McGraw-Hill, 1970.
2. Weist & Levy, a Management-Guide to PERT and CPM, Eastern Economy of PHI, 2002.
3. L.S. Srinnath, PERT & CPM, Affiliated East West Press Pvt.ltd, 2002.
4. Moder Joseph and Philips Cerel R., Project management with PERT and CPM, 2nd Edition, New York VAN Norstrand, Reinhold-1976.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Explain the basic concept of project management and roles and responsibilities of project leader (Level-1).

CO2: Discuss the generation and screening of project ideas and describe the procedure involved in awarding the project (Level-2).

CO3: Analyse the different market scenarios while allocating the project and discuss the tools and techniques used in PM (Level-3).

CO4: Demonstrate the ability to schedule, coordinate and control the projects (Level-3).

CO5: Describes the various performance measurement techniques in PM and analyse the PM environment (Level-4).

PROJECT MANAGEMENT

Course Code: **HSS07D**

(For Civil Engg. Branch)

Contact Hours/ Week : 2+2 (T+L) Credits : 3.0

Total Lecture Hours : 26

Total Lab Hours : 26

CIE Marks
Theory: 50 Lab : 50

SEE Marks :
Theory: 60 Lab : 40

Course Objectives: The objective of this course is to expose the students to concepts of project, scheduling, time-cost relationship, resource allocation, project cost, crashing, quality and contract management. Also, to enable the students to use construction management tools for scheduling, resource allocation, crashing of various infrastructure projects.

Unit-1

Project Planning: Introduction, Project categories, Characteristics of a Project, Project life cycle phases, Function of Project Management. Project Planning - Scope, Planning process and its objective, Types of project plan, Types of networks, Float and its implication on project schedule. Use of leads and lags in logic diagrams. **8 Hrs.**

Unit-2

Financial management: Working Capital Management, Compound Interest and Present Value methods, Discounted Cash Flow Techniques, Capital Budgeting. Managerial economics: Cost Concepts, Break-even analysis, Pricing Techniques, numerical problems.

Project Quality Management: Introduction, Elements of quality, Quality Assurance, Quality Control, Quality planning, quality audit, Quality Checklists, **TQM Tools** - An overview of Flowcharts, Histogram, Pareto diagram, Scatter diagram, Control charts. **9 Hrs.**

Unit-3

Contract Management: Definition, Types of contracts: Classification Based on − Tendering Process, Economic Consideration, Tasks Involved; Main and Sub Contracts, Features, Merits, Demerits, Applicability of the various types of contracts.

Breach of contract: Definition and Classification, Common Breaches by – Principal, Contractor, Damage Assessment, Claims for Damages, Quantum Meruit, Force Majeure or Frustration.

Dispute resolution: General, Methods for dispute resolution − Negotiations, Mediation, Conciliation, Dispute Resolution Boards, Arbitration, Litigation/Adjudication by courts. **9 Hrs.**

Laboratory component- Project Management Lab

Unit-4

Project Scheduling: Introduction, Precedence network analysis (A-O-A network, A-O-N network), Logic diagram, Construction Scheduling techniques like CPM and PERT, Work Breakdown Structure (WBS), - (3Hrs)

- Preparation of detailed WBS for various infrastructural projects.(5Hrs)
- Determination of project duration by adopting critical path for the construction projects (5Hrs). **13 Hrs.**

Unit-5

Resource Scheduling: Resource allocation, Resource smoothening and resource leveling.

Project Cost Management: Time-cost relationship, Direct and indirect cost, concept of crashing. (3Hrs).

- Allocation of resources for construction project. (4Hrs).
- Determination of project duration and cost of construction project on crashing. (6Hrs). **13 Hrs.**

Text Book:

1	Jimmie W. Hinze	Construction Planning and Scheduling, Edition 4th 2011, (3rd edition), Publisher: Prentice Hall

Reference Books:

1	User Manual- MS Project & Primavera P6.	
2	Rain Diana	"Training Guide to Microsoft Access", 2008 BPB Publications, New Delhi
3	Raina V.K.	"Construction Management practice", edition 2nd 2009 (1988), Tata – McGraw Hill publishing co. Ltd.
4	Lt. Col. K. K. Chitkara	Construction Project Management, 2/E 2010 Planning, Scheduling and Controlling, Publisher - Tata McGraw-Hill Education
5	George 1.Ritz.	"Total construction project management", 1994 (1994), Tata-McGraw Hill publishing Co.
6	Punmia B.C & Khandelwal K.K.	"Project planning and control with PERT and CPM", (1989), 2002 Laxmi publication II edition.

Course Outcomes (COs)

CO1: Describe the concept of project, project life cycle, network and associated terms. (L3)

CO2: Determine project cost through various methods and perform break even analysis for determining optimal crashing condition. (L4)

CO3: Describe the various contracts used in construction, breach and dispute resolution techniques. (L3)

CO4: Prepare WBS for various infrastructural projects, analyze the network through various methods and schedule the project using construction management tools. (L3)

CO5: Allocate resources and perform crashing using construction management tools. (L3)

CO6: Function as a team member (L3).

PROJECT MANAGEMENT

Course Code: **HSS07E**

(For CH, BT Branches)

Contact Hours/ Week	: 3	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Manage the scope, cost, timing, and quality of the project, at all times focused on project success as defined by project stakeholders.
2. Apply project management practices to the launch of new programs, initiatives, products, services, and events relative to the needs of stakeholders
3. Identify project goals, constraints, deliverables, performance criteria, control needs, and resource requirements in consultation with stakeholders.
4. Implement project management knowledge, processes, lifecycle and the embodied concepts, tools and techniques in order to achieve project success.
5. Interact with team and stakeholders in a professional manner, respecting differences, to ensure a collaborative project environment. Manage & monitor communication.

Unit-1

Introduction: Project, Program, and portfolio, Operations management, Product life cycle, Project life cycle, Project management life cycle, Ten Knowledge areas, Role of project manager and PMO, Ten Project Knowledge areas with their associated processes.

Project Integration Management: Develop project charter, Develop project management plan, Direct & manage project work, Monitor control project, Perform integrated change control, Close project / phase.

7 Hrs

Unit-2

Project scope management: Plan scope management, Collect requirements, Define scope, Create WBS, Validate Scope, Control scope.

Project Schedule management: Plan schedule management, Define activities, Sequence activities, Estimate activity durations, Develop schedule, and Control schedule. **8 Hrs**

Unit-3

Project cost management: Plan cost management, Estimate cost, Determine budget, and Control costs.

Project quality management: Plan quality management, Manage quality and Control quality.

Project resource management: Plan resource management, Estimate activity resources, Acquire resources, Develop team, Manage team and Control resources. **8 Hrs**

Unit-4

Project communication management: Plan communication management plan, Manage communications and Monitor communications.

Project risk management: Plan risk management, Identify risks, Perform qualitative risk analysis, Perform quantitative risk analysis, Plan risk responses, Implement risk responses and Monitor risks.

Project Procurement management: Plan procurement management, Conduct procurement, Control procurements. **8 Hrs**

Unit-5

Project stake holder management: Identify stake holders, Plan stake holder management, Manage stake holder engagement, and Monitor stake holder engagement.

A case study relevant to the domain knowledge of the department is taken up to explain the principles of the project management as brought out above. **8 Hrs**

TEXTBOOKS:

1. "Project Management Book of Knowledge (PMBOK)", Project Management Institute, USA, 6e, 2017, ISBN: 9781628253825.
2. **Ghattas, R.G. & Mc Kee, S.L.,** "Practical Project Management", Pearson Education Asia, 2008, ISBN: 978-8131707418.
3. **Pinto, P.K., "**Project Management", Pearson Education, 3e, 2012 ISBN: 9780273767428.

REFERENCE BOOKS:

1. **Prasanna Chandra.,** Project Planning: Analysis, Selection, Implementation and Review, MC- Graw Hill Education, 8e, 2017, ISBN: 9789332902572.

Course Outcomes: After the completion of the course, the student will be able to:

CO1: Manage the scope, cost, timing, and quality of the project, at all times focused on project success as defined by project stakeholders.

CO2: Identify project goals, constraints, deliverables, performance criteria, control needs, and resource requirements in consultation with stakeholders.

CO3: Implement project management knowledge, processes, lifecycle and the embodied concepts, tools and techniques in order to achieve project success.

CO4: Interact with team and stakeholders in a professional manner, respecting differences, to ensure a collaborative project environment.

CO5: Apply project management practices to the launch of new programs, initiatives, products, services, and events relative to the needs of stakeholders.

SOFT SKILLS

Course Code: **HSS08**

Contact Hours/ Week	:	Credits :	0.0
Total Lecture Hours	: 36	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50

COURSE OBJECTIVES

- To make the students aware of the importance of soft skills in the present-day business world and work environment
- To learn the science behind picking up any skill quickly
- To help students realize as well as develop key soft skills interviewers look for – such as change management, professionalism, inter- and intra-personal skills, adaptability etc.
- To develop effective resumes (paper-based as well as video)
- To understand the importance of and create an effective digital footprint
- To provide simulated Group Discussion and Personal Interview experience based on the models adopted by reputed companies.
- To understand professional etiquette to be displayed in workplaces.
- To learn to introspect over one's strengths and weaknesses, and apply them effectively for career growth

METHODOLOGY

Interactive instructor led session with audio-visual aids / case studies

Day	#	Topic	Sub-topics covered	Duration (Hrs)
1	1	How to pick up skills faster?	i) Knowledge v/s. skill ii) Skill introspection iii) Skill acquisition iv) "The 10,000 hours rule" and the converse	2
	2	Interpersonal and Intrapersonal skill building	Social Interaction i) Interpersonal Communication ii) Peer Communication iii) Bonding iv) Types of social interaction Emotional Management Responsibility i) Types of responsibilities ii) Moral and personal responsibilities	2
	3	Professional etiquette	Workplace etiquette - meeting room, pantry, cubicle Dining etiquette; Telephone etiquette; Email and Business correspondence etiquette	2
2	4	Change Management	i) Who moved my Cheese? ii) Tolerance of change and uncertainty iii) Joining the bandwagon	2

			iv) Adapting change for growth – overcoming inhibition v) Adapt to changes (tolerance of change and uncertainty) vi) Adaptability Curve vii) Survivor syndrome	
	5	Creating a digital footprint	i) How what you post online / information online can affect people's and recruiter's perception about you ii) Usage of LinkedIn to further one's career prospects iii) Managing content that one posts on platforms like Twitter, Facebook, Instagram etc. to create positive footprint about oneself iv) Why is it important to leave a digital footprint?	2
	6	Time Management	i) Prioritization - Time Busters ii) Procrastination iii) Scheduling iv) Multitasking v) Monitoring vi) Working under pressure and adhering to deadlines	2
3	7	Group Discussion - Basics	i) Importance of GD round ii) Skills assessed in a GD iii) How to ace a GD iv) Do's and Don'ts in a GD v) Idea generation techniques vi) One mock GD involving 12 volunteers, facilitated by the trainer	2
	8	Personal Interview - Basics	i) Self-introduction practice. ii) Body language – especially grooming - for personal interview. iii) Personal interview – FAQs discussion.	2
	9	Building a resume from scratch	i) How to write a good and impressive Resume. ii) Important aspects of an impressive resume. iii) Sample template and formatting ideas.	2
4	10	Group Discussion - Advanced	i) GD sample Video with analysis and discussion. ii) GD Do's and Don’ts – Worksheet practice. iii) Role plays for Do's and Don’ts. iv) Idea generation – worksheet practice.	3

	11	Personal Interview - Advanced	i) Extensive discussion on PI FAQs. ii) Interview questions from based on resume – discussion iii) PI Videos - discussion and analysis. iv) Highlighting successful answers for PI-questions. v) Body language during a personal interview. vi) Unconventional types of interviews (Stress panel, MR, Guesstimation)	3
5	12	Resume Writing - Workshop (Drafting a paper-based as well as a video resume)	i) Resume writing – Worksheet practice. ii) 3 stage Resume drafting iii) Rough draft-1. iv) Rough draft -2. v) Fair draft. vi) Discussion on specific aspects of an impressive Resume. vii) Creating a video resume	3
	13	Setting and achieving targets	i) Ambition, goal, passion and career objective –difference ii) SMART goals and Action plans iii) Obstacles -Failure management (case studies)	1.5
	14	Introspection	i) Identify your USP - Unique Selling Proposition ii) Recognize your strengths and weakness (SWOT) iii) Nurture strengths iv) Fixing weakness v) Overcoming your complex vi) Confidence building	1.5
6	15	Group Discussion - Mock	i) Mock Group Discussions featuring groups of 10 people, with each GD lasting for 15 minutes. ii) Detailed feedback for each participant iii) Introspection by the audience to add value to the GD	3
	16	Personal Interview - Mock	i) Mock personal interview for a sample set of candidates ii) Simulate the real personal interview experience. iii) Individual feedback and areas of improvements are shared.	3

ASSESSMENTS PROVIDED

The following assessments are integrated into the training programme to best judge a student's proficiency on soft skills.

1. Team building tasks (Inside training hours)
2. Participation in group activities (Inside training hours)
3. Psychometric test
4. Creating a resume
5. Creating an effective LinkedIn profile
6. Mock Group Discussion (Inside training hours)

REFERENCE MATERIAL

1. 'Who moved my Cheese?' by Spencer Johnson
2. 'Outliers' by Malcolm Gladwell
3. 'Emotional Intelligence' by Daniel Goleman
4. 'Road Less Travelled' by Scott Peck M.
5. 'How to win friends and influence people' by Dale Carnegie

COURSE OUTCOMES

On successful completion of this course, students will be able to:

- Display key soft skills expected by recruiters
- Be able to apply scientific methods to learn any skill quickly
- Participate in Group Discussions and Personal Interviews effectively
- Create effective resumes that impress interviewers (paper-based as well as video)
- Apply professional etiquette to be displayed in various workplace scenarios
- Set and achieve targets – work-place based as well as personal

APTITUDE RELATED ANALYTICAL SKILLS

Course Code: **ARAS**

Contact Hours/ Week	: -	Credits :	1.0
Total Lecture Hours	: 36	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50

MODULES COVERED:

Sl. No.	Module covered	Duration (in hrs.
1	Quantitative Aptitude	16
2	Verbal Reasoning	08
3	Logical Reasoning	08
4	Test taking strategies to crack recruiter tests	02
5	Post-Training Assessment along with a debrief	02
	Total Course Duration	**36**

Methodology : Instructor led – Concepts with guided question solving, assignments and homework assessments

Detailed syllabus:

1.Quantitative Aptitude (with focus on questions from top recruiters) – 16 hrs

a) Number System
- Classification of numbers
- Divisibility tests
- Power cycles and remainders
- Factors and multiples
- Applications of HCF and LCM

b) Profit and Loss, Partnerships and Averages
- Basic terminology in Profit and Loss
- Partnerships
- Averages and weighted averages
- Mixtures and alligations

c) Time and Work
- Working with different efficiencies
- Pipes and cisterns
- Work equivalence
- Division of wages

d) Time, Speed and Distance
- Basics of Time Speed and Distance
- Relative Speed
- Problems based on trains
- Problems based on boats and streams
- Problems based on Races

e) Percentages, Simple and Compound Interest

- Percentages as fractions and decimals
- Percentage increase / decrease
- Simple interest and compound interest
- Relationship between simple and compound interest

f) Permutation, Combination and Probability
- Fundamental counting principle
- Basics of permutation and combination
- Computation of permutation
- Circular permutation
- Computation of combination
- Probability

g) Logarithms, Progressions, Geometry and Quadratic Equations
- Logarithms
- Progressions – Arithmetic, Geometric and Harmonic
- Geometry
- Mensuration
- Quadratic equations

2.Verbal Reasoning (with focus on questions from top recruiters)–8 hrs

a) Reading Comprehension –
- Eyespan
- Speed reading techniques
- Types of questions
- Comprehension strategies

b) Sentence Correction –
- Subject-Verb Agreement
- Parallelism
- Modifiers
- Pronoun Antecedent Agreement
- Verb Time Sequence
- Comparison
- Determiners
- Prepositions

c) Vocabulary –
- Etymology of words
- Prefix and suffix
- Memory techniques to remember words
- Synonyms and antonyms
- Analogy

d) Sentence Completion and Para Jumbles –
- Sentence completion – single blank and double blank questions
- Parajumbles – Moving and anchored jumbles

3. Logical Reasoning (with focus on questions from top recruiters)- 8hrs

a) Coding and Decoding, Series, Analogy, Odd Man Out and Visual Reasoning
- Coding and decoding

- Number and alphabet series
- Analogy
- Odd man out
- Visual Reasoning

b) Data Arrangements and Blood Relations
   - Linear, circular and distribution arrangements
   - Blood Relations

c) Data interpretation and Data Sufficiency
   - Tables
   - Pie Charts
   - Bar Graphs
   - Data Sufficiency

d) Clocks, Calendars, Direction sense and Cubes
   - Clocks
   - Calendars (Conventional and shortcut methods to find day of a date)
   - Cubes
   - Direction Sense

4.Test taking strategies – 2 hrs

This module will focus on:

- Understanding patterns of tests (Adaptive, non adaptive, navigation – intra sectional, inter sectional)
- Best strategies to maximize scores and clear cut-offs
- Shortcut strategies on Quantitative Aptitude, Logical Reasoning as well as Verbal Ability to ace sections

5.Post Training Assessment with debrief – 2 hrs

An assessment that tests a student on all three sections of Aptitude, followed a detailed student-wise analysis based on:

- Cut-off
- Percentile w.r.t the batch
- Percentile w.r.t. the college
- Corrective measures to be taken to improve the score

In class, there will be a debrief on how the test should have been taken by an ideal test taker to navigate through the difficulties and ace the cut-off.

6.Tests outside training schedule

An ideal aptitude training course is a mix of classroom learning / guided question solving, followed by self-practice. The 'training duration' focuses mainly on laying strong foundations on concepts and ability to solve questions on major aptitude topics. Significant amount of practice is also provided to students through online tests in the form of:

1. Pre-Assessment test
2. Full-length practice tests
3. Company specific tests (patterns and question types of major recruiters should be given exposure to)

3. 'The Pearson Guide to Verbal Ability' by Nisht K Sinha

ಬಳಕೆ ಕನ್ನಡ (ವ್ಯಾವಹಾರಿಕ ಕನ್ನಡ)

Course Code: **NHS01**

(For Non-Karnataka Students)

Contact Hours/ Week	: 2(T)	Credits :	1.0
Total Lecture Hours	: ---	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50

Course Objectives:

The course will enable the Non-Karnataka students to understand Kannada and communicate in Kannada language.

Chapter 1: Balake (Vyavaharika) Kannada – Parichaya (Introduction)

Chapter 2: Kannada Aksharamale haagu uchcharane (Kannada Alphabet and Pronunciation)

Chapter 3: Sambhashanegaagi Kannada Padagalu (Kannada Vocabulary for Communication)

Chapter 4: Kannada Grammar in Conversations (Sambhashaneyalli Kannada Vyakarana)

Chapter 5: Activities in Kannada.

ಪಠ್ಯ ಪುಸ್ತಕ:

ಬಳಕೆ ಕನ್ನಡ (ವ್ಯಾವಹಾರಿಕ ಕನ್ನಡ) ಪಠ್ಯ ಪುಸ್ತಕ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ (ಆಡಳಿತ ಕನ್ನಡ)

Course Code: **NHS02**

(For Karnataka Students)

Contact Hours/ Week	: 2(T)	Credits :	1.0
Total Lecture Hours	: ---	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಭಾಷಾ ಕಲಿಕೆಯ ಉದ್ದೇಶಗಳು:

- ಪದವಿ ವಿದ್ಯಾರ್ಥಿಗಳಾಗಿರುವುದರಿಂದ ಆಡಳಿತ ಕನ್ನಡದ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.
- ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ ಕನ್ನಡ ಭಾಷೆಯ ವ್ಯಾಕರಣದ ಬಗ್ಗೆ ಅರಿವು ಮೂಡಿಸುವುದು.
- ಕನ್ನಡ ಭಾಷಾ ರಚನೆಯಲ್ಲಿನ ನಿಯಮಗಳು ಮತ್ತು ಕನ್ನಡ ಭಾಷಾ ಬರಹದಲ್ಲಿ ಕಂಡು ಬರುವ ದೋಷಗಳು ಹಾಗೂ ಲೇಖನ ಚಿಹ್ನೆಗಳನ್ನು ಪರಿಚಯಿಸುವುದು.
- ಸಾಮಾನ್ಯ ಅರ್ಜಿಗಳು, ಸರ್ಕಾರಿ ಮತ್ತು ಅರೆ ಸರ್ಕಾರಿ ಪತ್ರ ವ್ಯವಹಾರದ ಬಗ್ಗೆ ಅರಿವು ಮೂಡಿಸುವುದು.
- ಭಾಷಾಂತರ ಮತ್ತು ಪ್ರಬಂಧ ರಚನೆ ಬಗ್ಗೆ ಅಸಕ್ತಿ ಮೂಡಿಸುವುದು.
- ಕನ್ನಡ ಭಾಷಾಭ್ಯಾಸ ಮತ್ತು ಸಾಮಾನ್ಯ ಕನ್ನಡ ಹಾಗೂ ಆಡಳಿತ ಕನ್ನಡದ ಪದಗಳ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.

ಪರಿವಿಡಿ

ಅಧ್ಯಾಯ 1: ಕನ್ನಡ ಭಾಷೆ – ಸಂಕ್ಷಿಪ್ತ ವಿವರಣೆ

ಅಧ್ಯಾಯ 2: ಭಾಷಾ ಪ್ರಯೋಗದಲ್ಲಾಗುವ ಲೋಪದೋಷಗಳು ಮತ್ತು ಅವುಗಳ ನಿವಾರಣೆ.

ಅಧ್ಯಾಯ 3: ಲೇಖನ ಚಿಹ್ನೆಗಳು ಮತ್ತು ಅವುಗಳ ಉಪಯೋಗ

ಅಧ್ಯಾಯ 4: ಪತ್ರ ವ್ಯವಹಾರ

ಅಧ್ಯಾಯ 5: ಆಡಳಿತ ಪತ್ರಗಳು

ಅಧ್ಯಾಯ 6: ಸರ್ಕಾರದ ಆದೇಶ ಪತ್ರಗಳು

ಅಧ್ಯಾಯ 7: ಸಂಕ್ಷಿಪ್ತ ಪ್ರಬಂಧ ರಚನೆ (ಪ್ರಿಸೈಸ್ ರೈಟಿಂಗ್), ಪ್ರಬಂಧ ಮತ್ತು ಭಾಷಾಂತರ.

ಅಧ್ಯಾಯ 8: ಕನ್ನಡ ಶಬ್ದ ಸಂಗ್ರಹ

ಅಧ್ಯಾಯ 9: ಕಂಪ್ಯೂಟರ್ ಹಾಗೂ ಮಾಹಿತಿ ತಂತ್ರಜ್ಞಾನ

ಅಧ್ಯಾಯ 10: ಪಾರಿಭಾಷಿಕ ಆಡಳಿತ ಕನ್ನಡ ಪದಗಳು ಮತ್ತು ತಾಂತ್ರಿಕ/ಕಂಪ್ಯೂಟರ್ ಪಾರಿಭಾಷಿಕ ಪದಗಳು.

ಪಠ್ಯ ಪುಸ್ತಕ:

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ (ಆಡಳಿತ ಕನ್ನಡ) ಪಠ್ಯ ಪುಸ್ತಕ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

CONSTITUTION OF INDIA AND PROFESSIONAL ETHICS

Course Code: **NHS03**

Contact Hours/ Week	: 2 (T)	Credits :	1.0
Total Lecture Hours	: ---	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50

Course Outcomes: On successful completion of the course, the student will be able:

CO1: To orient students on the salient features of the Indian Constitution with special emphasis on fundamental rights and duties.
CO2: To provide an overview of the Union and State legislature, executive and judiciary.
CO3: To explain the importance of electoral process and help students appreciate the ethical practices in elections.
CO4: To facilitate the students to have a clear perspective of the Ethical values and their relevance in the present context of globalization.
CO5: To enable the students familiarize themselves with the ethical values proposed and practiced by the great leaders / eminent personalities with particular reference to Sir M. Visvesvaraya.

Part I: Constitution of India

Unit 1: Introduction to Constitution of India

Salient Features of Indian Constitution, Preamble to the Indian Constitution, Different kinds of fundamental rights, Directive Principles of State Policy, Categorical study of Directive Principles, Relationship between DPSP and Fundamental Rights, Fundamental Duties.

06 Hrs.

Unit 2: Union and State Governments

Union and State Legislature: Composition and powers of Loksabha, Rajyasabha, Legislative Assembly and Legislative Council. Union and State Executive: The appointment and powers of President, Vice-president, Prime-Minister, Union Council of Ministers, Governor of State, Chief Minister of State and State Council of Ministers. Union and State Judiciary: The Composition and powers of Supreme Court and High Court.

07 Hrs.

Unit 3: Other Provisions of Constitution

Special provisions relating to SC / ST, Women and Children and other backward classes. Electoral process related to the Election Commission of India: Composition, functioning and removal of the Election Commissioner(s).

Human Rights: Meaning, Kinds and Safeguard of Human Rights, State Human Rights Commission and National Human Rights Commission.

05 Hrs.

Part II -Professional Ethics

Unit 4: Professional Ethics and Human Values

Introduction, What is Ethics, Scope of Professional Ethics, Values and Characteristics, Types of values: Negative and positive values, Ethical values for Professional success. ***Case Studies*:** Ethical practices of the reputed Indian Companies: TATA Group, Wipro Technologies.

4 Hrs.

Unit 5: Professional Code of Conduct

Introduction, Professional Code, Legal System, Ethical and Unethical practices, Making the Professional Code successful. Ethical values of Sir M. Visvesvaraya, Mahatma Gandhi and Swami Vivekananda.

4 Hrs.

ENVIRONMENTAL SCIENCE

Course Code: **NHS04**

Contact Hours/ Week	: 2 (T)	Credits :	1.0
Total Lecture Hours	: ---	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50

Objectives: This course introduces the students to the problems of depletion of natural resources due to deforestation, agricultural practices, and adverse environmental effects, pesticides, soil erosion, mining. Different types of energy-renewable, non-renewable and energy conservation, impact of environmental pollution on water quality, air quality, soil pollution and noise pollution, solid waste management- disposal, treatment of different types of solid waste including MSW, e-waste, biomedical waste, societal impact of environmental issues- ozone layer depletion, GHG effects, water conservation and harvesting and environmental protection & acts

Course Outcomes: On successful completion of the course, the student will be able:

CO1: Describe the importance of forestation, effects of deforestation, land degradation, adverse effects of mining on environment, using the principles of natural sciences compute the runoff from rainfall & estimates the conservation of water for beneficial use of humans.

CO2: Describe the Renewable sources of energy and formulate, review literature, calculate power potential of solar & wind energy by using the principles of natural sciences.

CO3: Describe the effects of pollution of air, water, soil & noise on humans and environment, identify & analyze the pollution problems related to air, water, soil & noise and quantify pollution levels & draw valid inferences using the principles of engineering sciences.

CO4: Describe Impact of solid waste on human health and environment, its safe disposal. Use population data & compute per capita solid waste generation, land area requirement for sanitary landfill.

CO5: Describe the sustainable development, its importance, current global environmental issues, Present state & central governments protection acts, compute carbon foot print using data(vehicles/industries) & asses its impact on environment.

Unit-1

Introduction:

- Components of Environment and their interactions
- Ecology, Ecosystem and types

Natural Resources:

- Forest Resources-Deforestation, Causes of deforestation, Environmental effects of deforestation and solutions
- Water resources, World's water reserves, Hydrological cycle
- Land resources, Land degradation. Soil erosion, Causes and prevention, Soil conservation and its types
- Mineral resources of India, Mining & its adverse effects
- Numerical problems on rainfall & runoff **6 Hrs.**

Unit-2

Energy and resources:

- Types of Energy-Renewable, Non renewable & sustainable energy & their advantages and disadvantages.

- Renewable energy sources- Solar energy, Wind energy, Tidal energy, Ocean thermal energy. Geothermal energy, Hydroelectric power, Biomass energy, Hydrogen energy, Thermal power- environmental impacts
- Conservation of energy.
- Numerical problems on Solar energy, Wind power **5 Hrs.**

Unit-3

Environmental pollution:

- Sources of pollution- Natural sources, & Anthropogenic
- Pollutants- Classification & their effects on environment
- Air pollution-Composition of clean air, Sources of air pollution & Air pollutants, Effect of air pollution on humans, animals, plants & climate
- Water quality–Potable water, Wholesome water, Sources of water pollution Polluted water & Contaminated water
- Common impurities in water (physical, chemical and bacteriological), Effects of impurities on humans & industrial use
- Soil Pollution-Sources, Effects & its control
- Noise pollution- Sources of noise, Effects on human health & its control
- Numerical problems on pH, hardness of water, noise pollution **5 Hrs.**

Unit-4

Solid Waste Management

- Refuse, Garbage, Rubbish, Ash, types of solid waste
- Necessity of safe disposal, Impacts on human health and environment
- Classification of solid wastes- Quantity and composition of MSW, Collection of solid waste- methods
- Disposal of solid waste-Sanitary land-fill
- E-waste- Problems and solutions
- Biomedical waste-Impacts on human health, storage, treatment methods and disposal
- Numerical problems on moisture content, density & proportioning of land fill **5 Hrs.**

Unit-5

Sustainable development:

- Issues on energy utilization, water conservation, concept of 3 Rs, Rain water harvesting- methods
- Global environmental issues: Population growth, Urbanization, Global warming, Acid rains, Ozone layer depletion & controlling measures.
- Environmental acts, Regulations, Role of state & central governments,
- Numerical problem on carbon foot print & rainwater harvesting. **5 Hrs.**

Content beyond syllabus

- Introduction to GIS & Remote sensing, their applications in environmental engineering practices

TEXT BOOKS:

PROGRAM OUTCOMES (POs)

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work:** Function effectively as an individual; and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

SYLLABUS

FOR

I and II semester B.ARCH

2022 - 2023

School of Architecture

Siddaganga Institute of Technology

(An Autonomous Institution affiliated to V.T.U., Belagavi, Approved by AICTE, New Delhi Accredited by NAAC with 'A' Grade and ISO 9001:2015 Certified)

B.H. Road, Tumakuru – 572 103, Karnataka, India

Ph. :+91-816-2214001, 2282696, 2214000 Fax.:+91-816-2282994

E-Mail: principal@sit.ac.in web: www.sit.ac.in

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institution affiliated to VTU, Belagavi, Approved by AICTE, New Delhi, Accredited by NAAC with 'A' grade & ISO 9001:2015 Certified)

B ARCHITECTURE

(An Autonomous constituent institution of Visvesvaraya Technological University, Belgaum)

SCHOOL OF ARCHITECTURE

DETAILED SYLLABUS FOR
FIRST SEMESTER
B. ARCHITECTURE

1ATS1 BASICS OF ARCHITECTURAL DESIGN

Credit	: 08
Number of contact hours per week	: 09
Internal Assessment Marks	: 50
Mode of Examination	: Viva
Examination Marks	: 50

OBJECTIVE:

1. The aim of this subject is to familiarize students with visual grammar, elements of design and methods of visual composition.

OUTLINE:

- Elements of composition - Point, Line, Shape and Form. Principles of Design - Scale, Proportion, Balance, Harmony, Rhythm and Contrast. Abstract representation of events, memories, activities, objects and moods. Learning basics of architectural representation.
- Form & Space – Volumes, elements of volumes, enclosure of space, semi-enclosed spaces, defining space by elements. Role of colour, texture, materials and shapes in three dimensional compositions to understand form, voids, space, openings (shapes within shapes), material, texture and light.
- Anthropometry – study of human dimensions, concept of percentile in Indian standards, space required for various simple activities, Introduction to static and transitional spaces through user requirements. Need of furniture as an aid to enhance activities, study of various furniture in isolation and combination.
- Elements of Built Form – Basic elements including walls, floor, windows, doors, staircase, façade etc. Support elements including courtyards, balconies, canopy, patio, sit outs, water bodies, pergolas etc. Relevance of all such elements on architectural expression and spatial quality.
- Principles of spatial organization – Basic principles of architectural design and spatial organization, symbiosis of form and function, concept generation, convergent and divergent thinking in design.

COURSE OUTCOME:

Students will be able to,

CO1: Translate abstract principles of design into architectural language.
CO2: Apply basic design principles to create architectural space and form.
CO3: Recognize the importance of anthropometry in creation of functional space.

Note:

- Exercises related to each unit have to be carried out distinctively.
- Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students.
- One or more design exercises can be carried out as group work to explore possibilities of students working as teams.
- Vertical studio involving other semesters can be encouraged to carry out one full or part project.
- The portfolio covering above topics shall be presented for viva voce.

REFERENCE BOOKS:

1. Principles of three dimensional Design by Wucius Wong (publisher: Van Nostrand Reinhold NY)
2. Basic principles of Design by Maier Manfired (publisher: Van Nostrand ReinholdNY)
3. Elements of Space Making by Yatin Pandya
4. Form, Space & Order by D KChing

1ATS2 BUILDING MATERIALS & CONSTRUCTION – I

Credit	: 04
Number of contact hours per week	: 04
Internal Assessment Marks	: 50
Mode of Examination	: Term work
Examination Marks	: 50

OBJECTIVES:

1. To identify basic building materials and list their properties.
2. To introduce to basics of drawing plan, elevation and section of a building.
3. To recognize and represent details of different masonry construction.
4. To identify the various components of a building and learn their functions.

Unit 1: Historical evolution of building materials and construction methods. Lecture on Vernacular building materials such as mud, timber, bamboo, thatch, terracotta tiles and construction techniques used in early times. Study the properties and behaviors of materials such as brick, stone, sand, lime, cement, mortar, PCC and concrete blocks; their manufacturing processes and commercially available sizes.

Unit2: Introduction to various conventions used for drawing plan, sections & elevation of a building. Introduction to the primary building components such as foundations, walls, floors, windows, doors, piers, arches and roofs. Construction details of simple stone foundation for load bearing wall and embankments.

Unit 3: Wall Masonry - Brick, Stone, Hollow and solid Concrete Blocks, Fly-ash Blocks, Aerated Concrete Block, Glass Blocks, Composite masonry.

Unit 4: Mud as construction material – Various methods using COB, Rammed earth, Adobe, wattle and daub, Compressed stabilized mud blocks (CSEB) and their applications.
Damp-proof course and methods of damp proofing for different building elements.

Unit5: Lintels and Arches-Types and Method of typical arch construction. Detailing of brick and stone Lintels.
Introduction to Staircases, types of Staircases. Construction details of Masonry steps and staircases for outdoor and indoor areas.
Traditional roofing systems-Construction of Jack arch roof, Madras terrace roof, stone slabs.

COURSE OUTCOME:
Students will be able to
CO1: Identify various traditional and contemporary building materials. [L2]
CO2: Identify the various building components and their functions. [L3]
CO3: Classify and represent through drawings different types of wall masonry. [L3]
CO4: Demonstrate construction methods using various Materials. Illustrate various methods for damp proofing in buildings. [L2]
CO5: Analyze the construction technology of traditional and vernacular roofing systems along with arches, lintels and masonry staircases. [L4]

NOTE:
a. Minimum one plate on each construction topic and study of material in the form of portfolio.
b. Hands on session to be conducted to execute wall masonry with different materials in construction yard.
c. Site visits to manufacturing units of brick, cement block, CSEB blocks etc., stone quarries, construction sites and case studies of vernacular roofing systems to be arranged by studio teachers and report to be compiled by students.
d. Market survey of materials should be carried out by students.
e. The entire portfolio on construction and materials shall be presented for viva voce

REFERENCE BOOKS:
1. "Building Construction" by W.B. Mc Kay
2. "Construction Technology" by Chudley
3. "Construction of Buildings" by Barry
4. "Building Construction - Principles, Practices and Materials" by Glenn M Hardie

1ATS3 ARCHITECTURAL GRAPHICS – I

Credit	: 03
Number of contact hours per week	: 04
Internal Assessment Marks	: 50
Mode of Examination	: Term work
Examination Marks	: 50

OBJECTIVE:
1. To introduce the basic principles of technical/proportionate drawing.
2. To equip with the techniques of Architectural drafting and lettering standards.
3. To explain the methods of conversion of drawings into different scales.
4. To demonstrate the techniques of drawing orthographic projections.
5. To explain the various 3-dimensional representation methods of building forms.

Unit 1: General introduction of drafting fundamentals, drafting equipment and materials Architectural drafting conventions, drawing set up, drafting techniques, line work, line types, line weights, line quality.
Practice in lettering - single stroke letters - uppercase, lowercase, vertical and inclined letters. Different fonts used in architectural lettering.

Unit 2: Scales: Construction of plain scales and their uses in practice. How to use the different standard scales like 1:100, 1:200, 1:500, 1:50 etc.

Unit 3: Introduction to plane geometry and exercises in lines and angles, construction of triangles, quadrilaterals and regular polygons. Construction of plane curves, ellipse, parabola, hyperbola, Involute and types of Arches.

Unit 4: Orthographic projections – Introduction to the principles of projection. First angle projection; Projection of Planes, solids and building plans and elevations.

Unit 5: Three-dimensional representation, Isometric and Axonometric projection of simple objects & buildings.

COURSE OUTCOME:

Students will be able to,

CO1: Illustrate the proficiency in Architectural lettering.
CO2: Define the basic principles of Architectural drafting.
CO3: Apply the drafting skills for preparing scaled drawings.
CO4: Construct orthographic projections for various building forms.
CO5: Develop the various three dimensional representation methods.

NOTE:

a. Exercises related each unit has to be carried out precisely.
b. Relevant teaching aids can be presented by the studio teachers and report has to be compiled by the students.
c. Application of constructions can be explained with relevance to historical/ modern buildings.
d. Measured drawing exercise can be done for orthographic projection.
e. The portfolio covering above topics shall be presented for viva voce.

REFERENCE BOOKS:

1. Architectural Graphics, 4th Edition, by Francis D.K. Ching
2. Design Drawing by Francis D.K. Ching
3. Engineering Drawing by N. D. Bhat
4. Geometrical Drawing for Arts Students by I. H. Morris
5. Engineering Drawing Vol I & II by K. R. Gopalkrishna

1ATS4 VISUAL ARTS

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: Term Work
Examination Marks	: 50

OBJECTIVES:

1. To introduce the different media used for making basic drawings.
2. To develop the skills of observation through ideation and free exploration of objects.

3. To explain the role of color schemes for enhancing visual representation.
4. To discuss the graphical representation methods for rendering building forms.

Unit 1: Introduction to basics of 2D & 3D sketching using various media like pencils, ink pens, charcoal pencils, water colours, poster colours, pastels, etc., Understanding light, shades and shadow.

Unit 2: Freehand sketching - simple buildings with landscape elements and household furniture, street furniture, human beings, cars, trees etc. Indoor & Outdoor sketching - Still drawings and Memory drawings.

Unit 3: Introduction of painting – Colour, Properties of colour, Colour schemes, Types of colour, colour theory. Exercises to understand color value and intensity. Properties of paper, brush and other tools – Basic washes – 3D effects from still-life, nature and built environment using mono chromatic and multi-color.

Unit 4: Introduction to rendering skills- Representation of surface textures of materials like stone, timber, brick, concrete, steel, glass etc. Rendering of perspective drawings of various built environments.

Unit 5: Graphical presentations - Rendering individual building plans, elevations and sections in different media showing shades and shadows.

COURSE OUTCOME:
Students will be able to,
CO 1: Illustrate the basics of 2D & 3D sketching using various media.
CO 2: Imbibe the skills of free hand sketching techniques using different media.
CO 3: Choose appropriate coloring techniques for Architectural drawings.
CO 4: Compare the texture of various materials by appropriate rendering techniques.

NOTE:

a. The portfolio covering the above topics shall be presented for term work at end of semester.

REFERENCE BOOKS:

1. Rendering with pen and ink by Robert Gill
2. Water colour rendering by Hayashi Studio 1994, Graphic-sha publishing company Ltd.
3. Perspective sketches by Theodore D Walker Van Nostrand Reinhold, New York.
4. A History of painting Sculpture & Architecture by Fredrick Harh.
5. Principles of two Dimensional Design by Wucius Wong (publisher: Van Nostrand Reinhold NY)
6. Principles of color composition by Wucius Wong (publisher: Van Nostrand Reinhold NY)

1ATS5 ARCHITECTURAL MODEL MAKING

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: Term Work
Examination Marks	: 50

OBJECTIVES:

1. To introduce the basic skills required for Architectural model making.
2. To develop the skills of making abstract models using different materials.
3. To develop the site models for depicting building mass with topography.
4. To demonstrate the techniques and precision involved in making detailed Architectural models.

Unit 1:Paper -Making models of three-dimensional geometrical forms such as cubes, cuboids, prisms, pyramids, cylinders and cones etc. using different types of sheets and boards etc. Platonic forms
(Derivatives forms and transformation). Introduction to origami. Creating historic monuments and contemporary buildings using paper products.

Unit 2: Clay & Plaster of Paris–Understanding the properties of the material, creation of 2D /3D abstract models, exercises on creating solids and voids in a mass, clay tile designing, etc.

Unit 3: Metal and glass – Use of metal sheets, wires to generate abstract and architectural models. Techniques of welding, soldering etc. Glass etching, tinting, modeling in glass.

Unit 4: Site model – To represent all elements of landscape on site model with contours, pathways, water bodies etc. Locating buildings as masses (building blocks) in the model and detailing the surroundings,
Different materials Eg: Paper, Soap, wood, POP, Plastic, foam to be experimented with.

Unit 5: **Detailed plan & Sectional model** - To depict the detailed plan and Sectional model for clear understanding of function. To understand the relationship of levels, openings, staircases/steps, passages/ramps or corridors etc. floor finish, details–texture design etc.
To introduce the 3D-printing tool for making the detailed and précised Architectural models.

COURSE OUTCOME:

Students will be able to,
CO1: Explain the properties and uses of different materials.
CO2: Apply the skills of handling various materials.
CO3: Apply the skills of making detailed site models.
CO4: Construct the detailed Architectural models depicting plans and sections.

NOTE:

a. Exercises relating to each module need to be presented individually.
b. Modules can also be clubbed for greater complexity or comprehensive studies.
c. Photographs at different stages of preparation as well as sectional and plan models to be used for documentation to study aspects like light, shade and shadows to understand visual quality.
d. Materials like Cardboard, mount board, mill board, balsa wood, solid wood, plywood, soap, foam, plastic, glass, paper, gauze, mesh metal (sheet) canvas, clay to be experimented with to understand their limitations and qualities.
e. Prepare model through 3D- Printing, to understand the Digital Technology in the field of architecture.

REFERENCE BOOKS:

1. Model-making: Materials and Methods by David Neat
2. Architectural model making by Nick Dunn
3. Model Making for Architects by Driscoll Matt
4. Architectural Model Building by Roark T. Congdon

1ATT1 HISTORY OF ARCHITECTURE – I

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVES:

1. To introduce the pragmatic early shelter forms &burial traditions of Prehistoric era
2. To discuss the importance of water source in the evolution of early civilizations and river valley cultures.
3. To inquire the various social, cultural, economic and political factors which have led to the evolution of the settlement pattern.
4. To describe the early settlement patterns w.r.t to their organization, zoning, house forms, street patterns, infrastructure, building materials, etc.
5. To comprehend and relate to the theoretical and philosophical basis of western architecture.
6. To introduce the development of architectural form with reference to technology, style and character in early western architecture.

Unit 1: Pre-Historic world - Primitive man - shelters, settlements, religious & burial systems. Eg: Oval hut. Nice, Dolmen tomb, gallery grave, passage grave. Houses at Catal Huyuk, Henge monuments, Stone Henge. **07hrs**

Unit 2: River valley cultures - Study of Political systems, concept of settlement, impact of climate, social structure and their related shelter types, planning types, method of building structures and detailing. Indus valley Civilization - Layout of Mohenjodaro: House plan, Community well, Great Bath, Granary. Tigris and Euphrates valley Civilization - Ziggurats at

Warka, Palace of Sargon. Nile valley Civilization-Mastaba Tombs, Pyramid of Cheops, Temple of Khonsu. **10hrs**

Unit 3: Architectural character, construction methods, materials and socio religious character are explained with suitable examples. Persian Architecture – Palace of Persepolis, Iran Chinese -Forbidden city in Beijing, Mausoulea, Buddhist temples. Japanese -Imperial palace, Kyoto. Shinto shrines **07hrs**

Unit 4: Introduction to Minoan &Mycenae civilization Eg: Citadel of Tiryns, The Treasury of Atrius. Classical - Greek Architecture, Greek temple layout, study of principles of design, proportion, composition, visual effects (Optical corrections). Evolution of Doric, Ionic, Corinthian, and Composite orders. Study of principles of design of Greek buildings through the study of Greek temples – Parthenon, Athens- Erechtheion. Public buildings– Acropolis and Agora and Theatre at Epidaurus. House of Colline **07hrs**

Unit 5: Introduction to Etruscan architecture. Introduction to Roman Architecture. Architectural characteristic features and study of Roman Classical Architecture: Study of principles of design, Innovations, Engineering aspects in construction technology.
Eg: -Roman orders: Tuscan and Composite. Roman Temples: Pantheon, Rome, Amphitheatre: Colosseum,Rome,Amphitheatre of Pompeii. Public bath: Thermae of Caracalla, Aqueducts: Pont Du Gard , Circus: Circus Maximus, Rome, Roman Forum –Trajan's Forum and Basilica of Trajan, Triumphal arches: Arch of Septimius Severus **08hrs**

COURSE OUTCOME:

Students will be able to,

CO1: Critically appreciate works and synoptic study of architectural characteristic features from the Pre-Historic world. [L1, L2, L4]

CO2: Interpret different concepts of settlement pattern and their evolution. [L2, L4, L5]

CO3: Discuss the various architectural characteristics of monuments built during different civilizations. [L4, L5]

CO4: Appreciation of the architectural principles of classical architecture. [L2]

CO5: Discuss the building and aesthetic innovations made during Roman era. [L4]

NOTE:

a. Assignments to include study of concepts relating to cultural and religious beliefs, structure, climatic interfaces and integration of all these in the resultant forms.
b. Models, analytical studies individually or in groups

REFERENCE BOOKS:

1. "History of Architecture in India" by Tadgell Christopher
2. "A History of Architecture on the Comparative Method", by Sir Banister Fletcher
3. "Indian Architecture, Buddhist and Hindu Period" by Percy Brown
4. "Architecture of India - Buddhist and Hindu" by Grover Satish
5. "World Architecture" by Trewin Copplestone
6. "History of Architecture" by Dora P.Crouch

7. "Architecture through the Ages" by Talbor Hamlin
8. "Understanding Architecture: Its Elements, History and Meaning" by Leland M.Both
9. "Illustrated Dictionary of Historic Architecture" by Cyril M.Harris
10. "A History of Western Architecture" by David Watkins
11. 'Architecture of the world- Greece' by Henri Sterlin
12. 'Architecture of the world- The Roman Empire' by Henri Sterlin

1ATT2 HUMAN SETTLEMENTS & VERNACULAR ARCHITECTURE

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVE:

1. To sensitize towards the influence of socio-cultural factors on human settlement evolution
2. To study various settlement planning principles and their influences
3. To appraise the determinants of settlement forms
4. To define and list the characteristics of vernacular architecture
5. To analyze the influence of climate material and culture on vernacular dwellings
6. To understand the spatial configuration of vernacular dwellings

OUTLINE:

Unit 1: Anthropology and Ethnic groups – Definitions. Physical and cultural societies in socio – cultural evolution such as hunting and gathering, horticultural, pastoral, agrarian, industrial and postindustrial groups. Evolution of Settlements – Type and structure of human settlements. Traditional settlement planning principles of Vedic period, Indus valley, Jaipur, Madurai etc. **08hrs**

Unit 2: Determinants of settlement form – mobility, socio cultural, climate, technology, political power and geographical location. Traditional open spaces and their significance – Maidans, kunds, riverghats and sacred groves. **08hrs**

Unit 3: Vernacular Architecture and form – Definition. Approaches and concepts – socio cultural forces and form relation of house and settlement. Role of climate, culture, values and tradition in determining the house form and layout. **08hrs**

Unit 4: Interiors and Space Utilization- Customary practices as a generator of interior space. Space configuration – hierarchy of interior spaces. Evolution of spaces based on climate, economic and social factors. Space utilization based on value additions, gender specific and rituals. Space modulators – furniture, art and artifacts. Relationship between interiors and exteriors. **08hrs**

Unit 5: Building materials and Technology – Traditional building materials - classification, characteristics, choice of materials. Techniques of construction and structural systems. Impact of materials and technology as modifying factors of house form. **07hrs**

COURSE OUTCOME:
Students will be able to
CO1: Justify the factors involved in development of tradition settlement patterns.
CO2: Appraise the socio cultural, political and climatic factors dictating the vernacular house forms.
CO3: Analyze the role of various public places in traditional and vernacular settlements and their importance.
CO4: Understand traditional building techniques and materials.

NOTE:

a) Assignments in form of presentations or sheets to be done to understand various topics of study.
b) Relevant case studies field trips to be arranged by the studio teachers.

REFERENCE BOOKS:

1) "House form and Culture" –Amos Rappoport
2) "Human aspects of Urban form" – Amos Rappoport
3) "Good city form" – Kevin Lynch
4) "Urban Space" –Rob Krier

CE COMMUNICATIVE ENGLISH

Credit	: 01
Number of contact hours per week	: 02
Internal Assessment Marks	: 50
Duration of Examination	: 01 hr
Examination Marks	: 50

OBJECTIVES:

1. To know about Fundamentals of Communicative English and Communication Skills in general.
2. To train to identify the nuances of phonetics, intonation and enhance pronunciation skills for better Communication skills.
3. To impart Basic English grammar and essentials of important language skills.
4. To enhance with English vocabulary and language proficiency for better communication skills.
5. To learn about Techniques of Information Transfer through presentation.

UNIT 1: **6 hrs**

Introduction to Communicative English : Communicative English, Fundamentals of Communicative English, Process of Communication, Barriers to Effective Communicative English, Different styles and levels in Communicative English. Interpersonal and Intrapersonal Communication Skills.

UNIT 2: **6 hrs**

Introduction to Phonetics : Phonetic Transcription, English Pronunciation, Pronunciation Guidelines to consonants and vowels, Sounds Mispronounced, Silent and Non silent Letters, Syllables and Structure. Word Accent, Stress Shift and Intonation, Spelling Rules and Words often Miss-spelt. Common errors in pronunciation.

UNIT 3: **6 hrs**

Basic English Communicative Grammar and Vocabulary PART - I: Grammar: Basic English Grammar and Parts of Speech, Articles and Preposition. Question Tags, One Word Substitutes, Strong and Weak forms of words, Introduction to Vocabulary, All Types of Vocabulary – Exercises on it.

UNIT 4: **6 hrs**

Basic English Communicative Grammar and Vocabulary PART - II: Words formation - Prefixes and Suffixes, Contractions and Abbreviations. Word Pairs (Minimal Pairs) – Exercises, Tense and Types of tenses, The Sequence of Tenses (Rules in use of Tenses) and Exercises on it.

UNIT 5: **6 hrs**

Communication Skills for Employment :Information Transfer: Oral Presentation and its Practice. Difference between Extempore/Public Speaking, Communication Guidelines. Mother Tongue Influence (MTI), Various Techniques for Neutralization of Mother Tongue Influence. Reading and Listening Comprehensions – Exercises.

Course Outcomes:

Students will be able to:

CO1 : Understand and apply the Fundamentals of Communication Skills in their communication skills.

CO2 : Identify the nuances of phonetics, intonation and enhance pronunciation skills.

CO3 : To impart basic English grammar and essentials of language skills as per present requirement.

CO4 : Understand and use all types of English vocabulary and language proficiency.

CO5 : Adopt the Techniques of Information Transfer through presentation.

Textbook:

1. Communication Skills by Sanjay Kumar & Pushp Lata, Oxford University Press India Pvt Ltd - 2019.
1. A Textbook of English Language Communication Skills, (ISBN-978-81-955465-2-7), Published by Infinite Learning Solutions, Bengaluru - 2022.

Reference Books:

1. Technical Communication by Gajendra Singh Chauhan and Et al, (ISBN-978-93-5350-050-4), Cengage learning India Pvt Limited [Latest Revised Edition] - 2019.
2. English for Engineers by N.P.Sudharshana and C.Savitha, Cambridge University Press – 2018.
3. English Language Communication Skills – Lab Manual cum Workbook, Cengage learning India Pvt Limited [Latest Revised Edition] – (ISBN-978-93-86668-45-5), 2019.

4. A Course in Technical English – D Praveen Sam, KN Shoba, Cambridge University Press – 2020.
5. Practical English Usage by Michael Swan, Oxford University Press – 2016.

Activity Based Learning (Suggested Activities in Class)/ Practical Based learning:

- Contents related activities (Activity-based discussions)
- For active participation of students instruct the students to prepare Flowcharts and Handouts
- Organizing Group wise discussions Connecting to placement activities
- Quizzes and Discussions, Seminars and assignments

IDT INNOVATION and DESIGN THINKING

Credit	: 01
Number of contact hours per week	: 02
Internal Assessment Marks	: 50
Duration of Examination	: 02 hrs
Examination Marks	: 50

Objectives:

1. To explain the concept of design thinking for product and service development
2. To explain the fundamental concept of innovation and design thinking
3. To discuss the methods of implementing design thinking in the real world.

UNIT I: PROCESS OF DESIGN

Understanding Design thinking
Shared model in team-based design – Theory and practice in Design thinking – Explore presentation signers across globe – MVP or Prototyping

UNIT II: Tools for Design Thinking

Real-Time design interaction capture and analysis – Enabling efficient collaboration in digital space – Empathy for design – Collaboration in distributed Design

UNIT III: Design Thinking in IT

Design Thinking to Business Process modeling – Agile in Virtual collaboration environment – Scenario based Prototyping

UNIT IV: DT For strategic innovations

Growth – Story telling representation – Strategic Foresight - Change – Sense Making – Maintenance Relevance – Value redefinition - Extreme Competition – experience design - Standardization – Humanization - Creative Culture – Rapid prototyping, Strategy and Organization – Business Model design.

UNIT V:

Design thinking workshop
Design Thinking Work shop Empathize, Design, Ideate, Prototype and Test

Course Outcomes:

After the course students will be able

CO1 : Appreciate various design process procedure [L2]
CO2 : Generate and develop design ideas through different Technique [L2]
CO3 : Identify the significance of reverse Engineering to Understand products [L2]
CO 4 : Draw technical drawing for design ideas [L3]

Text Books :

1. John.R.Karsnitz, Stephen O'Brien and John P. Hutchinson, "Engineering Design", Cengage learning (International edition) Second Edition, 2013.
2. Roger Martin, "The Design of Business: Why Design Thinking is the Next Competitive Advantage", Harvard Business Press , 2009.
3. Hasso Plattner, Christoph Meinel and Larry Leifer (eds), "Design Thinking: Understand – Improve Apply", Springer, 2011
4. Idris Mootee, "Design Thinking for Strategic Innovation: What They Can't Teach You at Business or Design School", John Wiley & Sons 2013.

References:

5. Yousef Haik and Tamer M.Shahin, "Engineering Design Process", Cengage Learning, Second Edition, 2011.
6. Book - Solving Problems with Design Thinking - Ten Stories of What Works (Columbia Business School Publishing) Hardcover – 20 Sep 2013 by Jeanne Liedtka (Author), Andrew King (Author), Kevin Bennett (Author).

ಬಳಕೆ ಕನ್ನಡ - baLake Kannada (Kannada for Usage)

ಕನ್ನಡ ಕಲಿಕೆಗಾಗಿ ನಿಗದಿಪಡಿಸಿದ ಪಠ್ಯಪುಸ್ತಕ - (Prescribed Textbook to Learn Kannada)

Course Title:	ಬಳಕೆ ಕನ್ನಡ		
Course Code:	22KBK17 / 27	CIE Marks	50
Course Type (Theory/Practical /Integrated	Theory	SEE Marks	50
		Total Marks	100
Teaching Hours/Week (L:T:P: S)	1:0:0:0	Exam Hours	01 Theory
Total Hours of Pedagogy	15 hours	Credits	01

Course objectives : ಬಳಕೆ ಕನ್ನಡ ಪಠ್ಯ ಕಲಿಕೆಯ ಉದ್ದೇಶಗಳು:

The course (22KBK17/27) will enable the students,

1. To Create the awareness regarding the necessity of learning local language for comfortable and healthy life.
2. To enable learners to Listen and understand the Kannada language properly.
3. To speak, read and write Kannada language as per requirement.
4. To train the learners for correct and polite conservation.
5. To know about Karnataka state and its language, literature and General information about this state.

Module - 1 (03 hours of pedagogy)

1. Introduction, Necessity of learning a local language. Methods to learn the Kannada language.
2. Easy learning of a Kannada Language: A few tips. Hints for correct and polite conservation, Listening and Speaking Activities, Key to Transcription
3. ವೈಯಕ್ತಿಕ, ಸ್ವಾಮ್ಯಸೂಚಕ/ಸಂಬಂಧಿತ ಸಾರ್ವನಾಮಗಳು ಮತ್ತು ಪ್ರಶ್ನಾರ್ಥಕ ಪದಗಳು - Personal Pronouns, Possessive Forms, Interrogative words

Module - 2 (03 hours of pedagogy)

1. **ನಾಮಪದಗಳ ಸಂಬಂಧಾರ್ಥಕ ರೂಪಗಳು, ಸಂದೇಹಾಸ್ಪದ ಪ್ರಶ್ನೆಗಳು ಮತ್ತು ಸಂಬಂಧವಾಚಕ ನಾಮಪದಗಳು - Possessive forms of nouns, dubitive question and Relative nouns**
2. **ಗುಣ, ಪರಿಮಾಣ ಮತ್ತು ವರ್ಣಬಣ್ಣ ವಿಶೇಷಣಗಳು, ಸಂಖ್ಯಾವಾಚಕಗಳು Qualitative, Quantitative and Colour Adjectives, Numerals**
3. ಕಾರಕ ರೂಪಗಳು ಮತ್ತು ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು –ಸಪ್ತಮಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯ – (ಅ, ಅದು, ಅವು, ಅಲ್ಲಿ) **–Predictive Forms, Locative Case**

Module - 3 (03 hours of pedagogy)

1. ಚತುರ್ಥಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯದ ಬಳಕೆ ಮತ್ತು ಸಂಖ್ಯಾವಾಚಕಗಳು - **Dative Cases, and Numerals**
2. ಸಂಖ್ಯಾಗುಣವಾಚಕಗಳು ಮತ್ತು ಬಹುವಚನ ನಾಮರೂಪಗಳು **-Ordinal numerals and Plural markers**
3. ಸ್ಯೂನ/ನಿಷೇಧಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು & ವರ್ಣ ಗುಣವಾಚಕಗಳು **–Defective/Negative Verbs & Colour Adjectives**

Module- 4 (03 hours of pedagogy)

1. **ಅಪ್ಪಣೆ / ಒಪ್ಪಿಗೆ, ನಿರ್ದೇಶನ, ಪ್ರೋತ್ಸಾಹ ಮತು ಒತ್ತಾಯ ಅರ್ಥರೂಪ ಪದಗಳು ಮತ್ತು ವಾಕ್ಯಗಳು Permission, Commands, encouraging and Urging words (Imperative words and sentences)**
2. **ಸಾಮಾನ್ಯ ಸಂಭಾಷಣೆಗಳಲ್ಲಿ ದ್ವಿತೀಯ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ಸಂಭವನೀಯ ಪ್ರಕಾರಗಳು Accusative Cases and Potential Forms used in General Communication**
3. **"ಇರು ಮತ್ತು ಇರಲ್ಲ" ಸಹಾಯಕ ಕ್ರಿಯಾಪದಗಳು, ಸಂಭಾವ್ಯಸೂಚಕ ಮತ್ತು ನಿಷೇಧಾರ್ಥಕ ಕ್ರಿಯಾ ಪದಗಳು -** Helping Verbs "iru and iralla", Corresponding Future and Negation Verbs
4. **ಹೋಲಿಕೆ (ತರತಮ) , ಸಂಬಂಧ ಸೂಚಕ, ವಸ್ತು ಸೂಚಕ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ನಿಷೇಧಾರ್ಥಕ ಪದಗಳ ಬಳಕೆ-** Comparitive, Relationship, Identification and Negation Words

Module - 5 (03 hours of pedagogy)

1. **ಕಾಲ ಮತ್ತು ಸಮಯದ ಹಾಗೂ ಕ್ರಿಯಾಪದಗಳ ವಿವಿಧ ಪ್ರಕಾರಗಳು** -Different types of Tense, Time and Verbs
2. **ದ್, -ತ್, - ತು, - ಇತು, - ಆಗಿ, - ಅಲ್ಲ, - ಗ್, -ಕ್, ಇದೆ, ಕ್ರಿಯಾ ಪ್ರತ್ಯಯಗಳೊಂದಿಗೆ ಭೂತ, ಭವಿಷ್ಯತ್ ಮತ್ತು ವರ್ತಮಾನ ಕಾಲ ವಾಕ್ಯ ರಚನೆ** - Formation of Past, Future and Present Tense Sentences with Verb Forms
3. **Kannada Vocabulary List :ಸಂಭಾಷಣೆಯಲ್ಲಿ ದಿನೋಪಯೋಗಿ ಕನ್ನಡ ಪದಗಳು -Kannada Words in Conversation**

Course outcome (Course Skill Set)

ಬಳಕೆ ಕನ್ನಡ ಪಠ್ಯ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಅನುಕೂಲಗಳು ಮತ್ತು ಫಲಿತಾಂಶಗಳು:

At the end of the course the student will be able to:

CO1	To understand the necessity of learning of local language for comfortable life.
CO2	To speak, read and write Kannada language as per requirement.
CO3	To communicate (converse) in Kannada language in their daily life with kannada speakers.
CO4	To Listen and understand the Kannada language properly.
CO5	To speak in polite conservation.

University Prescribed Textbook :

ಬಳಕೆ ಕನ್ನಡ

ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ

ಪ್ರಕಟಣೆ : ಪ್ರಸಾರಾಂಗ,

ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

ಸೂಚನೆ :

ವಿಶೇಷ ಸೂಚನೆ : 1. ಮೇಲಿನ ಪಠ್ಯಕ್ರಮಕ್ಕೆ ಸೀಮಿತವಾಗಿ ಅಂತಿಮ ಪರೀಕ್ಷೆಯ ಪ್ರಶ್ನೆಪತ್ರಿಕೆ ಇರುತ್ತದೆ.

2. ಮೇಲಿನ ಪಠ್ಯಕ್ರಮವನ್ನು ಹೊರತುಪಡಿಸಿದ ಬಳಕೆ ಕನ್ನಡ ಪಠ್ಯಪುಸ್ತಕದಲ್ಲಿನ ಉಳಿದ ಭಾಗಗಳನ್ನು ಹೆಚ್ಚುವರಿ ಪೂರಕ ಓದಿಗಾಗಿ ಬಳಸಿಕೊಳ್ಳಬಹುದು. ಅಂತಿಮ ಪರೀಕ್ಷೆಯಲ್ಲಿ ಈ ಪಾಠಗಳಿಂದ ಪ್ರಶ್ನೆಗಳನ್ನು ಕೇಳಲಾಗುವುದಿಲ್ಲ.

==========

3. ಹೆಚ್ಚಿನ ಮಾಹಿತಿ ಮತ್ತು ವಿವರಣೆಗಳಿಗೆ ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ (9900832331) ಇವರನ್ನು ಸಂಪರ್ಕಿಸಿ.

4. ಮಾದರಿ ಪ್ರಶ್ನೆಪತ್ರಿಕೆ, ಕೋರ್ಸ್ ಆಯ್ಕೆ ಮಾಹಿತಿ, ಅಧ್ಯಯನ ಸಾಮಗ್ರಿ & ಬಹು ಆಯ್ಕೆ ಮಾದರಿಯ ಪ್ರಶ್ನೆಗಳ ಕೈಪಿಡಿಗಾಗಿ ವಿಶ್ವವಿದ್ಯಾಲಯದ ವೆಬ್ ಸೈಟ್ ನೋಡುವುದು.

Activity Based Learning (Suggested Activities in Class)/ Practical Based learning

- ✓ Contents related activities (Activity-based discussions)
- ✓ For active participation of students instruct the students to prepare Flowcharts and Handouts
- ✓ Organising Group wise discussions Connecting to placement activities
- ✓ Quizzes and Discussions.
- ✓ Seminars and assignments.

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ - ಕನ್ನಡ ಬಲ್ಲ ಮತ್ತು ಕನ್ನಡ ಮಾತೃಭಾಷೆಯ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ನಿಗದಿಪಡಿಸಿದ ಪಠ್ಯಕ್ರಮ

Course Title:	ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ		
Course Code:	22KSK17 / 27	CIE Marks	50
Course Type (Theory/Practical /Integrated	Theory	SEE Marks	50
		Total Marks	100
Teaching Hours/Week (L:T:P: S)	1:0:0:0	Exam Hours	01 Theory
Total Hours of Pedagogy	15 hours	Credits	01

Course objectives : ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಪಠ್ಯ ಕಲಿಕೆಯ ಉದ್ದೇಶಗಳು:

The course (22KSK17/27) will enable the students,

1. ಪದವಿ ವಿದ್ಯಾರ್ಥಿಗಳಾಗಿರುವುದರಿಂದ ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.
2. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಪ್ರಧಾನ ಭಾಗವಾದ ಆಧುನಿಕಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳನ್ನು ಪರಿಚಯಿಸಿವುದು.
3. ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ ಸಾಹಿತ್ಯ ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಅರಿವು ಹಾಗೂ ಆಸಕ್ತಿಯನ್ನು ಮೂಡಿಸುವುದು.
4. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವನ್ನು ಹಾಗೂ ಅವರುಗಳ ಸಾಧಿಸಿದ ವಿಷಯಗಳನ್ನು ಪರಿಚಯಿಸುವುದು.
5. ಸಾಂಸ್ಕೃತಿಕ, ಜನಪದ ಹಾಗೂ ಪ್ರವಾಸ ಕಥನಗಳ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.

ಘಟಕ -1 ಕನ್ನಡ ಸಂಸ್ಕೃತಿ ಮತ್ತು ಭಾಷೆ ಕುರಿತಾದ ಲೇಖನಗಳು (03 hours of pedagogy)
1. ಕರ್ನಾಟಕ ಸಂಸ್ಕೃತಿ - ಹಂಪ ನಾಗರಾಜಯ್ಯ 2. ಕರ್ನಾಟಕದ ಏಕೀಕರಣ : ಒಂದು ಅಪೂರ್ವ ಚರಿತ್ರೆ - ಜಿ. ವೆಂಕಟಸುಬ್ಬಯ್ಯ 3. ಆಡಳಿತ ಭಾಷೆಯಾಗಿ ಕನ್ನಡ - ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ ಮತ್ತು ಪ್ರೊ. ವಿ. ಕೇಶವಮೂರ್ತಿ
ಘಟಕ - 2 ಆಧುನಿಕ ಪೂರ್ವದ ಕಾವ್ಯ ಭಾಗ (03 hours of pedagogy)
1. ವಚನಗಳು : ಬಸವಣ್ಣ, ಅಕ್ಕಮಹಾದೇವಿ, ಅಲ್ಲಮಪ್ರಭು, ಆಯ್ದಕ್ಕಿ ಮಾರಯ್ಯ, ಜೇಡರದಾಸಿಮಯ್ಯ, ಆಯ್ದಕ್ಕಿ ಲಕ್ಕಮ್ಮ. 2. ಕೀರ್ತನೆಗಳು : ಅದರಿಂದೇನು ಫಲ ಇದರಿಂದೇನು ಫಲ – ಪುರಂದರದಾಸರು ತಲ್ಲಣಿಸದಿರು ಕಂಡ್ಯ ತಾಳು ಮನವೇ - ಕನಕದಾಸರು 3. ತತ್ವಪದಗಳು : ಸಾವಿರ ಕೊಡಗಳ ಸುಟ್ಟು - ಶಿಶುನಾಳ ಶರೀಫ
ಘಟಕ -3 ಆಧುನಿಕ ಕಾವ್ಯಭಾಗ (03 hours of pedagogy)
1. ಡಿವಿಜಿ ರವರ ಮಂಕುತಿಮ್ಮನ ಕಗ್ಗದಿಂದ ಆಯ್ದ ಕೆಲವು ಭಾಗಗಳು 2. ಕುರುಡು ಕಾಂಚಾಣ : ದಾ.ರಾ. ಬೇಂದ್ರೆ 3. ಹೊಸಬಾಳಿನ ಗೀತೆ : ಕುವೆಂಪು
ಘಟಕ - 4 ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯ (03 hours of pedagogy)
1. ಡಾ. ಸರ್. ಎಂ. ವಿಶ್ವೇಶ್ವರಯ್ಯ : ವ್ಯಕ್ತಿ ಮತ್ತು ಐತಿಹ್ಯ – ಎ. ಎನ್. ಮೂರ್ತಿರಾವ್ 2. ಕರಕುಶಲ ಕಲೆಗಳು ಮತ್ತು ಪರಂಪರೆಯ ವಿಜ್ಞಾನ : ಕರೀಗೌಡ ಬೀಚನಹಳ್ಳಿ
ಘಟಕ - 5 ಸಾಂಸ್ಕೃತಿಕ, ಜನಪದ ಕಥೆ ಮತ್ತು ಪ್ರವಾಸ ಕಥನ (03 hours of pedagogy)
1. ಯುಗಾದಿ : ವಸುಧೇಂದ್ರ 2. ಮೆಗಾನೆ ಎಂಬ ಗಿರಿಜನ ಪರ್ವತ : ಹಿ.ಚಿ. ಬೋರಲಿಂಗಯ್ಯ

Course outcome (Course Skill Set)

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ (22KSK17/27) ಪಠ್ಯ ಕಲಿಕೆಯ ನಂತರ ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ :

At the end of the course the student will be able to:

CO1	ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಕುರಿತು ಅರಿವು ಮೂಡಿರುತ್ತದೆ.
CO2	ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳನ್ನು ಸಾಂಕೇತಿಕವಾಗಿ ಕಲಿತು ಹೆಚ್ಚಿನ ಓದಿಗೆ

022

1

26.10.2022

	ಮತ್ತು ಜ್ಞಾನಕ್ಕೆ ಸ್ಪೂರ್ತಿ ಮೂಡುತ್ತದೆ.
CO3	ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ ಸಾಹಿತ್ಯ ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಅರಿವು ಹಾಗೂ ಆಸಕ್ತಿಯನ್ನು ಹೆಚ್ಚಾಗುತ್ತದೆ.
CO4	ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯ ಹಾಗೂ ಅವರುಗಳ ಸಾಧಿಸಿದ ವಿಷಯಗಳನ್ನು ತಿಳಿದುಕೊಂಡು ನಾಡಿನ ಇನ್ನಿತರ ವ್ಯಕ್ತಿಗಳ ಬಗ್ಗೆ ತಿಳಿದುಕೊಳ್ಳಲು ಕೌತುಕತೆ ಹೆಚ್ಚಾಗುತ್ತದೆ.
CO5	ಸಾಂಸ್ಕೃತಿಕ, ಜನಪದ ಹಾಗೂ ಪ್ರವಾಸ ಕಥನಗಳ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.

SIDDAGANGA INSTITUTE OF TECHNOLOGY
Tumakuru-572103

(An Autonomous constituent institution of Visvesvaraya Technological University, Belgaum)

SCHOOL OF ARCHITECTURE

DETAILED SYLLABUS FOR
SECOND SEMESTER
B. ARCHITECTURE

2ATS1 ARCHITECTURAL DESIGN - I

Credit	: 08
Number of contact hours per week	: 09
Internal Assessment Marks	: 50
Mode of Examination	: Viva
Examination Marks	: 50

OBJECTIVE:

1. To nurture ideation of a functional space crafted by robust elements in an aesthetic manner and exploiting drawings as a medium of representation of an architectural intent.

OUTLINE:

- Spatial Interpretations – Movement, transformation, visual connections, linkages, volumetric relationships.
- Relationship of activities to space – User's data, circulation diagrams, deriving optimum areas. Various activities and their relationship with spaces.
- Generation of 3D form – Study of form development of historical monuments learnt earlier with respect to philosophy, principles, elements, context and materials. Observation and analysis of natural or organic forms. Exercises to derive three dimensional forms with strong conceptual framework.
- Projects involving organization of multiples of single unit space with horizontal and vertical movement as well as single use public buildings of small scale
- Types of projects: House for myself, Farm house, Villa, Architect's Office, Personal work spaces, post office/ Taluk office
- Detailing of any building element like staircase, skylight, courtyard, entrance lobby etc. of the project handled.

COURSE OUTCOME:

Students will be able to

CO1: Appraise the grammar of creating architectural space and form
CO2: Translate abstract ideas into architectural language.
CO3: Deriving appropriate form and spaces to given function.

Note:

a. Exercises related to each unit have to be carried out distinctively.

b. Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students.

c. One of the design exercises can be carried out as group work to explore possibilities of students working as teams.

d. Vertical studio involving other semesters can be encouraged to carry out one full or part project.

e. The portfolio covering the above topics shall be presented for viva voce.

f. Projects to be presented with help of drawings, sketches and models. Application of techniques learnt in visual arts and architectural graphics have to be incorporated.

g. The projects listed in the syllabus is only to state the scale and complexity. The projects of similar scope can be introduced by the teachers.

REFERENCE BOOKS:

1. The Dynamics of visual of design by Sausmarez Mourice DE 1987 (Herbert press London)
2. Design communications by Burden Ernest 1987 (McGraw Hill USA)
3. Time saver standards for Architectural Design Data by John Hanock
4. Architectural Graphics Standards by Ramsay and sleeper
5. Elements of Space Making by Yatin Pandya
6. Form, Space & Order by D K Ching

2ATS2 BUILDING MATERIALS & CONSTRUCTION-II

Credit	: 04
Number of contact hours per week	: 04
Internal Assessment Marks	: 50
Mode of Examination	: Term work
Examination Marks	: 50

OBJECTIVE:

1. To explore timber and commercial wood as building material.
2. To introduce to conventional types of doors and windows with carpentry joinery details.
3. To impart knowledge of construction practices related to timber elements of a building.

Unit 1: Study of timber used for buildings-their defects, seasoning and preservation of timber, types of timber, hard and soft varieties. Pest control and anti-termite treatments. Ecological Impact of use of wood, deforestation etc. Study of commercial wood used in building i.e., plywood, block boards, particle boards, hard board, veneers and laminates and other types like MDF, HDF, HDPE, wood wool. Manufacturing processes in brief, their properties and application.

Unit2: Introductiontothebasicsofcarpentryjoinerydetailsandtheirapplications.Introductiontocomponentsofwoodendoorsand Conventional Typesofdoors.
Construction of Wooden Doors - Doors with frames, Doors on Pivot, Single and double shutters, Paneled doors, Flush doors, glazed doors and sliding folding doors.

Unit 3: Introduction to windows – its types and applications. Construction of Wooden windows – Casement, top hung, fixed types, louvered windows and ventilators.
Timber Staircase–Open riser and Stringer.

Unit 4: Flooring - Mud, Murrum, Stones, Marble, Granite, Mosaic, Terrazzo, Ceramic tiles and Timber flooring.
Paving-Cast in situ concrete, concrete tiles, Interlocking blocks, Claytiles, Brick and Stone.

Unit5: Timber roof–Construction details of various types of timber trusses.Study the applications of Commercial wood–Detailing of partitions, wardrobes, showcases and built-in furniture.

COURSE OUTCOME:

Students will be able to

CO1: Classify timber and commercial wood, manufacturing processes and list its application in building. [L2]

CO2: Identify and represent conventional types of timber doors. [L3]

CO3 Identify and represent conventional types of timber windows and timber staircases [L3]

CO4: Identify the types of flooring and paving done using different materials. [L3]

CO5: Detail and draw the timber roof trusses and various timber elements. [L2]

NOTE:

- Minimum one plate on each construction topic and study of material in the form of portfolio.
- Miniature models to scale should be done for the construction related topics.
- Site visits to timber yards, Saw mills, Carpentry workshops, and case studies of timber staircases, roofs and trusses to be arranged by studio teachers and report to be compiled by students.
- Market survey of materials should be carried out by students.
- The entire portfolio on construction and materials shall be presented for viva voce.

REFERENCE BOOKS:

1. "Building Construction" by W.B. Mc Kay
2. "Construction Technology" by Chudley
3. "Construction of Buildings" by Barry
4. "Building Construction - Principles, Practices and Materials" by Glenn M Hardie

2ATS3 ARCHITECTURAL GRAPHICS – II

Credit	: 03
Number of contact hours per week	: 04
Internal Assessment Marks	: 50
Mode of Examination	: Term work
Examination Marks	: 50

OBJECTIVE:

1. To introduce the fundamental principles of perspective drawing.
2. To discuss the methods of drawing free hand perspectives.
3. To demonstrate the construction techniques of one point and two-point perspectives.
4. To explain the principles of Sciography and graphical representation methods.

Unit 1: Introduction to one-point, two-point and three-point perspectives - Principles of perspective drawings and varying visual effects of three-dimensional objects. Study and understanding of picture plane, cone of vision, center of vision, station point, ground level, horizon level or eye level, vanishing points, their variations and resultant effects.

Unit 2: Introduction to the methods of constructing perspective drawings – Free hand sketches of one-point, two-point and three-point perspectives of building exterior with surroundings and interior view of a room.

Unit 3: Construction of one-point perspective drawings of building elements and Building forms.

Unit 4: Construction of two-point perspective drawing of any buildings, corridors, interiors etc.

Unit 5: Principles of Sciography - study and understanding of light, shade and shadow. Standardization of direction of light and graphical representation methods of constructing shadow patterns. Construction of shadow patterns of planes and solids at different positions, different shapes and their combinations. Construction of shadow patterns for Buildings; Plans, Elevations, Perspective views and develop the site plan for different time of the day.

COURSE OUTCOME:

Students will be able to,

CO1: Define the basic principles of perspective drawings.
CO2: Apply the skill of drawing freehand perspectives.
CO3: Construct perspective drawings for various building forms.
CO4: Identify the principles of Sciography for constructing shadow patterns.

NOTE:

a. Exercises related each unit has to be carried out precisely.
b. Relevant teaching aids can be presented by the studio teachers and report has to be compiled by the students.
c. Two-point perspectives of an interesting building with sloped roofs against suitable background or fore ground with trees & other street furniture to be depicted in the exercises.
d. The portfolio covering above topics shall be presented for viva voce.

REFERENCE BOOKS:

1. Basic Perspective drawing: A visual approach-John Montage
2. Creative Perspective for artist and illustrators- Ernest W Waston
3. Perspective and Sciography by Mullik.
4. Perspective drawing handbook-Joseph D Amelio

2ATS4 STRUCTURAL SYSTEMS AND BEHAVIOURS - I

Credit	: 03
Number of Contact hours per week	: 03
Internal Assessment marks	: 50
Mode of Examination	: Integrated
Examinations Marks	: 50

OBJECTIVES:

1. To acquaint the students with the fundamental principles of structural systems.
2. To study various loads acting on a building and the support reactions
3. To summarize the properties of various structural materials.

Unit 1: Introduction to structural systems – An overview into evolution of structures through history with examples. Definition of structural systems - Load bearing, framed, post and lintel, Vertical/lateral systems, cantilever, moment frame, braced frame, horizontal one-way and two- way systems, truss, arch, vault, dome, shell, cable stayed, suspended & membrane structures.

Unit 2: Various Loads on structures - Dead load (DL), live load (LL), static, dynamic, impact, and thermal loads. Concentrated, uniformly distributed load, uniformly varying loads. Analysis of a simple structure with respect to loads acting on it.

Principle of transmissibility of loads: Understanding load flow by tributary load, load path and support reactions for horizontal members (slab, beam, and girder) and vertical members (post, wall, and footing).

Unit 3: Force systems and Equilibrium of Forces - Characteristics of forces, composition and resolution of forces. Types of force systems, moment, couple. Resultant and equilibrium of coplanar, concurrent and non- concurrent force systems. Calculation of different forces on simple objects and building elements.

Unit 4: Geometrical properties of sections - Definition of center of gravity and centroid. Centroids of basic figures. Finding of centroids of simple and composite sections through models. Moment of inertia - Definition of moment of inertia, Radius of gyration of simple cross sections and built-up sections.

Unit 5: Structural materials - Mechanical properties of structural materials like wood, masonry, steel, concrete and fabric. Experiments to analyze corroborate crushing strength, energy use and rupture length of different materials. Enumerating advantages and disadvantages of Structural materials and choice of Structural Material for domestic buildings, Industrial buildings, tall buildings and Long Span buildings.

COURSE OUTCOME:

Students will be able to,

CO1: Identify various types of structural systems. [L1]

CO2: Analyze various loads acting on a building and infer the support reactions. [L3]

CO3: Classify different types of forces and calculate the resultant force on simple objects and building elements. [L4]

CO4: Determine centroid, Moment of Inertia, Radius of gyration of various sections. [L4]

CO5: Explain mechanical properties of structural materials and their application. [L2]

REFERENCE BOOKS:

1. Elements of Civil Engineering (IV Edition), S. S. Bhavikatti., Vikas Publishing House, New Delhi.

2. Elements of Civil Engineering by T. R. Jagadeesh and M. A. Jayaram, Sapna Books House, Bangalore
3. Engineering Mechanics by Dr. R K Bansal
4. Structure in Architecture, the building of buildings, by Mario Salvadori
5. Strength of materials, Badavarajaiah & Mahadevappa, Khanna Publishers, New Delhi.
6. Structural Engineering for architecture, A.P. Dongre, Scitech Publications, Chennai

2ATT1 HISTORY OF ARCHITECTURE - II

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVE:

1. To study the concepts and philosophies of Byzantine, Medieval and Gothic architecture through critical analysis of appropriate examples.
2. To understand and analyse the innovative materials and construction techniques during classical period and early Christian period.
3. To understand architecture as evolving within specific cultural contexts including aspects of politics, society, religion, climate and technology.
4. To Sketch and recognize Architectural Characteristics of Various Architectural Styles from Renaissance period till Industrial Revolution.
5. To explain the influence of revivals on Architecture.
6. To analyze the impact of industrial revolution on Architecture and beginning of Modernism.

Unit 1: Evolution of Ecclesiastical architecture: Early Christian - Study of Architectural Characteristics, evolution of church plan and study of principles of design of buildings.
Eg: - Basilicas: Old St Peter's Basilica, Basilica of St Clemente,
Baptistery: Baptistry of Constantine, Rome
Ecclesiastical: Byzantine Architecture - Study of Architectural Characteristics, structural concepts, material and ornamentation. Eg: Hagia Sophia at Constantinople and St. Marks Basilica at Venice. **7hrs**

Unit 2: Introduction to Medieval architecture- Italian ,French , Anglo Saxon and Norman .
Italian Romanesque. Eg: -The Cathedral, The Campanile and The Baptistery, Pisa
French Romanesque. Eg: Angouleme Cathedral, France, The Abbey Church of Sainte-Foy in Conques, France
Ecclesiastical: Gothic - Study of Architectural Characteristics, structural concepts and ornamentation. Concept of pointed arch, the ribbed vault and the flying buttress and aesthetic elements. Examples: Chartres Cathedral, West Minster abbey, London, Notre Dame, Paris, Reims Cathedral, Reims (France). **8 hrs**

Unit 3: Background and influences on Renaissance Architecture. Characteristics of Renaissance Architecture in general.Filippo Brunelleschi -The dome of the Cathedral of Santa Maria del Fiore (the Duomo) in Florence, Leon Alberti -St Andrea Mantua and Palazzo Rucellai, Palladio -Villa Rotunda, Michelangelo-St. Peter’s Rome, Sir Christopher Wren- St.

Paul's London.General characteristics of Baroque -St Peter/s Piazza by Bernini and Rococo Styles-Hermitage Winter Palace in St. Petersburg. **8 hrs**

Unit 4: Transitional period -A brief account of the situations before the changeover to modern architecture, in Europe. REVIVALS: Palladia revival in Britain-Chiswick House, London, Mereworth castle, Kent, Greek revival -St Pancras Church, London, British Museum, London and Gothic Revival-West Minister Palace, London, Strawberry Hill House, London.Impact of Industrial Revolution in Europe- The Social, Economic and Political changes effected, new requirements of the society, new materials and technological developments. Early Industrial Buildings The Eiffel Tower, Paris, Crystal Palace, London **8hrs**

Unit 5: The Chicago School, works of Sullivan- Wain Wright Building, St Louis, Guaranty Building, Buffalo.Contributions of Bauhaus-Bauhaus school at Dessau, De Stijl movement - Schroder house by Rietveld, Italian Futurism-Antonio Sant' Elias Station for Airplanes and Trains, Art Nouveau- Casa Batlo, SagradaFamilia, Tassel House, Brussels, Arts and Crafts movement- Red house London. **8hrs**

COURSE OUTCOME:

Students will be able to

CO1: Discussing the transformation of building typologies from early Christian to Gothic style. [L2]

CO2: Explain the concepts of Christian architecture in the west. [L1]

CO3: To identify and sketch the Characteristic features of Renaissance, Baroque and Rococo Architecture [L1, L3]

CO4: Summarize the situations that influenced the revivals in architecture and also their architectural feature [L2]

CO5: Analyze the Impact of Industrial Revolution and also compare various styles of architecture that emerged as reaction for the same [L4]

NOTE:

a. Assignments to include study of concepts relating to cultural and religious systems, structure, climatic interfaces and integration of all these in the resultant forms.
b. Models, analytical studies and paper presentations individually or in groups.

REFERENCE BOOKS:

1. 'History of Architecture' by Sir Banister Fletcher
2. 'Architecture of the world- Greece' by Henri Sterlin
3. 'Architecture of the world- The Roman Empire' by Henri Sterlin
4. 'Architecture of the world- Romanesque' by Henri Sterlin
5. 'Architecture of the world- Greece' by Henri Sterlin.
6. "City Shaped" by Spiro Kostoff
7. "Italian Renaissance architecture" by Marco Bussagi
8. "Architecture Nineteen & Twentieth Centuries" by Henry – Russell Hitchcock
9. "Modern Architecture- A Critical History" By Kenneth Frampton.

2ATT2 SURVEY AND LEVELING

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03Hrs
Examination Marks	: 50

Objectives:

1. To familiarize with the use of various instrumental techniques/methods to measure directions/angles, distances of lines, areas of land and elevations
2. To learn different types of surveys like chain, compass, theodolite and leveling and analyze the data.

Unit 1: Surveying - Definition, classification, principles of surveying, character of work, shrunk scale. Chain Survey - Instruments used, types of chains and tapes. Instruments for ranging, setting out angles, erecting perpendiculars & other geometrical figures . **8 hrs**

Unit 2: Compass surveying- Prismatic compass and accessories, open and closed traverses. Definitions: Fore bearing and back bearing. Construction of geometrical figures. Local attraction, problems.
Plane table survey - Plane table and accessories. Methods of plane table survey. Radiation, Intersection. **8 hrs**

Unit 3: Leveling- Principles and basic definitions. Dumpy level, temporary adjustment, simple leveling, profile leveling, fly leveling booking and reduction of levels-Rise and fall method &Height of instrument method, arithmetic checks. **8 hrs**

Unit 4: Theodolite - Study of instruments, definition of different terms, temporary Adjustments, uses, measuring horizontal and vertical angles & methods prolonging a straight-line. **7 hrs**

Unit 5: Contouring - Characteristics of contours, direct and indirect methods of contouring, interpolation, uses of contours, setting out works such as center lines of a building, grade for sewer.
Calculation of area – General, methods of determining areas by sub-division, offsets at regular intervals (mid-ordinate rule, average ordinate rule, trapezoidal rule, Simpson's one-third rule), problems. **08 hrs**

COURSE OUTCOMES:
The student will be able to:
CO1: Identify the types of survey and instruments to be employed depending upon the extent and accuracy. [L2]
CO2: Calculate the horizontal distances by direct and indirect methods after applying field corrections. [L3]
CO3: Determine the bearings to set out geometrical figures, latitude and departure of open and closed traverse and apply corrections for erroneous measurements. [L3]
CO4: Determine the reduced levels of points for engineering applications in projects. [L3]
CO5: Interpolation of contours for generating contour maps and determining the area of lands for engineering applications. [L3]

2. T. P. kanetkar& S.P. Kulkarni- Surveying, Edition 16thVol- I. Tata Mcgrw Hill publications Co.Pvt. Ltd. New Delhi-2009.

PWS PROFESSIONAL WRITING SKILLS IN ENGLISH

Credit	: 01
Number of contact hours per week	: 02
Internal Assessment Marks	: 50
Duration of Examination	: 01Hrs
Examination Marks	: 50

OBJECTIVES:

1. To Identify the Common Errors in Writing and Speaking of English.
2. To achieve better Technical writing and Presentation skills for employment.
3. To read Technical proposals properly and make them to write good technical reports.
4. To Acquire Employment and Workplace communication skills.
5. To learn about Techniques of Information Transfer through presentation in different level.

UNIT 1: **6 hrs**

Identifying Common Errors in Writing and Speaking English : Common errors identification in parts of speech, Use of verbs and phrasal verbs, Auxiliary verbs and their forms, Subject Verb Agreement (Concord Rules), Common errors in Subject-verb agreement, Sequence of Tenses and errors identification in Tenses. Words Confused/Misused.

UNIT 2: **6 hrs**

Nature and Style of sensible writing: Organizing Principles of Paragraphs in Documents, Writing Introduction and Conclusion, Importance of Proper Punctuation, Precise writing and Techniques in Essay writing, Sentence arrangements and Corrections activities. Misplaced modifiers, Contractions, Collocations, Word Order, Errors due to the Confusion of words.

UNIT 3: **6 hrs**

Technical Reading and Writing Practices: Technical writing process, Introduction to Technical Reports writing, Significance of Reports, Types of Reports. Introduction to Technical Proposals Writing, Types of Technical Proposals, Characteristics of Technical Proposals. Scientific Writing Process. Grammar – Voices and Reported Speech, Spotting Error & Sentence Improvement, Cloze Test and Theme Detection Exercises.

UNIT 4: **6 hrs**

Professional Communication for Employment: Listening Comprehension, Types of Listening, Listening Barriers, Improving Listening Skills. Reading Comprehension, Tips for effective reading. Job Applications, Types of official/employment/business Letters, Resume vs. Bio Data, Profile, CV. Writing effective resume for employment, Emails, Blog Writing and Memos.

UNIT 5: **6 hrs**

Professional Communication at Workplace: Group Discussion and Professional Interviews, Characteristics and Strategies of a GD and PI's, Intra and Interpersonal Communication Skills at workplace, Non-Verbal Communication Skills and its importance in GD and Interview. Presentation skills and Formal Presentations by Students, Strategies of Presentation Skills.

Course Outcomes:

Students will be able to,

CO1 : To understand and identify the Common Errors in Writing and Speaking..

CO2 : To achieve better Technical writing and Presentation skills.

CO3 : To read Technical proposals properly and make them to Write good technical reports.

CO4 : Acquire Employment and Workplace communication skills.

CO5 : To learn about Techniques of Information Transfer through presentation in different level.

Textbook:

1. "Professional Writing Skills in English" published by Fillip Learning – Education (ILS), Bangalore – 2022.
2. "Functional English" (As per AICTE 2018 Model Curriculum) (ISBN-978-93-5350-047-4) Cengage learning India Pvt Limited [Latest Edition 2019].

Reference Books:

1. English for Engineers by N.P.Sudharshana and C.Savitha, Cambridge University Press – 2018.
2. Technical Communication by Gajendra Singh Chauhan and Et al, (ISBN-978-93-5350-050-4), Cengage learning India Pvt Limited [Latest Revised Edition] - 2019.
3. Technical Communication – Principles and Practice, Third Edition by Meenakshi Raman and Sangeetha Sharma, Oxford University Press 2017.
4. High School English Grammar & Composition by Wren and Martin, S Chandh & Company Ltd – 2015.
5. Effective Technical Communication – Second Edition by M Ashraf Rizvi, McGraw Hill Education (India) Private

Activity Based Learning (Suggested Activities in Class)/ Practical Based learning:

- Contents related activities (Activity-based discussions)
- For active participation of students instruct the students to prepare Flowcharts and Handouts
- Organizing Group wise discussions Connecting to placement activities
- Quizzes and Discussions, Seminars and assignments

IC INDIAN CONSTITUTION

Credit	: 01
Number of contact hours per week	: 02
Internal Assessment Marks	: 50
Duration of Examination	: 01Hrs
Examination Marks	: 50

Objectives:

The course INDIAN CONSTITUTION (22ICO17 / 27) will enable the students,

1. To know about the basic structure of Indian Constitution.
2. To know the Fundamental Rights (FR's), DPSP's and Fundamental Duties (FD's) of our constitution.
3. To know about our Union Government, political structure & codes, procedures.
4. To know the State Executive & Elections system of India.
5. To learn the Amendments and Emergency Provisions, other important provisions given by the constitution.

UNIT I:

Indian Constitution: Necessity of the Constitution, Societies before and after the Constitution adoption. Introduction to the Indian constitution, Making of the Constitution, Role of the Constituent Assembly. **6 hrs**

UNIT II:

Salient features of India Constitution. Preamble of Indian Constitution & Key concepts of the Preamble. Fundamental Rights (FR's) and its Restriction and limitations in different Complex Situation building. **6 hrs**

UNIT III:

Directive Principles of State Policy (DPSP's) and its present relevance in Indian society. Fundamental Duties and its Scope and significance in Nation, Union Executive: Parliamentary System, Union Executive – President, Prime Minister, Union Cabinet. **6 hrs**

UNIT IV:

Parliament - LS and RS, Parliamentary Committees, Important Parliamentary Terminologies. Judicial System of India, Supreme Court of India and other Courts, Judicial Reviews and Judicial Activism. **6 hrs**

UNIT V:

State Executive and Governer, CM, State Cabinet, Legislature - VS & VP, Election Commission, Elections & Electoral Process. Amendment to Constitution, and Important Constitutional Amendments till today. Emergency Provisions. **6 hrs**

Course Outcomes:

The students will be able to,

CO1 : Analyze the basic structure of Indian Constitution.

CO2 : Remember their Fundamental Rights, DPSP's and Fundamental Duties (FD's) of our constitution.

CO3 : Know about our Union Government, political structure & codes, procedures.

CO4 : Understand our State Executive & Elections system of India.

CO5 : Remember the Amendments and Emergency Provisions, other important provisions given by the constitution.

Textbook:

1. "Constitution of India" (for Competitive Exams) - Published by Naidhruva Edutech Learning Solutions, Bengaluru. – 2022.
2. "Introduction to the Constitution of India", (Students Edition.) by Durga Das Basu (DD Basu): Prentice –Hall, 2008.

Reference Books:

1. "Constitution of India, Professional Ethics and Human Rights" by Shubham Singles, Charles E. Haries, and et al: published by Cengage Learning India, Latest Edition – 2019.
2. "The Constitution of India" by Merunandan K B: published by Merugu Publication, Second Edition, Bengaluru.
3. "Samvidhana Odu" - for Students & Youths by Justice HN Nagamohan Dhas, Sahayana, kerekon.
4. M.Govindarajan, S.Natarajan, V.S.Senthilkumar, "Engineering Ethics", Prentice –Hall, 2004.

Activity Based Learning (Suggested Activities in Class)/ Practical Based learning

- Contents related activities (Activity-based discussions)
- For active participation of students instruct the students to prepare Flowcharts and Handouts
- Organizing group wise discussions Connecting to placement activities
- Quizzes and Discussions
- Seminars and assignments

SWH SCIENTIFIC FOUNDATIONS OF HEALTH

Credit	: 01
Number of contact hours per week	: 01
Internal Assessment Marks	: 50
Duration of Examination	: 01Hrs
Examination Marks	: 50

Objectives:

1. To know about Health and wellness (and its Beliefs) & It's balance for positive mindset.
2. To build the healthy lifestyles for good health for their better future.
3. To Create a Healthy and caring relationships to meet the requirements of good/social/positive life.
4. To learn about Avoiding risks and harmful habits in their campus and outside the campus for their bright future
5. To Prevent and fight against harmful diseases for good health through positive mindset

UNIT I:

Good Health & its balance for positive mindset: Health -Importance of Health, Influencing factors of Health,

Health beliefs, Advantages of good health, Health & Behavior, Health & Society, Health & family, Health & Personality,

Psychological disorders-Methods to improve good psychological health, Changing health habits for good health. **03 hrs**

UNIT II:

Building of healthy lifestyles for better future: Developing healthy diet for good health, Food & health, Nutritional guidelines for good health, Obesity & overweight disorders and its management, Eating disorders, Fitness components for health, Wellness and physical function, How to avoid exercise injuries. **03 hrs**

UNIT III:

Creation of Healthy and caring relationships : Building communication skills, Friends and friendship - Education, the value of relationship and communication skills, Relationships for Better or worsening of life, understanding of basic instincts of life (more than a biology), Changing health behaviors through social engineering. **03 hrs**

UNIT IV:

Avoiding risks and harmful habits: Characteristics of health compromising behaviors, Recognizing and avoiding of addictions, How addiction develops, Types of addictions, influencing factors of addictions, Differences between addictive people and non addictive people & their behaviors. Effects of addictions such as, how to recovery from addictions. **03 hrs**

UNIT V:

Preventing & fighting against diseases for good health: How to protect from different types of infections, How to reduce risks for good health, Reducing risks & coping with chronic conditions, Management of chronic illness for Quality of life, Health & Wellness of youth :a challenge for upcoming future, Measuring of health & wealth status. **03 hrs**

Course outcome:

Students will be able to,

CO1: To understand and analyze about Health and wellness (and its Beliefs) & its balance for positive mindset.

CO2: Develop the healthy lifestyles for good health for their better future.

CO3: Build a Healthy and caring relationships to meet the requirements of good/social/positive life.

CO4: To learn about Avoiding risks and harmful habits in their campus and outside the campus for their bright future.

CO5: Prevent and fight against harmful diseases for good health through positive mindset.

Textbook:

1. "Scientific Foundations of Health" – Study Material Prepared by Dr. L Thimmesha, Published in VTU - University Website.

2. "Scientific Foundations of Health", (ISBN-978-81-955465-6-5) published by Infinite Learning Solutions, Bangalore – 2022.

3. Health Psychology - A Textbook, FOURTH EDITION by Jane Ogden McGraw Hill Education (India) Private Limited - Open University Press.

Reference Books:

1. Health Psychology (Second edition) by Charles Abraham, Mark Conner, Fiona Jones and Daryl O'Connor – Published by Routledge 711 Third Avenue, New York, NY 10017.

2. HEALTH PSYCHOLOGY (Ninth Edition) by SHELLEY E. TAYLOR - University of California, Los Angeles, McGraw Hill Education (India) Private Limited - Open University Press.

3. SWAYAM / NPTL/ MOOCS/ We blinks/ Internet sources/ YouTube videos and other materials / notes.

4. Scientific Foundations of Health (Health & Welness) - General Books published for university and
colleges references by popular authors and published by the reputed publisher.

Activity Based Learning (Suggested Activities in Class)/ Practical Based learning

- Contents related activities (Activity-based discussions)
- For active participation of students instruct the students to prepare Flowcharts and Handouts
- Organizing Group wise discussions Connecting to placement activities
- Quizzes and Discussions, Seminars and assignments

SCHEME & SYLLABUS

OF

III & IV SEMESTERS

B. ARCHITECTURE

SIDDAGANGA SCHOOL OF ARCHITECTURE

2022-23

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU
School of Architecture

Vision

To establish as a pioneer institute in planning and design of built environment through excellence in teaching, research, consultancy and design innovation.

Mission

- To create conducive academic ambience that nurtures aesthetic attitude, technical confidence, and critical thinking among students.
- To develop research and design innovation skills in students to address various societal needs.
- To inculcate professional ethics based on values and entrepreneurial skills among students.

SIDDAGANGA SCHOOL OF ARCHITECTURE

Program Educational Objectives (PEO's)

Graduates from school of Architecture will achieve the following Program Educational Objectives within few years of graduation

- Graduates will showcase capabilities for competent practice of Architecture and enhance career by pursuing higher education
- Graduates will exhibit strong design skills to solve complex real-time problems through high technical skills and strong communication along with the knowledge of various domains of architecture including landscape, architectural conservation, interior design, energy conscious architecture, urban design and planning, construction project management, alternative building techniques, building information modeling and digital architecture
- Graduates will demonstrate professionalism, ethical conduct, societal concerns, effective team work and adapt to dynamic global and local needs engaging in lifelong learning

Program Specific Outcomes (PSO's)

PSO 1: Develop critical thinking to analyse, evaluate, synthesise and generate appropriate design solutions for varying scales and levels of complexity.

SIDDAGANGA SCHOOL OF ARCHITECTURE

PSO 2: Explore possibilities and application of various building materials, construction techniques, building systems and services.

PSO 3: Draw inspiration from divergent architectural theories and history along with varied indigenous and vernacular settings.

PSO 4: Demonstrate effective communication skills to present architectural works and comprehend professional practice.

Programme Outcomes(PO's)

1. **Architectural Knowledge:** Apply the knowledge of design principles, building systems & technologies, humanities and environmental aspects in design, planning and construction.
2. **Problem Analysis**: Identify, formulate, review research literature and analyse various scales of architectural projects to arrive at tangible conclusions.
3. **Design/ Development of solutions:** Design solutions to integrate interdisciplinary approach for contextual issues pertaining to built-environment.
4. **Conduct investigations of complex problems:** Use research-based knowledge and methodologies including context analysis, case studies, project requirements and synthesis of the information to provide context sensitive solutions.
5. **Modern tool usage:** Identify, select and apply the appropriate tools, techniques and resources to predict, design and simulate qualitative and quantitative outcomes with an understanding of its limitations.
6. **The Architect and Society:** Apply reasoning to address socio-cultural, legal and safety aspects relevant to the professional practice and social responsibility.
7. **Environment and Sustainability:** Understand the importance of the architectural design solutions in environmental and social contexts to demonstrate the need for sustainable built environment.
8. **Ethics:** Apply ethical principles and commit to professional ethics, responsibilities and norms of Architectural profession.
9. **Individual and teamwork:** Function effectively as an individual as well as a team member or a leader in diverse interdisciplinary settings.
10. **Communication:** Comprehend and effectively communicate issues related to architecture, community and society at large through documentation, graphical and verbal presentations.
11. **Project management and Finance:** Demonstrate knowledge and understanding of professional and management principles to apply to individual work, as a team member and as a leader, to manage projects in multidisciplinary environments.
12. **Life-Long learning:** Recognize the need for, have the preparation and ability to engage in independent and lifelong learning in the changing domain of societal and technological advancement and adopt it in individual's professional practice.

SIDDAGANGA SCHOOL OF ARCHITECTURE

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institution affiliated to VTU, Belagavi, Approved by AICTE, New Delhi, Accredited by NAAC with 'A' grade & ISO 9001:2015 Certified)

B ARCHITECTURE

SCHEME OF TEACHING AND EXAMINATION
Applicable to the students admitted during 2021-22(Credit Scheme)

III Semester

Sl. No.	Course and Course Code	Course Title	Teaching / Paper setting Dept.	Teaching hrs/week				Examination					Credits
				Lecture	Studio	Seminar/ Drawing	Self Study Component	Duration in hrs.	Mode of Exam	CIE Marks	SEE Marks	Total Marks	
				L	S	SD	SS						
1.	3ARL1	Architectural Design- III			8				Viva	50	50	100	**8**
2.	3ARL2	Building materials and construction- III		1	3				Integrated	50	50	100	**4**
3.	3ARL3	Computer Applications-I			1	2			Integrated	50	50	100	**2**
4.	3ARL4	Structural systems and Behaviors-III		1		2			Integrated	50	50	100	**2**
5.	3ARL5	Climate responsive Architecture		1		2			Viva	50	50	100	**2**
6.	3AR01	History of Architecture-III		3				3	Written	50	50	100	**3**
7.	3AR02	Building Services-I (Water supply and Sanitation)		3				3	Written	50	50	100	**3**
8.	3AR03	Surveying and Levelling	Civil	3				3	Written	50	50	100	**3**
9.	3ARST	Study Tour-I		Conducted during I year vacation					Portfolio	100	-	100	**0**
		Total		12	12	6				**500**	**400**	**900**	**27**

Viva: Evaluation of the project conducted during the semester. Viva voce examinations should be conducted by one internal examiner & one external examiner.
Integrated: Written examination and Evaluation of the portfolio conducted during the semester.
Written: Written examination at the end of the semester

SIDDAGANGA SCHOOL OF ARCHITECTURE

ARCHITECTURAL DESIGN – III

Contact Hours/Week	:	08	Credits	:	08
Total Lecture Hours	:	08	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	3ARL1			

COURSE OBJECTIVES:

1. To explore the relationship between spatial configuration and activity
2. To introduce to the role and influence of context in the design of built environment
3. To evolve appropriate design ideas and solutions to respond to Indian rural context.

COURSE OUTLINE:

- Relationship between spatial configuration and activity related functions – Understanding and interpretation of user requirements. Introduction to bubble diagrams, proximity charts etc.
- Introduction to Contextuality – Site Analysis. Impact of site and surrounding on design. Refer local building codes and regulations. —**RURAL CONTEXT**
- Process and methods of carrying out Case studies – Spatial, Socio economic, Climatic, Functional aspects to be analysed to formulate design framework.
- Projects like
  Polyclinic,
  Skill development Centre,
  Community library,
  Day care centre,
  Primary school, etc
- to be tackled in rural context.
- Exploration of different ways of natural and Artificial Lighting for specific function to be detailed. Detailing of skylights, lighting in galleries, lighting for reading spaces, light explored for thematic design purposes can be tackled.

COURSE OUTCOMES:

Students will be able to,

CO1: Identify the factors influencing design process like context, site, surroundings etc. (L2)

CO2: Develop the concepts and design which enhances the user experience and living standards in rural context. (L6)

CO3: Investigate and demonstrate appropriate use of light in architectural design. (L5)

SIDDAGANGA SCHOOL OF ARCHITECTURE

NOTE:

a. Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students.
b. Minimum of two architectural projects have to be tackled in the semester.
c. One of the design exercises can be carried out as group work to explore possibilities of students working as teams.
d. Projects to be presented with help of drawings, sketches and models. Application of techniques learnt in architectural presentation has to be incorporated.

Continuous Internal Evaluation:

Methods suggested:

1. Studio discussions, Reviews, Time problems, CIE tests, Seminar or micro project, Quiz, report writing etc.

2. The class teacher has to decide the topic for the Design and Seminars if any, in the beginning only. The teacher has to announce the methods of CIE for the subject in advance in writing.

Semester End Examination:
1. The student needs to submit his/her works done throughout the semester, two days prior to the Viva work examination to the course teacher/coordinator.
2. The Viva-voce will be evaluated by an external examiner along with Course teacher or an internal examiner.

REFERENCE BOOKS:

1.	Laurie Baker	"Rural Community Buildings"
2.	Charles Correa	"The new landscape: Urbanisation in the third world" ISBN 0-408-50071-9, Butterworth Architecture, 1989
3.	Charles Correa	"The Ritualistic Pathway: 5 Projects: a Portfolio of Architecture" ISBN 0863552277,9780863552274, Pregati Art Printers, 1993
4.	Geoffrey Broadbent	"Design in architecture" ISBN-10 : 0419168303, Spon Press; New ed of 2 Revised ed edition (1 May 1990)

3ARL2 BUILDING MATERIALS AND CONSTRUCTION – III

Credit	: 04
Number of contact hours per week	: 04
Internal Assessment Marks	: 50
Mode of Examination	: Integrated
Examination Marks	: 50

OBJECTIVES:
1. To impart the knowledge of construction practices related to various RCC components of a building.
2. To introduce the building materials related to RCC.
3. To explore the techniques of weather proofing.

SIDDAGANGA SCHOOL OF ARCHITECTURE

Unit 1: RCC Footing– Isolated square and rectangular column footings, combined footings, Eccentric Footing, Pre-cast Footings and retaining walls.
RCC Foundation– Raft, Grillage and Pile Foundations.
RCC Beams - Simply supported singly reinforced beam, doubly reinforced beam, Tee beams, L beams, fixed beam, Cantilevered, Inverted, Concealed beams.

Unit 2: RCC Roof slabs - One way, two-way, Cantilever, one way continuous and two-way continuous slabs, Decking slab.

Unit 3: RCC stairs -Waist slab, folded plate, stringer stairs, pre-cast stairs.

Unit 4: Cement-Types of cement, their applications, manufacturing process, laboratory and field tests.
Concrete - Concrete Ingredients, grades of concrete, properties of concrete, production of concrete, mix, proportioning, mixing, transporting, placing, compaction, curing of concrete, sampling and testing of concrete. Concreting under water, special concretes like lightweight and heavy weight concrete, admixtures. Construction joints. Concretes for special applications.

Unit 5: Plastering-Methods of a) Internal - use of various finishes viz., lime, cement, plaster of Paris, puffing etc. b) External- smooth, rough, textured, grit plaster.
Water proofing materials and weather proofing materials: chemical admixtures and surface applications

COURSE OUTCOMES:
Students will be able to,
CO1: Classify various RCC components of a building. (L1)
CO2: Illustrate the details of various RCC components of a building. (L3)
CO3: Describe properties and applications of building materials related to RCC. (L2)
CO4: Explain various methods of Weather proofing and its applications. (L2)

NOTE:
a. Minimum one plate on each construction topic and study of material in the form of portfolio.
b. Miniature models to scale should be done for the construction related topics.
c. Site visits and factory visits to be arranged and report to be compiled by students.
d. Market survey of materials should be carried out by students.
e. The entire portfolio on construction and materials shall be presented for viva.
f. Building construction guidelines to be referred from National building code (NBC).

REFERENCE BOOKS:
1. "Construction Technology" by Chudley
2. "Building construction" by Sushilkumar
3. "Construction of Buildings" by Barry
4. "Concrete Technology" by Negi

3ARL3 COMPUTER APPLICATIONS-I

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: Integrated
Examination Marks	: 50

SIDDAGANGA SCHOOL OF ARCHITECTURE

OBJECTIVES:
1. To introduce students to the field of digital presentation.
2. To demonstrate the basics of various digital tools available for Architectural drafting.
3. To develop the required computer proficiency for enhancing presentation skills.

Unit 1: Words & Numerical processing- Creating basic templates for text documents, editing, formatting, grammar check, page layout, fonts, document review, develop charts, graphs for visual communication using MS Office or similar software. Image processing – basic image sourcing, editing and inserting images, color adjustments using Adobe Photoshop or similar software.

Unit 2: Introduction to Autodesk CAD & 2D Modelling, Coordinate Systems-Absolute, Relative Rectangle & Polar, Creating Layers, Creating Basic Drawings / Drawing tools, Using Advance Drawing tools.

Unit 3: Manipulating Objects / Modifying tools, Using Advance Modifying tools.

Unit 4: Project Creation, Creating Blocks & xref. Creating Patterns (Array), Annotation, Inquiry Commands, Scaling & Plotting.

COURSE OUTCOMES:
Students will be able to,
CO1: Explain the uses of computers and digital media for Architecture. (L1)
CO2: Acquire skills of Architectural drafting and presentation using digital tools. (L2)
CO3: Translate the Architectural ideas/concepts into presentation using appropriate software's. (L2)

NOTE:
a. A report to be compiled by students for unit 1.
b. Plates on schematic architectural drawings in the form of portfolio.
c. Plates on presentation of architectural drawings in the form of portfolio
d. The entire portfolio and report shall be presented for viva.

REFERENCE BOOKS:
1. "Microsoft Office – 2019"
2. "Basic Computer Course Book" by Dr. Paolo Coletti,
3. "Introducing AutoCAD and AutoCAD LT" by George Omura
4. "AutoCAD 2020 Beginners Guide"

3ARL4 STRUCTURAL SYSTEMS & BEHAVIORS – III

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: Integrated
Examination Marks	: 50

OBJECTIVES:
1. To acquaint with the characteristics and properties of Reinforced Concrete as a building material.
2. To impart fundamental principles of structural behavior of Reinforced Concrete buildings in withstanding various types of loads.
3. To apply relevant IS codes to design RCC building elements.

SIDDAGANGA SCHOOL OF ARCHITECTURE

Unit 1: Reinforced concrete cement- Basic Characteristics of Concrete & Reinforced concrete, including specifications and testing. Basics of mix design, water-cement ratio, strength, durability, workability requirements and formwork. Structural behavior under different loads and the need for reinforcement.

Unit 2: Designing of RCC beams - Introduction to National building code and IS456. Designing of singly reinforced beams (simply supported, fixed and cantilevered) using SP16.

Unit 3: Designing of RCC slabs - Designing of one way & two-way slabs using SP16. Design Aids for Reinforced Concrete to IS 456:2000.

Unit 4: Designing of RCC columns - Designing of short & long columns, using SP16. Design Aids for Reinforced Concrete to IS 456:2000.

Unit 5: Designing of RCC footings- Designing of isolated footing using SP16. Design Aids for Reinforced Concrete to IS 456:2000.

COURSE OUTCOMESS:
Students will be able to**,**
CO1: List out the characteristic, properties, strengths and drawbacks of Reinforced concrete member. (L1)
CO2: Apply relevant IS codes & standards and design RCC structural elements. (L3)
CO3: Suggest appropriate dimensions and spacing of reinforcements for RCC structures. (L3)

NOTE:
a. Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students.
b. Site visits to be arranged by studio teacher.
c. Miniature models should be done to understand each of the structures **.**
d. Design considerations to be referred from IS 456:2000
e. The entire portfolio and report shall be presented for viva.

REFERENCE BOOKS:
1. STRUCTURES - Martin Bechthold, Daniel L Schodek,
2. 'Structure in Architecture' by Mario Salvadori,
3. IS 456-2000 Plain and Reinforced Concrete - Code of Practice
4. IS SP-16.

3ARL5 CLIMATE RESPONSIVE ARCHITECTURE

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: Viva
Examination Marks	: 50

OBJECTIVES:
1. To introduce the concept of climate and it's elements
2. To recognize various elements that influence micro-climate.
3. To study various passive design concepts relevant to different climatic zones.
4. To recognize thermal properties of building materials and its impact on indoor comfort.
5. To design climate responsive buildings.

OUTLINE:
- Introduction to elements of climate, classification & characteristics of climatic zones. Introduction to psychometric chart and its application. Study the influence of topography, surroundings and existing natural features at site on microclimate.
- Study of various design considerations and passive strategies relevant to different climatic zones. Concepts of thermal comfort & thermal comfort indices. Understanding the thermo-physical properties of building materials and its effect on comfort zone of structure/ building.
- Analysis of sun path diagram and its effect on building orientation. Design of appropriate shading devices. Understanding the importance and techniques of day-lighting.
- Projects such as residence, community centers, kindergarten can be addressed to provide appropriate passive design solutions for given climatic context.
- Detailing of various components incorporated to enhance occupant comfort.

SIDDAGANGA SCHOOL OF ARCHITECTURE

COURSE OUTCOMES:

Students will able to,

CO1: Distinguish between different climatic zones with respect to the climatic elements. (L4)

CO2: Interpret the influence of building materials on the indoor thermal comfort. (L2)

CO3: Articulate building orientation, envelope design, openings and shading devices in climate specific building design. (L4)

CO4: Design thermally comfortable space with the use of passive techniques. (L6)

NOTE:

- Exercises to include aspects concerning each unit.
- Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students.
- Design project/s responsive to any specified climate, integrated with passive cooling systems is compulsory to be submitted.
- The portfolio covering the above topics shall be presented for viva-voce.

REFERENCE BOOKS:

1. "Manual of Tropical Housing & Buildings (Part-II)" Koenigsberger
2. "Housing, Climate and Comfort" by Martin Evans
3. "Buildings in the tropics" by Maxwell Fry
4. "Climate Responsive Architecture" by Arvind Kishan, Baker & Szokolay
5. "Sun, Wind, and Light: Architectural Design Strategies" by G. Z Brown and Mark DeKay
6. "Tropical Architecture" by CP Kukreja

3AR01 HISTORY OF ARCHITECTURE – III

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVES:

1. Summarise of the development of Islamic, colonial and post - Independence architecture in India in terms of influences, built forms (Secular and Religious), aesthetic considerations and their relevance at the given time and context.
2. Introduction to the elements of Islamic architecture and building typologies, like mosque and tomb prototypes.
3. Analysis of Climate responsive, Construction techniques, Site planning and zoning and landscaping in different building types and context.
4. Analysis of the different provincial Islamic style in architecture spread over India and their distinctive architectural features.
5. Introduction to the colonial phase in India and the influence of different territorial styles in India in Colonial public buildings.

Unit 1: Coming of Islam to India in 11th century A.D. Distinctive features of each of the dynasties. Development of basic mosque and tomb prototypes.

Imperial style - Delhi: Slave and Khilji phase: Quwwat-ul-Islam, Qtub complex, Tomb of Iltumish, Alai Darwaza,

Tughlaq and Sayyid& Lodi dynasties. Eg: Tomb of Ghiyasuddin Tughlaq, Khirki masjid, Octoganal and square tombs- Muhammad shah sayyid tomb, Bada Gumbad and Sikandar Lodi tomb. **08 hrs**

SIDDAGANGA SCHOOL OF ARCHITECTURE

Unit 2: Development of Provincial styles and their distinctive features.
Jaunpur - Eg: Atala Masjid and Jami Masjid.
Bengal style - Eg: Adina masjid, Eklakhi tomb, Chotasona and Bada sona Masjid
Ahmedabad - Integration of Hindu and Muslim style in building features - exclusive features. Eg: Jami masjid at Ahmedabad and Wavs of Gujarat, Recreational complex at Sarkhej. **08 hrs**

Unit 3: Bijapur, Gulbarga and Bidar - variations in design approach between Bijapur, Gulbarga and Bidar in planning and features - forms and finishes.
Bijapur: Eg: Gol Gumbaz, Ibrahim Rauza and Jami masjid
Gulbarga: Jami Masjid
Bidar: Madrasa of Md. Gawan at Bidar**.**
Mughal Phase: Fort and complexes of Mughal architecture during Akbar, Jehangir and Shahjehan: Eg: Agra Fort, Fathepur Sikri fort and Red fort, Shahajanabad **08 hrs**

Unit 4: Mughal phase - Development under Humayun, Akbar, Jehangir and Shahjehan as well as Aurangazeb. Exclusive features and typology of Mughal tombs and complex structural systems and their use. Eg: Humayun's tomb, Tomb of Salim Chisti, Akbar's tomb, Tomb of Mariam-uz-Zamani
Taj mahal, Tomb of Itmad ud Daulah at Agra
Bibi-ka-Maqbarah at Aurangabad. **08 hrs**

Unit 5: Colonial Phase –Arrival of British - Initial phase. Forts of Bombay, Madras and Kolkata.
Later phase: Eg: Campuses, railway stations, public buildings etc (St.Paul'sCatherdal, Bombay Town hall, Victoria terminus, Club at Madras etc.)
Final/last phase: Design and layout of New Delhi and its buildings. Eg: Rashtrapathi Bhavan, Parliament. **07 hrs**

COURSE OUTCOMES:
Students will be able to,
CO1: Summarise the culture and architecture of Islamic Phase in India. (L2)
CO2: Identify phases of Islamic architecture and understand the influences and morphology of Islamic elements. (L1)
CO3: Analyse the evolution of different elements, building types, settlement pattern and innovative building construction techniques like domes, arches etc. (L4)
CO4: Categorise the context specific designs, consideration of climate, context, location etc., (L4)
CO5: Identify the influence of British phase in India with respect to monuments and settlements. (L1)

SIDDAGANGA SCHOOL OF ARCHITECTURE

NOTE:
a. Assignments to include study of concepts relating to functions, forms, structure, climatic interfaces and integration of all these in buildings.
b. Models, analytical studies and paper presentations individually or in groups.

REFERENCE BOOKS:
1. “Modern Architecture- A Critical History” By Kenneth Frampton.
2. “History of Architecture in India” by Christopher Tadgel
3. “Indian Architecture - Islamic period” by Percy Brown
4. “The Architecture of the world – Islamic India” by Satish Grover

3AR02 BUILDING SERVICES - I

(Water Supply and Sanitation & Environmental Sciences)

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVES:

1. To introduce sources of water supply and its treatment processes.
2. To discuss the systems and methods of water distribution.
3. To develop plumbing layout for a small residence.
4. To summarize various types of materials, and construction techniques used in sewerage system.
5. To discuss rainwater harvesting systems at various scales.
6. To familiarize the concept of Solid waste management and special requirements of buildings.

Unit 1: Introduction to Environment and Health Aspects: History of Sanitation with respect to human civilization, Importance of Health, Hygiene Cleanliness, Waterborne, Water related, Water based, Epidemic diseases, Urban and Rural Sanitation.
Water Supply: Sources of Water supply – Municipal, bore well, river, etc. Quantity of water for different usages like Domestic, Hot water, Flushing, Gardening, Commercial, Industrial. Quality of supply for different uses as per national and international standards.
Water treatment: OBJECTIVESs of treatment, process- coagulation/flocculation, sedimentation, filtration (slow sand and rapid sand), disinfection, chlorination, softening**.** **09 hrs**

Unit 2: Water distribution system - Requirement of a good distribution system. Methods of distribution systems- gravity system, pumping and combined system. Layouts of distribution system-dead end, grid-iron, ring and radial systems. Water distribution in building - Direct, over-head tank, underground and overhead tank, hydro-pneumatic and other systems. Distribution of water to fixture and fittings, schematic diagrams, Swimming pool, water bodies, efficient usage of water. **08 hrs**

Unit 3: Plumbing: Water supply piping – hot, cold, flushing water, Piping in sunken areas, false ceiling areas, Drainage – floor traps, drains, P-trap, bottle traps, Single stack, two stack, cross venting, fixture venting, Material of construction like GI, PPR, PB, CPVC, Composite pipes, Copper, Flow control Valves – Gate valve, Globe valves, butterfly valves, Pressure Reducing valves &station, Pipe supports, hangers, fixing, plumbing of small residence .
Sanitary Fixtures, Fittings & Wellness: Soil appliances – Water closets, Bidet, urinals, Cisterns, Flush valve, Waste appliances – wash basin, sink, dishwasher, washing machine, Hot water system – Geysers, boilers, heat pump, Bath & water fixtures – Taps, mixers, single lever, quarter turn, bathtub, multi-jet bath, rain showers, health faucets, Wellness products : Sauna bath, steam bath, Jacuzzi. **09 hrs**

Unit 4: Sewerage system: Assessment of sewage generated, Collection of sewage / wastewater from all sources, Conveyance of sewage – gully trap, chamber, manhole, intercepting trap, grease traps, backflow preventer, schematic diagram. Materials of construction of sewerage network – PVC, UPVC, HDPE, corrugated PP pipes, OBJECTIVES of Sewage treatment, types of treatment, aerobic, anaerobic and Space requirements.
Storm water Management: Assessment, Drainage system – piped drains, open drains, Recharging of storm water, Drainage of basements, podium, paved areas, Collection, Reuse of water within the project, reduction of the load on municipal system, landscape drainages and Rainwater harvesting. **09 hrs**

SIDDHARTHA SCHOOL OF ARCHITECTURE

Unit 5: Solid Waste Management: Assessment of waste, Waste to wealth concept, Municipal waste, garden waste, organic & inorganic, Commercial waste, Medical waste & Industrial waste, Collection, segregation, treatment, disposal, Organic waste – Bio-methanation, Vermicomposting, Organic waste converter.
Special requirements: Solar Hot Water Generation, Central LPG Supply System, Medical Gases Supply, Central Vacuum and Waste Collection. **08 hrs**

COURSE OUTCOMES:
Students will be able to,
CO1: Explain the sources of water supply, their requirements with quality and quantity as per standards. (L2)
CO2: Identify different water distribution systems and layouts at building and urban scale. (L1)
CO3: Develop plumbing layout for a small project. (L3)
CO4: Summarize the sewage, sewerage system and storm water managements and its role, their construction, materials and detailing. (L2)
CO5: Explain types and collection methods of solid waste and its treatment methods. (L2)
CO6: Describe special requirements of building such as Solar Hot Water Generation, Central LPG Supply System, Medical Gases Supply, Central Vacuum and Waste Collection. (L2)

NOTE:
a. Assignments/Exercises related to each unit to be carried out.
b. Site visits to be arranged by faculty.

REFERENCE BOOKS:
1. "Environmental Engineering - (Vol I and II)" by RS Deshpande
2. "Water supply and Sanitary Engineering" by S Birdi RS

3AR03 SURVEYING AND LEVELLING

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

SIDDAGANGA SCHOOL OF ARCHITECTURE

OBJECTIVES:
1. To familiarize with the use of various instrumental techniques/methods to measure directions/angles, distances of lines, areas of land and elevations by conducting different types of surveys like chain, compass, and theodolite and levelling.
2. To analyze the data from the survey methods.
3. To generating contour maps and determining the engineering applications.

Unit 1: Surveying - Definition, classification, principles of surveying, character of work, shrunk scale. Chain Survey - Instruments used, types of chains and tapes. Instruments for ranging, setting out angles, erecting perpendiculars & other geometrical figures. **08 hrs**

Unit 2: Compass surveying- Prismatic compass and accessories, open and closed traverses. Definitions: Fore bearing and back bearing. Construction of geometrical figures. Local attraction, problems.
Plane table survey - Plane table and accessories. Methods of plane table survey. Radiation, Intersection**.** **08 hrs**

Unit 3: Leveling- Principles and basic definitions. Dumpy level, temporary adjustment, simple leveling, profile leveling, fly leveling booking and reduction of levels-Rise and fall method &Height of instrument method, arithmetic checks. **08 hrs**

Unit 4: Theodolite - Study of instruments, definition of different terms, temporary Adjustments, uses, measuring horizontal and vertical angles & methods prolonging straight-line. **07 hrs**

Unit 5: Contouring - Characteristics of contours, direct and indirect methods of contouring, interpolation, uses of contours, setting out works such as center lines of a building, grade for sewer. **Calculation of area** – General, methods of determining areas by sub-division, offsets at regular intervals (mid-ordinate rule, average ordinate rule, trapezoidal rule, Simpson's one-third rule), problems. **08 hrs**

COURSE OUTCOMES:

Student will be able to:

CO1 - Identify the types of survey and instruments to be employed depending upon the extent and accuracy (L2).

CO2 - Calculate the horizontal distances by direct and indirect methods after applying field corrections (L3).

CO3 - Determine the bearings to set out geometrical figures, latitude and departure of open and closed traverse and apply corrections for erroneous measurements (L3).

CO4 - Determine the reduced levels of points for engineering applications in projects (L3).

CO5 - Interpolation of contours for generating contour maps and determining the area of lands for engineering applications (L3).

NOTE:

a. On site demonstration of any methods of survey can be conducted.

b. Assignments/Exercises related to units can be carried out.

2. T. P. kanetkar& S.P. Kulkarni- Surveying, Edition 16thVol- I. Tata Mcgrw Hill publications Co.Pvt. Ltd. New Delhi-2009.

SIDDAGANGA SCHOOL OF ARCHITECTURE

3ARST STUDY TOUR-I (Mandatory)

Credit	: 00
Number of contact hours per week	: Tour during II semester Vacation
Internal Assessment Marks	: 100
Duration of Examination	: 00
Examination Marks	: 00

OBJECTIVES:

To expose students to Historical, Vernacular and contemporary architecture

OUTLINE:

The study tour may include places of architectural interest in India or Abroad. The choice of places and buildings to be visited will be decided by department. The students have to submit a report on the study tour within one month from the beginning of the III semester. The reports have to be assessed by the faculty in-charge for progressive marks.

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institution affiliated to VTU, Belagavi, Approved by AICTE, New Delhi, Accredited by NAAC with 'A' grade & ISO 9001:2015 Certified)

B ARCHITECTURE

SCHEME OF TEACHING AND EXAMINATION
Applicable to the students admitted during 2021-22(Credit Scheme)

IV Semester

Sl. No.	Course and Course Code	Course Title	Teaching / Paper setting Dept.	Teaching hrs/week				Examination					Credits
				Lecture	Studio	Seminar/ Drawing	Self Study Component	Duration in hrs.	Mode of Exam	CIE Marks	SEE Marks	Total Marks	
				L	S	SD	SS						
1.	4ARL1	Architectural Design-IV			8				Viva	50	50	100	**8**
2.	4ARL2	Building materials and construction-IV		1	3				Integrated	50	50	100	**4**
3.	4ARL3	Computer Applications-II		1		2			Integrated	50	50	100	**2**
4.	4ARL4	Structural systems and Behaviors-IV		1		2			Integrated	50	50	100	**2**
5.	4ARL5	Human settlements and Vernacular Architecture		1		2			Viva	50	50	100	**2**
6.	4AR01	History of Architecture-IV		3				3	Written	50	50	100	**3**
7.	4AR02	Building Services-II (Electrical and Illumination)		3				3	Written	50	50	100	**3**
8.	4AR03	Sociology and Economics		3				3	Written	50	50	100	**3**
		Total		13	11	6				**400**	**400**	**800**	**27**

Viva: Evaluation of the project conducted during the semester. Viva voce examinations should be conducted by one internal examiner & one external examiner.
Integrated: Written examination and Evaluation of the portfolio conducted during the semester.
Written: Written examination at the end of the semester

SIDDAGANGA SCHOOL OF ARCHITECTURE

4ARL1 ARCHITECTURAL DESIGN – IV

Credit	: 08
Number of contact hours per week	: 08
Internal Assessment Marks	: 50
Mode of Examination	: Viva
Examination Marks	: 50

OBJECTIVES:

1. To incorporate the knowledge earned during the study of climate responsive architecture in designing a project.
2. To evolve suitable strategies and proposals in response to the climate and context.
3. To explore various building material and techniques to suit the clime and context of the project.

OUTLINE:

- Application of Climatic responsive architectural principles on given project. The project tackled would explore the possibilities of passive design for the given climatic condition with respect to site planning, landscape, building design and detailing.
- Introduction to sense of place. Study of design ideas and strategies adopted in historical precincts learnt earlier with respect to philosophy, principles, elements, context and materials.
- Projects like Nature cure centers, Theme resort and restaurants etc to be tackled.
- Exploration of alternative building material and technology and incorporation of it into design. Detailing of any part of the building to represent the basic understanding.

COURSE OUTCOMES:

Students will be able to,

CO1: Identify the influence of climatic factors on design process and develop strategies to create passive architecture responsive to given climatic conditions. (L2)

CO2: Develop concepts and designs which enhance the user experience and create a sense of place using alternative building material and techniques in design. (L6)

NOTE:

a. Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students.
b. Minimum of two architectural projects have to be tackled in semester.
c. One of the design exercises can be carried out as group work to explore possibilities of students working as teams.
d. The portfolio covering the above topics shall be presented for viva.
e. Projects to be presented with help of drawings, sketches and models. Application of techniques learnt in architectural presentation has to be incorporated.
f. Knowledge of the alternative materials and techniques taught in building construction can be incorporated into design and detailing.

SIDDAGANGA SCHOOL OF ARCHITECTURE

REFERENCE BOOKS:

1. "Passive and Low Energy Cooling of building" by Van Nortrand
2. Bureau of Indian Standards IS 3792 (1987), Hand book on Functional requirements of buildings other than industrial buildings
3. "Manual of Tropical Housing and Building – Part I" by O.H. Koenigsberger and others
4. "Balkrishna Doshi: An Architecture for India" by William J.R. Curtis
5. "A Pattern Language: Towns, Buildings, Construction" by Christopher Alexander

4ARL2 BUILDING MATERIALS AND CONSTRUCTION – IV

Credit	: 04
Number of contact hours per week	: 04
Internal Assessment Marks	: 50
Mode of Examination	: Integrated
Examination Marks	: 50

OBJECTIVESS:

1. To introduce to construction details of various long span and advanced RCC roof structures
2. To identify materials and techniques for building repair.
3. To explain various types of surface finishes.

Unit 1: RCC roof slabs - RCC sloping roofs, Flat slab, ribbed, filler, waffle / coffered slab with reinforcement details and form work techniques.

Unit 2: Advanced RCC roof slabs-vaults, domes, shell roof, folded plate.

Unit 3: Design of pre-stressed, pre-cast concrete and pre- fabrication system - Modular coordination. Advantages and relevance in the Indian context

Unit 4: Materials for repair: Special mortar and concrete, chemicals, special cements and high grade concrete, admixtures of latest origin; Techniques for repair; Surface repair: material selection, surface preparation, rust eliminators and polymers coating; Repair of cracks in concrete and masonry: methods of repair, epoxy injection, mortar repair for cracks: guniting and shotcreting. Waterproofing for concrete roofs.

Unit 5: Paints, varnishes and distempers, emulsions, enamel. Constituents of oil paints, characteristics of good paints, types of paints and process of painting different surfaces. Types of varnish, methods of applying varnish and French polish and melamine finish.

COURSE OUTCOMES:

Students will be able to,

CO 1: Interpret the design and detailing of advanced RCC roof slabs. (L2)
CO 2: Explore the possibilities of pre fabrication/ modular systems in construction industry. (L3)
CO 3: Develop the knowledge about various roofs for large span structures. (L3)
CO 4: Illustrate the techniques and materials used for building repair. (L3)
CO 5: Differentiate various surface finishes and its applications. (L3)

SUJNANASHA SCHOOL OF ARCHITECTURE

NOTE:

a. Minimum one plate on each construction topic and study of material application in the form of portfolio.
b. Site visits to explore various roof structures be arranged by studio teachers and report to be compiled by students.
c. Miniature models to scale should be done for the construction related topics.
d. Market survey of materials should be carried out by students.
e. Building construction guidelines to be referred from National building code (NBC).
f. The entire portfolio on construction and materials shall be presented for viva.

REFERENCE BOOKS:

1. “Construction Technology” by Chudley
2. “Concrete technology” by M.S.Shetty
3. “Building construction” by Sushilkumar
4. “Industrial Building and Modular Design” by Henrik Missen

4ARL3 COMPUTER APPLICATIONS-II

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: Integrated
Examination Marks	: 50

OBJECTIVESS:

1. To familiarize with the advanced methods of AutoCAD.
2. To introduce students to 3-D modeling software.
3. To enhance presentation skills combining various digital platforms.

Unit 1: Introduction to complex 2D drawings using Auto CAD and using advanced methods for handling complete project. Setting up Layouts, editing with advance tools.

Unit 2: Introduction to 3D modelling through Google SketchUp, importing drawings from Auto CAD, developing and working on conceptual models.

Unit 3: Techniques of 3D Design – tool settings in 3D, Material application, Camera Setting, Annotation, Walkthrough, Basic Rendering, Creating topo-surface using sandbox, Site Design, layouts and presentation.

Unit 4: Introduction to V-ray or Lumion rendering- Material applications and walkthrough techniques using Lumion. Rendering images using Sketchup V-ray or similar software.

COURSE OUTCOMES:

Students will be able to

CO1: Demonstrate the advanced drafting skills in AutoCAD. (L2)
CO2: Apply the software for presenting the Architectural design concepts. (L3)
CO3: Develop advanced skills of 3D modelling and rendering techniques using digital tools. (L3)

NOTE:

a. Convert Architectural design project drawings (of semester 3 / 4) into digital format using Auto CAD.
b. Plates on presentation of architectural drawings in the form of portfolio.
c. Plates on rendered 3D modelling of architectural design project in the form of portfolio.
d. The entire portfolio shall be presented for viva.

SIDDAGANGA SCHOOL OF ARCHITECTURE

REFERENCE BOOKS:

1. Mastering AutoCAD 2019 and AutoCAD LT 2019 by George Omura and Brian C. Benton
2. Google SketchUp Pro 8 Step by Step - João Gaspar.
3. Architectural Design with SketchUp: 3D Modeling, Extensions, BIM, Rendering, Making, and Scripting - Alexander C. Schreyer

4ARL4 STRUCTURAL SYSTEMS & BEHAVIORS – IV

Credit	: 02
Number of Contact hours per week	: 03
Internal Assessment marks	: 50
Mode of Examination	: Integrated
Examinations Marks	: 50

OBJECTIVESS:

1. To introduce steel as a structural material
2. To study the components and design process of steel rigid frame structures.
3. To discuss the concept of composite flooring.

Unit 1: Structural Steel- Different kinds of Steel, their Basic characteristics. Light Gauge Steel materials. Concepts of design of Steel Structures: Introduction to the concept of Working Stress Design and Limit state Design.

Unit 2: Steel Structural Systems: Introduction to Rigid Portal Frame, it's components and load path. Introduction to available sections in structural steel used in the design of frame elements (Indicative). Properties of Indian standard rolled steel section and general framing arrangement of beams and columns for the one-story industrial building.

Unit 3: Rigid Frames design: Design of Rigid frame including selection of frames according to the span, spacing and frame configuration using IS 800:2007 and steel tables.

Unit 4: Composite Flooring Systems: Discussion on steel-concrete composite construction using steel beams, metal decking and concrete, including the role of shear connectors attachment to the beam for composite action.

Unit 5: Rigid frame elements design: Steel Structural Column and beam design using IS 800:2007 for the design of steel structures and steel tables.

COURSE OUTCOMES:

Students will be able to:

CO1: List out the characteristic properties, strengths and drawbacks of steel as a structural member. (L1)

CO2: Distinguish various IS rolled steel sections used in building construction. (L2)

CO3: Apply relevant IS codes and standards to design a rigid frame structure. (L3)

CO4: Explain the various components of a composite flooring system, its installation and use in building industry. (L2)

NOTE:

- Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students.
- Site visits to be arranged by studio teacher.
- Miniature models should be done to understand each of the structures.

REFERENCE:

1. Limit state design of steel structures by Bhavikatti
2. Limit state design of steel structures by Subramanya.
3. Structure in Architecture' by Mario Salvadori, Pearson's Publications Pvt. Ltd.
4. IS SP-6 (1) for steel structural column and beam design.

4ARL5 HUMAN SETTLEMENTS AND VERNACULAR ARCHITECTURE

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: Viva
Examination Marks	: 50

OBJECTIVESS:

1. To understand the dynamics of occupation vs settlement pattern.
2. To analyze the settlement patterns and their architectural characteristics based on their evolution and determinants of the settlement form.
3. To document and analyze the characteristics of a vernacular settlement, house typology and construction techniques to understand the role of culture, climate and topography determining the form of the settlement.

OUTLINE:

Unit 1: Anthropology and Ethnic groups – Definitions. Physical and cultural societies in socio – cultural evolution such as hunting and gathering, horticultural, pastoral, agrarian, industrial and postindustrial groups.

Unit 2: Evolution of Settlements – Type and structure of human settlements. Traditional settlement planning principles of Vedic period, Indus valley, Jaipur, Madurai etc. Determinants of settlement form – mobility, socio cultural, climate, technology, political power and geographical location. Traditional open spaces and their significance – Maidans, kunds, river ghats and sacred groves.

Unit 3: Vernacular Architecture and form – Definition. Approaches and concepts – socio cultural forces and form relation of house and settlement. Role of climate, culture, values and tradition in determining the house form and layout.

Unit 4: Interiors and Space Utilization- Customary practices as a generator of interior space. Space configuration – hierarchy of interior spaces. Evolution of spaces based on climate, economic and social factors. Space utilization based on value additions, gender specific and rituals. Space modulators – furniture, art and artifacts. Relationship between interiors and exteriors.

SIDDAGANGA INSTITUTE OF TECHNOLOGY
SIDDAGANGA SCHOOL OF ARCHITECTURE

Unit 5: Building materials and Technology – Traditional building materials - classification, characteristics, choice of materials. Techniques of construction and structural systems. Impact of materials and technology as modifying factors of house form.

COURSE OUTCOMES:

Students will be able to

CO1: Justify the factors involved in development of tradition settlement patterns. (L2)

CO2: Appraise the socio cultural, political and climatic factors dictating the traditional house forms. (L3)

CO3: Analyze the role of various public places in traditional settlements and their importance. (L3)

CO4: Understand traditional building techniques and materials. (L3)

NOTE:

a. Assignments/Exercises related to each unit to be carried out.
b. Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students.
c. Miniature models should be made by students to understand concepts of each of the structures.
d. The portfolio covering above topics along with respective models shall be presented for viva by students

REFERENCE BOOKS:

1) "House form and Culture" –Amos Rappoport
2) "Human aspects of Urban form" – Amos Rappoport
3) "Good city form" – Kevin Lynch
4) "Urban Space" –Rob Krier

4AR01 HISTORY OF ARCHITECTURE – IV

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVES:

1. To comprehend and relate to the theoretical and philosophical basis of western architecture.
2. To study the concepts and philosophies of Greek, Roman, Byzantine, Medieval and Gothic architecture through critical analysis of appropriate examples.
3. To introduce the development of architectural form with reference to technology, style and character in early western architecture.
4. To understand and analyse the innovative materials and construction techniques during classical period and early Christian period.
5. To understand architecture as evolving within specific cultural contexts including aspects of politics, society, religion, climate and technology.
6. To comprehend and analyse spatial character, scale, and structure through historical and traditional built form.

SIDDAGANGA SCHOOL OF ARCHITECTURE

Unit 1: Introduction to Minoan &Mycenae civilization Eg: Citadel of Tiryns, The Treasury of Atrius.
Classical - Greek Architecture, Greek temple layout, principles of design, proportion, composition, visual effects (Optical corrections). Evolution of Doric, Ionic, Corinthian, and Composite orders. Study of principles of design of Greek buildings through Greek temples – Parthenon, Athens-Erechtheion, Athens. Public buildings– Acropolis and Agora and Theatre at Epidaurus. House of Colline and House of Masks **08 hrs**

Unit 2: Introduction to Etruscan architecture.
Introduction to Roman Architecture. Architectural characteristic features and study of Roman Classical Architecture: Study of principles of design, Innovations, Engineering aspects in construction technology. Eg: -Roman orders: Tuscan and Composite. Roman Temples: Pantheon, Rome, Amphitheatre: Colosseum, Rome, Amphitheatre of Pompeii Public bath: Thermae of Caracalla, Aqueducts: Pont Du Gard, Nimes, Circus: Circus Maximus, Rome **08 hrs**

Unit 3: Architectural characteristic features and study of Roman Forum –Trajan's Forum and Basilica of Trajan, Triumphal arches: Arch of Septimius Severus, Arch of Constantine

Evolution of Ecclesiastical architecture: Early Christian - Study of Architectural Characteristics, evolution of church plan and principles of design of buildings.
Eg: - Basilicas: Old St Peter's Basilica, Basilica of St Clemente,
Baptistery: Baptistery at Nocera, Baptistry of Constantine, Rome **08 hrs**

Unit 4: Ecclesiastical: Byzantine Architecture - Study of Architectural Characteristics, structural concepts, material and ornamentation. Eg: Hagia Sophia at Constantinople and St. Marks Basilica at Venice.
Introduction to Medieval architecture- Italian, French, Anglo Saxon and Norman.
Italian Romanesque. Eg: -The Cathedral, the Campanile and the Baptistery, Pisa
French Romanesque. Eg: Angouleme Cathedral, France, the Abbey Church of Sainte-Foy in Conques, France **08 hrs**

Unit 5: Ecclesiastical: Gothic - Study of Architectural Characteristics, structural concepts and ornamentation. Concept of pointed arch, the ribbed vault and the flying buttress and aesthetic elements.
Eg: Basilica of Saint Denis, France, Chartres Cathedral, West Minster abbey, London, Notre Dame, Paris, Reims Cathedral, Reims (France), Milan Cathedral, Lombardy, Italy **07 hrs**

COURSE OUTCOMES:
Students will be able to
CO1: Appreciation of the architectural principles of classical architecture. (L2)
CO2: Appraise the use of materials and technology in design generation of buildings. (L3)
CO3: Discuss the building and aesthetic innovations made during Roman era. (L3)
CO4: To learn the transition and morphology of western architecture from its inception till ecclesiastical. (L3)
CO4: Explain the concepts of Christian architecture in the west. (L1)
CO5: Discussing the transformation of building typologies from early Christian to Gothic style. (L2)

NOTE:
a. Assignments to include study of concepts relating to cultural and religious systems, structure, climatic interfaces and integration of all these in the resultant forms.
b. Models and analytical studies to be done individually or in groups.

REFERENCE BOOKS:
1. 'History of Architecture' by Sir Banister Fletcher
2. 'Architecture of the world- Greece' by Henri Sterlin
3. 'Architecture of the world- The Roman Empire' by Henri Sterlin
4. 'Architecture of the world- Romanesque' by Henri Sterlin
5. 'Architecture of the world- Greece' by Henri Sterlin.
6. “City Shaped” by Spiro Kostoff

SHRAVANABELA SCHOOL OF ARCHITECTURE

4AR02 BUILDING SERVICES-II (Electrical)

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVES:

1. To introduce students to electrical services and its importance in Architecture
2. To equip students with the fundamentals of illumination.
3. To develop skills to design lighting schemes for various Architectural spaces.

Unit 1: Importance of electrical services in buildings. Brief introduction to various sources of electricity and different types of power plants. Achieving Net Zero Building design. Transmission of electricity from source to consumers. Functions and types of sub-stations, Functions of transformers, service connections -UG and OH Panel board. **06 hrs**

Unit 2: Wiring systems - PVC casing & capping wiring, conduit wiring, various types of cables and conduit. Necessity of earthing -Types of earthing - Pipe and Plate earthing. Functions and types of protective devices: Fuses, MCB's, functions of ELCB. Electrical and lighting load calculations for buildings. Problems on load calculation **09 hrs**

Unit 3: Fundamentals of illumination*:* Important definitions: Light, solid angle, Luminous flux, luminance and brightness. Laws of illumination and applications, Problems on Laws of Illumination and application. **06 hrs**

Unit 4: Importance of illumination*:* Importance of lighting, Natural lighting and artificial lighting. Fatigue and reduction of fatigue by providing good illumination scheme. Various types of electrical lamps. Principle and construction, Advantages, Disadvantages an applications- Incandescent, fluorescent/CFL, and HID lamps i.e. sodium vapour, mercury vapour, and metal halide lamps. **06 hrs**

Unit 5: Design of lighting schemes*:* Factors to be considered for good lighting schemes: Quality and quantity of lighting. Systems of luminaire: Direct, semi-direct, diffused, semi- indirect &indirect, various factors to be considered - Utilization factor, Depreciation factor/maintenance factors. Lighting calculations: Point to point method and light flux method (lumen method) Problems on preparation of a lighting electrical scheme. **09 hrs**

COURSE OUTCOMES:

Students will be able to-

CO1: Explain the importance & sources of electricity. (L2)
CO2: Differentiate the types of wiring systems and protective devices with their functions. (L3)
CO3: Describe the laws of Illumination and its application. (L1)
CO4: Select & install appropriate lighting fixtures for different architectural spaces. (L3)
CO5: Design lighting schemes for various spaces according to function. (L3)

NOTE:

a. Assignments/Exercises related to each unit to be carried out.
b. Site visits to be arranged by faculty.
c. National building code to be referred.

REFERENCE BOOKS:

1. "Electrical Technology" by H Cotton
2. "Electrical Wiring, Estimating and Costing" by L Uppal.
3. "Basic Electrical Engg" by Anwari.
4. National electric Code, Indian Electricity Rules 1956, Energy Conservation and Building Code.

4AR03 SOCIOLOGY AND ECONOMICS

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVES:

1. To familiarize students with the basic concepts of sociology and economics and their influence on architecture.
2. To develop sociological imagination that will rethink to how social systems operate through individuals in relation with space and building typologies.
3. To gain a comprehensive understanding of Urbanization and migration and social problems associated with these transformations in the urban settlements.
4. To introduce the concepts of social research, data sources and analysis.
5. Familiarize the students with the basics of economics, factors of production, consumer behavior with respect to architecture.
6. To learn cost analysis of buildings and sources of funding for building activity.

Unit 1: Introduction to Sociology - Nature, scope and utility of Sociology. Relation of sociology and its branches to architecture and the built environment.
Elements of society - bio-social, family and community. Socio cultural Association and Institution.
Types of Families – Single, nuclear and joint families and their impact on space.
Communities – Rural and urban communities - Origin, growth and nature of settlements, their characteristics and spatial organization- physical and visual **07 hrs**

Unit 2: Urbanization – definition, causes and effects. Patterns of urbanization and influence of urbanization on rural life. Urbanization process in India.
Migration and its impact on urbanization and urban form. Social problems of urbanization.
The impact of growing urbanization on urban life relating to health, housing and transportation.
The origin and characteristics of Slums in different parts of the world. Governmental and NGO approaches to engaging with issues regarding slums in Indian cities. **07 hrs**

Unit 3: Social surveys and social research – The need for research, the research process, ethics and scope of social research. Types of research methods. Methodology and principles of social research, units of study, choice of research topics.
Sources of information, Secondary sources like literature review - official and unofficial documents, library references, publication etc.
Primary data sources - Field survey - adoption of suitable techniques in field research viz. Questionnaires, interview, case study etc.
Analysis and classification of data and strategy making. Focus on gender issues and issues relating to women, children and senior citizens. **08 hrs**

Unit 4: Economics: Definition, Economic laws, Economic goods, utility, value, price and wealth. The relationship of economics with the built environment.
Economic organization of society – Primary, secondary and tertiary sectors.
Factors of Production. Land, labor, capital and transport relating to Architecture.
Economic Issues - Consumption, wants and needs their characteristics and laws based upon them. Market value, opportunity cost, the laws of diminishing, increasing and constant returns. **09 hrs**

Unit 5: Economics: Standard of living, factors affecting it and its impact on architecture.
Urban land values - land use and factors involved in development of urban land. The Bid Rent Theory that defines relationship between location and land value. Theorical city models based on

SIDDAGANGA SCHOOL OF ARCHITECTURE

Land use and land value- Burgess's Concentric Zone theory, Homer Hyot's Sector Theory, Ullman and Harris's Multiple Nuclei Theory.
Building Cost - Cost and cost indices, preliminary for building. Concepts of life cycle costing with reference to buildings. Time value of money-present worth and Inflation. Sources of finance for buildings. **08 hrs**

COURSE OUTCOMES:
Students will be able to,
CO1: Identify the elements of society and their impact on architectural design. (L2)
CO2: To discuss and critique the nature of social institutions that shapes the social structure. (L2)
CO3: Criticize the impact of urbanization on settlements in turn on social life and physical infrastructure. (L3)
CO4: Relation between the different sectors of occupation and factors of production. Learn the impact of economics on architectural projects. (L3)
CO5: Analyze the impact of standard of living on the spatial quality of built spaces. Learn the concepts of life cycle costing of buildings (L3)

NOTE:
a. Assignments/Exercises related to each unit to be carried out.
b. Site survey to be arranged by faculty to learn social survey methods.

REFERENCE BOOKS:
1. "Sociology" by Neil J Smelsa
2. "Urban Economics" by Warner Z Hirsch

SIDDAGANGA SCHOOL OF ARCHITECTURE

5ARL1 ARCHITECTURAL DESIGN – V

Credit	: 08
Number of contact hours per week	: 08
Internal Assessment Marks	: 50
Mode of Examination	: VIVA
Examination Marks	: 50

OBJECTIVES:

1. To introduce to sustainable site planning techniques.
2. To interpret relationship of buildings in a given environment/ context.
3. To Incorporate the agenda of building bye laws, structure, site planning and landscape and services within existing context.
4. To apply concept of large span roof structures into campus buildings.

OUTLINE:

- Site planning techniques – Understanding ecological aspects of site, General Principles, Land Use and Facilities, sustainable site planning principles, study of relevant zoning regulations, role of landscape, open Space, circulation and utility infrastructure in site planning.
- Formal, informal and interactive processes of learning and role of the built environment.
- Projects such as Higher Educational Institutions, University Campuses, Hospitals, Exhibition Pavilions, IT Parks, etc can be tackled.
- Detailing of large span roof structures for needed areas of the project. Elements like ramps, handrails to achieve inclusive design to be detailed.

COURSE OUTCOMES:

Students will be able to

CO1: Develop the knowledge of site planning principles. (L2)

CO2: Develop concepts and design towards multiple use buildings with application of zoning regulations. (L3)

CO3: Appraise the design with respect to context and functional requirement. (L4)

CO4: Detail innovative large span structures conducive to the given function. (L5)

SIDDAGANGA SCHOOL OF ARCHITECTURE

NOTE:

a. Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students.

b. Minimum of two architectural projects have to be tackled in the semester.

c. One of the design exercises can be carried out as group work to explore possibilities of students working as teams.

d. Vertical studio involving other semesters can be encouraged to carry out one full or part project.

e. The portfolio covering the above topics shall be presented for viva voce.

f. Projects can be presented using appropriate computer aided tools.

g. Knowledge of the alternative materials and techniques taught in building construction can be incorporated into design and detailing.

h. The projects listed in the syllabus is only to state the scale and complexity. The projects of similar scope can be introduced by the teachers.

REFERENCE BOOKS:

1. 'Campus Planning', Richard P. Dober,
2. 'Campus Planning in India', Kanvinde
3. 'Site planning', Kevin Lynch
4. Campus Design, Planning and physical resource management for universities and colleges.

5ARL2 BUILDING MATERIALS & CONSTRUCTION – V

Credit	: 04
Number of contact hours per week	: 04
Internal Assessment Marks	: 50
Mode of Examination	: Integrated
Examination Marks	: 50

OBJECTIVES:

1. To introduce to various architectural applications of steel in building construction.
2. To illustrate large span roof structures.
3. To explain secondary roofing & insulation materials.

OUTLINE:

Unit 1: Structural steel design- Introduction to the market forms of steel and its applications, MS sheet cladding, Steel sliding and folding doors, Design and construction of composite steel staircases.

Unit 2: Steel roofing - Design and construction of steel trusses for various spans, north light truss, roof lighting and roof fixing details.

Unit 3: Large span Roofs - Geodesic domes, space frame, tensile structures, pneumatic structures, pre-engineered metal building (PEB) structures.

Unit 4: Steel - Properties and architectural uses of mild steel and stainless steel. Introduction to non-ferrous materials - their properties, types and applications in Architecture like Aluminum, Copper, zinc and alloys like Brass and Bronze. Various types of metal finishes.

SIDDAGANGA SCHOOL OF ARCHITECTURE

Unit 5: Roofing materials - Polycarbonate sheets, Fiberglass, Asphalt shingles, Roof fabrics, AC sheets and metal roofs. Insulation Materials – Thermal and Sound Insulation Materials, Fire retardant materials.

COURSE OUTCOMES:

Students will be able to,

CO1: Demonstrate methods and details of constructing Steel trusses. (L1)
CO2: Explore the possibilities of steel structures in construction industry. (L3)
CO3: Analyse the applications of large span roofs. (L4)
CO4: Highlight the use of steel in construction industry. (L1)
CO5: Recognize applications of various insulation materials. (L1)

NOTE:

a. Site visits to be arranged by studio teacher.
b. Miniature models to scale should be done for the construction related topics.
c. Minimum one plate on each construction topic and study of material in the form of portfolio.

d. Market survey of materials should be carried out by students.
e. All the plates on construction and portfolio on material application shall be presented for viva voce.

REFERENCE BOOKS:

1.'Construction Technology' by Chudley.
2. 'Construction of Buildings' by Barry.
3. 'Building Construction - Principles, Practices and Materials' by Glenn M Hardie.
4. 'Engineering Materials" by Rangwala.
5. 'Materials in Construction - An Introduction' by G.D. Taylor.

5ARL3 COMPUTER APPLICATIONS-III

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: Integrated
Examination Marks	: 50

COURSE OBJECTIVES:

1. To introduce the advanced BIM compliant soft wares.
2. To develop proficiency in Revit Architecture and its applications.
3. To discuss the holistic approach of designing buildings using software.

OUTLINE:

Unit 1: Introduction to BIM software, its advantages and applications. Introduction to Autodesk Revit Architecture, Developing Models using Revit tools.
Unit 2: Techniques of 3D Design – tool settings in 3D, Material application, Camera Settings and annotation tools.
Unit 3: Advance Revit Architecture- Massing, Annotation with detailing, Rooms & Area.
Unit 4: Design Options, Scheduling, Linking files.

COURSE OUTCOMES:

Students will be able to
CO1: Demonstrate skills in BIM software and its applications. (L2)
CO2: Apply the various aspects related to building design using BIM software. (L3)
CO2: Detail the various elements of buildings using Revit. (L3)

SIDDAGANGA SCHOOL OF ARCHITECTURE

NOTE:

a. Classroom exercise involving Architectural design project to be done using Revit.
b. Detailing of the Architectural design project has to be done using advanced options in Revit.
c. A portfolio of Revit exercises and assignments done in the class to be submitted for progressive marks and SEE.

REFERENCE BOOKS:

1. Autodesk Revit 2022 User guide, Autodesk press.
2. Autodesk Revit 2022 Architecture fundamentals, SDC Publications.

5ARL4 STRUCTURAL SYSTEMS & BEHAVIOURS - V

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: Integrated
Examination Marks	: 50

OBJECTIVES:

1. To introduce long span structural systems and their selection criteria for integration in building design.
2. To study different materials and construction methods of long span structures.
3. To acquaint with underground structures, materials used and their structural design.

OUTLINE:

Unit 1: Arches, Vaults and Domes:
Introduction to Arches and types based on shape & material of construction. Discussion on their selection criteria, load path mechanism and use in buildings.
Introduction to Vaults, their types based on material (masonry, concrete & steel), methods of design/construction (catenary method, funicular method, optimization method) as a curved structural member spanning two points and use as a roofing system in large span buildings.
Introduction to types of domes (masonry, concrete & steel) and their methods of construction. Study spanning, structural design concept and thrust analysis, their structural strength and properties as roofing systems of large column-free spans.

Unit 2: Shell structures – Introduction to shell structures, their properties and strength as light-weight construction for large spans. Study building examples with different forms. Analysis of load path and the structural behavior.

Unit 3: Cable and suspension structures – Introduction to cable and suspension structures, and their types, members and different materials. Study their spanning, structural design concept, load paths and the importance of every member, their sizing.

Unit 4: Tensile structures- Introduction to tensile structures, different forms. Study of its members – cable (load bearing & stabilizing, ridge-line, valley & radial cables), supports (direct & indirect) and membrane (different materials like PVC-coated polyester fibers and PTFE-coated glass fiber). Understanding the importance of every member and its behavior.

Unit 5: Underground structures – Introduction to retaining walls (masonry and RCC), water tanks. Study load considerations on the vertical walls, their structural design, advanced materials (cement and additives). Discuss the precautions to be taken during design and construction.

COURSE OUTCOMES:

Students will be able to:
CO1: Differentiate between various long span structural systems and choose the appropriate system for a given architectural project. (L2)
CO2: Apply principles and concepts of long span structural systems in building design. (L3)
CO3: Apply knowledge of structural concepts and relevant building codes (IS) to design a RCC retaining wall. (L3)

NOTE:

a. Relevant case studies and literature studies can be given by the studio teachers and report

has to be compiled by the students.

b. Site visits to be arranged by studio teacher.
c. Miniature models should be to understand each of the structures.
d. A hands-on construction can be held for any of the modules.

REFERENCE BOOKS:

1. 'Structures' by Martin Bechthold, Daniel L Schodek
2. 'Structure in Architecture' by Mario Salvadori.
3. 'Building Structures Illustrated' by Francis D.K. Ching.
4. 'Building Construction Illustrated' by Francis D.K. Ching.
5. Works of Felix Candela
6. Works of Frei Otto
7. Works of Hassan Fathy
8. Works of Auroville Earth Institute.
9. 'NBC 2016 (SP-7)', Indian Standards Institution (ISI).

5ARL5 LANDSCAPE ARCHITECTURE

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: VIVA
Examination Marks	: 50

OBJECTIVES:

1. To introduce to the discipline of Landscape and its relevance in Architecture.
2. To gain an insight into the changing relationship of human with nature.
3. To familiarize with the process of site planning.
4. To develop design skills for landscape projects.

OUTLINE:

- Introduction to landscape Architecture, Basic principles of landscape design-factors to be considered, components involved.
- Elements of landscape architecture - Natural and manmade landscape elements and their application in landscape design. Components of hardscape and softscape and their application.
- Site planning and site analysis – Sustainable responses towards environmental, social, economic and cultural values of land, interrelationship between nature and human interventions. Organization of spaces - circulation, built form and open spaces.
- Design and development of landscape schemes in Architectural projects like Residences, Villas, Exhibition Pavilion, Resort, Schools etc.
- Detailing has to be done for courtyards, pools, roof tops, vertical garden etc.

SIDDAGANGA SCHOOL OF ARCHITECTURE

COURSE OUTCOMES:

Students will be able to,

CO1: Define various basic components of Landscape Architecture (L1)
CO2: Incorporate the learning about principles and elements in Landscape design. (L3)
CO3: Analyse the site and develop site planning for any design project. (L4)
CO4: Design and develop landscape solutions for given projects. (L6)
CO5: Develop drawings of courtyards, pools, vertical garden etc.(L6)

NOTE:
a. Relevant Exercises has to be decided by studio teachers.
b. Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students.
c. One major project to the scale of site planning and another to the scale of interiors have to be addressed. The studio can be integrated with the Architectural Design Studio.
d. The portfolio covering the above topics shall be presented for viva voce.
e. Projects to be presented with help of drawings, sketches and models. Application of techniques learnt in architectural presentation has to be incorporated.

REFERENCE BOOKS:
1. 'Landscape Architecture' by J O Simonds.
2. 'Introduction to Landscape architecture' by Michel Laurie.
3. 'Site Planning' By Kevin Lynch.
4. 'Landscape Graphics' by Grant W Reid.
5. 'Design with Nature' by Ian L McHarg.

5AR01 HISTORY OF ARCHITECTURE - V

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVES:
1. To Sketch and recognize Architectural Characteristics of Various Architectural Styles from Renaissance period till Modern Architecture
2. To recognize various Architects associated with each style
3. To discuss the philosophies and design ideas of various architects associated with Renaissance period till Modern Architecture through their noted works
4. To explain the influence of revivals on Architecture.
5. To analyze the impact of industrial revolution on Architecture

OUTLINE:
SIDDAGANGA SCHOOL OF ARCHITECTURE

Unit 1: Background and influences on Renaissance Architecture. Characteristics of Renaissance Architecture in general.
Filippo Brunelleschi -The dome of the Cathedral of Santa Maria del Fiore (the Duomo) in Florence, Leon Alberti -St Andrea Mantua and Palazzo Rucellai, Palladio -Villa Rotunda, Michelangelo-St. Peter's Rome, Sir Christopher Wren- St. Paul's London. **08 hrs**

Unit 2: General characteristics of Baroque -St Peter/s Piazza by Bernini and Rococo Styles-Hermitage Winter Palace in St. Petersburg.
Transitional period -A brief account of the situations before the changeover to modern architecture, in Europe. REVIVALS: Palladia revival in Britain-Chiswick House, London, Mereworth castle, Kent, Greek revival -St Pancras Church, London, British Museum, London and Gothic Revival-West Minister Palace, London, Strawberry Hill House, London **08 hrs**

Unit 3: Impact of Industrial Revolution in Europe- The Social, Economic and Political changes effected, new requirements of the society, new materials and technological developments. Early Industrial Buildings- The Eiffel Tower, Paris, Crystal Palace, London

The Chicago School, works of Sullivan- Wain Wright Building, St Louis, Guaranty Building, Buffalo. **08 hrs**

Unit 4: Contributions of Bauhaus-Bauhaus school at Dessau, De Stijl movement -Schroder house by Rietveld, Italian Futurism-Antonio Sant' Elias Station for Airplanes and Trains, Art Nouveau- Casa Mila, Casa Batlo, Sagrada Familia, Tassel House, Brussels, Paris Metro Station entrance, Arts and Crafts movement- Red house, Kent, Bedford park, near London **08 hrs**

Unit 5: Introduction to modern architecture through the ideas and works of Great Masters- FLWright - Robie House, Chicago, Falling Water, Pennsylvania, Guggenheim Museum, New York, Johnson Wax Tower**,**Racine.Le Corbusier -Villa Savoy, Poissy-sur-Seine, Unite de Habitation,Marseille, Notre-Dame du Haut, Ronchamp. MV Rohe- Farnsworth house, Plano,Seagram Building, New York, Crown Hall, IIT, Chicago. Walter Gropius-Fagus Factory, Alfeld an der Leine, Germany, Gropius House, Massachusetts. Bauhaus school, Dessau. **08 hrs**

COURSE OUTCOMES:

Students will be able to,

CO1: To identify and sketch the characteristic features of Renaissance, Baroque and Rococo architecture (L2)

CO2: Compare the architectural characters/features of the above styles. (L4)

CO3: Summarize the situations that influenced the revivals in architecture and also their architectural feature **(**L2)

CO4: Analyze the impact of industrial revolution and also compare various styles of architecture that emerged as reaction for the same (L3)

CO 5: Illustrate and identify the contribution of great masters of modern Architecture through their works. (L2)

NOTE:

a. Assignments to include study of concepts relating to cultural and religious systems, structure, climatic interfaces and integration of all these in the resultant forms.

b. Models, analytical studies and paper presentations individually or in groups.

REFERENCE BOOKS:

1. " Modern Architecture- A Critical History" By Kenneth Frampton.
2. "A History of Architecture on the Comparative Method", by Sir Banister Fletcher.
3. " Italian Renaissance architecture" by Marco Bussagi.
4. "A history of Architecture" by Fiske Kimbell& George Harold Edgell.
5. "Louis Sullivan as he live: The shaping of American Architecture by Willard Connelly.
6. "Architecture Nineteen & Twentieth Centuries" by Henry – Russell Hitchcock.
7. "A History of Modern Architecture" by Jurgen Joedicke.

SIDDAGANGA SCHOOL OF ARCHITECTURE

5AR02 BUILDING SERVICES - III

(HVAC, Lifts and Escalators and Firefighting)

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVES:

1. To introduce the importance of mechanical services in buildings
2. To develop the knowledge about various mechanical services and their integration with architectural design.
3. To impart the knowledge of fire safety in buildings and the role of architect in providing fire safety measures.

OUTLINE:

Unit 1: Mechanical/Artificial Ventilation - Definition, Need for mechanical ventilation in buildings. Rate of ventilation for different occupancies. Methods of mechanical ventilation in buildings. Guide lines/ventilation standards as per NBC/ASHRAE for different building types. Ventilation calculation. **08 hrs**

Unit 2: Air Conditioning - Definition, advantages and disadvantages. Industrial and comfort air conditioning. Basic air-conditioning system. Air-cycle in air conditioning and refrigeration cycle. Summer and winter air-conditioning. Air-conditioning load***:*** definition, factors contributing to AC load. Implications of architectural decisions on AC load of a building. Zoning: purpose and advantages. Air-distribution systems: Ducts and duct systems. Air-outlets, air-handling units. **08hrs**

Unit 3: Systems of Air-conditioning-Methods and equipment; window units, package units, split units and Cassette AC. Central Air-conditioning systems; direct expansion and chilled water systems. Location of air-conditioning equipment in buildings. Architectural/spatial requirement of various equipment. Critical air-conditioning-Clean Rooms, Server & Hub Rooms, UPS Rooms, Operation Theatres etc. **08 hrs**

SIDDAGANGA SCHOOL OF ARCHITECTURE

Unit 4: Vertical Transportation in Buildings- Elevators; brief history. Elevatoring of building: environmental considerations i.e., location in building, serving floors, grouping, size, shape of passenger car, door arrangement etc. Service requirements: Quality of service, quantity of service, time, passenger handling capacity, space and physical requirements, machine room space and its typical layout.

Types of Elevators - Definitions of passenger, hospital, freight, service elevators. Important components of electric traction and hydraulic elevators. Double-decker, sky lobby, lift lobby, lift interiors etc. Space requirements for different types of elevators.

Escalators - Definition and important components. Design considerations; location and arrangement in buildings. Space requirement, Escalators Vs. elevators. **08hrs**

Unit 5: Fire safety in Buildings - Causes of fire, combustible and non-combustible building materials, classification of fire, growth of fire, fire load, fire hazards. Classification of buildings and fire grading of structural elements as per NBC. Fire rating for different materials. Concept of passive fire protection and control; integration of fire safety norms at design and construction stage, design of escape routes, fire escape staircase, fire lifts, water storage

requirements etc., Evacuation time, crowd management, Emergency exits for differently abled persons. Active fire control using portable extinguishers. Basic concepts in fixed fire-fighting installations. Automatic fire detection and alarm systems.

08hrs

COURSE OUTCOMES:

Students will be able to

CO1: Explain the needs and requirements for ventilation and its impact on design and human comfort. (L2)

CO2: Illustrate the fundamental principles and applications of Air-conditioning and Refrigeration systems. (L2)

CO3: Identify equipment of Air-conditioning and explain its functions. (L3)

CO4: Apply standards to design a reliable, safe and efficient vertical transportation system. (L3)

CO5: Identify causes of fire, classify buildings and describe major techniques & approaches involved in fire safety design. (L3)

NOTE:

a. Chiller Plant Rooms, AHU Rooms, Piping Distribution System in Commercial Building, Hotels, Hospital, IT Buildings.

b. Centralized A C layout drawing has to be prepared for an office building showing all connections of units.

REFERENCE BOOKS:

1. 'Principles of Refrigeration' by Roy J Dossat.
2. 'Air Conditioning and Refrigeration Data Hand book' by Manohar Prasad.
3. 'Refrigeration and Air Conditioning' by Don Kundwar
4. 'Principles of refrigeration and AC' by V.Paul Lang
5. 'National Building Code of India (NBC 2016), SP 7', Indian Standards Institution (ISI).

SIDDAGANGA SCHOOL OF ARCHITECTURE

5AR03 THEORY OF ARCHITECTURE

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVES:

1. To introduce students to Architectural Theories from Antiquity to Post Modern era.
2. To describe the ideas and principles put forth by various architects through history.
3. To discuss the salient features of various contemporary theories in Architecture.
4. To evaluate the application of principles of architectural aesthetics discussed by the theoreticians.
5. To introduce students to methods of Architectural criticism and their application.
6. To understand the design generation methods and their processes.
7. To develop and strong framework for design development, design process and critique.

OUTLINE:

Unit 1: Theory in Antiquity - Concepts of Vitruvius, Mayamata- Indian treatise on Housing and Architecture. Theory in Renaissance – Works of Leon Alberti and Andrea Palladio **08 hrs**

Unit 2: 18th Century Theory – Ideas of Boullee and Ledoux 19th Century Theory – Concepts of John Ruskin and Quatramere de Quincy Modern Movement Theory – Ideas of Adolf Loos, Eero Sarinen, Richard Neutra, Kenzo Tange. **08 hrs**

Unit 3: Post Modern Theory – Ideas of Robert Venturi and Charles Jencks
Deconstruction – Fundamental beliefs and philosophy. Ideas of Peter Eisenman and Coop Himmelb(l)au.
Contribution to architectural thought by Kenneth Frampton, Christopher Alexander, Amos Rapoport. **08 hrs**

Unit 4: Design generation methods - Geoffrey Broadbent, Positive and Normative Theories in Architecture - Jon Lang.
Architectural Criticism – Definition & Sources, its role and function in thinking, discussing and writing on aesthetics in architecture. Types of Criticism according to Wayne Attoe. **08 hrs**

SIDDAGANGA SCHOOL OF ARCHITECTURE

Unit 5: Contemporary Theory – Arcology – ideas of Paolo Soleri**,** Phenomenology in architecture - works of Peter Zumthor, Plugin city, Walking city, Instant city – works of Archigram, Genius Loci - Christian Norberg-Schulz, Digital Architecture – works of Timothy Hartung, Duncan Hazard
Design Logic – Design generation process and role of logic and intuition in concept generation. Step by step development of design from problem definition, site analysis to post occupancy evaluation. **08 hrs**

COURSE OUTCOMES:

Students will be able to
CO1: Define various principles of aesthetics in architecture (L1)
CO2: Discuss the contribution of various architects to theory (L2)
CO3: Demonstrate the concepts of design proposed by architects (L3)
CO4: Interpret the theoretical rationale of the architects (L3)
CO5: Critique on the theories and their application in designing (L5)

CO6: Develop strong conceptual framework for architectural design (L5)

NOTE:
a. Book reviews of different authors mentioned in the above topics can be given as assignments.

REFERENCE BOOKS:
1. 'Design in Architecture' by Geoffrey Broadbent.
2. 'Creating Architectural Theory' by Jon Lang.
3. 'Theorizing a New Agenda for Architecture: An Anthology of Architectural Theory 1965 – 1995' by Kate Nesbit.

Viva: Evaluation of the project conducted during the semester. Viva voce examinations should be conducted by one internal examiner & one external examiner.
Integrated: Written examination and Evaluation of the portfolio conducted during the semester.
Written: Written examination at the end of the semester

SIDDAGANGA SCHOOL OF ARCHITECTURE

6ARL1 ARCHITECTURAL DESIGN-VI

Credit	: 08
Number of contact hours per week	: 08
Internal Assessment Marks	: 50
Mode of Examination	: VIVA
Examination Marks	: 50

OBJECTIVES:

1. To acknowledge the socio cultural, climatic and community aspects which nurture in the formation and development of a traditional and vernacular settlement
2. To introduce various spatial aspects of community design and their principles
3. To derive solutions for different housing projects based on the category of housing and the context
4. To design housing projects with appropriate site planning strategies and detailing involving various building services and other infrastructure facilities

OUTLINE:

- Study of traditional and vernacular settlements studied in history with respect to climate responsiveness, sense of community, socio cultural factors influencing design, principles, elements, context and materials. Study on use of theories of proportion into design.
- Introduction to aspects of community – public and private realms, edge conditions, connectivity, convenience, comfort, security, health, socio cultural aspects, sense of belonging and territoriality, modularity, Housing density etc.
- Projects such as housing for Low-cost housing, apartments, community housing etc. to be tackled. Housing projects of LRHD, HRHD, LRLD and HRLD could be addressed. Temporary housing like housing for deprived, disaster relief shelter etc. can be handled.
- Develop grid set out plan for individual units or cluster and to provide structural details like columns, beams, roofs etc. Providing basic service details like water supply, sanitation, rain water harvesting, etc.

COURSE OUTCOMES:

Students will be able to

CO1: Learn about the social, cultural and climatic aspects of human settlements and how they shape the settlements in traditional and vernacular contexts. (L1)

CO2: Design housing projects with various demands, scale and sense of community. (L5)

CO3: Address appropriate solutions for disaster relief shelters and temporary housing needs. (L4)

CO4: Detail out various structural, service oriented and infra-structure facilities required for a housing project at various levels of detailing. (L5)

SIDDAGANGA SCHOOL OF ARCHITECTURE

NOTE:

a. Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students.

b. Minimum of two architectural projects has to be tackled in the semester.

c. One of the design exercises can be carried out as group work to explore possibilities of students working as teams.

d. Vertical studio involving other semesters can be encouraged to carry out one full or part project.

e. The portfolio covering the above topics shall be presented for viva voce.

f. Projects to be presented with help of drawings, sketches and models. Application of techniques learnt in architectural presentation has to be incorporated.

g. Knowledge of the alternative materials and techniques taught in building construction can be incorporated into design and detailing.

h. The projects listed in the syllabus is only to state the scale and complexity. The projects of similar scope can be introduced by the teachers.

REFERENCE BOOKS:

1. 'Housing and urbanization', Charles correa.
2. 'The architecture of affordable housing', Sam Davis.
3. 'The housing design handbook-A guide to good practice', David Levitt and Jo McCafferty

6ARL2 BUILDING MATERIALS & CONSTRUCTION – VI

Credit	: 04
Number of contact hours per week	: 04
Internal Assessment Marks	: 50
Mode of Examination	: Integrated
Examination Marks	: 50

OBJECTIVES:

1. To illustrate construction systems and detailing of special doors, windows, partitions, structural glazing and cladding.
2. To introduce to various false ceiling materials and their fixing details.
3. To discuss the applications of glass and plastic for different building types.

OUTLINE:

Unit 1: Aluminum doors, windows and partitions. UPVC and FRP doors, windows and partitions.

Unit 2: Frameless glass doors and windows.

Contemporary façade systems - Structural glazing, AC sheet cladding, composite panel cladding – aluminum and fundermax panels, thermal insulation façade, and rain screen cladding.

Unit 3: False ceiling systems: Fiber board, plaster of Paris, particle board, wood wool, metals, straw and any other materials introduced in the market including acoustic ceiling.

Unit 4: Glass - its manufacture in its various types like plate, tinted, decorative, reinforced, laminated glass block, fiber glass, glass murals, partially colored glass, etching of glass and its applications in building industry for both exteriors and interiors. Glass fabrication techniques, fiber reinforced composite materials and products. (Commercial glass)

Unit 5: Plastics- types, properties and uses of plastics such as polycarbonates, acrylics, PVC polymer films, and fiber reinforced plastic. Building materials and components developed by research organizations like CBRI, NBO, and BMTPC.

COURSE OUTCOMES:

Students will be able to,

CO1: Explain the Construction detail of aluminum and plastic doors and windows [L2]
CO2: Evaluate the possibilities of contemporary façade systems. [L3]
CO3: Develop knowledge about false ceiling systems. [L1]
CO4: Examine the types and application of glass in construction industry. [L3]
CO5: Demonstrate the knowledge of plastic and its application. [L2]

NOTE:

a. Site visits to be arranged by studio teacher.

SIDDAGANGA SCHOOL OF ARCHITECTURE

b. Miniature models to scale should be done for the construction related topics.
c. Minimum one plate on each construction topic and study of material in the form of portfolio.
d. Market survey of materials should be carried out by students.
e. All the plates on construction and portfolio on material application shall be presented for viva voce.
f. Exercises through literature/case studies and drawings.

REFERENCE BOOKS:

1. 'Repair and Renovation of Modern Buildings' by Ian Chandler.
2. 'A Manual of Maintenance Engineering' by B. S. Nayak
3. 'Maintenance and Repairs of Buildings' P.K. Guha,
4. 'National Building Code of India (NBC 2016), SP7', Indian Standards Institution (ISI).

6ARL3 COMPUTER APPLICATION IV

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: Integrated
Examination Marks	: 50

OBJECTIVES:

1. To introduce the advanced applications of Revit.
2. To familiarize with the various plugins used for Revit.
3. To generate 3D models and renders using Revit V-ray for both interiors and exteriors.

OUTLINE:

Unit 1: Introduction to Revit MEP, Structures & Revit Dynamo.
Revit MEP- Introduction to workflow, general sketching and modify tools, inserting and editing components-Mechanical, Electrical and Plumbing. Working with views and spaces, adding and modifying mechanical equipment- HVAC Ducts and pipes, Plumbing fixtures and equipment's, electrical equipment's and lighting fixtures, creating and annotating construction documents.

Unit 2: Energy analysis & Quantity Take-off.
Setting the model location and climate for energy analysis. Generating reports of building performance.
Using schedules option to create material takeoff schedule.

Unit 3: Project planning and interior designing**.**

Unit 4: Advanced Realistic Interior and exterior rendering using V-ray in Revit architecture.
Introduction to tool settings in 3D rendering engines for photo-realistic rendering.
Application of materials and Simple Timeline animations, For e.g. using V-Ray.

SIDDAGANGA SCHOOL OF ARCHITECTURE

COURSE OUTCOMES:

Students will be able to,
CO1: Develop skills related to the advanced MEP detailing in Revit. (L3)
CO2: Identify the methods of estimating project using Revit. (L2)
CO3: Apply the rendering skills for interiors and exteriors using V-ray. (L3)

NOTE:

a. Classroom exercise detailing MEP services in a building.
b. Construction drawings using Revit MEP and structures.

c. Energy analysis report to be generated for the building.
d. Walkthrough and image rendering to be done of Architectural design project using V-ray for Revit.
e. A portfolio of Revit MEP and V-ray for Revit exercises and assignments done in the class to be submitted for progressive marking.

REFERENCE BOOKS:
1. Autodesk Revit 2022 User guide, Autodesk press.
2. Autodesk Revit 2022 MEP fundamentals, SDC Publications.
3. Autodesk Revit 2022 Structure fundamentals, SDC Publications.

6ARL4 STRUCTURAL SYSTEMS & BEHAVIOURS – VI

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: Integrated
Examination Marks	: 50

OBJECTIVES:
1. To introduce concepts of high-rise structures
2. To acquaint with various structural systems adaptable for resisting lateral loads.
3. To study structural properties and application of long span truss systems.

OUTLINE:
Unit 1: Moment resisting frame structures – Introduction to moment frames. Study the structural design concept, essential members & their role, load path. Design a moment frame for a space showing general framing arrangement and sizes of members using general thumb rules.
Unit 2: Braced Frame – Study of lateral structural systems to resist lateral loads (wind and seismic), general braced frame arrangement, load path analysis.
Unit 3: Shear wall system – Introduction to shear walls as lateral load resistance structural system. General shear wall framing arrangement, sizing and load path analysis.
Unit 4: Dual system – Introduction dual systems, concept of twin structural system typically shear walls (RCC) and moment resisting frames as combined resistance system to lateral forces. General dual framing arrangement, sizing and load path analysis.
Unit 5: Long span truss systems; Planar and Space truss –Introduction to structural properties & strength, assembly of simple triangular planar trusses & three-dimensional trusses and basic load path analysis.
Unit 6: Vierendeel Truss –Introduction to Vierendeel Truss **(**rectangular or square assembly of members with rigid joints capable of resisting bending moments). Discussion on general framing arrangement and basic load path analysis.

COURSE OUTCOMES:
Students will be able to,
CO1: Differentiate between various types of lateral structural systems and their application. (L2)
CO2: Apply principles and concepts of high-rise structural systems to design an appropriate high-rise structure. (L3)
CO3: Apply structural principles and concepts to design a long span truss system for a given building. (L3)

NOTE:

SHADAKANEA SCHOOL OF ARCHITECTURE

a. Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students.
b. Site visits to be arranged by studio teacher.
c. Miniature models should be made by students to analyse each of the structural systems.

REFERENCE BOOKS:

1. 'Structures' by Martin Bechthold, Daniel L Schodek
2. 'Structure in Architecture' by Mario Salvadori.
3. 'Building Structures Illustrated' by Francis D.K. Ching.
4. 'Building Construction Illustrated', by Francis D.K. Ching.
5. 'National Building Code of India (NBC 2016-SP-7)', Indian Standards Institution (ISI).

6AR01 CONTEMPORARY ARCHITECTURE – I

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVES:

1. To extrapolate the contribution of eminent International architects to Indian Architecture
2. To recognize eminent Indian Architects and focus on key design features Ideas and philosophies.
3. To discuss the contribution of various architects in shaping the built environment through their noted works
4. To draw inspiration from Innovative design ideas and use of new materials and technology by eminent architects
5. To sensitize the students toward context and climate responsive ideas in designing buildings.

OUTLINE:

Unit 1: Ideas and Works of Le-Corbusier – Capitol complex, Chandigarh: Legislative Assembly Building, High Court and Secretariat. Mill Owners' Building, Ahmedabad. Villa Shodhan, Ahmedabad.
Ideas & Works of Louis I Kahn – Indian Institute of Management, Ahmedabad.
Ideas & Works of Laurie Baker - Centre for Development Studies, Thiruvananthapuram, St. John Cathedral, Tiruvalla, The Hamlet, Thiruvananthapuram. **08hrs**

SIDDAGANGA SCHOOL OF ARCHITECTURE

Unit 2: Ideas and works of Joseph Allen Stein – India Habitat Centre- New Delhi, India International Centre – New Delhi, Triveni Kala Sangam – New Delhi.
Ideas and works of Habib rahman – Gandhi Ghat - Barrackpore, Rabindra bhavan – New Delhi, New Secretariat- Kolkatta.
Ideas and works of Balakrishna V Doshi - Sangath Office Building - Ahmedabad, Aranya housing, Indore, Indian Institute of Management- Bangalore. **08 hrs**

Unit 3: Ideas and works of Nari Gandhi – Mehta's Bungalow- Korlai, Jain House- Lonavala, Daya's Bungalow, Revdanda.
Ideas & Works of Charles Correa – Ramakrishna House - Ahmedabad, Kanchenjunga Apartments – Mumbai, Cidade De Goa- Goa, Bharat Bhavan- Bhopal.

Ideas & Works of Raj Rewal – Pragati maidan - New Delhi, Asian Games Village – New Delhi, Parliament Library – New Delhi, National Institute of Immunology, New Delhi. **08hrs**

Unit 4: Ideas and works of Uttam Jain - Campus Buildings- Jodhpur University, Habibganj Railway station- Bhopal, Aga Khan School, Mundra, Gujarat
Ideas and works of Achyut Kanvinde – IIT Kanpur, Nehru Science Centre- Mumbai, Administrative building, Dudhsagar Dairy Complex, Mehsana, Gujarat
Ideas and works of Ananth Raje – IIFM- Bhopal, Galbabhai Farmers' Training Institute - Banaskantha, Gujarat, MAFCO wholesale market - Mumbai. **08 hrs**

Unit 5: Ideas and works of Poppo Pingel – Udavi School – Auroville, Mukuduvidu and studio Naqshbandi- Auroville, Afsanah Guest House - Auroville.
Ideas and works of Christopher Charles Beninger – CDSA – Pune, SuzlonOneEarth Global Corporate Headquarters- Pune, The National Ceremonial Plaza – Thimphu.
Ideas and works of Sanjay Mohe – CARE Institute-Trichy, Karunashraya – Bengaluru, Sai Temple - Bengaluru. **08 hrs**

COURSE OUTCOMES:
Students will be able to,
CO1: Summarize the role of eminent international architects in shaping the architecture of India and their influence on the Indian architects (L2)
CO2: Demonstrate the response to context and climate through the works of the some of the contemporary architects and develop sensitivity in design of buildings (L3)
CO3: Compare the approaches to form and function by various architects (L2)
CO4: Recognize Innovative design ideas and use of new materials and technology by eminent architects (L2)
CO5: Draw Inspiration for their design through the Philosophies and works of eminent Indian architects. (L2)

NOTE:
a. Assignments to include study of concepts relating to cultural and religious systems, structure, climatic interfaces and integration of all these in the resultant forms.
b. Models, analytical studies and paper presentations individually or in groups.

REFERENCE BOOKS:
1. 'Contemporary Architecture' by Morgan, Ann Lee & Taylor Colin
2. 'Modem Architecture in India' by Bahga, Bahga and Bahga
3. 'After the masters' by Vikram Bhatt and Peter Scriver
4. 'A genealogy of Modern Architecture – Comparative critical analysis of built form' by Kenneth Frampton
5. 'Key buildings of the twentieth century' by David Dunster.

SIDDAGANGA SCHOOL OF ARCHITECTURE

6AR02 BUILDING SERVICES – IV
(Architectural Acoustics)

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVES:

1. To expound the basic terminologies associated with the sound and its properties.
2. To explain the behavior of sound in indoor and outdoor spaces.
3. To list out the materials used in acoustical design.
4. To apply the acoustical design ideas as per standards.
5. To evolve with the design ideas and strategies to mitigate noise.

OUTLINE:

Unit 1: Scope of Acoustics, Acoustical problem in contemporary Architectural Design, Sound Source, Path and Receiver. Properties of Sound Introduction to the study of acoustics - nature of sound, basic terminology - frequency, pitch, tone, sound pressure, sound intensity, decibel scale, loudness, threshold of audibility and pain, masking, sound and distance - inverse square law **08 hrs**

Unit 2: Behaviour of sound in enclosed spaces - reflection of sound, nature of reflection from plane, convex and concave surfaces, sound diffraction, Absorption of sound, sound absorption coefficient, reverberation, reverberation time calculation. **08 hrs**

Unit 3: Sound absorbents, porous materials, panel or membrane absorbers and cavity or Helmholtz resonators, role of functional absorbers. Absorption coefficients of indigenous acoustical materials. **08 hrs**

Unit 4: Acoustical design requirement for halls used for speech, drama and music - general purpose halls used for speech and music, cinema theatres, home theatres, recording studios and open air theatres. Study of auditoria designed and acoustically treated. IS code 2526- 1963. **10 hrs**

Unit 5: Introduction to environmental noise control, noise and its classification, outdoor and indoor noise, airborne noise and structure borne. Transmission of noise and transmission loss. STC Rating. Idea of Sick building syndrome. Means of noise control and sound insulations. Constructional measures of noise control and sound insulation. Industrial and Urban noise - methods of reduction by enclosures and barriers. Traffic planning and design against outdoor noise for air traffic, road traffic and rail traffic. **08 hrs**

COURSE OUTCOMES:

Students will be able to,

CO1: Define various terminologies related to sound and its properties. (L1)

CO2: Discuss behaviour of sound in indoor and outdoor environment and its effects on building design. (L2)

CO3: Identify indigenous acoustical materials and their applications. (L2)

CO4: Apply principles of acoustical design to detail various performance and speech-oriented spaces. (L3)

CO5: Develop sensitivity in design towards external and internal noise mitigation. (L3)

NOTE:

a. Design exercises involving the above topics. (Minimum 2 exercises)

b. Outdoor and indoor design criteria.

c. Relationship of forms & shapes of plans with respect to sound.

SIDDAGANGA SCHOOL OF ARCHITECTURE

REFERENCE BOOKS:

1. 'Environmental acoustics' by Leslie L. Doelle.
2. 'Architectural Acoustics' by David Egan.
3. 'Acoustical design in buildings' by Knudsen Ver
4. 'Acoustics – Noise and Buildings' by Patrich Peter.

6AR03 BUILDING ESTIMATION AND SPECIFICATIONS

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVES:

1. To expose the students to the different types of estimates, their preparation for different types of structures.
2. To familiarize with methods of taking out quantities, specifications for different types of structures, measurements, rate analysis of building items, types of contract, preparation of contract documents.

OUTLINE:

Unit 1: Introduction, Importance of Estimation in Civil Engineering. Different type of Estimates, Methods of estimations, study of various drawings with estimates, Concept of measurement, Units of Measurement.
Estimation-Methods of taking out quantities and cost by centre line method and long wall and short wall method. Preparing of detailed and abstract of estimates for the Buildings of flat and slopes roof. **09 Hrs**

Unit 2: Building Components - RCC Beams, RCC Columns and Column Footings, RCC Roof slabs, water supply and sewage, miscellaneous works like manhole, septic tank, steel truss and industrial sheds

Specifications-Definition of specifications, objective of writing specifications, essentials of specifications, general and detail specifications of item of work in buildings, RCC 1:2:4 in roof slab, column and beams, Damp proof course 2.5cm thk in c.c 1:1.5:3 in plinth. First class brick work in cm 1:6 in superstructure, Plastering in cm 1:6, 1:4 in brick works. Pointing in cm 1:1, 1:2, 1:3 in brick work or stone work, Cement concrete flooring 2.5 cm thick, Mosaic/marble flooring, White washing, color washing and distempering, Painting wood work. **09 Hrs**

Unit 3: Rate Analysis - Definition and purpose. Working out quantities and rates for thefollowing standard items of works - earth work in different types of soils, cement concrete of different mixes, bricks and stone masonry, flooring, plastering, RCC works, centering and form work for different RCC items, wood and steel works for doors, windows and ventilators**.07Hrs**

Unit 4: Measurement of Earthwork For Roads- Methods for computation of earthwork -Cross sections - mid section formula or average end area or mean sectional area, trapezoidal &prismoidal formula with and without cross slopes. **07Hrs**

Unit 5: Contracts - Types of contract-essentials of contract agreement- legal aspects, penal provisions on breach of contract. Definition of the terms-Tender, earnest money deposit, security deposit, tender forms, documents and types. Pre-qualification tenders, Comparative statements,

SIDDAGANGA SCHOOL OF ARCHITECTURE

acceptance of contract documents and issue of work orders. Duties and liabilities, arbitration, termination of contract, completion certificate, quality control certification, right of contractor, refund of deposit. Administrative approval-Technical sanction. Nominal muster roll, measurement books-procedure for recording and checking measurements preparation of bills. **07 Hrs**

NOTE:
a. Estimation of quantities for a Two Bedroom residence.

COURSE OUTCOMES:

The student will be able to,
CO1: Estimate quantity and cost of the building and its components, septic tank, manhole, beams, columns, etc., as per standard procedures. (L3)
CO2: Estimate quantity and cost of septic tank, manhole, beams, columns and write specifications for different civil engineering items., as per standard procedures. (L3)
CO3: Prepare rate analysis from first principles for various civil items. (L3)
CO4: Estimate quantity and cost of different types of roads. (L3)
CO5: Write departmental procedures for preparing contracts, agreements, legal aspects, tenders etc. (L2)

REFERENCE BOOKS:

1. 'Estimating & Costing in civil engineering- theory and practice including Specifications & valuation', B.N. Dutta.
2. 'Estimating, Costing, specification & valuation in Civil Engineering', N. Chakraborti.
3. 'Valuation of Real properties', S.C.Rangwala.
4. 'Estimating, costing and valuation', S.C.Rangwala.

6ARE ELECTIVE-I

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: VIVA
Examination Marks	: 50

SIDDAGANGA SCHOOL OF ARCHITECTURE

LIST OF ELECTIVES

ARE -1 ART IN ARCHITECTURE
ARE -2 PRODUCT DESIGN
ARE -3 ALTERNATIVE BUILDING TECHNOLOGIES

ARE -1 ART IN ARCHITECTURE

OBJECTIVES:
1. To familiarize with the role of art in history of world architecture.
2. To identify the application of different art forms in architecture.
3. To familiarise with the role of visual communication in architecture.
4. To study the works of different artists and architects that reflect the interrelationship between art and architecture.

OUTLINE:
Role of art in history of world architecture; Symbiotic relationship of folk art and architecture; application of different art forms in architecture; Visual communication in architecture and way finding; Works of different artists and architects that reflect the inter relationship.

COURSE OUTCOMES:
Student will be able to,
CO1: Identify the role of art in history of world architecture. (L2)
CO2: Identify the application of different art forms in architecture. (L2)
CO3: Identify the role of visual communication in architecture. (L2)

ARE -2 PRODUCT DESIGN

OBJECTIVES:
1. To familiarize with the concept of form and space in product design.
2. To recognize the relationship between form and material and the process of manufacture.
3. To demonstrate a prototype product design.

OUTLINE:
Concept of form and space in product design; Relating Form to Materials and Processes of Manufacture. Creativity techniques; product detailing and manufacture; exploratory mock-up models for concept development, refinement and detailing; product design prototyping and advanced manufacturing processes.

COURSE OUTCOMES:
Student will be able to,
CO1: Identify the relationship between form and space in product design. (L2)
CO2: Identify the relationship between form and material and manufacturing process in product design. (L2)
CO3: Demonstrate a prototype product design model. (L3)

ARE -3 ALTERNATIVE BUILDING TECHNOLOGIES

SIDDAGANGA SCHOOL OF ARCHITECTURE

OBJECTIVES:
1. To gain insight into the different alternative cost-effective technologies available in modern context.
2. To strengthen the understanding of various appropriate technologies and systems as evolved over time.

OUTLINE:
Strengthen knowledge and understanding of appropriate technologies and cost-effective technologies, Technologies as evolved from contexts through the practice of international architects and Indian architects; Systems and techniques developed in research labs, etc. correction, and excellent printing output.

COURSE OUTCOMES:
Student will be able to,
CO1: Identify the appropriate alternative building technologies as per the context of the project. (L2)

CO2: Apply appropriate cost effective technologies as per project context and requirement. (L3)

NOTE:

1. The electives offered could be decided by the department depending on the expertise available.
2. The detailed syllabus for the elective subject will be worked by the experts as and when the requirement arises.

NHS03 CONSTITUTION OF INDIA AND PROFESSIONAL ETHICS

Credit	: 00
Number of contact hours per week	: 02
Internal Assessment Marks	: 50
Duration of Examination	: 3hrs
Examination Marks	: 50

OBJECTIVES:

1. To introduce the students to the basic structure, fundamental rights and duties enshrined in the constitution of India.
2. To introduce to the system of governance at the centre and the states.
3. To enlighten the students about the method of amendment to the constitution and special provisions of constitution.
4. To enable the students to imbibe ethical practices and moral values.
5. To learn from the life story of leaders such as Sir M Visvesvaraya.

OUTLINE:

Part I: Constitution of India

Unit 1: Introduction to Constitution of India

Salient Features of Indian Constitution, Preamble to the Indian Constitution, Different kinds of fundamental rights, Directive Principles of State Policy, Categorical study of Directive Principles, Relationship between DPSP and Fundamental Rights, Fundamental Duties. Meaning and kinds of human rights and safeguards. **06 Hrs.**

SIDDAGANGA SCHOOL OF ARCHITECTURE

Unit 2: Union and State Governments

Union and State Legislature: Composition and powers of Loksabha, Rajyasabha, Legislative Assembly and Legislative Council. Union and State Executive: The appointment and powers of President, Vice-president, Prime-Minister, Union Council of Ministers, Governor of State, Chief Minister of State and State Council of Ministers. Union and State Judiciary: The Composition and powers of Supreme Court and High Court. **07 Hrs.**

Unit 3: Other Provisions of Constitution

Method of amendment of constitution of India, 42nd and 44th amendment act. Special provisions relating to SC / ST, Women and Children and other backward classes. Electoral process related to the Election Commission of India: Composition, functioning and removal of the Election Commissioner(s).

Human Rights: Meaning, Kinds and Safeguard of Human Rights, State Human Rights Commission and National Human Rights Commission. **05 Hrs.**

Part II -Professional Ethics

Unit 4: Professional Ethics and Human Values

Introduction, What is Ethics? Scope of Professional Ethics, Values and Characteristics, Types of values: Negative and positive values, Ethical values for Professional success. ***Case Studies*:** Ethical practices of the reputed Indian Companies: TATA Group, Wipro Technologies. **4 Hrs.**

Unit 5: Professional Code of Conduct

Introduction, Professional Code, Legal System, Ethical and Unethical practices, Making the Professional Code successful. Ethical values of Sir M. Visvesvaraya, Mahatma Gandhi and Swami Vivekananda. **4 Hrs**.

COURSE OUTCOMES:

On successful completion of the course, the student will be able,

CO1: To orient students on the salient features of the Indian Constitution with special emphasis on fundamental rights and duties. (L1)

CO2: To provide an overview of the Union and State legislature, executive and judiciary. (L1)

CO3: To explain the importance of electoral process and help students appreciate the ethical practices in elections. (L2)

CO4: To facilitate the students to have a clear perspective of the Ethical values and their relevance in the present context of globalization. (L2)

CO5: To enable the students familiarize themselves with the ethical values proposed and practiced by the great leaders / eminent personalities with particular reference to Sir M. Visvesvaraya. (L2)

Viva: Evaluation of the project conducted during the semester. Viva voce examinations should be conducted by one internal examiner & one external examiner.
Integrated: Written examination and Evaluation of the portfolio conducted during the semester.
Written: Written examination at the end of the semester

SIDDAGANGA SCHOOL OF ARCHITECTURE

7ARL1 ARCHITECTURAL DESIGN-VII

Credit	: 08
Number of contact hours per week	: 08
Internal Assessment Marks	: 50
Mode of Examination	: Viva voce
Examination Marks	: 50

OBJECTIVE:

- To introduce students to principles of inclusive design
- To interpret symbolism in architecture and its various expressions through elements of Architecture
- To create an architectural insert for given program as a landmark in the given context.
- To apply the knowledge of advanced roofing techniques and modular construction techniques in detailing the building.

OUTLINE:

- Overview of practical rules of thumb related to MEP services, firefighting and acoustics. Study of NBC, ZR, green building rating and other building regulations and their implications on design.
- Introduction to Inclusive design – principles and elements. Formal, informal and interactive public spaces.
- Projects such as Legislative assemblies, GPO, Govt. Administrative complexes, high-rise mixed-use towers, cultural complexes, transit nodes, stadium and sports complexes, shopping mall, urban recreation center and other urban landmarks can be selected as studio projects.
- Design and detailing of advanced building techniques, modular construction, pre-engineered structures incorporated in design.

COURSE OUTCOME:

Students will be able to

CO1: Interpret the need for creating architecture as an envelope to system dependent program. (L3)

CO2: Use appropriate technologies developed in other fields as a precursor to creating architecture (L4)

SIDDAGANGA SCHOOL OF ARCHITECTURE

CO3: Create symbolic and aesthetic thematic abstracts and imagery in influencing architecture. (L6)

CO4: Explore the possibilities of using innovative and advanced roof structures in design. (L3)

Note:

a. Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students.

b. Minimum of two architectural projects has to be tackled in the semester.

c. One of the design exercises can be carried out as group work to explore possibilities of students working as teams.

d. Vertical studio involving other semesters can be encouraged to carry out one full or part project.

e. The portfolio covering the above topics shall be presented for viva voce.

f. Projects can be presented using appropriate computer aided tools
g. New alternative construction techniques can be incorporated into design and detailing.
h. The projects listed in the syllabus is only to state the scale and complexity. The projects of similar scope can be introduced by the teachers.

REFERENCE BOOKS:

1) Elizabeth M. Golden, "Building from Tradition: Local Materials and Methods in Contemporary Architecture", 2018, Routledge.
2) Russell Fortmeyer, Charles F. Linn, " Kinetic Architecture: Designs for Active Envelopes", 2014, The Images Publishing Group.
3) Lisa Iwamoto, "Digital Fabrications: Architectural and Material Techniques", 2009, Princeton Architectural Press.
4) Building Examples of contemporary architects.

7ARL2 INTERIOR DESIGN

Credit	: 04
Number of contact hours per week	: 05
Internal Assessment Marks	: 50
Mode of Examination	: Viva voce
Examination Marks	: 50

OBJECTIVE:

- To introduce various concepts and aspects of interior design.
- To design interiors of a residential or commercial unit.
- To explore various interior surface materials and finishes.

OUTLINE:

- Introduction to interior design and its history of evolution.
- Basics of interior design - concepts of interior space making/furniture layout, elements of interior design, lighting design, and selection of materials, finishes & colors. Understanding the proportions to enhance the quality of interior space and its psychological effects of space.
- Projects like residences, small offices, retail outlets and other small-scale commercial buildings.
- Detailing of interior elements such as ceiling, flooring, walls, furniture, lighting, etc.

SIDDAGANGA SCHOOL OF ARCHITECTURE

COURSE OUTCOME:

Students will be able to,
CO1: Design the interior space using various concepts and elements of interior design. (L6)
CO2: Detail out various interior elements. (L3)
CO3: Justify the use of various surface materials, finishes and colors. (L5)

NOTE:

- The class work shall include two interior design projects (one major and one minor) to be handled with complete design, detailing, furniture layout, specification for the materials, and their application.

- The projects shall relate to residential, commercial, educational or interiors of other public spaces.

REFERENCE BOOKS:

1) "Human Dimension and Interior Space" by Julius Panero & Zelnik Martin
2) "Design of Interior Environment" by Alexander and Mercourt
3) “Interior Design Fundamentals” Steven B Weber.
4) “Time saver standards for interior design and space planning” by Julius Panero, Zelnik Martin & Joseph De Chiara

7ARL3 WORKING DRAWING

Credit	: 03
Number of contact hours per week	: 04
Internal Assessment Marks	: 50
Duration of Examination	: Integrated
Examination Marks	: 50

OBJECTIVES:

- To recognize the significance of working drawings in the construction of buildings.
- To illustrate the essential components of working drawings, notations & drawing standards.
- To prepare working drawings for a building elements.

Unit 1: Introduction to working drawing, its purpose and importance in building construction. Methods of representing various contents & specific information in working drawings. Study of building byelaws and preparation of sanction drawings.

Unit 2: Preparation of center-line drawing, excavation drawings, foundation/footing drawings. Preparation of working plan. Exterior and interior elevations and sections.

Unit 3: Schedule of openings and door, window details. Detailing of various building elements like Staircase and railing, skylights, etc.

SIDDAGANGA SCHOOL OF ARCHITECTURE

Unit 4: Services – Electrical layout, Water supply and sanitary drawing. Flooring, tiling and dadoing details. Interior Details of Toilet and Kitchen layout etc.,

Unit 5: Site detailing - Site plan showing hardscape and softscape details. Basic water supply, sewage layout and site drainage.

COURSE OUTCOME:

Students will be able to,

CO1: Distinguish between architectural drawing, sanction drawings and working drawings. (L2)
CO2: Prepare set of working drawings for construction. (L3)
CO3: Develop detailing of various site and building elements. (L3)
CO4: Organize different building services for any given structure. (L3)

NOTE:

a. One design project handled in the earlier semester can be chosen to execute complete set of working drawings.
b. Exercises related each unit has to be carried out distinctively.
c. Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students in groups.
d. Studio teachers can arrange for construction site visits for field supervision.

REFERENCE BOOKS:

1) "The Working Drawing: The Architect's tool" by Mario Carpo
2) "Working Drawings Handbook" fourth edition by Keith Styles

7ARL4 EARTHQUAKE RESISTANT STRUCTURES

Credit	:02
Number of contact hours per week	:03
Internal Assessment Marks	:50
Mode of Examination	: Integrated
Examination Marks	:50

OBJECTIVE:

- To introduce the basic terminologies associated with the Earthquake phenomenon.
- To study Vernacular Architecture details and Earthquake resistant design concepts.
- To discuss the process of vulnerability assessment of buildings and settlements.
- To introduce the design codes and building configuration required for Earthquake resistant design.
- To explore different building materials and their construction details adoptable in seismic prone area.

SIDDAGANGA SCHOOL OF ARCHITECTURE

Unit 1: Elementary Seismology - Building Safety from natural Hazards: Introduction to earthquake. History of past earthquakes in the world and in India. Earthquake Hazards. Role of Disaster management and mitigation centre.
Earths structure. Plate tectonics. Pangaea, Types of Faults. Earthquake Zones of India. Elementary Seismology. Seismic. Waves, Magnitude, Intensity. Seismological Instruments: Seismograph, Accelorograph, and Richter scale.
Earthquake effects on structures - Factors affecting Earthquake Loads on buildings. Load paths. Characteristics of Earthquake ground motion. Natural period of vibration. Free vibration response of a building. Deformation shapes of buildings at different frequencies.

Unit 2: Concepts of Earthquake resistant design - Seismic Design philosophy and code requirements; (IS code 1893-2002). Planning Considerations /Shapes / Building forms, Horizontal and vertical eccentricities, Mass and stiffness distribution, soft storey etc./ seismic effects related to building configuration, Plan and vertical irregularities. Vernacular constructions Architectural design Concepts. (IS 4326-1993)

Unit 3: Vulnerability Assessment of Existing Buildings through case studies- Assessment and retrofitting needs, Seismic Evaluation, Visual Inspection & Study of Drawings; Check list, In-situ Testing, Modelling and Analysis.
Vulnerability Assessment of Urban Areas/ Cities through case studies- Rapid Screening and Check List, Building Bye-Laws, Building Typology Studies; Classification of Buildings, Experiment on Liquefaction, MRF, MRF with braces. MRF with shear wall. Using Shake table. Performance Levels for Retrofitting.

Unit 4: Guide lines for improving earthquake resistance - Earthen buildings (IS 13827: 1993), Low strength Masonry buildings (IS:13828-1993), Masonry Buildings, R.C.C. Buildings. Ductile R.C. structures (IS13920-1993), MRF and Shear walls.
Design and detailing for Geotechnical considerations for design of foundations, Liquefaction and remedial measures. Basic concepts of Seismic base isolation.
Behaviour of Non-structural elements like staircases, parapets, glazing, cladding panels, suspended ceiling, Mechanical services equipment's etc.

Unit5: Earthquake safe construction of New Buildings – General Precautions; Check list, Detailing of Earthquake Resistance Practices.

COURSE OUTCOME:
Students will be able to,
CO1: Explain the basics of seismology and its effects on building. (L1)
CO2: Analyze the impacts of earthquake on building. (L4)
CO3: Formulate procedure for vulnerability assessment of buildings. (L3)
CO4: Design buildings considering the principles of earthquake resistance. (L6)
CO5: Implement the process of retrofitting post calamity. (L3)

NOTE:
a. Exercises related each unit has to be carried out distinctively.
b. Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students in groups.
c. Portfolio shall contain one project to the scale of site planning and Earthquake resistant construction detailing of at-least one or more blocks has to be addressed.
d. Studio teachers can arrange for construction site visits for field supervision.

SIDDAGANGA SCHOOL OF ARCHITECTURE

REFERENCE BOOKS:
1) Manual of EQR, Non-engineered construction, Indian Society of Earth Quake Technology, Roorkee.
2) NPEEE Resource material for Earthquake Design Concepts.
3) "Earthquake resistant design of structures" by Pankaj Agrawal and Manesh Shrikande.
4) "Earthquake resistant design of building structures" by Dr Vinod Hosur.
5) "Learning earthquake design and construction- earthquake tips" IIT Kanpur- NICEE

7ARL5 ENERGY CONSCIOUS ARCHITECTURE

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: Integrated
Examination Marks	: 50

OBJECTIVE:

1. To discuss impacts of human settlements on the earth's ecosystems, atmosphere and climate change.
2. To introduce various national and international mitigations adapted to reduce impact.
3. To design spaces those are energy conscious.

OUTLINE:

- Introduction to energy conscious architecture. Need for energy consciousness–Impact of human civilizations on the earth's major ecosystems- Forests, Oceans & Atmosphere and climate change Assessing the impacts - Consumption, Carbon Footprint, and Ecological Footprint.
- National and International mitigations taken through regulations and building rating systems. Introduction to National and International rating systems like LEED ISGBC, GRIHA, BREEAM, CASBEE, LEED USGBC, etc. National codes like NBC and ECBC.
- Design projects like institution buildings, recreational spaces, convention centres, etc to reduce building energy consumption and incorporate green rating compliances.
- Detailing out strategies used to reduce energy consumption.

COURSE OUTCOME:

Students will be able to:

CO 1: Explain the need for energy conscious architecture. (L2)
CO 2: Distinguish various national and international mitigations for climate change. (L2)
CO 3: Apply strategies for efficient utilization of resources in building design. (L3)
CO 4: Design energy conscious buildings. (L4)

NOTE:

a. Relevant case studies and literature studies should be given by the studio teachers and report has to be compiled by the students.
b. Design assignments can be taken up, implementing energy efficient ideas.
c. The portfolio covering the above topics shall be presented for viva voce.
a. Students should be taken for Case study / field visits pertaining to energy efficient buildings.
b. Students can be introduced to various softwares that are used for energy simulation, Ecotect, Design Builder, Equest, etc.

SIDDAGANGA SCHOOL OF ARCHITECTURE

REFERENCE BOOKS:

1. IPCC(Intergovernmental Panel on Climate change) AR-5 (Assessment Report 5), 2014.
2. Mili Majumdar (Editor); Energy Efficient Buildings in India; The Energy and Resources Institute, TERI (28 February 2009)

4. Energy Conservation Building Code (ECBC) 2017; Bureau of Energy Efficiency, Ministryof Power, Government of India.

7AR01 CONTEMPORARY ARCHITECTURE-II

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVES:

1. To provide the analytical skills and critical appreciation of the buildings of contemporary architects around the world.
2. To analyze the buildings in terms of composition of form, function, construction and materials in the contemporary world.
3. To interpret the contemporary built environment through elements of design, Design ideas, context and theory derived by various architects in different context and influences.
4. To sensitize the students towards the use of innovative materials related to new typology.

Unit 1: Ideas & Works of Richard Meier – Smith House - Connecticut, Getty Centre - Brentwood, Los Angeles & Jubilee Church Rome
Ideas and works of Norman Foster - Hong Kong Shanghai Bank, Renault Distribution Centre - England & Zayed National Museum – Abu Dhabi.
Ideas & Works of Renzo Piano – Pompidou Centre – Paris, Zentrum Paul Klee- Bern & Jean - Marie Tjibaou Cultural Centre – Tinu Peninsula **8 hrs**

Unit 2: Ideas and works of Bernard Tschumi- Park de la Villete – Paris & New Acropolis Museum –Athens, Paul& Henri Carnal Hall, Institut Le Rosey, Rolle, Switzerland
Ideas and works of Frank Gehry – Vitra Design Museum – Germany, Guggenheim Museum – Bilbao & Museum of Pop Culture - Seattle
Ideas and works of Zaha Hadid – Heydar Aliyev Cultural Canter – Baku, London Aquatics Center- London &Maxxi National Museum - Rome **8 hrs**

SIDDAGANGA SCHOOL OF ARCHITECTURE

Unit 3: Ideas and works of Daniel Leibskind - Jewish Museum – Berlin, Ground Zero - New York & Denver Art Museum - Colorado
Ideas and works of Santiago Calatrava - Lyon-Satolas Railway Station, Olympic Stadium-Athens & Turning Torso - Sweden
Ideas and works of Rem Koolhaas - The CCTV building - Beijing, The Maison à Bordeaux – France& Seattle Central Library – Seattle **8 hrs**

Unit 4: Ideas and works of I M Pie - Pyramide Du Louvre - Paris, Museum of Islamic Art – Doha & Luce Memorial Chapel – Taiwan
Ideas & works of Jean Nouvel – Louvre Abudhabi, 100 Eleventh Avenue- Manhattan & DR Koncerthuset - Copenhagen
Ideas & Works of SOM Architects – The Willis Tower, 1973, Chicago Burj Khalifa – Dubai, Sheikh Khalifa Medical City – Abu Dhabi **8 hrs**

Unit 5: Ideas and works of Geoffrey Bawa - Kandalama Hotel - Dambulla, Bawa House – Colombo & Srilankan Parliament Building

Ideas and Works of Hassan Fathy - New Gourna Village - Luxor, Hamid Said house – Cairo & Ceramics Factory in Qina - Egypt
Ideas and works of Tadao Ando - Church of light - Osaka, Naoshima contemporary Art museum – Japan & Water Temple – Japan **8 hrs**

COURSE OUTCOME:
Students will be able to,
CO1: Appraise the contribution of world-renowned Architects (L2)
CO2: Analyze the response to context and climate through the works of the some of the contemporary architects and can develop sensitivity in design buildings responding to climate, context etc, (L3)
CO3: Critique the approaches to form and function by various architects (L3)
CO4: Recognize Innovative design ideas and use of new materials and technology by eminent architects (L2)
CO5: Draw Inspiration for their design through the Philosophies and works of eminent architects. (L3)

NOTE: Assignments to include study of concepts relating to cultural and religious systems, structure, climatic interfaces and integration of all these in the resultant forms.
Models, analytical studies and paper presentations individually or in groups.

Reference Books:
1. Richard Meier, Architect Volume 4, Rizolli Publishers
2. Norman Foster: A Global Architecture (Architecture/Design Series)
3. Renzo Piano: The complete Log book
4. Architecture & Disjunction - Bernard Tschumi
5. Building Art: The life & work of Frank Gehry
6. The Complete Zaha Hadid - Aaron Betsy
7. Santiago Calatrava: Drawing, Building, Reflecting
8. Rem Koolhaas: Elements of Architecture
9. I M Pei: A profile in American Architecture

7AR02 PROFESSIONAL PRACTICE

SIDDAGANGA SCHOOL OF ARCHITECTURE

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: 03 hrs
Examination Marks	: 50

OBJECTIVE:

- To familiarize the characteristics and duties of the profession.
- To explain the importance of the provisions of the Architect's Act 1972 and it' regulations.
- To extract the role of architect in the management of contracts.

Unit 1: Architect and profession- Introduction, profession, its characteristics and essential difference between profession and other occupations. Owner's expectation from an architect, ethics. Architect's profession: Duties and liabilities.

Architectural practice: Office management, business development, accounts. Types of architectural organizations and laws relating to architectural practice, general administration. **08 hrs**

Unit 2: The Architect's Act 1972- Introduction, council of architecture, its main functions, registration of architects, architect's (professional conduct) regulations 1989. Conditions of engagement, scope of comprehensive services.
Architectural competitions – its purposes, guidelines, conditions, types of competitions, classification of competitions, competition organization, step by step procedure to conduct architectural competition. **08 hrs**

Unit 3: Tenders - Introduction, objective of tendering, technical terms, tenders based on economic classification, method of inviting tenders, notice inviting tenders, prerequisites for tendering, issues encountered on opening of tenders and suggested guidelines.Receipt and opening of tenders, evaluation of tenders.Selection of contractor – public tenders, pre-qualification and post-qualification of contractors, limited tenders and single tenders, nomination.Award of contract.Issue of work order. **08hrs**

Unit 4: Management of contracts -Introduction, contract, objective of contract management, technical terms, the Indian contract act 1872, types of contracts. General conditions of contract, performance bond, damages for non-completion, determination of contract, interim payment, completion certificate, virtual completion certificate, penultimate certificate, interim and final certificate, materials, fluctuations, variations, defective work, defect liability period, arbitration, excepted matters, disputes in contract and architect's role in resolving such disputes.
Supervision- Definition, its characteristics, duties of an architect, engineer in charge, site visits, site meeting, co-ordination with various agencies, site book and site office. **08hrs**

Unit: 05 Arbitration - Definition, Arbitration and conciliation act 1996, arbitrator, umpire, order of reference, selection of arbitrators, powers and duties of arbitrators, arbitration award and implementation of award.
Valuation and Dilapidation - Definitions and architect's role in preparation of valuation and dilapidation reports and certifications. Physical and Economic life of buildings. Introduction to valuation, essential characteristics, classifications and purpose of classifications. Methods of valuation, standard rent and cost of construction.
Byelaws and easements - Building byelaws, National Building Code, floor area ratio, floor space index, floating FAR, zoning regulations.
Easements, various easement rights, architect's role in protecting easement rights. **08 hrs**

SIDDAGANGA SCHOOL OF ARCHITECTURE

COURSE OUTCOME:
Students will be able to,
CO1: Summarize the responsibilities and liabilities of the profession.(L2)
CO2: Toadapt to the role of the provisions of the Architect's Act 1972 and it'regulations, with architectural competitions. (L2)
CO3: List and explain the types of tenders with their process and procedures for a particulartype of project. (L1)
CO4: Identify the importance and role of architect in contract management. (L3)
CO5: Explain the importance of building bye-laws and zoning regulations.(L2)

Reference Books:

1. 'Professional Practice for Architects, Engineers and Builders', Second edition by K.G.Krishnamurthy and S.V.Ravindra
2. 'Professional Practice for Architects and Engineers', Lakhani Book by Roshan Namavathi
3. 'Legal Contractual Procedures for Architects' by Bob Greenstreet

7ARE ELECTIVE -II

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: Viva-voce
Examination Marks	: 50

OUTLINE:

To expose students to specialized areas of architecture.

List of Electives

7ARE1: Urban design
7ARE2: Parametric design
7ARE3: Universal Design

7ARE1 URBAN DESIGN

OBJECTIVE:

- To recognize the scope and nature of urban design as a discipline.
- To familiarize various documentation/ mapping techniques of Urban Design
- To learn to analyze and interpret works and theories of eminent urban designers.

OUTLINE:

Interdisciplinary nature of urban design, Factors affecting urbanism-built form, Social aspects of urban design. Tools and techniques; Understanding various tools through which an urban setting could be perceived. Works and theories of eminent urban designers.

SIDDAGANGA SCHOOL OF ARCHITECTURE

COURSE OUTCOME:

Students will be able to,

CO1: Understand the role of urban design as a discipline, and its role in understanding and interpreting a city. (L2)

CO 2: Address urban design issues in terms of awareness creation as well as with possible ways to address them through various readings (L4)

CO 3: Learn tools and techniques for mapping urban places (L3)

7ARE2 PARAMETRIC DESIGN

OBJECTIVE:

- To introduce to Parametric Architecture and Computational designing tools.
- To develop proficiency in Rhino modelling of complex NURB surfaces.
- To illustrate and explain the algorithmic coding in Grasshopper, visual programming language.
- To explore iterative design solutions through parametric modelling software.

OUTLINE:

Introduction to parametric architecture & computational design. Basics & working of computational design - algorithms & coding. Introduction to software's like rhino & grasshopper. Basic modelling & form generation using these software's. Theory & application of logic & concepts in form generation.

COURSE OUTCOME:

Students will be able to

CO1: Develop proficiency in Rhino & grasshopper modeling (L3)
CO2: Apply the algorithmic logic in the design process (L5)
CO3: Generate iterative solutions using parametric modeling (L5)

7ARE5 UNIVERSAL DESIGN

OBJECTIVE:

1. To introduce the concept of 'Universal Design', a design paradigm that extends far beyond the bias on the able-bodied in architecture.
2. To widen the scope of the conceptual architectural thinking and strengthen the design skills to achieve social sustainability through design by addressing needs and abilities of all sections of the society.

OUTLINE:

This course will introduce students to Universal Design (UD) and its principles. It focuses on the basic issues that create the biggest impact on usability of the physical environment — the interaction between human ability (and disability) and the design of places, products, and systems. The focus of the course is on the usability of spaces, buildings, objects, and interfaces based on human ability. The student will develop an understanding of human ability and its importance in defining both disability and usability. 'Harmonised Guidelines & standards for Universal accessibility in India' will be introduced, to help in architectural design and detailing.

COURSE OUTCOME:

Students would be able to,

CO1: conduct accessibility audits (L4)
CO2: Provide solutions to issues of universal accessibility **(**L5)
CO3: Design & detail considering Universal accessibility (L6

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institution affiliated to VTU, Belagavi, Approved by AICTE, New Delhi, Accredited by NAAC with 'A' grade & ISO 9001:2015 Certified)

B ARCHITECTURE

SCHEME OF TEACHING AND EXAMINATION (260 Credits Scheme)
Applicable to the students admitted during 2019-20

VIII Semester

Sl. No.	Course and Course Code	Course Title	Teaching / Paper setting Dept.	Teaching hrs/week				Examination					Credits
				Lecture	Studio	Seminar/ Drawing	Self Study Component	Duration in hrs.	Mode of Exam	CIE Marks	SEE Marks	Total Marks	
				L	S	SD	SS

		Total								**50**	**50**	**100**	**27**

Viva: Evaluation of the project conducted during the semester. Viva voce examinations should be conducted by one internal examiner & one external examiner.
Integrated: Written examination and Evaluation of the portfolio conducted during the semester.
Written: Written examination at the end of the semester

SIDDAGANGA SCHOOL OF ARCHITECTURE

8ARPT PROFESSIONAL TRAINING

Credit	: 20
Internal Assessment Marks	: 50
Mode of Examination	: Viva Voce
Examination Marks	: 50

OBJECTIVE:
To expose students to the diverse facets of architectural practice

OUTLINE:
The aim of introducing one complete term for the students to undergo practical training is to expose them to the world of Professional Practice and get hands on training under the guidance of a professional who is actively engaged in Architectural Practice. It will give the students first-hand experience of dealing with live projects of various nature and also the site experience to see how the projects get built on the site. The students will also be able to learn about the Office Management, Project Management, Contract Management, Human Resource Management, new techniques of construction, advanced building services, landscape and environmental designing etc. This rich experience is expected to enhance the students' ability to think comprehensively and better prepare them for undertaking the Architectural Project work in the final semester.

Guidelines:

(1) The term of Practical Training will commence after the examination of VII semester and will continue till the end of VIII semester or thereabout. The students are expected to work in the organization where architecture and its related practice are carried out and under the guidance of the professional who is registered with Council of Architecture. In case the student opts to go abroad he / she will work under the guidance of the professional who is registered with the council / any other organization controlling the profession of Architecture in the respective country. The students will decide very carefully about their placement venue as it is expected that they learn best ethics in Professional Practice and which produces quality architecture.

(2) Student will have to maintain a weekly record of their engagement for the period of training. This will be recorded in an authorized log-book to be counter-signed by architect at the end of each month.

(3) At the end of the training period, student will have to procure a certificate of training and satisfactory performance from the concerned office in the prescribed form.

(4) Certificate of satisfactory completion of training same shall be submitted the College, along with the report and drawings made during the training period and appear for Viva-voce.

(5) The total duration of the training will be minimum 16 working weeks / 90 working days

SIDDAGANGA SCHOOL OF ARCHITECTURE

NOTE:

i) The viva-voice marks shall be awarded based on the following works submitted by the student and presented during the viva.

a. **Training Report:** This shall contain copies of various drawings done by the student either drafted or designed. It shall also contain other works like photographs of sites visited, models done, computer output produced etc.,

b. **Building Study:** This shall be a detailed critical study of a building designed by the architect with whom the student has worked. It shall include the study of function, aesthetics, context, structure etc., This shall be presented through drawings, photographs, write ups etc.

c. **Building Material Study:** This shall be a detailed study of a new or relatively new building material available in the market. A study of its properties, uses, cost, maintenance etc., is expected to be done. Samples of materials shall also be obtained and presented.

ii) Students shall work only in architectural firms functioning over 5 years and headed by an architect registered with Council of Architecture, New Delhi.

iii) In case of architectural firms abroad, the Principal Architect of the firm should hold the title of architect under the law of that country.

iv) A candidate failing in the viva examination shall repeat the training afresh for 16 weeks, the starting date coinciding with the beginning of a subsequent semester.

COURSE OUTCOME:

Students will be able to:

CO1: Acquire a real-time exposure of how architectural projects are carried out (L4)

CO2: Gain Knowledge regarding office management and team work to enhance the employability (L3)

SIDDAGANGA SCHOOL OF ARCHITECTURE

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

SCHOOL OF ARCHITECTURE

DETAILED SYLLABUS FOR
NINTH SEMESTER
B. ARCHITECTURE

9ARL1 ARCHITECTURAL DESIGN –VIII

Credit	: 12
Number of contact hours per week	: 12
Internal Assessment Marks	: 50
Mode of Examination	: Viva
Examination Marks	: 50

OBJECTIVES:

1. To introduce students to various layers of understanding and analyzing urban areas
2. To interpret the role of architecture in urban domain and public realm
3. To create architectural spaces as extension of private domain in a public building to respond to the urban context

OUTLINE:

The role of urban space as a public realm and the need to create such spaces as extension of private domain in a public building shall be investigated and shall become one of the architectural goals.

Introduction to Urban analysis – reading urban tissues, analyzing the area, listing the key issues.

Derive architectural program to fit into the fabric and enhance the character of place.

Large scale urban insert projects such as transport interchanges, large scale retail areas, entertainment nodes, sports complex, mixed use developments can be handled.

Incorporating principles of energy conservation, zero energy building, minimum ecological footprint and other concepts to design.

COURSE OUTCOMES:

Students will be able to,

CO1: Read and document urban contexts and understand the idea of urban space.(L2)
CO2: Differentiate between urban design as opposed to urban development.(L2)
CO3: Explore the role of architecture in shaping urban fabric.(L3)
CO4: Create Architecture that fits into a specific urban context.(L6)

NOTE:

a. Relevant case studies and literature studies can be given by the studio teachers and report has to be compiled by the students.
b. Minimum of two architectural projects have to be tackled in the semester.
c. The portfolio covering the above topics shall be presented for viva voce.
d. Projects can be presented using appropriate computer aided tools.
e. Urban design techniques to enhance character of place can be explored.

REFERENCE BOOKS:

1. "The image of the city" by Kevin Lynch
2. " A theory of Good city Form" by Kevin A lynch
3. "Townscape" by Gordon Cullen
4. "Urban Space" by Rob Krier
5. " Public Places Urban Spaces: The Dimensions of Urban Design" by Matthew Carmona

9ARL2 RESEARCH SKILLS AND PROJECT INTRODUCTION

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: Viva
Examination Marks	: 50

OBJECTIVES:

1. To introduce students to research methods in Architecture
2. To analyze architectural concepts, ideas and systems in a systematic method
3. To develop a strong research question to which students can answer through their design
4. To compile the existing knowledge systems about the topic chosen and carve out an architectural program suitable to address the issues raised

OUTLINE

Pre-Project – The work involves students to discuss with the faculty to identify an area of interest or specific types of Structures. The pre project stage should end with a project proposal giving routine information on site, location, need, broad requirements and scale. In addition, the proposal should clearly indicate the "project question" or an area (or areas) of interest.

Students shall present a seminar on a project topic which would include the following

- Identification of topic/area of research interest
- Statements – aims, objectives
- Scope and feasibility of the project
- Research through Literature Study, precinct study etc
- Identification of categories/ parameters
- A detailed analysis and outcomes/research findings.
- Identify the Architectural proposals for exploration of research findings.

Architectural proposals shall include:

- Precedents of similar project, either actual visit to such projects or through literature reviews.
- Cultural, contextual, historical, technological, programmatic, functional concerns of the project.

A rhetorical of speculative statement that would be the basis of further investigation. Documentation which is part of this presentation shall be taken as completion of final requirement.

COURSE OUTCOMES:

Students will be able to

CO1: Learn basic architectural research skills.(L1)
CO2: Appraise various architectural research methods and methodologies.(L3)
CO3: Critically analyze architectural ideas and buildings to develop strong constructs.(L4)
CO4: Prepare an architectural program as a solution to the issues raised through literature study.(L5)

NOTE:

a. The course shall run on a one to one discussion mode.
b. Students shall be allotted guides after finalizing their topic of concern through seminar.

c. Students shall be promoted to document and published quality research papers out of their work done during the semester.

9AR01 URBAN AND REGIONAL PLANNING

Credit	: 04
Number of contact hours per week	: 04
Internal Assessment Marks	: 50
Duration of Examination	: 3hrs
Examination Marks	: 50

OBJECTIVES:

1. To familiarize the concepts of Urban and Rural settlements
2. To understand settlements as an expression of culture, influenced by climate and geographical location
3. To understand the dynamics of human settlements, both past and present, through various theories and approaches
4. To introduce the impact of urbanization and explain the merits and demerits of the transformation
5. To understand the relationship between various land uses and density and various components of infrastructure and services
6. To study various methods and techniques of data collection and analysis
7. To discuss concept and requirement of Regional planning principles

Unit 1: Introduction - Introduction to urban planning and Urban Design and its principles addressing the physical and social challenges that towns, villages, and cities face as they grow or decline. Urban settlements and Rural settlements, Relation between urban and rural settlements, differences, origins, evolution and growth of settlements. Major functions of a city, city forming and city serving functions. History of Planning - Characteristics and planning efforts of cities and towns of various historical periods like Egyptian, Roman, Greek, Medieval and Renaissance.
Cities of Indus valley period, Vedic period, Mughal period and British period. **12hrs**

Unit 2:
Planning Theories - enunciated by Ebenezer Howard, Patrick Geddes, Soria Y Mata, Doxiadis, Le-Corbusier, Clarence Stein, Clarence Arthur Perry, Hilberseimer, Lewis Mumford.
Indian city planners: Charles Correa, B V Doshi **12hrs**

Unit 3: Land Use Planning - Internal spatial structure of cities - concentric zone theory, sector theory, multiple nuclei concept and work-home concept. Land use planning, analysis of land uses in Indian cities.
Components of a settlement - activity pattern and land use, traffic and road network, density of population and population distribution.
Central business district of a city, other business districts, urban nodes, fringe area and suburbs.
Introduction to environmental factors, terrain and soils, neighborhood planning, subdivision concepts, mapping and platting, street layout and design, provision of utilities - electricity, gas, water, sanitary sewer and storm sewers and drainage. Interaction with state and local government, organization of these governments, and general public works activities. **12hrs**

Unit 4: Urbanization and Urban Renewal -Industrial Revolution and its impact on the contemporary cities. Urbanization and urban growth, impact on physical growth of urban settlement.
Causes and consequences of urban blight and obsolescence, slums and shanties, prevention of formation of slums and squatter settlements.

Urban renewal– Definition, rehabilitation, redevelopment and conservation.
Introduction to the new concepts of urban development like Self sustained communities, smart cities, Transit oriented Development (TOD) and Special Economic Zone (SEZ) **12hrs**

Unit 5: Planning Techniques - Study and analysis of existing settlements, methodology of conducting diagnostic surveys and studies, land use survey, density survey, FSI survey, traffic surveys and presentation of data. Environmental and management issues. Introduction to GIS analysis methods in urban planning.
Regional Planning - Relation among various settlements of a region, pattern of settlements in a region. Definition of a region, various types of regions, basic principles of regional planning. **12hrs**

COURSE OUTCOMES:
Students will be able to,
CO1: Explain basics of urban planning in terms of its evolution and growth.(L1)
CO2: Emphasize the need for planners to learn design, and designers to learn planning; to illustrate various planning theories.(L2)
CO3: Gain knowledge and identify the spatial structure, components and physical factors affecting feasibility and economics of a city.(L3).
CO4: Analyze the contemporary trends in urbanization and urban redevelopment & to recognize the relevant planning techniques adopted for the analysis of urban areas.(L2)
CO5: Differentiate between urban, rural and regional planning.(L2)

NOTE:
a. Seminar with selected readings and presentations to be made individually or in groups. Submission in the form of Poster and report.

REFERENCE BOOKS:
1. 'The urban pattern: city planning and design' by Gallion and Eisner
2. 'Urban and regional planning' by Ramegowda
3. 'Principles of planning' by Lewis Keeble
4. 'The city shaped' by Spiro Kostof
5. 'Regional planning' by Mahesh Chand and Puri.
6. 'Regional planning' by R K.Mishra.

9AR02 CONSTRUCTION PROJECT MANAGEMENT

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Duration of Examination	: 3hrs
Examination Marks	: 50

OBJECTIVES:
1. To familiarize students with the construction industry and its organizational structure
2. To equip students with concepts of project planning and execution techniques needed for building projects
3. To introduce various software applications and equipment's in the construction industry

Unit 1: Introduction to Construction Project management, Principles, objectives and need for construction project management. Types of construction projects, Knowledge (study) areas in a construction project and management, various stakeholders in a construction project.

Construction project organization- Types of construction firms/ companies, Types (or structure) of construction organization, study of organizational structures suitable for building and construction projects, the role of the various members of a typical construction organization (General manager, project manager, engineer, supervisor, etc) qualities of an ideal construction organization, ethics in construction industry. **08hrs**

Unit 2: Construction planning and scheduling- Project management stages- Overview of Project planning, project scheduling and project controlling, Time, cost and resource management in construction.
Project planning- Life cycle stages in a construction project, Preparation of Work Break Down Structures and Sequencing of Activities (Activity definition, Activity Sequencing, Estimation of Resource Requirements, Time & Cost for an Activity, Development of project Schedule) **08hrs**

Unit 3: Construction management techniques- Project scheduling- Preparation of Schedules using Bar chart, Milestone charts, Precedence diagrams.
Networking theories and rules (for CPM and PERT analysis)- Basic concepts (Event, activity, dummy), rules for developing networks, graphical guidelines for network, numbering of events, errors in network, difference between PERT & CPM. **08hrs**

Unit 4: Project Networks- Networking and analysis using CPM, Project networking and cost analysis using CPM, Indirect project cost, direct project cost, slope of the direct cost curve, calculation of total project duration and cost using CPM network diagram.
Project networking and analysis using PERT, calculation of total project duration and cost using PERT network diagram. Brief understanding of about time, cost and resource optimization.
Introduction to software applications in Construction Management – Use of Software applications like MS Project, Primavera etc. for preparing and managing schedules. **09hrs**

Unit 5: Construction Equipment- The role of equipment/machinery in construction industry, factors affecting selection of construction machinery, standard versus special equipment, and understanding of the various issues involved in owning, operating and maintaining of construction equipment, economic life of a equipment.
Types of construction equipment: Brief description of earth moving (tractors, excavators, dragline, trenching equipment, etc.,) transporting (various types of trucks), spreading and compacting (motor graders and various types of rollers) and concreting equipment (including concrete mixers, transporting and pumping equipment) **08hrs**

COURSE OUTCOMES:
Student will be able to:
CO 1: Differentiate between various organizational structures suitable for construction industry.(L2)
CO 2: Identify various stages or steps involved in execution of a construction project work.(L3)
CO 3: Explain the role of various players or stakeholders in a construction project.(L2)
CO 4: Calculate minimum time duration with optimal expenditure, for a given project.(L3)
CO 5: Identify various equipment's used in construction industry and also select appropriate equipment for each construction work.(L3)

NOTE:
a. Use of computers to be encouraged although the same is not for the Examination purposes.
b. Students must be encouraged to study and document case studies of live construction projects.

REFERENCE BOOKS:
1. 'Construction Planning, Equipment and Methods' by R L Peurifoy
2. 'Project Management for Architects' IIT, Kharagpur, 1974, by S P Mukopadhyay

3. 'Pert and CPM' by L S Srinath.
4. Project planning and control with PERT and CPM by Dr. B C Punmia
5. Construction and Project Management by S V Ravindra and K G Krishnam.
6. Construction Project Management by Kumar Neeraj Jha, Pearson's Publications Pvt. Ltd. Codes and standards.
7. NBC 2016 – Part 7 (SP-7)
8. IS 15883 (Part 1): Guidelines for construction project management: Part 1 General 2009.
9. IS 13430: 1992 Code of practice for safety during additional construction and alteration to existing buildings.

9ARE ELECTIVE- III

Credit	: 02
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: Viva
Examination Marks	: 50

9ARE-1: Architectural Conservation

OBJECTIVES:

1. To introduce various aspects of Heritage and its conservation
2. To realize the importance of heritage documentation, consolidation and analysis of data
3. To introduce various Heritage management systems and integrated conservation approach

OUTLINE

This elective is to introduce students to understand Heritage and the need for conservation of historical structures. The students shall understand the process to be followed for conserving any heritage structures, the conventions and charters which defines the guidelines nationally and internationally will for responsible protection of heritage.

COURSE OUTCOMES:

Students will be able to,

CO1: Explain basic of Heritage Conservation and process of interventions.(L2)

CO2: Gain knowledge of world heritage norms, National and International charters and its significance in safeguarding the heritage.(L1)

CO3: Explore various documentation techniques and proposal strategies for the heritage site. (L3)

9ARE-3: Environmental Impact Assessment

OBJECTIVES:

1. To introduce students to the importance and process of Environmental impact assessment.
2. To help achieve a sustainable project or development.

OUTLINE

Environmental Impact Assessment (EIA) can be defined as the systematic identification and evaluation of the potential impacts of proposed projects, plans, programs or legislative actions relative to the physical, chemical, biological, geological, social, economic, and aesthetic dimensions along with their complex interactions, which affects individuals, communities and ultimately determines their forms, character, relationship, and survival.

The purpose of environmental impact assessment is to guarantee a sustainable development that is in harmony with human welfare and the conservation of ecosystems and hence it should be clearly understood

by all concerned. This course provides an understanding of the objectives, methods and phases of conducting EIA.

COURSE OUTCOMES:
Students would be able to,
CO1: Assess and present intangible/unquantifiable effects of a proposal. (L4)
CO2: Plan and design with analysis of the total environment. (L5)
CO3: Provide alternatives to a proposal, in order that the least environmentally harmful means of achieving the given objective can be chosen. (L5)

9ARE-5: Biomimicry

OBJECTIVES:
1. To understand 'Boimimicry' in architecture
2. Reconnect with nature: learning to observe nature by function
3. To understand and explore how biology can be integrated with nature inspired design
4. To examine how the 'biomimicry approach' can influence sustainable designs and innovations

OUTLINE
This elective is to introduce students to understand Biomimicry and explore the biological component that can influence the design approach. Application of nature-inspired approaches from historical to contemporary architecture and in sustainable practices.

COURSE OUTCOMES:
Students will be able to,
CO1: Appreciate and understand cross disciplinary design practice of Biomimicry.(L2)
CO2: Understanding of Biomimicry & its relevance in design.(L3)
CO3: Appreciate the importance of 'reconnection/ connection' with nature.(L4)
CO4: Understanding how this can inform sustainable solutions.(L3)
CO5: Understanding and being able to 'integrating biology in design'.(L3)

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institution affiliated to VTU, Belagavi, Approved by AICTE, New Delhi, Accredited by NAAC with 'A' grade & ISO 9001:2015 Certified)

B ARCHITECTURE
SCHEME OF TEACHING AND EXAMINATION (260 Credits Scheme)
Applicable to the students admitted during 2018-19

X Semester

Sl. No.	Course and Course Code	Course Title	Teaching / Paper setting Dept.	Teaching hrs/week				Examination					Credits
				Lecture	Studio	Seminar/ Drawing	Self-Study Component	Duration in hrs.	Mode of Exam	CIE Marks	SEE Marks	Total Marks	
				L	S	SD	SS						
1.	10ADP	Architectural Design Project			20		5		Viva	50	50	100	**25**

SCHOOL OF ARCHITECTURE

DETAILED SYLLABUS FOR
TENTH SEMESTER
B. ARCHITECTURE

10ADP ARCHITECTURAL DESIGN PROJECT

Credit	: 25
Number of contact hours per week	: 25
Internal Assessment Marks	: 50
Mode of Examination	: Viva
Examination Marks	: 50

OBJECTIVES:

1. To demonstrate ability to comprehend the nature of architectural problem
2. To create a brief or program which can set the frame work for design solution
3. To give appropriate solutions to the issues raised through architectural design
4. To detail the architectural systems and facilities as according to the objectives of the project

OUTLINE:

Architectural Design projects can be of any scale and size (in terms of built areas) as long as the required rigor and depth is demonstrated by the student to merit consideration as a final project. It is expected that all genre of projects (study or design) would end with a design solution; in fact all projects should be grounded in some kind of critical enquiry.

The stages can be fine-tuned depending on the resources. It is expected that this project will be run as a studio with individual guidance under a project coordinator and assisted by guides.

1. **Project seminar** – Student shall present a seminar on the project topic which would include the following;

i. Precedents of similar projects, either actual visit to such projects or through literature reviews.

ii. Cultural, contextual, historical, technological, programmatic concerns of the project.

iii. Prevalent or historical models of architectural approach to such projects and a critique of such models and

iv. A rhetorical or a speculative statement that would be the basis of further investigation. (For example: Architecture in the information age: Design of libraries in the new virtual reality regime). Documentation which is a part of this presentation shall be taken as completion of "case study" part of the final requirement

2. **Mid Reviews** – There shall be a review to clarify the conceptual statements and assumptions of the students. Students shall present a clearly articulated response to context, programme and users. Conceptual framework and preliminary architectural scheme shall be the end products of this stage.
3. **Final Review** – Final review should consist of all the works which would be presented at the viva.

COURSE OUTCOMES:

Students will be able to,

CO1: Execute advanced level design ability to convert the brief set forth earlier into a speculative proposition of design. (L6)

CO2: Articulate and delineate the propositions of design into an architectural solution addressing all the dimensions. (L6)

CO3: Apply knowledge of allied subjects learnt in the earlier semesters to detail their projects. (L3)

CO4: Interpret architectural design theories in solving real time architectural problems. (L4)

NOTE:

a. Completion of Research skills and project introduction (VII sem) is mandatory to carry Architectural Design Project.
b. The final output shall include a report, all drawings, study models and a presentation model.
c. The report in printed form shall discuss the programme, site- analysis, literature review, case studies, design criteria, concept and detailed design.
d. Detailed study on any topic related to the project has to be done during the semester.
e. Two copies of the reports shall be submitted along with drawing and models.
f. At the time of Viva examination, the student shall show to the jurors the portfolio containing the evolution of his/her design from the beginning to the final output.
g. All the drawings and reports shall be certified by the Head of the Department as bonafide work carried out by the student during the semester.

10ARE ELECTIVE- IV

Credit	: 03
Number of contact hours per week	: 03
Internal Assessment Marks	: 50
Mode of Examination	: Viva
Examination Marks	: 50

10ARE-2: DISASTER MANAGEMENT

OBJECTIVES:

1. To familiarize students with the disaster management cycle
2. To create awareness about natural disasters and factors that cause them
3. To foster knowledge about strategies for disaster prevention and management

4. To familiarize students with various disaster resistant construction techniques according to the type of disaster or natural hazard

OUTLINE

- Introduction to disaster management, understanding terminologies like hazards, risk and vulnerability, Types of disasters like Earthquake, Tsunami, Cyclone, Flood and Landslide, their causes, adverse effects, distribution patterns, Disaster management cycle, Indian scenario.
- Case studies on above mentioned disasters (National and international), inferences derived from such case studies and actions taken in post disaster scenarios.
- Guidelines for management of Floods, River Erosion, Cyclones Tsunami, Landslides & Avalanches, Forest Fires. Disaster Management Act, Guidelines, NDMA (National Disaster Management Authority). Vulnerability Assessment & Warning systems for above said disaster types, Programmes and strategies for disaster reduction, Pre disaster, emergency, transition, and recovery. Disaster management plan, National and state crisis management groups/committees.
- Risk reduction measures through land use control, site planning and land management, design and construction of structures for above mentioned disasters.

COURSE OUTCOMES:

Students would be able to,

CO1: Explain the concept of a disaster management cycle. (L1)

CO2: Differentiate between the various types of natural disasters and factors that cause them. (L2)

CO3: Adopt suitable strategies for disaster prevention and management based on the type of disaster. (L3)

CO4: Demonstrate knowledge of various disaster resistant construction techniques according to the type of disaster or natural hazard. (L1)

10ARE-4: ARCHITECTURAL JOURNALISM

OBJECTIVES:

1. To introduce writing on architecture as a method to study and interpret the built environment through analysis, criticism and review.
2. To equip the students with the fundamentals, relevant skills and techniques of various genres of architectural writing and journalism.

OUTLINE

- Overview and objectives of role of writing and journalism in architecture; Writing and Journalism skills: research, writing, editing and criticism. Introduction, scope and constraints of print, audio and visual architectural journalism in the context of newspapers, radio, film, and television. Roles of an architectural journalist as a reporter, reviewer, cartoonist, interviewer, feature writer and specialist writer.

- Techniques and methods of expressing an architectural narrative or description through forms of creative writings such as fiction, poetry, travel writing, blogging which are based on architecture or employ architecture as a context.
- Techniques and methods of researching, analyzing and critiquing architecture through forms of analytical writings such as research papers, journal writings and critical essays.
- Techniques and methods of recording, authenticating and examining architecture through documentation and technical writings.
- Role of an architect as a writer and journalist in scripting the narrative of architecture; Topics relevant and needed in an architectural journals and current issues; Mass Media and Public Opinion – critique of architecture through new age journalism and technology; Issues of code of ethics, copyright, royalty, publishing rights and policies; Citation and plagiarism.

COURSE OUTCOMES:
Students will be able to,
CO1: Study and interpret the built environment through analysis, criticism and review in the form of writing. (L2&L3)
CO2: Develop relevant skills and techniques for various genres of architectural writing like design interpretation, creative writing, analytical writing, documentation, technical writing (research paper), etc. (L3)

10ARE-5: RURAL PLANNING & INFRASTRUCTURE

OBJECTIVES:
1. To understand settlements as an expression of culture, influenced by climate and geographical location.
2. To understand the planning process, and various types of plans, especially in India.
3. To study various methods and techniques of data collection and analysis.
4. To understand the relationship between various land uses and density.
5. To understand the various components of infrastructure and services.
6. To enable students to inter relate various typologies of land uses to related infrastructure and services.

OUTLINE
This elective is to introduce students to understand the difference between Urban and Rural settlements and to understand the rural physical setting wrt social and economical aspects. The students shall understand the process of documenting the rural settlement, its physical setting, Occupation structure and living environment. The infrastructural requirements and incentives by government towards rural development will be studied.

COURSE OUTCOMES:
Students will be able to,

CO1: Gain knowledge of rural settlements wrt land utilisation, social and economic aspects.(L1)
CO2: Explore the principles and concepts of environment and ecological sciences and their connection with planning.(L2)
CO3: Explore various documentation techniques and proposal strategies for the rural infrastructure and physical development.(L3)

10ARE-6: UNIVERSAL DESIGN

OBJECTIVE:
To introduce the concept of 'Universal Design', a design paradigm that extends far beyond the bias on the able-bodied in architecture.
To widen the scope of the conceptual architectural thinking and strengthen the design skills to achieve social sustainability through design by addressing needs and abilities of all sections of the society.

OUTLINE:
This course will introduce students to Universal Design (UD) and its principles. It focuses on the basic issues that create the biggest impact on usability of the physical environment — the interaction between human ability (and disability) and the design of places, products, and systems. The focus of the course is on the usability of spaces, buildings, objects, and interfaces based on human ability. The student will develop an understanding of human ability and its importance in defining both disability and usability. 'Harmonised Guidelines & standards for Universal accessibility in India' will be introduced, to help in architectural design and detailing.

COURSE OUTCOME:
Students would be able to,

CO1: Conduct accessibility audits (L4)
CO2: Provide solutions to issues of universal accessibility (L5)
CO3: Design & detail considering Universal accessibility (L6)

9	NCMC	NMC01	National Service Scheme (NSS)	NSS	All students have to register for any one of the courses namely National Service Scheme, Physical Education (PE) (Sports and Athletics) and Yoga with the concerned coordinator of the course during the first week of III semester. The activities shall be carried out from III semester to VIII semester (for 5 semesters). **SEE for the courses shall be conducted during VIII semester examinations** and the accumulated CIE marks shall be added to the SEE marks. Successful completion of the registered course is mandatory for award of the degree. The events shall be appropriately scheduled by Dean Academic and the same shall be reflected in the calendar prepared for the NSS, PE and Yoga activities.								
		NMC02	Physical Education (PE) (Sports and Athletics)	PE									
		NMC03	Yoga	Yoga									
		NMC04	NCC	NCC									
Course prescribed to Lateral Entry Diploma holders admitted to III semester B.E. programs													
1	NCMC	N3MATDP	Foundation of Engineering Mathematics - I	Maths	2	2	0		-	100	-	100	0
		AAP	AICTE Activity Points (Applicable for both Regular and Lateral Entry students)	40 hours community service to be documented and produced for the examination									

Note: **BSC**: Basic Science Course, **IPCC**: Integrated Professional Core Course; **PCC**: Professional Core Course,
HSMC: Humanity and Social Science & Management Courses, **AEC** –Ability Enhancement Courses. **UHV**- Universal Human Value Courses
L –Lecture, **T** – Tutorial, **P**- Practical/ Drawing, **S** – Self-Study Component, **CIE**: Continuous Internal Evaluation, **SEE**: Semester End Examination

NSH01 Balake Kannada is for students who can't speak, read and write Kannada.
NSH02 Samskrutika Kannada is for students who can speak, read and write Kannada.

Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with Practicals of the same course. Credit for IPCC can be 04 and its Teaching – Learning hours (L : T : P) can be considered as (3: 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from practical part of IPCC shall be included in the SEE question paper.

INT1 - Inter/Intra Institutional Internship: All the students admitted to engineering programs under the **lateral entry category** shall have to undergo mandatory INT1 Inter/Intra Institutional Internship of 03 weeks during the **intervening period of III and IV semesters**. The internship shall be slated for CIE only and will not have SEE. The letter grade earned through CIE shall be included in the IV semester grade card. The internship shall be considered for vertical progression and for the award of degree. Those, who do not take up / complete the internship shall be declared fail and shall have to complete subsequently after satisfying the internship requirements. The faculty coordinator or mentor shall monitor the students' internship progress and interact with them for the successful completion of the internship.

Non-Credit Mandatory Course (NCMC):

(A) Foundation of Engineering Mathematics - I & II

(1) These courses are prescribed for III and IV semesters respectively to **lateral entry Diploma holders** admitted to III semester of B.E. programs. They shall attend the classes during the respective semesters to complete all the formalities of the course and appear for the Continuous Internal Evaluation (CIE). In case, any student fails to register for the said course/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have secured an F grade. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks. **These courses are slated for CIE only and have no SEE.**

(2) Foundation of Engineering Mathematics I and II shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.

(3) Successful completion of the courses Foundation of Engineering Mathematics I and II shall be indicated as PP in the grade card. Non-completion of the courses Foundation of Engineering Mathematics I and II shall be indicated as NP.

(B) National Service Scheme/Physical Education (Sport and Athletics)/Yoga:

(1) Securing 40 % or more in CIE, 35 % or more marks in SEE and 40 % or more in the sum total of CIE + SEE leads to successful completion of the registered course.

(2) In case, students fail to secure 35 % marks in SEE, they have to appear for SEE during the subsequent examinations conducted by the Institute.

(3) In case, any student fails to register for NSS, PE or Yoga/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have not completed the requirements of the course. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks.

(4) Successful completion of the course shall be indicated as PP in the grade card. Non-completion of the course shall be indicated as NP.

(5) These courses shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.

Ability Enhancement Course – III (Offered by the Department)

N3CCSA01	**Unix and Shell Programming**	N3CCSA03	
N3CCSA02	**MS Office and Latex**	N3CCSA04

The practical part shall be evaluated by only CIE (no SEE). However, questions from practical part of IPCC shall be included in the SEE question paper.

Internship of 04 weeks during the intervening period of IV and V semesters; INT2 Innovation/ Entrepreneurship/ Societal based Internship.

(1) All the students shall have to undergo a mandatory internship of 04 weeks during the intervening period of IV and V semesters. **The internship shall be slated for CIE only and will not have SEE.** The letter grade earned through CIE shall be included in the VI semester grade card. The internship shall be considered as a head of passing and shall be considered for vertical progression and for the award of degree. Those, who do not take up / complete the internship shall be considered under F (fail) grade and shall have to complete subsequently after satisfying the internship requirements.

(2) **Innovation / Entrepreneurship Internship** shall be carried out at industry, State and Central Government / Non-government organizations (NGOs), micro, small, and medium enterprise (MSMEs), Innovation centres or Incubation centres. Innovation need not be a single major breakthrough; it can also be a series of small or incremental changes. Innovation of any kind can also happen outside of the business world. Entrepreneurship internships offers a chance to gain hands on experience in the world of entrepreneurship and helps to learn what it takes to run a small entrepreneurial business by performing intern duties with an established company. This experience can then be applied to future business endeavours. Start-ups and small companies are a preferred place to learn the business tactics for future entrepreneurs as learning how a small business operates will serve the intern well when he/she manages his/her own company. Entrepreneurship acts as a catalyst to open the minds to creativity and innovation. Entrepreneurship internship can be from several sectors, including technology, small and medium-sized, and the service sector.

(3) **Societal or social internship**. Urbanization is increasing on a global scale; and yet, half the world's population still resides in rural areas and is devoid of many things that urban population enjoy. Rural internship is a work-based activity in which students will have a chance to solve/reduce the problems of the rural place for better living. **As proposed under the AICTE rural internship programme, activities under Societal or social internship, particularly in rural areas, shall be considered for 40 points under AICTE activity point programme.**

Scheme of Teaching, Examination and Syllabus

B.E. ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

Batch: 2021-22

III SEMESTER

(Effective from the academic year 2022-2023)

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE

SEMESTER - III

OBJECT ORIENTED PROGRAMMING WITH C++

Course Code	N3CCSI01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:2)	SEE Marks	50
Credits	04	Exam Hours	3

Course objectives:

This Course will enable students to:

1. Make use of the fundamental concepts of object oriented programming.
2. **Develop** object oriented code by using C++ language.
3. **Create** and make use of objects from predefined class libraries.
4. **Develop** C++ classes from specifications.
5. Make use of interfaces, inheritance, and polymorphism as programming techniques.
6. Make use of exceptions for error free code.
7. **Develop** robust and reliable software using object oriented programming.

Module-1 **(8L+0Thrs)**

Principles of Object-Oriented Programming and Functions : A look at Procedure Oriented Programming, Object Oriented Programming Paradigm, Basic Concepts of Object Oriented Programming, Benefits of OOPS, Object Oriented Languages, Applications of OOP, Reference Variables, Operators in C++, Scope Resolution Operator, Memory Dereferencing Operators, Memory Management Operators, Manipulators, Function Prototyping, Call by Reference, Return by Reference, Inline Functions, Default Arguments, Const Arguments, Function Overloading.

Classes and Objects: C Structure Revisited, Specifying a Class, Defining Member Functions, A C++ Program with Class, Making an Outside Function Inline, Nesting of Member Functions, Private Member Functions, Arrays within a Class, Memory Allocation for Objects, Static Data Members, Static Member Functions, Array of Objects, Objects as Function Arguments, Friendly Functions, Returning Objects.

Practical questions on: Reference variables, Operators in C++, Scope Resolution Operator, Memory Dereferencing Operators, Memory Management Operators, Manipulators, Main Function, Function Prototyping, Function Definition, Call by Reference, Return by Reference, Inline Functions, Friend Function, Static Functions, Virtual Functions, Function Overloading, Classes and Objects, Nesting of Member Functions, Array of Objects, Objects as Function Arguments, Friend Functions and Returning Objects.

Module-2 **(8L+0T hrs)**

Constructors and Destructors: Constructors, Parameterized Constructors, Multiple Constructors in a Class, and Constructors with Default Arguments, Dynamic Initialization of Objects, Copy Constructors, Dynamic Constructors, and Destructors.

Operator overloading and type conversions: Introduction, Defining operator overloading, Overloading Unary and Binary operators, Overloading binary operators using friend function, Manipulation of strings using operators, Rules for overloading operators, type conversions.

Practical questions on: Parameterized Constructor, Constructors with Default Arguments, and Multiple Constructors in a Class, Dynamic Initialization of Objects, Copy Constructors, Dynamic Constructors, and Destructors

.

Module-3 **(8L+0T hrs)**

Inheritance: Introduction, Defining Derived Classes, Single Inheritance, Making a Private Member Inheritable, Multi-Level Inheritance, Multiple Inheritance, Hierarchical Inheritance, Hybrid Inheritance, Virtual Base Classes, Abstract Classes, Constructors in Derived classes, Nesting of Classes.

Pointers, **Virtual functions and polymorphism:** Introduction, Pointers, Pointers to Objects, This pointer, Pointers to Derived Classes, Virtual Functions, Pure Virtual Functions.

Practical questions on: Single Inheritance, Multi-Level Inheritance, Multiple Inheritance, Hierarchical Inheritance, Hybrid inheritance, Virtual Base Classes, Abstract Classes, Constructors in Derived Classes, Nesting of Classes, Pointers to Objects, This Pointer, Pointer to Derived Classes, Virtual Functions, Pure Virtual Functions.

Module-4 **(8L+0T hrs)**

Working with Files: Introduction, Classes for File Stream operations, opening and closing Files, detecting end of file, Open() file modes, File pointers and their manipulations, sequential input output operations, updating a File

Templates: Introduction, Class Templates, Class Templates with Multiple Parameters, Function Templates, Function Templates with Multiple Parameters, Overloading of Template Functions, Member Function Templates, Non-type Template Arguments.

Practical questions on: File opening, file closing, file manipulations, Class Templates, Class Templates with Multiple Parameters Function Templates, Function Templates with Multiple Parameters, Overloading Template Functions.

Module-5 **(7L+0T hrs)**

Exception handling: Introduction, Basics of Exception Handling, Exception Handling Mechanism, Throwing Mechanism, Catching Mechanism, Rethrowing an Exception, Specifying Exceptions, Exceptions in Constructors and Destructors, Exceptions in Operator Overloaded Functions

Introduction to the Standard Template Library: Introduction, Components of STL, Containers, Algorithms, Iterators, Application of Container Classes, Function Objects.

Practical questions on: Exception Handling Mechanism, Throwing Mechanism, Catching Mechanism, Rethrowing Mechanism, Exceptions in Constructors and Destructors, Exceptions in Overloaded Functions, Standard Template Library, Application of Container Classes and Function Objects .

Open Ended Experiments in OOP with C++

The Open Ended Experiments are introduced to enable the students to apply the programming concepts such as inheritance, encapsulation, polymorphism, exception handling, templates, STL. Implement and demonstrate the solution to the any real world problems.

Course outcomes:

On successful completion of this course, students will be able to:

1. Apply the object-oriented programming concepts to solve real world problems.
2. Develop and demonstrate the different overloading techniques.
3. Develop solutions for real world problems using inheritance and polymorphism concepts
4. Develop generic programming skills using templates
5. Apply the exception handling methodology for handling errors.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE

SEMESTER - III

DIGITAL CIRCUITS & COMPUTER ORGANIZATION

Course Code	N3CCSI02	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:2)	SEE Marks	50
Credits	4	Exam Hours	3

Course objectives:

1. **Explain** the basic structure of a computer and how computer programs are organized, stored and executed at the machine level
2. **Identify** the data path elements needed to implement single bus and three bus organization of a processor
3. **Describe** the principles of hardwired and micro programmed control
4. **Explain** different techniques used to perform arithmetic operations
5. **Explain** the basic types of memory and cache mapping functions

Module-1 **(8L hrs)**

Basic Structure of Computer: Functional Units, Basic Operational Concepts, Bus Structures, Performance - Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement. Machine Instructions and Programs: Numbers, Arithmetic Operations and Characters - Number Representation, Addition of Positive Numbers, Addition and Subtraction of Signed Numbers, Overflow in Integer Arithmetic, Characters, Memory Location and Addresses - Byte Addressability, Big-endian and Little-endian Assignments, Word Alignment, Accessing Numbers, Characters, and Character Strings, Memory Operations, Instructions and Instruction Sequencing - Register Transfer Notation, Assembly Language Notation, Basic Instruction Types, Instruction Execution and Straight-Line Sequencing, Branching, Condition Codes.

Module-2 **(8L hrs)**

Addressing Modes - Implementation of Variables and Constants, Indirection and Pointers, Indexing and Arrays, Relative Addressing, Additional Modes, Basic Input and Output Operations. Stacks and Queues, Subroutines - Subroutine Nesting and the Processor Stack, Parameter Passing, The Stack Frame , Basic Processing Unit: Some Fundamental Concepts – Single Bus Organization: Register Transfers, Performing an Arithmetic or Logic operation, Fetching a Word from Memory, Storing a word in Memory.

Module-3 **(8L hrs)**

Basic Processing Unit: Execution of a Complete Instruction - Branch Instructions, Multiple Bus Organization, Hard wired Control - A Complete Processor, Micro programmed Control - Microinstructions. Arithmetic: Addition and Subtraction of Signed Numbers - Addition/Subtraction Logic Unit, Design of Fast Adders - Carry-Lookahead Addition.

Module-4 **(8L hrs)**

Arithmetic: Multiplication of Positive Numbers, Signed Operand Multiplication - Booth Algorithm, Fast Multiplication - Bit-Pair Recoding of Multipliers, Carry-Save Addition of Summands, Integer Division, Floating-point Numbers and Operations - IEEE Standard for Floating-Point Numbers, Arithmetic Operations on Floating-Point Numbers - Addition and Subtraction Operations, Implementing Floating-Point Operations.

Module-5 **(7L hrs)**

Memory System: Some Basic Concepts, Semiconductor RAM Memories - Internal Organization of Memory Chips, Static Memories, Asynchronous DRAMs, Synchronous DRAMs, Structure of Larger Memories, Memory System Considerations, Read Only Memories - ROM, PROM, EPROM, EEPROM, Flash Memory, Speed, Size, and Cost, Cache Memories -Mapping Functions

LAB COMPONENT

Week 1 : Introduction to digital trainer kits & verification of basic gates

Week 2 onwards in every lab the instructions and design of the following experiments to be taught during the first one hour of the lab. The second hour is to be utilized in conducting the experiments and verification of truth tables.

1. Design and implementation of a Half- adder and a full adder using minimum number of 2 input NAND gates
2. Given any 4-variable logic expression, simplify using Entered Variable Map and realize the simplified logic expression using 8:1 or (2) 4:1 Multiplexer IC.
3. Design and implement Full Adder and Full Subtractor using 4:1 MUX.
4. Design and implement full-adder and full-subtractor using a 74138 DECODER.
5. Design and test one/ two-bit Magnitude Comparator and verify its true table. Realize a J-K Master/Slave Flip-Flop using NAND gates and verify its truth table.
6. Design and implement a mod-n (n<8) Synchronous up Counter using J-K Flip-Flop Ics, display the result on discrete LEDs.
7. Design and implement the following using 4-bit Shift register IC.
   i) Left Shift ii) SIPO iii) SISO iv) PIPO v) Ring Counter vi) Johnson counter
8. Design and implement an Asynchronous Counter using Decade Counter IC to Count up from 0 to 9. Display the count value on 7 Segment LED display using BCD to 7 segment code converter IC.
9. Design and implement a 3 stage Asynchronous Counter using a J-K Flip Flops to count from 0 to n.

Course outcomes:

On successful completion of this course, students will be able to:

1. **Illustrate** the basic operational concepts of a computer system and **discuss** its performance parameters
2. **Explain** various addressing modes and **apply** the same to **design** solution to a given problem
3. **Discuss** basic processing unit to generate control signals and to **design** the control sequence for execution of an instruction
4. **Explain** the various arithmetic algorithms and **apply** the same to solve a given problem
5. **Describe** memory organization and **design** the solution to the given problem

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

2	Computer Systems Design and Architecture	Vincent P. Heuring & Harry F. Jordan	PEARSON	2004

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE
SEMESTER – III

DATA STRUCTURES

Course Code	N3CCS01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	3.0	Exam Hours	3

Course objectives:

1. Discuss the concepts of structures, union, files and dynamic memory allocation techniques.
2. Describe the properties of various data structures such as Stacks, Queues, Lists, and Trees.
3. Implement the data structures such as Stacks, Queues, Lists, and Trees using C language.
4. Discuss the applications of various Data Structures.

Module-1 **(08L hrs)**

Structures and Unions: Defining a Structure, declaring Structure variables, accessing Structure members, Structure initialization, copying and comparing Structure variables, operations on individual members, array of Structures, array within Structure, Structure within Structure, Structures and Functions, Unions, size of structures.

File management in C: Defining and Opening a file, Closing a file, Input/Output operations on files - getc(), putc(), getw(), putw(), fscanf(), fprintf(), Error handling during I/O operations - feof(), ferror(), Random access to files - ftell(), rewind(), fseek(), Command line arguments.
(Text Book 1: 10, 12)

Module-2 **(08L hrs)**

The Stack: Definition and Examples, representing Stacks in C, Example: Infix, Postfix, and Prefix.
Recursion: Recursive Definition and Processes, Recursion in C, Writing recursive programs: The Towers of Hanoi Problem, Efficiency of Recursion.
Queues and Lists: The Queue and Its Sequential Representation: C implementation of Queues, Insertion, Deletion and Display operations, Types of Queues (Linear and Circular Queues)
Self-Study: Priority and Double Ended Queues (Only concepts).
(Text Book2: 2, 3.1, 3.2, 3.3(only the Towers of Hanoi Problem), 3.5. 4.1(excluding Queue as an ADT))

Module-3 **(08L hrs)**

Queues and Lists Continued
Dynamic memory allocation: malloc(), calloc(), realloc(), free().
(Text Book 1: 13.1-13.6)
Linked lists: Inserting and removing nodes from a list, linked implementation of stacks, getnode and freenode operations, linked implementation of queues, examples of list operation, list implementation of priority queues, header nodes.
Lists in C: allocating and freeing dynamic variables, linked lists using dynamic variables, queues as lists in C, examples of list operations in C, non-integer and non-homogeneous lists, Addition of two polynomials, implementing header nodes.
(Text Book2: 4.2, 4.3(except array implementation of list, Limitations of array implementation, comparing dynamic and array implementations of list))

Module-4 **(07L hrs)**

Other List Structures: Circular lists, stack as a Circular list, queue as a Circular list, primitive operations on circular lists, the Josephus problem, Doubly linked lists, Primitive operations on Doubly linked list.

(Text Book2: 4.5(except addition of long positive integers using circular and doubly linked list))

Module-5 (08L hrs)

Trees: Operations on Binary Trees, Applications of Binary Trees, Binary Tree Representations: Node representation of Binary Trees, Internal and External Nodes, Implicit array representation of Binary Trees, Binary Tree Traversals in C.

Trees and Their applications: C Representations of Trees, Tree Traversals, General Expressions as Trees, Evaluating an Expression Tree, Constructing a Tree.

Self-Study: Threaded Binary Trees - definition and types.

(Text Book2: 5.1, 5.2, 5.5(except choosing Binary Tree Representation, Traversal using a Father field, Heterogeneous Binary Trees))

Course outcomes:

On successful completion of this course, students will be able to:

1. **Apply** advanced C programming techniques like pointers, structures, union and files to **develop** solution for a given problem
2. **Discuss** and **implement** different linear data structures like stacks and queues using static memory allocation technique
3. **Discuss** different types of linked lists and **implement** using dynamic memory allocation technique
4. **Discuss** non-linear data structures like trees and **implement** using dynamic memory allocation technique.
5. **Apply** the knowledge of stacks, queues, linked lists and trees to **design** and **develop** solutions to given problems

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE
SEMESTER – III

DATA STRUCTURES LABORATORY

Course Code	N3CCSL01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits		Exam Hours	3

Course objectives:

1. Design and implement different data structures.
2. Develop C programs for various applications of data structures.
3. Select appropriate data structure for a given problem.

Sl. no.	Programs
1	Develop a C program to create a sequential file for storing employee records with each record having following information: **Employee_Id**: Non-Zero Positive integer; **Name**: 25 Characters; **Department**: 25 Characters; **Salary**: Positive Integer; **Age**: Positive integer Write necessary functions to perform the following operations: a) Read the details of a record. b) Display all the records in the file. c) Search for a specific records based on Department. In case if the required record is not found, suitable message should be displayed.
2	Develop a C program to implement Stack of names to perform the push, pop and display operations.
3	Develop a C program to convert a valid infix expression to postfix.
4	Develop a C program to evaluate the given postfix expression.
5	Develop a C program to implement Linear Queue of characters to perform the insertion, deletion and display operations.
6	Develop a C program to implement Circular Queue of integers to perform the insertion, deletion and display operations.
7	Define a structure to represent a node in a Singly Linked List. Each node must contain following information: player name, team name and batting average. Develop a C program using functions to perform the following operations on a list of cricket players: a) Add a player at the end of the list. b) Search for a specific player and update his/her batting average if the player exists. c) Display the details of all the players.
8	Develop a C program to add two two-variable polynomials using Singly Linked list.
9	Develop a C program to construct two ordered singly linked lists using functions to perform following operations: a) Insert an element into a list. b) Merge the two lists. c) Display the contents of the list.
10	Define a structure to represent a node in a Linear Doubly Linked List. Each node must contain following information: Student name, USN, branch and year of admission. Develop a C program using functions to perform the following operations on a list of students: a) Add a student at the beginning of the list. b) Display the details of the students of a specified branch. c) Delete the student with specified USN. d) Display the details of all the students.

11	Develop a C program to implement Josephus problem using Circular Singly Linked List. Write necessary functions to perform the following operations: a) Add a soldier to the list. b) Delete a soldier from the list.
12	Develop a C program to perform the following operations: a) Construct a binary search tree of integers. b) Traverse the tree in Inorder. c) Delete a given node from the BST.
13	Develop a C program to construct an expression tree for a given postfix expression and evaluate the expression tree.

Open Ended Problems

These problems are introduced to make the students to apply the knowledge of Data Structures in solving real world problems. Following are the guidelines:

- Each team (3/4 students) from each batch should come up with the problem statement for an application of any of the data structures like files, stacks, queues, linked lists and trees.
- Faculty-incharge approves the problem based on the complexity of the problem chosen.
- Each team has to implement the problem statement within the deadline.

Implementation will be considered for Continuous Internal Evaluation (CIE) and it will be based on individual contribution of the students in each team.

Course outcomes:

On successful completion of this course, students will be able to:

1. **Design** and **develop** C programs by applying advanced C programming techniques like pointers, structures and files to solve a given problem
2. **Design** and **develop** C programs to implement linear data structures like stack, queue and explore its applications by **applying** the knowledge of static memory allocation technique
3. **Design** and **develop** C programs to implement linked lists and its types by applying the knowledge of dynamic memory allocation technique
4. **Apply** the knowledge of dynamic memory allocation technique to implement non-linear data structures like trees and to **design** and **develop** solutions for applications on trees

Conduct of Practical Examination:

1. All laboratory experiments are to be included for practical examination.
2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
3. Students can pick one experiment from the questions lot prepared by the examiners.
4. Change of experiment is allowed only once and 20% Marks is to be deducted.

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE
SEMESTER – III

UNIX & SHELL PROGRAMMING

Course Code	N3CCSA01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(1:0:2)	SEE Marks	100
Credits	2 credits	Exam Hours	3 hrs

Course objectives:

1. To execute basic unix commands using bash shell
2. To program using shell scripting
3. To program in C to utilize unix services using the system call interface

Sl. no.	Experiments
	Basic Commands
1	Simple commands, recording sessions, Files, directories, pipes, redirection, links, locating files, Archiving
2	Simple filters, grep, sed
3	Running jobs in background, job control, priority, running jobs periodically, killing processes, customising the environment
	Shell Scripting
1	Basic constructs – read, if, test, case, expr, while, for
2	set, shift, export, eval, exec, strings, arrays
	System Call Interface with GDB
1	POSIX Standards, Process creation, Process control, non local branching, process accounting, race condition, orphan process, Zombie process
2	Signals, user defined signals, timers, signal sets, masking of signals, impact of signals on non-local branching
3	Inter-process communication : pipes, semaphores, queues

Self Study : Perl programming along with open ended problems.

Course outcomes:

On successful completion of this course, students will be able :

1. To interact with Unix operating system using command interface
2. To write shell scripts for various user requirements using Unix OS programming facility
3. To write C programs to utilise the Unix OS services using system calls.

Conduct of Practical Examination:

1. All laboratory experiments are to be included for practical examination.
2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
3. Students can pick one experiment from the questions lot prepared by the examiners.
4. Change of experiment is allowed only once and 20% Marks is to be deducted.

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE SEMESTER – III			
MS OFFICE AND LATEX			
Course Code	N3CCSA02	CIE Marks	50
TeachingHours/Week (L:T:P)	(1:0:2)	SEE Marks	50
Credits	2	Exam Hours	3

Course objectives:

1. Understand the basics of MS Office to prepare documents and small presentations,
2. Illustrate the features of spreadsheet/worksheet with various options.
3. Create simple presentations using templates with various options available.
4. Demonstrate the ability to apply application software in an office environment.
5. Usage of Latex tool to prepare quality documents.

Sl. no.	Experiments
1	Create a document using MS-Word with at least three paragraphs and perform the following operations: • With left and right margin of 0.75" and Top and Bottom margin of 1". • Insert page number in every page. • Centre the heading and make it bold, increase the font size. • Underline the specified words in the document and change them to italics. • Conduct the spell check and correct them suitably. • Exchange paragraphs 2 and 3 using cut and paste facility. • Put suitable headers and footers. • Find and replace the text. • To demonstrate Watermarking technique using ima • Make your documents protected by a password so that nobody changes it.
2	Create a document using MS-Word with at least two paragraphs and also create a power point presentation with minimum two slides. Include each slide a minimum of 4 to 5 lines of text. Then perform the following operations: • Count the number of words and lines in word document. • Using mail merge facility of MS-Word send a birthday invitation to 10 of your friends. • Insert page border and insert gutter of 1" in word document. • Create a time table of your class in the following format in MS-Word.  • Create a hyperlink from the Power Point slide to the above time table created. • Create a hyperlink from word to the power point document.

<table>
<tr><td></td><td></td></tr>
<tr><td>3</td><td>Following is the table of scores of basketball players using MS Excel.

<table>
<tr><th>Players</th><th>Team A</th><th>Team B</th></tr>
<tr><td>A</td><td>10</td><td>11</td></tr>
<tr><td>B</td><td>10</td><td>9</td></tr>
<tr><td>C</td><td>11</td><td>12</td></tr>
<tr><td>D</td><td>13</td><td>12</td></tr>
<tr><td>E</td><td>15</td><td>15</td></tr>
<tr><td>F</td><td>20</td><td>18</td></tr>
<tr><td>Average Score</td><td></td><td></td></tr>
<tr><td>Grade</td><td></td><td></td></tr>
</table>

Using the table, perform the following operations:
• Calculate the average-score of each team and assign grade for the team - if the average score of Team A is greater than Team B, then assign Grade ‘A’ to Team A or assign Grade ‘A’ to Team B.
• Draw a Bar Chart.
• Demonstrate Auto Format.
• Demonstrate relative reference and absolute reference formulation.</td></tr>
<tr><td>4</td><td>Using MS Excel create a table of five students for their marks scored in five subjects (max. marks 25).

<table>
<tr><th>Players</th><th>Team A</th><th>Team B</th></tr>
<tr><td>A</td><td>10</td><td>11</td></tr>
<tr><td>B</td><td>10</td><td>9</td></tr>
<tr><td>C</td><td>11</td><td>12</td></tr>
<tr><td>D</td><td>13</td><td>12</td></tr>
<tr><td>E</td><td>15</td><td>15</td></tr>
<tr><td>F</td><td>20</td><td>18</td></tr>
<tr><td>Average Score</td><td></td><td></td></tr>
<tr><td>Grade</td><td></td><td></td></tr>
</table>

Using the table, perform the following operations for the above data:
• Calculate the percentage of each student.
• Highlight the data cell with green color if a student scores above 20 and highlight with red color, if a student scores less than 10 using formatting toolbar.
• Draw a Column Bar chart.
• Demonstrate the filter option.</td></tr>
<tr><td>5</td><td>You are asked to make a presentation about your organization to the general public. Develop the presentation as specified below:
• Make a power point presentation consisting of the following 3 slides.
• Slide 1: Your organization Name and Mission. Insert a picture either from the clipart gallery or from the library of scanned images of your organization.
• Slide 2: Minimum 5 lines of text describing different departments in your organization. Create a word document describing the departments and give the link to the word document from this slide.
• Slide 3: Create organization chart of SIT with suitable data.
• Give transition effects to each slide with automatically advancing to next slide (5 Sec.).</td></tr>
</table>

	• Demonstrate custom animation and action buttons for the slides. • Show presentation.
6	Make a Power point presentation on any topic of your interest. Create Master Slide with suitable slide design, slide layout, background color, slide number & date. Use this Master slide to demonstrate the following operations: • Give transition effects to each slide with automatically advancing to next slide (5 Sec). • Demonstrate how to use appropriate fonts, pictures and colors. • Demonstrate how to add charts and hyperlinks. • Demonstrate custom animations & action buttons for the slides. • Demonstrate organization chart with suitable data. • Show presentation.
7	Create a database using MS-Access to keep track of products purchased which has the attributes as pid, pname, price, city, country. Demonstrate the following : • Creating the table. • Inserting suitable values into the table. • Creating the forms. • Querying the database. • Generating suitable reports.
8	Create the database of a member of the Library using MS Acess having the fields like member¬_id, member_name, account_open_date, max_books_allowed, penalty_amount. Demonstrate the following • Creating the table. • Inserting suitable values into the table. • Creating the forms. • Querying the database. • Generating suitable reports.
9	Create a document using LATEX typesetting system with the following contents : • title page with author name • table of contents • header and footer • section containing text in paragraphs having certain words in bold ,italics, colouring & foot notes • section containing formulae for the following - Roots of a quadratic equation - Euler's number definition - Taylors series
10	Create a document using LATEX typesetting system with the following contents : • section containing lists • numbered lists • unordered lists • section containing image with a title • section containing table to display marks of 5 students in 5 subjects

Course outcomes:

On successful completion of this course, students will be able to:

1. Understand the basics features of MS Office tools such as MS Word, Excel, Power Point & Access and Latex tools.
2. Apply the knowledge of MS Office to solve given problems.

3. Apply the knowledge of Latex tool to prepare quality documentation.
Conduct of Practical Examination: 1. All laboratory experiments are to be included for practical examination. 2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners. 3. Students can pick one experiment from the questions lot prepared by the examiners. 4. Change of experiment is allowed only once and 20% Marks is to be deducted.

Course Code	N4MATC	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	3

Course objectives:

This Course will enable students to:

1. To provide the foundations of probabilistic and statistical analysis mostly used in varied applications in engineering and science like disease modeling, climate prediction and computer networks etc.
2. To introduce the concept of a probability density function of a continuous random variable.
3. To deal with multiple random variables and introduction of the most important types of stochastic processes.
4. To investigate the variability in sample statistics from sample to sample, measure of central tendency and dispersion of sample statistics and pattern of variability of sample. To understand the fundamentals of coding theory, concept of source coding and channel coding theorem.

Module-1 : Analysis of Discrete Random Variables	**8 Hours**
Discrete random variables, probability distribution and probability mass function, cumulative distributive functions, mean and variance of discrete random variable, discrete, binomial distribution, geometric distribution, negative binomial distribution and Poisson distribution.	
Module-2 : Analysis of Continuous Random Variables	**8 Hours**
Continuous random variable, probability distribution and probability density function, cumulative distributive functions, mean and variance of continuous random variable, continuous, exponential distribution, normal distribution, normal approximation to the Binomial and Poisson distributions	
Module-3 : Joint Probability	**8 Hours**
Joint probability distribution, discrete and independent random variables, expectation, covariance, correlation coefficient, probability vectors, stochastic matrices, fixed point matrices, regular stochastic matrices, Markov chains, higher transition probabilities, stationary distribution of regular Markov chains and absorbing states.	
Module-4 : Information Theory	**7 Hours**
Introduction, Entropy, Joint Entropy and Conditional Entropy, Relative Entropy and Mutual Information, Relationship Between Entropy and Mutual Information, Chain Rules for Entropy, Relative Entropy and Mutual Information, Jensen's Inequality and Its Consequences, Log Sum Inequality and Its Applications, Data-Processing Inequality, Sufficient Statistics, Fano's Inequality	
Module-5 : Sampling Distribution	**8 Hours**
Introduction, Objectives, sampling distribution, testing of hypothesis, level of significance, confidence limits, simple sampling of attributes, test of significance of large samples, comparison of large samples, sampling of variables, central limit theorem, confidence limits for unknown mean, test of significance for means of two large samples, Sampling of variables – small samples , Student's t-distribution.	

Course outcomes:

On successful completion of this course, students will be able to:

1. Identify a random variable as discrete and appropriate probability distribution, its parameters(L1).
2. Identify a random variable as continuous and appropriate probability distribution, its parameters (L1).
3. Determine the joint probability distribution, its mean, variance and covariance. Calculate the transition matrix, fixed probability vector for a given Markov chain(L3).
4. Estimate the parameter of a population, important role of normal distribution as a sampling distribution (L2).
5. Apply concepts of probability in information theory and coding (L3).

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE SEMESTER - IV			
DESIGN AND ANALYSIS OF ALGORITHMS			
Course Code	N4CCSI01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:2)	SEE Marks	50
Credits	4	Exam Hours	3

Course objectives:

1. An introduction to the design and analysis of algorithms. (Synthesis)
2. Expose students to prove the correctness and analyse the running time of the basic algorithms. (Analysis)
3. To compare the running time of sorting and searching algorithms. (Comprehension)
4. Create an awareness of applying the algorithms and design techniques to solve problems. (application)

Module-1 **(08L)**

Introduction: Notion of algorithm, Fundamentals of Algorithmic Problem Solving, Fundamentals of the Analysis of Algorithm Efficiency: Analysis frame work, Asymptotic Notations and Basic Efficiency Classes, Mathematical Analysis of Non-recursive and Recursive Algorithms. [Chapters: 1.1, 1.2, 2.1-2.4]

Module-2 **(07L)**

Brute Force: Selection Sort and Bubble Sort, Sequential Search and Brute-Force String Matching.
Divide and Conquer: Mergesort, Quicksort, Binary Search. [Chapters: 3.1, 3.2, 4.1- 4.3]

Module-3 **(08L)**

Decrease and Conquer: Insertion Sort, Depth First Search, Breadth First Search, Topological Sorting, Algorithms for Generating Combinatorial Objects.
Transform and Conquer: Presorting, Balanced Search Trees: AVL Tree, Heaps and Heapsort. [Chapters: 5.1 – 5.4, 6.1, 6.3 (only AVL Trees),6.4]
Self Study : Algorithms for Generating Combinatorial Objects.

Module-4 **(08L)**

Dynamic Programming: Computing a Binomial Coefficient, Warshall's and Floyd's Algorithms, The Knapsack Problem.
Greedy Technique: Prim's Algorithm, Kruskal's Algorithm, Dijkstra's Algorithm. [Chapters: 8.1, 8.2, 8.4, 9.1-9.3]

Module-5 **(08L)**

Space and Time Tradeoffs: Sorting by Counting, Input Enhancement in String Matching: Horspool's Algorithm.
Limitations of Algorithm Power: P, NP and NP-Complete Problems.
Coping with the Limitations of Algorithm Power: Backtracking: N-Queens, Hamiltonian Circuit Problem, Subset-Sum Problem. [Chapters: 7.1,7.2, 10.3, 11.1]
Self Study : Limitations of Algorithm Power: P, NP and NP-Complete Problems.

Course outcomes:

On successful completion of this course, students will be able to:

6. Discuss the fundamental principles of analysis and design of algorithms.
7. Apply design techniques such as Brute -Force, Divide-and-Conquer, Decrease-and-Conquer, Transform-and-Conquer, Greedy, Dynamic programming, space & time trade-off and Backtracking to solve a given problem.
8. Design/Outline algorithms classified under different design techniques.
9. Analyse the complexity of a given algorithm.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

3	Programs on Decrease and Conquer Technique
4	Programs on Transform and Conquer Technique
5	Programs on Dynamic Programming Technique
6	Programs on Greedy Technique
7	Programs on Space and Time Tradeoffs
8	Programs on Backtracking

Course outcomes:

Upon successful completion of this course, students will be able to:

1. **Design/Develop** a solution for the given problem using appropriate design techniques such as Brute-Force, Greedy, Dynamic Programming, Divide and Conquer, Decrease and Conquer, Transform and conquer and Backtracking.
2. **Analyze** the time complexity of the algorithms.
3. **Apply** various algorithmic design techniques to solve real world problems and demonstrate the same.

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE SEMESTER - IV			
MICROCONTROLLER AND EMBEDDED SYSTEMS			
Course Code	N4CCSI02	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:2)	SEE Marks	50
Credits	4.0	Exam Hours	3

Course objectives:

This Course will enable students to:

1. Introduce the concept of architecture and programming of advanced embedded microcontrollers.
2. ARM family of microcontrollers that are widely used in design of real time sophisticated embedded systems like tablets, hand held devices, automation and industrial control systems.
3. It also covers writing Embedded C programming of LPC2148 for GPIO, ADC, DAC, UART, LCD, Timers.
4. It also explains the concepts of embedded system and its components.

Module-1 **(08L hrs)**

CHAPTER 1-EMBEDDED SYSTEM COMPONENTS: Embedded v/s General computing system, Classification of Embedded systems, Major applications and purpose of Embedded systems, Core of an Embedded System including all types of Processors, Controller and Memory.

CHAPTER 2-ARM EMBEDDED SYSTEMS: The RISC Design Philosophy, The ARM Design Philosophy, Embedded System Hardware, Embedded System Software.

Module-2 **(08L hrs)**

CHAPTER 3-ARM PROCESSOR FUNDAMENTALS: Registers, Current Program Status Register, Pipeline, Exceptions, Interrupts, and Vector Table Core Extensions, Architecture Revisions, ARM Processor Families, LPC2148 Microcontroller Architecture, LPC2148 Microcontroller Architecture, Memory Mapping, Register Description.

Module-3 **(08L hrs)**

CHAPTER 4-INTRODUCTION TO THE ARM INSTRUCTIONS SET: Data Processing Instructions and examples, Branch Instructions and examples, Load-Store Instructions and examples, Software Interrupt Instructions and examples, Program Status Register Instruction and examples. Programs: Addition, Multiplication, division and Subtraction of 16, 32-bit data, Example Programs: Looping, conditional programs like sum of memory elements, Loading Constants, Conditional Execution, and Example Programs.

Module-4 **(08L hrs)**

CHAPTER 5-INTERFACING Sensors, Actuators, GPIO, LED interfacing and programming in C,7 segment display interfacing and C program, stepper motor interfacing, Keyboard interfacing, Push button switch interfacing and programming in C.

Module-5 **(07L hrs)**

INTERFACING Cont… Data Conversions (ADC, DAC) interfacing and C program, Timers, Counters, Communication Protocols: UART, I2C (on board) SPI, CAN Programs using C

Course outcomes:

On successful completion of this course, students will be able to:

1. Describe the fundamental concept of Embedded System Architecture.
2. Describe the ARM processor architecture and its family.
3. Develop assembly language programs to perform specific tasks using ARM instructions.
4. Design and develop embedded C programs to interface external hardware with LPC214x microcontroller.
5. Design and develop the solutions for a problem using embedded system and demonstrate.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

2	ARM ASSEMBLY LANGUAGE Fundamentals and Techniques	William Hohl, Christopher	CRC Press	Second Edition, 2015
3	ARM Assembly Language an Introduction	Gibson	John Wiley & Sons	Second Edition, 2007

Integrated Lab Syllabus

Course objectives:

This Course will enable students to:

1. Develop and test assembly language programs (ALP) using ARM7TDMI/LPC2148
2. Conduct the experiments on ARM7TDMI/LPC2148 evaluation board using evaluation version of Keil µvision tool.

Sl. no.	Programs
	PART A
	Conduct the following experiments by developing Assembly Language Program (ALP) for LPC2148 using Keil µvision-5 tool.
1	Develop an ALP to add two 64-bit numbers.
2	Develop an ALP to find the sum of first *n* natural numbers.

3	Develop an ALP to find the factorial of a non-zero number using subroutine.
4	Develop an ALP to add an array of *n* numbers.
5	Develop an ALP to find the square of a number (0-10) using Look-up table.
6	Develop an ALP to find the largest number in an array of 32-bit signed integers.
7	Develop an ALP to arrange a series of 32-bit unsigned numbers in ascending order.
8	Develop an ALP to count the number of ones and zeroes in two consecutive memory locations.
PART B	
Conduct the following experiments on LPC2148 evaluation board by developing embedded C program using Keil µvision-5 and Flash Magic tools.	
1	Develop an embedded C program to display the Hex digits 0 to F on a Seven-Segment display interface with an appropriate delay in between.
2	Develop an embedded C program to drive a Stepper motor Interface to rotate the motor in clockwise direction.
3	Develop an embedded C program to read the status of 8 input bits from the Logic Controller Interface and display 'FF' if it is even parity bits otherwise display 00. Also display number of 1's in the input data.
4	Develop an embedded C program to display "Hello World" message on a 2x16 character LCD interface.
5	Develop an embedded C program to generate triangular and square waveforms using the DAC Interface. (The output of the DAC is to be displayed on the CRO).
6	Develop an embedded C program to display the message "dEPt OF CSE" from right to left and left to right on a Seven Segment display interface.
7	Develop an embedded C program to drive a Stepper motor Interface to rotate the motor in anti-clockwise direction.
8	Develop an embedded C program to generate Half-rectified Sine waveform using DAC interface.

Course outcomes:

On successful completion of this course, students will be able to:

1. Summarize ARM instruction sets and comprehend the knowledge of how assembly language works.
2. Design and develop ARM assembly language programs using Keil tool.
3. Infer functioning of hardware devices and interfacing them to ARM microcontroller.
4. Design and develop embedded C code for interfacing different modules with ARM microcontroller using Keil and Flash Magic tools.

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE
SEMESTER - IV

OPERATING SYSTEM

Course Code	N4CCS03	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	3	Exam Hours	03

Course objectives:

1. **Define** fundamental OS abstractions such as processes, threads, files etc, (L1-knowlegde).
2. **Visualize** the intricate relationship between an operating system and its underlying hardware (L1-knowlegde).
3. **Explain** scheduling algorithms, deadlock detection algorithms and memory management strategies (L2-Comphrension).
4. A**pply** the principles of concurrency and synchronization, to write concurrent programs/ software (L3-Application).

Module-1 **(08 hrs)**

INTRODUCTION: What operating systems do - User view, System view, Defining operating systems, Operating System Structure, Operating System Operations – Dual mode and multi-mode operation, Timer, Process Management; Memory Management; Storage Management; Protection and Security. [Textbook 1:chapteres 1.1, 1.4 to 1.9]

SYSTEM STRUCTURES: Operating System Services; System calls; Types of system calls; System programs; Operating System Structure –Simple structure, Layered approach, Micro kernels, Modules [Textbook 1: Chapters 2.1, 2.3 to 2.5, 2.7.4]

Self study : Hybrid Systems – Mac OS X, iOS, Android.[Textbook 1: Chapter 2.7.5]

Module-2 **(08 hrs)**

PROCESS: Process concept, Process state, Process control block, Process scheduling, Scheduling queues, Schedulers, Context switch, Operations on processes – Process creation and termination, Inter-process communication, Shared memory and message passing systems. [Textbook 1: Chapters 3.1 to 3.4]

PROCESS MANAGEMENT: Basic concepts, CPU scheduler, Preemptive and non-preemptive scheduling, Scheduling criteria, Scheduling algorithms – FCFS, SJF, Priority and Round robin scheduling, [Textbook 1: Chapters 6.1 to 6.3.4]

Self Study : Multi-level and multilevel feedback queue scheduling[Textbook 1: Chapter 6.3.5]

Module-3 **(08 hrs)**

THREADS: Overview, Benefits, Multi core Programming, Types of parallelism, Multi threading models. [Textbook 1: Chapters 4.1-4.3]

PROCESS SYNCHRONIZATION: Background, The Critical section problem, Peterson's solution, Synchronization hardware, Mutex locks, Semaphores, Classic problems of synchronization, Bounded buffer problem. [Textbook 1: Chapters 5.1 to 5.7.1]

Self-Study : Readers writer's problem, Dining philosopher's problem.[Textbook 1: Chapters 5.7.2 , 5.7.3]

Module-4 **(08 hrs)**

DEADLOCKS: System model, Deadlock characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock detection and recovery from deadlock. [Textbook 1:7.1-7.7]

MEMORY MANAGEMENT: Background, Basic hardware, Address binding, Logical and physical address, swapping, Dynamic loading and linking [Textbook 1: Chapters 8.1, 8.2]

Module-5 **(07 hrs)**

MEMORY MANAGEMENT: Contiguous memory allocation, Segmentation, Paging. [Textbook 1: 8.3, 8.4, 8.5]

VIRTUAL MEMORY MANAGEMENT: Basic concepts, Demand paging, Copy-on-write, Page replacement – FIFO, LRU, Optimal [Textbook 1:9.1-9.4]
Self-Study: Structure of page table, Hierarchical paging, Hashed paging, Inverted paging. [Textbook 1: Chapter 8.6]

7 Hours

NOTE: Self-study topics are assessed only in CIE-Quizzes/ Assignment

Course outcomes:
On successful completion of this course, students will be able to:

1. **Identify** the services, functions and structure of different operating systems.
2. **Apply and analyze** appropriate scheduling algorithm for process selection and execution.
3. **Identify and analyze** the techniques used to solve process synchronization issues.
4. **Apply and analyze** various deadlock prevention, avoidance, detection and recovery mechanisms to solve real world problems.
5. **Analyze** the performance of various memory management techniques and page replacement algorithms**.**

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE
SEMESTER – IV

PYTHON PROGRAMMING LAB

Course Code	N4CCSL01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits	1.0	Exam Hours	3

Course objectives:

1. Implement Python programs with conditional statements, loops, and exception handling statements.
2. Represent compound data using Python lists, tuples, and dictionaries.
3. Read and write data from/to files/database in Python.
4. Write, test and debug simple Python programs for image processing, regular expression evaluation, and plotting graphs.
5. Use functions for structuring Python programs and establish client server communication.

Sl. no.	Experiments
1	Programs on lists, tuples, numpy arrays and dictionaries.
2	Programs on plotting graphs.
3	Programs on image processing.
4	Programs on regular expressions.
5	Programs on exception handling.
6	Programs on files operations.
7	Programs on client server communication.
8	Programs on pandas dataframes and database handling.

Course outcomes:

On successful completion of this course, students will be able to:

1. Design and develop programs to structure the compound data using lists, tuples, and dictionaries.
2. Design and develop programs for plotting graphs and image processing.
3. Design and develop programs for regular expression evaluation.
4. Design and develop programs to perform read and write operations over the files.
5. Design and develop programs on client server communication.
6. Design and develop programs on using databases and SQL.

Conduct of Practical Examination:

- Question bank consisting of experiments covering the above concepts will be announced for SEE during last working day of the semester.
- Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
- Students can pick one experiment from the questions lot prepared by the examiners.
- Change of experiment is allowed only once and 20% of the Marks to be deducted for the same.

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE
Outcome Based Education (OBE) and Choice Based Credit System (CBCS)
SEMESTER – IV

JAVA PROGRAMMING (Practical)

Course Code	**N4CCSA01**	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits	1	Exam Hours	3

Course objectives:

1. Implement java programs to understand the principles of object-oriented programming.
2. Implement standalone programs using core Java classes and packages such as Threads, Exception, etc.
3. Develop programs on Java Swing GUI applications
4. Develop programs on Java Networking packages.
5. Develop Web applications using Servlets.

Sl. no.	Experiments
1	Design and develop simple applications using core java concepts – Control statements, Classes and Objects, Arrays, Strings.
2	Design and develop Real-time applications using OOP First principles – Encapsulation,Abstraction, Polymorphism, and Inheritance
3	Design and develop Multi-threaded applications using Thread class or Runnable Interface.
4	Design and develop GUI applications using Java Swing package
5	Design and develop Networking applications using Java Net package.
6	Design and develop Web applications using Java Servlets

Course outcomes:

On successful completion of this course, students will be able to:

1. Design and develop applications of Object-oriented programming concepts using Core Java.
2. Design and develop multi-threaded and GUI based applications using Java Threads and Java Swing packages.
3. Design and develop Networking applications using Java networking packages.
4. Design and develop Web applications using Java Servlet packages.

Conduction of Practical Examination:

1. All laboratory experiments are to be included for practical examination.
2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
3. Students can pick one experiment from the list of questions prepared by the examiners.
4. Change of experiment is allowed only once and 20% of Marks is to be deducted.

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE
SEMESTER – IV

WEB PROGRAMMING LABORATORY

Course Code	**N4CCSA02**	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits	1	Exam Hours	2 Hrs

Course objectives:

4. To understand web development environment and methodology
5. To understand the web architecture and web languages
6. To develop an ability to design and implement websites
7. To develop the skills required for front-end and back-end development

Sl. no.	Experiments **Minimum of 2 exercises on each of the following topics**
1	HTML 5 and CSS 3
2	Java Script ES6
3	Bootstarp 4
4	Scopes and Closures
5	Develop a Server side programming using java Script: Node.Js
6	Implement CRUD Operation using MongoDB and Node.Js
7	Develop Client side Application using ReactJs
8	Implement MERN Stack

Course outcomes:

On successful completion of this course, students will be able to:

1. Develop web pages using HTML and Cascading Styles sheets
2. Create a robust Client-side validation with java script
3. Design dynamic data-driven Web sites using MongoDB and Node.js

Conduct of Practical Examination:

1. All laboratory experiments are to be included for practical examination.
2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
3. Students can pick one experiment from the questions lot prepared by the examiners.
4. Change of experiment is allowed only once and 20% Marks is to be deducted.

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE
SEMESTER – IV

CUDA PROGRAMMING (AEC)

Course Code	**N4CCSA03**	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits	1	Exam Hours	3

Course objectives:

1. To program using Message Passing Paradigm
2. To program using shared address space
3. To program for GPUs using CUDA

Sl. no.	Experiments
	Message Passing Interface
1	Establish communication between nodes.
2	Receive selective messages.
4	Factorial of a huge number.
5	Sorting
6	Vector operation
7	Matrix operation
	OpenMP
1	One dimensional array
2	Two dimensional array
3	Synchronization among threads
4	Scheduling of threads
5	Workload sharing
	CUDA
1	Basic image processing operation
2	Text analysis
3	One dimensional array
4	Two dimensional array
5	Query device properties and handling errors

Course outcomes:

On successful completion of this course, students will be able to:

1. To implement and debug program using Message Passing Interface (MPI)
2. To implement and debug program using OpenMP to use shared address space
3. To implement and debug programs on GPU

Conduct of Practical Examination:

1. All laboratory experiments are to be included for practical examination.
2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
3. Students can pick one experiment from the questions lot prepared by the examiners.
4. Change of experiment is allowed only once and 20% Marks is to be deducted.

B.E COMPUTER SCIENCE & ENGINEERING

SEMESTER - IV

Foundations of Engineering Mathematics-II

Course Code	N4MATDP	CIE Marks	100
Teaching Hours/Week (L:T:P)	(2:2:0)	SEE Marks	-
Credits	0	Exam Hours	-

Course objectives:

This Course will enable students to:

1. Solve second and higher order differential equations.
2. Find the Laplace transform of the function f(t).
3. Find the Inverse Laplace transform of the function F(s).
4. Apply the knowledge of numerical methods in the models of various physical and engineering phenomena
5. Solve the integral by using standard integrals (Beta and Gamma) and multiple integrals

Module-1 : Linear Differential Equations (6+6) Hours

Solution of second and higher order equations with constant coefficients by inverse differential operator method, method of variation of parameters

Module-2 : Laplace Transform (5+5) Hours

Definition, Transforms of elementary functions, properties of Laplace Transform, Laplace Transform of $e^{at}\,f(t)$, $t^n\,f(t)$, $\frac{f(t)}{t}$, derivatives and Laplace Transform of Periodic functions'

Module-3 : Inverse Laplace Transform (5+5) Hours

Inverse Laplace Transform, Convolution theorem (without proof) and problems Applications –Solution of Linear differential equations using Laplace Transform.

Module-4 : Elementary Numerical Methods (5+5) Hours

Finite differences. Interpolation/extrapolation using Newton's forward and backward difference formulae, Newton's divided difference and Lagrange's formulae (All formulae without proof). Solution of polynomial and transcendental equations - Newton-Raphson method (only formula) – Illustrative examples.

Module-5 : Integral Calculus (5+5) Hours

Evaluation of double and triple Integrals, **Beta and Gamma functions**: Definition, relation between Beta and Gamma functions and simple problems.

Course outcomes:

After the completion of this course, students will be able to:

1. Explain various physical models through higher order differential equations and solve such linear ordinary differential equations. (L1& L2)
2. Understand the concept of Laplace transform and obtain Laplace transform of periodic functions and unit step functions. (L1& L2)
3. Apply the concept of Laplace transform in solving Linear Differential equations. (L1& L2)
4. Apply the Numerical methods to solve Algebraic and transcendental equations and find the polynomials by finite difference method. (L1& L2)
5. Apply the concept of to evaluate multiple integrals and Beta and Gamma functions (L1& L2)

ಬಳಕೆ ಕನ್ನಡ		Course Code:	NSH01
baLake Kannada (Kannada for Usage)			
Contact Hours/ Week	: 2 (T)	Credit :	1.0
Total Lecture Hours	: 0	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50

Course Learning Objectives:

- To create the awareness regarding the necessity of learning local language for comfortable and healthy life.
- To enable learners to Listen and understand the Kannada language properly.
- To speak, read and write Kannada language as per requirement.
- To train the learners for correct and polite conservation.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. ಬಳಕೆ ಕನ್ನಡವನ್ನು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಬೋಧಿಸಲು ವಿಟಿಯು ಸೂಚಿಸಿರುವ ಪಠ್ಯಪುಸ್ತಕಗಳನ್ನು ಉಪಯೋಗಿಸಬೇಕು.
2. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಉತ್ತೇಜಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.
3. ಪ್ರತಿ ವಿದ್ಯಾರ್ಥಿ ಪುಸ್ತಕವನ್ನು ತರಗತಿಯಲ್ಲಿ ಬಳಸುವಂತೆ ನೋಡಿಕೊಳ್ಳುವುದು ಮತ್ತು ಪ್ರತಿ ಪಾಠ ಮತ್ತು ಪ್ರವಚನಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟಂತೆ ಪೂರಕ ಚಟುವಟಿಕೆಗಳಿಗೆ ತೊಡಗಿಸತಕ್ಕದ್ದು.
4. ಡಿಜಿಟಲ್ ತಂತ್ರಜ್ಞಾನದ ಮುಖಾಂತರ ಇತ್ತೀಚೆಗೆ ಡಿಜಿಟಲೀಕರಣಗೊಂಡಿರುವ ಭಾಷೆ ಕಲಿಕೆಯ ವಿಧಾನಗಳನ್ನು ಪಿಪಿಟಿ ಮತ್ತು ದೃಶ್ಯ ಮಾಧ್ಯಮದ ಮುಖಾಂತರ ಚರ್ಚಿಸಲು ಕ್ರಮ ಕೈಗೊಳ್ಳುವುದು. ಇದರಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ತರಗತಿಯಲ್ಲಿ ಹೆಚ್ಚು ಏಕಾಗ್ರತೆಯಿಂದ ಪಾಠ ಕೇಳಲು ಮತ್ತು ಅಧ್ಯಯನದಲ್ಲಿ ತೊಡಗಲು ಅನುಕೂಲವಾಗುತ್ತದೆ.
5. ಭಾಷಾ ಕಲಿಕೆಯ ಪ್ರಯೋಗಾಲಯದ ಮುಖಾಂತರ ಬಹುಬೇಗ ಕನ್ನಡ ಭಾಷೆಯನ್ನು ಕಲಿಯಲು ಅನುಕೂಲವಾಗುವಂತೆ ಕಾರ್ಯಚಟುವಟಿಕೆಗಳನ್ನು ಮತ್ತು ಕ್ರಿಯಾ ಯೋಜನೆಗಳನ್ನು ರೂಪಿಸುವುದು.

Unit 1 (5 Hours):

1. Introduction, Necessity of learning a local language. Methods to learn the Kannada language.
2. Easy learning of a Kannada Language: A few tips. Hints for correct and polite conservation, Listening and Speaking Activities
3. Key to Transcription.
4. **ವೈಯಕ್ತಿಕ ಸ್ವಾಮ್ಯಸೂಚಕ/ಸಂಬಂಧಿತ ಸರ್ವನಾಮಗಳು ಮತ್ತು** ಪ್ರಶ್ನಾರ್ಥಕ **ಪದಗಳು** - Personal Pronouns, Possessive Forms, Interrogative words

Unit 2 (4 Hours):

1. **ನಾಮಪದಗಳ** ಸಂಬಂಧಾರ್ಥಕ **ರೂಪಗಳು, ಸಂದೇಹಾಸ್ಪದ ಪ್ರಶ್ನೆಗಳು ಮತ್ತು ಸಂಬಂಧವಾಚಕ ನಾಮಪದಗಳು -** Possessive forms of nouns, dubitive question and Relative nouns.
2. **ಗುಣ, ಪರಿಮಾಣ ಮತ್ತು** ವರ್ಣಬಣ್ಣ **ವಿಶೇಷಣಗಳು, ಸಂಖ್ಯಾವಾಚಕಗಳು** Qualitative, Quantitative and Colour Adjectives, Numerals
3. ಕಾರಕ ರೂಪಗಳು ಮತ್ತು ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು – ಸಪ್ತಮಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯ – (ಆ, ಅದು, ಅವು, ಅಲ್ಲಿ) Predictive Forms, Locative Case

Unit 3 (5 Hours):

1. ಚತುರ್ಥಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯದ ಬಳಕೆ ಮತ್ತು ಸಂಖ್ಯಾವಾಚಕಗಳು – Dative Cases, and Numerals
2. ಸಂಖ್ಯಾಗುಣವಾಚಕಗಳು ಮತ್ತು ಬಹುವಚನ ನಾಮರೂಪಗಳು – Ordinal numerals and Plural markers
3. ನ್ಯೂನ/ನಿಷೇಧಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು ಮತ್ತು ವರ್ಣ ಗುಣವಾಚಕಗಳು – Defective / Negative Verbs and Colour Adjectives

Unit 4 (6 Hours):

1. ಅಪ್ಪಣೆ/ಒಪ್ಪಿಗೆ, ನಿರ್ದೇಶನ, ಪ್ರೋತ್ಸಾಹ ಮತ್ತು ಒತ್ತಾಯ ಅರ್ಥರೂಪ ಪದಗಳು ಮತ್ತು ವಾಕ್ಯಗಳು Permission, Commands, encouraging and Urging words (Imperative words and sentences)
2. ಸಾಮಾನ್ಯ ಸಂಭಾಷಣೆಗಳಲ್ಲಿ ದ್ವಿತೀಯ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ಸಂಭವನೀಯ ಪ್ರಕಾರಗಳು Accusative Cases and Potential Forms used in General Communication
3. 'ಇರು ಮತ್ತು ಇರಲ್ಲ' ಸಹಾಯಕ ಕ್ರಿಯಾಪದಗಳು, ಸಂಭಾವ್ಯಸೂಚಕ ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು – Helping Verbs; "iru and iralla", Corresponding Future and Negation Verbs
4. ಹೋಲಿಕೆ (ತರ–ತಮ), ಸಂಬಂಧ ಸೂಚಕ ಮತ್ತು ವಸ್ತು ಸೂಚಕ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಪದಗಳ ಬಳಕೆ – Comparative, Relationship, Identification and Negation Words

Unit 5 (6 Hours):

1. ಕಾಲ ಮತ್ತು ಸಮಯದ ಹಾಗೂ ಕ್ರಿಯಾಪದಗಳ ವಿವಿಧ ಪ್ರಕಾರಗಳು – Different types of forms of Tense, Time and Verbs
2. –ದ್, –ತ್, –ತು, –ಇತು, –ಆಗಿ, –ಅಲ್ಲ, –ಗ್, –ಕ್, ಇದೆ, ಕ್ರಿಯಾ ಪ್ರತ್ಯಯಗಳೊಂದಿಗೆ ಭೂತ, ಭವಿಷ್ಯತ್ ಮತ್ತು ವರ್ತಮಾನ ಕಾಲ ವಾಕ್ಯ ರಚನೆ. Formation of Past, Future and Present Tense Sentences with Verb Forms
3. Kannada Vocabulary List: ಸಂಭಾಷಣೆಯಲ್ಲಿ ದಿನೋಪಯೋಗಿ ಕನ್ನಡ ಪದಗಳು – Kannada Words in Conversation.

ಬಳಕೆ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಅನುಕೂಲಗಳು ಮತ್ತು ಫಲಿತಾಂಶಗಳು: **Course Outcomes**

At the end of the Course, The Students will be able

1. To understand the necessity of learning of local language for comfortable life.
2. To Listen and understand the Kannada language properly.
3. To speak, read and write Kannada language as per requirement.
4. To communicate (converse) in Kannada language in their daily life with Kannada speakers.
5. To speak in polite conservation.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration

SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

TEXT BOOKS:

ಬಳಕೆ ಕನ್ನಡ – ಲೇಖಕರು: ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ		Course Code:	NSH02
Contact Hours/ Week	: 2 (T)	Credit :	1.0
Total Lecture Hours	: 0	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯ ಉದ್ದೇಶಗಳು:

೧. ವೃತ್ತಿಪರ ಪದವಿ ವಿದ್ಯಾರ್ಥಿಗಳಾಗಿರುವುದರಿಂದ ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.

೨. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಪ್ರಧಾನ ಭಾಗವಾದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳನ್ನು ಸಾಂಕೇತಿಕವಾಗಿ ಪರಿಚಯಿಸಿ ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ ಸಾಹಿತ್ಯ ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಅರಿವು ಹಾಗೂ ಆಸಕ್ತಿಯನ್ನು ಮೂಡಿಸುವುದು.

೩. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವನ್ನು ಹಾಗೂ ಅವರುಗಳು ಸಾಧಿಸಿದ ವಿಷಯಗಳನ್ನು ಪರಿಚಯಿಸುವುದು.

೪. ಕನ್ನಡ ಶಬ್ದ ಸಂಪತ್ತಿನ ಪರಿಚಯ ಮತ್ತು ಕನ್ನಡ ಭಾಷೆಯ ಬಳಕೆ ಹಾಗೂ ಕನ್ನಡದಲ್ಲಿ ಪತ್ರ ವ್ಯವಹಾರವನ್ನು ತಿಳಿಸಿಕೊಡುವುದು.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

೧. ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡವನ್ನು ಬೋಧಿಸಲು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಪ್ರಸ್ತುತ ಪುಸ್ತಕ ಆಧರಿಸಿ ಬ್ಲಾಕ್ ಬೋರ್ಡ್ ವಿಧಾನವನ್ನು ಅನುಸರಿಸುವುದು. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಪ್ರೇರೇಪಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.

೨. ಇತ್ತೀಚಿನ ತಂತ್ರಜ್ಞಾನದ ಅನುಕೂಲಗಳನ್ನು ಬಳಸಿಕೊಳ್ಳುವುದು – ಅಂದರೆ ಕವಿ–ಕಾವ್ಯ ಪರಿಚಯದಲ್ಲಿ ಕವಿಗಳ ಚಿತ್ರಣ ಮತ್ತು ಲೇಖನಗಳು ಮತ್ತು ಕಥೆಕಾವ್ಯಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟ ಧ್ವನಿ ಚಿತ್ರಗಳು, ಸಂಭಾಷಣೆಗಳು, ಈಗಾಗಲೇ ಇತರ ವಿಮರ್ಶಕರು ಬರೆದಿರುವ ವಿಮರ್ಶಾತ್ಮಕ ವಿಷಯಗಳನ್ನು ಪಿಪಿಟಿ, ಡಿಜಿಟಲ್ ಮಾಧ್ಯಮಗಳ ಮುಖಾಂತರ ವಿಶ್ಲೇಷಿಸುವುದು.

೩. ನವೀನ ಮಾದರಿಯ ಸಾಹಿತ್ಯ ಬೋಧನೆಗೆ ಸಂಬಂಧಪಟ್ಟ ವಿಧಾನಗಳನ್ನು ಶಿಕ್ಷಕರು ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಅನುಕೂಲವಾಗುವ ರೀತಿಯಲ್ಲಿ ಅಳವಡಿಸಿಕೊಳ್ಳಬಹುದು.

ಘಟಕ ೧: ಲೇಖನಗಳು (6 hours)

೧. ಕರ್ನಾಟಕ ಸಂಸ್ಕೃತಿ – ಹಂ.ಪ. ನಾಗರಾಜಯ್ಯ

೨. ಕರ್ನಾಟಕ ಏಕೀಕರಣ : ಒಂದು ಅಪೂರ್ವ ಚರಿತ್ರೆ – ಜಿ. ವೆಂಕಟಸುಬ್ಬಯ್ಯ

೩. ಆಡಳಿತ ಭಾಷೆಯಾಗಿ ಕನ್ನಡ – ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ ಮತ್ತು ಪ್ರೊ. ವಿ. ಕೇಶವಮೂರ್ತಿ

ಘಟಕ ೨: ಆಧುನಿಕ ಪೂರ್ವದ ಕಾವ್ಯ ಭಾಗ (5 hours)

೧. ವಚನಗಳು: ಬಸವಣ್ಣ, ಅಕ್ಕಮಹಾದೇವಿ, ಅಲ್ಲಮಪ್ರಭು, ಆಯ್ದಕ್ಕಿ ಮಾರಯ್ಯ, ಜೇಡರದಾಸಿಮಯ್ಯ, ಆಯ್ದಕ್ಕಿ ಲಕ್ಕಮ್ಮ

೨. ಕೀರ್ತನೆಗಳು: ಅದರಿಂದೇನೂ ಫಲ ಇದರಿಂದೇನು ಫಲ – ಪುರಂದರದಾಸರು
ತಲ್ಲಣಿಸದಿರು ಕಂಡ್ಯ ತಾಳು ಮನವೇ – ಕನಕದಾಸರು

೩. ತತ್ವಪದಗಳು: ಸಾವಿರ ಕೊಡಗಳ ಸುಟ್ಟು – ಶಿಶುನಾಳ ಶರೀಫ

ಘಟಕ ೩: ಆಧುನಿಕ ಕಾವ್ಯ ಭಾಗ (6 hours)

೧. ಡಿ.ವಿ.ಜಿ. ರವರ ಮಂಕುತಿಮ್ಮನ ಕಗ್ಗದಿಂದ ಆಯ್ದ ಕೆಲವು ಭಾಗಗಳು

೨. ಕುರುಡು ಕಾಂಚಾಣ: ದ.ರಾ. ಬೇಂದ್ರೆ

೩. ಹೊಸಬಾಳಿನ ಗೀತೆ: ಕುವೆಂಪು

ಘಟಕ ೪: ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯ (5 hours)

೧. ಡಾ. ಸರ್ ಎಂ. ವಿಶ್ವೇಶ್ವರಯ್ಯ : ವ್ಯಕ್ತಿ ಮತ್ತು ಐತಿಹ್ಯ – ಎ.ಎನ್. ಮೂರ್ತಿರಾವ್

೨. ಕರಕುಶಲ ಕಲೆಗಳು ಮತ್ತು ಪರಂಪರೆಯ ವಿಜ್ಞಾನ : ಕರೀಗೌಡ ಬೀಚನಹಳ್ಳಿ

ಘಟಕ ೫: ಕಥೆ ಮತ್ತು ಪ್ರವಾಸ ಕಥನ (4 hours)

೧. ಯುಗಾದಿ : ವಸುಧೇಂದ್ರ

೨. ಮೆಗಾನೆ ಎಂಬ ಗಿರಿಜನ ಪರ್ವತ : ಹಿ.ಚಿ. ಬೋರಲಿಂಗಯ್ಯ

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಪರಿಣಾಮಗಳು (Course Outcomes):

೧. ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯವಾಗುತ್ತದೆ.

೨. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳು ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಆಸಕ್ತಿಯು ಮೂಡುತ್ತದೆ.

೩. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

೪. ಕನ್ನಡ ಭಾಷಾಭ್ಯಾಸ, ಸಾಮಾನ್ಯ ಕನ್ನಡ ಹಾಗೂ ಆಡಳಿತ ಕನ್ನಡದ ಪದಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration

SEE for 60 marks and examination duration is 120 minutes

Course prescribed to lateral entry Diploma holders admitted to III semester of Engineering programs

12	BS	20MAT4AD4	Applied Statistics	MATHS	3	1	-	3	50	50	100	3.5

Continued

UG Research: Totally six credits are prescribed for UG research. Research work can be taken up individually or a group of two students from the same or different departments. Students interested to pursue UG research are exempted from studying professional elective I (PE-1) in V semester and professional elective II (PE-2) in VI semester. The students are required to identify the guide, research topic and submit the application in the format available in the department, to the HoD at the beginning of V semester. If the work is interdisciplinary, one guide is allotted from each of the participating departments. Students have to carry out the extensive literature survey during V semester and submit a report comprising abstract, introduction, literature survey, motivation, objectives and methodology at the end of V semester. Evaluation of UG research work for 6 credits will be done in final year as and when the student completes the research. If students wish to discontinue UG research, they have to do so before the completion of 5th or 6th semester and students have to study exempted Professional Electives in subsequent semesters.

AICTE Activity Points: In case students fail to earn the prescribed activity points, Eighth semester Grade Card shall be issued only after earning the required activity points. Students shall be admitted for the award of degree only after the release of the Eighth semester Grade Card.

List of Professional Electives- 1				**List of Open Electives – 1**

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

SEMESTER - V

MANAGEMENT AND ENTREPRENEURSHIP

Course Code	HSS06	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. Explain the role , Functions and principles of management.
2. Identify and Analyse the importance of staffing and leading and controlling organization.
3. Explain the entrepreneurial qualities and need of rural entrepreneurship.
4. Identify select and evaluate projects.
5. Identify funding agencies and fallow guideline to start SSI.

Module-1

Introduction To Management: Definition of management, management skills, productivity and effectiveness, efficiency, functions and principles of management.

Planning: Nature of planning, types of plans- purpose of mission, objectives, goals, strategies, policies, Steps in planning.

Organizing: Formal and informal organization, span of management, the structure and process of organizing Organizational structure: line and staff organization, Functional organization and matrix organization.

Module-2

Staffing: Definition staffing, system approach to HRM, factors affecting staffing, system approach to selection, job design, skill and personal characteristics of manager, selection process and technique.

Leading: Human factors in managing, motivation, theory X and Y, the hierarchy of needs theory, job enrichment, leadership behaviour and styles.

Controlling: Basic control process, critical control points and standards, requirement and effective control, control techniques- budget, time event network analysis.

Module-3

Managing Engineering Design And Development: Product and Technology Life Cycles, Nature of Research and development, Research Strategy and organization, Nature of Engineering Design, Systems Engineering / New Product Development.

Managing Production Operations: Assuring product quality, Productivity, Work measurement, Maintenance and Facilities (Plant) engineering, other manufacturing functions.

Engineers In Marketing And Service Activities: Marketing and the Engineer, Engineers in Service organizations.

Module-4

Entrepreneur & Entrepreneurship: Introduction, concept of Entrepreneur, characteristics of an entrepreneur, qualities of an entrepreneur functions of an entrepreneur, characteristics of entrepreneurship, factors affecting entrepreneurial growth.

Rural Entrepreneurship: meaning and need, problems of rural entrepreneurship, development of rural entrepreneurship.

Project Identification And Selection : Introduction, Project identification, project selection project formulation: formulation and preparation of a project report, steps or guidelines in the preparation of a project report.

Project Appraisal: concept of project appraisal, methods of project appraisal. Financing of project: need for financial planning, sources of finance, capital structure, Lease and hire purchase: types of lease agreements, Concept Of Hire Purchase, Procedure For Hire Purchase.

Module-5

Micro Small & Medium Enterprises (MSME): Definition; Characteristics; Need and rationale; Objectives; Scope; role of MSME in Economic Development. Advantages of MSME, Steps to start an MSME Government policy towards MSME; Impact of Liberalization, Privatisation, Globalization on MSME, Effect of WTO / GATT.

Financial Support To SSI: Financial Assistance by the various Financial Institutions to industries: Introduction, IFCI, ICICI, LIC, UTI, IDBI, SIDBI, NSIC.

Taxation Benefits To Small-Scale Industry: Depreciation, Rehabilitation allowance, investment allowance, tax concessions.

Course outcomes:

On successful completion of this course, students will be able to:

1. Apply managerial functions and principles and develop plan activities.
2. Identify and apply staffing and selection procedure as well can control the activities of management.
3. Identify the roles of managers in engineering management.
4. Develop characteristics of entrepreneurship and demonstrate & apply the knowledge of project management and analyse and evaluate selection of projects by using project appraisal techniques.
5. Identify steps to start MSME's and financing institution and taxation benefits of MSME's.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

Sl. no.	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
Textbooks				
1	Essentials of Management	Harold Koontz and Heinz Weihrich	TMH	7th Edition
2	Daniel L Babcock and Lucy C Morse	Managing Engineering and Technology	Pearson Education	3rd Edition
3	Entrepreneurship Development	SS Khanka	S Chand & Co	2009

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE
SEMESTER – V

MACHINE LEARNING TECHNIQUES

Course Code	20AD501	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:2)	SEE Marks	50
Credits	04	Exam Hours	03

Course objectives:

1. Know the fundamental concepts of machine learning algorithm.
2. Identify the basic concepts of learning task.
3. Explain the genetic algorithms and its applications.
4. Describe the basic application of Bayesian techniques.
5. Explain the instant based and analytical learning.
6. Explain Reinforcement Learning.

Module-1

Introduction, Concept Learning: Well Posed Learning problem, Designing Learning systems, Perspectives and Issues in machine learning.

Concept Learning Introduction, A Concept Learning Task, Concepts Learning Search, Find-S: Finding a maximally specific Hypotheses, Version Spaces and Candidate Elimination Algorithm, Remarks on version space and Candidate Elimination, Inductive bias.

Module-2

Evaluating Hypotheses: Motivation, Estimating Hypothesis Accuracy, Basic of Sampling Theory.

Genetic Algorithms: Motivation, Genetic Algorithms, An Illustrative Example, Hypothesis Space Search, Genetic Programming, Models of Evolution and Learning**.**

Module-3

Bayesian Learning: Introduction, Bayes Theorem, Bayes Theorem and Concept Learning, Maximum Likelihood and least squared error hypotheses, Minimum Description Length Principle, Bayes Optimal Classifier, and Naive Bayes Classifier, An Example: Learning to Classify Text, Bayesian Belief network, EM Algorithm- General Statements of EM Algorithm**.**

Module-4

Instant Based Learning: Introduction K- Nearest Neighbor Learning, Locally Weighted Regression, Radial Basis Functions.

Analytical Learning: Introduction, learning with Perfect Domain Theories, Remarks on Explanation Based Learning, Explanation Based Learning of Searching Control Knowledge.

Module-5

Reinforcement Learning: The Learning Task ,Q-Learning, Nondeterministic Rewards and Actions, Temporal Difference Learning, Generalizing from Examples, Relationship to Dynamic Programming.

NOTE : The course is associated with 2 hours practical . Student has to implement and execute algorithms learnt during theory classes.

Course outcomes:

On successful completion of this course, students will be able to:

1. Illustrate the fundamental concepts and various issues related to the machine learning.
2. Explain different machine learning algorithms along with their strengths and weaknesses.
3. Analyse a given problem and identify the appropriate computing environment and give solution.
4. Apply machine learning algorithms to solve problems of moderate complexity.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

Sl. no.	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

SEMESTER – V

DATA MINING AND VISUALIZATION

Course Code	20AD502	CIE Marks	50
Teaching Hours/Week (L:T:P)	(4:0:0)	SEE Marks	50
Credits	04	Exam Hours	03

Course objectives:

1. Understand basics of data, its challenges and pre-processing.
2. Know how to classify a new instance using any classification technique.
3. Explain frequent item sets ,its generation and association rule mining.
4. Describe what is clustering, and explain clustering methods.
5. Illustrate Data Visualization and describe various methods to visualize data.

Module-1

Data Mining-Introduction, Challenges, Data Mining Tasks, Types of Data, Data Quality. Data Pre-processing, Measures of similarity and dissimilarity.
Textbook 1(Chapter 1, Chapter 2)

Module-2

Classification :Basics, General approach to solving a classification problem, Decision Tree Induction , Model Overfitting –Overfitting due to presence of noise and lack of representative samples, Nearest Neighbour Classifiers.
Textbook1(Chapter 4-4.1,4.2,4.3,4.4(4.4.2), Chapter 5-5.2)

Module-3

Association Analysis-Basic Concepts & Algorithms: Frequent Item set Generation,Rule Generation, Compact Representation of Frequent Item sets, Alternative methods for generating Frequent Item sets, FP Growth Algorithm, Evaluation of Association Patterns–Objective Measures of Interestingness-Limitations of Support-Confidence framework, Interest factor and limitations, Correlation Analysis and limitations.
Textbook 1 (Chapter 6- 6.1,6.2,6.3,6.4,6.5,6.6,6.7-6.7.1(Only mentioned topics))

Module-4

Clustering Techniques: Overview, K-means, Agglomerative Hierarchical Clustering, DBSCAN, Cluster Evaluation- Unsupervised Cluster Evaluation Using Cohesion and separation.
Textbook 1(Chapter 8-8.1, 8.2, 8.3, 8.4, 8.5-8.5.1,8.5,2)

Data Visualization I :Computational Statistics and Data Visualization, Content, Context and Construction, Presentation Graphics and Exploratory Graphics.
Textbook 2(1.1-1.1,2.2-2.1)

Module-5

Data Visualization II: Higher Dimensional Displays and Spread Sheets, Complete Plots, Customization, Data and Graphs, Graph layout Techniques, Trees, Graph drawing, Geometric Graphs, High Dimensional Data Visualization-Mosaic Plots.
Textbook 2(2.2-2.5, 2.3-3.1,3.2,2.4-4.1,4.2,4.3,2.5-5.1,5.2,5.3,5.4,2.6-6.1,6.2)

Course outcomes:

On successful completion of this course, students will be able to:

1. Describe the basics of Data Mining and Data Pre-processing .
2. Illustrate the data mining tasks like classification and clustering.
3. Analyse the given dataset and choose an appropriate classification technique, create a model and classify the new instance.
4. Analyse the given data set and generate frequent item set, apply association rule mining technique to generate association rules.
5. Apply suitable clustering algorithm to cluster the given dataset.
6. Discuss the basics of data visualization and techniques for visualising data.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE

SEMESTER - V

BIG DATA

Course Code	20AD503	CIE Marks	50
Teaching Hours/Week (L:T:P)	(4:0:0)	SEE Marks	50
Credits	04	Exam Hours	03

Course objectives:

1. Describe the basic concepts , technology , evolution and applications of Big Data.
2. Explain the tools of Big Data Ecosystem that can store , manage and process Big Data.
3. Describe the basic Map Reduce Programming Model and Apply it to solve real world application problems .
4. Study how the data is stored in databases and data warehouses.
5. Identify the importance of big data stack architecture in effective analysis of big data.
6. Describe the basic Spark Programming Model and Apply it to solve real world problems.

Module-1

Getting an Overview of Big Data: What is Big Data? History of Data, Management – Evolution of Big Data, Structuring Big Data, Types of Data, Elements of Big Data, Volume, Velocity, Variety, Veracity, Big Data Analytics, Careers in Big data, Advantages of Big Data Analytics, Future of Big Data.

Introducing Technologies for Handling Big Data: Distributed and Parallel Computing for Big Data, How data models and computing models are different, Introducing Hadoop, HDFS and MapReduce, How does Hadoop Function? Cloud Computing and Big Data, Cloud Services for Big Data, In-Memory Computing Technology for Big Data.

Module-2

Understanding Hadoop Ecosystem: Hadoop Ecosystem, Hadoop Distributed File System, HDFS Architecture, Concepts of Blocks in HDFS Architecture, NameNodes and DataNodes, The command line interface, Using HDFS Files ,Hadoop specific File System Files, HDFS commands,Theorg.apache. Hadoop, io.package,HDFS High Availability , Features of HDFS, MapReduce, Hadoop Yarn, Introducing HBase, HBase Architecture, Regions, Storing Bigdata with HBase, Interacting with the Hadoop Ecosystem, HBase in Operation –Programming with HBase, Combining HBase and HDFS, REST and Thrift, Data Integrity in HDFS, Features of HBase ,hive, Pig and Pig Latin, Sqoop, Zookeeper, Flume, OozieRole of HBase in Big Data Processing. Characteristics of HBase.

Module-3

Understanding MapReduce Fundamentals : The MapReduce Framework. Exploring the Features of MapReduce. Working of MapReduce. Exploring Map and Reduce Functions. Techniques to Optimize MapReduce Jobs. Hardware/Network Topology, Synchronization, File System. Uses of MapReduce.

Processing Your Data with MapReduce: Recollecting the Concept of MapReduce Framework, Developing Simple MapReduce Application, Building the Application, Executing the Application, Points to Consider while Designing MapReduce.

Module-4

Big Data Technology Foundations:

Exploring the Big Data Stack, Data Sources Layer, Ingestion Layer, Storage Layer, Physical Infrastructure Layer, Platform Management Layer, Security Layer, Monitoring Layer, Analytics Engine, Visualization Layer, Big Data Applications, Virtualization and Big Data, Virtualization Approaches, Server virtualization, Application Virtualization, Network Virtualization, Processor and Memory Virtualization, Data and Storage Virtualization, Managing Virtualization with Hypervisor. Implementing Virtualization to work with Big data.

Storing Data in Databases and Data Warehouses:
RDBMS and Big Data, CAP Theorem, Issues with the Relational Model, Non-Relational Database, Issues with the Non-Relational Model, Polyglot Persistence, Integrating Big Data with Traditional Data Warehouses, Big Data Analysis and Data Warehouse, Changing Deployment Models in Big Data Era.

Module-5

Introduction to Apache Spark: What Spark brings to the table, Spark components, Spark program flow, Spark ecosystem, Downloading and starting the spark-in-action virtual machine.

Spark fundamentals: Exploring the spark-in-action VM, Managing multiple Spark versions, Getting to know Spark's command line interface (spark-shell), Playing with simple examples in spark-shell, Exploring RDD actions and transformations and double functions.

The Spark API in depth: Working with key-value pairs, Data partitioning and shuffling, Grouping, sorting, and joining data, Using accumulators and broadcast variables.

Course outcomes:

On successful completion of this course, students will be able to:

1. Apply the basic knowledge related to Big data , its elements , its analytics , computing in Big data etc. to the solutions of complex real world engineering problems.
2. Select and apply appropriate modern tools of Hadoop ecosystem to the solution of various problems in storage, processing, accessing, managing and analysing the Big data.
3. Design and Develop Map Reduce programs to the solution of various real world application problems.
4. Identify the importance of Big data Stack architecture and Analyse the merits of u modern data warehouses against the limitations of Traditional Databases.
5. Design and Develop Spark programs to the solution of various problems.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE

SEMESTER – V

BIG DATA LABORATORY

Course Code	20ADL501	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:3)	SEE Marks	50
Credits	1.5	Exam Hours	03

Course objectives:

1. Describe the demonstration of installation of Hadoop ecosystem and HDFS.
2. Explain the demonstration of working of different HDFS commands.
3. Develop and implement MapReduce Programs for various application problems.
4. Develop and implement Spark Programs for various application problems.

Sl. no.	Experiments
	Programs / practical demonstration on the following Big Data topics:
1	Demonstration of installation of **Hadoop** ecosystem and HDFS.
2	Demonstration of working of different HDFS commands.
3	Develop and implement Map Reduce Programs for various application problems.
4	Develop and implement Spark Programs for various application problems.

Course outcomes:

On successful completion of this course, students will be able to:

1. Apply the knowledge of Hadoop ecosystemt o Demonstrate the installation of Hadoop ecosystem and HDFS.
2. Apply the knowledge of HDFS to demonstrate the working of different HDFS commands.
3. Design MapReduce Programs for various application problems.
4. Design Spark Programs for various application problems.

Conduct of Practical Examination:

1. All laboratory experiments are to be included for practical examination.
2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
3. Students can pick one experiment from the questions lot prepared by the examiners.
4. Change of experiment is allowed only once and 20% of Marks is to be deducted.

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE
Outcome Based Education (OBE) and Choice Based Credit System (CBCS)
SEMESTER - V

STATISTICAL ANALYSIS LABORATORY USING R & PYTHON

Course Code	5ADL02	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:1:2)	SEE Marks	50
Credits	1.5	Exam Hours	03

Course objectives:

- To understand the concept of statistical learning where Statistical learning refers to a set of tools for modeling and understanding complex datasets.
- To Manipulate data within R and to create simple graphs and charts used in introductory statistics
- To learn the statistical methods such as lasso and sparse regression, classification and regression trees, and boosting and support vector machines.
- To analyse and simulate any given data set.

Sl. No.	Experiments
	CYCLE -1 (Basics of R programming)
1	Introduction to R Programming
2	Getting Used to R Programming: Describing Data , Viewing and Manipulating Data – sampling, deriving confidence intervals etc.
3	Getting Used to R Programming: Plotting Data , Reading in Your Own Data – program to do preliminary data screening
	CYCLE -2 (Basic Analysis Techniques)
4	program to do Statistical hypothesis generation and testing
5	program to perform Analysis of variance
6	program to derive Correlation analysis
	CYCLE -3 (Regression Analysis)
7	Consider any data set and simulate the data set in order to obtain. i) The linear regression. (plot the linear and non-linear model) ii) Multiple Linear Regression. iii) Non-linear Transformations of the Predictors. iv) Qualitative predictors. Also show the mean and standard deviation of each quantitative predictor
8	Exercise for Logistic Regression, LDA, QDA, and KNN : i) Consider the stock market data set. Transform all of the elements for which the predicted probability of a market increase exceeds 0.5. Given predictions, produce a confusion matrix in order to determine how many observations were correctly or incorrectly classified. Suggest a possible trading strategy of buying on days when the model predicts an increasing market, and avoiding trades on days when a decrease is predicted. **ii)** Perform LDA in stock market set (use MASS library) and analyze the posterior probability output. **iii)** Fit a QDA model to the stock market data and analyze the QDA predictions. **iv)** Perform KNN using knn() function and predict the market's movement. Which of these methods appears to provide the best results on this data?
9	Consider an example to predict the probability of `default` using `income` and `balance` on the `Default` data set. Estimate the test error of this logistic regression model using the validation set approach. (Do not forget to set a random seed before beginning your analysis.) a) Fit a logistic regression model that uses `income` and `balance` to predict `default`. b) Using the validation set approach, estimate the test error of this model. In order to do this, you must perform the following steps:

	i) Split the sample set into a training set and a validation set ii) Fit a multiple logistic regression model using only the training observations. iii) Obtain a prediction of default status for each individual in the validation set by computing the posterior probability of default for that individual, and classifying the individual to the `default` category if the posterior probability is greater than threshold value (assume the value – e.g., 0.5) iv) Compute the validation set error, which is the fraction of the observations in the validation set that are misclassified. c) Repeat the process in (b) three times, using three different splits of the observations into a training set and a validation set. Comment on the results obtained. d) Now consider a logistic regression model that predicts the probability of `default` using `income`, `balance`, and a dummy variable for `student. Estimate the test error for this model using the validation set approach. Comment on whether or not including a dummy variable for `student` leads to a reduction in the test error rate
	CYCLE -4 (Open Ended Project)
10	Sample project to demonstrate Bi variate and multi variate data
11	Sample project to demonstrate data classification and tabulation
12	Sample project to demonstrate finance management or business statistics

Note	Cycle 1 – 3: Minimum 2 programs to be executed. Cycle 4: Synthesize and demonstrate as Open Ended Project
Revised Bloom's Taxonomy Level	L_1 - Remembering, L_2 - Understanding, L_3 - Applying

Course outcomes:

At the end of the course the student will be able to:

- CO1: To implement each of the statistical learning methods using the popular statistical software package R, python etc.
- CO2: To use statistical learning tools to analyze the data

Conduct of Practical Examination:

1. All laboratory experiments are to be included for practical examination.
2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
3. Students can pick one experiment from the questions lot prepared by the examiners.
4. Change of experiment is allowed only once and 20% of the Marks to be deducted for the same.

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

SEMESTER - V

SOFT SKILLS

Course Code	HSS08	CIE Marks	50
Total Teaching Hours	36	SEE Marks	50
Credits	00	Exam Hours	03

Course objectives:

1. To make the students aware of the importance of soft skills in the present-day business world and work environment
2. To learn the science behind picking up any skill quickly
3. To help students realize as well as develop key soft skills interviewers look for – such as change management, professionalism, inter- and intra-personal skills, adaptability etc.
4. To develop effective resumes (paper-based as well as video)
5. To understand the importance of and create an effective digital footprint
6. To provide simulated Group Discussion and Personal Interview experience based on the models adopted by reputed companies.
7. To understand professional etiquette to be displayed in workplaces.
8. To learn to introspect over one's strengths and weaknesses, and apply them effectively for career growth.

METHODOLOGY

Interactive instructor led session with audio-visual aids / case studies

Day	#	Topic	Sub-topics covered	Duration (Hrs)
1.	1	How to pick up skills faster?	i) Knowledge v/s. skill ii) Skill introspection iii) Skill acquisition iv) "The 10,000 hours rule" and the converse	2
	2	Interpersonal and Intrapersonal skill building	Social Interaction i) Interpersonal Communication ii) Peer Communication iii) Bonding iv) Types of social interaction Emotional Management Responsibility i) Types of responsibilities ii) Moral and personal responsibilities	2
	3	Professional etiquette	Workplace etiquette - meeting room, pantry, cubicle Dining etiquette; Telephone etiquette; Email and Business correspondence etiquette	2
2.	4	Change Management	i) Who moved my Cheese? ii) Tolerance of change and uncertainty iii) Joining the bandwagon iv) Adapting change for growth – overcoming inhibition v) Adapt to changes (tolerance of change and uncertainty) vi) Adaptability Curve vii) Survivor syndrome	2
	5	Creating a digital footprint	i) How what you post online / information online can affect people's and recruiter's perception about you ii) Usage of LinkedIn to further one's career prospects iii) Managing content that one posts on platforms like Twitter, Facebook, Instagram etc. to create positive	2

			footprint about oneself viii) Why is it important to leave a digital footprint?	
	6	Time Management	i) Prioritization - Time Busters ii) Procrastination iii) Scheduling iv) Multitasking v) Monitoring iv) Working under pressure and adhering to deadlines	2
3.	7	Group Discussion - Basics	i) Importance of GD round ii) Skills assessed in a GD iii) How to ace a GD iv) Do's and Don'ts in a GD v) Idea generation techniques vi) One mock GD involving 12 volunteers, facilitated by the trainer	2
	8	Personal Interview - Basics	i) Self-introduction practice. ii) Body language – especially grooming - for personal interview. vi) Personal interview – FAQs discussion.	2
	9	Building a resume from scratch	i) How to write a good and impressive Resume. ii) Important aspects of an impressive resume. iii) Sample template and formatting ideas.	2
4.	10	Group Discussion - Advanced	i) GD sample Video with analysis and discussion. ii) GD Do's and Don'ts – Worksheet practice. iii) Role plays for Do's and Don'ts. Idea generation – worksheet practice.	3
	11	Personal Interview - Advanced	i) Extensive discussion on PI FAQs. ii) Interview questions from based on resume – discussion iii) PI Videos - discussion and analysis. iv) Highlighting successful answers for PI- questions. v) Body language during a personal interview. iv) Unconventional types of interviews (Stress panel, MR, Guesstimation)	3
5.	12	Resume Writing - Workshop (Drafting a paper-based as well as a video resume)	i) Resume writing – Worksheet practice. ii) 3 stage Resume drafting iii) Rough draft-1. iv) Rough draft -2. v) Fair draft. vi) Discussion on specific aspects of an impressive Resume. vii) Creating a video resume	3
	13	Setting and achieving targets	i) Ambition, goal, passion and career objective – difference ii) SMART goals and Action plans viii) Obstacles -Failure management (case studies)	1.5
	14	Introspection	i) Identify your USP - Unique Selling Proposition ii) Recognize your strengths and weakness (SWOT) iii) Nurture strengths iv) Fixing weakness v) Overcoming your complex iii) Confidence building	1.5
6.	15	Group	i) Mock Group Discussions featuring groups of 10	3

		Discussion - Mock	people, with each GD lasting for 15 minutes. ii) Detailed feedback for each participant vi) Introspection by the audience to add value to the GD	
	16	Personal Interview - Mock	i) Mock personal interview for a sample set of candidates ii) Simulate the real personal interview experience. iii) Individual feedback and areas of improvements are shared.	3

Course outcomes:

On successful completion of this course, students will be able to:

- Display key soft skills expected by recruiters.
- Apply scientific methods to learn any skill quickly.
- Participate in group discussions and personal interviews effectively.
- Create effective resumes that impress interviewers (paper-based as well as video).
- Apply professional etiquette to be displayed in various workplace scenarios.
- Set and achieve targets – at work-place, as well as personal.

ASSESSMENTS PROVIDED

The following assessments are integrated into the training programme to best judge a student's proficiency on soft skills.

1. Team building tasks (Inside training hours).
2. Participation in group activities (Inside training hours).
3. Psychometric test.
4. Creating a resume.
5. Creating an effective LinkedIn profile.
6. Mock Group Discussion (Inside training hours).

REFERENCE MATERIAL

1. 'Who moved my Cheese?' by Spencer Johnson
2. 'Outliers' by Malcolm Gladwell
3. 'Emotional Intelligence' by Daniel Goleman
4. 'Road Less Travelled' by Scott Peck M.
5. 'How to win friends and influence people' by Dale Carnegie

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE

SEMESTER -V

MINI PROJECT PHASE-I

Course Code	--	CIE Marks	--
Teaching Hours/Week (L:T:P)	--	SEE Marks	--
Credits	0	Exam Hours/Batch	--

Course objectives:

1. To support independent learning and innovative attitude.
2. To guide to select and utilize adequate information from varied resources upholding ethics.
3. To guide to organize the work in the appropriate manner and present information (acknowledging the sources) clearly.
4. To develop interactive, communication, organisation, time management, and presentation skills.
5. To impart flexibility and adaptability.
6. To inspire independent and team working.
7. To expand intellectual capacity, credibility, judgement, intuition.
8. To adhere to punctuality, setting and meeting deadlines.
9. To instil responsibilities to oneself and others.
10. To train students to present the topic of project work in a seminar without any fear, face audience confidently, enhance communication skill, involve in group discussion to present and exchange ideas.

Mini-Project Phase-I:

- The aim of mini project is to bring out creativity and innovation in the students, preferably in the form of a working model.
- The project can be taken up individually or by a group of students (maximum four members per batch) from the same or different departments. If the project demands more man power, then the number of students in the group can be relaxed to 5 or 6 by the Department Academic Affairs Committee (DAAC).
- DAAC assigns guide for mini project and for interdisciplinary projects, one guide will be allotted from each of the participating department.
- The project is spread over two semesters (V & VI) and evaluated at the end of each semester. No credit is allocated during V semester. No SEE for mini project-phase I during V semester.

CIE procedure for Mini Project – Phase I:

- Mini project work is evaluated for 100 marks (50% CIE and 50% SEE). The CIE for mini project is spread over V and VI semester.
- The work carried out during V semester will be evaluated for 30% of CIE marks. The breakup of 30% of CIE marks is given below:

Synopsis submission	5 Marks
Presentation	5 Marks
Question and Answer	5 marks
Total	15 marks

Course outcomes:

On successful completion of this course, students will be able to:

1. Demonstrate a sound technical knowledge of their selected project topic.
2. Apply the knowledge of engineering and IT specialization to solve engineering problems.
3. Identify, formulate, solve and analyse Information Technology problems.
4. Design and develop algorithms for the solution of engineering problems.
5. Create software and hardware systems using modern IT tools to handle engineering activities.
6. Provide solution to various societal and environmental issues by understanding the impact of IT Knowledge & professional ethics.
7. Function effectively as an individual or as a peer member or as a team leader during project development work.
8. Effectively Communicate with the engineering community and society to write effective reports and to make effective presentations.

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

SEMESTER - V

WEB TECHNOLOGIES AND APPLICATIONS

Course Code	20ADPE151	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives: This course will enable students to:

1. **Illustrate** the Semantic Structure of HTML and CSS
2. **Compose** forms and tables using HTML and CSS
3. **Design** Client-Side programs using JavaScript and Server-Side programs using PHP
4. **Infer** Object Oriented Programming capabilities of PHP
5. **Explore** backend database interactions with PHP and **Examine** JavaScript frameworks such as jQuery and PHPExpress

Module-1 **7 Hrs**

Introduction to HTML, What is HTML and Where did it come from?, HTML Syntax, Semantic Markup, Structure of HTML Documents, Quick Tour of HTML Elements, HTML5 Semantic Structure Elements, Introduction to CSS, What is CSS, CSS Syntax, Location of Styles, Selectors, The Cascade: How Styles Interact, The Box Model, CSS Text Styling.

Chapters: 2.1 to 2.6, 3.1 to 3.7

Module-2 **7 Hrs**

HTML Tables and Forms, Introducing Tables, Styling Tables, Introducing Forms, Form Control Elements, Table and Form Accessibility, Microformats, Advanced CSS: Layout, Normal Flow, Positioning Elements, Floating Elements, Constructing Multicolumn Layouts, Approaches to CSS Layout, Responsive Design, CSS Frameworks.

Chapters: 4.1 to 4.6, 5.1 to 5.7

Module-3 **7 Hrs**

JavaScript: Client-Side Scripting, What is JavaScript and What can it do?, JavaScript Design Principles, Where does JavaScript Go?, Syntax, JavaScript Objects, The Document Object Model (DOM), JavaScript Events, Forms, Introduction to Server-Side Development with PHP, What is Server-Side Development, A Web Server's Responsibilities, Quick Tour of PHP, Program Control, Functions

Chapters: 6.1 to 6.8, 8.1 to 8.5

Module-4 **8 Hrs**

PHP Arrays and Superglobals, Arrays, $_GET and $_POST Superglobal Arrays, $_SERVER Array, $_Files Array, Reading/Writing Files, PHP Classes and Objects, Object-Oriented Overview, Classes and Objects in PHP, Object Oriented Design, Managing State: The Problem of State in Web Applications, Passing Information via Query Strings, Passing Information via the URL Path.

Chapters: 9.1 to 9.5, 10.1 to 10.3, 13.1 to 13.3

Module-5 **10 Hrs**

Databases and web development, Managing a MySQL database, SQL, Database APIs, Accessing MySQL from PHP, PHPExpress: Installation, API, Controllers, Views

Chapters: 11.1 to 11.5

Cookies, Serialization, Session State, HTML5 Web Storage, Advanced JavaScript and jQuery, JavaScript Pseudo-Classes, jQuery Foundations, AJAX, Asynchronous File Transmission, Animation
Chapters: 13.4 to 13.7, 15.1 to 15.6

Course outcomes:

On successful completion of this course, students will be able to:

CO1: Apply the knowledge of HTML and CSS syntax and semantics to build web pages.

CO2: Construct and visually format tables and forms using HTML and CSS.

CO3: Develop Client-Side Scripts using JavaScript and Server-Side Scripts using PHP to generate and display the contents dynamically.

CO4: Appraise the principles of object oriented development using PHP

CO5: Apply the knowledge of MySQL database using PHP and Illustrate JavaScript frameworks like jQuery and PHPExpress which facilitates developer to focus on core features.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

SEMESTER – V

COMPUTER GRAPHICS AND VISUALIZATION

Course Code	20ADPE152	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. Describe the basic concepts of computer graphics and OpenGL.
2. Explain and apply the OpenGL APIs to for simple applications like sierpinski gasket, marching square technique etc.
3. Explain and apply the basic concepts of input and interaction handling in an OpenGL application.
4. Describe the basics of geometric objects and transformations in computer graphics.
5. Apply the OpenGL APIs related to event handling and transformations in simple applications.
6. Explain the basics of implementation strategies of computer graphics.

Module-1

INTRODUCTION: Applications of computer graphics; A graphics system; Images: Physical and synthetic; Imaging systems; The synthetic camera model, Graphics architectures; Graphics Programming: The Sierpinski gasket; programming 2D applications.

Module-2

THE OPENGL: The OpenGL API; Primitives and attributes; Control functions; The Gasket program; Polygons and recursion; the three-dimensional gasket, plotting of implicit functions.

Module-3

INPUT AND INTERACTION: Input devices; Display lists; Display lists and modeling; Programming event-driven input; Menus; Picking; A simple CAD program, Building interactive models; Animating interactive programs.

Module-4

GEOMETRIC OBJECTS AND TRANSFORMATIONS: Scalars, points, and vectors; Coordinate systems and frames, Modeling a colored cube; affine transformations; Rotation, translation and scaling. Transformations in homogeneous coordinates; Concatenation of transformations; OpenGL transformation matrices; quaternions.

Module-5

IMPLEMENTATION: Basic implementation strategies; The major tasks; Clipping; Line- segment clipping; Polygon clipping; Clipping of other primitives; Rasterization; Bresenham's algorithm; Polygon rasterization; Hidden-surface removal, antialiasing.

Course outcomes:

On successful completion of this course, students will be able to:

1. Explain the basic concepts of graphics, architecture, mathematical foundations and programming in developing graphical applications.
2. Create, select and apply appropriate OpenGL functions to achieve visualization in graphics designing.
3. Analyse and apply knowledge of engineering to set the 2D and 3D projections for visualization.
4. Explain techniques of input handling and develop event driven graphical solutions with OpenGL.
5. Develop interactive and animated models using OpenGL transformation functions.
6. Explain and analyse the different implementation techniques like rasterization, clipping, hidden surface removal and antialiasing.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

SEMESTER - V

THEORY OF COMPUTATION

Course Code	20ADPE153	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. Explain the concepts of automata theory and formal languages.
2. Identify different formal language classes like regular and context free and their relationships.
3. Design grammars and recognizers for different formal languages.
4. Analyze and modify the CFGs to normal forms.
5. Demonstrate the equivalence between various language recognizers.
6. Describe Turing machine, its variants and hierarchy of formal languages and automata.

Module-1

Introduction to Finite Automata: Why study automata theory? The central concepts of Automata theory; Deterministic finite automata; Nondeterministic finite automata; An Application: Text search; Finite automata with Epsilon-transitions. (Text Book 1: 1.1.1, 1.5, 2.2, 2.3, 2.4, 2.5)

Module-2

Regular expressions and Languages: Regular expressions, Finite Automata and Regular Expressions- From DFA's to Regular Expressions, converting regular expressions to automata; Application of Regular Expressions.

Properties of Regular languages- Proving languages not to be regular languages; Equivalence and Minimization of Automata - Testing equivalence of states, Testing equivalence of regular languages, Minimization of DFA's. (Text Book 1: 3.1, 3.2.1, 3.2.3, 3.3, 4.1)

Module-3

Context-Free Grammars and Languages: Context-free grammars; Parse trees- Constructing Parse Trees, The yield of a parse tree; Applications of Context Free Grammars, Ambiguity in grammars and languages- Ambiguous grammars, Leftmost derivation as a way to express ambiguity, Inherent ambiguity. (Text Book 1:5.1, 5.2.1, 5.2.2,5.3, 5.4.1, 5.4.3,5.4.4). Simplification of CFG's and Normal forms (only Chomsky Normal Form) (Text Book 2: 6.1,6.2).

Module-4

Pushdown Automata: Definition of the Pushdown automata; The languages of a PDA, Acceptance by Final State, Acceptance by Empty Stack, From Empty Stack to Final State, From Final State to Empty Stack, Deterministic Pushdown Automata- Definition of a DPDA. (Text Book 1: 6.1, 6.2, 6.4.1)

Introduction to Turing Machine: The Turing Machine: Notation for the TM, Instantaneous Descriptions for the TM, Transition diagrams for the TM, The Language of a TM, TM and Halting. (Text Book 1:8.2.2 - 8.2.6)

Module-5

A hierarchy of Formal Languages and Automata- Definitions of Recursive and Recursively Enumerable Languages, Definition of Unrestricted Grammars, Definition of Context Sensitive Grammars and Languages, Chomsky hierarchy.

Limits of Algorithmic Computation- Some problems that cannot be solved by Turing Machines, Undecidable problems for recursively enumerable languages, The Post Correspondence Problem, Undecidable problems for context free languages.

(Text Book 2: 11.1, 11.2, 11.3, 11.4 only mentioned definitions of chapter 11, 12.1,12.2,12.3and 12.4) [12.1, 12,3, 12.4, 12.7, 12.8].

Course outcomes:

On successful completion of this course, students will be able to:

1. Apply the basic mathematics knowledge to explain the theoretical foundations of computing.
2. Apply the concepts of theoretical foundations of computing to show the equivalence among different notations of regular and context free languages.
3. Analyze the language and formulate regular expressions and context free grammars.
4. Identify the class of languages based on Chomsky hierarchy to prove the membership of regular and context free languages.
5. Analyze the given language and design the automata to accept the language.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

SEMESTER - V

SOFTWARE ENGINEERING

Course Code	20ADOE151	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. Define the importance of software and process models in developing the large scale software systems.
2. Identify the requirements for the software to be developed by various mechanisms and interpreting the same as structured, unambiguous, consistent, correct and clear SRS.
3. Apply the various design techniques to choose the best architecture and user interface design.
4. Design various test cases well in advance to make sure that it is considered in all dimensions.
5. Apply analysis and design techniques to Web and Mobile apps.

Module-1

The Nature of Software: The Nature of Software, The Changing Nature of Software.

Software Engineering: Defining the Discipline, The Software Process, Software Engineering Practice, Software Development Myths.

The Software Process Structure: A Generic Process Model, Defining a Framework Activity, Identifying a Task set, Process Patterns, Process Assessment and Improvement.

Process Models: Perspective Process Models, Specialized Process Models, The Unified Process, Personal and Team Process Models.

Agile Development: What is Agility, Agility and the Cost of Change, What is an Agile Process, Extreme Programming, Scrum.

Module-2

Understanding Requirements: Requirements Engineering, Establishing the Groundwork, Eliciting Requirements, Developing Use Cases, Building the Analysis Model, Negotiating Requirements and Validating Requirements.

Requirements Modelling: Scenarios And Class Based Methods: Requirements Analysis, Scenario-Based Modelling, UML Models That Supplement the Use Case, Identifying Analysis Classes, Specifying Attributes, Defining Operations, Class-Responsibility-Collaborator Modelling, Association and Dependencies, Analysis Packages.

Requirements Modelling: Behaviour, Patterns: Creating a Behavioural Model, Identifying Events with the Use Case, State Representations.

Module-3

Design Concepts: Design within the Context of Software Engineering, The Design Process, Design Concepts, The Design Model .

Architectural Design: Software Architecture, Architectural Genres, Architectural Styles, Architectural considerations, Architectural Decisions, Architectural Design(Except 13.6.5 and 13.6.6), Assessing Alternative Architectural Designs.

Module-4

Component-Level Design: What Is a Component, Designing Class-Based Components, Conducting Component-Level Design, Designing Traditional Components and Component-Based Development.

User Interface Design: The Golden Rules, User Interface Analysis and Design.Expressions, combining searching and extracting, escape characters.

Module-5

Software Testing Strategies: A Strategic Approach toSoftware Testing, Strategic Issues, Test Strategies for Conventional Software, Test Strategies for Object-Oriented Software, Validation Testing, System Testing and The Art of Debugging.

Testing Conventional Applications: Software Testing Fundamentals, Internal and External Views of Testing, White-Box Testing, Basis Path Testing, Control Structure Testing and Black-Box Testing.

Course outcomes:

On successful completion of this course, students will be able to:

1. Analyse the process model chosen for the development of software and its merits and demerits.
2. Identify the clear, correct and consistent requirements for the project.
3. Design suitable data, architecture and user interface that copes with the requirements.
4. Estimate the cyclomatic complexity and design the corresponding test cases..
5. Conduct various integration testing approaches and note down pit falls in requirements, design and test cases.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

SEMESTER - V

FUNDAMENTALS OF DIGITAL SIGNAL PROCESSING

Course Code	20ADOE152	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. Define and describe the basic concepts of digital signal processing.
2. Explain the representations, properties, computation and relationships with analysis of DFT and DCT.
3. Describe the structure, design and realization of FIR filters.
4. Describe the structure, design and realization of IIR filters.

Module-1

Introduction to Digital Signal Processing: Basic elements of a Digital Signal Processing system, advantages of digital over analog signal processing, Concept of frequency in continuous-time and discrete-time domain (Section 1.3 of Text book), Importance of Sampling (Section of 1.4 of Text book), Frequency ranges of natural signals. (Section 4.2.10 of Text book)

Module-2

Discrete Fourier Transform: Introduction, Fourier representations of finite-duration sequences, Properties of DFT, Linear convolution using DFT, Computation of Circular convolution and correlation, Relationship of DFT to other transforms, Spectral analysis using DFT, Filtering of long sequences: Overlap-save method and overlap-add method.

Module-3

Discrete Cosine Transform (DCT): Type-II DCT Pair, Properties of DCT and Applications of DCT. (Qualitative analysis)

Design and Realization of Filters: Ideal filter characteristics, low-pass, high-pass and band-pass filters.

Module-4

Design of FIR filters: Issues in filter design, importance of linear phase, Frequency response of linear phase FIR filters, Locations of zeros of FIR filters, Design techniques of FIR filters-Windowing method and Frequency sampling method.

Basic structures for FIR systems: Direct, Cascade, Linear Phase and Frequency sampling structures.

Module-5

Design of IIR filters: Elementary properties of IIR filters, Techniques for determining IIR filter coefficients, Frequency transformations in analog domain. Digital filter design from continuous-time filters- Impulse invariant technique and Bilinear transformation methods.

Basic structures for IIR systems: Direct, Cascade, and Parallel structures. Comparison of FIR and IIR filters.

Course outcomes:

On successful completion of this course, students will be able to:

1. Explain the basic concepts of digital signal processing.
2. Represent and process information in digital domain as a function of time or frequency.
3. Design a digital FIR filter for a given specification and realize using a given structure.
4. Design a digital IIR filter for a given specification and realize using a given structure.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

SEMESTER - V

BIOINFORMATICS

Course Code	20ADOE153	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. Describe the various types of biological database and tools.
2. Develop algorithms of sequence alignment (pair-wise and multiple) and understating the scoring algorithms.
3. Employ the information in gene prediction and phylogenetic Analysis.
4. Analyse and understating of protein structure prediction and validation.
5. Describe the applications of bioinformatics in life sciences.

Module-1

Introduction to bioinformatics and biological database Introduction to bioinformatics: Goal, scope and application. Introduction to database: types of database (object-oriented databases and RDBMS). Biological Database: need of biological database, sequence and structure database –(NCBI, EMBL, DDBJ, and PDB), other databases -KEGG, PubMed, OMIM, PubChem, NCI, ZINC, Drug Bank. format of databases: genbank and PDB flat file. Protein Structure Visualization: Rasmol, Pymol, Jmol,CN3D, Swiss PDB viewer, chimera and discovery studio visualizer.

Module-2

Sequence alignment and motif, domain prediction Pairwise alignment: dot matrix method, dynamic programming -(local and global alignment), POA alignment. scoring matrices: amino acid scoring matrices, PAM, BLOSUM. Database similarity searching: FASTA and BLAST, BLAST variants, BLAST output format. Multiple sequence alignment: scoring function, exhaustive algorithms, and heuristic algorithms. PSSM, hidden markov model. protein motif and domain prediction: motif and domain databases PROSITE. sequence logos and web-logo.

Module-3

Gene and Promoter prediction and Phylogenetic Aanlysis Gene prediction in prokaryotes: Conventional determination of open reading frames (ORF), Markov model and HMM. Gene prediction in eukaryotes: an initio based program, neural networks. Promoter and regulatory element prediction: prokaryotes and eukaryotes. Introduction to phylogenetic: phylogenetic basics, terminologies.

Module-4

Protein structure prediction and molecular dynamics Secondary structure predication: Globular proteins: ab-inition, homology based, neural networks method. Trans membrane proteins: Prediction of helical membrane, β-barrel membrane proteins.

Module-5

Applications of Bioinformatics: Bioinformatics in pharmacy: drug discovery process, structure based and ligand based drug design (CADD). Pharmacokinetics: absorption, distribution, metabolism, excretion and toxicity of drugs. Bioinformatics in genomics: human genome project, software's for genomics. Bioinformatics in metabolomics: online databases and pipelines for metabolomics, software for metabolomics. Bioinformatics in agriculture: meta genomics: crops, insect resistance, nutritional quality and abiotic stress tolerance.

Course outcomes:

On successful completion of this course, students will be able to:

1. Describe about bioinformatics and gain understanding lab and research techniques using molecular biology methods.
2. Explain about storage, retrieval, sharing and using biological data, information and tool used in computational biology.
3. Describe algorithms, Mathematical and statistical models for sequence analysis.
4. Analyze the principles underlying Protein secondary and tertiary structure prediction in computational approach.
5. Illustrate the various applications of Structural and Functional Bioinformatics and Bioinformatics in agriculture, industry, medicine and environmental protection

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

NCMC: Non Credit Mandatory Course **VAC:** Value Added Course

UG Research: Students pursuing UG research are exempted from studying Professional Electives (PE-2) in VI semester and continue the research work. Evaluation will be done in final year as and when student completes the work and prescribed number of credits will be included. If students wish to discontinue UG research they have to do so before the completion of 6th semester and students have to study exempted Professional Electives in subsequent semesters.

Internship / Ind. Training: Students have to undergo internship/ Ind. training for a period of 6 weeks (minimum) during the intervening vacation of IV and V semester / VI and VII semester. Two credits are prescribed for Internship / Ind. Training and it will be included in VII semester. There is no SEE for Internship / Ind. Training and evaluation is only through CIE. Student has to get a minimum of 40% of CIE marks for pass, otherwise the training has to be repeated in its entirety. Those students who are unable to complete the Internship / Ind. Training will have to undergo the industrial training after VIII semester and the VIII semester Grade Card will be issued only after the successful completion of industrial training.

AICTE Activity points: In case students fail to earn the prescribed activity points, eighth semester Grade Card shall be issued only after earning the required activity points. Students shall be admitted for the award of degree only after the release of the eighth semester Grade Card.

SEMESTER - VI

SOFTWARE PROJECT MANAGEMENT

Course Code	HSS07A	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. Understand the basics of software project management concepts, principles and practices.
2. Understand the different methods of estimation for software project.
3. Understand the basic concepts, principles and practices of software project scheduling and risk management.
4. Analyse a software project based on various review metrics with review guidelines.
5. Understand software project maintenance, reengineering and configuration management.

Module-1

Project Management Concepts: The Management Spectrum – The People, The Products, The Process, The Project, People -The Stakeholders, Team Leaders, The Software Team, Agile Teams, Coordination And Communication Issues, The Product – Software Scope, Problem Decomposition, The Process – Melding The Products And The Process, Process Decomposition, The Project, The W5HH Principle, Critical Practices.

Module-2

Metrics in the Process and Project Domains -Process Metrics And Software Process Improvement, Project Metrics, Software Measurement – Size-Oriented Metrics, Function-Oriented Metrics, Reconciling LOC And FP Metrics, Object-Oriented Metrics, Use Cases- Oriented Metrics, Webapp Project Metrics, Metrics For Software Quality – Measuring Quality ,Defect Removal Efficiency, Integrating Metrics With The Software Process - Arguments For Software Metrics, Establishing A Baseline, Metrics Collection Computation And Evaluation, Metrics For Small Organisation, Establishing A Software Metrics Program.

Module-3

Estimation for Software Project: Observations On Estimation, The Project Planning Process, Software Scope And Feasibility, Resources – Human Resources, Reusable Software Resources, Environmental Resources, Software Project Estimation, Decomposition Techniques – Software Sizing, Problem Based Estimation, An Example Of LOC Based Estimation, An Example Of FP – Based Estimation, Process-Based Estimation, An Example Of Process- Based Estimation, Estimation With Usecases, An Example Of Estimation Using Use Case Points, Reconciling Estimates, Empirical Estimation Models – The Structure Of Estimation Models, The COCOMO II Model, The Software Equation.

Module-4

Project Scheduling: Basic concepts, Project Scheduling – Basic Principles - The Relationship Between People and Effort – Effort Distribution, defining a Task Set for The Software Project – a Task Set Example – Refinement of Major Tasks, defining a Task Network, Scheduling – Timeline Charts – Tracking the Schedule – Tracking Progress for an OO Project.

Module-5

Software Quality: What is Quality? Software Quality – Garvin's Quality Dimensions, McColl's Quality Factors, ISO 9126 Quality Factors, Targeted Quality Factors, The Transition to a Quantitative View, The Software Quality Dilemma - "Good Enough" Software, The Cost Of Quality, Risks, Negligence and Liability, Quality and Security, The Impact Of Management Actions, Achieving Software Quality – Software Engineering Methods, Project Management Techniques, Quality Control, Quality Assurance.

Course outcomes:

On successful completion of this course, students will be able to:

1. Describe the basics of software project management concepts, principles and practices.
2. Apply the different metrics and techniques to measure a software project.
3. Apply software cost estimation models.
4. Apply scheduling techniques to software project.
5. Discuss the software quality concepts and good practices.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

SEMESTER – VI

BUSINESS INTELLIGENCE AND ANALYTICS

Course Code	20AD601	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. Explain the Decision Support systems and Business Intelligence framework.
2. Illustrate the significance of computerised Decision Support, and understand the mathematical modelling behind decision support.
3. Explain Data warehousing , its architecture and Extraction, Transformation, and Load (ETL) Processes.
4. Explore knowledge management , explain its activities, approaches and its implementation.
5. Describe the Expert systems , areas suitable for application of experts system.

Module-1

Decision Support and Business Intelligence: Opening Vignette , Changing Business Environments and Computerized Decision Support, Managerial Decision Making, Computerized Support for Decision Making, An Early Framework for Computerized Decision Support, The Concept of Decision Support Systems (DSS), A Framework for Business Intelligence (BI), A Work System View of Decision Support.

Module-2

Computerised Decision Support: Decision Making, Models, Phases of the Decision-Making Process, The Intelligence Phase, The Design Phase, The Choice Phase, The Implementation Phase, How Decisions Are Supported.

Modelling and Analysis: Structure of Mathematical Models for Decision Support, Certainty, Uncertainty, and Risk, Management Support Systems, Multiple Goals, Sensitivity Analysis, What-If Analysis, and Goal Seeking.

Module-3

Data Warehousing: Data Warehousing Definitions and Concepts, Data Warehousing Process Overview, Data Warehousing Architectures, Data Integration and the Extraction, Transformation, and Load (ETL) Processes.

Module-4

Knowledge Management: Introduction to Knowledge Management, Organizational Learning and Transformation, Knowledge Management Activities, Approaches to Knowledge Management, Information Technology (IT) In Knowledge Management, Knowledge Management Systems Implementation.

Module-5

Expert Systems: Basic Concepts of Expert Systems, Applications of Expert Systems, Structure of Expert Systems, Knowledge Engineering, Problem Areas Suitable for Expert Systems, Development of Expert Systems, Benefits, Limitations, and Critical Success Factors of Expert Systems.

Course outcomes:

On successful completion of this course, students will be able to:

1. Apply the basics of data and business to understand Decision Support systems and Business Intelligence framework.
2. Describe the significance of computerised Decision Support, apply the basics of mathematics to understand the mathematical modelling behind decision support.
3. Explain Data warehousing , its architecture and Extraction, Transformation, and Load (ETL) Processes.
4. Analyze the importance of knowledge management and explain its activities, approaches and its implementation.
5. Describe the Expert systems and analyze its development , discuss areas suitable for application of experts system.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE

SEMESTER - VI

ARTIFICIAL INTELLIGENCE

Course Code	20AD602	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. Explain the basics of intelligent agents and nature of environments and its properties.
2. Discuss the different search strategies and constraint satisfaction problems.
3. Explain the knowledge base sentences using propositional and first order logic.
4. Explain PROLOG syntax and several simple programs.
5. Search strategies are designed using PROLOG.

Module-1

Introduction, Intelligent Agents and Searching: What is AI? Intelligent agents, agents and environment rationality nature of environment, the structure of agents .problem solving, problem solving agents, searching for solution, uninformed search strategies, informed search strategies.

Module-2

Adversial Search : Games, optimal decision in games, alpha- beta pruning, imperfect real time decision, stochastic games, partially observable games, state of the art game programs, alternative approaches.
Constraint Satisfaction problem, backtracking search for CSP's.

Module-3

Logical Agents and First Order Logic: knowledge based agents, the wumpus world, logic, propositional logic reasoning patterns in propositional logic syntax and semantics of first order logic, knowledge engineering in first order logic.

Module-4

Introduction to Prolog: Introduction, Syntax for predicate calculus program, Abstract data types in PROLOG, a production system example in PROLOG, A production system example in PROLOG, Designing alternative search strategies, a PROLOG planner, PROLOG meta predicates, types and unification, meta interpreter in PROLOG, learning algorithm in PROLOG, natural language processing in PROLOG.

Module-5

Inference in First Order Logic: Unification and lifting, Forward chaining and backward Chaining, resolution .Knowledge Representation: issues in knowledge representation, semantic nets, Frames, Conceptual graphs, strong method of problem solving, over view of expert system technology, rule based expert system.

Course outcomes:

On successful completion of this course, students will be able to:

1. Apply the knowledge of Artificial Intelligence to write simple algorithm for agents.
2. Apply the AI knowledge to solve problem on search algorithm.
3. Develop knowledge base sentences using propositional logic and first order logic.
4. Apply first order logic to solve knowledge engineering process.
5. Examine PROLOG syntax and semantics and be fluent in the use of PROLOG in solving AI problems.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

INTERNET OF THINGS AND ITS APPLICATIONS

Course Code	20AD603	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. To understand and learn Industrial IoT basics, I-IoT data flow, Industrial Protocols and apply the knowledge of IoT. (Understanding, Application)
2. To develop I-IoT data flow. (Synthesis)
3. To learn I-IoT platform and Architecture and implement custom platforms (Comprehension, Application)
4. To gain practical knowledge by using I-IoT Analytics (Synthesis)
5. To analyse the latest IoT techniques used in Industry- to carry out the industrial case study - prepare a technical document and make a presentation (Analysis, Syntheses and Evaluation) To develop open ended solution for any of the identified problems

Module-1 **10 Hrs**

Introduction to Industrial IoT: What is the I-IoT?, Use cases of the I-IoT, IoT and I-IoT similarities and differences, IoT analytics and AI, Understanding the Industrial Process and Devices, The CIM pyramid

The I-IoT data flow: The Industrial IoT data flow in a factory, The edge device, The Industrial IoT data flow in the cloud . Industrial Data Flow and Devices: The I-IoT data flow in the factory, Measurements and the actuator chain – Sensors, Actuators, Controllers, PLCs, DCS

Industrial protocols, Supervisory control and data acquisition (SCADA), Historian, ERP and MES

Module-2 **08 Hrs**

Implementing the Industrial IoT Data Flow:

Discovering OPC - OPC Classic; OPC UA, Understanding the I-IoT edge: The edge architecture; Edge implementations; Edge internet protocols, Implementing the I-IoT data flow, Edge deployment and data flow scenarios,

Module-3 **12 Hrs**

Developing Industrial IoT and Architecture:

Introduction to the I-IoT platform and architectures, OSGi, microservice, containers, and serverless computing; dockers, The standard I-IoT flow: Understanding the time-series technologies; Asset registry; Data-processing and the analytics platform

Implementing a Custom Industrial IoT Platform:

An open source platform in practice, Mosquitto as MQTT connector, Apache Kafka as a data dispatcher, Storing time-series data on Apache Cassandra, Developing our batch analytics with Airflow, Other open source technologies for analytics, Building an asset registry to store asset information, Pro and cons of the proposed platform, Other I-IoT data beyond the time-series

Module-4 **10 Hrs**

Understanding Diagnostics, Maintenance, and Predictive Analytics:

I-IoT analytics, The different classes of analytics, I-IoT analytics technologies, Building I-IoT analytics, Understanding the role of the infrastructure, Deploying analytics, Open System Architecture (OSA), Analytics in practice, Anomaly detection with ML, Predictive production

Module-5 **0 Hrs**

IoT in Industry:

Manufacturing - An Architecture for the Connected Factory, Industrial Automation Control Protocols, Connected Factory Security

Oil and Gas - An Introduction to the Oil and Gas Industry, Industry Key Challenges as Digitization Drivers, Improving Operational Efficiency, IoT Architectures for Oil and Gas

Utilities - An Introduction to the Power Utility Industry, The GridBlocks Reference Model, The Primary Substation GridBlock and Substation Automation, System Control GridBlock: The Substation WAN, The Field Area Network (FAN) GridBlock, Smart Grid Security Considerations, The Future of the Smart Grid

Mining- Mining Today and Its Challenges, Challenges for IoT in Modern Mining, An IoT Strategy for Mining, An Architecture for IoT in Mining

Public Safety - Overview of Public Safety, An IoT Blueprint for Public Safety, Emergency Response IoT Architecture, IoT Public Safety Information Processing, School Bus Safety

NOTE:

- **Any 2 case studies – from the given UNIT 5 syllabus**

Book 2 to be referred

Course outcomes: The students should be able to:

CO1. Understand and learn Industrial IoT basics, data flow, Industrial Protocols, SCADA

CO2. Apply, Analyze Industrial IoT data flow

CO3. Apply, Analyze Industrial IoT platform – architecture and **Develop** programs using custom IoT platform.

CO4. Apply and **Analyze** the I-IoT Analytics

CO5. Understand and **apply** the knowledge of IoT in Industry

CO6. Do Literature Survey on Industrial Case Study - prepare technical reports and present before audience convincingly. Also, Create open ended framework solution for various Industry 4.0 problems

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

Sl.. no.	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
Textbooks				
1	Hands-On Industrial Internet of Things	Giacomo Veneri and Antonio Capasso	Packt Publications	November 2018 (chapters 1, 2, 3, 4, 7,8,13)
2	IoT Fundamentals- Networking Technologies, Protocols and Use cases for the Internet of Things	David Hanes, Gonzalo Salgueiro, Patrick Grossetete, Rob Bartpn, Jerome Henry	CISCO Press	Chapters 9, 10, 11, 14, 15
Reference Books				

1	INTRODUCTION TO INDUSTRY 4.0 AND INDUSTRIAL INTERNET OF	Sudip Misra, Chandana Roy, Anandarup Mukherjee	CRC Press,	January 7, 2021
2	Industrial Internet of Things: Cyber manufacturing Systems,	Sabina Jeschke, Christian Brecher, Houbing Song, Danda B.	Springer	
3	Industry 4.0: The Industrial Internet of Things",	Alasdair Gilchrist	Apress	

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE

SEMESTER – VI

ARTIFICIAL INTELLIGENCE LABORATORY USING LISP, SWIFT, SCALA

Course Code	20ADL601	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:3)	SEE Marks	50
Credits	1.5	Exam Hours	03

Course objectives:

1. To design of PROLOG search algorithm.
2. To Design alternative search strategies.
3. To design learning algorithm using PROLOG.

Sl. no.	Experiments
1	Study of PROLOG. Write the following programs using PROLOG Using *Turbo* Prolog **Topics:** a) Basics of Turbo Prolog. b) Intro to Prolog programming. c) Running a simple program.
2	Solve any problem using best first search.
3	Write simple fact for the statements using PROLOG.
4	Write predicates one converts centigrade temperature to Fahrenheit the other checks if a temperature is below freezing.
5	Write a program to solve 4- queen problem.
6	Write a program to solve 8-Puzzle problem.
7	Write a program to solve travelling sales man problem.
8	Write a program to solve water jug problem.
9	Solve any problem using depth first search.
10	Solve the problem using best first search.
11	Write a PROLOG programme to implement all set operations (Union, intersection and complement)
12	Program to demonstrate family relationship.
13	Write recursive unification function.

Course outcomes:

On successful completion of this course, students will be able to:

1. Apply AI techniques to solve search problems.
2. Design and implement search problem using PROLOG.
3. Design and implement learning algorithms using PROLOG.

Conduct of Practical Examination:

1. All laboratory experiments are to be included for practical examination.
2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
3. Students can pick one experiment from the questions lot prepared by the examiners.
4. Change of experiment is allowed only once and 20% of Marks is to be deducted.

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE
Outcome Based Education (OBE) and Choice Based Credit System (CBCS)
SEMESTER - VI

INTERNET OF THINGS LABORATORY

Course Code	**6ADL02**	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:3)	SEE Marks	50
Credits	1.5	Exam Hours	03

Course objectives:

- To provide IoT concepts including identification, sensors, localization, wireless protocols, data storage and security
- To explore IoT technologies, architectures
- To manage and process complex raw data (cloud based)

Sl. No.	Experiments
	CYCLE -1
1	Introduction to IoT toolkit – Familiarization with Arduino/RaspberryPi/ESP8266 and perform necessary SW installations
2	To interface LED/buzzer with Arduino/RaspberryPi/ESP8266 and write a program to turn the LED on/off
3	Experiment to interface IR/LDR with Arduino/Raspberry Pi/ESP8266 and write a program to turn LED on when the push button is pressed or at sensor detection
4	Experiment to interface temperature sensor DHT11 and write a program to print the temperature and humidity reading
	CYCLE -2
5	To interface Bluetooth with Arduino/RaspberryPi and write a program to send sensor data to smartphone using bluetooth
6	To interface GPS module with Arduino/RaspberryPi and write a program to send location data to smartphone
7	Interacting with social media: Using Arduino/RaspberryPi/ ESP8266 data is posted to Twitter, Facebook post is created and weather data from Yahoo is obtained.
8	Sending out alerts: To send notifications(email, message or push notifications) using ESP8266
	CYCLE -3 (Open Ended Project – Set 1)
9	To install MySQL database on RaspberryPi and perform basic SQL queries
10	Write a program on Arduino/Raspberry Pi to publish any sensor(temperature/LDR/IR) data to MQTT broker
11	Setting up a TCP server: To set up a web server using Arduino/Raspberry Pi or ESP8266 module
12	Setting up a UDP server: To set up a web server using Arduino/Raspberry Pi or ESP8266
	CYCLE -4 (Open Ended Project – Set 2)
13	Home automation: To build a small cloud based home automation system.
14	Health monitoring: To build a small cloud based health monitoring system
15	Weather Monitoring : Cloud based complex analysis and processing using mapReduce
16	Design and implement a solution for driverless car(proto)

Revised Bloom's Taxonomy Level	L_2 - Understanding, L_3 - Applying

Course outcomes:

At the end of the course the student will be able to:

- CO1: Discover key IoT concepts including identification, sensors, localization, wireless protocols, data storage and security
- CO2: Explore IoT technologies, architectures, standards, and regulation
- CO3: Realize the value created by collecting, communicating, coordinating, and leveraging the data from connected devices
- CO4: Understand how to develop and implement your own IoT technologies, solutions, and applications

Conduct of Practical Examination:

1. All laboratory experiments are to be included for practical examination.
2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
3. Students can pick one experiment from the questions lot prepared by the examiners.
4. Change of experiment is allowed only once and 20% of the Marks to be deducted for the same.

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE

SEMESTER -VI

MINI PROJECT – PHASE II

Course Code	20ADP6	CIE Marks	50
Teaching Hours/Week (L:T:P)	--	SEE Marks	50
Credits	2	Exam Hours/Batch	3

Course objectives:

1. To support independent learning and innovative attitude.
2. To guide to select and utilize adequate information from varied resources upholding ethics.
3. To guide to organize the work in the appropriate manner and present information (acknowledging the sources) clearly.
4. To develop interactive, communication, organisation, time management, and presentation skills.
5. To impart flexibility and adaptability.
6. To inspire independent and team working.
7. To expand intellectual capacity, credibility, judgement, intuition.
8. To adhere to punctuality, setting and meeting deadlines.
9. To instil responsibilities to oneself and others.
10. To train students to present the topic of project work in a seminar without any fear, face audience confidently, enhance communication skill, involve in group discussion to present and exchange ideas.

Mini Project–Phase II: Student has to execute the problem statement defined during V semester (mini project phase – I) and result to be presented and demonstrated in phase – II. Mini project work is evaluated for 100 marks (50% CIE and 50% SEE).

CIE procedure for Mini - Project -II: The 70% of CIE marks awarded for mini project work. At the end of VI semester students have to submit report containing details of the work done. The breakup of 70% of CIE marks is given below:

Project Presentation	15 marks
Question and Answer	10 marks
Project report	10 marks
Total	35 marks

The marks awarded for mini project report shall be the same for all the batch mates.

Semester End Examination: The breakup of SEE marks is given below .

Project Report, Presentation, Demonstration and Quality of work	30 marks
Viva-Voce	20 marks
Total	50 marks

Course outcomes:

On successful completion of this course, students will be able to:

1. Demonstrate a sound technical knowledge of their selected project topic.
2. Apply the knowledge of engineering and IT specialization to solve engineering problems.
3. Identify, formulate, solve and analyse Information Technology problems.
4. Design and develop algorithms for the solution of engineering problems.
5. Create software and hardware systems using modern IT tools to handle engineering activities.
6. Provide solution to various societal and environmental issues by understanding the impact of IT Knowledge & professional ethics.
7. Function effectively as an individual or as a peer member or as a team leader during project development work.
8. Effectively Communicate with the engineering community and society to write effective reports and to make effective presentations.

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE

SEMESTER - VI

APTITUDE RELATED ANALYTICAL SKILLS

Course Code	ARAS	CIE Marks	50
Teaching Hours	36	SEE Marks	50
Credits	1	Exam Hours	03

MODULES COVERED:

Sl. No.	Module covered	Duration (in hrs.)
1	Quantitative Aptitude	16
2	Verbal Reasoning	08
3	Logical Reasoning	08
4	Test taking strategies to crack recruiter tests	02
5	Post-Training Assessment along with a debrief	02
	Total Course Duration	**36**

Methodology: Instructor led – Concepts with guided question solving, assignments and homework assessments.

Module-1

Quantitative Aptitude (with focus on questions from top recruiters)

a) Number System
- Classification of numbers
- Divisibility tests
- Power cycles and remainders
- Factors and multiples
- Applications of HCF and LCM

b) Profit and Loss, Partnerships and Averages
- Basic terminology in Profit and Loss
- Partnerships
- Averages and weighted averages
- Mixtures and alligations

c) Time and Work
- Working with different efficiencies
- Pipes and cisterns
- Work equivalence
- Division of wages

d) Time, Speed and Distance
- Basics of Time Speed and Distance
- Relative Speed
- Problems based on trains
- Problems based on boats and streams
- Problems based on Races

e) Percentages, Simple and Compound Interest
- Percentages as fractions and decimals
- Percentage increase / decrease
- Simple interest and compound interest

- Relationship between simple and compound interest

f) Permutation, Combination and Probability

- Fundamental counting principle
- Basics of permutation and combination
- Computation of permutation
- Circular permutation
- Computation of combination
- Probability

g) Logarithms, Progressions, Geometry and Quadratic Equations

- Logarithms
- Progressions – Arithmetic, Geometric and Harmonic
- Geometry
- Mensuration
- Quadratic equations

Module-2

Verbal Reasoning (with focus on questions from top recruiters)–8 hrs

a) Reading Comprehension –

- Eyespan
- Speed reading techniques
- Types of questions
- Comprehension strategies

b) Sentence Correction –

- Subject-Verb Agreement
- Parallelism
- Modifiers
- Pronoun Antecedent Agreement
- Verb Time Sequence
- Comparison
- Determiners
- Prepositions

c) Vocabulary –

- Etymology of words
- Prefix and suffix
- Memory techniques to remember words
- Synonyms and antonyms
- Analogy

d) Sentence Completion and Para Jumbles –

- Sentence completion – single blank and double blank questions
- Parajumbles – Moving and anchored jumbles

Module-3

Logical Reasoning (with focus on questions from top recruiters)-

a) Coding and Decoding, Series, Analogy, Odd Man Out and Visual Reasoning
   - Coding and decoding
   - Number and alphabet series
   - Analogy
   - Odd man out
   - Visual Reasoning

b) Data Arrangements and Blood Relations
   - Linear, circular and distribution arrangements
