2022-23

SYLLABUS OF UG PROGRAMMES

SYLLABUS

FOR

I and II semester B.E.

All Engineering Streams

2022 - 2023

Sree Siddaganga Education Society ®

Siddaganga Institute of Technology

(An Autonomous Institution affiliated to VTU, Belagavi, Approved by AICTE, New Delhi
Accredited by NAAC with 'A' Grade and ISO 9001:2015 Certified)

Dr. Sree Sree Sivakumara Swamiji Road, Tumakuru – 572 103, Karnataka, India

Phone: +91-816-2214001, 2282696, 2214000 Fax: +91-816-2282994

E-Mail: principal@sit.ac.in web: www.sit.ac.in

About Institution / Autonomous status / Principal Message

CONTENTS

Sl. No.	*Particulars*	*Page No.*
1	Schemes of Teaching and Examinations (Civil Engg. Stream)	
2	Schemes of Teaching and Examinations (CSE Stream)	
3	Schemes of Teaching and Examinations (ME Stream)	
4	Schemes of Teaching and Examinations (EEE Stream)	
Applied Science Courses		
5	Mathematics-I for Civil Engineering Stream	
6	Mathematics-II for Civil Engineering Stream	
7	Mathematics-I for Computer Science and Engineering Stream	
8	Mathematics-II for Computer Science and Engineering Stream	
9	Mathematics-I for Mechanical Engineering Stream	
10	Mathematics-II for Mechanical Engineering Stream	
11	Mathematics-I for Electrical and Electronics Engineering Stream	
12	Mathematics-II for Electrical and Electronics Engineering Stream	
13	Physics for Civil Engineering Stream	
14	Physics for Computer Science and Engineering Stream	
15	Physics for Mechanical Engineering Stream	
16	Physics for Electrical and Electronics Engineering Stream	
17	Chemistry for Civil Engineering Stream	
18	Chemistry for Computer Science and Engineering Stream	
19	Chemistry for Mechanical Engineering Stream	
20	Chemistry for Electrical and Electronics Engineering Stream	
Engineering Sciences Courses (Branch Specific)		
21	Computer Aided Engineering Drawing	(For All branches)
22	Engineering Mechanics	(For CV)
23	Elements of Electrical Engineering	(For EE)
24	Basic Electronics	(For EC, EI, ET)
25	Elements of Mechanical Engineering	(For ME, IM, CH)
26	Principles of Programming Using C	(For CS, IS, AD, CI, BT)
Engineering Sciences Courses (Optional)		
27	Introduction to Civil Engineering	(Except CV)
28	Introduction to Electrical Engineering	(Except EE)
29	Introduction to Electronics Engineering	(Except EC, EI, ET)
30	Introduction to Mechanical Engineering	(Except ME, IM, CH)
31	Introduction to C Programming	(Except CS, IS, AD, CI, BT)
Programming Language Courses		
32	Introduction to Web Programming	

Sl. No.	*Particulars*	*Page No.*
33	Introduction to Python Programming	
34	Basics to JAVA programming	
35	Introduction to C++ Programming	
Emerging Technology Courses		
36	Smart Materials and Systems	
37	Green Buildings	
38	Operation and Maintenance of Solar Electric Systems	
39	Introduction to Embedded System	
40	Introduction to Nano Technology	
41	Introduction to Sustainable Engineering	
42	Renewable Energy Sources	
43	Waste Management	
44	Emerging Applications of Biotechnology	
45	Introduction to Internet of Things (IoT)	
46	Introduction to Cyber Security	
Common Courses		
47	Communicative English	
48	Professional Writing Skills in English	
49	Samkruthika Kannada	
50	Balake Kannada	
51	Indian Constitution	
52	Innovation and Design Thinking	
53	Scientific Foundations of Health	
General Information		
54	Evaluation Pattern	
55	Induction Program	
56	AICTE Activity Points	
57	Program Outcomes

Mathematics-I for Civil Engineering Stream (CV)

Course Code:	**MATC1**	CIE Marks	50
Course Type (Theory/Practical/Integrated)	Integrated	SEE Marks	50
		Total Marks	100
Teaching Hours/Week (L:T:P: S)	2:2:2:0	Exam Hours	03
Total Hours	26(L)+26(T)+26(P)	Credits	04

Course Objectives: The goal of the course is to

- **Familiarize** the importance of calculus associated with one variable and two variables forcivil engineering.
- **Analyze** Civil engineering problems applying Ordinary Differential Equations.
- **Develop** the knowledge of Linear Algebra refereeing to matrices.

Unit-1 Calculus

Introduction to polar coordinates and curvature relating to Civil engineering.

Polar coordinates, Polar curves, angle between the radius vector and the tangent, angle between two curves. Pedal equations. Curvature and Radius of curvature - Cartesian, Parametric, Polar and Pedal forms. Problems. (**8 hours**)

Self-study: Center and circle of curvature, evolutes and involutes.
Applications: Structural design and paths, Strength of materials, Elasticity.
(BT Levels: L1, L2 and L3)

Unit -2 Series Expansion and Multivariable Calculus

Introduction to series expansion and partial differentiation in the field of Civil engineering applications.

Taylor's and Maclaurin's series expansion for one variable (Statement only) –problems. Indeterminate forms - L'Hospital's rule, problems.

Partial differentiation, total derivative - differentiation of composite functions. Jacobian andproblems. Maxima and minima for a function of two variables. Problems. (**8 hours**)

Self-study: Euler's theorem and problems. Method of Lagrange's undetermined multipliers withsingle constraint.

Applications: Computation of stress and strain, Errors and approximations, Estimating the criticalpoints and extreme values.

(BT Levels: L1, L2 and L3)

Unit -3 Ordinary Differential Equations (ODEs) of first order

Introduction to first order ordinary differential equations pertaining to the applications for the Civil engineering.

Linear and Bernoulli's differential equations. Exact and reducible to exact differential equation. Integrating factors on $\frac{1}{N}\left(\frac{\partial M}{\partial y}-\frac{\partial N}{\partial x}\right)$ and $\frac{1}{M}\left(\frac{\partial N}{\partial x}-\frac{\partial M}{\partial y}\right)$.

Applications of ODE's - Orthogonal trajectories, Newton's law of cooling.

Nonlinear differential equations: Introduction to general and singular solutions, Solvable for p only,Clairaut's equations, **r**educible to Clairaut's equations. Problems**.** (**8 hours**)

Self-Study: Applications of ODE's: Solvable for x and y.
Applications: Rate of Growth or Decay, Conduction of heat.
(BT Levels: L1, L2 and L3)

Unit-4 Ordinary Differential Equations of higher order

Importance of higher-order ordinary differential equations in Civil Engineering applications.
Higher-order linear ODE's with constant coefficients - Inverse differential operator, method ofvariation of parameters, Cauchy's and Legendre's homogeneous differential equations. Problems. (**8 hours**)

Self-Study: Formulation and solution of Cantilever beam. Finding the solution by the method ofundetermined coefficients.
Applications: Oscillations of a spring, Transmission lines, highway engineering.
(BT Levels: L1, L2 and L3)

Unit -5 Linear Algebra

Introduction of liner algebra related to Civil Engineering applications.
Elementary row transformation of a matrix, Rank of a matrix. Consistency and solution of a system of linear equations - Gauss-elimination method, Gauss-Jordan method and approximate solution by Gauss-Seidel method. Eigenvalues and Eigenvectors, Rayleigh's power method to find the dominant Eigenvalue and Eigenvector. (**8 hours**)

Self-Study: Solution of a system of linear equations by Gauss-Jacobi iterative method. Inverse of a square matrix by Cayley- Hamilton theorem.
Applications: Structural Analysis, Balancing equations.
(BT Levels: L1, L2 and L3)

List of Laboratory experiments using MATLAB (2 hours/week per batch)
10 lab sessions + 1 Lab Assessment

1	2D plots for Cartesian and polar curves
2	Finding angle between polar curves, curvature and radius of curvature of a given curve
3	Finding partial derivatives, Jacobian and plotting the graph
4	Applications to Maxima and Minima of two variables
5	Solution of first order differential equation and plotting the graphs
6	Solutions of Second order ordinary differential equations with initial/boundary conditions
7	Solution of a differential equation of oscillations of a spring/deflection of a beam with

	different loads
8	Numerical solution of system of linear equations, test for consistency and graphical Representation
9	Solution of system of linear equations using Gauss-Seidel iteration
10	Compute eigenvalues and eigenvectors and find the largest and smallest eigenvalue by Rayleigh power method.

Course Outcomes:

At the end of the course the student will be able to:

CO1	Apply the knowledge of calculus to solve problems related to polar curves.
CO2	Learn the notion of partial differentiation to compute rate of change multivariate functions.
CO3	Analyze the solution of linear and nonlinear ordinary differential equations.
CO4	Make use of matrix theory for solving for system of linear equations and compute eigenvalues and eigenvectors.
CO5	Familiarize with modern mathematical tool MATLAB

Course Code:	**MATC2**	CIE Marks	50
Course Type (Theory/Practical/Integrated)	Integrated	SEE Marks	50
		Total Marks	100
Teaching Hours/Week (L:T:P: S)	2:2:2:0	Exam Hours	03
Total Hours	26(L)+26(T)+26(P)	Credits	04

Course Objectives: The goal of the course is to

- **Familiarize** the importance of Integral calculus and Vector calculus essential for civilengineering.
- **Analyze** Civil engineering problems applying Partial Differential Equations.
- **Develop** the knowledge of solving civil engineering problems numerically.

Unit-1 Integral Calculus

Introduction to Integral Calculus in Civil Engineering applications.
Multiple Integrals: Evaluation of double and triple integrals, evaluation of double integrals by change of order of integration, changing into polar coordinates. Applications to find: Area and Volume by double integral. Problems.
Beta and Gamma functions: Definitions, properties, relation between Beta and Gamma functions. Problems. (**8 hours**)

Self-Study: Volume by triple integration, Center of gravity.
Applications: Applications to mathematical quantities (Area, Surface area, Volume) Analysis ofprobabilistic models.
(BT Levels: L1, L2 and L3)

Unit-2 Vector Calculus

Introduction to Vector Calculus in Civil Engineering applications.
Vector Differentiation: Scalar and vector fields. Gradient, directional derivative, curl anddivergence - physical interpretation, solenoidal and irrotational vector fields. Problems.
Vector Integration: Line integrals, Surface integrals. Applications to work done by a force andflux. Statement of Green's theorem and Stoke's theorem. Problems. (**8 hours**)

Self-Study: Volume integral and Gauss divergence theorem.
Applications: Heat and mass transfer, oil refinery problems, environmental engineering. Analysis ofstream lines, velocity and acceleration of a moving particle.
(BT Levels: L1, L2 and L3)

Unit-3 Partial Differential Equations (PDE's)

Importance of partial differential equations for Civil Engineering application.
Formation of PDE's by elimination of arbitrary constants and functions. Solution of non-homogeneous PDE by direct integration. Homogeneous PDEs involving derivative with respect to one independent variable only. Solution of Lagrange's linear PDE. **Derivation of one-dimensional heat equation and wave equation.** (**8 hours**)

Self-Study: Solution of one-dimensional heat equation and wave equation by the method of separation of variables.

Applications: Design of structures (vibration of rod/membrane).
(BT Levels: L1, L2 and L3)

Unit-4 Numerical methods-1

Importance of numerical methods for discrete data in the field of Civil Engineering.
Solution of algebraic and transcendental equations: Regula-Falsi and Newton-Raphson methods (onlyformulae). Problems,
Finite differences, Interpolation using Newton's forward and backward difference formulae, Newton's divided difference formula and Lagrange's interpolation formula (All formulae withoutproof). Problems.
N**umerical integration**: Trapezoidal, Simpson's $(1/3)^{rd}$ and $(3/8)^{th}$ rules (without proof). Problems. (**8 hours**)

Self-Study: Bisection method, Lagrange's inverse Interpolation**.**
Applications: Estimating the approximate roots, extremum values, Area, volume, surface area.Finding approximate solutions to civil engineering problems.
(BT Levels: L1, L2 and L3)

Unit-5 Numerical methods -2

Introduction to various numerical techniques for handling Civil Engineering applications. Numerical Solution of Ordinary Differential Equations (ODE's):
Numerical solution of ordinarydifferential equations of first order and first degree - Taylor's series method, Modified Euler'smethod, Runge-Kutta method of fourth order and Milne's predictor-corrector formula (Noderivations of formulae). Problems. (**8 hours**)

Self-Study: Adam-Bashforth method.
Applications: Finding approximate solutions to ODE related to civil engineering fields.
(BT Levels: L1, L2 and L3)

List of Laboratory experiments using MATLAB (2 hours/week per batch) 10 lab sessions + 1 Lab Assessment

1	Program to compute surface area, volume and centre of gravity
2	Evaluation of improper integrals
3	Finding gradient, divergent, curl and their geometrical interpretation
4	Verification of Green's theorem
5	Solution of one-dimensional heat equation and wave equation
6	Solution of algebraic and transcendental equations by Regula-Falsi and Newton-Raphson method
7	Interpolation/Extrapolation using Newton's forward and backward difference formula

8	Computation of area under the curve using Trapezoidal, Simpson's $(1/3)^{rd}$ and $(3/8)^{th}$ rule
9	Solution of ODE of first order and first degree by Taylor's series and Modified Euler's method
10	Solution of ODE of first order and first degree by Runge-Kutta 4^{th} order and Milne's predictor-corrector method

Course Outcomes:

At the end of the course the student will be able to:

CO1	Apply the knowledge of multiple integrals to compute area and volume.
CO2	Understand the applications of vector calculus refer to solenoidal, irrotational vectors, line integral and surface integral.
CO3	Demonstrate partial differential equations and their solutions for physical interpretations.
CO4	Apply the knowledge numerical methods in solving physical and engineering phenomena.
CO5	Get familiarize with modern mathematical tool MATLAB

Course objectives: The goal of the course is to

- **Familiarize** the importance of calculus associated with one variable and multivariable for computer science and engineering.
- **Analyze** computer science and engineering problems applying Ordinary Differential Equations
- **Apply** the knowledge of modular arithmetic to computer algorithms.
- **Develop** the knowledge of Linear Algebra to solve the system of equations.

Unit-1 Calculus

Introduction to polar coordinates and curvature relating to Computer Science and engineering.

Polar coordinates, Polar curves, angle between the radius vector and tangent, angle between two curves. Pedal equations. Curvature and Radius of curvature - Cartesian, Parametric, Polar and Pedal forms. Problems. (**8 hours**)

Self-study: Center and circle of curvature, evolutes and involutes.
Applications: Computer graphics, Image processing.
(BT Levels: L1, L2 and L3)

Unit-2 Series Expansion and Multivariable Calculus

Introduction of series expansion and partial differentiation in Computer Science & Engineering applications.

Taylor's and Maclaurin's series expansion for one variable (Statement only)– problems. Indeterminate forms - L'Hospital's rule. Problems.
Partial differentiation, total derivative - differentiation of composite functions. Jacobian andproblems. Maxima and minima for a function of two variables. Problems. (**8 hours**)

Self-study: Euler's theorem and problems. Method of Lagrange's undetermined multipliers withsingle constraint.
Applications: Series expansion in computer programming, Errors and approximations, calculators.
(BT Levels: L1, L2 and L3)

Unit-3 Ordinary Differential Equations (ODEs) of first order

Introduction to first order ordinary differential equations pertaining to the applications forComputer Science & Engineering.

Linear and Bernoulli's differential equations. Exact and reducible to exact differential equation. Integrating factors on $\frac{1}{N}\left(\frac{\partial M}{\partial y}-\frac{\partial N}{\partial x}\right)$ and $\frac{1}{M}\left(\frac{\partial N}{\partial x}-\frac{\partial M}{\partial y}\right)$

Applications of ODE's - Orthogonal trajectories, L-R & C-R circuits. Problems

Nonlinear differential equations: Introduction to general and singular solutions, Solvable for p only,Clairaut's equations, **r**educible to Clairaut's equations. Problem**s.** (**8 hours**)

Self-Study: Applications of ODE's, Solvable for x and y.
Applications of ordinary differential equations: L-R & C-R circuits, Rate of Growth or Decay,Conduction of heat.
(BT Levels: L1, L2 and L3)

Unit-4 Modular Arithmetic

Introduction of modular arithmetic and its applications in Computer Science and Engineering.
Introduction to Linear Diophantine Equation, Congruences, Linear Congruences, The Chinese Remainder theorem, Solving Polynomials, System of Linear Congruences, Euler's Theorem, WilsonTheorem and Fermat's little theorem. Applications of Congruences-RSA algorithm. (**8 hours**)

Self-Study: Divisibility, GCD, Properties of Prime Numbers, Fundamental theorem of Arithmetic.
Applications: Cryptography, encoding and decoding, RSA applications in public key encryption.
(BT Levels: L1, L2 and L3)

Unit-5 Linear Algebra

Introduction of liner algebra related to computer science & engineering.
Elementary row transformation of a matrix, Rank of a matrix. Consistency and Solution of system of linear equations - Gauss-elimination method, Gauss-Jordan method and approximate solution by Gauss-Seidel method. Eigenvalues and Eigenvectors, Rayleigh's power method to find the dominant Eigenvalue and Eigenvector. Problems. (**8 hours**)

Self-Study: Solution of system of equations by Gauss-Jacobi iterative method. Inverse of a square matrix by Cayley- Hamilton theorem.
(BT Levels: L1, L2 and L3)

List of Laboratory experiments using Matlab (2 hours/week per batch) 10 lab sessions + 1 Lab Assessment

1	2D plots for Cartesian and polar curves
2	Finding angle between polar curves, curvature and radius of curvature of a given curve
3	Finding partial derivatives, Jacobian and plotting the graph
4	Applications to Maxima and Minima of two variables
5	Solution of first order differential equation and plotting the graphs
6	Finding GCD using Euclid's Algorithm
7	Applications of Wilson theorem
8	Numerical solution of system of linear equations, test for consistency and graphical representation
9	Solution of system of linear equations using Gauss-Seidel iteration
10	Compute eigenvalues and eigenvectors and find the largest and smallest eigenvalue by Rayleigh power method.

Course outcome (Course Skill Set)

At the end of the course the student will be able to:

CO1	Apply the knowledge of calculus to solve problems related to polar curves.
CO2	Learn the notion of partial differentiation to compute rate of change multivariate functions
CO3	Get Acquainted and to Apply modular arithmetic to computer algorithms.
CO4	Make use of matrix theory for solving for system of linear equations and compute eigenvalues and eigenvectors
CO5	Familiarize with modern mathematical tool MATLAB

Course Type (Theory/Practical/Integrated)	Integrated	SEE Marks	50
		Total Marks	100
Teaching Hours/Week (L:T:P: S)	2:2:2:0	Exam Hours	03
Total Hours	26(L)+26(T)+26(P)	Credits	04

Course objectives: The goal of the course is to

- **Familiarize** the importance of Integral calculus and Vector calculus.
- **Learn** vector spaces and linear transformations**.**
- **Develop** the knowledge of numerical method and apply to solve transcendental anddifferential equations

Unit-1 Integral Calculus

Introduction to Integral Calculus in Computer Science & Engineering.
Multiple Integrals:

Evaluation of double and triple integrals, evaluation of double integrals by change of order of integration, changing into polar coordinates. Applications to find Area and Volume by double integral. Problem**s.**

Beta and Gamma functions: Definitions, properties, relation between Beta and Gamma functions. Problems**.** (**8 hours**)

Self-Study: Center of gravity, Duplication formula.
Applications: Antenna and wave propagation, Calculation of optimum value in various geometries. Analysis of probabilistic models.
(BT Levels: L1, L2 and L3)

Unit-2 Vector Calculus

Introduction to Vector Calculus in Computer Science & Engineering.

Scalar and vector fields. Gradient, directional derivative, curl and divergence - physical interpretation, solenoidal and irrotational vector fields. Problems.

Curvilinear coordinates: Scale factors, base vectors, Cylindrical polar coordinates, Spherical polar coordinates, transformation between cartesian and curvilinear systems, orthogonality. Problems. (**8 hours**)

Self-Study: Volume integral.
Applications: Conservation of laws, Electrostatics, Analysis of stream lines.
(BT Levels: L1, L2 and L3)

Unit-3 Vector Space and Linear Transformations

Importance of Vector Space and Linear Transformations in the field of Computer Science & Engineering.

Vector spaces: Definition and examples, subspace, linear span, Linearly independent and

dependentsets, Basis and dimension. Problems.
Linear transformations: Definition and examples, Algebra of transformations, Matrix of a lineartransformation. Change of coordinates, Rank and nullity of a linear operator, rank-nullity theorem.Inner product spaces and orthogonality. Problems. (**8 hours**)

Self-study: Angles and Projections. Rotation, reflection, contraction and expansion.
Applications: Image processing, AI & ML, Graphs and networks, computer graphics.
(BT Levels: L1, L2 and L3)

Unit-4 Numerical methods -1

Importance of numerical methods for discrete data in the field of computer science & engineering.
Solution of algebraic and transcendental equations -Regula-Falsi and Newton-Raphson methods(only formulae). Problems.
Finite differences, Interpolation using Newton's forward and backward difference formulae, Newton's divided difference formula and Lagrange's interpolation formula (All formulae without proof). Problems.
Numerical integration: Trapezoidal, Simpson's $(1/3)^{rd}$ and $(3/8)^{th}$ rules (without proof). Problems. (**8 hours**)

S**elf-Study:** Ramanujan's method, Bisection method, Lagrange's inverse Interpolation, Weddle's rule.**Applications:** Estimating the approximate roots, extremum values, Area, volume, surface area. Errorsin finite precision.
(BT Levels: L1, L2 and L3)

Unit-5 Numerical methods -2

Introduction to various numerical techniques for handling Computer Science & Engineering applications.
Numerical Solution of Ordinary Differential Equations (ODE's): Numerical solution of ordinary differential equations of first order and first degree - Taylor's series method, Modified Euler's method, Runge-Kutta method of fourth order and Milne's predictor-corrector formula (No derivations of formulae). Problems. (**8 hours**)

Self-Study: Adam-Bashforth method.
Applications: Estimating the approximate solutions of ODE.
(BT Levels: L1, L2 and L3)

List of Laboratory experiments using Matlab (2 hours/week per batch) 10 lab sessions + 1 Lab Assessment

1	Program to compute area, surface area, volume and centre of gravity
2	Evaluation of improper integrals
3	Finding gradient, divergent, curl and their geometrical interpretation

4	Computation of basis and dimension for a vector space and Graphical representation of linear transformation
5	Computing the inner product and orthogonality
6	Solution of algebraic and transcendental equation by Ramanujan's, Regula-Falsi and Newton-Raphson method
7	Interpolation/Extrapolation using Newton's forward and backward difference formula
8	Computation of area under the curve using Trapezoidal, Simpson's $(1/3)^{rd}$ and $(3/8)^{th}$ rule
9	Solution of ODE of first order and first degree by Taylor's series and Modified Euler's method
10	Solution of ODE of first order and first degree by Runge-Kutta 4^{th} order and Milne's predictor-corrector method

Course outcome (Course Skill Set)

At the end of the course the student will be able to:

CO1	Apply the concept of change of order of integration and variables to evaluate multiple integral and their usage in computing area and volume.
CO2	Understand the applications of vector calculus refer to solenoidal, irrotational vectors, orthogonal curvilinear coordinates.
CO3	Demonstrate the idea of Linear dependence and independence of sets in the vector space, and linear transformation
CO4	Apply the knowledge of numerical methods in analyzing the discrete data and for solving the physical and engineering problems.
CO5	Get familiarize with modern mathematical tool MATLAB

Unit-2 Series Expansion and Multivariable Calculus

Introduction to series expansion and partial differentiation in the field of mechanical engineering applications.
Taylor's and Maclaurin's series expansion for one variable (Statement only) problems. Indeterminate forms - L'Hospital's rule, Problems.
Partial differentiation, total derivative - differentiation of composite functions. Jacobian andproblems. Maxima and minima for a function of two variables. Problems. (**8 hours**)

Self-study: Euler's theorem and problems. Method of Lagrange's undetermined multipliers with asingle constraint.
Applications: Computation of stress and strain, Errors and approximations in manufacturingprocess, Estimating the critical points and extreme values, vector calculus.
(BT Levels: L1, L2 and L3)

Unit-3 Ordinary Differential Equations (ODEs) of first order

Introduction to first order ordinary differential equations pertaining to the applications for mechanical engineering.
Linear and Bernoulli's differential equations. Exact and reducible to exact differential equation. Integrating factors on $\frac{1}{N}\left(\frac{\partial M}{\partial y}-\frac{\partial N}{\partial x}\right)$ and $\frac{1}{M}\left(\frac{\partial N}{\partial x}-\frac{\partial M}{\partial y}\right)$

Applications of ODE's-Orthogonal trajectories, L-R and C-R circuits. Problems

Nonlinear differential equations: Introduction to general and singular solutions, Solvable for p only,Clairaut's equations, **r**educible to Clairaut's equations. Problem**s.** (**8 hours**)

Self-Study: Applications of ODE's: L-R circuits. Solvable for x and y.
Applications: Rate of Growth or Decay, Conduction of heat.
(BT Levels: L1, L2 and L3)

Unit-4 Ordinary Differential Equations of higher order

Importance of higher-order ordinary differential equations in Mechanical Engineeringapplications.
Higher-order linear ODE's with constant coefficients - Inverse differential operator, method of variation of parameters, Cauchy's and Legendre homogeneous differential equations. Problems. (**8 hours**)

Self-Study: Formulation and solution of oscillations of a spring. Finding the solution by the methodof undetermined coefficients.
Applications: Applications to oscillations of a spring, Mechanical systems and Transmission lines.
(BT Levels: L1, L2 and L3)

Unit-5 Linear Algebra

Introduction of liner algebra related to Mechanical Engineering applications.
Elementary row transformation of a matrix, Rank of a matrix. Consistency and solution of a system of linear equations - Gauss-elimination method, Gauss-Jordan method and approximate solution by Gauss - Seidel method. Eigenvalues and Eigenvectors, Rayleigh's power method to find the dominant Eigenvalue and Eigenvector. (**8 hours**)

Self-Study: Solution of a system of equations by Gauss-Jacobi iterative method. Inverse of a squarematrix by Cayley- Hamilton theorem.
(BT Levels: L1, L2 and L3)

List of Laboratory experiments using Matlab (2 hours/week per batch) 10 lab sessions + 1 Lab Assessment

1	2D plots for Cartesian and polar curves
2	Finding angle between polar curves, curvature and radius of curvature of a given curve
3	Finding partial derivatives, Jacobian and plotting the graph
4	Applications to Maxima and Minima of two variables
5	Solution of first order differential equation and plotting the graphs
6	Solutions of Second order ordinary differential equations with initial/ boundary conditions

7	Solution of differential equation of oscillations of a spring with various load
8	Numerical solution of system of linear equations, test for consistency and graphical representation
9	Solution of system of linear equations using Gauss-Seidel iteration
10	Compute eigenvalues and eigenvectors and find the largest and smallest eigenvalue by Rayleigh power method.

Course outcome (Course Skill Set)

At the end of the course the student will be able to:

CO1	Apply the knowledge of calculus to solve problems related to polar curves.
CO2	Learn the notion of partial differentiation to compute rate of change of multivariate functions.
CO3	Analyze the solution of linear and non-linear ordinary differential equations.
CO4	Get acquainted with solving equations by matrix methods
CO5	Get familiarize with modern mathematical tool MATLAB

Mathematics-II for Mechanical Engineering Stream (ME / IM /CH)

Course Code:	**MATM2**	CIE Marks	50
Course Type (Theory/Practical/Integrated)	Integrated	SEE Marks	50
		Total Marks	100
Teaching Hours/Week (L:T:P: S)	2:2:2:0	Exam Hours	03
Total Hours	26(L)+26(T)+26(P)	Credits	04

Course objectives: The goal of the course is to

- **Familiarize** the importance of Integral calculus and Vector calculus essential for Mechanicalengineering.
- **Analyze** Mechanical engineering problems applying Partial Differential Equations.
- **Develop** the knowledge of solving Mechanical engineering problems numerically.

Unit-1 Integral Calculus

Introduction to Integral Calculus in Mechanical Engineering applications.

Multiple Integrals:

Evaluation of double and triple integrals, evaluation of double integrals by change of order of integration, changing into polar coordinates. Applications to find Area and Volume by double integral. **Problems.**

Beta and Gamma functions: Definitions, properties, relation between Beta and Gamma functions. Problems. (**8 hours**)

Self-Study: Volume by triple integration, Center of gravity.

Applications: Applications to mathematical quantities (Area, Surface area, Volume), Analysis of probabilistic models.

(BT Levels: L1, L2 and L3)

Unit-2 Vector Calculus

Introduction to Vector Calculus in Mechanical Engineering applications.

Vector Differentiation: Scalar and vector fields. Gradient, directional derivative, curl anddivergence - physical interpretation, solenoidal and irrotational vector fields. Problems.

Vector Integration: Line integrals, Surface integrals. Applications to work done by a force andflux. Statement of Green's theorem and Stoke's theorem. Problems. (**8 hours**)

Self-Study: Volume integral and Gauss divergence theorem.

Applications: Heat and mass transfer, oil refinery problems, environmental engineering, velocity andacceleration of moving particle, analysis of stream lines.

(BT Levels: L1, L2 and L3)

Unit-3 Partial Differential Equations (PDE's)

Importance of partial differential equations for Mechanical Engineering application.

Formation of PDE's by elimination of arbitrary constants and functions. Solution of

non-homogeneous PDE by direct integration. Homogeneous PDEs involving derivative with respect toone independent variable only. Solution of Lagrange's linear PDE. Derivation of the one-dimensional heat equation and wave equation. (**8 hours**)

Self-Study: Solution of the one-dimensional heat equation and wave equation by the method ofseparation of variables.
Applications: Vibration of a rod/membrane.
(BT Levels: L1, L2 and L3)

Unit-4 Numerical Methods -1

Importance of numerical methods for discrete data in the field of Mechanical Engineering.
Solution of algebraic and transcendental equations: Regula-Falsi and Newton-Raphson methods (onlyformulae). Problems.
Finite differences, Interpolation using Newton's forward and backward difference formulae, Newton's divided difference formula and Lagrange's interpolation formula (All formulae withoutproof). Problems.
Numerical integration: Trapezoidal, Simpson's $(1/3)^{rd}$ and $(3/8)^{th}$ rules (without proof). Problems. (**8 hours**)

S**elf-Study:** Bisection method, Lagrange's inverse Interpolation, Weddle's rule.

Applications: Finding approximate solutions to solve mechanical engineering problems involvingnumerical data.
(BT Levels: L1, L2 and L3)

Unit-5 Numerical Methods -2

Introduction to various numerical techniques for handling Mechanical Engineering applications.
Numerical Solution of Ordinary Differential Equations (ODE's):
Numerical solution of ordinary differential equations of first order and first degree - Taylor's series method, Modified Euler's method, Runge-Kutta method of fourth order and Milne's predictor-corrector formula (No derivations of formulae). Problems. (**8 hours**)

Self-Study: Adam-Bashforth method.
Applications: Finding approximate solutions to solve mechanical engineering problems.
(BT Levels: L1, L2 and L3)

List of Laboratory experiments using Matlab (2 hours/week per batch) 10 lab sessions + 1 Lab Assessment

1	Program to compute surface area, volume and centre of gravity
2	Evaluation of improper integrals
3	Finding gradient, divergent, curl and their geometrical interpretation
4	Verification of Green's theorem

5	Solution of one-dimensional heat equation and wave equation
6	Solution of algebraic and transcendental equations by Regula-Falsi and Newton-Raphson method
7	Interpolation/Extrapolation using Newton's forward and backward difference formula
8	Computation of area under the curve using Trapezoidal, Simpson's $(1/3)^{rd}$ and $(3/8)^{th}$ rule
9	Solution of ODE of first order and first degree by Taylor's series and Modified Euler's method
10	Solution of ODE of first order and first degree by Runge-Kutta 4^{th} order and Milne's predictor-corrector method

Course outcome (Course Skill Set)

At the end of the course the student will be able to:

CO1	Apply the knowledge of multiple integrals to compute area and volume.
CO2	Understand the applications of vector calculus refer to solenoidal, irrotational vectors, line integral and surface integral.
CO3	Demonstrate partial differential equations and their solutions for physical interpretations.
CO4	Apply the knowledge numerical methods in solving physical and engineering phenomena.
CO5	Get familiarize with modern mathematical tool MATLAB

Mathematics-I for Electrical and Electronics Engineering Stream (EE / EC / EI / ET)

Course Code:	**MATE1**	CIE Marks	50
Course Type (Theory/Practical/Integrated)	Integrated	SEE Marks	50
		Total Marks	100
Teaching Hours/Week (L:T:P: S)	2:2:2:0	Exam Hours	03
Total Hours	26(L)+26(T)+26(P)	Credits	04

Course objectives: The goal of the course is to

- **Familiarize** the importance of calculus associated with one variable and multivariable for Electrical & Electronics engineering.
- **Analyze** Electrical &Electronics engineering problems applying Ordinary DifferentialEquations.
- **Develop** the knowledge of Linear Algebra to solve the system of equations.

Unit-1 Calculus

Introduction to polar coordinates and curvature relating to EC & EE Engineering applications.

Polarcoordinates, Polar curves, angle between the radius vector and tangent, angle between two curves. Pedal equations. Curvature and Radius of curvature - Cartesian, Parametric, Polar and Pedal forms. Problems. (**8 hours**)

Self-study: Center and circle of curvature, evolutes and involutes.

Applications: Communication signals, Manufacturing of microphones, and Image processing.

(BT Levels: L1, L2 and L3)

Unit-2 Series Expansion and Multivariable Calculus

Introduction of series expansion and partial differentiation in EC & EE Engineering applications.

Taylor's and Maclaurin's series expansion for one variable (Statement only) – problems.Indeterminate forms - L'Hospital's rule. Problems

Partial differentiation, total derivative - differentiation of composite functions. Jacobian andproblems. Maxima and minima for a function of two variables. Problems. (**8 hours**)

Self-study: Euler's Theorem and problems. Method of Lagrange's undetermined multipliers withsingle constraint.

Applications: Series expansion in communication signals, Errors and approximations, and vectorcalculus.

(BT Levels: L1, L2 and L3)

Unit -3 Ordinary Differential Equations (ODEs) of first order

Introduction to first order ordinary differential equations pertaining to the Electrical &Electronics Engineering

Linear and Bernoulli's differential equations. Exact and reducible to exact differential equation. Integrating factors on $\frac{1}{N}\left(\frac{\partial M}{\partial y}-\frac{\partial N}{\partial x}\right)$ and $\frac{1}{M}\left(\frac{\partial N}{\partial x}-\frac{\partial M}{\partial y}\right)$

Applications of ODE's-Orthogonal trajectories, L-R and C-R circuits. Problems

Nonlinear differential equations: Introduction to general and singular solutions, Solvable for p only,Clairaut's equations, **r**educible to Clairaut's equations. Problem**s.** (**8 hours**)

Self-Study: Applications of ODE's, Solvable for x and y.
Applications of ordinary differential equations: L-R and C-R circuits, Rate of Growth or Decay,Conduction of heat.
(BT Levels: L1, L2 and L3)

Unit -4 Integral Calculus

Introduction to Integral Calculus in EC & EE engineering applications.
Multiple Integrals:

Evaluation of double and triple integrals, evaluation of double integrals by change of order of integration, changing into polar coordinates. Applications to find Area and Volume by double integral. Problems.

Beta and Gamma functions: Definitions, properties, relation between Beta and Gamma functions. Problems. (**8 hours**)

Self-Study: Volume by triple integration, Center of gravity.

Applications: Antenna and wave propagation, Calculation of optimum power in electrical circuits,field theory.
(BT Levels: L1, L2 and L3)

Unit-5 Linear Algebra

Introduction of liner algebra related to EC & EE engineering applications.

Elementary row transformation of a matrix, Rank of a matrix. Consistency and Solution of system of linear equations - Gauss-elimination method, Gauss-Jordan method and approximate solution by Gauss-Seidel method. Eigenvalues and Eigenvectors, Rayleigh's power method to find the dominantEigenvalue and Eigenvector. Problems. (**8 hours**)

Self-Study: Solution of system of equations by Gauss-Jacobi iterative method. Inverse of a square matrix by Cayley- Hamilton theorem
(BT Levels: L1, L2 and L3)

List of Laboratory experiments using Matlab (2 hours/week per batch) 10 lab sessions + 1 Lab Assessment

1	2D plots for Cartesian and polar curves
2	Finding angle between polar curves, curvature and radius of curvature of a given curve
3	Finding partial derivatives, Jacobian and plotting the graph
4	Applications to Maxima and Minima of two variables
5	Solution of first order differential equation and plotting the graphs
6	Program to compute area, volume and centre of gravity
7	Evaluation of improper integrals
8	Numerical solution of system of linear equations, test for consistency and graphical representation
9	Solution of system of linear equations using Gauss-Seidel iteration
10	Compute eigenvalues and eigenvectors and find the largest and smallest eigenvalue by Rayleigh power method.

Course outcome (Course Skill Set)

At the end of the course the student will be able to:

CO1	Apply the knowledge of calculus to solve problems related to polar curves.
CO2	Learn the notion of partial differentiation to compute rate of change multivariate functions
CO3	Apply the concept of change of order of integration and variables to evaluate multiple integral and their usage in computing area and volume.
CO4	Make use of matrix theory for solving for system of linear equations and compute eigenvalues and eigenvectors
CO5	Familiarize with modern mathematical tool MATLAB

- **Familiarize** the importance of Integral calculus and Vector calculus essential for electronicsand electrical engineering.
- **Analyze** electronics and electrical engineering problems applying Partial DifferentialEquations.
- **Develop** the knowledge of solving electronics and electrical engineering problems numerically

Unit-1 Vector Calculus

Introduction to Vector Calculus in EC & EE engineering applications.

Vector Differentiation: Scalar and vector fields. Gradient, directional derivative, curl anddivergence - physical interpretation, solenoidal and irrotational vector fields. Problems.
Vector Integration: Line integrals, Surface integrals. Applications to work done by a force andflux. Statement of Green's theorem and Stoke's theorem. Problems. (**8 hours**)

Self-Study: Volume integral and Gauss divergence theorem.
Applications: Conservation of laws, Electrostatics, Analysis of stream lines and electric potentials
(BT Levels: L1, L2 and L3)

Unit-2 Vector Space and Linear Transformations

Importance of Vector Space and Linear Transformations in the field of EC & EE engineering applications

Vector spaces: Definition and examples, subspace, linear span, Linearly independent and dependent sets, Basis and dimension.
Linear transformations: Definition and examples, Algebra of transformations, Matrix of a linear transformation. Change of coordinates, Rank and nullity of a linear operator, Rank-Nullity theorem. Inner product spaces and orthogonality. (**8 hours**)

Self-study: Angles and Projections. Rotation, reflection, contraction and expansion.
Applications: Image processing, AI & ML, Graphs and networks, computer graphics.
(BT Levels: L1, L2 and L3)

Unit-3 Laplace Transform

Importance of Laplace Transform for EC & EE engineering applications.

Existence and Uniqueness of Laplace transform (LT), transform of elementary functions, region of convergence, Properties–Linearity, Scaling, t-shift property, s-domain shift, differentiation in the s- domain, division by t, differentiation and integration in the time domain, LT of special functions- periodic functions (square wave, saw-tooth wave, triangular

wave, full & half wave rectifier), Heaviside Unit step function, Unit impulse function.
Inverse Laplace Transforms:
Definition, properties, evaluation using different methods, convolution theorem (without proof),problems, and Applications to solve ordinary differential equations. (**8 hours**)

Self-Study: Verification of convolution theorem.
Applications: Signals and systems, Control systems, LR, CR & LCR circuits
(BT Levels: L1, L2 and L3)

Unit-4 Numerical methods -1

Importance of numerical methods for discrete data in the field of EC & EE engineering applications.
Solution of polynomial and transcendental equations: Regula-Falsi method and Newton-Raphson method (only formulae). Problems.
Finite differences, Interpolation using Newton's forward and backward difference formulae, Newton's divided difference formula and Lagrange's interpolation formula (All formulae without proof). Problems.
N**umerical integration**: Trapezoidal, Simpson's $(1/3)^{rd}$ and $(3/8)^{th}$ rules (without proof). Problems. (**8 hours**)

S**elf-Study:** Bisection method, Lagrange's inverse Interpolation, Weddle's rule.
Applications: Estimating the approximate roots, extremum values, Area, volume, surface area.
(BT Levels: L1, L2 and L3)

Unit-5 Numerical methods -2

Introduction to various numerical techniques for handling EC & EE applications.
Numerical Solution of Ordinary Differential Equations (ODE's):
Numerical solution of ordinary differential equations of first order and first degree - Taylor's series method, Modified Euler's method, Runge-Kutta method of fourth order and Milne's predictor-corrector formula (No derivations of formulae). Problems. (**8 hours**)

Self-Study: Adam-Bashforth method.
Applications: Estimating the approximate solutions of ODE for electric circuits.
(BT Levels: L1, L2 and L3)

List of Laboratory experiments using Matlab (2 hours/week per batch) 10 lab sessions + 1 Lab Assessment

1	Finding gradient, divergent, curl and their geometrical interpretation and Verification of Green's theorem
2	Computation of basis and dimension for a vector space and Graphical representation of linear transformation
3	Visualization in time and frequency domain of standard functions
4	Computing inverse Laplace transform of standard functions

5	Laplace transform of convolution of two functions
6	Computing the approximate roots for algebraic and transcendental equation
7	Interpolation/Extrapolation using Newton's forward and backward difference formula
8	Computation of area under the curve using Trapezoidal, Simpson's $(1/3)^{rd}$ and $(3/8)^{th}$ rule
9	Solution of ODE of first order and first degree by Taylor's series and Modified Euler's method
10	Solution of ODE of first order and first degree by Runge-Kutta 4^{th} order and Milne's predictor-corrector method

Course outcome (Course Skill Set)

At the end of the course the student will be able to:

CO1	Understand the applications of vector calculus refer to solenoidal, irrotational vectors, line integral and surface integral.
CO2	Demonstrate the idea of Linear dependence and independence of sets in the vector space, and linear transformation
CO3	To understand the concept of Laplace transform and to solve initial value problems.
CO4	Apply the knowledge numerical methods in solving physical and engineering phenomena.
CO5	Get familiarize with modern mathematical tool MATLAB

PHYSICS for Civil Engineering Stream

Contact Hours/Week	:	2(L) + 2(T) + 2(P)	Credits	:	04
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Total Practical Hours	:	26	Exam Hours	:	03
Course Type	:	Integrated / Theory	Course Code	:	**PHYC**

Course Objectives: This course will enable students to:

- To study the elastic properties of materials and failures of engineering materials
- To comprehend theoretical background of laser, the working of He-Ne laser and applications of laser. Also, study the nature of propagation of light in optical fiber, reasons for the fibre loss and optical fibre application.
- To understand the types of oscillation, shock waves & its generation, and applications.
- To Study the acoustics buildings and the essentials of radiometry and photometry.
- To understand the various relevant material characterization techniques.

UNIT-1: ELASTICITY 08 hrs

Introduction, Elastic materials (qualitative), Hooke's law, stress-strain curve, strain hardening and softening. Elastic Moduli, Poisson's ratio and its limiting values. Relation between Young's modulus (Y), rigidity modulus (n), bulk modulus (K) and Poisson's ratio (σ) (with derivation), Beams, bending moment and expression for bending moment (No derivation), Cantilever, derivation of expression of Young's modulus of a beam, experimental determination of Young's modulus by single cantilever method, I section girder and their Engineering Applications, Failures of engineering materials – ductile fracture, brittle fracture, stress concentration, fatigue and factors affecting fatigue (only qualitative explanation). Numerical problems.

Prerequisites: Basics of Elasticity.
Self-learning: Stress-Strain Curve, Elastic moduli

UNIT -2: LASERS AND OPTICAL FIBERS 08hrs

Lasers: Introduction, Characteristics of LASER and difference between laser light and ordinary light. Concept of induced absorption, spontaneous emission and stimulated emission. Expression for energy density in terms of Einstein's coefficients and discussion of results. Requisites of lasers. Condition for laser action. Construction and working of He-Ne laser, Application of lasers - LASER Range Finder, Road Profiling, Bridge Deflection. Numerical Problems.

Optical fibers: Structure of optical fiber, working principle (TIR), Light propagation mechanism - angle of acceptance, numerical aperture, Expression for numerical aperture, Attenuation, and its mechanisms (qualitative). Applications of Optical Fibers - Fiber Optic displacement sensor and pressure sensor. Numerical Problems.

Prerequisite: Properties of light,
Self-learning: Difference between laser and ordinary light, Difference between pulse and continuous laser, Principle of optical fiber

UNIT- 3: OSCILLATIONS and SHOCK WAVES 08hrs

Simple Harmonic motion (SHM), differential equation for SHM (No derivation), Sprigs: spring constant and its physical significance, series and parallel combination of springs (Derivation), Types of spring and their applications. Theory of damped oscillations (Qualitative), Types of damping (Graphical Approach). Theory of forced oscillations, resonance, sharpness of resonance. Numerical Problems.

Shock waves: Mach number and Mach Angle, Mach Regimes, definition and Characteristics of Shock waves, Construction and working of Reddy shock tube, Applications of Shock Waves, Numerical problems.

Pre-requisites: Basics of oscillations
Self-learning: Differences between harmonic and un-harmonic oscillations, Basics of SHM

UNIT -4: ACOUSTICS, RADIOMETRY AND PHOTOMETRY 08 hrs

Acoustics: Introduction to acoustics, Types of Acoustics, reverberation and reverberation time, absorption power and absorption coefficient, Requisites for acoustics in auditorium, Sabine's formula (derivation), measurement of absorption coefficient, factors affecting the acoustics and remedial measures, Noise and its measurements, Sound insulation and its measurements. Impact of Noise in Multi-storied buildings, Numerical Problems.

Radiometry and Photometry: Radiation quantities, Spectral Quantities, Relation between luminescence and radiant quantities, Reflectance and Transmittance, Photometry (cosine law and inverse square law - Qualitative), Numerical Problems

Prerequisites: Basics of Sound, Waves & light properties

Self-learning: Types of acoustics

UNIT – 5: INSTRUMENTATION TECHNIQUES FOR MATERIAL CHARACTERISATION 08 hrs

Introduction to nanomaterials and nanocomposites, surface area to volume ratio, quantum confinement, characteristics of composites, metal matrix, ceramic matrix, polymer matrix nanocomposites. Bragg's law, principle, construction and working of X-ray Diffractometer, crystallite size determination by Scherrer equation, Principle, construction, working and applications of Atomic Force Microscope (AFM) and Scanning electron microscopy (SEM), Numerical Problems.

Pre requisites: Principle and working of optical Microscope
Self-learning: Bragg's law, condition for diffraction.

List of experiments

1. Rigidity modulus by Torsional Pendulum
2. Determination of Young's modulus using Single Cantilever
3. Series & Parallel Resonance using LCR circuit
4. Spring Constant
5. Verification of Stefan's law
6. Wavelength of Laser by Diffraction
7. Numerical Aperture and Fiber loss
8. Frequency of AC source by Sonometer
9. Reddy Shock tube
10. Resistivity by Four Probe Method
11. Laser Range finder
12. Virtual labs/simulations
13. GNU Step Interactive Simulations
14. Study of motion/Crystallite size determination/Application of Statistics using Spread Sheet
15. PHET Interactive Simulations : https://phet.colorado.edu/en/simulations/

COURSE OUTCOMES

Upon completion of this course, students will be able to

CO1 Apply the knowledge of theory of elasticity to find Young's modulus of the materials experimentally and summarize the reasons for failures of engineering materials.

CO2 Elucidate the working of He-Ne laser, types of optical fibers, reasons for the fiber loss and their applications in engineering.

CO3 Elucidate the concepts of oscillations, generation of shock waves in the laboratory and their applications.

CO4 Summarize concepts of acoustics in buildings, explain the concepts in radiation &photometry and various modern tools for material characterizations.

CO5 Identify and apply the appropriate analytic, numerical and other mathematical tools necessary to solve physics and engineering problems.

CO6 Practice working in individual / groups to conduct experiments in Physics and perform precise and host measurements

PHYSICS for Computer Science Stream (CS/IS/AD/ML/BT)

Contact Hours/Week	:	2(L) + 2(T) + 2(P)	Credits	:	04
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Total Practical Hours	:	26	Exam Hours	:	03
Course Type	:	Integrated/Theory	Course Code	:	**PHYS**

Course objectives

- To comprehend theoretical background of laser, the working of He-Ne laser and applications of laser. Also, study the nature of propagation of light in optical fiber, reasons for the fiber loss and optical fiber application.
- To study the principles of quantum mechanics and its application in quantum computing.
- To study the essentials of physics for band theory of solids and semiconductor.
- To study the electrical properties of materials.

UNIT -1: LASER AND OPTICAL FIBERS **08hrs**

LASER: Basic properties of a LASER beam, Interaction of Radiation with Matter, Einstein's A and B Coefficients, Laser Action, Population Inversion, Metastable State, Requisites of a laser system, He-Ne Laser, Applications: Bar code scanner, Laser Printer, Laser Cooling, Numerical Problems

Optical Fiber: Principle and structure, Acceptance angle and Numerical Aperture (NA) and derivation of Expression for NA, Classification of Optical Fibers, Attenuation and Fiber Losses, Applications: Fiber Optic Communication, advantages and disadvantages, Numerical problems.

Pre requisite: Properties of light

Self-learning: Laser Cooling, Total Internal Reflection & Propagation Mechanism (Optical Fibers)

UNIT -2: QUANTUM MECHANICS **08hrs**

de Broglie hypothesis and Matter Waves, de Broglie wavelength and derivation of expression by analogy, Phase Velocity and Group Velocity, Heisenberg's Uncertainty Principle and its application (Nonexistence of electron inside the nucleus-Non Relativistic). Wave Function, Time independent Schrodinger wave equation, Physical Significance of a wave function and Born Interpretation, Expectation value, Eigen functions and Eigen Values, Motion of a particle in a one dimensional potential well of infinite depth, Waveforms and Probabilities. Numerical Problems.

Pre requisite: Wave–Particle dualism,

Self-learning: de Broglie Hypothesis

UNIT –3: SEMICONDUCTOR PHYSICS **08 hrs**

Classification of solids based on the formation of bands due to splitting of energy levels at equilibrium inter-nuclear distance: metal (Na & Mg), insulator (diamond) and semiconductor (Si). Types of semiconductor (qualitative).Fermi energy, Fermi level in semiconductors (qualitative).Expression for electrical conductivity for intrinsic and extrinsic semiconductor (no derivation). Photodiode and Power responsivity. Construction and working of Semiconducting Laser. Hall Effect in semiconductor, Expression for Hall coefficient and Hall voltage, Applications of Hall effect, Numerical problems.

Pre requisite: Basics of Semiconductors
Self-learning: p-n junction and its V-I characteristics

UNIT -4: ELECTRICAL PROPERTIES OF MATERIALS AND APPLICATIONS **08 hrs**

Electrical conductivity in metals, Resistivity, Mobility. Concept of phonon, Matheissen's rule. Introduction to super conductors, Temperature dependence of resistivity, Meissner effect, Critical current, Types of super conductors, Temperature dependence of critical field, BCS theory (qualitative), Quantum tunneling, High temperature superconductivity, Josephson Junction, DC and AC SQUIDs (qualitative), Applications in quantum computing. Numerical problems.

Pre requisites: Basics of electrical conductivity
Self-learning: Resistivity and Mobility

UNIT- 5: QUANTUM COMPUTING **08hrs**

Wave Function in Ket Notation : Matrix form of wave function, Identity Operator, Determination of I|0> and I|1>,Pauli Matrices and its operations on 0 and 1 states, Mention of Conjugate and Transpose, Unitary Matrix U, Examples : Row and Column Matrices and their multiplication(Inner Product).

Principles of Quantum Information & Quantum Computing: Introduction to Quantum Computing, Moore's law & its end. Single particle quantum interference, Quantum entanglement (Qualitative), Classical & quantum information comparison. Differences between classical & quantum computing, quantum superposition and the concept of qubit.

Quantum Gates : Single Qubit Gates: Quantum Not Gate, Pauli -Z Gate, Hadamard Gate, Multiple Qubit Gates: Controlled gate, CNOT Gate, Swap gate.

Pre requisites: Basics of Matrices, Classical computing, Concept of bit, https://www.quantum-inspire.com/kbase/cnot/
Self-learning: Moore's law

List of experiments

1. Wavelength of LASER using Grating
2. Numerical Aperture and fiber loss
3. Plank's Constant using LEDs.
4. Verification of Stefan's law
5. Resistivity of a metal wire by Four Probe Method
6. Photo-Diode Characteristics
7. I-V characteristics of Zener diode
8. Energy gap of a given semiconductor
9. Transistor characteristics
10. Black box
11. Hall effect
12. Virlab/simulation (https://www.vlab.co.in/broad-area-physical-sciences)
13. GNU Step Interactive Simulations.
14. Application of Statistic using Spread Sheets
15. PHET Interactive Simulations https://phet.colorado.edu/en/simulations /filter?subjects =physics&type=html,prototype)

Note: Any ten experiments to be conducted from the above list by covering under a) Exercise b) Demonstration c) Structure Inquiry d) Open Ended. Select at least one simulation/spread sheet activity.

COURSE OUTCOMES

Upon completion of this course, students will be able to

CO1 Describe the principles of LASERs and Optical fibers with their relevant applications.

CO2 Comprehend the wave particle dualism, significance of Heisenberg's uncertainty principle, mathematical formulation of Schrodinger equation and its applications.

CO3 Analyze the properties of semiconductor materials and their applications.

CO4 Analyze the properties of superconductor and apply the principles of Quantum Mechanics in Quantum Computing.

CO5 Identify and apply the appropriate analytic, numerical and other mathematical tools necessary to solve physics and engineering problems.

CO6 Practice working in groups to conduct experiments in physics and perform precise and honest measurements.

PHYSICS for Mechanical Stream (ME/IM/CH)

Contact Hours/Week	:	2(L) + 2(T) + 2(P)	Credits	:	04
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Total Practical Hours	:	26	Exam Hours	:	03
Course Type	:	Integrated/Theory	Course Code	:	**PHYM**

Course Objectives: This course will enable students to:

- To study the elastic properties of materials and failures of engineering materials
- To comprehend theoretical background of laser, the working of He-Ne laser and applications of laser. Also, to study the nature of propagation of light in optical fiber, reasons for the fiber loss and optical fiber application.
- To understand the types of oscillation, shock waves & its generation, and applications
- To know the thermal properties of materials and their applications relevant to engineering
- To understand the various relevant material characterization techniques

UNIT-1: ELASTICITY 08 hrs

Introduction, Elastic materials (qualitative). Hooke's law, Stress-Strain curve, Stress hardening and softening. Elastic Moduli, Poisson's ratio and its limiting values. Relation between Young's modulus (Y), rigidity modulus (n), bulk modulus (K) and Poisson's ratio (σ) (with derivation), Beams, bending moment and expression for bending moment (No derivation), Cantilever, derivation of expression of Young's modulus of a beam, experimental determination of Young's modulus by single cantilever method, I section girder and their engineering applications, Failures of engineering materials - ductile fracture, brittle fracture, stress concentration, fatigue and factors affecting fatigue (only qualitative explanation). Numerical problems.

Prerequisites: Basics of Elasticity.
Self-learning: Stress-Strain Curve, Elastic moduli

UNIT -2: LASERS AND OPTICAL FIBERS 08hrs

Lasers: Introduction, characteristics of LASER and difference between laser light and ordinary light. Concept of induced absorption, spontaneous emission and stimulated emission. Expression for energy density in terms of Einstein's coefficients and discussion of results. Requisites of lasers. Condition for laser action. Construction and working of He-Ne laser, Material processing with laser beam: Surface modification, surface hardening, drilling, welding, cutting. Numerical Problems.

Optical fibers: Structure of optical fiber, working principle (TIR), Light propagation mechanism - angle of acceptance, numerical aperture, Expression for numerical aperture, Attenuation, and its mechanisms (qualitative). Applications of Optical Fibers - Fiber Optic Displacement Sensor and Pressure sensor. Numerical Problems

Prerequisite :Properties of light,
Self-learning: Difference between laser and ordinary light, Difference between pulse and continuous laser,

UNIT- 3: OSCILLATIONS and SHOCK WAVES 08hrs

Simple Harmonic motion (SHM), differential equation for SHM (No derivation), Sprigs: spring constant and its Physical Significance, series and parallel combination of springs (Derivation), Types of spring and their applications. Theory of damped oscillations (Qualitative), Types of damping (Graphical Approach). Theory of forced oscillations, resonance, sharpness of resonance. Numerical Problems.

Shock waves: Mach number and Mach Angle, Mach Regimes, definition and Characteristics of Shock waves, Construction and working of Reddy shock tube, Applications of Shock Waves, Numerical problems.

Pre-requisites: Basics of oscillations
Self-learning: Differences between harmonic and un-harmonic oscillations, Basics of SHM

UNIT -4: THERMOELECTRIC MATERIALS AND DEVICES 08 hrs

Thermo emf and thermos current, Seeback effect, peltier effect, Seeback and peltier coefficients, figure of merit (Mention Expression), laws of thermoelectricity. Expression for thermos emf in terms of T1 and T2, Thermo couples, thermopile, Construction and Working of Thermoelectric generators (TEG) and Thermoelectric coolers (TEC), low, mid and high temperature thermoelectric materials, Applications: Exhaust of Automobiles, Refrigerator, Space Program (RTG), Numerical Problems

Pre requisites: Basics of thermal conductivity

Self-learning: Seeback effect, Thermo emf.

UNIT - 5: INSTRUMENTATION TECHNIQUES FOR MATERIAL CHARACTERISATIONS 08 hrs

Introduction to nanomaterials and nanocomposites, surface area to volume ratio, quantum confinement, characteristics of composites, metal matrix, ceramic matrix,

polymer matrix nanocomposites. Bragg's law, principle, construction and working of X-ray Diffractometer, crystallite size determination by Scherrer equation, Principle, construction, working and applications of Atomic Force Microscope (AFM) and Scanning electron microscopy (SEM), Numerical Problems.

Pre requisites: Principle and working of optical Microscope
Self-learning:Bragg's law, condition for diffraction.

List of experiments

1. Rigidity modulus by Torsional Pendulum
2. Determination of Young's modulus using Single Cantilever
3. Wavelength of laser using grating,
4. Numerical aperture and fiber loss
5. Series & Parallel Resonance using LCR
6. Spring Constant
7. Verification of Stefan's law
8. Thermocouple /Seebeck / Peltier effect
9. Frequency of AC source by Sonometer
10. Laser range finder
11. Reddy shock tube
12. Resistivity of a wire by four probe method
13. Virtual labs/simulations
14. GNU Step Interactive Simulations
15. Study of motion/Crystallite size determination/Application of Statistics using Spread Sheet
16. PHET Interactive Simulations : https://phet.colorado.edu/en/simulations/

Note: Any ten experiments to be conducted from the above list by covering under

a) Exercise b) Demonstration c) Structure Inquiry d) Open Ended. Select at least one simulation/spread sheet activity.

COURSE OUTCOMES

Upon completion of this course, students will be able to

CO1 Apply the knowledge of theory of elasticity to find Young's modulus of the materials experimentally and summarize the reasons for failures of engineering materials.

CO2 Elucidate the working of He-Ne laser, types of optical fibers, reasons for the fiber loss and their applications in engineering

CO3 Elucidate the concepts of oscillations, generation of shock waves in the laboratory and their applications.

CO4 Summarize concepts of the thermoelectric materials and various modern tools for material characterizations.

CO5 Identify and apply the appropriate analytic, numerical and other mathematical tools necessary to solve physics and engineering problems.

CO6 Practice working in individual / groups to conduct experiments in Physics and perform precise and host measurements

PHYSICS for Electrical Stream (EC/EE/EI/ET)

Contact Hours/Week	:	2(L) + 2(T) + 2(P)	Credits	:	04
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Total Practical Hours	:	26	Exam Hours	:	03
Course Type	:	Integrated/Theory	Course Code	:	**PHYE**

Course Objectives: This course will enable students:

- To understand the properties of dielectrics and superconductors.
- To study the essentials of LASER and optical fibre for engineering applications.
- To study the principles of quantum mechanics.
- To understand Maxwells equations and the propogation of EM waves in vacuum.
- To study the concept of band formation in solids and Hall effect.

UNIT-1: DIELECTRICS AND SUPERCONDUCTORS 08 hrs

Dielectric Properties: Dielectrics material, Examples for solid, liquid and gaseous dielectrics. Electric dipole and dipole moment, polarization and polarisability, Dielectric constant, dielectric susceptibility, Polar and non-polar dielectrics, Types of Polarization (electronic, ionic, orientational and space charge - qualitative), Internal fields in solid (derivation), Clausius-Mossotti equation (derivation), Application of dielectrics in transformers and capacitors (qualitative). Numerical Problems.

Superconductivity: Introduction to superconductors, Temperature dependence of resistivity, Meissner effect, Types of super conductors, Temperature dependence of critical field, BCS theory (Qualitative), High temperature superconductivity, Superconducting magnet and MAGLEV, Numerical problems.

Pre-requisites: Basics of dielectrics, Basics of electrical conductivity
Self-learning: Electric dipolemoment,

UNIT-2: LASERS AND OPTICAL FIBERS 08 hrs

Lasers: Introduction, Characteristics of LASER and difference between laser light and ordinary light. Concept of induced absorption, spontaneous emission and stimulated emission. Expression for energy density in terms of Einstein's coefficients and discussion of results. Requisites of lasers. Condition for laser action. Construction and working of He-Ne laser, Application of lasers - defense (laser range finder) and laser printer (qualitative).

Optical fibers: Structure of optical fiber, working principle (TIR), Light propagation mechanism - angle of acceptance, numerical aperture, Expression for numerical aperture, Attenuation and its mechanisms (qualitative). Block diagram and discussion of point-to-point optical communication, advantages and disadvantages, Numerical problems

Pre requisite: Properties of light
Self-learning: Propagation Mechanism &TIR in optical fiber

UNIT-3: QUANTUM MECHANICS **08 hrs**

de Broglie Hypothesis of Matter Waves, de Broglie wavelength and derivation of expression for free particle and charged particle, Phase Velocity and Group Velocity (only concept), Heisenberg's Uncertainty Principle and its application (Nonexistence of electron inside the nucleus-Non Relativistic), Wave Function, Time independent Schrodinger wave equation, Physical Significance of a wave function and Born Interpretation, Eigen functions and Eigen Values, Motion of a particle in a one dimensional potential well of infinite depth, Waveforms and Probabilities. Numerical Problems

Pre requisite: Wave–Particle dualism
Self-learning: de Broglie Hypothesis

UNIT-4: MAXWELL'S EQUATIONS AND EM WAVES **08 hrs**

Maxwell's equations: Fundamentals of vector calculus. Divergence and curl of electric field and magnetic field (static), Gauss' divergence theorem and Stokes' theorem. Description of laws of electrostatics, magnetism and Faraday's laws of EMI. Current density & equation of Continuity; displacement current (with derivation) Maxwell's equations in vacuum

EM waves: The wave equation in differential form in free space (Derivation of the equation using Maxwell's equations), Plane electromagnetic waves in vacuum, their transverse nature, Numerical problems.

Pre requisite: Electricity& Magnetism
Self-learning: Fundamentals of vector calculus

UNIT-5: SEMICONDUCTOR PHYSICS **08 hrs**

Classification of solids based on the formation of bands due to splitting of energy levels at equilibrium inter-nuclear distance: metal (Na & Mg), insulator (diamond) and semiconductor (Si). Types of semiconductor (qualitative). Fermi energy, Fermi level in

semiconductors (qualitative). Expression for electrical conductivity for intrinsic and extrinsic semiconductor (no derivation). Photodiode and Poweresponsivity, Construction and working of Semiconducting Laser. Hall effect in semiconductor, Expression for Hall coefficient and Hall voltage, Applications of Hall effect, Numerical problems.

Pre requisite: Basics of Semiconductors

Self-learning: p-n junction and its V-I characteristics

List of experiments

1. Dielectric constant by charging and discharging of a capacitor
2. Wavelength of laser using grating
3. Numerical aperture and fiber loss
4. Determination of Planck's constant using LEDs
5. Verification of Stefan's law
6. Fermi energy by four-point probe method
7. Photodiode characteristics
8. Energy gap of the given semiconductor
9. I-V characteristics of Zener diode
10. Black Box
11. Hall Effect
12. Online circuit simulator
13. Virlab/simulation (https://www.vlab.co.in/broad-area-physical-sciences)
14. EM wave generation by simulation
15. Application of Statistic using Spread Sheets

Note: Any ten experiments to be conducted from the above list by covering under a) Exercise b) Demonstration c) Structure Inquiry d) Open Ended. Select at least one simulation/spreadsheet activity.

COURSE OUTCOME:

Upon completion of this course, students will be able to:

CO1 Elucidate the concepts of dielectrics and superconductors.

CO2 Describe the fundamental principles of the quantum mechanics and the essentials of Photonics.

CO3 Discuss the fundamentals of vector calculus and their applications in Maxwell's Equations and EM Waves.

CO4 Summarize the formation of energy bands in semiconductors and determine the type semiconductor by Hall effect.

CO5 Identify and apply the appropriate analytic, numerical and other mathematical tools necessary to solve physics and engineering problems.

CO6 Practice working in groups to conduct experiments in physics and perform precise and honest measurements.

CHEMISTRY FOR CIVIL ENGG. STREAM

Contact Hours/Week	:	2(L) + 2(T) + 2(P)	Credits	:	4.0
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Total Practical Hours	:	26	Exam Hours	:	03
Course Type	:	Integrated/Theory	Course Code	:	**CHEC**

Course Objectives: This course will enable students to:

- The basic concepts of electrochemistry, electrode potentials that are essential to determine the battery voltage, rate of corrosion and working of analytical instruments.
- The use of analytical instruments for chemical analysis.
  The working principle and construction of various batteries and their applications.
- The knowledge of using different types of nanomaterials, synthesis and their applications.
  The usage of green chemistry concepts and extend these ideas to environmental care and sustainability.
- The polymers required for daily usage and their applications in advanced engineering materials such as polymer composites and polymer nanocomposites.
  The mechanism of corrosion, factors affecting the rate of corrosion and corrosion control methods.
- The perceptions towards basic terminologies like metals, alloys, cement, their properties and applications. The determination of water quality using various tests.

Unit I

Electrode systems and applications: Introduction to electrode potential. Electrochemical cells: Classification - galvanic cells and electrolytic cells with examples. Single electrode potential - definition and origin. Derivation of Nernst equation for single electrode potential and effect of temperature and concentration. Standard electrode potential - definition, construction and working of a galvanic cell (e.g, Daniel cell). E.M.F of a cell - definition, notations and sign conventions. Concentration cells – definition, construction, working and derivation of EMF. Electrodes: Types of electrodes: Reference electrodes - construction and working of calomel electrode and Ag-AgCl electrode. Numerical problems on E, E^o and EMF of cells and concentration cells. Glass

electrode (Ion-selective electrode) - definition, construction and working of glass electrode. Determination of pH using glass electrode.

Self-learning topics: Determination of single electrode potential, EMF using Poggendroff's compensation principle and concentration of heavy metal ions in industrial effluent. Construction and working of fruit and vegetable electrochemical cell using zinc and copper sheets. **08 Hrs**

Unit II

Analytical techniques and applications: Introduction. Types of analysis: Qualitative and quantitative - classical and instrumental methods of analysis. Advantages of instrumental methods of analysis over physical and chemical methods. Electro optical methods: Colorimetry - principle, statement and derivation of Lambert's law, Beer's law, Beer-Lambert's law, instrumentation, advantages and applications. Numerical problems. Electrochemical methods: Potentiometry - principle, instrumentation, advantages and applications in redox titration. Conductometry - principle, instrumentation and advantages. Applications of conductometric titrations - strong acid against a strong base, strong acid against a weak base and mixture of acids (strong acid + weak acid) against a strong base.

Energy conversion and storage: Batteries – basic concepts, components and operation of a battery – discharging and charging. Classification of batteries – primary, secondary and reserve batteries. Classical batteries - construction, working and applications of Lead-acid and Ni-Cd batteries. Modern batteries - construction, working and applications of Zn-air, Li-MnO_2, Lithium-ion and Sodium - ion batteries.

Self-learning topics: Applications of colorimetry in the estimation of iron present in printed circuit board. Study of characteristics of a battery. **05+03 Hrs**

Unit III

Nano materials: Definition and types of nano materials – based on materials (carbon, metal, composite & dendrimers) and based on dimensions (0D, 1D, 2D and 3D). Production of nanomaterials – definition of top down and bottom up process with examples. Synthesis of nanometal oxides – semiconducting nano

ZnO by combustion method and nano TiO_2 by hydrothermal method. Carbon nanotubes - definition, types - SWCNT and MWCNT and synthesis of carbon nanotubes by arc discharge method. Techniques used in characterization of nanomaterials – XRD, FTIR, SEM and TEM (No description of techniques).

Green chemistry: Introduction, principles of green chemistry, atom economy - definition and numerical problems. Biomass as a renewable energy source - synthesis and advantages of bio-ethanol, bio-diesel and power alcohol as a fuel. Fuel Cells: Introduction, definition, advantages, construction and working of MeOH-O_2 fuel cell.

Self-learning topics: Synthesis of nanoparticles by sol-gel/co-precipitation method. Construction and working of H_2-O_2 fuel cell. **04+04 Hrs**

Unit IV

Advanced polymeric materials for engineering applications: Definition, classification – based on occurrence, structure and effect of heat on polymer (thermoplastic and thermosetting polymers). Polymerization - definition, types – addition and condensation with examples. Mechanism of polymerization - free radical mechanism (vinyl chloride as an example). Number average and weight average molecular weight – definition and numerical problems. Synthesis, properties and applications of Teflon (PTFE) and PMMA. Polymer composites – definition and advantages. Synthesis and applications of polyaramides (Kevlar). Polymer nanocomposites - definition, properties and applications.

Corrosion science and engineering: Metallic corrosion – definition, corrosion interrelated problems and electrochemical theory of corrosion. Types of corrosion - differential metal corrosion, differential aeration corrosion (waterline corrosion and pitting corrosion), and stress corrosion. Factors affecting the rate of corrosion – Primary (electrode potential, nature of corrosion product and area effect) and secondary factors (pH and temperature). Introduction to corrosion penetration rate (CPR), numerical problems. Corrosion control methods - anodizing, phosphating, galvanizing, and tinning. Corrosion control by cathodic protection – impressed voltage method and sacrificial anode method.

Self-learning topics: Biodegradable polymers – definition, types and applications of poly latctic acid (PLA). Corrosion control using anodic and cathodic inhibitors. **04+04 Hrs**

Unit V

Structural materials: Metals and alloys: Introduction, properties and application of iron and its alloys, aluminium and its alloys. Cement: Introduction, composition, properties, classification, manufacturing process of cement, process of setting and hardening of cement, additives for cement and testing of cement.

Water technology: Introduction – impurities present in water. Chemical analysis of water: Determination of total hardness of water using EDTA, chloride by Mohr's method, dissolved oxygen by Winkler's method, and Chemical Oxygen Demand (COD). Numerical problems on COD. Biological Oxygen Demand (BOD). Water softening by Reverse osmosis (RO) - principle and process.

Self-learning topics: Determination of alkalinity and nitrate in a water sample.

03+05 Hours

17.	B. S. Jai Prakash, R. Venugopal, Shivakumaraiah, Pushpa Iyengar.	Chemistry for Engineering Students.

Course outcomes: After the completion of this course, students will be able to:

CO1. Determine the electrode potential of newly constructed electrodes; calculate the voltage of galvanic cells and determination of pH of water and other liquid samples.

CO2. Apply the knowledge of colorimetry, potentiometry and conductometry in chemical analysis and carryout the estimation of metals and other pollutants in industrial effluents samples.
Develop new materials for construction of batteries to improve their performance.

CO3. Gain knowledge about different types of nano materials, preparation and its applications. Acquire the green chemistry concepts and extend these ideas to environmental care and sustainability.

CO4. Develop different types of polymers and polymer composites which find applications in the field of engineering. To understand the causes for the corrosion of metals/alloys and corrosion control methods.

CO5. Recognizing the usage of various types of metals and alloys used in daily life. Identifying the process of manufacturing and testing of cement towards the construction of building. Gain awareness of water quality parameters and their different test methods determination.

ENGINEERING CHEMISTRY LABORATORY

Course Objectives: This course will enable students to:

- The use of pH sensor for the determination of pK_a of given soft drinks.
- The construction and use of electrochemical cell as sensor for the determination of emf /concentration of redox species.
- The usage of optical sensor (colorimeter) for the estimation of metals in various matrices.
- The use of conductivity meter for the determination of conductance in electrolytic solutions.
- The application of volumetry in the analysis of water quality parameters.

A – Instrumental Methods of Analysis

A1. Determination of pKa of given sample of soft drink using pH sensor and its graphical interpretation using origin software.

A2. Estimation of iron present in stainless steel solution using electrochemical sensor and its graphical interpretation using origin software.

A3. Optical sensor for copper determination from e - waste sample (printed circuit board) and its graphical interpretation using origin software.

A4. Estimation of HCl using standard NaOH conductometrically and its graphical interpretation using origin software.

B - Volumetric Methods of Analysis

B1. Determination of total hardness of water for drinking purpose.

B2: Determination of Chemical Oxygen Demand (COD) of the given industrial waste water sample.

B3. Redox titration - Determination of iron in the given TMT bars by external indicator method.

B4. Determination of CaO in cement by rapid EDTA method.

C – Demonstration Experiments (any two):

C1. Synthesis of semiconducting nano TiO_2 by combustion method.

C2. Estimation of sodium present in soil/effluent sample using flame photometer.

C3. Preparation of thiokol rubber or urea formaldehydye resin.

C4. Determination of viscosity coefficient of a lubricant using Ostwald's viscometer.

D - Open Ended Experiments (any two):

TEXT BOOKS:

1.	Arthur I. Vogel	Quantitative Inorganic Analysis and Elementary Instrumental Analysis: ELBS, Longmann Group, 5th Edition, 1989.

Course Outcomes: After the completion of this course, students will be able to:

CO1: Determine the electrode potential of newly constructed electrodes; calculate the voltage of galvanic cell and batteries and determination of pH of water and other liquid samples.

CO2: Estimate the amount of metal(s) in effluents by potentiometer.

CO3: Determine the metals/pollutants in water and alloys using colorimeter.

CO4: Measure the conductance of solutions/electrolytes which in turn can be used for the determination of its characteristics.

CO5: Use the knowledge of volumetric analysis for estimation of metals and water samples.

CHEMISTRY FOR CSE STREAM

Contact Hours/Week	:	2(L) + 2(T) + 2(P)	Credits	:	4.0
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Total Practical Hours	:	26	Exam Hours	:	03
Course Type	:	Integrated	Course Code	:	**CHES**

Course Objectives: This course will enable students to:

- The basic concepts of electrochemistry, electrode potentials that are essential to determine the battery voltage, rate of corrosion and working of analytical instruments.
- The use of analytical techniques for chemical analysis. The working principle and construction of various batteries and their applications.
- The knowledge of using different types of nanomaterials, synthesis and their applications. The usage of green chemistry concepts and extend these ideas to environmental care and sustainability.
- The polymers required for daily usage and their applications in advanced engineering materials such as polymer composites, polymer nanocomposites and conducting polymers.

  The concepts of electronic memory devices, display systems, their types and applications.

- The mechanism of corrosion, factors affecting the rate of corrosion and corrosion control methods.

  The sources of E - waste, its management and recycling.

Unit I

Electrode systems and applications: Introduction to electrode potential. Electrochemical cells: Classification - galvanic cells and electrolytic cells with examples. Single electrode potential - definition and origin. Derivation of Nernst equation for single electrode potential and effect of temperature and concentration. Standard electrode potential - definition, construction and working of a galvanic cell (e.g, Daniel cell). E.M.F of a cell - definition, notations and sign conventions. Concentration cells – definition, construction, working and derivation of EMF. Electrodes: Types of electrodes: Reference electrodes -

construction and working of calomel electrode and Ag-AgCl electrode. Numerical problems on E, E^o and EMF of cells and concentration cells. Glass electrode (Ion-selective electrode) - definition, construction and working of glass electrode. Determination of pH using glass electrode.

Self-learning topics: Determination of single electrode potential, EMF using Poggendroff's compensation principle and concentration of heavy metal ions in industrial effluent. Construction and working of fruit and vegetable electrochemical cell using zinc and copper sheets. **08 Hrs**

Unit II

Analytical techniques and applications: Introduction. Types of analysis: Qualitative and quantitative - classical and instrumental methods of analysis. Advantages of instrumental methods of analysis over physical and chemical methods. Electro optical methods: Colorimetry - principle, statement and derivation of Lambert's law, Beer's law, Beer-Lambert's law, instrumentation, advantages and applications. Numerical problems. Electrochemical methods: Potentiometry - principle, instrumentation, advantages and applications in redox titration. Conductometry - principle, instrumentation and advantages. Applications of conductometric titrations - strong acid against a strong base, strong acid against a weak base and mixture of acids (strong acid + weak acid) against a strong base.

Energy conversion and storage: Batteries – basic concepts, components and operation of a battery – discharging and charging. Classification of batteries – primary, secondary and reserve batteries. Classical batteries - construction, working and applications of Lead-acid and Ni-Cd batteries. Modern batteries - construction, working and applications of Zn-air, Li-MnO_2, Lithium-ion and Sodium - ion batteries.

Self-learning topics: Applications of colorimetry in the estimation of iron present in printed circuit board. Study of characteristics of a battery. **05+03 Hrs**

Unit III

Nanomaterials: Definition and types of nano materials – based on materials (carbon, metal, composite & dendrimers) and based on dimensions (0D, 1D, 2D and 3D). Production of nanomaterials – definition of top down and bottom up process with examples. Synthesis of nanometal oxides – semiconducting nano ZnO by combustion method and nano TiO_2 by hydrothermal method. Carbon nanotubes - definition, types - SWCNT and MWCNT and synthesis of carbon nanotubes by arc discharge method. Techniques used in characterization of nanomaterials – XRD, FTIR, SEM and TEM (No description of techniques).

Green chemistry: Introduction, principles of green chemistry, atom economy - definition and numerical problems. Biomass as a renewable energy source - synthesis and advantages of bio-ethanol, bio-diesel and power alcohol as a fuel. Fuel Cells: Introduction, definition, advantages, construction and working of MeOH-O_2 fuel cell.

Self-learning topics: Synthesis of nanoparticles by sol-gel/co-precipitation method. Construction and working of H_2-O_2 fuel cell. **04+04 Hrs**

Unit IV

Advanced polymeric materials: Definition, classification - based on occurrence, structure and effect of heat on polymer (thermoplastic and thermosetting polymers). Polymerization - definition, types – addition and condensation with examples. Number average and weight average molecular weight - definition and numerical problems. Synthesis, properties and applications of Teflon and Bakelite. Polymer composites - definition and advantages. Synthesis and applications of polyaramides (Kevlar). Polymer nanocomposites - definition, properties and applications. Conducting polymers - definition, synthesis of polyacetylene and mechanism of conduction in polyacetylene - oxidative and reductive doping.

Materials for memory and display systems: Introduction, basic concepts of electronic memory, history and classification of electronic memory devices, types of memory devices (organic molecules, polymeric materials, organic-inorganic hybrid materials). Display systems - introduction, types of display

systems, working and applications of Liquid Crystal Displays (LCD's), Organic light emitting diodes (OLED's), Quantum Light emitting diodes (QLED's), Light emitting electrochemical cells (LEEC's).

Self-learning topics: Biodegradable polymers - definition, types and applications of poly lactic acid (PLA). Properties and functions of Silicon (Si), Germanium (Ge), Copper (Cu), Aluminum (Al) and brominated flame retardants in computers. **04+04 Hrs**

UNIT – V

Corrosion science: Metallic corrosion - definition, corrosion interrelated problems and electrochemical theory of corrosion. Types of corrosion - differential metal corrosion, differential aeration corrosion (waterline and pitting corrosion) and stress corrosion. Factors affecting the rate of corrosion - primary (electrode potential, nature of corrosion product and area effect) and secondary factors (pH and temperature). Introduction to corrosion penetration rate (CPR), numerical problems. Corrosion control methods - anodizing, phosphating, galvanizing and tinning. Corrosion control by cathodic protection - impressed voltage method and sacrificial anode method.

E – waste management: Introduction, sources (E - waste items), toxic materials used in the manufacturing electronic and electrical products, problem of E - waste on environment and human health, solution for E - waste, methods of disposal, advantages of recycling. Extraction of gold from E - waste.

Self-learning topics: Corrosion control using anodic and cathodic inhibitors. Impact of heavy metals on environment and human health, recycling of PCB and battery components. **04+04 Hrs**

Course outcomes: After the completion of this course, students will be able to:

CO1. Determine the electrode potential of newly constructed electrodes, calculate the voltage of galvanic cells and determination of pH of water and other liquid samples.

CO2. Apply the knowledge of colorimetry, potentiometry and conductometry in chemical analysis and carryout the estimation of metals and other pollutants in industrial effluents samples.
Develop new materials for construction of batteries to improve their performance.

CO3. Gain knowledge about different types of nanomaterials, preparation and its applications. Acquire the green chemistry concepts and extend these ideas to environmental care and sustainability.

CO4. Develop different types of polymers and polymer composites which find applications in the field of engineering. Acquire knowledge on the types of electronic memory devices, display systems and their applications.

CO5. Understand the causes for the corrosion of metals/alloys and corrosion control methods. Learn the sources of E - waste and its management.

ENGINEERING CHEMISTRY LABORATORY

Course Objectives: This course will enable students to:

- The use of pH sensor for the determination of pK_a of given soft drinks.
- The construction and use of electrochemical cell as sensor for the determination of emf /concentration of redox species.
- The usage of optical sensor (colorimeter) for the estimation of metals in various matrices.
- The use of conductivity meter for the determination of conductance in electrolytic solutions.
- The application of volumetry in the analysis of water quality parameters.

A – Instrumental Methods of Analysis

A1. Determination of pKa of given sample of soft drink using pH sensor and its graphical interpretation using origin software.

A2. Estimation of iron present in stainless steel solution using electrochemical sensor and its graphical interpretation using origin software.

A3. Optical sensor for copper determination from e - waste sample (printed circuit board) and its graphical interpretation using origin software.

A4. Estimation of HCl using standard NaOH conductometrically and its graphical interpretation using origin software.

B - Volumetric Methods of Analysis

B1. Determination of total hardness of water for drinking purpose.

B2: Determination of Chemical Oxygen Demand (COD) of the given industrial waste water sample.

B3. Redox titration - Determination of iron in the given TMT bars by external indicator method.

B4. Determination of percentage of copper from electroplating industrial effluent iodometrically.

C – Demonstration Experiments: (any two)

C1. Synthesis of semiconducting nano CuO by combustion method.

C2. Synthesis of biologically active peptide (Fmoc-Ala-Val-OMe).

C3: Evaluation of acid content in beverages using pH sensors.

C4. Detection of sugar in a blood sample using Fehling's solution.

D - Open Ended Experiments (any two):

TEXT BOOKS:

1.	Arthur I. Vogel	Quantitative Inorganic Analysis and Elementary Instrumental Analysis: ELBS, Longmann Group, 5th Edition, 1989.

Course Outcomes: After the completion of this course, students will be able to:

CO1: Determine the electrode potential of newly constructed electrodes; calculate the voltage of galvanic cell and batteries and determination of pH of water and other liquid samples.

CO2: Estimate the amount of metal(s) in effluents by potentiometer.

CO3: Determine the metals/pollutants in water and alloys using colorimeter.

CO4: Measure the conductance of solutions/electrolytes which in turn can be used for the determination of its characteristics.

CO5: Use the knowledge of volumetric analysis for estimation of metals and water samples.

Course Objectives: This course will enable students to:

- The basic concepts of electrochemistry, electrode potentials that are essential to determine the battery voltage, rate of corrosion and working of analytical instruments.
- The use of analytical instruments for chemical analysis.
  The working principle and construction of various batteries and their applications.
- The knowledge of using different types of nanomaterials, synthesis and their applications.
  The usage of green chemistry concepts and extend these ideas to environmental care and sustainability.
- The polymers required for daily usage and their applications in advanced engineering materials such as polymer composites and polymer nanocomposites.
  The mechanism of corrosion, factors affecting the rate of corrosion and corrosion control methods.
- The effect of variables in phase transformations of materials and their correlation to the properties of materials. The determination of water quality using various tests.

Unit I

Electrode systems and applications: Introduction to electrode potential. Electrochemical cells: Classification - galvanic cells and electrolytic cells with examples. Single electrode potential - definition and origin. Derivation of Nernst equation for single electrode potential and effect of temperature and concentration. Standard electrode potential - definition, construction and working of a galvanic cell (e.g, Daniel cell). E.M.F of a cell - definition, notations and sign conventions. Concentration cells – definition, construction, working and derivation of EMF. Electrodes: Types of electrodes: Reference electrodes - construction and working of calomel electrode and Ag-AgCl electrode. Numerical problems on E, E^o and EMF of cells and concentration cells. Glass

electrode (Ion-selective electrode) - definition, construction and working of glass electrode. Determination of pH using glass electrode.

Self-learning topics: Determination of single electrode potential, EMF using Poggendroff's compensation principle and concentration of heavy metal ions in industrial effluent. Construction and working of fruit and vegetable electrochemical cell using zinc and copper sheets. **08 Hrs**

Unit II

Analytical techniques and applications: Introduction. Types of analysis: Qualitative and quantitative - classical and instrumental methods of analysis. Advantages of instrumental methods of analysis over physical and chemical methods. Electro optical methods: Colorimetry - principle, statement and derivation of Lambert's law, Beer's law, Beer-Lambert's law, instrumentation, advantages and applications. Numerical problems. Electrochemical methods: Potentiometry - principle, instrumentation, advantages and applications in redox titration. Conductometry - principle, instrumentation and advantages. Applications of conductometric titrations - strong acid against a strong base, strong acid against a weak base and mixture of acids (strong acid + weak acid) against a strong base.

Energy conversion and storage: Batteries – basic concepts, components and operation of a battery – discharging and charging. Classification of batteries – primary, secondary and reserve batteries. Classical batteries - construction, working and applications of Lead-acid and Ni-Cd batteries. Modern batteries - construction, working and applications of Zn-air, Li-MnO_2, Lithium-ion and Sodium - ion batteries.

Self-learning topics: Applications of colorimetry in the estimation of iron present in printed circuit board. Study of characteristics of a battery. **05+03 Hrs**

Unit III

Nano materials: Definition and types of nano materials – based on materials (carbon, metal, composite & dendrimers) and based on dimensions (0D, 1D, 2D and 3D). Production of nanomaterials – definition of top down and bottom up process with examples. Synthesis of nanometal oxides – semiconducting nano ZnO by combustion method and nano TiO_2 by hydrothermal method. Carbon nanotubes - definition, types - SWCNT and MWCNT and synthesis of carbon nanotubes by arc discharge method. Techniques used in characterization of nanomaterials – XRD, FTIR, SEM and TEM (No description of techniques).

Green chemistry: Introduction, principles of green chemistry, atom economy - definition and numerical problems. Biomass as a renewable energy source - synthesis and advantages of bio-ethanol, bio-diesel and power alcohol as a fuel. Fuel Cells: Introduction, definition, advantages, construction and working of MeOH-O_2 fuel cell.

Self-learning topics: Synthesis of nanoparticles by sol-gel/co-precipitation method. Construction and working of H_2-O_2 fuel cell. **04+04 Hrs**

Unit IV

Advanced polymeric materials for engineering applications: Definition, classification – based on occurrence, structure and effect of heat on polymer (thermoplastic and thermosetting polymers). Polymerization - definition, types – addition and condensation with examples. Mechanism of polymerization - free radical mechanism (vinyl chloride as an example). Number average and weight average molecular weight – definition and numerical problems. Synthesis, properties and applications of Teflon (PTFE) and PMMA. Polymer composites – definition and advantages. Synthesis and applications of polyaramides (Kevlar). Polymer nanocomposites - definition, properties and applications.

Corrosion science and engineering: Metallic corrosion – definition, corrosion interrelated problems and electrochemical theory of corrosion. Types of corrosion - differential metal corrosion, differential aeration corrosion (waterline corrosion and pitting corrosion), and stress corrosion. Factors affecting the rate of corrosion – Primary (electrode potential, nature of corrosion product and area effect) and secondary factors (pH and temperature). Introduction to corrosion penetration rate (CPR), numerical problems. Corrosion control methods - anodizing, phosphating, galvanizing, and tinning. Corrosion control by cathodic protection – impressed voltage method and sacrificial anode method.

Self-learning topics: Biodegradable polymers – definition, types and applications of poly latctic acid (PLA). Corrosion control using anodic and cathodic inhibitors. **04+04 Hrs**

Unit V

Phase equilibria: The phase rule – statement and explanation of the terms (phase, component and degress of freedom) involved in the phase rule with examples. Application of phase rule to one component system – water system and two component system - Pb-Ag system. Concept of desilverization of lead – Pattinson's process.

Water technology: Introduction – impurities present in water. Chemical analysis of water: Determination of total hardness of water using EDTA, chloride by Mohr's method, dissolved oxygen by Winkler's method, and Chemical Oxygen Demand (COD). Numerical problems on COD. Biological Oxygen Demand (BOD). Water softening by Reverse osmosis (RO) - principle and process.

Self-learning topics: Determination of alkalinity and nitrate in a water sample.

03+05 Hours

Nano materials: Definition and types of nano materials – based on materials (carbon, metal, composite & dendrimers) and based on dimensions (0D, 1D, 2D and 3D). Production of nanomaterials – definition of top down and bottom up

process with examples. Synthesis of nanometal oxides – semiconducting nano ZnO by combustion method and nano TiO_2 by hydrothermal method. Carbon nanotubes - definition, types - SWCNT and MWCNT and synthesis of carbon nanotubes by arc discharge method. Techniques used in characterization of nanomaterials – XRD, FTIR, SEM and TEM (No description of techniques).

Green chemistry: Introduction, principles of green chemistry, atom economy - definition and numerical problems. Biomass as a renewable energy source - synthesis and advantages of bio-ethanol, bio-diesel and power alcohol as a fuel. Fuel Cells: Introduction, definition, advantages, construction and working of MeOH-O_2 fuel cell.

Self-learning topics: Synthesis of nanoparticles by sol-gel/co-precipitation method. Construction and working of H_2-O_2 fuel cell. **04+04 Hrs**

Unit IV

Corrosion science and E - waste management: Metallic corrosion **-** definition, corrosion interrelated problems and electrochemical theory of corrosion. Types of corrosion - differential metal corrosion, differential aeration corrosion (waterline corrosion and pitting) and stress corrosion. Factors affecting the rate of corrosion - Primary (electrode potential, nature of corrosion product and area effect) and secondary factors (pH and temperature). Introduction to corrosion penetration rate (CPR), numerical problems. Corrosion control methods - anodizing, phosphating, galvanizing and tinning. Corrosion control by cathodic protection - impressed voltage method and sacrificial anode method.

E-waste management: Introduction, sources (E-waste items), toxic materials used in manufacturing electronic and electrical products, problem of E-waste on environment and human health, solution for E-waste, methods of disposal, advantages of recycling. Extraction of gold from E-waste.

Self – learning topics: Corrosion control using anodic and cathodic inhibitors. Impact of heavy metals on environmental and human health, recycling of PCB and battery components. **08 Hrs**

Unit V

Materials for Electronic Applications and Display Systems: Materials: Definition, classification of materials as conductors and insulators, mechanism of conduction in case of solids.

Polymers: Introduction, definition, classification - based on occurrence, structure and effect of heat on polymer (thermoplastic and thermosetting polymers). Number average and weight average molecular weight - definition and numerical problems. Synthesis, properties and applications of PMMA and Teflon. Conducting polymers - mechanism of conduction in polyacetylene (oxidative and reductive doping).

Liquid crystals: Introduction, classification (Thermotropic and Lyotropic liquid crystals), Types (chiral nematic liquid crystals, smectic liquid crystals). Electro - optic effect and application of liquid crystals in liquid crystal display (LCD).

Light emitting diodes (LED): Definition, working, properties and uses of LED's and difference between LCD and LED.

Self - learning topics: Use of carbon nanotubes and graphene in LCD and printed circuit board. **08 Hrs**

17.	V.R. Gowriker, N. V. Viswanathan, Jayadev Sreeshar	Polymer science, New age International (P) Ltd., 1996.

Course outcomes: After the completion of this course, students will be able to:

CO1. Determine the electrode potential of newly constructed electrodes, calculate the voltage of galvanic cells and determination of pH of water and other liquid samples.

CO2. Apply the knowledge of colorimetry, potentiometry and conductometry in chemical analysis and carryout the estimation of metals and other pollutants in industrial effluents samples.
Develop new materials for construction of batteries to improve their performance.

CO3. Gain knowledge about different types of nanomaterials, preparation and its applications. Acquire the green chemistry concepts and extend these ideas to environmental care and sustainability.

CO4. Understand the reasons for corrosion of metals/alloys, mechanism of corrosion, control methods. To gain more insight into E-wastes, its sources, effects and disposal methodologies.

CO5. Develop different types of polymeric materials which find applications in the field of engineering. Learn fundamentals, classifications of liquid crystals and application of liquid crystals in display technology.

ENGINEERING CHEMISTRY LABORATORY

Course Objectives: This course will enable students to:

- The use of pH sensor for the determination of pK_a of given soft drinks.
- The construction and use of electrochemical cell as sensor for the determination of emf /concentration of redox species.
- The usage of optical sensor (colorimeter) for the estimation of metals in various matrices.
- The use of conductivity meter for the determination of conductance in electrolytic solutions.
- The application of volumetry in the analysis of water quality parameters.

A – Instrumental Methods of Analysis

A1. Determination of pKa of given sample of soft drink using pH sensor and its graphical interpretation using origin software.

A2. Estimation of iron present in stainless steel solution using electrochemical sensor and its graphical interpretation using origin software.

A3. Optical sensor for copper determination from e - waste sample (printed circuit board) and its graphical interpretation using origin software.

A4. Estimation of HCl using standard NaOH conductometrically and its graphical interpretation using origin software.

B - Volumetric Methods of Analysis

B1. Determination of total hardness of water for drinking purpose.

B2: Determination of Chemical Oxygen Demand (COD) of the given industrial waste water sample.

B3. Redox titration - Determination of iron in the given TMT bars by external indicator method.

B4. Determination of percentage of copper from electroplating industrial effluent iodometrically.

C – Demonstration Experiments: (any two)

C1. Synthesis of semiconducting nano ZnO by combustion method.

C2. Determination of λ_{max} of a printed circuit board solution using UV-VIS spectrophotometer.

C3: Doping of electronic material (ZnO) with dopants (Cu/Ni) to increase the conductivity of material.

C4. Synthesis of polyaniline as a conducting polymer.

D - Open Ended Experiments (any two):

TEXT BOOKS:

1.	Arthur I. Vogel	Quantitative Inorganic Analysis and Elementary Instrumental Analysis: ELBS, Longmann Group, 5th Edition, 1989.

Course Outcomes: After the completion of this course, students will be able to:

CO1: Determine the electrode potential of newly constructed electrodes; calculate the voltage of galvanic cell and batteries and determination of pH of water and other liquid samples.

CO2: Estimate the amount of metal(s) in effluents by potentiometer.

CO3: Determine the metals/pollutants in water and alloys using colorimeter.

CO4: Measure the conductance of solutions/electrolytes which in turn can be used for the determination of its characteristics.

CO5: Use the knowledge of volumetric analysis for estimation of metals and water samples.

Computer Aided Engineering Drawing

Contact Hours/Week	:	2(L) + 0(T) + 2(P)	Credits	:	3.0
Total Lecture Hours	:	48	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	03
Course Type	:	Integrated/Theory	Course Code	:	**ESCF1**

Course Objectives: This course will enable students to:

- To expose the students to standards and conventions followed in preparation of engineering drawings.
- To make them understand the concepts of orthographic projections, Development of surfaces and isometric projections.
- Develop the ability of conveying the engineering information through drawings.
- To make them understand the relevance of engineering drawings to different engineering domains.
- To expose them to Computer aided drafting package and generation of computer assisted drawings.

Teaching-Learning (General Instructions):

- Students should be made aware of powerful engineering communication tool – Drawing.
- For application problems use very generally available actual objects. (Example: For rectangular prism / object; matchbox, carton boxes, book, etc can be used. Similarly for other shapes)
- Use Solid Edge software for generating orthographic and pictorial views.
- Make use of drawing sheets and mini drafter for manual drawing

Unit I

Introduction to Computer Aided Drawing:

Introduction, Drawing Instruments and their uses, BIS conventions, Lettering, Dimensioning and free hand practicing. Computer screen, layout of the software, standard tool bar/menus and description of most commonly used tool bars, navigational tools.

Co-ordinate system and reference planes HP, VP, RPP & LPP of

2D environment. Selection of drawing sheet size and scale of a drawing, Commands and creation of Lines, Co-ordinate points, axes, poly- lines, square, rectangle, polygons, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints viz. tangency, inclination and perpendicularity. Dimensioning, line conventions, material conventions.

Orthographic Projections of Points, Straight lines and Planes:

Introduction, Orthographic projection, Planes of projection, reference line and conventions employed,

Projections of points in all the four quadrants.

Projections of straight lines (located in First quadrant/First angle only), True and apparent lengths, True and apparent inclinations to reference planes, (No mid point problems).

Application problems on Projection of Lines (For CIE only)

Projections of Plane Surfaces

Orthographic projections of regular plane Surfaces – triangle, square, rectangle, pentagon, hexagon and circle in simple positions inclined to both the planes, planes in different positions by change of position method only. (No problems on punched plates, composite plates, Lamina resting on VP) **16 Hrs**

Unit II

Projections of solids:

Introduction , Classification of Solids, Projections of prisms, pyramids, cylinders and cones with axis inclined to both the planes, Solids in different positions by change of position method only.(No problems on octahedrons, freely suspended solids, Solid resting on VP).

Projections of Frustum of cone and pyramids (For practice only, not for CIE and SEE) 12 Hrs

Unit III

Development of Lateral Surfaces of Solids:

Introduction to section planes and sectional views, Development of lateral surfaces of right regular prisms, cylinders, pyramids, cones resting with base on HP only, Development of lateral surfaces of their frustums and truncations.

Application problems on development of lateral surfaces like funnels and trays (For CIE only). **08 Hrs**

Unit IV

Isometric Projection:

Introduction, Isometric scale, Isometric projection of simple plane figures, Isometric projection of hexahedron(cube), right regular prisms, pyramids, cylinders, cones, spheres. Isometric view of combination of two simple solids.

Conversion of simple isometric drawings into orthographic views. Problems on applications of Isometric projections of simple objects / engineering components. Introduction to drawing views using 3D environment (For CIE only). **08 Hrs**

Unit V

Multidisciplinary Applications & Practice (For CIE Only):

Free hand Sketching; True free hand, Guided Free hand, Roads, Buildings, Hand tools & Furniture's etc.

Drawing Simple Mechanisms; Four bar mechanism, Engine mechanism, Gear trains.

Electric Wiring and lighting diagrams; Like, Call bell system, UPS system using suitable software.

Basic Building Drawing; Like, Architectural floor plan, basic foundation drawing using Auto CAD or suitable software.

Electronics Engineering Drawings: Like, Simple Electronics Circuit Drawing

04 Hrs

TEXT BOOKS:

1.	K.R. Gopalakrishna,	Engineering Graphics 32nd edition, 2005- Subhash Publishers Bangalore.
2.	N.D. Bhatt & V.M. Panchal	Engineering Drawing – 48th edition, 2005- Charotar Publishing House, Gujarat.

REFERENCE BOOKS:

1.	S. Trymbaka Murthy	Computer Aided Engineering Drawing – I.K. International Publishing House Pvt. Ltd., New Delhi, 3rd revised edition-2006.
2.	Dr. M H Annaiah, Dr C N Chandrappa and Dr. B Sudheer Premkumar,	Computer Aided Engineering Drawing- Fifth edition, New Age International Publishers.

Course outcomes: After the completion of this course, students will be able to:

CO1. Draw orthographic projections of Lines and Planes according to the constraints of the problem.

CO2. Draw orthographic projections of solids both in conventional way and using modern engineering tool according to the constraints of the problem.

CO3. Develop the lateral surfaces of the objects both in conventional way and using modern engineering tool

CO4. Draw the isometric projection of combination of solids both in conventional way and using modern engineering tool

CO5. Identify the interdisciplinary engineering components or systems through its graphical representation.

Assessment Details (both CIE and SEE):

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks) and that for SEE minimum passing marks is 40% of the maximum marks (20 marks). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 40% (20 Marks out of 50) in the semester-end examination (SEE), and a minimum of 40% (20 marks out of 50) in the sum of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation (CIE)

CIE shall be evaluated for max. marks of 100 and later the same shall be scaled-down to 50 marks as detailed below:

CIE component should comprise of Continuous evaluation of Drawing work of students as and when the Modules are covered based on below detailed weightage.

Module	**Max. Marks Weightage**	**Evaluation Weightage in marks**	
		Computer display and print out (a)	**Sketching (b)**
Module 1	20	10	10
Module 2	20	10	10
Module 3	20	10	10
Module 4	20	10	10
Module 5	20	10	10
Total	**100**	**50**	**50**
Consideration of Class work		Total of [(a) + (b)] = 100 Scaled down to 30 Marks	

- At least one Test covering all the modules **is to be conducted for 100 marks and evaluation to be based SEE pattern**, and the same is to be scaled down to 20 Marks.
- **The final CIE = Class work marks + Test marks**

Semester End Examination (SEE)

- SEE shall be conducted and evaluated for maximum marks 100. Marks obtained shall be accounted for SEE final marks, reducing it by 50%

Module	**Max. Marks Weightage**	**Evaluation Weightage in marks**	
		Computer display and print out (a)	**Manual Drawing (b)**
Module 1	10	-	10
Module 2	30	20	10
Module 3	30	20	10
Module 4	30	20	10
Total	**100**	**60**	**40**
Consideration of SEE Marks		Total of ((a) + (b)) ÷ 2 = Final SEE marks	

- Question paper and scheme shall be made available for each batch as per schedule. Questions are to be set preferably from Text Books.
- Question paper pattern is as follows:

Question No. 1: One full question can be set either from “points & lines” or “planes”.
Question No. 2: One full question from Projections of solids

Question No. 3: One full question from Development of Lateral Surfaces of Solids

Question No. 4: One full question from Isometric Projection.

Weightage of marks for modules 1,2,3 and 4 is as per the below table.

- Evaluation shall be carried jointly by both the examiners.

COs and POs Mapping (CO-PO mappings are only Indicative)

COs	POs											
	1	2	3	4	5	6	7	8	9	10	11	12
CO1	3	1			2					2		
CO2	3				2					2		
CO3	3	1			2					2		
CO4	2	1			2					2		
CO5	3				2					2		

Level 3- Highly Mapped, Level 2-Moderately Mapped, Level 1-Low Mapped, Level 0- Not Mapped

ENGINEERING MECHANICS

Contact Hours/Week	:	2(L) + 2(T)	Credits	:	3.0
Total Lecture Hours	:	25	CIE Marks	:	50
Total Tutorial Hours	:	25	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	03
Course Type	:	Theory	Course Code	:	**ESCF2**

Course Objectives: This course will enable students to:

- To develop students' ability to analyze the problems involving forces,
- moments with their applications.
- To make students to learn the effect of friction on different planes
- To develop the student's ability to find out the centre of gravity and moment of inertia and their applications.
- To make the students learn about kinematics and kinetics and their applications..

Unit I

Fundamentals of mechanics - Basic idealization- particle, continuum and rigid body, laws of mechanics, force and its characteristics, classification of force system, concept of free body diagram, Principle of Transmissibility.

Resultant of coplanar concurrent force system - Law of parallelogram of forces, triangle law of forces, polygon law of forces, and problems related to determination of the resultant.

Equilibrium of coplanar concurrent force system - Conditions of equilibrium, Lami's theorem and problems related to equilibrium of concurrent force system. Illustrative problems specific to engineering applications. **5+5 Hrs.**

Unit II

Resultant of coplanar non-concurrent force system - Concept of moment, couple, equivalent force and couple system, Varignon's theorem, analysis of resultant of the System.

Equilibrium of coplanar non-concurrent force system - Types of loads, Types of supports, types of beams. Determination of support reaction for beams subjected to different types of loads (Concentrated loads, UDL, UVL, pure moment and their combinations), introduction to the concepts of determinacy and indeterminacy in components subjected to forces/loads. **5+5 Hrs.**

Unit III

Friction - Introduction, laws of Coulomb friction, equilibrium of blocks on horizontal plane, equilibrium of blocks on inclined plane, ladder friction, wedge friction Numerical examples. **5+5 Hrs.**

Unit IV

Centroid of Plane areas - Introduction, Locating the centroid of rectangle, triangle, circle, semicircle, quadrant and sector of a circle using method of integration (No derivations), centroid of composite areas and simple built-up sections, Numerical examples.

Moment of inertia of plane areas - Introduction, Rectangular moment of inertia, polar moment of inertia, product of inertia, radius of gyration, parallel axes theorem, perpendicular axis theorem, moment of inertia of rectangular, triangular and circular areas from the method of integration (No derivations), moment of inertia of composite areas and simple built up sections, Numerical examples.

5+5 Hrs.

Unit V

Kinematics - Linear motion: Introduction, Displacement, speed, velocity, acceleration, acceleration due to gravity, Numerical examples on linear motion Projectiles: Introduction, numerical examples on projectiles.

Kinetics - Introduction, D'Alembert's principle of dynamic equilibrium and its application in-plane motion and connected bodies including pulleys, Numerical examples. **5+5 Hrs.**

TEXT BOOKS:

7.	Kolhapure B K	Elements of Civil Engineering and Engineering Mechanics, 2014, EBPB
8.	Bansal R. K., Rakesh Ranjan Beohar and Ahmad Ali Khan	Basic Civil Engineering and Engineering Mechanics, 2015, Laxmi Publications.

Course outcomes: After the completion of this course, students will be able to:

CO1: Identify system of forces and to solve complex engineering problems by applying principles of engineering, science, and mathematics.

CO2: Apply equations of statics to analyze non concurrent force system and to determine support reactions and internal forces in a system.

CO3: Apply the concept of friction for a given real world problem and analyse the frictional resistance offered by different planes.

CO4: Locate the centroid and compute the moment of inertia of plane and built-up sections.

CO5: Compute the moment of inertia of plane and built-up sections.

ELEMENTS OF ELECTRICAL ENGINEERING

Contact Hours/Week	:	2(L) + 2(T) +0(P)	Credits	:	3.0
Total Lecture Hours	:	30	CIE Marks	:	50
Total Tutorial Hours	:	30	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	03
Course Type	:	Theory	Course Code	:	**ESCF3**

Course Objectives: This course will enable students to:

1. To introduce fundamental concepts of electric circuits and electromagnetism.
2. To expose different electrical measuring techniques.
3. To study the domestic wiring, tariff and electrical safety practices.

Unit I

DC circuits: Ohm's law and Kirchhoff's laws, analysis of series, parallel and series-parallel circuits. Power and energy. **Numericals**

Electromagnetism: Faraday's Laws of Electromagnetic Induction, Lenz's Law, Fleming's rules, statically and dynamically induced EMF; concepts of self and mutual inductance. Coefficient of Coupling. Energy stored in magnetic field. **Numericals** (**6+6)Hrs**

Unit II

Single-phase AC circuits: Generation of sinusoidal voltage, frequency of generated voltage, average value, RMS value, form factor and peak factor of sinusoidal voltage and currents. Phasor representation of alternating quantities. Analysis of R, L, C, R-L, R-C and R-L-C circuits with phasor diagrams, Real power, reactive power, apparent power, and Power factor. Series, Parallel and Series-Parallel circuits. **Numericals**.

(6+6) Hrs

Unit III

Three-phase AC circuits: Necessity and advantage of 3-phase system. Generation of 3-phase power. Definition of phase sequence. Balanced supply and balanced load. Relationship between line and phase values of balanced star and delta connections. Power in balanced 3-phase circuits. Measurement of 3-ϕ power by 2-wattmeter method. **Numerical**.

(6+6) Hrs

Unit IV

Measuring instruments: construction and working principle of whetstone's bridge, Kelvin's double bridge, Megger, Maxwel's bridge for inductance, Schering's bridge for capacitance, concepts of current transformer and potential transformer. (Only balance equations and excluding Vector diagram approach), **Numericals.**

Domestic Wiring: Requirements, Types of wiring: conduit wiring and casing & capping. Two way and three-way control of lamp load. **(6+6) Hrs**

Unit V

Electrical energy consumption and Tariff: Power rating of household appliances including air conditioners, PCs, laptops, printers, etc. Definition of "unit" used for consumption of electrical energy, two-part electricity tariff, calculation of electricity bill for domestic consumers.

Safety measures: Domestic electric circuit including protective devices, working principle of Fuse and Miniature circuit breaker (MCB), merits and demerits.

Electric Shock, Earthing, types (Plate and pipe earthing), Safety Precautions to avoid shock, and introduction to Residual Current Circuit Breaker (RCCB) and Earth Leakage Circuit Breaker (ELCB).

(6+6) Hrs

TEXT BOOKS:

1.	D C Kulshreshtha,	Basic Electrical Engineering, Tata McGraw Hill, 1st Ed., 2019
2.	D. P. Kothari and I. J. Nagrath,	Basic Electrical Engineering, Tata McGraw Hill, 4th Ed., 2019

REFERENCE BOOKS:

1.	V. K. Mehta, Rohit Mehta	Principles of Electrical Engineering & Electronics, S. Chand and Company Publications, 2nd Ed., 2015.
2.	E. Hughes	Electrical Technology, Pearson, 12th Ed., 2016.
3.	A K Sawhney	Electrical and Electronic measurements and instrumentation, Dhanapat Rai and Co. edition, 2015.

Course outcomes: After the completion of this course, students will be able to:

CO1. Apply the concepts of basic laws to solve electric circuits

CO2. Apply Faraday's laws to solve electromagnetic circuits.

CO3. Understand the concepts of measuring techniques.

CO4. Explain the concepts of domestic wiring, electrical energy consumption, protective devices and safety measures.

COs and POs Mapping

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

Level 3- Highly Mapped, Level 2-Moderately Mapped, Level 1-Low Mapped, Level 0- Not Mapped

BASIC ELECTRONICS

Contact Hours/Week	:	3(L) + 0(T) + 0(P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	3
Course Type	:	Theory	Course Code	:	**ESCF4**

Pre-requisite: Semiconductor Physics

Course Objectives: This course will enable students to:

- Analyze & design different stages of DC power supply
- Get knowledge of the working and application of transistors
- Build the analog computational circuits using OPAMP and generate AC signal of required frequency using Oscillator circuits
- Understand basics of digital electronics
- Understand different analog modulation techniques and get the knowledge of transducers

Unit I

Semiconductor diode and its applications: Review of PN–junction, diode equation, VI characteristics, effect of temperature, Zener diode: Working, VI characteristics. Basic building blocks of a regulated DC power supply: Full wave rectifier, Capacitor filter (qualitative analysis), Zener regulator (includes numericals on diode equation, rectifier, filter and Zener regulator) **8 Hrs**

Unit II

Transistors and their applications: Review of Bipolar junction transistor, CE configuration and characteristics, BJT as switch & amplifier, Fixed bias and voltage divider bias (approximate analysis), DC load line and operating point, Single stage RC coupled amplifier and its frequency response, MOSFET: Classification, Construction and drain characteristics of N-channel enhancement type MOSFET. **8 Hrs**

Unit III

Operational Amplifier and Oscillators: Block diagram of an Operational amplifier, Schematic symbol, differential amplifier, Characteristics of an ideal operational amplifier, Concept of virtual ground, Op-amp applications: Inverting and non-inverting amplifier, Voltage follower, Adder, Subtractor, Integrator and differentiator, Open-loop configuration

Concept of feedback, Types of feedback, Barkhausen criteria for oscillations, RC phase-shift oscillator and Wein's bridge oscillator. **8 Hrs**

Unit IV

Fundamentals of Digital Electronics: Introduction to number systems: Octal, Hexadecimal, Binary numbers: Binary addition and subtraction using 1's and 2's complement method, Review of logic gates, Universal gates, Boolean Algebra, De Morgan's theorems, Simplification and realization of Boolean expressions using basic gates and NAND gates, Half adder, Full adder and Parallel adder. **8 Hrs**

Unit V

Communication System: Block diagram of communication system, Need for modulation, Analog Modulation: AM, FM, PM (Definition waveforms, expressions and comparisons)

Transducers: Introduction, Resistive Transducers, Inductive Transducers, Capacitive Transducers, Thermal Transducers, Optoelectronic Transducers and Piezoelectric transducers. **7 Hrs**

TEXT BOOKS:

1	David A Bell	Electronic Devices and Circuits, Oxford, 5th Edition, 2016.
2	Ramakanth A Gayakwad	Op-amps and Linear Integrated Circuits, Pearson Education, 4th Edition, 2015.
3	M. Morris Mano	Digital Logic and Computer Design,, PHI Learning, 2008
4	David A. Bell	Electronic Instrumentation and Measurements, Oxford, 3rd Edition
5	George Kennedy	Electronic Communication Systems, TMH, 6th Edition, 2017.

Course Outcomes: After the completion of this course, students will be able to

CO1. Analyze PN junction diodes & design different stages of DC power supply.

CO2. Analyze characteristics, biasing of transistors & illustrate the application of transistor as an amplifier.

CO3. Analyze the characteristics of OPAMP, develop its applications, and design oscillator circuits using OPAMP

CO4. Simplify and realize Boolean expressions, analyze & implement combinational logic circuits.

CO5. Compare different analog modulation techniques and describe various transducers

ELEMENTS OF MECHANICAL ENGINEERING

Contact Hours/Week	:	3(L) + 0(T) + 0(P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	3 Hrs.
Course Type	:	Theory	Course Code	:	**ESCF5**

Course Objectives: This course will enable students to:

- Acquiring a basic understanding about scope of mechanical engineering, fundamentals about steam and non-conventional energy resources.
- Acquire a basic knowledge about conventional and advanced manufacturing processes.
- Students will be introduced to fundamentals of IC engines and refrigeration systems.
- Students will be exposed to power transmission and joining processes.
- Acquiring a basic insight into future mobility such as Mechatronics, CNC and Additive Manufacturing

Unit I

Introduction to Mechanical Engineering (Overview Only**):**

Role on Mechanical engineering in Industries and society: Emerging Trends and technologies in different sectors such as Energy, Manufacturing, Automotive. **(PO1)**

Energy: Forms of energy, sources and classification of energy sources, non-conventional energy sources (Solar Energy (FPC only), Wind Energy (Wind Mill)).

Formation of steam: Formation of steam, Types of steam, Steam properties - specific volume, enthalpy and internal energy, Simple numerical problems **(PO2)** **08 Hrs**

Unit II

Machine Tools :

Lathe: Principle of Working, Construction of Centre Lathe, Lathe operations – Turning, Facing, Knurling. **(PO1)**

Drilling: Principle of working, Construction and Working of Bench drilling machine. Drilling operations - Drilling, Boring, Reaming, Tapping. **(PO1)**

Milling: Principle of working, Construction and working of horizontal milling machine. Milling operations - Slot milling, Form milling, Angular milling **(PO1)**

08 Hrs

Unit III

IC Engines and Refrigeration :

Introduction to IC engines: Components and working principles,4 stroke Petrol and Diesel engine. Simple problems on IP, BP, FP **(PO2)**

Introduction to Refrigeration: Principle of refrigeration, working principle of Vapour compression refrigeration and vapour absorption refrigeration, List of commonly used refrigerants **(PO2)** **08 Hrs**

Unit IV

Mechanical Power Transmission:

Belt drives: Types of belt drives (Open and closed), Stepped cone pulley, Velocity ratio in belt drives (No derivation), Slip and Creep in belts drives. **(PO2)**

Gear Drives: Types of gears- Spur, Helical, Bevel, Worm gears, Rack and Pinion, and Velocity ratio in Gears. (No derivation) **(PO2)**

Gear Trains: Types of Gear trains, Working and derivation on Simple gear train, Compound gear train, Simple numerical problems on gear trains. **(PO2)**

08 Hrs

Unit V

Joining Process, Mechatronics, CNC and Additive Manufacturing:

Joining Processes: Soldering, Brazing, and welding definitions only, working of Gas welding. **(PO1)**

Introduction to Mechatronics: Systems of Mechatronics, advantages & disadvantages, Measurement Systems and Control Systems - Open loop control system and close loop control system (with simple block diagrams). **(PO1)**

Introduction to CNC Machine: Advantages and disadvantages of CNC, CNC system configuration **(PO1)**

Introduction to Additive Manufacturing: classification and any one concept of Additive Manufacturing (3D printing by Stereo lithography process) **(PO1)**

08 Hrs

TEXT BOOKS:

1.	K R Gopala Krishna	Elements of Mechanical Engineering, Subhash Publications, 2008

2.	Hazra Choudhry and Nirzar Roy	Elements of Workshop Technology (Vol. 1 and 2), Media Promoters and Publishers Pvt. Ltd., 2010.

REFERENCE BOOKS:

1.	Jonathan Wickert and Kemper Lewis	An Introduction to Mechanical Engineering, , Third Edition 2012
2.	P.N.Rao	Manufacturing Technology- Foundry, Forming and Welding, Tata McGraw Hill 3rdEd., 2003
3.	P.N.Rao	CAD/CAM principles and applications, Tata McGraw Hill 2nd Edition.

Web links and Video Lectures (e-Resources):

1.https://www.tlv.com/global/TI/steam-theory/principal-applications-for-steam.html.

2.https://www.forbesmarshall.com/Knowledge/SteamPedia/AboutSteam/Fundamental-Applications-of-Steam.

3.https://rakhoh.com/en/applications-and-advantages-of-steam-in-manufacturing – and process-industry/.

4.Videos Makino (For Machine Tool Operation).

Course outcomes: After the completion of this course, students will be able to:

CO1. Explain the role of mechanical engineering in industry and society, fundamentals of steam and non- conventional energy sources and study the basic principles of formation of steam

CO2. Describe different conventional and advanced machining tools such as Lathe, drilling and milling machines

CO3. Describe the performance parameters of IC engines and working principles of VAR and VCR refrigeration system

CO4. Describe the working of various mechanical power transmission for engineering applications

CO5. Enumerate various aspects of future mobility such as Mechatronics, CNC and 3D printing technology

Mapping of Course Outcomes (COs) to Program Outcomes (POs) & Program Specific Outcomes (PSOs)

		POs												PSOs		
		1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
COs	CO1	3	1											1		
	CO2	3												1		
	CO3	3	1											1		
	CO4	3	1											1		
	CO5	3	1											1		

Principles of Programming using C

Contact Hours/Week	:	2(L) + 0(T) + 2(P)	Credits	:	3
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	26	Exam Hours	:	03
Course Type	:	Integrated	Course Code	:	**ESCF6**

Course Objectives: This course will enable students to:

- Elucidate the basic architecture and functionalities of a Computer
- Apply programming constructs of C language to solve the real-worldproblems
- Explore user-defined data structures like arrays, structures and pointers in implementing solutions to problems
- Design and Develop Solutions to problems using structured programming constructs such as functions and procedures

Unit I

Introduction to C: Introduction to computers, input and output devices, designing efficientprograms. Introduction to C, Structure of C program, Files used in a C program, Compilers, Compiling and executing C programs, variables, constants, Input/output statements in C.

Textbook: Chapter 1.1-1.9, 2.1-2.2, 8.1 - 8.6 ,9.1-9.14

4L + 2P Hrs

Unit II

Decision control and Looping statements : Operators in C, Type conversion and typecasting, **Decision control and Looping statements:** Introduction to decision control, Conditional branching statements, iterative statements, nested loops, break and continue statements,goto statement.

Textbook: Chapter 9.15-9.16, 10.1-10.6

5L + 6P Hrs

Unit III

Functions and Arrays: Functions- Introduction using functions, Function definition, function declaration, function call, return statement, passing parameters to functions, scope of variables, storage classes, recursive functions.

Arrays- Declaration of arrays, accessing the elements of an array, storing values in arrays, Operations onarrays, Passing arrays to functions, two dimensional arrays, operations on two-dimensional arrays, two- dimensional arrays to functions, multidimensional arrays, applications of arrays.

Textbook: Chapter 11.1-11.10, 12.1-12.10,12.12 6L + 6P Hrs

Unit IV

Strings and Pointers: Introduction, string taxonomy, operations on strings, Miscellaneous string and character functions, arrays of strings. Pointers: Introduction to pointers, declaring pointer variables, Types of pointers, Passing arguments to functions using pointers

Textbook: Chapter 13.1-13.6, 14-14.7 5L+6P Hrs

Unit V

Structure, Union, and Enumerated Data Type: Introduction, structures and functions, Unions, unionsinside structures, Enumerated data type.

Files: Introduction to files, using files in C, reading and writing data files. , Detecting end of file

Textbook: Chapter 15.1 – 15.10, 16.1-16.5 5L+6P Hrs

Programming Assignments

1 Simulation of a Simple Calculator.

2 Compute the roots of a quadratic equation by accepting the coefficients. Print appropriate messages.

3 An electricity board charges the following rates for the use of electricity: for the first 200 units 80 paise per unit:for the next 100 units 90 paise per unit: beyond 300 units Rs 1 per unit. All users are charged a minimum of Rs.
100 as meter charge. If the total amount is more than Rs 400, then an additional surcharge of 15% of total amountis charged. Write a program to read the name of the user, number of units consumed and print out the charges.

4. Write a C Program to display the following by reading the number of rows as input,

```
                1
              1 2   1
            1 2 3   2 1
          1 2 3 4   3 2   1
```

---

n^{th} row

5 Implement Binary Search on Integers.

6 Implement Matrix multiplication and validate the rules of multiplication.

7 Compute sin(x)/cos(x) using Taylor series approximation. Compare your result with the built-in library function.Print both the results with appropriate inferences.

8 Sort the given set of N numbers using Bubble sort.

9 Write functions to implement string operations such as compare, concatenate, and find string length. Use theparameter passing techniques.

10 Implement structures to read, write and compute average- marks of the students, list the students scoring aboveand below the average marks for a class of N students.

11 Develop a program using pointers to compute the sum, mean and standard deviation of all elements stored inan array of N real numbers.

12. Write a C program to copy a text file to another, read both the input file name and target file name.

TEXT BOOKS:

Sl. No.	Author/s	Title, Publisher, Edition, Year, ISBN
1	Reema Thareja	Computer fundamentals and programming in c, Oxford University, Second edition,2017.

REFERENCE BOOKS:

1.	E. Balaguruswamy,	Programming in ANSI C, 7th Edition, Tata McGraw-Hill.
2.	Brian W. Kernighan and Dennis M. Ritchie	The 'C' Programming Language, Prentice Hall of India

Course outcomes: After the completion of this course, students will be able to:

CO1. Elucidate the basic architecture and functionalities of a computer and also recognizethe hardware parts.

CO2. Apply programming constructs of C language to solve the real world problem

CO3. Explore user-defined data structures like arrays in implementing solutions to problems like searching and sorting

CO4. Explore structures , unions, pointers & files in implementing solutions.

CO5. Design and Develop Solutions to problems using modular programming constructs using functions

INTRODUCTION TO CIVIL ENGINEERING

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	50	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	03
Course Type	:	Theory	Course Code	:	**ESCO1**

Course Objectives: This course will enable students to:

- To make students learn the scope of various specializations of civil engineering.
- To make students learn the concepts of sustainable infrastructure
- To develop student's ability to analyze the problems involving forces, moments with their applications.
- To develop the student's ability to find out the center of gravity and moment of inertia and their applications.

Unit I

Civil Engineering Disciplines and Building Science

Introduction to Civil Engineering - Surveying, Structural Engineering, Geotechnical Engineering, Hydraulics & Water Resources, Transportation Engineering, Environmental Engineering, Construction planning & Project Management.

Basic Materials of Construction - Bricks, Cement & mortars, Plain, Reinforced & Pre-stressed Concrete, Structural steel, Construction Chemicals.

Structural elements of a building: foundation, plinth, lintel, chejja, Masonry wall, column, beam, slab and staircase.

Infrastructure: Introduction to sustainable development goals, Smart city concept, clean city concept, Safe city concept. **10 Hrs**.

Unit II

Fundamentals of mechanics - Basic idealization- particle, continuum and rigid body, laws of mechanics, force and its characteristics, classification of force system, concept of free body diagram, Principle of Transmissibility.

Resultant of coplanar concurrent force system - Law of parallelogram of forces, triangle law of forces, polygon law of forces, and problems related to determination of the resultant.

Equilibrium of coplanar concurrent force system - Conditions of equilibrium, Lami's theorem and problems related to equilibrium of concurrent force system. Illustrative problems specific to engineering applications. **10 Hrs**.

Unit III

Resultant of coplanar non-concurrent force system - Concept of moment, couple, equivalent force and couple system, Varignon's theorem, analysis of resultant of the system.

Equilibrium of coplanar non-concurrent force system - Types of loads, Types of supports, types of beams. Determination of support reaction for beams subjected to different types of loads (Concentrated loads, UDL, UVL, pure moment and their combinations), introduction to the concepts of determinacy and indeterminacy in components subjected to forces/loads. **10Hrs.**

Unit IV

Centroid - Importance of centroid and centre of gravity, methods of determining the centroid, locating the centroid of plane laminae from first principles, centroid of built-up sections. Numerical examples. **10Hrs**.

Unit V

Moment of inertia - Importance of Moment of Inertia, method of determining the second moment of area (moment of inertia) of plane sections from first principles, parallel axis theorem and perpendicular axis theorem, section modulus, radius of gyration, moment of inertia of built-up sections, Numerical Examples. **10Hrs.**

TEXT BOOKS:

1.	A Nelson	Engineering Mechanics, Statics and Dynamics Tata Mc_Graw Hill Publications, 2009. ISBN: 978-0-07-014614-3.
2.	Bansal R. K., Rakesh Ranjan Beohar and Ahmad Ali Khan	Basic Civil Engineering and Engineering Mechanics 2015, Laxmi Publications.

REFERENCE BOOKS:

1.	Beer F.P. and Johnston E. R	Mechanics for Engineers, Statics and Dynamics, 1987, McGraw Hill
2.	Irving H. Shames	Title, Publisher, Edition, Year, ISBN
3.	Hibbler R. C	Engineering Mechanics: Principles of Statics and Dynamics, 2017, Pearson Press.
4.	Timoshenko S, Young D. H., Rao J. V	Engineering Mechanics, 5th Edition, 2017, Pearson Press.
5.	Bhavikatti S S	Engineering Mechanics, 2019, New Age International
6.	Reddy Vijaykumar K and Suresh Kumar K	Engineering Mechanics, 2011, BS publication
7.	Kolhapure B K	Elements of Civil Engineering and Engineering Mechanics, 2014, EBPB

Course outcomes: After the completion of this course, students will be able to:

CO1: Comprehend the various disciplines of civil engineering.
CO2: Identify system of forces and to solve engineering problems by applying equations of statics to analyze concurrent force system.
CO3: Apply equations of statics to analyze non concurrent force system and to determine support reactions in a system.
CO4: Locate the centroid of plane and built-up sections.
CO5: Compute the moment of inertia of plane and built-up sections.

INTRODUCTION TO ELECTRICAL ENGINEERING

Contact Hours/Week	:	3(L) + 0(T) +0(P)	Credits	:	3.0
Total Lecture Hours	:	40	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	03
Course Type	:	Theory	Course Code	:	ESC02

Course Objectives: This course will enable students to:

1. To introduce different types of electric power systems
2. To expose the fundamental concepts of electric circuits.
3. To impart knowledge of construction and operation of electrical machines.
4. To study the domestic wiring, tariff and electrical safety practices.

Unit I

Introduction: Conventional and non-conventional energy resources; General structure of electrical power systems using single line diagram approach.

Power Generation: Hydel, thermal, nuclear, Solar & wind power generation (Block Diagram approach).

DC Circuits: Ohm's Law and its limitations. KCL & KVL, series, parallel, series-parallel circuits. Numerical. **08 Hrs**

Unit II

A.C. Fundamentals: Equation of AC Voltage and current, waveform, time period, frequency, amplitude, phase, phase difference, average value, RMS value, form factor, peak factor. (only definitions)

Voltage and current relationship with phasor diagrams in R, L, and C circuits. Concept of Impedance. Analysis of R-L, R-C, R-L-C Series circuits. Active power, reactive power and apparent power. Concept of power factor. Numerical.

Three Phase Circuits: Generation of Three phase AC quantity, advantages and limitations; star and delta connection, relationship between line and phase quantities(excluding proof). Numerical. **08 Hrs**

Unit III

DC Machines: DC Generator: Principle of operation, constructional details, induced emf expression, types of generators. Relation between induced emf and terminal voltage. Numerical.

DC Motor: Principle of operation, back emf and its significance. Torque equation, types of motors, characteristics and speed control (armature & field) of DC motors (series & shunt only). Rating, cost, size and applications of DC motors. Numerical. **08 Hrs**

Unit IV

Transformers: Necessity of transformer, principle of operation, Types and construction of single- phase transformers, EMF equation, losses, variation of losses with respect to load. Efficiency. Rating, cost, size and applications. Numerical.

Three-phase induction Motors: Concept of rotating magnetic field, Principle of operation, constructional features of motor, types – squirrel

cage and wound rotor. Slip and its significance Rating, cost, size and applications. Numerical. **08 Hrs**

Unit V

Domestic Wiring: Requirements, Types of wiring: conduit, casing & capping. Two way and three-way control of load.

Electrical energy consumption and Tariff: Power rating of household appliances including air conditioners, PCs, laptops, printers, etc. Definition of "unit" used for consumption of electrical energy, two-part electricity tariff, calculation of electrical energy consumption for domestic applications.

Safety measures: Working principle of Fuse and Miniature circuit breaker (MCB), merits and demerits. Electric Shock, Earthing and its types, Safety Precautions to avoid shock. **08 Hrs**

TEXT BOOKS:

1.	D C Kulshreshtha,	Basic Electrical Engineering, Tata McGraw Hill, 1st Ed., 2019
2.	D. P. Kothari and I. J. Nagrath,	Basic Electrical Engineering, Tata McGraw Hill, 4th Ed., 2019

REFERENCE BOOKS:

1.	V. K. Mehta, Rohit Mehta	1. Principles of Electrical Engineering & Electronics, S. Chand and Company Publications, 2nd Ed., 2015.
2.	E. Hughes	2. Electrical Technology, Pearson, 12th Ed., 2016.

Course outcomes: After the completion of this course, students will be able to:

CO1. Explain the concepts of various energy sources and Electric circuits.

CO2. Apply the basic Electrical laws to solve circuits.

CO3. Explain the construction and operation of various Electrical Machines.

CO4. Determine the performance parameters of different Electrical Machines.

CO5. Explain the concepts of domestic wiring, circuit protective devices and safety measures.

COs and POs Mapping

Level 3- Highly Mapped, Level 2-Moderately Mapped, Level 1-Low Mapped, Level 0- Not Mapped

INTRODUCTION TO ELECTRONICS ENGINEERING

Contact Hours/Week	:	3(L) + 0(T) + 0(P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	3
Course Type	:	Theory	Course Code	:	**ESCO3**

Course Objectives: This course will enable students to:

- Analyze & design different stages of DC power supply
- Get knowledge of the working and application of transistors amplifiers
- Build the analog computational circuits using OP-AMP and generate AC signal of required frequency using Oscillator circuits
- To equip students with basic foundations of embedded systems
- Understand basics of digital electronics
- Understand basics of analog and digital modulation techniques

Unit I

Power Supplies –Block diagram, Half-wave rectifier, Full-wave rectifiers, C- filter (Qualitative analysis), Zener voltage regulator, Line and load regulation, Voltage multipliers.

Amplifiers – Review of BJT, BJT as a switch; Cut-off and saturation modes; RC coupled CE amplifier, Multi-stage amplifier. **8 Hrs.**

Unit II

Operational amplifiers - Ideal op-amp; characteristics of ideal and practical op-amp; Practical op-amp circuits: Inverting and non-inverting amplifiers, voltage follower, summer, subtractor, integrator, differentiator.

Oscillators – Barkhausen criterion, sinusoidal and non-sinusoidal oscillators, RC phase shift oscillator, Wein bridge oscillator, Multivibrators, Single-stage astable oscillator, Crystal controlled oscillators (using Op-amp, qualitative analysis).

8 Hrs.

Unit III

Boolean Algebra and Logic Circuits: Binary numbers, Number Base Conversion, octal & Hexa Decimal Numbers, Complements, Basic definitions, Axiomatic Definition of Boolean Algebra, Basic Theorems and Properties of Boolean Algebra, Boolean Functions, Canonical and Standard Forms,

Other Logic Operations, Digital Logic Gates

Combinational logic: Introduction, Design procedure, Adders- Half adder, Full adder. **7 Hrs**.

Unit IV

Embedded Systems – Definition, Embedded systems vs general computing systems, Classification of Embedded Systems, Major application areas of Embedded Systems, Elements of an Embedded System, Core of the Embedded System, Microprocessor vs Microcontroller, RISC vs CISC

Sensors and Interfacing – Instrumentation and control systems, Transducers, Sensors, Actuators, LED, 7-Segment LED Display. **8 Hrs.**

Unit V

Analog Communication Schemes – Modern communication system scheme, Information source, input transducer, Transmitter, Channel or Medium – Hardwired and Soft wired, Noise, Receiver, Multiplexing, Types of communication systems. Types of modulation (only concepts) – AM, FM, Concept of Radio wave propagation (Ground, space, sky)

Digital Modulation Schemes: Advantages of digital communication over analog communication, ASK, FSK, PSK, Radio signal transmission Multiple access techniques. **8 Hrs.**

TEXT BOOKS:

1	Mike Tooley	'Electronic Circuits, Fundamentals & Applications', Elsevier, 4th Edition, 2015. https://doi.org/10.4324/9781315737980.
2	M. Morris Mano	Digital Logic and Computer Design, PHI Learning, 2008 ISBN-978-81-203-0417-84.
3	D P Kothari, I J Nagrath	'Basic Electronics', McGraw Hill Education (India) Private Limited, 2nd edition, 2018.
4	Shibu K V	Introduction to Embedded Systems, Tata Mc Graw Hill Education Pvt. Ltd., 2nd edition, 2017.

Course Outcomes: After the completion of this course, students will be able to

CO1. Analyze different stages of DC power supply, transistor characteristics and amplifier.

CO2. Analyze the characteristics of OPAMP, develop the applications using OPAMP

CO3. Simplify and realize Boolean expressions, analyze & implement combinational logic circuits.

CO4. Differentiate embedded systems versus general computing systems and analyze different embedded architectures.

CO5. Analyze different analog and digital modulation techniques.

INTRODUCTION TO MECHANICAL ENGINEERING

Contact Hours/Week	:	3(L) + 0(T) + 0(P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	3
Course Type	:	Theory	Course Code	:	**ESCO4**

Unit I

Introduction: Role of Mechanical Engineering in Industries and Society, Emerging Trends and Technologies in different sectors such as Energy, Manufacturing, Automotive and Aerospace.

Energy: Introduction to various Energy Sources, Basic working principles of Thermal power plant, nuclear power plant, Solar power plant (Photovoltaic based) and Wind power plant. Environmental issues like Global warming and Ozone depletion. **7 Hrs**

Unit II

Machine Tool Operations: Working Principle of lathe, Lathe operations: Plain Turning, facing, knurling. Working principles of Bench Type Drilling Machine, drilling operations: drilling, boring, reaming. Working of Horizontal Milling Machine, Milling operations: plane milling and slot milling.

Introduction to Advanced Manufacturing Systems: Introduction, components of CNC, advantages a n d application of CNC, Introduction to 3D printing and 3D printing by stereolithography process. **8 Hrs**

Unit III

Introduction to IC Engines: Topic / contents Components and Working Principles, 4-Strokes Petrol and Diesel Engines, comparison of 4-stroke Petrol and Diesel engine, Application of IC Engines.

Insight into Future Mobility: Electric and Hybrid Vehicles, Components of Electric and Hybrid Vehicles. Advantages and disadvantages of EVs and Hybrid vehicles. **8 Hrs**

Unit IV

Engineering Materials: Properties and applications of Ferrous & Nonferrous Metals, silica, ceramics, glass, graphite, diamond and polymer, Shape Memory Alloys.

Joining Processes: Soldering, Brazing and Welding, Definitions, classification of welding process, Arc welding, Gas welding and types of flames **8 Hrs**

Unit V

Introduction to Mechatronics and Robotics: open-loop and closed-loop mechatronic systems, Classification of Robots: Robot Anatomy, Application, Advantages and Disadvantages.

Automation in industry: Definition, types – Fixed, programmable and flexible automation, basic elements with block diagrams, advantages.

Introduction to IOT: Definition and Characteristics, Physical design, protocols, Logical design of IoT, Functional blocks, and communication models. **8 Hrs**

TEXT BOOKS:

1.	K R Gopala Krishna	Elements of Mechanical Engineering, Subhash Publications, 2008
2.	Jonathan Wickert and Kemper Lewis	An Introduction to Mechanical Engineering, Third Edition, 2012

REFERENCE BOOKS:

3.	V. Ganesan	Internal Combustion Engines, Tata McGraw Hill Education; 4th edition, 2017
4.	Appu Kuttan	Robotics, K K. International Pvt Ltd, volume 1
5.	Dr SRN Reddy, Rachit Thukral, Manasi mishra	"Introduction to Internet of Things: A Practical Approach", ETI Labs
6.	Raj kamal	"Internet of Things: Architecture and Design", McGraw hill.

Web links and Video Lectures (e-Resources):

- Videos | Makino (For Machine Tool Operation)
- https://www.youtube.com/watch?v=vIJ50aUiBgM

Course outcomes: After the completion of this course, students will be able to:

CO1. Explain the Role of Mechanical Engineering in Industries and Society, various Energy sources and its impact on environment.

CO2. Describe the Machine Tool Operations and Advanced Manufacturing process.

CO3. Explain the Working Principle of IC engines, Electric and Hybrid vehicles.

CO4. Discuss the Properties of Common Engineering Materials and various Metal Joining Processes.

CO5. Explain the Concepts of Mechatronics, Robotics and Automation in IoT.

COs and POs Mapping (CO-PO mappings are only Indicative)

Level 3- Highly Mapped, Level 2-Moderately Mapped, Level 1-Low Mapped, Level 0- Not Mapped

Introduction to C Programming

Contact Hours/Week	:	2(L) + 0(T) + 2(P)	Credits	:	0.3
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	26	Exam Hours	:	03
Course Type	:	Integrated	Course Code	:	**ESC05**

Course Objectives: This course will enable students to:

- Elucidate the basic architecture and functionalities of a Computer
- Apply programming constructs of C language to solve the real-world problems
- Explore user-defined data structures like arrays, structures and pointers in implementing solutions to problems
- Design and Develop Solutions to problems using modular programming constructs such as functions and procedures

Unit I

Introduction to C : Introduction to computers, input and output devices, designing efficient programs. Introduction to C, Structure of C program, Files used in a C program, Compilers, Compiling and executing C programs, variables, constants, Input/output statements in C,

Textbook: Chapter 1.1-1.9, 2.1-2.2, 8.1 – 8.6, 9.1-9.14 **5L + 2P Hrs**

Unit II

Decision Control and Looping Statements : Operators in C, Type conversion and typecasting. Introduction to decision control, Conditional branching statements,iterative statements, nested loops, break and continue statements, goto statement.

Textbook: Chapter 9.15-9.16, 10.1-10.6 **5L + 6P Hrs**

Unit III

Functions & Array : Functions- Introduction using functions, Function definition, function declaration, function call, return statement, passing parameters to functions, scope of variables, storage classes, recursive functions.
Arrays: Declaration of arrays, accessing the elements of an array, storing values in arrays, Operations on arrays, Passing arrays to functions,

Textbook: Chapter 11.1-11.13, 12.1-12.6 **6L + 6P Hrs**

Unit IV

Two dimensional arrays, operations on two-dimensional arrays, two-dimensional arrays to functions, multidimensional arrays

Applications of arrays and introduction to strings: Applications of arrays, case study with sorting techniques.

Introduction to strings: Reading strings, writing strings, summary of functions used to read and write characters.Suppressing input using a Scanset.

Textbook: Chapter 12.7-12.12 **5L + 6P Hrs**

Unit V

Strings : String taxonomy, operations on strings, Miscellaneous string and character functions, arrays of strings.

Pointers: Understanding the Computers Memory, Introduction to Pointers, Declaring Pointer Variables

Structures: Introduction to structures

Textbook: Chapter 13.1-13.6, 14.1-14.3,15.1 **5L + 6P Hrs**

Web links and Video Lectures (e-Resources):

https://nptel.ac.in/courses/106/105/106105171/ MOOC courses can be adopted for more clarity inunderstanding the topics and verities of problem solving methods.

Lab Assignments

1. C Program to find Mechanical Energy of a particle using E = mgh+1/2 mv2.
2. C Program to convert Kilometers into Meters and Centimeters.
3. C Program To Check the Given Character is Lowercase or Uppercase or Special Character.
4. Program to balance the given Chemical Equation values x, y, p, q of a simple chemical equation of thetype: The task is to find the values of constants b_1, b_2, b_3 such that the equation is balanced on both sides and it must be the reduced form.
5. Implement Matrix multiplication and validate the rules of multiplication
6. Compute sin(x)/cos(x) using Taylor series approximation.Compare you result with the built-in library function.Print both the results with appropriate inferences.
7. Sort the given set of N numbers using Bubblesort.
8. Write functions to implement string operations such as compare , concatenate, string length Convince the parameter passing techniques.
9. Implement structures to read,write and compute average-marks and the students scoring above and below the average marks for a class of N students
10. Develop a program using pointers to compute the sum,mean and standard deviation of all elements stored in an array of N real numbers

Introduction to Web Programming

Contact Hours/Week	:	2(L) + 0(T) + 2(P)	Credits	:	0.3
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	26	Exam Hours	:	03
Course Type	:	Integrated	Course Code	:	**PLC1**

Course Objectives: This course will enable students to:

- To use the syntax and semantics of HTML and XHTML
- To develop different parts of a web page
- To understand how CSS can enhance the design of a webpage.
- To create and apply CSS styling to a webpage
- To get familiarity with the JavaScript language and understand Document Object Model handling of Java Script

Unit I

Traditional HTML and XHTML: First Look at HTML and XHTML, Hello HTML and XHTML World, HTML and XHTML: Version History, HTML and XHTML DTDs: The Specifications Up Close, (X)HTML Document Structure, Browsers and (X)HTML, The Rules of (X)HTML, Major Themes of (X)HTML, The Future of Markup—Two Paths.

TextBook1: Chapter 1 **5L + 5P Hrs**

Unit II

HTML5 : Hello HTML5, Loose Syntax Returns, XHTML5, HTML5: Embracing the Reality of Web Markup, Presentational Markup Removed and Redefined, HTML5 Document Structure Changes, AddingSemantics, HTML5's Open Media Effort, Client-Side Graphics with <canvas>, HTML5 Form Changes, Emerging Elements and Attributes to Support Web Applications

TextBook1: Chapter 2 **5L + 5P Hrs**

Unit III

Cascading Style Sheets (CSS): Introduction, CSS Overview , CSS Rules, Example with Type Selectors and the Universal Selector, CSS Syntax and Style, Class Selectors, ID Selectors, span and div Elements, Cascading, styleAttribute, style Container, External CSS Files, CSS Properties, Color Properties, RGB Values for Color, Opacity Values for Color, HSL and HSLA Values for Color, Font Properties, line-height
Property, Text Properties, Border Properties, Element Box, padding Property, margin Property , Case Study: Description of a Small City's Core Area.

TextBook2-: Chapter 3 **5L + 5P Hrs**

Unit IV

Tables and CSS, Links and Images: Table Elements, Formatting a Data Table: Borders, Alignment, and Padding, CSS Structural Pseudo- Class Selectors, thead and tbody Elements, Cell Spanning, Web Accessibility, CSS display Property with Table Values, a Element, Relative URLs, Navigation Within a Web Page, CSS for Links, Bitmap Image Formats: GIF, JPEG, PNG, img

Element, Responsive Images, Positioning Images, Shortcut Icon, iframe Element .

TextBook2: 5.2 to 5.8, 6.2, 6.3, 6.6., 6.7, 6.9, 6.10, 6.12, 7.2 to 7.4

6L + 6P Hrs

Unit V

Introduction to JavaScript: Functions, DOM, Forms, and Event Handlers

History of JavaScript, Hello World Web Page, Buttons, Functions, Variables, Identifiers, Assignment Statements and Objects, Document Object Model, Forms and How They're Processed: Client-Side Versus Server-Side, form Element, Controls, Text Control, Accessing a Form's Control Values, reset and focus Methods

TextBook2: 8.2 to 8,13, 8.15, 8.16 **5L + 5P Hrs**

Programming Assignments:

1. Create an XHTML page using tags to accomplish the following:

(i) A paragraph containing text "All that glitters is not gold". Bold face and italicize this text

(ii) Create equation:

$x = 1/3(y^2 + z^2$

1 1

(iii) Put a background image to a page and demonstrate all attributes of background image

(iv) Create unordered list of 5 fruits and ordered list of 3 flowers

2. Create following table using XHTML tags. Properly align cells, give suitable cell padding and cell spacing, and apply background color, bold and emphasis necessary

Department	**Sem1**	*SubjectA*
		SubjectB
		SubjectC
	Sem2	*SubjectE*
		SubjectF
		SubjectG
	Sem3	*SubjectH*
		SubjectI
		SubjectJ

3. Use HTML5 for performing following tasks:

(i) Draw a square using HTML5 SVG , fill the square with green color and make 6px brownstroke width

(ii) Write the following mathematical expression by using HTML5 MathML.d=x^2-y^2

(iii) Redirecting current page to another page after 5 seconds using HTML5 meta tag

4. Demonstrate the following HTML5 Semantic tags- <article>, <aside>,

<details>, <figcaption>,
<figure>, <footer>, <header>, <main>, <mark>, <section> for a webpage that gives informationabout travel experience.

5. Create a class called **income**, and make it a background color of #0ff. Create a class called **expenses**, and make it a background color of #f0f. Create a class called **profit**, and make it a background color of #f00.
Throughout the document, any text that mentions income, expenses, or profit, attach theappropriate class to that piece of text. Further create following line of text in the same document:
~~The current price is 50₹~~ and new price is 40₹

6. Change the tag **li** to have the following properties:

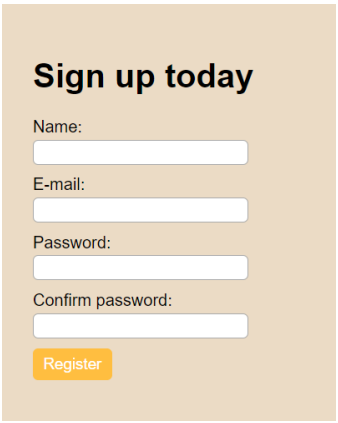
- A display status of inline
- A medium, double-lined, black border
- No list style type

Add the following properties to the style for **li**:

- Margin of 5px
- Padding of 10px to the top, 20px to the right, 10px to the bottom, and 20px tothe left

Also demonstrate list style type with user defined image logos

7. Create following web page using HTML and CSS with tabular layout



8. Create following calculator interface with HTML and CSS

9. Write a Java Script program that on clicking a button, displays scrolling text which moves from left to right with a small delay

10. Create a webpage containing 3 overlapping images using HTML, CSS and JS. Further when the mouse is over any image, it should be on the top and fully displayed.

Web links and Video Lectures (e-Resources):

https://onlinecourses.swayam2.ac.in/aic20_sp11/preview

TEXT BOOKS:

1.	Thomas A. Powell,	HTML & CSS: The Complete Reference Fifth Edition, Tata McGraw Hill
2.	John Dean, Jones & Bartlett Learning,	WEB PROGRAMMING with HTML5, CSS and JavaScript, First Edition

Course outcomes: After the completion of this course, students will be able to:

CO1. Explain the historical context and justification for HTML over XHTML
CO2. Develop HTML5 documents and adding various semantic markup tags
CO3. Analyse various attributes, values and types of CSS
CO4. Implement core constructs and event handling mechanisms of JavaScript.

Introduction to Python Programming

Contact Hours/Week	:	2(L) + 0(T) + 2(P)	Credits	:	03
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	26	Exam Hours	:	03
Course Type	:	Integrated	Course Code	:	**PLC2**

Course Objectives: This course will enable students to:

- Learn the syntax and semantics of the Python programming language.
- Illustrate the process of structuring the data using lists, tuples
- Appraise the need for working with various documents like Excel, PDF, Word and Others
- Demonstrate the use of built-in functions to navigate the file system.
- Implement the Object Oriented Programming concepts in Python.

Unit I

Python Basics : Entering Expressions into the Interactive Shell, The Integer, Floating-Point, and String Data Types, String Concatenation and Replication, Storing Values in Variables, Your First Program, Dissecting Your Program, **Flow control:** Boolean Values, Comparison Operators, Boolean Operators,Mixing Boolean and Comparison Operators, Elements of Flow Control, Program Execution, Flow Control Statements, Importing Modules,Ending a Program Early with sys.exit(), **Functions:** def Statements with Parameters, Return Values and return Statements,The None Value, Keyword Arguments and print(), Local and Global Scope, The global Statement, Exception Handling, A Short Program: Guess the Number

Textbook 1: Chapters 1 – 3 **6L + 4P Hrs**

Unit II

Lists: The List Data Type, Working with Lists, Augmented Assignment Operators, Methods, Example Program: Magic 8 Ball with a List, List-like Types: Strings and Tuples, References,

Dictionaries and Structuring Data: The Dictionary Data Type, Pretty Printing, Using Data Structures to Model Real-World Things,

Textbook 1: Chapters 4 – 5 **4L + 6P Hrs**

Unit III

Manipulating Strings: Working with Strings, Useful String Methods, Project: Password Locker, Project: Adding Bullets to Wiki Markup

Reading and Writing Files: Files and File Paths, The os.path Module, The File Reading/Writing Process, Saving Variables with the shelve Module,Saving Variables with the print.format() Function, Project: Generating Random Quiz Files, Project: Multiclipboard,

Textbook 1: Chapters 6 , 8 **6L + 6P Hrs**

Unit IV

Organizing Files: The shutil Module, Walking a Directory Tree, Compressing Files with the zipfile Module, Project: Renaming Files with American-Style Dates to European-Style Dates,Project: Backing Up a Folder into a ZIP File,

Debugging: Raising Exceptions, Getting the Traceback as a String, Assertions, Logging, IDLE‟s Debugger.

Textbook 1: Chapters 9-10 **4L + 4P Hrs**

Unit V

Classes and objects: Programmer-defined types, Attributes, Rectangles, Instances as return values, Objects are mutable, Copying,

Classes and functions: Time, Pure functions, Modifiers, Prototyping versus planning,

Classes and methods: Object-oriented features, Printing objects, Another example, A more complicated example,Theinit method, The str method, Operator overloading, Type-based dispatch, Polymorphism, Interface and implementation,

Textbook 2: Chapters 15 – 17 **6L + 6P Hrs**

Programming Exercises:

1. a. Develop a program to read the student details like Name, USN, and Marks in three subjects. Displaythe student details, total marks and percentage with suitable messages.
   b. Develop a program to read the name and year of birth of a person. Display whether the person is asenior citizen or not.

2. a. Develop a program to generate Fibonacci sequence of length (N). Read N from the console.
   b. Write a function to calculate factorial of a number. Develop a program to compute binomialcoefficient (Given N and R).

3. Read N numbers from the console and create a list. Develop a program to print mean, variance andstandard deviation with suitable messages.

4. Read a multi-digit number (as chars) from the console. Develop a program to print the frequency ofeach digit with suitable message.
5. Develop a program to print 10 most frequently appearing words in a text file. [Hint: Use dictionary with distinct words and their frequency of occurrences. Sort the dictionary in the reverse order of frequency and display dictionary slice of first 10 items]
6. Develop a program to sort the contents of a text file and write the sorted contents into a separate text file. [Hint: Use string methods strip(), len(), list methods sort(), append(), and file methods open(), readlines(), and write()].
7. Develop a program to backing Up a given Folder (Folder in a current working directory) into a ZIP File by using relevant modules and suitable methods.
8. Write a function named DivExp which takes TWO parameters a, b and returns a value c (c=a/b). Write suitable assertion for a>0 in function DivExp and raise an exception for when b=0. Develop a suitable program which reads two values from the console and calls a function DivExp.

9. Define a function which takes TWO objects representing complex numbers and returns new complex number with a addition of two complex numbers. Define a suitable class 'Complex' to represent the complex number. Develop a program to read N (N >=2) complex numbers and to compute the addition of N complex numbers.
10. Develop a program that uses class Student which prompts the user to enter marks in three subjects and calculates total marks, percentage and displays the score card details. [Hint: Use list to store the marks in three subjects and total marks. Use_init () method to initialize name, USN and the lists to store marks and total, Use getMarks() method to read marks into the list, and display() method to display the score card details.]

- https://pythontutor.com/visualize.html#mode=edit

TEXT BOOKS:

1.	Al Sweigart	**"Automate the Boring Stuff with Python",** 1st Edition, No Starch Press, 2015. (Available under CC-BY-NC-SA license at https://automatetheboringstuff.com/) (Chapters 1 to 18, except 12) for lambda functions use this link: https://www.learnbyexample.org/python-lambda-function/
2.	Allen B. Downey	**"Think Python: How to Think Like a Computer Scientist**", 2nd Edition, Green Tea Press, 2015. (Available under CC-BY-NC license at http://greenteapress.com/thinkpython2/thinkpython2.pdf (Chapters 13, 15, 16, 17, 18) (Download pdf/html files from the above link)

Course outcomes: After the completion of this course, students will be able to:

CO1. Demonstrate proficiency in handling loops and creation of functions.
CO2. Identify the methods to create and manipulate lists, tuples and dictionaries.
CO3. Develop programs for string processing and file organization
CO4. Interpret the concepts of Object-Oriented Programming as used in Python

Basics of Java Programming

Contact Hours/Week	:	2(L) + 0(T) + 2(P)	Credits	:	03
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	26	Exam Hours	:	03
Course Type	:	Integrated	Course Code	:	**PLC3**

Course Objectives: This course will enable students to:

- Learn fundamental features of object oriented language and JAVA
- Set up Java JDK environment to create, debug and run simple Java programs.
- Learn object oriented concepts using programming examples.
- Study the concepts of importing of packages and exception handling mechanism.

Unit I

An Overview of Java: Object-Oriented Programming, A First Simple Program, A Second Short Program, Two Control Statements, Using Blocks of Code, Lexical Issues, The Java Class Libraries, Data Types, Variables, and Arrays: Java Is a Strongly Typed Language, The Primitive Types, Integers, Floating-Point Types, Characters, Booleans, A Closer Look at Literals, Variables, Type Conversion and Casting, Automatic Type Promotion in Expressions, Arrays, A Few Words About Strings. Text book 1: Ch 2, Ch 3

6L + 4P Hrs

Unit II

Operators: Arithmetic Operators, The Bitwise Operators, Relational Operators, Boolean Logical Operators, The Assignment Operator, The ? Operator, Operator Precedence, Using Parentheses, Control Statements: Java‟s Selection Statements, Iteration Statements, Jump Statements.

Text book 1: Ch 4, Ch 5

4L + 6P Hrs

Unit III

Introducing Classes: Class Fundamentals, Declaring Objects, Assigning Object Reference Variables, Introducing Methods, Constructors, The this Keyword, Garbage Collection, The finalize( ) Method, A Stack Class, A Closer Look at Methods and Classes: Overloading Methods, Using Objects as Parameters, A Closer Look at Argument Passing, Returning Objects, Recursion, Introducing Access Control, Understanding static, Introducing final, Arrays Revisited

Text book 1: Ch 6, Ch 7 (7.1-7.9) **6L + 6P Hrs**

Unit IV

Inheritance: Inheritance, Using super, Creating a Multilevel Hierarchy, When Constructors Are Called, Method Overriding, Dynamic Method Dispatch, Using Abstract Classes, Using final with Inheritance, The Object Class.

6L + 6P Hrs

Text book 1: Ch 8

Unit V

Packages and Interfaces: Packages, Access Protection, Importing Packages, Interfaces, Exception Handling: Exception-Handling Fundamentals, Exception Types, Uncaught Exceptions, Using try and catch, Multiple catch Clauses, Nested try Statements, throw, throws, finally, Java‟s Built-in Exceptions, Creating Your Own Exception Subclasses, Chained Exceptions, Using Exceptions.

Text book 1: Ch 9, Ch 10

4L + 4P Hrs

Programming Assignments

1. Write a JAVA program that prints all real solutions to the quadratic equation $ax^2+bx+c=0$. Read in a,b, c and use the quadratic formula.
2. Write a JAVA program for multiplication of two arrays.
3. Demonstrate the following operations and sign extension with Java programs(i) << (ii) >> (iii) >>>
4. Write a JAVA program to sort list of elements in ascending and descending order using bubble sort.
5. Create a JAVA class called Student with the following details as variables within it.
   USN
   NAME
   BRANCH
   PHONE
   PERCENTAGE
   Write a JAVA program to create n Student objects and print the USN, Name, Branch, Phone, and percentage of these objects with suitable headings.
6. Write a JAVA program demonstrating Method overloading and Constructor overloading.
7. Design a super class called Staff with details as StaffId, Name, Phone, Salary. Extend this class by writing three subclasses namely Teaching (domain, publications), Technical (skills), and Contract (period). Write a JAVA program to read and display atleast 3 staff objects of all three categories.
8. Demonstrate dynamic dispatch using abstract class in JAVA.
9. Create two packages P1 and P2. In package P1, create class A, class B inherited from A, class C . In package P2, create class D inherited from class A in package P1 and class E. Demonstrate working of access modifiers (private, public, protected, default) in all these classes using JAVA.
10. Write a JAVA program to read two integers a and b. Compute a/b and print, when b is not zero. Raise an exception when b is equal to zero. Also demonstrate working of Array Index Out Of Bound Exception.

Web links and Video Lectures (e-Resources):

- https://onlinecourses.nptel.ac.in/noc22_cs47/preview

TEXT BOOKS:

1.	Herbert Schildt	Java The Complete Reference, 7th Edition, Tata McGraw Hill, 2007

Course outcomes: After the completion of this course, students will be able to:

CO1. To explain the features and object oriented concepts in JAVA programming

CO2. To analyse working of bitwise operators in JAVA

CO3. To develop simple programs based on polymorphism and Inheritance

CO4. To describe the concepts of importing packages and exception handling mechanics

Introduction to C++ Programming

Contact Hours/Week	:	2(L) + 0(T) + 2(P)	Credits	:	03
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	26	Exam Hour	:	03
Course Type	:	Integrated	Course Code	:	**PLC4**

Course Objectives: This course will enable students to:

- Understanding about object oriented programming and Gain knowledge about the capability to store information together in an object.
- Understand the capability of a class to rely upon another class and functions.
- Understand about constructors which are special type of functions.
- Create and process data in files using file I/O functions
- Use the generic programming features of C++ including Exception handling.

Unit I

Introduction to Object Oriented Programming: Computer programming background- C++ overview. First C++ Program -Basic C++ syntax, Object Oriented Programming: What is an object, Classes, methods and messages, abstraction and encapsulation, inheritance, abstract classes, polymorphism.

6L + 4P Hrs

Textbook 1: Chapter 1(1.1 to 1.8)

Unit II

Functions in C++: Tokens – Keywords – Identifiers and constants – Operators in C++ – Scope resolution operator – Expressions and their types – Special assignment expressions – Function prototyping – Call by reference – Return by reference – Inline functions -Default arguments – Function overloading**.** **4L + 6P Hrs**

Textbook 2: Chapter 3(3.2,3.3,3.4,3.13,3.14,3.19, 3.20) ,

chapter 4(4.3,4.4,4.5,4.6,4.7,4.9)

Unit III

Inheritance & Polymorphism: Derived class Constructors, destructors-Types of Inheritance- Defining Derived classes, Single Inheritance, Multiple, Hierarchical Inheritance, Hybrid Inheritance. **6L + 6P Hrs**

Textbook 2: Chapter 6 (6.2,6.11) chapter 8 (8.1 to,8.8)

Unit IV

I/O Streams: C++ Class Hierarchy- File Stream-Text File Handling- Binary File Handling during fileoperations. **6L + 6P Hrs**

Textbook 1: Chapter 12(12.5) , Chapter 13 (13.6,13.7)

Unit V

Exception Handling: Introduction to Exception - Benefits of Exception handling- Try and catchblockThrow statement- Pre-defined exceptions in C++ **4L + 4P Hrs**

Textbook 2: Chapter 13 (13.2 to13.6)

Programming Assignments:

1. Write a C++ program to sort the elements in ascending and descending order using bubble sort.
2. Write a C++ program to find the sum of all the natural numbers from 1 to n.
3. Write a C++ program to swap 2 values by writing a function that uses call by reference technique.
4. Write a C++ program to demonstrate function overloading for the following prototypes.

   add(int a, int b)

   add(double a, double b)

5. Create a class named Shape with a function that prints "This is a shape". Create another class named Polygon inheriting the Shape class with the same function that prints "Polygon is a shape". Create two other classes named Rectangle and Triangle having the same function which prints "Rectangle is a polygon" and "Triangle is a polygon" respectively. Again, make another class named Square having the same function which prints "Square is a rectangle".Now, try calling the function by the object of each of these classes.
6. Suppose we have three classes Vehicle, FourWheeler, and Car. The class Vehicle is the base class, the class FourWheeler is derived from it and the class Car is derived from the class FourWheeler. Class Vehicle has a method 'vehicle' that prints 'I am a vehicle', class FourWheeler has a method 'fourWheeler' that prints 'I have four wheels', and class Car has a method 'car' that prints 'I am a car'. So, as this is a multi-level inheritance; we can have access to all the other classes methods from the object of the class Car. We invoke all the methods from a Car object and print the corresponding outputs of the methods.

   So, if we invoke the methods in this order, car(), fourWheeler(), and vehicle(), then the output will be

   I am a car

   I have four wheels

   I am a vehicle

   Write a C++ program to demonstrate multilevel inheritance using this.

7. Write a C++ program to create a text file, check file created or not, if created it will write some textinto the file and then read the text from the file.
8. Write aC++ program to write and read time in/from binary file using fstream
9. Write a function which throws a division by zero exception and catch it in catch block. Write a C++program to demonstrate usage of try, catch and throw to handle exception.
10. Write a C++ program function which handles array of bounds exception using C++.

Weblinks and Video Lectures (e-Resources):

1. Basics of C++ - https://www.youtube.com/watch?v=BClS40yzssA
2. Functions of C++ - https://www.youtube.com/watch?v=p8ehAjZWjPw

Tutorial Link:

1. https://www.w3schools.com/cpp/cpp_intro.asp
2. https://www.edx.org/course/introduction-to-c-3

TEXT BOOKS:

1.	Bhushan Trivedi	"Programming with ANSI C++", Oxford Press, Second Edition, 2012.
2.	Balagurusamy E	Object Oriented Programming with C++, Tata McGraw Hill Education Pvt.Ltd ,Fourth Edition 2010.

Course outcomes: After the completion of this course, students will be able to:

CO1. Able to understand and design the solution to a problem using object-orientedprogramming concepts.

CO2. Able to reuse the code with extensible Class types, User-defined operators andfunction Overloading.

CO3. Achieve code reusability and extensibility by means of Inheritance andPolymorphism

CO4. Implement the features of C++ including templates, exceptions and file handling forproviding programmed solutions to complex problems.

SMART MATERIALS AND SYSTEMS

Contact Hours/Week	:	3(L) + 0(T) + 0(P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	00
Course Type	:	Theory	Course Code	:	**ETC01**

Course Objectives: This course will enable students to:

- To develop the students ability to learn emerging materials
- To make students to learn prefabricated Smart material components
- To understand the sensors deployed in smart materials
- To learn the concepts of 3D Printing
- To learn the concepts of different 3D Printing process

Unit I

Introduction to Smart Materials:

General Characteristics of Materials, Types and classification of materials, Smart materials, Classification of smart materials, General principles of smart materials Smart Structures, potential Smart Structure systems or devices. **PO1** **08 Hrs**

Unit II

Smart Structures:

Principle, Mechanism of working of piezoelectric, Magneto strictive, Electro strictive, Magnetorheological, Electrorheological materials, Smart gels, Chromic Materials etc., Applications of these smart materials. **PO1** **08 Hrs**

Unit III

Shape Memory Alloys (SMAs) or Thermo responsive materials :

Shape Memory Alloy, Principles of working properties (Shape memory effect and super elasticity) and preparation of shape memory alloys, types of SMAs, Determination of strain recovery by SME, Determination of Transformation temperatures. **PO2** **08 Hrs**

Unit IV

3-D Printing:

Importance, Historic development, advantages, common terminologies, classification, Process chain, 3 – D modelling, Data conversion and transmission, checking and preparation, Building, Post processing, Applications. PO2 **08 Hrs**

Unit V

Stereolithography:

Stereolithography, Process parameter, applications. Fused Deposition Modelling, Process parameters, Applications, Selective laser Sintering, Process Parameter, Application, Solid Ground Curing, Process parameters, Applications. **PO2 07 Hrs**

TEXT BOOKS:

1.	Mel Schwartz.	**Encyclopedia of Smart Materials**, John Wiley & Sons, New York, 2002

REFERENCE BOOKS:

1.	K.Otsuka and C.M.Wayman.	Shape Memory Materials, Cambridge University Press, London, 1998.
2.	T.W.Duerig et al.	Engineering Aspects of Shape Memory Alloys, Butterworth and Heinemann editions, London, 1990.
3.	M.V.Gandhi and B.S.Thompson	Smart Materials and Structure, Chapman and Hall, London, 1992.
4.	Mohamed Gad-El-Hak (Eds.),	Handbook of MEMS, CRC Press, Florida, USA, 2001.
5.	Pham D.T & Dinjoy S.S	"Rapid Manufacturing" Verlog London 2001.
6.	Rapid prototyping materials	by Gurumurthi, IISc Bangalore.

Course outcomes: After the completion of this course, students will be able to:

- **CO1.** Identify and differentiate various Emerging Smart Materials and its Engineering Applications
- **CO2.** Describe the principle of working of Smart materials and describe the applications of these smart materials
- **CO3.** Describe and distinguish the Shape Memory alloy and describe the fabrication of components using SMAs
- **CO4.** Describe 3D printing process and Prepare CAD Data and Print 3 Dimensional components
- **CO5.** Decide suitable Additive Manufacturing Process for 3D printing of materials

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Mapping of Course Outcomes (COs) to Program Outcomes (POs) & Program Specific Outcomes (PSOs)

		POs												PSOs		
		1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
COs	CO1	2												2		
	CO2	2												2		
	CO3	2	2										2	2		
	CO4	2	2											2		
	CO5	2	2										2	2		

GREEN BUILDINGS

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	50	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	03
Course Type	:	Theory	Course Code	:	**ETC02**

Course Objectives: This course will enable students to:

- Understand the Definition, Concept & Objectives of the terms cost effective construction and green building.
- Apply cost effective techniques in construction.
- Apply cost effective Technologies and Methods in Construction.
- Understand the Problems due to Global Warming.
- State the Concept of Green Building.
- Understand Green Buildings..

Unit I

Introduction to the concept of cost effective construction - Uses of different types of materials and their availability -Stone and Laterite blocks- Burned Bricks- Concrete Blocks- Stabilized Mud Blocks- Lime Pozzolana Cement- Gypsum Board-Light Weight Beams- Fiber Reinforced Cement Components- Fiber Reinforced Polymer Composite- Bamboo- Availability of different materials- Recycling of building materials – Brick- Concrete- Steel- Plastics - Environmental issues related to quarrying of building materials. **08 Hrs.**

Unit II

Environment friendly and cost effective Building Technologies - Different substitute for wall construction Flemish Bond - Rat Trap Bond – Arches – Panels - Cavity Wall - Ferro Cement and Ferro Concrete constructions – different pre cast members using these materials - Wall and Roof Panels – Beams – columns - Door and Window frames - Water tanks - Septic Tanks - Alternate roofing systems - Filler Slab - Composite Beam and Panel Roof -Pre-engineered and ready to use building elements - wood products - steel and plastic - Contributions of agencies - COSTFORD - Nirmithi Kendra – Habitat. **08 Hrs.**

Unit III

Global Warming - Definition - Causes and Effects - Contribution of Buildings towards Global Warming - Carbon Footprint – Symbolic problem to calculate carbon footprints for automobiles, Global Efforts to reduce carbon Emissions, Green Buildings– Definition - Features- Necessity – Environmental benefit - Economical benefits - Health and Social benefits - Major Energy efficient areas for buildings – Embodied Energy in Materials Green Materials - Comparison of Initial cost of Green V/s Conventional Building - Life cycle cost of Buildings.

08 Hrs.

Unit IV

Green Building rating Systems - BREEAM – LEED - GREEN STAR -GRIHA (Green Rating for Integrated Habitat Assessment) for new buildings – Purpose – Key highlights - Point System with Differential weight age. Green Design – Definition - Principles of sustainable development in Building Design - Characteristics of Sustainable Buildings – Sustainably managed Materials - Integrated Lifecycle design of Materials and Structures (Concepts only)

08 Hrs.

Unit V

Utility of Solar Energy in Buildings - Utility of Solar energy in buildings concepts of Solar Passive Cooling and Heating of Buildings. Low Energy Cooling. Symbolic problem to calculate solar energy from solar panels. Case studies of Solar Passive Cooled and Heated Buildings.

Green Composites for Buildings - Concepts of Green Composites. Water Utilisation in Buildings, Low Energy Approaches to Water Management. Management of Solid Wastes. Management of Sullage Water and Sewage. Urban Environment and Green Buildings. Green Cover and Built Environment.

08 Hrs.

TEXT BOOKS:

1.	Harhara Iyer G	Green Building Fundamentals, Notion Press
2.	Dr. Adv. Harshul Savla	Green Building: Principles & Practices

Course outcomes: After the completion of this course, students will be able to:

CO1: Select different building materials for construction.
CO2: Apply effective environmental friendly building technology.
CO3: Analyze global warming due to different materials in construction.
CO4: Analyse buildings for green rating.
CO5: Use alternate source of energy and effective use of water.

OPERATION AND MAINTENANCE OF SOLAR ELECTRIC SYSTEMS

Contact Hours/Week	:	3(L) + 0(T) + 0(P)	Credits	:	3.0
Total Lecture Hours	:	40	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	00
Course Type	:	Theory	Course Code	:	**ETC03**

Course Objectives: This course will enable students to:

1. To discuss basics of solar resource data, its acquisition and usage.
2. To discuss PV technology, characteristics and interconnections of modules.
3. To discuss batteries, converters and inverters, system components for standalone SPV system and designing of standalone SPV system.
4. To explain the functioning of grid connected system and different applications of SPV systems.
5. To explain maintenance of PV systems.

Unit I

Fundamentals of solar energy: Energy Scenarios, Physics of propagation of solar radiation from the sun to the earth, solar radiation and sunshine measuring instruments, Geometry, angles and measurement. Estimation of radiation under different climatic conditions, Estimation of radiation in horizontal and inclined surface. **08 Hrs**

Fundamentals of Solar PV cell: A historical perspective of PV cells, Semiconductor physics, Model of PV cell, Performance characterization of PV cells, Datasheet study, Effect of temperature and irradiance, Photovoltaic modules and arrays. **08 Hrs**

Unit III

Fundamentals of Solar PV system: Overview of solar energy conversion devices and applications, Basics of Batteries, Applications of Batteries in Solar PV Systems, Charge Controller, MPPT and Inverters Components of and functioning of standalone PV system, Design of standalone PV system. **08 Hrs**

Unit IV

Applications of SPV systems: Functioning and components of grid connected PV system, PV and Water Pumping, Solar energy applications in cooking, desalination, and refrigeration and electricity generation **08Hrs**

Unit V

Maintenance of Solar PV system: System maintenance, PV array maintenance, Inverter maintenance, System integrity, Troubleshooting, Identifying the problem, Troubleshooting PV arrays, troubleshooting underperforming systems, Troubleshooting inverters, other common problems. **08 Hrs**

TEXT BOOKS:

1.	Solanki C. S	**"Solar Photovoltaics - Fundamentals, Technologies and Applications"**, Prentice Hall India Learning Private Limited; 3rd edition, ASIN: 8120351118
2.	Solanki C. S	**"Solar Photovoltaic Technology and Systems: A Manual for Technicians, Trainers and Engineers"**, Prentice Hall India Learning Private Limited, ISBN-13: 978-8120347113

REFERENCE BOOKS:

1.	J. N. Roy D. N. Bose	**"Photovoltaic Science and Technology"**, Cambridge University Press; 1st edition, ISBN-13: 978-1108415248
2.	Arno Smets, Klaus Jäger, Olindo Isabella, René van Swaaij, Miro Zeman	**"Solar Energy: The Physics and Engineering of Photovoltaic Conversion, Technologies and Systems"** UIT Cambridge LTD, ISBN-13 : 978-1906860325

Course outcomes: After the completion of this course, students will be able to:

CO1. Explain the basics of solar resource data, its acquisition and usage.
CO2. Explain PV technology, characteristics and connecting the modules to form arrays.
CO3. Explain the applications of batteries, inverters, other system components, used to design and connect the components of standalone PV system
CO4. Explain the operation of grid connected system and different applications of SPV systems.
CO5. Explain the operation and maintenance of SPV systems

INTRODUCTION TO EMBEDDED SYSTEM

Contact Hours/Week	:	3(L) + 0(T) + 0(P)	Credits	:	3.0
Total Lecture Hours	:	40	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	03
Course Type	:	Theory	Course Code	:	**ETC04**

Course Objectives: This course will enable students to:

- Acquire the Knowledge and understanding of fundamentals of embedded systems.
- Describe the differences between the general computing system and the embedded system, also recognize the classification of embedded systems.
- Develop familiarity with tools used to develop in an embedded environment.
- Understand the role of embedded systems in industry.
- Learn the method of designing and program an Embedded Systems for real time applications.

Unit I

Introduction: Embedded Systems and general-purpose computer systems, history, classifications, applications and purpose of embedded systems. Core of Embedded Systems: Microprocessors and microcontrollers, RISC and CISC controllers, Big endian and Little-endian processors, Application specific ICs, Programmable logic devices, COTS, sensors and actuators, communication interface, embedded firmware, other system components, PCB and passive components. **8 Hrs**

Unit II

Characteristics and quality attributes of embedded systems: Characteristics, Operational and non- operational quality attributes, application specific embedded system - washing machine, domain specific - automotive. **8 Hrs**

Unit III

Embedded hardware: Memory map, i/o map, interrupt map, processor family, external peripherals, memory - RAM, ROM, types of RAM and ROM, memory testing, CRC, Flash memory. **8 Hrs**

Unit IV

Peripherals: Control and Status Registers, Device Driver, Timer Driver-Watchdog Timers, Embedded Operating System, Real-Time Characteristics, Selection Process. **8 Hrs**

Unit V

Design and Development: Embedded System development environment - IDE, Types of files generated on cross compilation, disassembler /decompiler, simulator, emulator and debugging, embedded product development life-cycle, trends in embedded industry. **8 Hrs**

TEXT BOOKS:

1.	Shibu K V	"Introduction to embedded systems", Tata McGraw Hill Education Private Limited (1 January 2009), ISBN-10: 0070678790

REFERENCE BOOKS:

1.	Rajkamal	"Embedded Systems", Tata McGraw Hill Education (1 January 2003), ISBN-10: 0070494703

Course outcomes: After the completion of this course, students will be able to:

CO1. Able to acquire knowledge and understand fundamental embedded systems design.

CO2. Able to analyze a system both as whole and in the included parts, to understand how these parts interact in the functionality and properties of the system

CO3. Integrating embedded subsystems and applications in building a fully functional autonomous robot.

CO4. Apply formal method, testing, verification for Embedded system.

CO5. Develop simple embedded systems for real time operations.

INTRODUCTION TO NANOTECHNOLOGY

Contact Hours/Week	:	3(L) + 0(T) + 0(P)	Credits	:	3.0
Total Lecture Hours	:	40	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	3
Course Type	:	Theory	Course Code	:	**ETC05**

Course Objectives: This course will enable students to:

- To provide a comprehensive overview of synthesis and characterization of nanoparticles, nanocomposites and hierarchical materials with nanoscale features.
- To provide the engineering students with necessary background for understanding various nanomaterials characterization techniques.
- To develop an understanding of the basis of the choice of material for device applications.
- To give an insight into complete systems where nanotechnology can be used to improve our everyday life.

Unit I

Introduction to Nanomaterials : Nanotechnology, Frontier of future-an overview, Length Scales, Variation of physical properties from bulk to thin films to nanomaterials, Confinement of electron in 0D, 1D, 2D and 3D systems, Surface to Volume Ratio, Synthesis of Nanomaterials: Bottom-Up approach: Chemical Routes for Synthesis of Nanomaterials-Sol-gel, Precipitation, Solution Combustion synthesis, Hydrothermal, SILAR, Chemical Bath Deposition. Top-Down approach- Ball milling technique, Sputtering, Laser Ablation. **7 Hrs**

Unit II

Characterization of Nanomaterials : Topic / contents Basic principles and instrumentations of Electron Microscopy –Transmission Electron Microscope, Scanning Electron Microscope, Scanning Probes- Scanning Tunnelling microscope, Atomic Force Microscope –different imaging modes, comparison of SEM and TEM, AFM and STM, AFM and SEM.

Basic principles of working of X-ray diffraction, derivation of Debye-Scherrer equation, numericals on Debye Scherrer equation, Optical Spectroscopy-Instrumentation and application of IR, UV/VIS (Band gap measurement). **9 Hrs**

Unit III

Carbon Based Materials : Topic / contents . Introduction, Synthesis, Properties (electrical, Electronic and Mechanical), and Applications of Graphene, SWCNT, MWCNT, Fullerenes and other Carbon Materials: Carbon nanocomposites, nanofibres, nanodiscs, nanodiamonds. **8 Hrs**

Unit IV

Nanotechnology in Energy storage and conversion: Solar cells: First generation, second generation and third generation solar cells: Construction and

working of Dye sensitized and Quantum dot sensitized solar cells. **Batteries:** Nanotechnology in Lithium ion battery- working, Requirements of anodic and cathodic materials, classification based on ion storage mechanisms, limitations of graphite anodes, Advances in Cathodic materials, Anodic materials, Separators **Fuel Cells**: Introduction, construction, working of fuel cells and nanotechnology in hydrogen storage and proton exchange membranes

Self-study for lifelong learning: Super capacitors: Introduction, construction and working of super capacitor **9 Hrs**

Unit V

Applications of Nanotechnology: Nanotech Applications and Recent Breakthroughs: Introduction, Significant Impact of Nanotechnology and Nanomaterial, Medicine and Healthcare Applications, Biological and Biochemical Applications (Nano biotechnology), Electronic Applications (Nano electronics), Computing Applications (Nano computers), Chemical Applications (Nano chemistry), Optical Applications (Nano photonics), Agriculture and Food Applications, Recent Major Breakthroughs in Nanotechnology.

Self study for lifelong learning: Nano coatings (Photocatalysts) and super hydrophobic coatings (Lotus effect) **7 Hrs**

TEXT BOOKS:

1.	A.K. Bandyopadhyay	Nano Materials – New Age Publishers
2.	C.N.R. Rao, P. John Thomas and G. U. Kulkarni	Nanocrystals: Synthesis, Properties and Applications – Springer Series in Materials Science
3.	T. Pradeep	Nano Essentials- TMH
4.	Peter J. F. Harris	Carbon nanotube science: synthesis, properties, and applications. Cambridge University Press, 2011
5.	M.A. Shah, K.A. Shah	"Nanotechnology: The Science of Small", Wiley India.

REFERENCE BOOKS:

1.	C. P. Poole and F. J. Owens	Introduction to Nanotechnology, Wiley, 2003
2.	Scientific American	Understanding Nanotechnology, 2002
3.	M. Ratner and D. Ratner	Nanotechnology, Prentice Hall 2003.
4.	M. Wildon, K. Kannagara, G.	Nanotechnology, CRC Press, Boca Raton 2002

	Smith, M. Simmons and B. Raguse	
5.		Recent reviews on Li-ion batteries, solar cells and fuel cells

Course outcomes: After the completion of this course, students will be able to:

CO1. Demonstrate the synthesis of nanoparticles by various techniques and classify the nanomaterials based on the dimensions

CO2. Identify the basic instruments required for the characterization of given nanoparticles or nano material.

CO3. Select appropriate Carbon based material based on Electrical, Electronic and Mechanical properties.

CO4. Discuss the application of nanotechnology to mechanical domains such as Solar Cells, batteries, fuel cells and so on.

CO5. Assess the suitability of nanomaterials for various device applications in various fields.

COURSE ARTICULATION MATRIX:

Introduction to Sustainable Engineering

Contact Hours/Week	:	3(L) + 0(T) + 0(P)	Credits	:	3.0
Total Lecture Hours	:	40	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	03
Course Type	:	Theory	Course Code	:	**ETC07**

Course Objectives: This course will enable students to:

- To familiarize the students to the area of sustainability and concepts of sustainability engineering
- To enable students with an understanding of principles and frame work of sustainable engineering
- To provide students with an understanding of Life Cycle Assessment tool in sustainable engineering
- To provide students with understanding of integration of sustainability with design.

Unit I

Sustainable Development and Role of Engineers: Introduction, Why and What is Sustainable Development, THE SDFs, Paris Agreement and Role of Engineering, Sustainable Development and the Engineering Profession, Key attributes of the Graduate Engineering.

Sustainable Engineering Concepts: Key concepts – Factor 4 and Factor 10: Goals of sustainability, System Thinking, Life Cycle Thinking and Circular Economy.

08 Hrs

Unit II

Sustainable Engineering and Concepts, Principles and Frame Work: Green Economy and Low Carbon Economy, Eco Efficiency, Triple bottom Line, Guiding principles of sustainable engineering, Frameworks for sustainable Engineering.

Tools for sustainability Assessment: Environmental Management System, Environmental Auditing, Cleaner Production Assessment, Environmental Impact Assessment, Strategic Environmental. **08 Hrs**

Unit III

Fundamentals of Life Cycle Assessment : Why and What is LCA, LCA Goal and Scope, Life cycle inventory, Life Cycle Impact Assessment, Interpretation and presentation of Results, Iterative Nature of LCA, Methodological Choices, LCI Databases and LCA Software's, Strength and Limitations of LCA. **08 Hrs**

Unit IV

Environmental Life Cycle Costing, Social Life Cycle Assessment, and Life Cycle Sustainability Assessment: Introduction, Environmental Life Cycle Costing, Social Life Cycle Assessment, Life Cycle Sustainability, LCA Applications in Engineering: Environmental Product Declarations and Product Category Rules, Carbon and Water Foot Printing, Energy systems, Buildings and the Built Environment**,** Chemical and Chemical Production Food and Agriculture.

Introduction to Environmental Economics: Introduction – What Is Environmental Economics, Valuing the Environment, Market-based Incentives (or Economic Instruments) for Sustainability, Command-and-Control versus Economic Instruments, A Simple Model of Pollution Control. **08 Hrs**

Unit V

Integrating Sustainability in Engineering Design: Problems Solving in Engineering, conventional to Sustainable Engineering Design Process, Design for Life Guidelines and Strategies, Measuring Sustainability, Sustainable Design through sustainable procurement criteria, Case studies on sustainable Engineering Design Process– Sustainable Process Design, Sustainable Production Design Sustainable Product design in Electronic Engineering. **08 Hrs**

TEXT BOOKS:

	Author/s	Title, Publisher, Edition, Year, ISBN
1.	Toolseeram Ramjeawon	Introduction to Sustainability for Engineers, CRC Press, 1st Edition, 2020.
2.	David Allen, David R. Shonnard	Sustainability Engineering: Concepts, Design and Case studies, Prentice Hall, 1st Edition, 2015.

REFERENCE BOOKS:

	Author/s	Title, Publisher, Edition, Year, ISBN
1.	Ni Bin Chang	System Analysis for sustainable Engineering: Theory and applications, Ni bin Chang, McGraw Hill Publications, 1st Edition, 2010.
2.	Rag. R.L. and Ramesh Lakshmi Dinachandran	Introduction to Sustainable Engineering, PHI Learning Pvt. Ltd., 2nd Edition, 2016.

Course outcomes: After the completion of this course, students will be able to:

CO1. Elucidate the basics of sustainable development, sustainable engineering and its role in engineering.

CO2. Application of Sustainable Engineering Concepts and Principles in Engineering.

CO3. Understanding the fundamentals of Life Cycle assessment.

CO4. Understanding the fundamentals of Life Cycle cost and environmental Economics.

CO5. Applying the sustainable engineering design process to engineering systems.

RENEWABLE ENERGY SOURCES

Contact Hours/Week	:	3(L) + 0(T) + 0(P)	Credits	:	3.0
Total Lecture Hours	:	40	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	03
Course Type	:	Theory	Course Code	:	**ETC08**

Course Objectives: This course will enable students to:

- To understand energy scenario, energy sources and their utilization
- To explore society's present needs and future energy demands
- To Study the principles of renewable energy conversion systems
- To exposed to energy conservation methods

Unit I

Introduction :

Principles of renewable energy; energy and sustainable development, fundamentals and social implications. worldwide renewable energy availability, renewable energy availability in India, brief descriptions on solar energy, wind energy, tidal energy, wave energy, ocean thermal energy, biomass energy, geothermal energy, oil shale. Introduction to Internet of energy (IOE).

08 Hrs

Unit II

Solar Energy:

Fundamentals; Solar Radiation; Estimation of solar radiation on horizontal and inclined surfaces; Solar radiation Measurements- Pyrheliometers, Pyrometer, Sunshine Recorder. Solar Thermal systems: Flat plate collector; Solar distillation; Solar pond electric power plant.

Solar electric power generation- Principle of Solar cell, Photovoltaic system for electric power generation, advantages, Disadvantages and applications of solar photovoltaic system **08 Hrs**

Unit III

Wind Energy:

Properties of wind, availability of wind energy in India, wind velocity and power from wind; major problems associated with wind power, Basic components of wind energy conversion system (WECS); Classification of WECS- Horizontal axis- single, double and muliblade system. Vertical axis- Savonius and darrieus types.

Biomass Energy: Introduction; Photosynthesis Process; Biofuels; Biomass Resources; Biomass conversion technologies -fixed dome; Urban waste to energy conversion; Biomass gasification (Downdraft) **08 Hrs**

Unit IV

Tidal Power:

Tides and waves as energy suppliers and their mechanics; fundamental characteristics of tidal power, harnessing tidal energy, advantages and limitations.

Ocean Thermal Energy Conversion: Principle of working, OTEC power stations in the world, problems associated with OTEC. **08 Hrs**

Unit V

Green Energy:

Introduction, Fuel cells: Classification of fuel cells – H2; Operating principles, Zero energy Concepts. Benefits of hydrogen energy, hydrogen production technologies (electrolysis method only), hydrogen energy storage,

applications of hydrogen energy, problem associated with hydrogen energy. **08 Hrs**

TEXT BOOKS:

1.	G D Rai	Nonconventional Energy sources, Khanna Publication, Fourth Edition
2.	S.Rao and Dr. B.B. Parulekar	Energy Technology, Khanna Publication.Solar energy, Subhas P Sukhatme, Tata McGraw Hill, 2nd Edition,1996.

REFERENCE BOOKS:

Activity Based Learning (Suggested Activities in Class)/ Practical Based learning

- Poster presentation on the theme of renewable energy sources
- Industry Visit

Course outcomes: After the completion of this course, students will be able to:

.

CO1. Describe the environmental aspects of renewable energy resources. In Comparison with various conventional energy systems, their prospects and limitations.

CO2. Describe the use of solar energy and the various components used in the energy production with respect to applications like-heating, cooling, desalination, power generation

CO3. Understand the conversion principles of wind and tidal energy

CO4. Understand the concept of biomass energy resources and green energy

CO5. Acquire the basic knowledge of ocean thermal energy conversion and hydrogen energy.

COs and POs Mapping (Individual teacher has to fill up)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1						1

CO4	1					1	1					
CO5	1					1	1					

Level 3- Highly Mapped, Level 2-Moderately Mapped, Level 1-Low Mapped, Level 0- Not Mapped

INTRODUCTION TO INTERNET OF THINGS (IOT)

Contact Hours/Week	:	3(L) + 0(T) + 0(P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	3
Course Type	:	Theory	Course Code	:	**ETC11**

Course Objectives: This course will enable students to:

- Understand about the fundamentals of Internet of Things and its building blocks along with their characteristics.
- Understand the recent application domains of IoT in everyday life.
- Gain insights about the current trends of associated IoT technologies and IoT analytics.

Unit I

Basics of Networking: Introduction, Network Types, Layered network models
Emergence of IoT: Introduction, Evolution of IoT, Enabling IoT and the Complex Interdependence of Technologies, IoT Networking Components **8 Hrs**

Textbook 1: Chapter 1- 1.1 to 1.3 Chapter 4 – 4.1 to 4.4

Unit II

IoT Sensing and Actuation: Introduction, Sensors, Sensor Characteristics, Sensorial Deviations, Sensing Types, Sensing Considerations, Actuators, Actuator Types, Actuator Characteristics. **8 Hrs**
Textbook 1: Chapter 5 – 5.1 to 5.9.

Unit III

IoT Processing Topologies and Types: Data Format, Importance of Processing in IoT, Processing Topologies, IoT Device Design and Selection Considerations, Processing Offloading. **8 Hrs**
Textbook 1: Chapter 6 – 6.1 to 6.5.

Unit IV

Associated IoT Technologies
Cloud Computing: Introduction, Virtualization, Cloud Models, Service-Level Agreement in Cloud Computing, Cloud Implementation, Sensor-Cloud: Sensors-as-a-Service.
IoT Case Studies
Agricultural IoT – Introduction and Case Studies **8 Hrs**
Textbook 1: Chapter 10– 10.1 to 10.6; Chapter 12- 12.1-12.2

Unit V

IoT Case Studies and Future Trends

Vehicular IoT – Introduction
Healthcare IoT – Introduction
IoT Analytics – Introduction

7 Hrs

Textbook 1: Chapter 13– 13.1; Chapter 14- 14.1-14.2; Chapter 17- 17.1

TEXT BOOKS:

1	Sudip Misra, Anandarup Mukherjee, Arijit Roy	Introduction to IoT, Cambridge University Press 2021.
2	S. Misra, C. Roy, and A. Mukherjee	Introduction to Industrial Internet of Things and Industry 4.0. CRC Press, 2020
3	Vijay Madisetti and Arshdeep Bahga	Internet of Things (A Hands-on-Approach), VPT, 1st Edition, 2014.
4	Francis daCosta	Rethinking the Internet of Things: A Scalable Approach to Connecting Everything", Apress Publications, 1st Edition, 2013.

Course Outcomes: After the completion of this course, students will be able to:

- **CO1.** Describe the evolution of IoT, IoT networking components, and addressing strategies in IoT.
- **CO2.** Classify various sensing devices and actuator types.
- **CO3.** Demonstrate the processing in IoT.
- **CO4.** Explain Associated IoT Technologies
- **CO5.** Illustrate architecture of IoT Applications

Introduction to Cyber Security

Contact Hours/ Week	:	3L+0T	Credits	:	3.0
Total Lecture Hours	:	40	CIE Marks	:	50
Total Tutorial Hours	:	00			
Sub. Code	:	**ETC12**	SEE Marks	:	50

Course objectives:

This course will enable students to:

1.	To familiarize cybercrime terminologies and perspectives
2.	To understand Cyber Offenses and Botnets
3.	To gain knowledge on tools and methods used in cybercrimes
4.	To understand phishing and computer forensics

UNIT I

Introduction to Cybercrime:

Cybercrime: Definition and Origins of the Word, Cybercrime and Information Security, Who are Cybercriminals? Classifications of Cybercrimes, An Indian Perspective, Hacking and Indian Laws., Global Perspectives

Textbook:1 Chapter 1 (1.1 to 1.5, 1.7-1.9)

8 Hours

UNIT II

Cyber Offenses:

How Criminals Plan Them: Introduction, How criminals plan the attacks, Social Engineering, Cyber Stalking, Cybercaafe & cybercrimes.

Botnets: The fuel for cybercrime, Attack Vector. Textbook:1 Chapter 2 (2.1 to 2.7)

8 Hours

UNIT III

Tools and Methods used in Cybercrime:

Introduction, Proxy Servers, Anonymizers, Phishing, Password Cracking, Key Loggers and Spyways, Virus and Worms, Trozen Horses and Backdoors, Steganography, DoS and DDOS Attackes, Attacks on Wireless networks.

Textbook:1 Chapter 4 (4.1 to 4.9, 4.12)

8 Hours

UNIT IV

Phishing and Identity Theft: Introduction, methods of phishing, phishing,phising techniques, spear phishing, types of phishing scams, phishing toolkits and spy phishing, counter measures, Identity Theft

Textbook:1 Chapter 5 (5.1. to 5.3)

8 Hours

UNIT V
Understnading Computer Forensics: Introdcution, Historical Background of Cyberforensics, Digital Foresics Science, Need for Computer Foresics, Cyber Forensics and Digital Evidence, Digital Forensic Life cycle, Chain of Custody Concepts, network forensics. Textbook:1 Chapter 7 (7.1. to 7.5, 7.7 to 7.9)
8 Hours

TEXT BOOK:	
1	Sunit Belapure and Nina Godbole, "Cyber Security: Understanding Cyber Crimes, Computer Forensics And Legal Perspectives", Wiley India Pvt Ltd, ISBN: 978-81-265-21791, 2011, First Edition (Reprinted 2018)

Web links and Video Lectures (e-Resources):	
1	• https://www.youtube.com/watch?v=yC_hFm0BX28&list=PLxApjaSnQGi6Jm7LLSxvmNQjS_rt9swsu • https://www.youtube.com/watch?v=nzZkKoREEGo&list=PL9ooVrP1hQOGPQVeapGsJCktzIO4DtI4_ • https://www.youtube.com/watch?v=6wi5DI6du-4&list=PL_uaeekrhGzJlB8XQBxU3zhDwT95xlk

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Explain the cybercrime terminologies
CO2: Describe Cyber offenses and Botnets
CO3: Illustrate Tools and Methods used on Cybercrime.
CO4: Explain Phishing and Identity Theft
CO5: Justify the need of Computer Forensics.

INNOVATION & DESIGN THINKING

Contact Hours/Week	:	1(L) + 0(T) + 0(P)	Credits	:	1.0
Total Lecture Hours	:	15	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Total Practical Hours	:	00	Exam Hours	:	1:30
Course Type	:	Theory	Course Code	:	**IDT**

Course Category: Foundation

Preamble: This course provides an introduction to the basic concepts and techniques of engineering and reverses engineering, the process of design, analytical thinking and ideas, basics and development of engineering drawing, application of engineering drawing with computer aide.

Course objectives:

- To explain the concept of design thinking for product and service development
- To explain the fundamental concept of innovation and design thinking
- To discuss the methods of implementing design thinking in the real world.

Teaching-Learning Process (General Instructions)

- These are sample Strategies; which teachers can use to accelerate the attainment of the various course outcomes.
- Lecturer method (L) does not mean only the traditional lecture method, but a different type of teaching method may be adopted to develop the outcomes.
- Show Video/animation films to explain concepts
- Encourage collaborative (Group Learning) Learning in the class
- Ask at least three HOTS (Higher-order Thinking) questions in the class, which promotes critical thinking
- Adopt Problem Based Learning (PBL), which fosters students' Analytical skills, develops thinking skills such as the ability to evaluate, generalize, and analyze information rather than simply recall it.
- Topics will be introduced in multiple representations.
- Show the different ways to solve the same problem and encourage the students to come up with their own creative ways to solve them.
- Discuss how every concept can be applied to the real world - and when that's possible, it helps improve the students' understanding.

Unit I

PROCESS OF DESIGN :

Understanding Design thinking

Meaning of Design Thinking, Definition of Design Thinking, Origins of Design Thinking, Design Thinker in the organizations, Features of Design Thinking, Principles of Design Thinking, Stages of Design Thinking, Benefits of Design Thinking, Theories and Practices of Design Thinking, Practices of Design Thinking, Team based Design Thinking. **03Hrs**

Teaching- Learning Process Introduction about the design thinking: Chalk and Talk method Theory and practice through presentation MVP and Prototyping through live examples and videos, **CASE STUDY: Embrace Infant Warmer**

Unit II

Tools for Design Thinking

Visualization, Journey mapping, Value chain analysis, The mind map, Rapid Concept development, Assumption testing, Prototype, Co- creation, Learning Launches, Story telling 0**3Hrs**

Teaching- Learning Process - Explanation through live examples and videos

CASE STUDY: GE Health care-Adventure Series

Unit III

Design thinking for Business Process Modeling

Business process Modelling (BPM), Advantage of Business Process Modelling, Design Thinking in Business Process Modelling, Agile in Virtual Collaboration, Scenario Based Prototyping **03Hrs**

Teaching- Learning Process - Explanation through live examples and videos, **CASE STUDY:** Bank of America-Keep the Change

Unit IV

Design Thinking For strategic innovations

Strategic Management, Innovation Management, types of innovation , Strategic Innovation, Features of Strategic Innovation, Scope of Strategic Innovation, Design Thinking and Strategic Innovation, Practices of Integrating Design Thinking in Strategic Innovation **03Hrs**

Teaching- Learning Process - Explanation through live examples and videos

CASE STUDY: American Express

Unit V

Design thinking workshop

Design Thinking Work shop Empathize, Design, Ideate, Prototype and Test **03Hrs**

Teaching- Learning Process - Workshop on Design Thinking from the expert

Presentation by the students on the success of design Live project on design thinking in a group of 4 students

Activity Based Learning (Suggested Activities in Class)/ Practical Based learning

- http://dschool.stanford.edu/dgift/
- https://onlinecourses.nptel.ac.in/noc19_mg60/preview

Course outcomes: After the completion of this course, students will be able to:

CO1. Appreciate various design process procedure

CO2. Generate and develop design ideas through different technique

CO3. Identify the significance of reverse Engineering to Understand products

CO4. Build Business model for design ideas asfda

Mapping of Course Outcomes (COs) to Program Outcomes (POs) & Program Specific Outcomes (PSOs)

		POs												PSOs

	CO4	3								3	3					

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

Evaluation Pattern under 160 credit - 2022 Scheme

CIE methods / Question Paper in both CIE and SEE are to be designed at different levels of Bloom's Taxonomy to attain defined Course Outcomes.

1. Four credit Integrated Course:

Course structure – 5 Units; 2(L)+2(T)+2(P)+0(S)

(Courses under this category: Mathematics, Physics, Chemistry)

(a) For theory component:

Three Tests of 50 marks each for 90 minutes duration

Activity Based Learning (ABL) - Quizzes / Seminar / Group Discussion / Micro project / Case study - any or combination of these.

Course coordinator / Course Instructor shall suitably plan these activities for the attainment of COs and POs covering complex Engineering problems and announce to the students at the beginning of the semester and clearly indicate in Lecture Plan.

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Average /Weight*	*Marks after scaled down*
Test-1	5th Week	90	50 marks	50 marks	20 marks
Test-2	10th Week	90	50 marks		
Test-3	15th Week	90	50 marks		
Assignment	Between 2nd & 3rd Test	-	50 marks	5 marks	10 marks
ABL	13th -14th week	-	15 marks	5 marks	
CIE					**30 marks**

Question Paper Pattern

CIE : *CIE pattern is 3 questions with a maximum of 4 subdivisions and all questions are compulsory. However, in SEE, the questions from the laboratory component shall be included.*

SEE: *Ten questions from five units, each unit having 2 questions with internal choice. However, in SEE, the questions from the laboratory component shall be included.*

(b) For laboratory component:

CIE marks for the practical course is computed by adding the average of the marks secured by the student for conducting each of the experiments with the marks secured in the test conducted at the end of the semester.

Table: Break-up of CIE marks for practical component in Integrated Courses

Description	***Conducted for***	***Average /Weight***	***Marks after scaled down***
Regular Lab Work and Writing lab records	20 marks 15 marks	35 marks	15 marks
Lab test and Viva-voce at the end of the semester	10 marks 05 marks	15 marks	5 marks
CIE			**20 marks**

SEE is conducted for Theory component for 100 marks and will be reduced to 50 marks and No SEE for Laboratory component.

Summary of evaluation pattern for 4 credit Integrated course

Description		*Conducted for*	*Reduced to*	*Minimum for Eligibility*
CIE	Theory	50 marks	30 marks	12 marks
	Practical	50 marks	20 marks	08 marks
SEE	Theory	100 marks	50 marks	18 marks
Total (CIE+SEE)			**100 marks**	**40** marks

If a student fails to secure 40% of maximum marks in Theory and Practical component of CIE, student has to repeat the entire course.

2. Three credit theory course:

Course structure – 5 Units; 3(L)+0(T)+0(P)+0(S)

OR

Course structure – 5 Units; 2(L)+2(T)+0(P)+0(S)

(Courses under this category: Engineering Science Courses, Emerging Technology Courses)

Three Tests of 50 marks each for 90 minutes duration

Activity Based Learning (ABL) - Quizzes / Seminar / Group Discussion / Micro project / Case study - any or combination of these.

Course coordinator / Course Instructor shall suitably plan these activities for the attainment of COs and POs covering complex Engineering problems and announce to the students at the beginning of the semester and clearly indicate in Lecture Plan.

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Average /Weight*	*Marks after scaled down*
Test-1	5th Week	90	50 marks	50 marks	40 marks
Test-2	10th Week	90	50 marks		
Test-3	15th Week	90	50 marks		
Assignment	Between 2nd & 3rd Test	-	50 marks	5 marks	10 marks
ABL	13th -14th week	-	15 marks	5 marks	
CIE					**50 marks**

Question Paper Pattern

CIE : *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Ten questions from five units, each unit having 2 questions with internal choice.*

3. Three credit Integrated Course:

Course structure – 5 Units; 2(L)+0(T)+2(P)+0(S)

[Courses under this category: Engineering Science Courses (ESC), Programming Language Courses (PLC)]

(a) For theory component:

Three Tests of 50 marks each for 90 minutes duration

Activity Based Learning (ABL) - Quizzes / Seminar / Group Discussion / Micro project / Case study - any or combination of these.

Course coordinator / Course Instructor shall suitably plan these activities for the attainment of COs and POs covering complex Engineering problems and announce to the students at the beginning of the semester and clearly indicate in Lecture Plan.

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Average /Weight*	*Marks after scaled down*
Test-1	5th Week	90	50 marks	50 marks	20 marks
Test-2	10th Week	90	50 marks		
Test-3	15th Week	90	50 marks		
Assignment	Between 2nd & 3rd Test	-	50 marks	5 marks	10 marks
ABL	13th -14th week	-	15 marks	5 marks	
CIE					**30 marks**

Question Paper Pattern

CIE : *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Ten questions from five units, each unit having 2 questions with internal choice.*

(b) For laboratory component:

CIE marks for the practical course is computed by adding the average of the marks secured by the student for conducting each of the experiments with the marks secured in the test conducted at the end of the semester and also the marks secured for the open ended experiments at the end of the course, if any.

Table: Break-up of CIE marks for practical component

Description	***Conducted for***	***Average /Weight***	***Marks after scaled down***
Regular Lab Work and Writing lab records	20 marks 15 marks	35 marks	15 marks
Lab test and Viva-voce at the end of the semester	10 marks 05 marks	15 marks	5 marks
CIE			**20 marks**

SEE is conducted for Theory component for 100 marks and will be reduced to 50 marks and No SEE for Laboratory component.

Summary of evaluation pattern for 3 credit Integrated course

Description		*Conducted for*	*Reduced to*	*Minimum for Eligibility*
CIE	Theory	50 marks	30 marks	12 marks
	Practical	50 marks	20 marks	08 marks
SEE	Theory	100 marks	50 marks	18 marks
Total (CIE+SEE)			**100 marks**	**40** marks

If a student fails to secure 40% of maximum marks in Theory and Practical component of CIE, student has to repeat the entire course.

4. One credit Course:

Course structure – 5 Units; 1(L)+0(T)+0(P)+0(S)

(Courses under this category: Communicative English, Professional Writing Skills in English, Indian Constitution, Samskruthika Kannada, Balake Kannada, Scientific Foundations of Health, Innovation and Design Thinking)

Two Tests of 30 marks each for 60 minutes duration

Activity Based Learning (ABL) - Quizzes / Seminar / Group Discussion / Micro project / Case study - any or combination of these.

Course coordinator / Course Instructor shall suitably plan these activities for the attainment of COs and POs covering complex Engineering problems and announce to the students at the beginning of the semester and clearly indicate in Lecture Plan.

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Average /Weight*	*Marks after scaled down*
Test-1	10^{th} Week	60	25 marks	30 marks	30 marks
Test-2	15^{th} Week	60	25 marks		
Assignment	Between 2^{nd} & 3^{rd} Test	-	15 marks	10 marks	20 marks
ABL	13^{th} -14^{th} week	-	15 marks	10 marks	
CIE (Total)					**50 marks**
SEE		**90**	**50 marks**	**50 marks**	**50 marks**

Question Paper Pattern

CIE: *CIE pattern may be hybrid type with MCQs and descriptive questions.*

- *10 Marks MCQs*
- *3 descriptive questions of 5 marks each*
- *All the questions are compulsory*

SEE: *SEE pattern may also be hybrid type with MCQs and descriptive questions.*

- *20 Marks MCQs*
- *1 descriptive question of 10 marks from each of the units (total 3 questions)*

  or

  2 questions of 5 marks from each of the units (total 6 questions)
- *All the questions are compulsory*

Dean Academic **Principal**

INDUCTION PROGRAM (3 WEEKS)

Purpose of the *Induction Program* is to help new students to adjust and feel comfortable in the new environment, inculcate in them the ethos and culture of the institution, help them build bonds with other students and faculty members, and expose them to a sense of larger purpose and self-exploration.

The term *induction* is generally used to describe the whole process whereby the incumbents adjust to or acclimatize to their new roles and environment. In other words, it is a well planned event to educate the new entrants about the environment in a particular institution, and connect them with the people in it.

Induction Program engages with the new students as soon as they come into the institution; regular classes start only after that. At the start of the induction, the incumbents learn about the institutional policies, processes, practices, culture and values, and their mentor groups are formed. Then the different activities start, including those which are daily.

List of activities:

- Physical Activity
- Creative Arts and Culture
- Mentoring & Universal Human Values
- Familiarization with College, Dept./Branch
- Literary Activity
- Proficiency Modules
- Lectures & Workshops by Eminent People
- Visits in Local Area
- Extra-Curricular Activities in College
- Feedback and Report on the Program

The time during the Induction Program is also used to rectify some critical lacunas, for example, English background, for those students who have deficiency in it. These are included under Proficiency Modules.

There will be a 3-week long induction program for the UG students entering the institution, right at the start. Normal classes start only after the induction program is over. Its purpose is to make the students feel comfortable in their new environment, open them up, set a healthy daily routine, create bonding in the batch as well as between faculty and students, develop awareness, sensitivity and understanding of the self, people around them, society at large, and nature.

AICTE ACTIVITY POINTS
(300 hrs. for the entire programme)

Apart from technical knowledge and skills to be successful as professionals, students should have excellent soft skills, leadership qualities and team spirit. They should have entrepreneurial capabilities and societal commitment. In order to match these multifarious requirements, AICTE has created a unique mechanism of awarding Activity Points over and above the academic grades.

Following suggestive activities as Long Term Goals may be carried out by students in teams:

- Prepare and implement plan to create local job opportunities.
- Prepare and implement plan to improve education quality in village.
- Prepare an actionable DPR for doubling the village Income.
- Developing Sustainable Water Management System.
- Prepare and improve a plan to improve health parameters of villagers.
- Developing and implementing of Low-Cost Sanitation facilities.
- Prepare and implement plan to promote Local Tourism through Innovative Approaches.
- Implement/Develop Technology solutions which will improve quality of life.
- Prepare and implement solution for energy conservation.
- Prepare and implement plan to develop skills of village youth and provide employment.
- Develop localized techniques for reduction in construction Cost.
- Prepare and implement plan of sustainable growth of village.
- Setting of Information imparting club for women leading to contribution in social and economic issues.
- Developing and managing efficient garbage disposable system.
- Contribution to any national level initiative of Government of India. For example Digital India/ Skill India/ Swachh Bharat Internship etc.

A student has to earn 100 points (75 points for lateral entry students).

The activities can be spread over entire duration of the programme and it will be reflected in the student's 8^{th} semester Grade Card. It shall not be considered for computation of SGPA/CGPA and for vertical progression. The total duration of the activities for entire programme is 400 hours for regular students and 300 hours for lateral entry students.

AICTE Activity Points Implementation and Monitoring Committee has been constituted under the Chairmanship of Principal and NSS Coordinator as convener, and Dean Academic, Dean Student Welfare, Chief Warden, NCC Coordinator and Two Senior Professors as members. This Committee shall arrange for logistics and material support wherever necessary and review the progress at the end of each Semester.

Procedure:

1. Students can take-up listed activities individually or in a group.
2. Proctors shall monitor the progress of students' work.
3. They can work on daily basis/ weekends/ or in one shot, continuously for 300 hours to earn 100 points. The schedule is at the convenience of group of students.
4. For every **FOUR** hours of work students will get **ONE** Activity Point.
5. Students shall submit a report and photographs related to activities carried out to the proctor
6. Students shall maintain a "Activity Logbook"
7. Students shall register to "Activity Points" during VIII Semester
8. The work done by students will be reviewed by Department Seminar Evaluation Committee during VIII Semester.
9. Break-up of CIE marks for activity points:

Evaluation by the Proctor	20 marks
Evaluation by DSEC	
(i) Report	30 marks
(ii) Presentation	30 marks
(iii) Outcome	20 marks
Total	**100 marks**

10. No SEE for Activity Points.
11. Students will be awarded either NP or PP grade based on their performance.
12. Students will be awarded degree only on earning P grade in the Activity Points.

PROGRAM OUTCOMES

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research - based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

SCHEME & SYLLABUS

OF

III & IV SEMESTERS

B.E. CIVIL ENGINEERING

2022-23

Vision of the Department of Civil Engineering

To become a premier Civil Engineering Department offering excellent engineering education in design methods and advanced technologies to the students, to pursue research in thrust areas and to offer professional services to the society.

Mission of the Department of Civil Engineering

The Department is committed to develop competent professionals by offering need based curriculum in Civil Engineering areas, promoting research and innovation to prepare the students for higher study, life-long learning and societal responsibility. The department is also committed to provide good learning environment to develop professional ethics and skills in our students and to provide engineering services to the society.

Programme Educational Objectives of Civil Engineering

PEO#1	Graduates of the program will practice Engineering profession as competent professionals applying fundamentals, state-of-the-art knowledge, and technical skills. ***[Theme: Practice Engineering profession as competent professionals]***
PEO#2	Graduates of the program will excel in higher education with life-long learning. ***[Theme: Higher education and life-long learning]***
PEO#3	Graduates of the program will exhibit leadership qualities, communication skills and team spirit. ***[Theme: Communication and teamwork]***
PEO#4	Graduates of the program will contribute to societal needs with ethical attitude. ***[Theme: Initiated to Society and ethical practice]***

Programme Outcomes of Civil Engineering

The following list of program specific outcomes describe what graduates are expected to know and be able to do at the time of graduation. Graduates will have:

PSO#1	An ability to conduct standardized field testing on civil engineering materials, interpret experimental data and provide conclusions. Demonstrate the construction of masonry, reinforcement fabrication for beams columns, slabs, etc., electrical wiring, assembling of water supply and sanitary layouts, application of painting and welding of joints. *[Short title: CE Field experiments and demonstration]*.
PSO#2	An ability to estimate material quantities, cost estimates, prepare specifications, produce engineering drawings by conducting appropriate survey works and 3D modeling of systems/components using modern tools for technical projects *[Short title: CE technical reports and 3D modeling]*.
PSO#3	Able to perform analysis and design in at least three to four of the technical areas appropriate to Civil Engineering. *[Short title: CE Technical areas]*.

PROGRAM OUTCOMES (POs)

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and teamwork:** Function effectively as an individual; and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning:** Recognize the need, have the preparation and ability to engage in independent life-long learning in the broadest context of technological change..

		NHS03	**Constitution of India and Professional Ethics**										
8.	AEC	AECXX3x	**Respective Department to decide on the course**		If offered as Theory Course				3	50	50	100	2
					2	0	0						
					If offered as Integrated Course								
					1	0	2						
			Total							**400**	**400**	**800**	**19**
9	NCMC		National Service Scheme (NSS)	NSS	All students have to register for any one of the courses namely National Service Scheme, Physical Education (PE) (Sports and Athletics), Yoga or NCC with the concerned coordinator of the course during the first week of III semester. The activities shall be carried out from III semester to VII semester (for 5 semesters). **SEE for the courses shall be conducted during VIII semester examinations** and the accumulated CIE marks shall be added to the SEE marks. Successful completion of the registered course is mandatory for award of the degree. The events shall be appropriately scheduled by the Course Coordinators and the same shall be reflected in the calendar prepared for the NSS, PE, Yoga and NCC activities.									
			Physical Education (PE) (Sports and Athletics)	PE									
			Yoga	Yoga									
			NCC	NCC									
Course prescribed to Lateral Entry Diploma holders admitted to III semester B.E. programs													
1	NCMC	NMATDIP3	Foundation of Engineering Mathematics - I	Maths	2	2	0		-	100	-	100	0
		AAP	AICTE Activity Points (Applicable for both Regular and Lateral Entry students)	40 hours community service to be documented and produced for the examination									

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institution affiliated to VTU, Belagavi, Approved by AICTE, New Delhi, Accredited by NAAC with 'A' grade & ISO 9001:2015 Certified)

B.E. in Civil Engineering.

Note: **BSC**: Basic Science Course, **IPCC**: Integrated Professional Core Course; **PCC**: Professional Core Course,
HSMC: Humanity and Social Science & Management Courses, **AEC** –Ability Enhancement Courses. **UHV-** Universal Human Value Courses
L –Lecture, **T** – Tutorial, **P-** Practical/ Drawing, **S** – Self-Study Component, **CIE**: Continuous Internal Evaluation, **SEE**: Semester End Examination

NHS01 Balake Kannada is for students who can't speak, read and write Kannada.
NHS02 Samskrutika Kannada is for students who can speak, read and write Kannada.

Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with Practicals of the same course. Credit for IPCC can be 04 and its Teaching – Learning hours (L : T : P) can be considered as (3: 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from practical part of IPCC shall be included in the SEE question paper.

INT1 - Inter/Intra Institutional Internship: All the students admitted to engineering programs under the **lateral entry category** shall have to undergo mandatory INT1 Inter/Intra Institutional Internship of 03 weeks during the **intervening period of III and IV semesters**. The internship shall be slated for CIE only and will not have SEE. The letter grade earned through CIE shall be included in the IV semester grade card. The internship shall be considered for vertical progression and for the award of degree. Those, who do not take up / complete the internship shall be declared fail and shall have to complete subsequently after satisfying the internship requirements. The faculty coordinator or mentor shall monitor the students' internship progress and interact with them for the successful completion of the internship.

Non-Credit Mandatory Course (NCMC):

(A) Foundation of Engineering Mathematics - I & II

(1) These courses are prescribed for III and IV semesters respectively to **lateral entry Diploma holders** admitted to III semester of B.E. programs. They shall attend the classes during the respective semesters to complete all the formalities of the course and appear for the Continuous Internal Evaluation (CIE). In case, any student fails to register for the said course/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have secured an F grade. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks. **These courses are slated for CIE only and have no SEE.**

(2) Foundation of Engineering Mathematics I and II shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.

(3) Successful completion of the courses Foundation of Engineering Mathematics I and II shall be indicated as PP in the grade card. Non-completion of the courses Foundation of Engineering Mathematics I and II shall be indicated as NP.

(B) National Service Scheme/Physical Education (Sport and Athletics)/Yoga:

(1) Securing 40 % or more in CIE, 35 % or more marks in SEE and 40 % or more in the sum total of CIE + SEE leads to successful completion of the registered course.

(2) In case, students fail to secure 35 % marks in SEE, they have to appear for SEE during the subsequent examinations conducted by the Institute.

(3) In case, any student fails to register for NSS, PE or Yoga/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have not completed the requirements of the course. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks.

(4) Successful completion of the course shall be indicated as PP in the grade card. Non-completion of the course shall be indicated as NP.

(5) These courses shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.

Ability Enhancement Course – III (Offered by the Department)

ENGINEERING MATHEMATICS– III

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	N3MATB			

Prerequisites: Engineering Mathematics-I and Engineering Mathematics-II.

Course objectives:

- To introduce the concept of analytic function, transformation for mapping.
- To introduce the concept of complex variables to evaluate the integrals
- To introduce the concept of partial differential equations, use separation of variable method to solve wave, heat and Laplace equations.
- To find optimal solutions to engineering problems whose optimum may be a certain quantity, shape and function.
- To Solve the system of equation analytically and numerically

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Determine continuity/differentiability/analyticity of a function and find the derivative of a function. Identify the transformation (L3, L1)

CO2: Evaluate a contour integral using Cauchy's integral formula. Compute singularities and the residues(L3).

CO3: Formulate and solve partial differential equations. Apply separation of variable method to solve wave, heat and Laplace equations (L4).

CO4: Compute extreme values of a variational problems like geodesics, least time and shortest path(L3).

CO5: Solve the system of equations analytically and numerically (L3).

UNIT-I : Complex Variables

Functions of complex variable, Definition of Limit, Continuity, Differentiability. Analytic functions, Cauchy's-Reimann equation in Cartesian and polar forms (Statement only), Properties of analytic functions (Statement only). Geometrical representation of f(z)=w, Conformal transformation: w=ez, w=$z+\frac{1}{z}$, w=z2. **8 Hrs.**

UNIT-II: Complex Integration

Bilinear transformation, Properties, Complex integration, Cauchy's theorem (with proof), Converse of Cauchy's theorem, Cauchy's integral formula (with proof), residues, residues theorem, calculation of residues. **8 Hrs.**

UNIT – III: Partial differential equations (P.D.E.)

Formation of Partial Differential Equation, Solution of Langrange's Linear P.D.E. of the type Pp+Qq=R. Method of Separation of Variables. Applications of P.D.E.: Classification of PDE, solution of one dimensional heat wave and two dimensional Laplace's equation by the method of separation of variables. **8 Hrs.**

UNIT-IV :Calculus of Variation

Variation of a function and a functional, Extremal of a functional, Variational problems, Euler's equation, Standard Variational problems including geodesics, Minimal surface of revolution, hanging chain and Brachistrochrone problem. **7 Hrs.**

UNIT – V :System of linear algebraic equations

Rank of a matrix by echelon form, Consistency of a system of linear equations, Gauss elimination method, **Gauss-Jordan method.** Iterative methods - Jacobi, Gauss-Seidel iterative methods. **8 Hrs.**

STRENGTH OF MATERIALS (Integrated Course)

Contact Hours/Week	:	3(L)+2(P)	Credits	:	4.0
Total Lecture Hours	:	39 + 26	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	N3CVI01	(Reduced to 60% weightage)		

Course Objectives: The objectives of the course are to enable the students:

- To define, identify and compute the stresses and strains developed in loaded components. Also, to find the elastic constants, thermal stresses, and stresses in composite sections.
- To compute magnitudes of bending moment and shear force over the span of various kinds of beams subjected to different kinds of loads.
- To compute bending stress and shear stress at critical sections of the beam and to sketch the distribution diagrams.
- To determine the torsional shear, rigidity and magnitudes of power transferred through shafts subjected to twisting moment / torque. Also, to draw shear stress distribution diagram across the section of the shaft.
- To find deflection in beam loaded with point loads and uniformly distributed loads.

Unit-1

Simple stresses and strains: Introduction, stress, strain, Hooke's law, stress strain diagram for structural steel and nonferrous materials, elongation of prismatic and tapering bars, volumetric strain, elastic constants, relationship between elastic constants. Composite section, thermal strain and thermal stress including compound bars. **9hrs.**

Unit-2

Bending moment and shear force in beams: Introduction, finding shear force and bending moment for simply supported, cantilever and overhanging beams for point loads, uniformly distributed, uniformly varying loads, and concentrated moments. Sketching the variation of bending moment and shear force. Relationship between intensity of loading and shear force, shear force and bending moment.

8 hrs.

Unit-3

Stresses in beams: Theory of simple bending, assumption, derivation of equation of bending, determination of bending stress at critical points over the beam of different sectional shapes (I, T, and L sections). Problems on bending stress, derivation of equation for shear stress, determination of shear stress distribution at critical sections of a beam. Problems. **8 hrs.**

Unit-4

Torsion of circular shaft: Derivation of equation of torsion, problems involving solid and hollow shafts, power transmitted by a shaft. **6 hrs.**

Unit-5

Slope and Deflection of Beams: Derivation of differential equation of flexure, application of double integration and Macaulay's method for determination of deflection. Problems involving simply supported, cantilever and overhanging beams with point loads and UDL. **8 hrs.**

LABORATORY COMPONENT

The objectives of the integrated lab component of the course are:

- To enable the students to conduct Brinell and Rockwell hardness tests on various materials.
- To perform tension test on structural steel and to draw stress strain diagram.
- To perform torsion test on bar of circular cross section and to draw shear stress distribution diagram.
- To perform the flexural test on wood and to find the modulus of rupture.

Title of Experiments:

1. Determination of hardness of materials.
2. Conducting Single shear and double shear strength test on structural steel.
3. Determining Energy absorption (Impact test) using Charpy test.
4. Determining Energy absorption (impact test) using Izod test.
5. Conducting Tension test on structural steel.
6. Conducting compression test on Mild steel.
7. Conducting Bending Strength Test on Wood using two-point loading.

Text Books:

2	James. M. Gere, David E Goetsch	Strength of Materials, Cengage Learning, India Edition, 9th edition, 2019. ISBN:

Reference Books:

1	B.C.Punmia	Strength of Materials, 10th edition, Lakhmi Publications, New Delhi, 2015.
2	M.A.Jayaram	Mechanics of Materials with Programs in C, Prentice Hall of India, 2007.
3	Tutorials on Strength of Materials, https://YouTube.com/c/DrJayaram, under Strength of Materials play list.	

Course Outcomes (COs): After the completion of this integrated course, the student will be able to:

CO1: Apply engineering and science fundamentals to determine simple stresses and strain and to establish interrelationships among various stress functions. Using mathematical knowledge of integration derive magnitudes of deformations and establish relationships among elastic moduli. Also, to determine the material properties such as elasticity, hardness, and toughness by conducting the related experiments.

CO2: Analyze the beam by computing bending moment and shear force at various points along the span of the beam and then be able to draw bending moment and shear force diagrams for the determinate beams and to locate critical sections.

CO3: Analyze simply supported, overhang, and cantilever beams, locate critical sections

over the beam in respect of bending stresses and shear stresses and to be able to draw the distribution bending stress and shear stress critical sections on the beam. Perform experimentation to determine the bending strength of wooden beam and determine modulus of rupture.

CO4: Analyze solid and hollow shafts subjected torque and determine torsional shear stresses, the magnitude of twist, modulus of rigidity, and be able to draw tortional shear stress distribution over the cross section. Perform experimentation to determine the torsional shear and magnitude of twist.

CO5: Apply mathematics knowledge of differentiation and integration to find slope and deflection of beams subjected to different patterns of loading and verify whether the deflection is in conformity with the acceptable magnitudes.

BUILDING SERVICES AND MAINTENANCE
(Integrated Course)

Contact Hours/Week	:	3(L)+2(P)	Credits	:	4.0
Total Lecture Hours	:	39 + 26	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	N3CVI02	(Reduced to 60% weightage)		

Course objectives: The objectives of the course are to enable the students:
The student is introduced to the basic knowledge of different types of building materials, innovative building materials, the selection, and applications, construction of different parts of the structure such as excavation and foundation, masonry, structural elements such as roofs and roof coverings, plastering, flooring, and imparts the knowledge of services in building which includes plumbing, sanitation and Electrical works and building maintenance.

Unit-1

Building Materials: Mud, Bricks, Stone, Cement, glass, ceramics, steel. Innovative Building materials- Soil cement, hollow, solid, stabilized soil blocks, aerated blocks, Flyash-sand-lime-gypsum bricks,
Compressed earth Bricks/Blocks, Clay Flyash Burnt Bricks, Marble Slurry Bricks, Solid/Hollow Concrete Blocks, Cellular Light Weight Concrete, Ferrocement Wall panels, and different types of building blocks, Properties of Materials – Mechanical, physical.

8L hrs.

Unit-2

Foundations and Plinth work: Excavation in soft/hard murum, Rock. Shoring for excavation, Types of Foundations-Shallow foundations, Deep foundations, Basic requirements, Specifications of materials, Tools and machineries, Laying of P.C.C. Plinth work: Plinth masonry, Refilling of plinth and foundation pits, Casting of column up to plinth /Tie beams, D.P.C, Floor P.C.C.

8L hrs.

Unit-3

Masonry in super structure, Roofs, Roof covering Plastering and Floorings: Types of masonry, Classification, types of roof and roof coverings, Internal and External plastering –Materials required, Types – External & Internal plaster, Scaffolding, Defects in plastering, Essential requirements and selection of flooring material, cement concrete, granolithic, terrazzo, marble, timber flooring, reinforced concrete floor, Ribbed floor, precast concrete floor, VDF. **7L hrs.**

Unit-4

Building Services: Plumbing and Sanitation work- Basic requirements of planning, Basics of plumbing system, Principles and norms for plumbing and sanitation work, Water supply systems and its work procedure, Drainage system and its work procedures, Electrical work- Materials and fittings, Planning, Tools, Types of wiring and work procedure Fire safety in Buildings- Basic requirement of fire safety, check list for firefighting (As per IS14435-1997), Heating and ventilating and air conditioning

8L hrs.

Unit-5

Introduction to building maintenance: Definition and types of building maintenance, Defects on major building elements - Roof defects - Wall defects - Floor defects etc. Property inspection/surveys Processes and equipment required Types of building surveys Condition surveys, Dilapidation surveys, Sanitation surveys, Building maintenance problems and solutions Defects in wall claddings, brick works, steel works, stone works, timber works, Dampness -definition, causes of dampness and solutions to dampness. **8L hrs.**

Course Outcomes (COs): After the completion of this integrated course, the student will be able to:

CO1: Identify the different construction practices and identify the material usage based on different types of civil engineering projects, properties of innovative building materials and identify innovative building materials for use in buildings and other infrastructure with due consideration for ease of construction, comfort of building usage and sustainability.
CO2: Describe the different types of foundations and components of substructure including the construction aspects, tools and machinery used for construction.
CO3: Describe the materials, specifications and tools used for various types of masonry and plastering.
CO4: Recognize the various roofing systems, flooring, plumbing, sanitation, electrical services and fire safety for buildings. Recommend suitable roofing system appropriate to the given context.
CO5: Identify the different types of building maintenance, common defects in building units and building maintenance.

LABORATORY COMPONENT

The objectives of the integrated lab component of the course are.

- To enable the students to conduct compressive strength tests on various building blocks and materials.
- To perform masonry construction of different types of blocks.
- To perform plastering and pointing in masonry construction.
- To perform water supply and sanitary connections on site conditions.
- To perform Electrical connections in Residential buildings.

Title of Experiments:

1. Determination of compressive strength of bricks.
2. Determination of tensile strength of HYSD/TMT bars.
3. Determination of compressive strength of Solid Blocks.
4. Determination of bulking of sand and silt content.
5. Determination of water absorption and Physical parameters.
6. Determination of compressive strength of paver blocks.
7. Determination of flexural strength and compressive strength of floor tiles.

Course Outcomes (COs): After the completion of this integrated course, the student will be able to:

CO1: Apply the knowledge of the different construction practices and decide on the appropriate material usage specific to the type of project. Identify innovative building materials for use in buildings and other infrastructure with due consideration for ease of construction, comfort of building usage and sustainability.

CO2: Select or recommend appropriate type of foundations from among several choices and be able to decide on the construction methods, tools and machinery to be used for construction.

CO3: Predicate the materials, specifications and tools to be used for various types of masonry and plastering.

CO4: Identify suitable roofing system, decide on kind of flooring, plan for plumbing, sanitation, electrical services and make provisions for fire safety of buildings

CO5: Using the knowledge gained, plan for efficient building maintenance, identify the common defects in building units and in building maintenance.

FLUID MECHANICS AND HYDRAULICS
(Professional Core Course)

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	N3CV01			

Course objectives: The objectives of the course is devised to:

- Introduce fundamental aspects of fluid statics, dynamics and kinematics.
- Introduce the students to the basic principles, laws and phenomena in the area of fluid mechanics and enable them to apply these principles to fluid flow problems associated with pipe flows, open channel flows.
- Enable the students to solve practical fluid flow problems.
- Analyze methods and devices for measurement of pressure and velocity of a fluid in motion.
- Design and analysis of hydraulic machinery (turbines)

Unit-1

Basic Properties of Fluids - Concepts and Definitions –Density, Specific weight, Specific Volume, Specific gravity, Newton's law of viscosity and Kinematic viscosity – Problems. Surface tension, Capillarity, bulk modulus of elasticity, Compressibility of fluids – problems.

Fluid statics: Pascal's law, hydrostatic pressure variation, pressure meters, manometers, micro manometers- problems. Hydrostatic forces on vertical and inclined flat surfaces and curved surfaces – Problems. **9 hrs.**

Unit-2

Kinematics of Fluid Flow - Types of fluid flow (Steady/Unsteady, Uniform/Nonuniform, Laminar/Turbulent, Rotational/Irrotational, one/two/three dimensional flows). General form of Continuity – equation (three dimensional), continuity equation – Problems.

Flow patterns – Streamlines, streak line path line, stream tube, stream functions, velocity potential, relational between stream functions, and velocity potential functions, relation between stream function and velocity potential function – Problems.

8 hrs.

Unit-3

Dynamics of Fluid Flow – Equations of motions, Bernoulli's equation from Euler's equation, Bernoulli's equation for real fluid flows – Application of Bernoulli's equation for measurement of velocity (pilot tube) and discharge (Venturimeter). Application of momentum equation to find forces on pipe bends and nozzles, - Problems

Discharge measurement through vertical – Circular orifices and mouthpieces – Determination of hydraulic co-efficients of orifice and mouthpiece. (No submerged conditions.) – Problems. **9 hrs.**

Unit-4

Flow in Pipes and Open Channels - Viscous flows through pipes – velocity distribution – Major and minor losses for flow in pipes - Pipes with parallel connections and pipes in series. Open channel flows – Classification – Specific energy – Design of subcritical channel transitions. Uniform flows – Manning's and Chezy's equations, hydraulically efficient Rectangular, Trapezoidal and Triangular channels. Design – Problems, Flow measurements in weirs, Notches (rectangular, triangular)

7 hrs.

Unit-5

Hydraulic Machines - Impact of jet on rigid/moving flat and curved vanes – Problems. Hydropower generation – Turbines – Classification – Pelton wheel turbine, Francis turbines, unit quantities and specific speed. Problems. **6 hrs.**

Textbooks:

3.	K Subramanya	Fluid Mechanics and Hydraulic Machines (Problems and Solution), 2nd Edition, McGraw Hill Education, Chennai (2019) ISBN: 978-93-5316-342-6

References:

1.	F.M. White	Fluid Mechanics. Edition 7th TMH Book Company. New York. 2011. ISBN:978-0-07-352934-9
2.	C.S.P Ojha, R. Berndtsson and P.N. Chadramouli	Fluid Mechanics and Machinery, Oxford University Press, 2010. ISBN:9780195699630

Course Outcomes (COs) : After the completion of this course, the student will be able to:

CO1:	Apply Newton's law of viscosity and other basic fluid properties to determine the shear stress, stability of bubble, capillarity. Apply Pascal's law of fluid to find hydrostatic forces on submerged, vertical and inclined flat surfaces and curved surfaces.
CO2:	Apply knowledge of mathematics and use continuity equations to solve all types of fluid flow problems in pipes and open channels. Able to identify ideal fluid flow problems through streamlines, and be able to use to stream functions and velocity potential functions to solve flow net problems.
CO3:	Apply Bernoulli's energy equation along with continuity to determine head loss, major and minor losses in pipes. Apply momentum principle to determine fluid forces acting on pipe bends and converging pipes. Able to measure and determine discharge through orifices and mouth pieces.
CO4:	Design subcritical flow channel transitions using specific energy concept. Design hydraulically efficient open channels having rectangular, triangular, trapezoidal and circular sections. Perform flow measurements through weirs and notches of various types.
CO5:	Analyze flow passing over turbine blades and be able to design basic aspects of turbines and its accessories like draft tube etc.

BUILDING PLANNING & DRAWING USING MODERN TOOLS

Lab hours/week	:	2(P)	Credits	:	1.0
Total lab Hours	:	26	CIE Marks	:	50
Course Code	:	N3CVL01	SEE Marks	:	50

Course Objectives: The course introduces the student to the human functions and corresponding space requirements and graphical representation of different building elements, physical and cultural factors influencing spatial planning including light, ventilation, movement and air circulation. The student will be made to design typical residential, public buildings considering essential building elements, electrical water supply and sanitary services make graphical representation using CAD.

Unit 1

Basic anthropometrics, human functions and their implications for space requirements. Minimum and optimum areas for mono functions. Spatial interpretations of various activities and their relationship with spaces. **3 Hrs.**

Unit 2

Measured drawing exercises of familiar building elements like staircases, windows, doors, classroom, open and enclosed spaces etc. Observing the built environment around, experiencing enclosures and graphically representing them through drawings with material indications. **3 Hrs.**

Unit 3

Understanding the role of physical and cultural factors that influence spatial planning. Concepts of Light, ventilation, movement, circulation, hierarchy, volume, structure and skin. Exercises and case studies to be conducted and compiled.

7Hrs.

Unit 4

Application of the above study into designing of a residential building to the given context. Representation of the design through hand drawn plans, sections and elevations. **8Hrs.**

Unit 5

Preparing set of good for construction drawings considering the bye laws and regulations. Centre line drawing, schedule of openings, electrical drawing, water supply and sanitary detailing. **8 Hrs.**

Unit 6

Designing of a public building of a suitable scale to understand various services like, staircases, lifts, HVAC, acoustics, fire fighting etc. Projects like Primary Health centre, School, Library, Bus stand, metro station etc. **10 Hrs.**

Field Visit:

- Visit to residential, commercial, public buildings, to understand human functions and space requirements.
- Observation of familiar building elements and take their measurements and represent through drawing.
- Understand the role of light, ventilation, movement, circulation aspects adopted in these buildings
- Record the design features of these buildings including various services.

Note: CIE will be awarded on the basis of quality of the sheets/exercises executed by the students throughout the semester.

Course Outcomes (COs) The student will be able to;

CO1: Explain space requirement for human functioning and spatial interpretations for various human activities. (L2)
CO2: Represent graphically the common building elements suiting the building environment. (L3)
CO3: Analyze the role of physical, spatial and cultural factors including light, ventilation, air circulation through case studies of buildings. (L4)
CO4: Design residential buildings considering physical & cultural factors including light, ventilation, air-circulation, and prepare architectural drawing. (L4)
CO5: Prepare detailed construction drawings considering Bye laws and regulations including electrical, water supply and sanitary details. (L3)
CO6: Design and prepare architectural drawings of public buildings, including electrical, sanitation and other services. (L4)

Universal Human Values, Social Connect and Responsibility

Contact Hours/Week	: 1+0+0+0 (LTPS)	Credits :	1.0
Total Lecture Hours	: 13	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50
Course Code:	**:** NSH04		

Pre-requisites: Universal Human Values (conducted during induction programme)

Learning objectives:

1. Explore about themselves (human beings), family, society and nature/existence.
2. Appreciate the harmony in the human being, family, society and nature/existence
3. Strengthen holistic perception of co-existence and mutual fulfilment among the four orders of nature.

Unit 1

Understanding Harmony in the Human Being - Harmony in self

Understanding human being as a co-existence of the sentient 'I' and the material 'Body'; Understanding the needs of Self ('I') and 'Body' - happiness and physical facility; Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer); Understanding the characteristics and activities of 'I' and harmony in 'I'; Understanding the harmony of 'I' with the Body: Sanyam and Health, correct appraisal of Physical needs, meaning
of Prosperity in detail, Include discussions to differentiate between

i) Prosperity and accumulation.
ii) Ensuring health vs dealing with disease **5 Hrs.**

Unit 2

Understanding Harmony in the Family and Society - Harmony in Human-Human Relationship

Understanding values in human - human relationship, meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness, Trust and Respect as the foundational values of relationship; Understanding the meaning of Trust, Difference between intention and competence; Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship; Understanding the harmony in the society (society being an extension of family)- Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals. **4Hrs.**

Unit 3

Understanding Harmony in the Nature and Existence - Whole-existence as Co-existence

Understanding the harmony in the Nature; Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self-regulation in nature;
Understanding Existence as Co-existence of mutually interacting units in all-pervasive space; Holistic perception of harmony at all levels of existence. Include discussions on-human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

4 Hrs.

Course Outcomes:

On successful completion of the course, the students will be able to

1.Become more aware of themselves, and their surroundings (family, society, nature)

2.Become more responsible in life, and value human relationships and human society

3.Have better critical ability in handling problems and in finding sustainable solutions

Text Book:

1. Gaur, R.R. & Sangal R – 'Foundation Course in Human Values and Professional Ethics; Presenting a universal approach to value education through self-exploration', Excel Books, Bangalore, 2016, ISBN: 978-8-174-46781-2

Reference Book:

2. Tripathi A.N. – 'Human Values', New Age International Publisher, 2003, ISBN: 81-224-1426-5

Evaluation Pattern:

Two Tests of 25 marks each and 45 minutes duration

SEE for 50 marks and examination duration is 90 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	45	25 marks	25 marks
Test-2	14th Week	45	25 marks	25 marks
CIE			50 marks	50 marks
SEE		90	50 marks	50 marks
Total			**100 marks**	**100 marks**

Question Paper Pattern

CIE: CIE pattern may be hybrid type with MCQs and descriptive questions.

- 10 Marks MCQs
- 3 descriptive questions of 5 marks each
- All the questions are compulsory

SEE: SEE pattern may also be hybrid type with MCQs and descriptive questions.

- 20 Marks MCQs
- 1 descriptive question of 10 marks from each of the units (total 3 questions) or

  2 questions of 5 marks from each of the units (total 6 questions)
- All the questions are compulsory

ಬಳಕೆ ಕನ್ನಡ

Balake Kannada (Kannada for Usage)

Contact Hours/ Week	: 2 (T)	Credit :	1.0
Total Lecture Hours	: 0	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50
Course Code	: NSH01		

Course Learning Objectives:

- To create the awareness regarding the necessity of learning local language for comfortable and healthy life.
- To enable learners to Listen and understand the Kannada language properly.
- To speak, read and write Kannada language as per requirement.
- To train the learners for correct and polite conservation.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. ಬಳಕೆ ಕನ್ನಡವನ್ನು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಬೋಧಿಸಲು ವಿಟಿಯು ಸೂಚಿಸಿರುವ ಪಠ್ಯಪುಸ್ತಕಗಳನ್ನು ಉಪಯೋಗಿಸಬೇಕು.
2. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಉತ್ತೇಜಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.
3. ಪ್ರತಿ ವಿದ್ಯಾರ್ಥಿ ಪುಸ್ತಕವನ್ನು ತರಗತಿಯಲ್ಲಿ ಬಳಸುವಂತೆ ನೋಡಿಕೊಳ್ಳುವುದು ಮತ್ತು ಪ್ರತಿ ಪಾಠ ಮತ್ತು ಪ್ರವಚನಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟಂತೆ ಪೂರಕ ಚಟುವಟಿಕೆಗಳಿಗೆ ತೊಡಗಿಸತಕ್ಕದ್ದು.
4. ಡಿಜಿಟಲ್ ತಂತ್ರಜ್ಞಾನದ ಮುಖಾಂತರ ಇತ್ತೀಚೆಗೆ ಡಿಜಿಟಲೀಕರಣಗೊಂಡಿರುವ ಭಾಷೆ ಕಲಿಕೆಯ ವಿಧಾನಗಳನ್ನು ಪಿಪಿಟಿ ಮತ್ತು ದೃಶ್ಯ ಮಾಧ್ಯಮದ ಮುಖಾಂತರ ಚರ್ಚಿಸಲು ಕ್ರಮ ಕೈಗೊಳ್ಳುವುದು. ಇದರಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ತರಗತಿಯಲ್ಲಿ ಹೆಚ್ಚು ಏಕಾಗ್ರತೆಯಿಂದ ಪಾಠ ಕೇಳಲು ಮತ್ತು ಅಧ್ಯಯನದಲ್ಲಿ ತೊಡಗಲು ಅನುಕೂಲವಾಗುತ್ತದೆ.
5. ಭಾಷಾ ಕಲಿಕೆಯ ಪ್ರಯೋಗಾಲಯದ ಮುಖಾಂತರ ಬಹುಬೇಗ ಕನ್ನಡ ಭಾಷೆಯನ್ನು ಕಲಿಯಲು ಅನುಕೂಲವಾಗುವಂತೆ ಕಾರ್ಯಚಟುವಟಿಕೆಗಳನ್ನು ಮತ್ತು ಕ್ರಿಯಾ ಯೋಜನೆಗಳನ್ನು ರೂಪಿಸುವುದು.

Unit 1 (5 Hours):

1. Introduction, Necessity of learning a local language. Methods to learn the Kannada language.
2. Easy learning of a Kannada Language: A few tips. Hints for correct and polite conservation, Listening and Speaking Activities
3. Key to Transcription.
4. ವೈಯಕ್ತಿಕ ಸ್ವಾಮ್ಯಸೂಚಕ/ಸಂಬಂಧಿತ ಸರ್ವನಾಮಗಳು ಮತ್ತು ಪ್ರಶ್ನಾರ್ಥಕ ಪದಗಳು - Personal Pronouns, Possessive Forms, Interrogative words

Unit 2 (4 Hours):

1. **ನಾಮಪದಗಳ** ಸಂಬಂಧಾರ್ಥಕ **ರೂಪಗಳು, ಸಂದೇಹಾಸ್ಪದ ಪ್ರಶ್ನೆಗಳು ಮತ್ತು ಸಂಬಂಧವಾಚಕ ನಾಮಪದಗಳು** - Possessive forms of nouns, dubitive question and Relative nouns.
2. **ಗುಣ, ಪರಿಮಾಣ ಮತ್ತು** ವರ್ಣಬಣ್ಣ **ವಿಶೇಷಣಗಳು, ಸಂಖ್ಯಾವಾಚಕಗಳು** Qualitative, Quantitative and Colour Adjectives, Numerals
3. ಕಾರಕ ರೂಪಗಳು ಮತ್ತು ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು – ಸಪ್ತಮಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯ – (ಆ, ಅದು, ಅವು, ಅಲ್ಲಿ) Predictive Forms, Locative Case

Unit 3 (5 Hours):

1. ಚತುರ್ಥಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯದ ಬಳಕೆ ಮತ್ತು ಸಂಖ್ಯಾವಾಚಕಗಳು – Dative Cases, and Numerals
2. ಸಂಖ್ಯಾಗುಣವಾಚಕಗಳು ಮತ್ತು ಬಹುವಚನ ನಾಮರೂಪಗಳು – Ordinal numerals and Plural markers
3. ನ್ಯೂನ/ನಿಷೇಧಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು ಮತ್ತು ವರ್ಣ ಗುಣವಾಚಕಗಳು – Defective / Negative Verbs and Colour Adjectives

Unit 4 (6 Hours):

1. ಅಪ್ಪಣೆ/ಒಪ್ಪಿಗೆ, ನಿರ್ದೇಶನ, ಪ್ರೋತ್ಸಾಹ ಮತ್ತು ಒತ್ತಾಯ ಅರ್ಥರೂಪ ಪದಗಳು ಮತ್ತು ವಾಕ್ಯಗಳು
   Permission, Commands, encouraging and Urging words (Imperative words and sentences)
2. ಸಾಮಾನ್ಯ ಸಂಭಾಷಣೆಗಳಲ್ಲಿ ದ್ವಿತೀಯ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ಸಂಭವನೀಯ ಪ್ರಕಾರಗಳು
   Accusative Cases and Potential Forms used in General Communication
3. 'ಇರು ಮತ್ತು ಇರಲ್ಲ' ಸಹಾಯಕ ಕ್ರಿಯಾಪದಗಳು, ಸಂಭಾವ್ಯಸೂಚಕ ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು – Helping Verbs; "iru and iralla", Corresponding Future and Negation Verbs
4. ಹೋಲಿಕೆ (ತರ–ತಮ), ಸಂಬಂಧ ಸೂಚಕ ಮತ್ತು ವಸ್ತು ಸೂಚಕ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಪದಗಳ ಬಳಕೆ – Comparative, Relationship, Identification and Negation Words

Unit 5 (6 Hours):

1. ಕಾಲ ಮತ್ತು ಸಮಯದ ಹಾಗೂ ಕ್ರಿಯಾಪದಗಳ ವಿವಿಧ ಪ್ರಕಾರಗಳು – Different types of forms of Tense, Time and Verbs
2. –ದ್, –ತ್, –ತು, –ಇತು, –ಆಗಿ, –ಅಲ್ಲ, –ಗ್, –ಕ್, ಇದೆ, ಕ್ರಿಯಾ ಪ್ರತ್ಯಯಗಳೊಂದಿಗೆ ಭೂತ, ಭವಿಷ್ಯತ್ ಮತ್ತು ವರ್ತಮಾನ ಕಾಲ ವಾಕ್ಯ ರಚನೆ. Formation of Past, Future and Present Tense Sentences with Verb Forms
3. Kannada Vocabulary List: ಸಂಭಾಷಣೆಯಲ್ಲಿ ದಿನೋಪಯೋಗಿ ಕನ್ನಡ ಪದಗಳು – Kannada Words in Conversation.

ಬಳಕೆ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಅನುಕೂಲಗಳು ಮತ್ತು ಫಲಿತಾಂಶಗಳು:

Course Outcomes

At the end of the Course, The Students will be able

1. To understand the necessity of learning of local language for comfortable life.
2. To Listen and understand the Kannada language properly.
3. To speak, read and write Kannada language as per requirement.
4. To communicate (converse) in Kannada language in their daily life with Kannada speakers.
5. To speak in polite conservation.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration

SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.

SEE: Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)

TEXT BOOKS:

ಬಳಕೆ ಕನ್ನಡ – ಲೇಖಕರು: ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ

Contact Hours/ Week	: 2 (T)	Credit :	1.0
Total Lecture Hours	: 0	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50
Course Code	: NSH02		

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯ ಉದ್ದೇಶಗಳು:

೧. ವೃತ್ತಿಪರ ಪದವಿ ವಿದ್ಯಾರ್ಥಿಗಳಾಗಿರುವುದರಿಂದ ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.

೨. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಪ್ರಧಾನ ಭಾಗವಾದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳನ್ನು ಸಾಂಕೇತಿಕವಾಗಿ ಪರಿಚಯಿಸಿ ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ ಸಾಹಿತ್ಯ ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಅರಿವು ಹಾಗೂ ಆಸಕ್ತಿಯನ್ನು ಮೂಡಿಸುವುದು.

೩. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವನ್ನು ಹಾಗೂ ಅವರುಗಳು ಸಾಧಿಸಿದ ವಿಷಯಗಳನ್ನು ಪರಿಚಯಿಸುವುದು.

೪. ಕನ್ನಡ ಶಬ್ದ ಸಂಪತ್ತಿನ ಪರಿಚಯ ಮತ್ತು ಕನ್ನಡ ಭಾಷೆಯ ಬಳಕೆ ಹಾಗೂ ಕನ್ನಡದಲ್ಲಿ ಪತ್ರ ವ್ಯವಹಾರವನ್ನು ತಿಳಿಸಿಕೊಡುವುದು.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

೧. ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡವನ್ನು ಬೋಧಿಸಲು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಪ್ರಸ್ತುತ ಪುಸ್ತಕ ಆಧರಿಸಿ ಬ್ಲಾಕ್ ಬೋರ್ಡ್ ವಿಧಾನವನ್ನು ಅನುಸರಿಸುವುದು. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಪ್ರೇರೇಪಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.

೨. ಇತ್ತೀಚಿನ ತಂತ್ರಜ್ಞಾನದ ಅನುಕೂಲಗಳನ್ನು ಬಳಸಿಕೊಳ್ಳುವುದು – ಅಂದರೆ ಕವಿ–ಕಾವ್ಯ ಪರಿಚಯದಲ್ಲಿ ಕವಿಗಳ ಚಿತ್ರಣ ಮತ್ತು ಲೇಖನಗಳು ಮತ್ತು ಕಥೆಕಾವ್ಯಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟ ಧ್ವನಿ ಚಿತ್ರಗಳು, ಸಂಭಾಷಣೆಗಳು, ಈಗಾಗಲೇ ಇತರ ವಿಮರ್ಶಕರು ಬರೆದಿರುವ ವಿಮರ್ಶಾತ್ಮಕ ವಿಷಯಗಳನ್ನು ಪಿಪಿಟಿ, ಡಿಜಿಟಲ್ ಮಾಧ್ಯಮಗಳ ಮುಖಾಂತರ ವಿಶ್ಲೇಷಿಸುವುದು.

೩. ನವೀನ ಮಾದರಿಯ ಸಾಹಿತ್ಯ ಬೋಧನೆಗೆ ಸಂಬಂಧಪಟ್ಟ ವಿಧಾನಗಳನ್ನು ಶಿಕ್ಷಕರು ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಅನುಕೂಲವಾಗುವ ರೀತಿಯಲ್ಲಿ ಅಳವಡಿಸಿಕೊಳ್ಳಬಹುದು.

ಘಟಕ ೧: ಲೇಖನಗಳು **(6 hours)**

೧. ಕರ್ನಾಟಕ ಸಂಸ್ಕೃತಿ – ಹಂ.ಪ. ನಾಗರಾಜಯ್ಯ

೨. ಕರ್ನಾಟಕ ಏಕೀಕರಣ : ಒಂದು ಅಪೂರ್ವ ಚರಿತ್ರೆ – ಜಿ. ವೆಂಕಟಸುಬ್ಬಯ್ಯ

೩. ಆಡಳಿತ ಭಾಷೆಯಾಗಿ ಕನ್ನಡ – ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ ಮತ್ತು ಪ್ರೊ. ವಿ. ಕೇಶವಮೂರ್ತಿ

ಘಟಕ ೨: ಆಧುನಿಕ ಪೂರ್‌ವದ ಕಾವ್ಯ ಭಾಗ **(5 hours)**

೧. ವಚನಗಳು: ಬಸವಣ್ಣ, ಅಕ್ಕಮಹಾದೇವಿ, ಅಲ್ಲಮಪ್ರಭು, ಆಯ್ದಕ್ಕಿ ಮಾರಯ್ಯ, ಜೇಡರದಾಸಿಮಯ್ಯ, ಆಯ್ದಕ್ಕಿ ಲಕ್ಕಮ್ಮ

೨. ಕೀರ್ತನೆಗಳು: ಅದರಿಂದೇನೂ ಫಲ ಇದರಿಂದೇನು ಫಲ – ಪುರಂದರದಾಸರು
ತಲ್ಲಣಿಸದಿರು ಕಂಡ್ಯ ತಾಳು ಮನವೇ – ಕನಕದಾಸರು

೩. ತತ್ವಪದಗಳು: ಸಾವಿರ ಕೊಡಗಳ ಸುಟ್ಟು – ಶಿಶುನಾಳ ಶರೀಫ

ಘಟಕ ೩: ಆಧುನಿಕ ಕಾವ್ಯ ಭಾಗ **(6 hours)**

೧. ಡಿ.ವಿ.ಜಿ. ರವರ ಮಂಕುತಿಮ್ಮನ ಕಗ್ಗದಿಂದ ಆಯ್ದ ಕೆಲವು ಭಾಗಗಳು

೨. ಕುರುಡು ಕಾಂಚಾಣ: ದ.ರಾ. ಬೇಂದ್ರೆ

೩. ಹೊಸಬಾಳಿನ ಗೀತೆ: ಕುವೆಂಪು

ಘಟಕ ೪: ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯ **(5 hours)**

೧. ಡಾ. ಸರ್ ಎಂ. ವಿಶ್ವೇಶ್ವರಯ್ಯ : ವ್ಯಕ್ತಿ ಮತ್ತು ಐತಿಹ್ಯ – ಎ.ಎನ್. ಮೂರ್ತಿರಾವ್

೨. ಕರಕುಶಲ ಕಲೆಗಳು ಮತ್ತು ಪರಂಪರೆಯ ವಿಜ್ಞಾನ : ಕರೀಗೌಡ ಬೀಚನಹಳ್ಳಿ

ಘಟಕ ೫: ಕಥೆ ಮತ್ತು ಪ್ರವಾಸ ಕಥನ **(4 hours)**

೧. ಯುಗಾದಿ : ವಸುಧೇಂದ್ರ

೨. ಮೆಗಾನೆ ಎಂಬ ಗಿರಿಜನ ಪರ್ವತ : ಹಿ.ಚಿ. ಬೋರಲಿಂಗಯ್ಯ

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಪರಿಣಾಮಗಳು

Course Outcomes:

೧. ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯವಾಗುತ್ತದೆ.

೨. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳು ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಆಸಕ್ತಿಯು ಮೂಡುತ್ತದೆ.

೩. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

೪. ಕನ್ನಡ ಭಾಷಾಭ್ಯಾಸ, ಸಾಮಾನ್ಯ ಕನ್ನಡ ಹಾಗೂ ಆಡಳಿತ ಕನ್ನಡದ ಪದಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration
SEE for 60 marks and examination duration is 120 minutes

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ – ಡಾ. ಹಿ.ಚಿ. ಬೋರಲಿಂಗಯ್ಯ ಮತ್ತು ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

CONSTITUTION OF INDIA AND PROFESSIONAL ETHICS

Contact Hours/ Week	: 2 (T)	Credits :	1.0
Total Lecture Hours	: 0	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50
Course Code	: NSH03		

Course Objectives:

- To introduce the students to the basic structure, fundamental rights and duties enshrined in the constitution of India.
- To introduce to the system of governance at the centre and the states.
- To enlighten the students about the method of amendment to the constitution and special provisions of constitution.
- To enable the students to imbibe ethical practices and moral values.
- To learn from the life story of leaders such as Sir M Visvesvaraya.

Part I: Constitution of India

Unit 1: Introduction to Constitution of India

Salient Features of Indian Constitution, Preamble to the Indian Constitution, Different kinds of fundamental rights, Directive Principles of State Policy, Categorical study of Directive Principles, Relationship between DPSP and Fundamental Rights, Fundamental Duties. Meaning and kinds of human rights and safeguards.

06 Hrs.

Unit 2: Union and State Governments

Union and State Legislature: Composition and powers of Loksabha, Rajyasabha, Legislative Assembly and Legislative Council. Union and State Executive: The appointment and powers of President, Vice-president, Prime-Minister, Union Council of Ministers, Governor of State, Chief Minister of State and State Council of Ministers. Union and State Judiciary: The Composition and powers of Supreme Court and High Court.

07 Hrs.

Unit 3: Other Provisions of Constitution

Method of amendment of constitution of India, 42nd and 44th amendment act. Special provisions relating to SC / ST, Women and Children and other backward classes. Electoral process related to the Election Commission of India: Composition, functioning and removal of the Election Commissioner(s).
Human Rights: Meaning, Kinds and Safeguard of Human Rights, State Human Rights Commission and National Human Rights Commission.

05 Hrs.

Part II -Professional Ethics

Unit 4: Professional Ethics and Human Values

Introduction, What is Ethics? Scope of Professional Ethics, Values and Characteristics, Types of values: Negative and positive values, Ethical values for Professional success. ***Case Studies*:** Ethical practices of the reputed Indian Companies: TATA Group, Wipro Technologies.

4 Hrs.

Unit 5: Professional Code of Conduct

Introduction, Professional Code, Legal System, Ethical and Unethical practices, Making the Professional Code successful. Ethical values of Sir M. Visvesvaraya, Mahatma Gandhi and Swami Vivekananda.

4 Hrs.

Course Outcomes: On successful completion of the course, the student will be able:

CO1: To orient students on the salient features of the Indian Constitution with special emphasis on fundamental rights and duties.
CO2: To provide an overview of the Union and State legislature, executive and judiciary.
CO3: To explain the importance of electoral process and help students appreciate the ethical practices in elections.
CO4: To facilitate the students to have a clear perspective of the Ethical values and their relevance in the present context of globalization.
CO5: To enable the students familiarize themselves with the ethical values proposed and practiced by the great leaders / eminent personalities with particular reference to Sir M. Visvesvaraya.

TEXT BOOKS:

1. M Rajaram – 'V.T.U Constitution of India and Professional Ethics'.
2. Dr. Kaveriswamy – 'V.T.U Constitution of India and Professional Ethics'.
3. J N Pandey – 'Constitutional Law of India', 49th Ed., 2012, Central Law Agency Publishing, 201.
4. 6 ISBN: 978-9384852412
5. S G Hunderker (Ed.) - 'Business Ethics and Human Values', Excel Books, New Delhi, 2009, ISBN-978-8174467386

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration
SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.

SEE: Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)

INDIAN ARCHITECTURE AND CULTURE

Contact Hours/Week	:	2(L)	Credits	:	2.0
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	N3CVA04			

Course objectives: The objectives of the course are to:

- Sensitize students towards social political and cultural influences on evolution of architecture and settlements
- Appraise the textual interpretations of architecture in vedic period
- Understand the characteristics of rock hewn buildings of Buddhist era and ideas of settlement in Himalayan region
- Discuss various design and structural innovations during the medieval period
- Discuss the architectural essence of colonial and post- Independence era

Module 1

Ancient River valley Civilizations – Introduction to the domain of Architecture, Natural & Man-made determinants of evolution of settlements. Introduction to river valley cultures- example of Indus valley civilization - settlement planning pattern, typology of Shelters and civic buildings, Citadel-Granary-Great baths, civic utility systems. **06 Hrs.**

Module 2

Vedic Culture and Architecture – Introduction to ancient texts on building technology and Architecture. Study of housing typologies, settlement patterns, civic structures, temple typologies with reference to Vastu shastra, Mayamata, Manasara and Samarangana Sutradhara. **06 Hrs.**

Module 3

Rock-Hewn and Himalayan Architecture – Rise and development of Buddhist phase - study of the early Hinayana and Mahayana phases. Types of structures and elements developed Eg: Stupas, Viharas, Chaityas, Rock cut examples. Himalayan Cities- Settlement Patterns, Public Places and Architecture. Idea of settlements in different areas of the Himalayan region, cutting across national boundaries, from Kashmir via Nepal to the north-eastern parts of the Indian subcontinent, and their relationship with the landscape.

06 Hrs.

Module 4

Medieval Indian Architecture –Elements of Indo- Islamic Architecture. Study of typical Indian mosque, Evolution of Tomb Architecture, Ideas of Rauza/ Mausoleum, Baolis.

Introduction to components and planning of Mughal forts. Salient features of regional architecture – Jaipur, Orccha, Hyderabad, Mysore.

06 Hrs.

Module 5

Colonial & Post independence Architecture – Colonial architecture of French and British. Planning and buildings of New Delhi. Modern Architecture– Planning of Chandigarh city and buildings of capitol complex. Innovations of Mahendra Raj.

06 Hrs.

Course Outcomes (COs) The student will be able to;

CO1: Elaborate on Ancient civilizations and their settlement patterns nature of buildings and civic utility systems.(PO6-M)
CO2: Demonstrate and explain the settlement patterns, vast shastra and other topology details related to temples. (PO6-M)
CO3: Present the development of Buddhist architecture and landscape patterns. (PO6-M)
CO4: Explain Islamic architecture with special reference of tomes and fort. (PO6-M)
CO5: Explain the modern architecture patterns and planning of cities. (PO6-M)

Foundations of Engineering Mathematics-I
(For Lateral Entry students)

Contact Hours/Week	:	2(L)+2(T)	Credits	:	0.0
Total Lecture Hours	:	26	CIE Marks	:	100
Total Tutorial Hours	:	26	SEE Marks	:	00
Course Code	:	N3MATDP			

Prerequisites: Basics in differential calculus, Integral calculus and vectors.

Course Learning Objectives: This course will enable students to master the basic tools of differential and vector calculus, Taylors series, Indeterminate forms (L' Hospital Rule) and differential equations and become skilled for solving problems in science and engineering.

Course objectives: This course will enable students to:

1. Known the behavior of the polar curve and its application.
2. Learn the notation of partial differentiation and determine the value of the Jacobians.
3. Learn how a function of single variable can be expanded as a Taylor's series and Maclaurin series and Handle the indeterminate form.
4. Learn how the vectors govern the physical models.
5. Known how the real word problems governed by the first order differential equations.

UNIT-I: Differential Calculus-I:

Polar curves: angle between the radius vector and tangent, angle of intersection of polar curves. Pedal equation for polar curves. Curvature and radius of curvature in pedal form. (Without proof) **(5+5) Hrs.**

UNIT – II: Differential Calculus –II:

Partial differentiation: Partial derivatives, Total derivatives, differentiation of composite functions. Jacobians. **(6+6) Hours**

UNIT – III: Differential Calculus –III:

Taylor's and Maclaurin's series expansions for one variable (statement only).

Indeterminate forms L' Hospital Rule (without proof) (Only $\frac{0}{0}, \frac{\infty}{\infty}, 0 \times \infty \; and \; \infty - \infty \; form)$

(5+5) Hrs.

UNIT-IV: Vector Calculus:

Vector Differentiation: scalar and vector fields, Gradient, directional derivative, divergence, curl-physical interpretation; solenoidal and irrotational vector fields-illustrative problems. **(5+5) Hrs**.

UNIT-V: Differential Equations-I:

Solution of first order and first degree differential equations: Variable Separable, Linear differential equations and Exact differential equations. **(5+5) Hrs.**

1: Low association, 2: Moderate association, 3: High association

Course outcomes: After the completion of this course, students will be able to:

Apply the knowledge of calculus to solve problems related to polar curves and its applications in determining the amount of bending of the curve. **(L1& L2)**

1. Learn the notation of partial differentiation to calculate rates of change of multivariate functions and solve problems related to composite functions. **(L1& L2)**
2. Illustrate the applications of multivariate calculus to understand the characteristics of vector field. 4.
3. Understand how a function of single variable can be expanded as a Taylor's series and Handle the indeterminate form **(L1& L2)**
4. Apply the analytical methods to solve first order and first degree differential equations and solve some Engineering problems. **(L1& L2)**

IV Semester Syllabus

STATISTICS AND PROBABILITY FOR ENGINEERING

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	N4MATA			

Prerequisites: Engineering Mathematics-III

Course objectives:

1. To develop and conduct appropriate experimentation ,analyze and interpret data and use engineering judgment to draw conclusion.
2. To introduce the basic concepts and applications of probability in engineering .
3. To provide the knowledge about the random variable, random process and how to model the random processes in engineering.
4. To deal with multiple random variables and introduction of the most important types of stochastic processes.
5. To investigate the variability in sample statistics from sample to sample, measure of central tendency & dispersion of sample statistics and pattern of variability of sample.

UNIT-I : Statistics

Introduction, Definitions, Curve Fitting: Straight line, parabola and exponential curves. Correlation and regression, formula for correlation coefficient, regression lines and angle between the regression lines. **7 Hrs.**

UNIT-II : Probability

Basic terminology, Definition of probability, Probability and set notations, Addition law of probability, independent events, conditional probability, multiplication law of probability, Baye's theorem. **8 Hrs.**

UNIT-III :Random Variable

Discrete Probability distribution, Continuous Probability distribution, expectation, Variance, Binomial distribution, Poisson distribution, Normal distribution and Exponential distributions. **8 Hrs.**

UNIT-IV :Joint Probability

Joint probability distribution, Discrete and independent random variables, Expectation, Covariance, Correlation coefficient. Probability vectors, stochastic matrices, fixed point matrices, Regular stochastic matrices, Markov chains, Higher transition-probabilities, stationary distribution of regular Markov chains and absorbing states. **8 Hrs.**

UNIT-V: Sampling Distribution

Introduction, Objectives, sampling distribution, testing of hypothesis, level of significance, confidence limits, simple sampling of attributes, test of significance of large samples, comparison of large samples, sampling of variables, central limit theorem, confidence limits for unknown mean, test of significance for means of two large samples, Sampling of variables – small samples , Student's t-distribution. **8 Hrs.**

Textbooks:

Mapping of Course outcomes to Program outcomes

		PROGRAM OUTCOMES											
		1	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**
COs	CO1	**3**											
	CO2	**3**											
	CO3	**3**											
	CO4	**3**	1										
	CO5	**3**	1										

1: Low association, 2: Moderate association, 3: High association

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Apply least square method to fit a curve for the given data and evaluate the correlation coefficient and regression lines for the data (L3).

CO2: Analyse the nature of the events and hence determine the appropriate probabilities of the events (L3).

CO3: Classify the random variables to determine the appropriate probability distributions (L2).

CO4: Determine the joint probability distribution, its mean, variance and covariance. Calculate the transition matrix and fixed probability vector for a given Markov chain (L3).

CO5: Estimate the parameter of a population, important role of normal distribution as a sampling distribution (L2).

GEOINFORMATICS (Integrated Course)

Contact Hours/Week	:	3(L)+2(P)	Credits	:	4.0
Total Lecture Hours	:	39 + 26	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	N4CVI01	(Reduced to 60% Weightage)		

Course Objectives: In this course, the students will be taught to use the various surveying techniques/methods to measure directions/ angles, distances of lines, elevations, co-ordinates, direction of lines, land areas by conducting different surveys using Total Station and Levelling. Further, to evaluate data to set out geometrical figures, curves, coordinates of points, etc.

Unit-1

Introduction to Surveying - Objectives, primary division, classification, principles of surveying, India and adjacent countries (I&AC) maps and their numbering systems, principle of chain surveying, basic accessories, ranging out of survey lines, measurement of sloping distances by direct and indirect methods, offsets, types of errors, error due to incorrect length of chain, correction for sag, pull and temperature-problems, obstacles in chaining, cross staff survey for an irregular area-problems.

8 Hrs.

Unit-2

Levelling – Dumpy level and auto level: Parts, temporary adjustments; Types of levelling: Simple levelling, differential levelling, profile levelling – plotting of longitudinal and cross sectioning; Booking and reducing of levels by H.I. method and rise & fall methods - numerical problems; Levelling across obstacles, errors in levelling, effect of curvature and refraction.

Contouring – Contour interval, horizontal equivalent, characteristics of contours, uses of contour maps, methods of contouring - Direct and indirect method of squares. Calculation of area and volume of contours. **8 Hrs.**

Unit-3

Introduction to Total station survey - Independent coordinates, dependent coordinates, WGS 84 coordinate system, standard traverse format, closing error, balancing of a traverse by Bowditch's method, calculation of lat and long.

Total station - Components, capabilities, advantages, different applications of total station (REM, stake out, area, missing line measurement, Z co-ordinates, measurement of coordinates of points, temporary adjustments at a station point, orientation to North and subsequent stations, resection, traversing around a building and its plotting (manually), column marking for a building. **8 Hrs.**

Unit-4

Curve Surveying – Elements of a simple curve, setting out simple curve by Rankine's method of deflection angles, problems on curve setting.

Transition Curves - General requirements, advantages, ideal transition curve, types of transition curves, length of transition curve. **7 Hrs.**

Unit-5

Advanced survey techniques and Modern survey equipments –

LiDAR: Geo-referencing and GCP's accuracy indices, role of DGPS in establishing precise GCP, Physics of Laser, characteristics, range measurement, Air borne Altimetric LiDAR, Topographic and Bathymetric LiDAR, data processing, classifications from LiDAR data.

Drone: Introduction to unmanned aerial vehicles, selection of hardware, different UAV models, limitations and applications, construction Laser and its applications, Concept of DEM (Digital Elevation Modelling) and its applications. **8 Hrs.**

Course Outcomes (COs): After studying the course, the student will be able to:

CO1: Identify and solve the engineering problems involving the determination of distances and areas by applying suitable corrections using basic principles of surveying; read international map series and numbering system.

CO2: Identify the given field data and record in an appropriate format; to determine the reduced levels of points for further engineering applications; to describe the generation of contour maps and their characteristics.

CO3: Describe the field procedure to set out building columns, traversing of building and other miscellaneous operations (MLM, REM, areas, etc.) using Total station.

CO4: Compute the necessary deflection angles by Rankine's method to set out simple and transition curves for roads/ railway routes using total station.

CO5: Using the principles of survey apply the advanced survey technologies and equipment's (such as LiDAR) for accurate survey works.

LABORATORY COMPONENT

Course Objectives: In this course, students will learn to use survey instruments like Chain, Ranging rod, Dumpy level, Auto level and Total station in the field to measure the directions/angles of lines, distances and elevations of points/objects in the field.

Title of Experiments:

1. **Conventional Instruments:** Ranging out a survey line and measuring its horizontal length.
2. **Levelling:** Measurement of elevation of points by simple levelling with reference to the given benchmark.
3. **Levelling:** Profile leveling – Plotting of longitudinal and cross sections.
4. **Total station:** Study of total station, parts and adjustments, setting up of instrument over a station.
5. **Total station:** Orientation with reference to north, measurement of horizontal distances, sloping distances, horizontal angles in angular measuring mode.
6. **Total station:** Orientation of total station to subsequent stations.
7. **Total station:** Setting of a simple curve using Total station.
8. **Total station:** Conducting block levelling for a given area and measuring NEZ coordinates of ground points.
9. **Total station:** Locating column positions for a given building plan in the field.
10. **Total station:** Determining the remote elevation of an object, Area of parcel of land.
11. **Total station:** Miscellaneous Exercises - Z coordinates, Staking out, MLM measurement.
12. **Demonstration of LiDAR and DGPS**

Course Outcomes: After the completion of the course, the student will be able to:
CO1: Using basic principles of surveying, range a survey line and measure its distance.
CO2: Determine the elevation of points with respect to given benchmark, conduct profile levelling survey for a stretch of land using level and plotting longitudinal and cross sections for engineering applications.
CO3: Establish column positions, conduct block leveling for an area, determine remote elevation, etc. by using Total station.
CO4: Work effectively as a member in a team and contribute to the team's goals.

CONCRETE TECHNOLOGY
(Integrated Course)

Contact Hours/Week	:	3(L) +2(P)	Credits	:	4.0
Total Lecture Hours	:	39 + 26	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	N4CVI02	Reduced to 60% weightage		

Course objectives: The objectives of the course are to enable the students:

- Classify different types of concrete ingredients and identify their important characteristics and evaluate conformity of any set of given ingredients to relevant standards.
- Explain the factors affecting workability of concrete and procedures for evaluation of workability and the role of admixtures.
- Explain the factors affecting the strength of concrete and decide the types of destructive/ non-destructive tests to be conducted for assessing the strength of structures in service.
- Compute concrete performance parameters, given the basic properties, and analyze and check the conformity of properties of a given concrete to relevant standards.
- Design concrete mix for the required strength with available concrete materials considering exposure conditions for various engineering materials.
- Explain the applications of different types of special concrete as per structural and functional requirements.

Unit-1

Concrete Ingredients:

Cement: Introduction, Types of cement, Grades of cement, Chemical composition, Hydration of cement, Tests on cement, Fineness, Normal consistency, setting time, soundness, Specific gravity, Compression strength of cement, Field and Laboratory tests on cement.

Fine Aggregates: Natural and Msand, Tests on Fine Aggregates - Specific gravity, bulking, moisture content, grading of fine aggregates, silt content.

Coarse Aggregates: Grading of aggregates, specific gravity, Flakiness and elongation index, crushing, impact and abrasion tests.

Deleterious materials, water analysis. Cement certification and rejection. **7L Hrs.**

Unit-2

Fresh concrete: Process of manufacture of concrete: Batching, Mixing, Transporting, Placing, Compaction, Curing.

Workability- Factors affecting workability, Measurement of workability - slump, flow tests, Compaction factor and Vee-bee consistometer tests, Segregation and Bleeding.

Admixtures: Chemical admixtures- plasticizers, accelerators, retarders and air entraining agents. Mineral admixtures - Fly ash, Silica fumes and rice husk ash.

8L Hrs.

Unit-3

Hardened concrete: Factors affecting strength, w/c ratio, gel/space ratio, maturity concept, Effect of aggregate properties, relation between compressive strength and tensile strength, bond strength, modulus of rupture, gain of strength with age, accelerated curing, aggregate-cement bond strength.
Testing of hardened concrete - compressive strength, Tensile strength, Flexural strength.

Non-Destructive testing of in-situ fresh concrete. Inspection - Testing of fresh concrete. Acceptance testing of hardened concrete. **8L Hrs.**

Unit-4

Elasticity-Relation between modulus of elasticity and strength, factors affecting modulus of elasticity, Poisson ratio Shrinkage-Plastic shrinkage and drying shrinkage, factors affecting shrinkage.
Creep - Factors affecting creep.
Durability - Definition, significance, permeability, sulphate attack. Chloride attack, carbonation, freezing and thawing. **8L Hrs.**

Unit-5

Concrete Mix Design: Concept of Mix design, variables in proportioning exposure conditions, Procedure of mix design as per IS 10262-2019. Numerical examples of Mix design.

Importance of Special Concrete, Types–Lightweight concrete, High Density Concrete, High Strength Concrete, High Performance Concrete, (Constituents and properties only).
Importance of Special Concrete, Types–Lightweight concrete, High Density Concrete, High Strength Concrete, High Performance Concrete, (Constituents and properties only).
8L Hrs.

LABORATORY COMPONENT

Course Objectives: The objectives of the integrated lab component of the course are.

- To enable the students to conduct tests on cement.
- To perform tests fine and coarse aggregates.
- To perform tests on fresh and hardened concrete.
- To perform the Non-destructive test on concrete.

Title of Experiments:

Tests on cement.

- Fineness and specific gravity
- Normal consistency, Initial & Final setting

Tests on fine aggregates.

- Fineness modulus
- Bulking of sand & silt content

Tests on coarse aggregates.

- Grain size
- Specific gravity and water absorption
- Elongation & flakiness index

Tests on fresh concrete.

- Test on workability (Slump/Compaction faction factor/Vee-Bee consistometer/flow table)

Tests on hardened concrete.

- Compressive strength
- Split tensile strength
- Flexural strength
- Concert Mix Design as per IS10262.

Non-destructive tests on concrete.

- Rebound hammer test
- Ultrasonic pulse velocity test

Textbooks:

1	M.S. Shetty	Concrete Technology, S.Chand & Company Ltd., 2006 ISBN-10 : 9788121900034, ISBN-13 : 978-8121900034

Reference Books:

1	A.M.Neville, J.J.Brooks	Concrete Technology, 2nd Ed., 2010, John Wiley & Sons, Inc. ISBN-10 : 0273732196, ISBN-13 : 978-0273732198
2	P.Kumar Mehta and Paulo J.M.Monterio	Concrete: Microstructure, Properties, and Materials, McGraw Hill Education; 4 edition (2017) ISBN-10 : 933920476X ISBN-13 : 978-9339204761

Course Outcomes (COs) : After the completion of the course, the student will be able to:

CO1: Classify different types of concrete ingredients and identify their important characteristics and evaluate the degree of conformity of given concrete ingredient to relevant standards.

CO2: Using the knowledge about workability and related issues of concrete, design the procedures for evaluation of workability of the mix with and without superplasticizers.

CO3: Using the knowledge on short term strength and long term strength decide on the types of evaluative tests to be destructive or non-destructive to be conducted for assessment of the strength of concrete structures in service.

CO4: Apply the knowledge on concrete, determine concrete performance parameters, analyze and check the conformity of properties of the same in conformity with the relevant code guidelines.

CO5: Design concrete mix for the required strength with available concrete materials considering exposure conditions for various engineering materials.

CO6: Decide on appropriate type of special concrete as per the given structural and functional requirements.

ANALYSIS OF DETERMINATE STRUCTURES
(Professional Core Course)

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	N4CV01			

Course objectives: The objectives of the course are to enable the students:
To introduce the students to analysis of determinate structures by different methods to find SF, BM and deflection at various location. The principles of analysis of rolling roads on determinate structures, arches and cables.

Prerequisites: 1. Strength of Materials
2. Engineering Mechanics

Unit-1

Forms of structures, one-two-three dimensional structural systems, conditions of equilibrium, Determinate and indeterminate structures, degrees of freedom, linear and nonlinear structures, simple and compound systems.

Columns and Struts-Introduction- Modes of failure of a column, Euler's theory, Ideal end condition and effective length, slenderness ratio, limitations of Euler's theory. Determination of buckling load using Euler's theory. Limitations of Euler's theory, Rankine's formula–(without derivation, Secant formula without derivation), IS code formula as per IS-800- their significance, Problems. **8 hrs.**

Unit-2

Moment Area method for prismatic beams, over hanging beams and cantilever beams subjected to concentrated loads, UDL, UVL, Couple. Slope and deflection in beams by Double integration method.

Slope and Deflection in beams by Conjugate beam method

Introduction, conjugate beam theorems, determination of deflection in cantilever, simply supported, overhanging beams. **8 hrs.**

Unit-3

Slope and deflection by Energy method. Strain energy and complimentary strain energy, strain energy due to axial load, bending and shear, Theorem of minimum potential energy, law of conservation of energy, Castigliano's theorems. Slope and Deflection in beams by unit load method for cantilever, simply supported, overhanging beams of uniform and non-uniform c/s, rigid frames, deflection in determinate trusses. **8hrs.**

Unit-4

Moving loads- Introduction, determination of maximum SF and BM at a section for point load, two-point load, several point loads, UDL and absolute maximum values for

determinate beams. **7 hrs.**

Unit-5

Arches and cables. Introduction, types of arches, three hinged parabolic and circular arches with supports at same level and different levels, determination of normal thrust, radial shear and bending moment.

Analysis of cables under Concentrated loads and UDL - forces in main cable, anchor cable, forces on piers, length of cables with supports at same level and at different levels. **8 hrs.**

Content beyond Syllabus: Analysis of semicircular arches and cable stayed bridges.

Text Books:

POs	Course Outcomes (COs) The student will be able to;	Correlation to PO
2	CO1: Identify and classify different types of structural systems, support conditions, and determine static indeterminacy and degrees of freedom. To determine the buckling load for columns.	L
2	CO2: Determine the slope and deflection in determinate beams, using moment area method, and conjugate beam method.	M
2	CO3: Determine the deflection in beams, rigid frames and trusses using energy/unit load method.	M
2	CO4: Evaluate the SF, and BM variations for different positions of rolling loads in the form of single point load/two-point loads /UDL.	M
2	CO5: Use principles of geometry and stability to analyze three hinged arches of parabolic, and circular profile to determine the shear, normal thrust, bending moment at different sections. Apply the principles of engineering mechanics to determine tension in cables, anchor cable, forces on the pier.	M

BIOLOGY FOR ENGINEERS

Contact Hours/ Week	: 2(L)	Credits :	2.0
Total Lecture Hours	: 0	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50
Course Code	: N4CCA01		

Course Objectives:

1. To familiarize the students with the basic biological concepts and their engineering applications.
2. To enable the students with an understanding of bio-design principles to create novel devices and structures.
3. To provide the students an appreciation of how biological systems can be re-designed as substitute products for natural systems.
4. To motivate the students develop the interdisciplinary vision of biological engineering.

General Instructions for Teaching-Learning

These are sample Strategies, which teacher can use to accelerate the attainment of the various course outcomes.

- Explanation via real life problem, situation modelling, and deliberation of solutions, hands-on sessions, reflective and questioning /inquiry-based teaching.
- Instructions with interactions in classroom lectures (physical/hybrid).
- Use of ICT tools, including YouTube videos, related MOOCs, AR/VR/MR tools.
- Flipped classroom sessions (~10% of the classes).
- Industrial visits, Guests talks and competitions for learning beyond the syllabus.
- Students' participation through audio-video based content creation for the syllabus (as assignments).
- Use of gamification tools (in both physical/hybrid classes) for creative learning outcomes.
- Students' seminars (in solo or group) /oral presentations.

Unit 1

BIOMOLECULES AND THEIR APPLICATIONS

Carbohydrates (cellulose-based water filters, PHA and PLA as bioplastics), Nucleic acids (DNA Vaccine for Rabies and RNA vaccines for Covid19, Forensics – DNA fingerprinting), Proteins (Proteins as food – whey protein and meat analogs, Plant based proteins), lipids (biodiesel, cleaning agents/detergents), Enzymes (glucose-oxidase in biosensors, ligninolytic enzyme in bio-bleaching).

5 Hrs.

Unit 2

HUMAN ORGAN SYSTEMS AND BIO DESIGNS - 1

Brain as a CPU system (architecture, CNS and Peripheral Nervous System, signal transmission, EEG, Robotic arms for prosthetics. Engineering solutions for Parkinson's disease). Eye as a Camera system (architecture of rod and cone cells, optical corrections, cataract, lens materials, bionic eye).Heart as a pump system (architecture, electrical signaling - ECG monitoring and heart related issues, reasons for blockages of blood vessels, design of stents, pace makers, defibrillators).

5 Hrs.

Unit 3

HUMAN ORGAN SYSTEMS AND BIO-DESIGNS - 2

Lungs as purification system (architecture, gas exchange mechanisms, spirometry, abnormal lung physiology - COPD, Ventilators, Heart-lung machine).Kidney as a filtration system (architecture, mechanism of filtration, CKD, dialysis systems). Muscular and Skeletal Systems as scaffolds (architecture, mechanisms, bioengineering solutions for muscular dystrophy and osteoporosis).

5 Hrs.

Unit 4

NATURE-BIOINSPIRED MATERIALS AND MECHANISMS

Echolocation (ultrasonography, sonars), Photosynthesis (photovoltaic cells, bionic leaf). Bird flying (GPS and aircrafts), Lotus leaf effect (Super hydrophobic and self-cleaning surfaces), Plant burrs (Velcro), Shark skin (Friction reducing swim suits), Kingfisher beak (Bullet train). Human Blood substitutes - hemoglobin-based oxygen carriers (HBOCs) and perfluorocarbons (PFCs).

5 Hrs.

Unit 5

TRENDS IN BIOENGINEERING

Bio-printing techniques and materials, 3D printing of ear, bone and skin. 3D printed foods. Electrical tongue and electrical nose in food science, DNA origami and Biocomputing, Bio-imaging and Artificial Intelligence for disease diagnosis. Self- healing Bio-concrete (based on bacillus spores, calcium lactate nutrients and bio-mineralization processes) and Bio-remediation and Bio-mining via microbial surface adsorption (removal of heavy metals like Lead, Cadmium, Mercury, Arsenic).

6 Hrs.

Course Outcomes

At the end of the course the student will be able to:

CO1: Elucidate the basic biological concepts via relevant industrial applications and case studies.

CO2: Evaluate the principles of design and development, for exploring novel bioengineering projects.

CO3: Corroborate the concepts of bio-mimetics for specific requirements.

CO4: Explore innovative bio-based solutions for socially relevant problems.

Evaluation Pattern

Two Tests of 50 marks each and 90 minutes duration

SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.

SEE: Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)

HYDRAULICS AND HYDRAULIC MACHINES LABORATORY

Credits: 1	CIE Marks	:	50
Lab hours/week: 2	SEE Marks	:	50
Total lab hours: 26			
Course Code: N4CVL01			

Course Objectives: The student is equipped to conduct various tests on notches, flumes, weirs, venturimeter, and carry out their calibration, determine friction factors, losses, and hydraulic coefficients of various hydraulics appurtenances and evaluate the performance of different types of hydraulic machinery such as orifices, turbines, etc.

Title of Experiments

1. Calibration of V-notch.
2. Calibration of rectangular or Trapezoidal notch.
3. Calibration of Broad crested weir.
4. Calibration of Venturi flume.
5. Calibration of Venturi meter.
6. Determination of Darcy's friction factor for a straight pipe.
7. Determination of minor loss constants (Bend, Sudden contraction, Sudden expansion).
8. Impact of Jet on Vanes.
9. Determination of hydraulic coefficient of a vertical orifice.
10. Performance tests on Pelton wheel turbine.
11. Performance tests on Francis turbine.

Course Outcomes (COs) : After the completion of this course, the student will be able to:

CO1: Apply the basic principles of fluid mechanics and hydraulics determine the coefficient of discharge in open channels, pipes and orifices. Analyze, interpret and comment on the test results.
CO2: Using the knowledge of flow through pipes determine the head losses in pipes, and pipe fittings. Analyze the variation in coefficients with respect to Reynold's number, interpret the results and comment on the validity.
CO3: Apply the mechanics of hydraulic machines to determine the characteristics of turbines. Analyze and interpret the results with respect to their efficiency and performance.
CO4: Participate fully as a team member in conducting experiments.

ಬಳಕೆ ಕನ್ನಡ

Balake Kannada (Kannada for Usage)

Contact Hours/ Week	: 2 (T)	Credit :	1.0
Total Lecture Hours	: 0	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50
Course Code	: NSH01		

Course Learning Objectives:

- To create the awareness regarding the necessity of learning local language for comfortable and healthy life.
- To enable learners to Listen and understand the Kannada language properly.
- To speak, read and write Kannada language as per requirement.
- To train the learners for correct and polite conservation.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. ಬಳಕೆ ಕನ್ನಡವನ್ನು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಬೋಧಿಸಲು ವಿಟಿಯು ಸೂಚಿಸಿರುವ ಪಠ್ಯಪುಸ್ತಕಗಳನ್ನು ಉಪಯೋಗಿಸಬೇಕು.
2. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಉತ್ತೇಜಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.
3. ಪ್ರತಿ ವಿದ್ಯಾರ್ಥಿ ಪುಸ್ತಕವನ್ನು ತರಗತಿಯಲ್ಲಿ ಬಳಸುವಂತೆ ನೋಡಿಕೊಳ್ಳುವುದು ಮತ್ತು ಪ್ರತಿ ಪಾಠ ಮತ್ತು ಪ್ರವಚನಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟಂತೆ ಪೂರಕ ಚಟುವಟಿಕೆಗಳಿಗೆ ತೊಡಗಿಸತಕ್ಕದ್ದು.
4. ಡಿಜಿಟಲ್ ತಂತ್ರಜ್ಞಾನದ ಮುಖಾಂತರ ಇತ್ತೀಚೆಗೆ ಡಿಜಿಟಲೀಕರಣಗೊಂಡಿರುವ ಭಾಷೆ ಕಲಿಕೆಯ ವಿಧಾನಗಳನ್ನು ಪಿಪಿಟಿ ಮತ್ತು ದೃಶ್ಯ ಮಾಧ್ಯಮದ ಮುಖಾಂತರ ಚರ್ಚಿಸಲು ಕ್ರಮ ಕೈಗೊಳ್ಳುವುದು. ಇದರಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ತರಗತಿಯಲ್ಲಿ ಹೆಚ್ಚು ಏಕಾಗ್ರತೆಯಿಂದ ಪಾಠ ಕೇಳಲು ಮತ್ತು ಅಧ್ಯಯನದಲ್ಲಿ ತೊಡಗಲು ಅನುಕೂಲವಾಗುತ್ತದೆ.
5. ಭಾಷಾ ಕಲಿಕೆಯ ಪ್ರಯೋಗಾಲಯದ ಮುಖಾಂತರ ಬಹುಬೇಗ ಕನ್ನಡ ಭಾಷೆಯನ್ನು ಕಲಿಯಲು ಅನುಕೂಲವಾಗುವಂತೆ ಕಾರ್ಯಚಟುವಟಿಕೆಗಳನ್ನು ಮತ್ತು ಕ್ರಿಯಾ ಯೋಜನೆಗಳನ್ನು ರೂಪಿಸುವುದು.

Unit 1 (5 Hours):

1. Introduction, Necessity of learning a local language. Methods to learn the Kannada language.

2. Easy learning of a Kannada Language: A few tips. Hints for correct and polite conservation, Listening and Speaking Activities
3. Key to Transcription.
4. **ವೈಯಕ್ತಿಕ ಸ್ವಾಮ್ಯಸೂಚಕ/ಸಂಬಂಧಿತ ಸರ್ವನಾಮಗಳು ಮತ್ತು** ಪ್ರಶ್ನಾರ್ಥಕ **ಪದಗಳು** - Personal Pronouns, Possessive Forms, Interrogative words

Unit 2 (4 Hours):

1. **ನಾಮಪದಗಳ** ಸಂಬಂಧಾರ್ಥಕ **ರೂಪಗಳು, ಸಂದೇಹಾಸ್ಪದ ಪ್ರಶ್ನೆಗಳು ಮತ್ತು ಸಂಬಂಧವಾಚಕ ನಾಮಪದಗಳು** - Possessive forms of nouns, dubitive question and Relative nouns.
2. **ಗುಣ, ಪರಿಮಾಣ ಮತ್ತು** ವರ್ಣಬಣ್ಣ **ವಿಶೇಷಣಗಳು, ಸಂಖ್ಯಾವಾಚಕಗಳು** Qualitative, Quantitative and Colour Adjectives, Numerals
3. ಕಾರಕ ರೂಪಗಳು ಮತ್ತು ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು – ಸಪ್ತಮಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯ – (ಆ, ಅದು, ಅವು, ಅಲ್ಲಿ) Predictive Forms, Locative Case

Unit 3 (5 Hours):

1. ಚತುರ್ಥಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯದ ಬಳಕೆ ಮತ್ತು ಸಂಖ್ಯಾವಾಚಕಗಳು – Dative Cases, and Numerals
2. ಸಂಖ್ಯಾಗುಣವಾಚಕಗಳು ಮತ್ತು ಬಹುವಚನ ನಾಮರೂಪಗಳು – Ordinal numerals and Plural markers
3. ನ್ಯೂನ/ನಿಷೇಧಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು ಮತ್ತು ವರ್ಣ ಗುಣವಾಚಕಗಳು – Defective / Negative Verbs and Colour Adjectives

Unit 4 (6 Hours):

1. ಅಪ್ಪಣೆ/ಒಪ್ಪಿಗೆ, ನಿರ್ದೇಶನ, ಪ್ರೋತ್ಸಾಹ ಮತ್ತು ಒತ್ತಾಯ ಅರ್ಥರೂಪ ಪದಗಳು ಮತ್ತು ವಾಕ್ಯಗಳು Permission, Commands, encouraging and Urging words (Imperative words and sentences)
2. ಸಾಮಾನ್ಯ ಸಂಭಾಷಣೆಗಳಲ್ಲಿ ದ್ವಿತೀಯ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ಸಂಭವನೀಯ ಪ್ರಕಾರಗಳು Accusative Cases and Potential Forms used in General Communication
3. 'ಇರು ಮತ್ತು ಇರಲ್ಲ' ಸಹಾಯಕ ಕ್ರಿಯಾಪದಗಳು, ಸಂಭಾವ್ಯಸೂಚಕ ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು – Helping Verbs; "iru and iralla", Corresponding Future and Negation Verbs
4. ಹೋಲಿಕೆ (ತರ–ತಮ), ಸಂಬಂಧ ಸೂಚಕ ಮತ್ತು ವಸ್ತು ಸೂಚಕ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಪದಗಳ ಬಳಕೆ – Comparative, Relationship, Identification and Negation Words

Unit 5 (6 Hours):

1. ಕಾಲ ಮತ್ತು ಸಮಯದ ಹಾಗೂ ಕ್ರಿಯಾಪದಗಳ ವಿವಿಧ ಪ್ರಕಾರಗಳು – Different types of forms of Tense, Time and Verbs
2. –ದ್, –ತ್, –ತು, –ಇತು, –ಆಗಿ, –ಅಲ್ಲ, –ಗ್, –ಕ್, ಇದೆ, ಕ್ರಿಯಾ ಪ್ರತ್ಯಯಗಳೊಂದಿಗೆ ಭೂತ, ಭವಿಷ್ಯತ್ ಮತ್ತು ವರ್ತಮಾನ ಕಾಲ ವಾಕ್ಯ ರಚನೆ. Formation of Past, Future and Present Tense Sentences with Verb Forms
3. Kannada Vocabulary List: ಸಂಭಾಷಣೆಯಲ್ಲಿ ದಿನೋಪಯೋಗಿ ಕನ್ನಡ ಪದಗಳು – Kannada Words in Conversation.

ಬಳಕೆ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಅನುಕೂಲಗಳು ಮತ್ತು ಫಲಿತಾಂಶಗಳು:

(Course Outcomes):

At the end of the Course, The Students will be able,

1. To understand the necessity of learning of local language for comfortable life.
2. To Listen and understand the Kannada language properly.
3. To speak, read and write Kannada language as per requirement.
4. To communicate (converse) in Kannada language in their daily life with Kannada speakers.
5. To speak in polite conservation.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration

SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯ ಉದ್ದೇಶಗಳು:

೧. ವೃತ್ತಿಪರ ಪದವಿ ವಿದ್ಯಾರ್ಥಿಗಳಾಗಿರುವುದರಿಂದ ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.

೨. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಪ್ರಧಾನ ಭಾಗವಾದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳನ್ನು ಸಾಂಕೇತಿಕವಾಗಿ ಪರಿಚಯಿಸಿ ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ ಸಾಹಿತ್ಯ ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಅರಿವು ಹಾಗೂ ಆಸಕ್ತಿಯನ್ನು ಮೂಡಿಸುವುದು.

೩. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವನ್ನು ಹಾಗೂ ಅವರುಗಳು ಸಾಧಿಸಿದ ವಿಷಯಗಳನ್ನು ಪರಿಚಯಿಸುವುದು.

೪. ಕನ್ನಡ ಶಬ್ದ ಸಂಪತ್ತಿನ ಪರಿಚಯ ಮತ್ತು ಕನ್ನಡ ಭಾಷೆಯ ಬಳಕೆ ಹಾಗೂ ಕನ್ನಡದಲ್ಲಿ ಪತ್ರ ವ್ಯವಹಾರವನ್ನು ತಿಳಿಸಿಕೊಡುವುದು.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

೧. ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡವನ್ನು ಬೋಧಿಸಲು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಪ್ರಸ್ತುತ ಪುಸ್ತಕ ಆಧರಿಸಿ ಬ್ಲಾಕ್ ಬೋರ್ಡ್ ವಿಧಾನವನ್ನು ಅನುಸರಿಸುವುದು. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಪ್ರೇರೇಪಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.

೨. ಇತ್ತೀಚಿನ ತಂತ್ರಜ್ಞಾನದ ಅನುಕೂಲಗಳನ್ನು ಬಳಸಿಕೊಳ್ಳುವುದು – ಅಂದರೆ ಕವಿ–ಕಾವ್ಯ ಪರಿಚಯದಲ್ಲಿ ಕವಿಗಳ ಚಿತ್ರಣ ಮತ್ತು ಲೇಖನಗಳು ಮತ್ತು ಕಥೆಕಾವ್ಯಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟ ಧ್ವನಿ ಚಿತ್ರಗಳು, ಸಂಭಾಷಣೆಗಳು, ಈಗಾಗಲೇ ಇತರ ವಿಮರ್ಶಕರು ಬರೆದಿರುವ ವಿಮರ್ಶಾತ್ಮಕ ವಿಷಯಗಳನ್ನು ಪಿಪಿಟಿ, ಡಿಜಿಟಲ್ ಮಾಧ್ಯಮಗಳ ಮುಖಾಂತರ ವಿಶ್ಲೇಷಿಸುವುದು.

೩. ನವೀನ ಮಾದರಿಯ ಸಾಹಿತ್ಯ ಬೋಧನೆಗೆ ಸಂಬಂಧಪಟ್ಟ ವಿಧಾನಗಳನ್ನು ಶಿಕ್ಷಕರು ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಅನುಕೂಲವಾಗುವ ರೀತಿಯಲ್ಲಿ ಅಳವಡಿಸಿಕೊಳ್ಳಬಹುದು.

ಘಟಕ ೧: ಲೇಖನಗಳು (6 hours)

೧. ಕರ್ನಾಟಕ ಸಂಸ್ಕೃತಿ – ಹಂ.ಪ. ನಾಗರಾಜಯ್ಯ

೨. ಕರ್ನಾಟಕ ಏಕೀಕರಣ : ಒಂದು ಅಪೂವ ಚರಿತ್ರೆ – ಜಿ. ವೆಂಕಟಸುಬ್ಬಯ್ಯ

೩. ಆಡಳಿತ ಭಾಷೆಯಾಗಿ ಕನ್ನಡ – ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ ಮತ್ತು ಪ್ರೊ. ವಿ. ಕೇಶವಮೂರ್ತಿ

ಘಟಕ ೨: ಆಧುನಿಕ ಪೂರ್ವದ ಕಾವ್ಯ ಭಾಗ **(5 hours)**

೧. ವಚನಗಳು: ಬಸವಣ್ಣ, ಅಕ್ಕಮಹಾದೇವಿ, ಅಲ್ಲಮಪ್ರಭು, ಆಯ್ದಕ್ಕಿ ಮಾರಯ್ಯ, ಜೇಡರದಾಸಿಮಯ್ಯ, ಆಯ್ದಕ್ಕಿ ಲಕ್ಕಮ್ಮ

೨. ಕೀರ್ತನೆಗಳು: ಅದರಿಂದೇನೂ ಫಲ ಇದರಿಂದೇನು ಫಲ – ಪುರಂದರದಾಸರು

ತಲ್ಲಣಿಸದಿರು ಕಂಡ್ಯ ತಾಳು ಮನವೇ – ಕನಕದಾಸರು

೩. ತತ್ವಪದಗಳು: ಸಾವಿರ ಕೊಡಗಳ ಸುಟ್ಟು – ಶಿಶುನಾಳ ಶರೀಫ

ಘಟಕ ೩: ಆಧುನಿಕ ಕಾವ್ಯ ಭಾಗ **(6 hours)**

೧. ಡಿ.ವಿ.ಜಿ. ರವರ ಮಂಕುತಿಮ್ಮನ ಕಗ್ಗದಿಂದ ಆಯ್ದ ಕೆಲವು ಭಾಗಗಳು

೨. ಕುರುಡು ಕಾಂಚಾಣ: ದ.ರಾ. ಬೇಂದ್ರೆ

೩. ಹೊಸಬಾಳಿನ ಗೀತೆ: ಕುವೆಂಪು

ಘಟಕ ೪: ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯ **(5 hours)**

೧. ಡಾ. ಸರ್ ಎಂ. ವಿಶ್ವೇಶ್ವರಯ್ಯ : ವ್ಯಕ್ತಿ ಮತ್ತು ಐತಿಹ್ಯ – ಎ.ಎನ್. ಮೂರ್ತಿರಾವ್

೨. ಕರಕುಶಲ ಕಲೆಗಳು ಮತ್ತು ಪರಂಪರೆಯ ವಿಜ್ಞಾನ : ಕರೀಗೌಡ ಬೀಚನಹಳ್ಳಿ

ಘಟಕ ೫: ಕಥೆ ಮತ್ತು ಪ್ರವಾಸ ಕಥನ **(4 hours)**

೧. ಯುಗಾದಿ : ವಸುಧೇಂದ್ರ

೨. ಮೆಗಾನೆ ಎಂಬ ಗಿರಿಜನ ಪರ್ವತ : ಹಿ.ಚಿ. ಬೋರಲಿಂಗಯ್ಯ

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಪರಿಣಾಮಗಳು (Course Outcomes):

೧. ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯವಾಗುತ್ತದೆ.

೨. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳು ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಆಸಕ್ತಿಯು ಮೂಡುತ್ತದೆ.

೩. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

೪. ಕನ್ನಡ ಭಾಷಾಭ್ಯಾಸ, ಸಾಮಾನ್ಯ ಕನ್ನಡ ಹಾಗೂ ಆಡಳಿತ ಕನ್ನಡದ ಪದಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration
SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.

SEE: Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal

choice. (Total seven questions)

TEXT BOOKS:

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ – ಡಾ. ಹಿ.ಚಿ. ಬೋರಲಿಂಗಯ್ಯ ಮತ್ತು ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

CONSTITUTION OF INDIA AND PROFESSIONAL ETHICS

Contact Hours/ Week	: 2 (T)	Credits :	1.0
Total Lecture Hours	: 0	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50
Course Code	: NSH03		

Course Objectives:

- To introduce the students to the basic structure, fundamental rights and duties enshrined in the constitution of India.
- To introduce to the system of governance at the centre and the states.
- To enlighten the students about the method of amendment to the constitution and special provisions of constitution.
- To enable the students to imbibe ethical practices and moral values.
- To learn from the life story of leaders such as Sir M Visvesvaraya.

Part I: Constitution of India

Unit 1: Introduction to Constitution of India

Salient Features of Indian Constitution, Preamble to the Indian Constitution, Different kinds of fundamental rights, Directive Principles of State Policy, Categorical study of Directive Principles, Relationship between DPSP and Fundamental Rights, Fundamental Duties. Meaning and kinds of human rights and safeguards.

06 Hrs.

Unit 2: Union and State Governments

Union and State Legislature: Composition and powers of Loksabha, Rajyasabha, Legislative Assembly and Legislative Council. Union and State Executive: The appointment and powers of President, Vice-president, Prime-Minister, Union Council of Ministers, Governor of State, Chief Minister of State and State Council of Ministers. Union and State Judiciary: The Composition and powers of Supreme Court and High Court.

07 Hrs.

Unit 3: Other Provisions of Constitution

Method of amendment of constitution of India, 42nd and 44th amendment act. Special provisions relating to SC / ST, Women and Children and other backward classes. Electoral process related to the Election Commission of India: Composition, functioning and removal of the Election Commissioner(s).
Human Rights: Meaning, Kinds and Safeguard of Human Rights, State Human Rights Commission and National Human Rights Commission.

05 Hrs.

Part II -Professional Ethics

Unit 4: Professional Ethics and Human Values

Introduction, What is Ethics? Scope of Professional Ethics, Values and Characteristics, Types of values: Negative and positive values, Ethical values for Professional success. ***Case Studies*:** Ethical practices of the reputed Indian Companies: TATA Group, Wipro Technologies.

4 Hrs.

Unit 5: Professional Code of Conduct

Introduction, Professional Code, Legal System, Ethical and Unethical practices, Making the Professional Code successful. Ethical values of Sir M. Visvesvaraya, Mahatma Gandhi and Swami Vivekananda.

4 Hrs.

Course Outcomes: On successful completion of the course, the student will be able:

CO1: To orient students on the salient features of the Indian Constitution with special emphasis on fundamental rights and duties.
CO2: To provide an overview of the Union and State legislature, executive and judiciary.
CO3: To explain the importance of electoral process and help students appreciate the ethical practices in elections.
CO4: To facilitate the students to have a clear perspective of the Ethical values and their relevance in the present context of globalization.
CO5: To enable the students familiarize themselves with the ethical values proposed and practiced by the great leaders / eminent personalities with particular reference to Sir M. Visvesvaraya.

TEXT BOOKS:

1. M Rajaram – 'V.T.U Constitution of India and Professional Ethics'.
2. Dr. Kaveriswamy – 'V.T.U Constitution of India and Professional Ethics'.
3. J N Pandey – 'Constitutional Law of India', 49th Ed., 2012, Central Law Agency Publishing, 2016 ISBN: 978-9384852412
4. S G Hunderker (Ed.) - 'Business Ethics and Human Values', Excel Books, New Delhi, 2009, ISBN-978-8174467386

REFERENCE BOOKS:

1. M.V. Pylee – 'Constitution of India', 5th Ed., Vikas Publishing House, New Delhi.

5. Swami Vivekananda- "My India: The India Eternal" – Ramakrishna Mission Institute of Culture, Kolkata, 1993.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration
SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.

SEE: Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)

ADVANCED TECHNICAL TRAINING LAB IN PYTHON

Contact Hours/Week	:	03	Credits	:	1.0
Total Lecture Hours	:	36	CIE Marks	:	50
Total Tutorial Hours	:	NIL	SEE Marks	:	50
Course Code	:	N4CCA02			

Course learning objectives (CLO):

At the end of the course the student should be able to:

1. Build the logic for a given problem statement by using algorithms using fundamental concepts of the Programming Language Python such as conditional statements, looping constructs, division, mod operations and string manipulation.
2. Implement the Data Structures such as Arrays, Dictionary, Queues, Lists, and Tuples using Python Programming language.
3. Implement File operations such as opening, reading, writing and closing.
4. Understanding the OOPS concepts such as classes, Objects, Inheritance & Polymorphism

Course Outcomes:

Upon successful completion of this course, the student should be able to:

1. Design and develop solutions for particular programming problems using the fundamental conceptsof Python Programming.
2. Implement different data structures like Arrays, Dictionary, Queues, Lists and Tuples.
3. Implement File operation like Open, close reading & writing the file
4. Understand the Object Oriented Concepts like Classes, Objects, Inheritance and Polymorphism

#	*Modules Covered*	*Duration in hrs.*
1	Fundamentals of Python Programming, IO & Operators	04
2	Control Statements, Decision Making, Iterations	06
3	String & String Manipulations	02
4	Data Structures	14
5	Functions	02

6	Fie Operations	02	
7	Python OOPs Concepts	06	
8	Total Course Duration	16 Hours of Lecture	20 Hours of Practise

CIE: 50 Marks

- Students are accessed every week for 35 marks.
- Evaluation includes Problem Analysis, Program Writing and Executing Programs in the Lab (10+15+10).
- Two tests are conducted for 15 marks each.
- Marks distribution (50 Marks) = Average of weekly assessments (35 Marks) + Average of two tests (15 Marks)

SEE: 50Marks

- There are 20 programs in the list divided into two parts A & B, students have to pick one program eachfrom the Part A & Part B
- Both the parts carry equal weightage.
- The evaluation includes Program Write-up + Analysis + Program Execution + Viva (10 + 10 + 20 + 10 =50 Marks)
- Change of the experiment is allowed only once in the first half an hour of the exam and in such cases the evaluation will be done for 80% of the Marks

Topics Covered

1. Introduction to Programming
   A. History
   B. Features
   C. Setting up Path
   D. Compilation
   E. Data types
   F. Variables

2. Working with IO & Operators
   A. Declaration, Input – Output
   B. Arithmetic Operator
   C. Relational Operators
   D. Assignment Operators
   E. Logical Operators
   F. Membership Operators
   G. Identity Operators
   H. Bitwise Operators

I. Multi- line Statements
J. Comment Line

3. Decision Making
a. Need of Decision Making and Syntax
b. If
c. If-else
d. Nested if
e. If-else if

4. Iterations
a. For Loop
b. While Loop
c. Nested Loops

5. Control Statements
a. Break
b. Continue
c. Pass

6. String
a. Creating a String
b. Memory Allocation
c. Built Functions in String

7. List
a.Creating List
b.Accessing Elements in List
c.Negative Accessing Elements in List
d.Slicing in List
e. Built Functions in List

8. Tuple
a. Creating Tuples
b. Immutable
c. Accessing values in Tuple
d. Slicing in Tuple
e. Built Functions in List

9. Dictionary
a. Creating a Dictionary with Integer Key, Mixed Key, dict(), Pair element, nested Dictionary.
b. Adding Element to Dictionary
c. Accessing Element in Dictionary
d. Built Functions in Dictionary

10. Set
a. Creating a Set and Built Functions in Set

11. Function
a. Syntax of Function
b. With Argument With return type.
c. With Argument without return type
d. Without Argument with return type

e. Without Argument without return type
f. Predefined, User defined, Anonymous Functions
g. Scope of variables.

12. File Operations
a. Open & Close File
b. Read & Write operations

13. Python OOPS Concepts
a. Classes & Objects
b. Inheritance
c. Encapsulation
d. Polymorphism
i. Method Overloading
ii. Method Over Riding
e. Data Abstraction
f. Methods

Advanced Technical Training Lab in C , Data Structure , C++

Contact Hours/Week	:	03	Credits	:	1.0
Total Lecture Hours	:	36	CIE Marks	:	50
Total Tutorial Hours	:	NIL	SEE Marks	:	50
Course Code	:	N4CESL1			

Course learning objectives (CLO):

At the end of the course the student should be able to:

1. Build the logic for a given problem statement by using algorithms using fundamental concepts of the Programming Language C such as conditional statements, looping constructs, division, mod operations and string manipulation.
2. Implement the Data Structures such as Stacks, Queues, Lists, and Trees using C Programming language.
3. Implement the fundamental concepts of Object Oriented Programming Concepts, such as Classes, Objects, Abstraction, Encapsulation, Polymorphism, Constructors, Over Loading and Over Riding.

Course Outcomes:

Upon successful completion of this course, the student should be able to:

1.Design and develop solutions for particular programming problems using the fundamental concepts of C Programming.

2.Implement different data structures like Stacks and Queues using static and dynamic memory allocation

techniques.

3.Design & Implement Object oriented concepts of C++ programming such as Classes, Objects, Inheritance, polymorphism for a given problem statement.

#	*Modules Covered*	*Duration in hrs.*	
1	C Programming	15	
2	Data Structures	15	
3	C++ Programming	06	
	Total Course Duration	16 Hours of Lecture	20 Hours of Practise

CIE: 50 Marks

- Students are accessed every week for 35 marks.
- Evaluation includes Problem Analysis, Program Writing and Executing Programs in the Lab (10 + 15+ 10).
- Two tests are conducted for 15 marks each.
- Marks distribution (50 Marks) = Average of weekly assessments (35 Marks) + Average of two tests (15 Marks)

SEE: 50 Marks

- There are 20 programs in the list divided into two parts A & B, students have to pick one program each from the Part A & Part B
- Both the parts carry equal weightage.
- Evaluation includes Program Write-up + Analysis + Program Execution + Viva (10 + 10 + 20 + 10 = 50 Marks)
- Change of Experiment is allowed once in a first half an hour and in such cases evaluation is done for 80% of the Marks

Topics Covered

1. Structure of a 'C' Program
   a. Main Function
   b. Input & Output
   c. C Tokens
2. Keyword and Identifiers
3. Operators
4. Variables
5. Control Statements
   a. Conditional Statements
      - If

- If-else
- Simple
- Nested
- Multiple
- switch

b. Looping Statements

- while
- do-while
- for

6. Arrays
   - Single Dimensional
   - Two Dimensional
   - String as Character Arrays

7. Functions and Recursive Functions
8. Pointers
9. Structures and Unions
10. Enumerations
11. Files

12. Introduction to Data Structures
    a. Space Complexity
    b. Time Complexity
13. Classification of data structures
    a. Linear Data structures
    b. Non-Linear Data Structures
14. Array Versus Linked List
15. Linked List
    a. Single Linked List
    b. Double Linked List
    c. Circular Linked List
16. Stack
    a. Push
    b. Pop
17. Queue
    a. Enqueue
    b. Dequeue
18. Searching Techniques
    a. Linear Search
    b. Binary Search
19. Sorting Techniques
    a. Bubble Sort
    b. Insertion Sort
    c. Selection Sort
    d. Merge Sort

e. Quick Sort

20. Tree
    a. Pre-Order
    b. In-Order
    c. Post-Order
21. Graph
    a. DFS
    b. BFS

22. Introduction to Object Oriented Programming and C++
23. Difference between C and C++
24. C++ Programming Structures and Input/output Functions
25. OOPS Concepts
    a. Class and Object
    b. Abstraction
    c. Encapsulation
    d. Inheritance
    e. Polymorphism
26. Implementation of the OOPS Concepts.

INTRADEPARTMENTAL INTERNSHIP I

Detailed syllabus for **Value added Course**
Functional Programming in C
(With special reference to solving Engineering Mechanics problems)
Course contributor: Dr.M A Jayaram

Objectives:

- To understand the concept of functional programming.
- To promote thinking of intent rather than algorithmic steps.
- To understand pure functions of returning and non-returning functions.

1	Developing generic functions to find support reactions	7.5 hours
Cantilever beams Simply supported beams Single and double overhanging beams		
2.	Developing generic functions to find centroid of sections	7.5 hours
T- section Asymmetrical I – sections (asymmetrical) L -shaped sections Channel sections		
3	Developing generic functions to find moment of inertia, and least radius of gyration	7.5 hours

T- section Symmetrical and asymmetrical I section L shaped sections Channel sections

Course outcomes

After the completion of this value-added course student will be able to

- CO1: Develop functions that are generic to solve problems related to support reactions, locating centroid, and finding moment of inertia.
- CO2: Able to garner the skills to develop the skills required to write object-oriented programs using OOP languages like C++ and Python.

References:

1. M A Jayaram, Manual on functional programming using C, Department of Civil Engg.
2. Pieter Hartel , Henk Muller, Functional C, Sixth edition, Peter and Henk publishing, 1999.

Detailed schedule of Value Added Course Functional Programming in C

1	Writing generic functions for finding reactions in cantilever beams
2	Writing generic functions for finding reactions in SSBs subjected to multiple concentrated loads
3	Writing generic functions for finding reactions in SSBs subjected to multiple concentrated loads and udl.
4	Writing generic functions for finding reactions for single overhanging beams subjected to multiple concentrated loads and udl.
5	Writing generic functions for finding reactions for double overhanging beams subjected to multiple concentrated loads and udl.
6	Writing generic functions for finding location of centroid forT-sections.
7	Writing generic functions for finding location of centroid for asymmetrical I- sections.
8	Writing generic functions for finding location of centroid for L - sections.
9	Writing generic functions for finding location of centroid in channel sections.
10	Writing generic functions for finding location of centroid in asymmetric sections.
11	Writing generic functions for finding MI and least radius of gyration for T-section

12	Writing generic functions for finding MI and least radius of gyration for I-section
13	Writing generic functions for finding MI and least radius of gyration for L-section
14	Writing generic functions for finding MI and least radius of gyration for channel sections.
15	Internal test.

Detailed Schedule of Generic Life Skills Course Excel

Sl No	Topics	Sub Topics
1	Introduction to Microsoft Excel	Why Should we Learn Microsoft Excel? & Use of ribbon
2	Important Excel shortcuts	Ctrl + P used to open the print dialogue window Ctrl + N creates a new workbook Ctrl + S saves the current workbook Ctrl + C copy contents of current select Ctrl + V paste data from the clipboard SHIFT + F3 displays the function insert dialog window SHIFT + F11 Creates a new worksheet F2 Check formula and cell range covered Etc....
3	MS Excel Basics	Excel- Home Excel - Getting Started Excel - Explore Window Excel - Backstage Excel - Entering Values Excel - Move Around Excel - Save Workbook Excel - Create Worksheet

		Excel - Copy Worksheet Excel - Hiding Worksheet Excel - Delete Worksheet Excel - Close Workbook Excel - Open Workbook Excel - Context Help
4	Editing Worksheet	Excel - Insert Data Excel - Select Data Excel - Delete Data Excel - Move Data Excel - Rows & Columns Excel - Copy & Paste Excel - Find & Replace Excel - Spell Check Excel - Zoom In-Out Excel - Special Symbols
5	Formatting Cells	Excel - Setting Cell Type Excel - Setting Fonts Excel - Text Decoration Excel - Rotate Cells Excel - Setting Colors Excel - Text Alignments Excel - Merge & Wrap Excel - Borders and Shades Excel - Apply Formatting
6	Formatting Worksheets	Excel - Sheet Options Excel - Adjust Margins Excel - Page Orientation Excel - Header and Footer Excel - Insert Page Breaks Excel - Set Background Excel - Freeze Panes Excel - Conditional Format
7	Working with Formula	Excel - Creating Formulas Excel - Copying Formulas Excel - Formula Reference Excel - Using Functions Excel - Builtin Functions
8	Advanced Operations	Excel - Data Filtering Excel - Data Sorting Excel - Using Ranges Excel - Data Validation Excel - Using Styles Excel - Using Themes Excel - Using Templates
9	Dashboards	Bar Graphs,Pie Charts,Line Etcs
10	Google Tools	Googles sheets, Google docs,etc
11	Excel to Google Sheets	
12	How to use Google sheets	
13	practice session	
14	practice session	

15	practice session	

Detailed Syllabus of Bridge Course
LaTeX for Engineering Students & Introduction to GIS Mapping

About this course:
Explore a new way of writing and typesetting articles, books, papers, etc. using a document preparation system called LaTeX. LaTeX, a document preparation system, is widely used for publishing in many scientific fields like mathematics, statistics, computer science, engineering, chemistry, physics, economics, linguistics, etc. It is a powerful and open-source system that provides numerous facilities for automating typesetting of the document: i.e., structuring page layout, listing and auto-numbering of sections, tables, figures, generating a table of contents, managing cross-referencing, and citing. This course introduces the basic concepts of LaTeX. Participants taking this course will be able to create and design documents in LaTeX with confidence.

***Subject*:** Engineering

***Level*:** Introductory

***Prerequisites*:** There are no prerequisites for this course, except knowledge of editing text. The course can be taken by any learner who wants to create documents using LaTeX.

Syllabus:

Topic 1: Introduction

This topic introduces the learner to LaTeX, its installation. The learner creates the first document using LaTeX, organizes content into sections using different class files of LaTeX. Basic Typesetting in Latex.

Topic 2: Styling Pages

In this topic, the session starts by reviewing different paper sizes, examines packages, formats the page by setting margins, customizing header and footer, changing the page orientation, dividing the document into multiple columns. The topic ends with reading different types of error messages.

Topic 3: Formatting Content

This topic concentrates on formatting text (styles, size, alignment), adding colors to text and entire page, and adding bullets and numbered items. It concludes by explaining the process of writing complex mathematical equations. Include maths within text. Non-inline mathematical equations.

Topic 4: Tables and Images

The topic starts by creating basic tables, adding simple and dashed borders, merging rows and columns, and handling situations where a table exceeds the size of a page. Formatting table; captions, labels, centring. The sessions then continue to add an image, explore different properties like rotate, scale, etc. Modifying size and alignment of the image.

Topic 5: Referencing and Indexing

In this topic, the learner learns to add cross-referencing (refer to sections, table, images), add bibliography (references), and create back index. Lastly know how to use Tikz to draw figures in LaTeX.

Detailed Schedule of Bridge Course
LaTeX for Engineering Students & Introduction to GIS Mapping

1	Introduction to LaTeX. Install LaTeX and a writing environment to create Latex documents.
2	Understanding Latex compilation, Basic Syntax, Writing equations, Matrix, Tables.
3	Reviewing different paper sizes, examine packages, format the page by setting margins, customizing header and footer, changing the page orientation, dividing the document into multiple columns.
4	Page Layout – Titles, Abstract Chapters, Sections, References, Equation references, citation. List making environments, Table of contents, generating new commands, Figure handling, numbering, List of figures, List of tables, Generating index.
5	Applications to: Writing Resume, official letter writing.
6	Applications to: Writing articles/ research papers, use Tikz to draw figures in LaTeX.
7	Assignment on LaTeX
8	Fundamental concepts that underlie GIS technology and geographic data, using GIS maps to visualize and explore real-world features and analyze data
9	Spatial data: working with tables. Vector data, Raster data. Representing real-world objects. Prepare a web map.
10	Map components. Identify effective map elements. Exercise: Use QGIS for mapping and visualization. Explore layout elements. Visualize map layers
11	Adjusting the size and type of sheet. Inserting elements: north, scale bar, numeric scale, map legend. Including other elements: images, graphs and tables.
12	Adding several data frameworks, Creation and use of templates. Printing options
13	Hands-on exercises using QGIS for mapping application.
14	Assignment on generation of watershed map using QGIS.
15	Internal test.

FOUNDATIONS OF ENGINEERING MATHEMATICS-II
(FOR LATERAL ENTRY STUDENTS)

Contact Hours/Week	:	2(L)+2(T)	Credits	:	0
Total Lecture Hours	:	26	CIE Marks	:	100
Total Tutorial Hours	:	26	SEE Marks	:	00
Course Code	:	N4MATDP			

Prerequisites: Basics in differential calculus, Integral calculus and vectors.

Course Learning Objectives: This course will facilitate the students with concrete foundation of ordinary differential equations, Laplace transforms, Integral calculus and numerical methods enabling them to acquire the knowledge of these mathematical tools.

Course objectives: This course will enable students to:

1. Solve second and higher order differential equations.
2. Find the Laplace transform of the function f(t).
3. Find the Inverse Laplace transform of the function F(s).
4. Apply the knowledge of numerical methods in the models of various physical and engineering phenomena.
5. Solve the integral by using standard integrals (Beta and Gamma) and multiple integrals.

Course outcomes: After the completion of this course, students will be able to:

1. Explain various physical models through higher order differential equations and solve such linear ordinary differential equations. **(L1& L2)**
2. Understand the concept of Laplace transform and obtain Laplace transform of periodic functions and unit step functions. **(L1& L2)**
3. Apply the concept of Laplace transform in solving Linear Differential equations. **(L1& L2)**
4. Apply the Numerical methods to solve Algebraic and transcendental equations and find the polynomials by finite difference method. **(L1& L2)**
5. Apply the concept of to evaluate multiple integrals and Beta and Gamma functions **(L1& L2)**

UNIT-I: Linear Differential Equations:

Solution of second and higher order equations with constant coefficients by inverse differential operator method, method of variation of parameters. **(6+6) Hrs.**

UNIT – II: Laplace Transform:

Definition, Transforms of elementary functions, properties of Laplace Transform, Laplace Transform of $e^{at} f(t)$, $t^n f(t)$, $\frac{f(t)}{t}$, derivatives and Laplace Transform of Periodic functions'. **(5+5) Hrs.**

UNIT-III: Inverse Laplace Transform:

Inverse Laplace Transform, Convolution theorem (without proof) and problems Applications –Solution of Linear differential equations using Laplace Transform.

(5+5) Hrs.

UNIT-IV: Elementary Numerical Methods

Finite differences. Interpolation/extrapolation using Newton's forward and backward difference formulae, Newton's divided difference and Lagrange's formulae (All formulae without proof). Solution of polynomial and transcendental equations - Newton-Raphson method (only formula) – Illustrative examples. **(5+5) Hrs.**

UNIT-V: Integral Calculus:

Multiple integrals –Evaluation of double and triple Integrals, **Beta and Gamma functions:** Definition, relation between Beta and Gamma functions and simple problems. **(5+5) Hrs.**

SCHEME & SYLLABUS

OF

V & VI SEMESTERS

B.E. CIVIL ENGINEERING

2022-23

Vision of the Department of Civil Engineering

To become a premier Civil Engineering Department offering excellent engineering education in design methods and advanced technologies to the students, to pursue research in thrust areas and to offer professional services to the society.

Mission of the Department of Civil Engineering

The Department is committed to develop competent professionals by offering need based curriculum in Civil Engineering areas, promoting research and innovation to prepare the students for higher study, life-long learning and societal responsibility. The department is also committed to provide good learning environment to develop professional ethics and skills in our students and to provide engineering services to the society.

Programme Educational Objectives of Civil Engineering

PEO#1	Graduates of the program will practice Engineering profession as competent professionals applying fundamentals, state-of-the-art knowledge and technical skills. ***[Theme: Practice Engineering profession as competent professionals]***
PEO#2	Graduates of the program will excel in higher education with life-long learning. ***[Theme: Higher education and life-long learning]***
PEO#3	Graduates of the program will exhibit leadership qualities, communication skills and team spirit. ***[Theme: Communication and team work]***
PEO#4	Graduates of the program will contribute to societal needs with ethical attitude. ***[Theme: Initiated to Society and ethical practice]***

Programme Outcomes of Civil Engineering

The following list of program outcomes describes what graduates are expected to know and be able to do at the time of graduation. Graduates will have:

PSO#1	An ability to conduct standardized field testing on civil engineering materials, interpret experimental data and provide conclusions. Demonstrate the construction of masonry, reinforcement fabrication for beams columns, slabs, etc., electrical wiring, assembling of water supply and sanitary layouts, application of painting and welding of joints. *[Short title: CE Field experiments and demonstration].*
PSO#2	An ability to estimate material quantities, cost estimates, prepare specifications, produce engineering drawings by conducting appropriate survey works and 3D modeling of systems/components using modern tools for technical projects *[Short title: CE technical reports and 3D modeling].*
PSO#3	Able to perform analysis and design in at least three to four of the technical areas appropriate to Civil Engineering. *[Short title: CE Technical areas].*

PROGRAM OUTCOMES (POs)

Engineering Graduates will be able to:

1.**Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work:** Function effectively as an individual; and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

MANAGEMENT AND ENTREPRENEURSHIP

Contact Hours/Week	:	3 (L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	HSS06			

Course Objectives: This course will enable students to:

1. Understand the principles and functions of management.
2. Analyze the importance of planning, organizing, staffing, leading and controlling organization.
3. Understand and manage engineering design and quality
4. Inculcate entrepreneurial qualities and understand the need of rural entrepreneurship
5. Acquire knowledge about funding agencies, understand procedure in applying for funds and analyze the cases of successful entrepreneurs

Unit I

Introduction to Management: Definition of management, management skills, productivity and effectiveness, efficiency, functions and principles of management.

Planning: Nature of planning, types of plans- purpose of vision, mission, goals, objectives strategies, policies; steps in planning, MBO, Strategic planning

Organizing: Formal and informal organization, span of management, the structure and Process of organizing, Organizational structure: line and staff organization, Functional organization, matrix organization. **8 Hrs**.

Unit II

Staffing: Definition, systems approach to HRM, factors affecting staffing, recruitment and selection, job design, skill and characteristics of a manager, selection process and techniques.

Leading: Human factors in managing, motivation, Theory X and Y, the hierarchy of needs theory, leadership behaviour and styles.

Controlling: Basic control process, critical control points and standards, Benchmarking requirements for effective control. **9 Hrs**.

UNIT - III

Managing Engineering Design and Development: Product and Technology Life Cycles, Nature of Research and Development, Research Strategy and organization, Nature of Engineering Design, Systems Engineering / New Product Development.

Managing Production/Operations: Types of production processes, Forecasting, Work measurement, Maintenance and Facilities (Plant) Engineering, Total Quality Management, Lean Manufacturing

Engineers in Marketing and service activities: Marketing and the Engineer, Engineers in Service organizations. **8 Hrs**.

UNIT – IV

Entrepreneur & Entrepreneurship: Introduction, concept of Entrepreneur, characteristics of an entrepreneur, and qualities of an entrepreneur, functions of an entrepreneur, characteristics of entrepreneurship, factors affecting entrepreneurial growth. Entrepreneurship and economic development-rural, woman and social entrepreneurship

Financing and Institutional Support for Entrepreneurship: Startups, business plans, venture capitalists, angel investors, funding agencies - commercial banks, development banks, NBFCS and incubation centres. Innovations and project trends. **8 Hrs.**

UNIT – V

Taxation benefits: Depreciation allowances, rehabilitation allowance, investment allowance and other tax concession benefits to an entrepreneur.

2 Case Studies from Stay Hungry and Stay Foolish – Rashmi Bansal, IIM Ahmedabad:

1) Success story of naukri.com by Sanjeev Bikhchandani
2) Success story of Make My Trip by Deep Kalra

6 Hrs.

Course Outcomes: After the completion of this course, students will be able to:

CO1: Explain various functions of management (L2).

CO2: Apply the knowledge of management principles and strategies in various functional areas. (L3).

CO3: Manage engineering design and product development (L3).

CO4: Describe entrepreneurship, its characteristics, and benefits and identify various funding sources for starting a business venture (L3).

CO5: Explain various taxation benefits enjoyed by an entrepreneur and analyze the characteristics and strategies adopted by successful entrepreneurs. (L2 & L3)

GEOTECHNICAL ENGINEERING-I

Contact Hours/Week	:	3 + 2 (L+T)	Credits	:	4.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Course Code	:	5RCV01			

Course Objectives: This course will enable students to:

1. Understand basic concepts of soil mechanics and an exposure to the mechanical behaviour of soils.
2. Gain knowledge on index properties, soil structure, hydraulic conductivity, compaction, strength and compressibility behaviour of soil system

Unit 1

Index properties of soils: Phase systems and inter-relationships, Index properties of soils and their laboratory determination, Grain size analysis-mechanical and sedimentation analysis, Consistency limits-Definitions, significance and determination of liquid, plastic & shrinkage limits.

11+2 Hrs.

Unit 2

Classification of soils: Unified and IS soil classifications.

Clay mineralogy: Clay minerals & their structures, clay water, diffuse double layer, adsorbed water, ion-exchange capacity.

Compaction: General principles, standard proctor test, factors affecting compaction, modified proctor test, structures of compacted cohesive soil, effect of compaction on cohesive soil properties, field compaction, specifications for field compaction, special compaction techniques.

11+2 Hrs.

Unit 3

Effective stress: Concept of effective stress, effective stress in partially saturated and saturated soil without seepage, capillary rise in soils, effective stress in capillary zone, quick sand condition.

Flow of water in soil: Hydraulic gradient, Darcy's law, limitations, Assumptions and Seepage velocity, coefficient of permeability, factors affecting permeability, laboratory determination of coefficient of permeability, equivalent permeability in stratified soil, field permeability tests.

10+3 Hrs.

Unit 4

Compressibility of soil: Fundamentals of consolidation (Spring–Mass analogy), Terzaghi 1D consolidation theory, 1D laboratory consolidation test, void ratio–pressure, determination of consolidation characteristics (compression index, coefficient of consolidation; determination of coefficient of consolidation by square root of time fitting method and logarithmic time fitting method). Normally consolidated and over consolidated soils, determination of pre-consolidation pressure. **10+3 Hrs**.

Unit V

Shear strength of soil: Concept of shear strength, Mohr–Coulomb failure criteria, determination of shear strength parameters for soils in the laboratory by direct shear test (UU, CU and CD tests) and unconfined compression test (for

saturated clay), Vane shear test, sensitivity & thixotropy.

10+3 Hrs.

TEXT BOOKS:

1	Gopal Ranjan & ASR Rao	Basic and Applied Soil Mechanics, New Age International publishers (Revised 2nd Ed.) ISBN-13 : 978-8122412239, ISBN-10 : 8122412238

REFERENCE BOOKS:

1	VNS Murthy	Geotechnical Engineering: Principles and Practices of Soil Mechanics and Foundation Engineering, CRC Press, 2002 ISBN: 1482275856, ISBN: 9781482275858
2	B C Punmia, Ashok Kumar Jain and Arun Kumar Jain	Soil Mechanics and Foundations, Laxmi Publications Pvt. Ltd., New Delhi, 2005, 16th Edition ISBN 10: 8170087910, ISBN 13: 9788170087915
3	Muniram Budhu	Soil Mechanics and Foundations, Wiley India Pvt. Ltd., 2010. 3rd Edition. ISBN: 978-0-470-55684-9

Course Outcomes: After the completion of this course, students will be able to:

1. Determine the index properties of soil using inter-relationships of soil phase system, soil composition by mechanical and sedimentation analysis and consistency limits and other indices
2. Classify soils in accordance with different soil classification methods and identify the suitability for civil engineering applications using grain size and consistency limits data.
3. Describe the atomic structure of clay minerals, soil-water relations, soil structure and fabric and their influence on engineering behaviour.
4. Evaluate the compaction characteristics of soils by standard laboratory methods. Specifications for quality control from field tests, identify the suitability of compaction equipment based on soil type for field compaction.
5. Determine the hydraulic conductivity of soils based on the principles of Darcy's law using laboratory permeability and field pumping tests and compute equivalent permeability of stratified soils.
6. Apply the Terzaghi's one dimensional consolidation theory for laboratory one dimensional test data to determine one dimensional consolidation characteristics and use the information for determining the primary consolidation settlement in saturated cohesive soil. In addition they would be able to analyze the consolidation data to determine the consolidation state of soils.
7. Apply the Mohr-Coulomb failure concepts to determine the shear strength parameters from various laboratory shear tests under different drainage conditions.

ANALYSIS OF INDETERMINATE STRUCTURES

Contact Hours/Week	:	3 + 2 (L+T)	Credits	:	4.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Course Code	:	5RCV02			

Course Objectives: This course will enable students to:
Gain knowledge on Analysis of indeterminate structures such as continuous beams, rigid frames, redundant trusses, arches under different loading and boundary conditions and to graphically represent BM and SF values by using various methods starting from traditional methods, Strain energy methods to matrix methods.

Unit 1

Analysis by Slope Deflection method and Two hinged arches

Analyse continuous beams, single storey non-sway and sway frames using Slope deflection method and analyse 2-hinged
Arches - Introduction, Development of slope deflection equation, Assumptions. Analysis of continuous beams with and without sinking of supports by SD method. Analysis of Rigid frames with and without sway by SD method. Analysis of two hinged parabolic arches. **11 + 3 Hrs**.

Unit 2

Analysis by Strain energy method

Analyse statically indeterminate beams and rigid frames, redundant trusses up to 2nd degree by strain energy method-unit load method - Introduction to strain energy method, Castigliano's II theorem, Unit load method. Analysis of continuous beams and rigid frames up to redundancy of 2, Analysis of redundant trusses (up to 2nd degree). Lack of fit in and temperature stresses in trusses. **11 + 3 Hrs.**

Unit 3

Analysis of beams and rigid frames using Kani's method

Analyse continuous beams, rigid frames using Kani's method - Stiffness factor, Distribution factor, Carry-over factor, Rotation factor. Analysis of continuous beams with and without sinking, Analysis of rigid frames without sway, symmetrical frames, unsymmetrical rigid frames.

10 + 2 Hrs.

Unit 4

Flexibility matrix method

Analyse continuous beams and rigid jointed plane frames with static indeterminacy up to 3 using flexibility matrix method. Introduction to matrix methods, types, local and global axis and co-ordinates, Derivation of flexibility matrix equation, Flexibility coefficient matrix. Analysis of continuous beams and rigid jointed plane frames with static indeterminacy up to 3 using system approach. **10 + 2 Hrs.**

Unit 5

Stiffness matrix method

Analyse continuous beams and rigid jointed plane frames with kinematic indeterminacy up to 3 using stiffness matrix method. Introduction, Derivation of

stiffness matrix equation, stiffness coefficients. Analysis of continuous beams and rigid jointed plane frames with kinematic indeterminacy up to 3 using system approach. **10 + 3 Hrs**.

TEXT BOOKS:

1	R.C.Hibbeler	Structural Analysis, Pearson Education; Ninth edition, ISBN-13: 9780133942842

5	G S Pandit ,S P Gupta	Structural Analysis, McGraw-Hill Education; 2nd Edition, ISBN: 0070667357, ISBN:9780070667358

Course Outcomes: After the completion of this course, students will be able to:

CO1: Analyse continuous beams, single storey non-sway and sway frames using slope deflection method and analyse 2-hinged arches.
CO2: Analyse statically indeterminate beams and rigid frames, redundant Trusses upto 2nd degree by strain energy method-unit load method.
CO3: Analyse continuous beams, rigid frames using Kani's method.
CO4: Analyse continuous beams and rigid jointed plane frames with static in determinacy up to 3 using flexibility matrix method.
CO5: Analyse continuous beams and rigid jointed plane frames with Kinematic indeterminacy up to 3 using stiffness matrix method.
CO6: Use spread sheets/FEM softwares for the analysis of framed structures.

DESIGN OF REINFORCED CONCRETE STRUCTURES

Contact Hours/Week	:	3 +2 (L+T)	Credits	:	4.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Course Code	:	5RCV04			

Course Objectives:

The course introduces the students to the design of RC structural elements-Slabs, Beams, Columns, Footing and staircase as per relevant IS Codes, handbooks and equip the students to design the different elements of simple RC framed building.

Unit 1

Basic Design concepts – working stress method, load factor method – limit state method, different limit states – principle of limit state design, characteristic load. Characteristic strength, partial safety factors, stress-strain characteristics for concrete and steel importance of different limit states, importance of durability and specifications for different exposure conditions as per IS 456:2000. **8 + 2 Hrs.**

Unit 2

Introduction to stress block parameters for limit state of collapse and limit state of serviceability. Ultimate flexural strength of Singly and doubly reinforced rectangular sections, (determination of moment of resistance for a given area of steel and grade of concrete, determination of stresses in concrete and steel for a given bending moment). Deflection and cracking – code provision, deflection control in design. Limit state design of beams – Design of rectangular sections (singly and doubly reinforced)- design for shear strength in concrete beams, types and design of shear reinforcement, Check for anchorage and development length as per IS 456:2000.

Practice: AUTO CAD detailing and preparation of Bar bending schedule for rectangular beams. **10 + 3 Hrs.**

Unit 3

Ultimate flexural strength of T and L flanged beams. Design of T and L sections for flexure and shear. Torsional shear stress – reinforcement for torsion, calculation of short and long term deflection in beams.

Limit state design of slabs–One way and two way slabs for various boundary conditions.

Practice: AUTO CAD detailing as per SP34 and preparation of Bar bending schedule for slabs. **12 + 3 Hrs.**

Unit 4

Design of columns– Limit state design of axially loaded short R.C. column, design for uniaxial and biaxial compression bending, concept of interaction diagram and its preparation, use of SP16.

Design of footings– Different types of footings and their applications, design of isolated footing for axial load and uni-axial moment – square & rectangular footings

Practice: AUTO CAD detailing for column and footing as per SP34 and preparation of BBS. **12 + 3 Hrs.**

Unit 5

Design of staircases by limit state method- Design of stairs with waist slab spanning transversely and longitudinally.

Practice: AUTO CAD detailing of staircase as per SP34 and preparation of BBS.

10 + 2 Hrs.

Term Project: Analysis and design of G+2 framed building

Course Outcomes: After the completion of this course, students will be able to:

CO1: Explain the concept of limit state design.
CO2: Design singly reinforced and doubly reinforced beams.
CO3: Design one way and two way slabs.
CO4: Design compression member for axial loading and moments.
CO5: Design isolated footing for axial load and bending.
CO6: Design staircase.

AIR POLLUTION & CONTROL

Contact Hours/Week	:	3 (L)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	5RCVE11			

Course Objectives: This course will enable students to:

Learn History of air pollution; definition of air pollution and various types of sources and classification of air pollutants. Effects of gaseous and particulate air pollutants on humans, plants and materials; principles of air pollution control and various control equipments at source. Techniques and instrumentation of ambient air sampling, stack monitoring and experimental analysis of air gaseous and particulate air pollutants. Meteorological components, stability of atmosphere and corresponding plume shapes. Principles of air pollution control and various control equipments at source. Recent problems concerning with global warming, ozone hole, acid rains and smog formation. Standards and legislation, Environmental impact assessment in industrial plant locations and planning

Unit 1

Introduction, composition of air, Definition of air pollution, Classification of pollutants-natural contaminants, aerosols (particulate matter), dust, smoke mist fog and fumes. Gases and vapours

Primary and secondary pollutants. Smog-photo chemical and coal induced smog. Behavior and fate of air pollutants. wet removal, dry removal and chemical reactions in the atmosphere

Effect of air pollution on human health. Mechanism of action of air pollutants.

Effect of air pollution on animals due to fluorine, arsenic and lead.

Effect of air pollution on plants. Effect of air pollution on properties. **8 Hrs.**

Unit 2

Meteorological factors affecting air pollution- atmospheric stability and temperature inversions .Wind rose diagram.

Ambient air sampling, collection of gaseous pollutants. Grab samples, absorption in liquids, adsorption on solids.

Freezeout sampling, collection of particulate pollutants. Dustfall jar, high-volume filtration.

Tape sampler, Impringement Electrostatic precipitation

8 Hrs.

Unit 3

Control of gaseous contaminants-combustion, absorption and adsorption.

Control of air pollution by equipment-objectives of using control equipment, use of collector in series. Types of collecting equipment- settling chambers-advantages and applications

Inertial separators-principles, types-Baffle type, Louver type and dust traps.

Cyclone separator-advantages, disadvantages and applications

Filters-Fabric or cloth filters- Reverse jet filter- Envelope type fabric filter and multiple compartment type bag house.

Electrostatic precipitators. Scrubbers or wet collectors-spray towers, venture, cyclone, packed and mechanical scrubbers. **8 Hrs.**

Unit 4

Air pollution due to automobiles-Introduction, Exhaust emission, crank case emission and evaporative emission.

Control of exhaust emission-modification in engines, treatment of exhaust gas. Catalytic converters.

Control of evaporative emission and crank case emission. Alternate methods.

Acid rain, Acid rain formation, Effects of acid rain on soil, surface waters, human health, materials, plants and animals

Green house effect- Effects of global warming on Climate, sea level, Water resources, Vegetation, Human health, Human settlement and society, Energy, Clouds and water vapour. Reduction of green house gases **8 Hrs.**

Unit 5

Major air pollution episodes-Bhopal gas episode (1984), London smog (1952), Meuse valley (Belgium 1930), Donora(USA 1948),Poza Rica(Mexico 1950), Tokyo(1967)

Standards and legislation-The air (prevention and control of pollution) act 1981. Constitution of the board, functions of central and state board.

Ambient air quality standards, emission standards, penal provision act

Air pollution indices- Determination of index. Diaplay Dissemination technique

Legislation to control air pollution and industrial plant location - City planning-factors to be considered. **7 Hrs.**

TEXT BOOKS:

1.	M.N.Rao & H.V.N.Rao	Air Pollution, Tata Mc Graw Hill Publishing Company Ltd., 2007, ISBN-13: 9780074518717

Reference Books:

1	Anjaneyalu. Y	Air Pollution and control Technologies, Allied Publishers (P) Ltd., 2012., ISBN 9789387593435
2	Noel De nevers	Air Pollution Control Engineering, Waveland Press, Inc., 2017. ISBN: 1478629053, ISBN:9781478629054

Course Outcomes: After the completion of this course, students will be able to:

CO1: Explain the effect of air pollution on humans, animals, plants and Property.

CO2: Explain the methods of collecting air samples.

CO3: Explain the methods of controlling gaseous contaminants.

CO4: Describe the method of controlling air pollution due to automobiles, effect of acid rains and global warming.

CO5: Describe the major air pollution episodes, legislation to control air pollution and industrial plant location.

SUSTAINABLE MATERIALS & CONSTRUCTION TECHNOLOGY

Contact Hours/Week	:	3 (L)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	5RCVE12			

Course Objectives: This course will provide:
An exposure to the environmental concerns and GHG effects and the role of civil engineer in promoting sustainability by choice of construction materials and improvement of exiting material or construction methodologies

Unit 1

Introduction-Traditional building materials- production requirements, - natural resources, energy consumption, labour and processing cost, transportation cost, concept of embodied energy and embedded energy, carbon foot print and their computation.
Review of durability of materials and causes of deterioration, computation of service life. **7 Hrs.**
Self Study: Increase of durability by the use of high performance materials, protective coatings and membranes.

Unit-2

Concept of sustainability – holistic combination of social, economical and environmentally conducive growth and development of industry/ infrastructure/products. Issues of profitability, suitability and adaptability– critical assessment of sustainability parameters in respect of traditional and new building materials.
Importance of cement and concrete from sustainability perspective – increasing the efficiency of cement production using alternate fuels, using less water; lowering of the environmental impact of concrete- Reducing the water/binder ratio, increasing the service life of concrete structures using concretes having a lower cement content, high-performance concrete.
Energy efficient and eco-friendly binders and aggregates- cements, lime from sources other than lime stone, prospects of OPC and non-OPC binders and the concrete of tomorrow.
Synthetic and specially processed aggregates-manufactured sand, expanded clay, slate, or shale. Expanded BFS, SFA and CBFA, vermiculite, perlite, sawdust, EPS beads. **8 Hrs.**

Unit-3

Reinforcing steel-alloy steels, weathering steel, corrosion resistant bar, TMT bars, coated reinforcement, fusion bonded epoxy coated reinforcement, galvanized bars, stainless steels, high tensile cables, laminates.
Masonry- THERMAL COMFORT AND ENERGY CONSERVATION, AESTHETICS. Requirements of building blocks for walls, limitations of fired clay bricks and Improvements in clay bricks, feasibility of Laterite blocks, solid and hollow clay & concrete blocks, Stabilized mud blocks. **8 Hrs.**
Self Study: Fal-G Blocks, phosphogypsum, celcrete and aerated concrete block-production, advantages and disadvantages.

Unit-4

AFFORDABLE AND INNOVATIVE CONSTRUCTION TECHNIQUES and PROCESSES

Concepts, Why Innovate?, Filler slabs, Composite beam panel roofs, Masonry vaults and domes, composite roofs, Rat-trap bond wall, brick arches, Hollow core slabs, profile sheet roofing, foam concrete floors and wall panels, plate floors, ferro-cement roof unit in box and channel sections, precast lintels, precast building units, plastic doors, red mud plastic roofing sheets and panels with fiber reinforcement, rubber wood flush doors, bamboo mat reinforced corrugated roofing sheet, interlocking blocks. **8 Hrs.**

Field Visit: Visit to a residential/commercial apartment to study the materials and technologies and make an assessment of innovative measures adopted.

Unit-5

Cost effective SUSTAINABLE building design

Cost concepts in buildings- Cost saving techniques in planning, design and construction, transport of materials. Use of local materials, treatment/utility of unused wastes/remnants from construction activity, treatment and recycling of water, Rain Water Harvesting, life cycle Cost analysis: Case studies using alternatives. **8 Hrs.**

Field Visit: Visit to a residential/commercial apartment to study the materials and technologies and make an assessment of sustainability measures adopted.

9	J.l. Clarke Chapman and hall	Alternative Materials for the Reinforcement and Prestressing of Concrete, 1993 ISBN: 9780751400076

Course Outcomes: After the completion of this course, students will be able to:

CO1:Evaluate the usage of natural resources, compute the energy consumption and carbon foot print for various construction materials and products. Predict the service life of building materials and components.

CO2:Critically analyze the sustainable parameters in respect of traditional and new building materials and justify the usage of recycling of concrete. Compute the reduction in energy consumption and carbon foot print due to use of sustainable and recycled materials.

CO3:Compute the thermal comfort, energy conservation due to use of alternative building blocks and explain the improvement in aesthetics.

CO4:Identify affordable and innovative construction techniques and processes for building construction for different situations.

CO5:Identify cost effective and sustainable construction materials and techniques and their economic evaluation.

SAFETY MANAGEMENT IN CONSTRUCTION

Contact Hours/Week	:	3 (L)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	5RCVE13			

Course Objectives:

Construction involves inherent risk to life of workers and hazards. This course will provide an exposure about rules, and mandatory requirements about safety, compliance of safety measures during construction stage.

Unit 1

Introduction-Integration of safety, health and environment (SH & E), SH & E concept, safety in construction, She policy & planning, hazards, their identification, control & types. Safety programme, education and training.

Accident and their prevention: Introduction, cases of accidents, contributing factors, types, classification of accidents, according to the nature of work, severity, principal causes, preventive measures, safe workplace and working conditions, Types of fatigues, their elimination, safe materials handling, Personal protection devices

Safety, Health and Environment (SHE) Management: Introduction, safety policy, guiding principles, SHE targets and goals, contractor's SHE policy, safety objectives & implementation, objectives with targets and performance indications, SHE Planning, Initial SHE review, risk assessment and its control, legal and other requirements. **7 Hrs.**

Unit 2

Tools, Plants and other equipment : Introduction, safety on plants, screening and processing in aggregate mixing plant, asphalt mixing plants, concrete mixing (batching) plants, miscellaneous construction equipment, concrete vibrators, air compressors and air receivers, belt conveyors, cable ways, forklift trucks, hydraulic system, pile driving equipment, concrete pumps, aggregate production equipment (crushing plants), safety in use of tools, hand tools, pneumatic and power tools, jacks, drills

Safety in excavation work : Introduction, general safety provisions, excavation hazards and safety considerations & requirements, safe slopes, loose side material and minimum berm, excavations near adjacent structures, Protection of employees and public, use of plant and machinery, responsibilities of in-charge & workers, shoring, timbering, sheathing, wales, struts, stability of structure, safer practices, planning, investigations, material supply, fencing, separation of traffic, handling large diameter pipes, surface water and drainage, harmful gases, underground services, quarries, borrow areas etc. **8 Hrs.**

Unit 3

Explosives, Drilling and Blasting : Introduction, important terms and definitions, safety from explosives, precautions during storage, transportation, handling, use of explosives, their disposal, drilling, general precautions in loading, wiring, blasting, firing, use of safety fuse, precautions after blasting, Gases and flammable substances.

Safety in underground works : Introduction, underground excavation, tunnels, vertical / inclined shafts, caverns, safety responsibilities, safety in underground

excavation, drilling, explosive loading and blasting, Water handling, Drainage in tunnels, power house caverns, flooding of tunnels, Fire protection in underground, Safety for underground machinery, scaling and mucking, supporting the excavation, ventilation, concreting, grouting and guniting, electrical and lighting & miscellaneous precautions. **8 Hrs.**

Unit 4

Fall protection, structural framework and concreting: Introduction, fall protection, scaffold, platforms, gangways and runs, ladders, openings and dangerous corners, Structural framework, structural steel erection, Concreting, grouting, guniting and shotcreting.

Confined – space (including sewers) entry : Introduction, responsibilities, confined space entry procedures, pre-entry planning, work procedures, rescue procedures, rescue plans and procedures, permit required for confined spaces, sewer hazards, atmosphere in confined spaces, efficient ventilation, testing the atmosphere, protection from flammable atmosphere, isolation techniques, personal protective equipments (PPEs), general safety precautions

Safety in Materials handling and storage : Introduction, potential hazards, safe and efficient material handling, functions of materials handling, safety principles, Safe working conditions, good housekeeping, use of protection devices, extent of mechanization, manual handling, handling by equipment, types of material handling, storage and handling equipment, safety (protection) of stores, tips for safe and efficient storage in the projects, safety precautions for different materials, General provision in material handling. **8 Hrs.**

Unit 5

Safety in building construction and demolition, Introduction, general building regulations, components of a building, stairs and exits, earthquake proof construction, structural joints, fire resistant buildings, fire safety in public assembly buildings & multistory building, Demolition planning, precautions before demolition work, sequence of demolition and removal of materials, demolition of walls, partition etc., access to floor, mechanical demolition, general precaution in demolition

Electrical safety : Introduction, electrical injuries, planning the work, safety provisions related to owners, safety related to power transmission, high voltage distribution overhead, working around high voltage, mains and apparatus, portable lamps and appliances, electrical installations, fire, electric shock, inspection and maintenance, general safety precautions. **8 Hrs.**

TEXT BOOKS:

1.	S.C. Sharma Vineet Kumar	Safety, occupational Health and Environmental Management in Construction, 2013, Khanna Publishers ISBN-10 : 8174092706, ISBN-13 : 978-8174092700

Course Outcomes: After the completion of this course, students will be able to accident and :

CO1: Explain the principles of SHE management including hazards and accidents in construction.

CO2: Describe the safety measures in handling tools, plants and equipment in construction site, including safety in excavation.

CO3: Explain the risks in underground construction & use of explosives, preventive & safety measures to be observed during their execution.

CO4: Describe the safety practices in building construction, storage of materials and handling, safety precautions in civil works in confined spaces.

CO5: Describe the safety precautions in construction. Regulations, planning and precautions in demolition of structures including electrical safety practices

DESIGN OF HYDRAULIC STRUCTURES

Contact Hours/Week	:	3 (L)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	5RCVE14			

Course Objectives: This course will enable students to:
Learn the basics of Design of Hydraulic Structures which will help them to Analyze and design of gravity dams. Estimate the seepage loss, design spillways and aprons for diversion works, design CD works and chose appropriate canal regulation works.

Unit 1

Elements of dam Engineering- Introduction, classifications according to use, design and materials. Gravity dams, Arch dams, Butters dams, Steel dams, Earth and Rock fill dams and their merits and demerits. Physical factors governing selection of type of dam, selection of site for a dam.
Arch and Buttress dams- Types of arch dams, forces and design method for arch dams, Types of buttress dams **7 Hrs.**

Unit 2

Gravity dams – Introduction, forces acting on a gravity dam, modes of failure of a gravity dam, principal and shear stresses, stability analysis, elementary profile of gravity dam, practical profile of dam, low and high gravity dams, galleries, joints, keys and water seal in dams, control of cracking in concrete dams, problems. **8 Hrs.**

Unit 3

Earth dams - Introduction, types of earth dams, causes of failure of earth dams, preliminary section, seepage analysis, stability analysis, design to suit available materials, slope protection, seepage control measures, problems.

8 Hrs.

Unit 4

Dam Outlet Works – Introduction, types of Spillways– free over fall spillway, Ogee spillway, side channel spillway, Chute spillways, conduit spillway, drop inlet spillway, siphon spillway, design features- design principles and design of spillways, energy dissipation below spillways, stilling basin types, spillway crest gates- types. **8 Hrs.**

Unit 5

Drop Structures – Canal Regulation Works- Introduction, Necessity and location of falls, development of falls, classification of falls, head regulators and cross-regulators Function of regulators.
Cross Drainage Works - Introduction, Type of cross-drainage works, works, selection of suitable type of cross-drainage work, classification of aqueducts and siphon aqueducts, (No design problems). **8 Hrs.**

TEXT BOOKS:

1	S. K. Garg	Irrigation Engineering and Hydraulic Structures, Khanna Publishers, New Delhi. ISBN: 978-81-7409-047-8
2	Punmia and Pandey Lal	Irrigation and Water Power Engineering, Lakshmi Publications, New Delhi. ISBN-13 : 978-8131807637
3	P. N. Modi	Irrigation, Water Resources and Water Power, Standard Book House, New Delhi ISBN - 9788189401290

Websites:

	Web link Address

2	http://nptel.iitm.ac.in/video.php?courseId=1029&v=XmO2pltg7YBz
3	http://nptel.iitm.ac.in/video.php?courseId=1029&v=SO0suW7TLiCs

Course Outcomes: After the completion of this course, students will be able to

CO1: Describe the classification of dams and criteria for selection of dam site.

CO2: Describe the forces acting on dams, perform stability analysis and explain the profile and various components of gravity dams.

CO3: Describe the types, causes of failure slope protection and seepage control measuring earth dams, perform seepage and stability analysis.

CO4: Explain the components of outlet works in hydraulic structures.

CO5: Explain the various drop structures and loss drainage works in hydraulic structures.

WATER RESOURCES AND WATERSHED MANAGEMENT

Contact Hours/Week	:	03 (L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	NIL	SEE Marks	:	50
Course Code	:	5RCVE15			

Objectives: The main objective of the course is to enable the students to learn the basics of Water Resources and Watershed Management. Students will gain the knowledge of water resources planning, governance and water policy issues. The course also helps in understanding the techniques of Watershed management for managing floods and drought.

Unit–1

Water Resources Planning: Introduction, India's water resources, scenario of water use, purposes of water resources development, classification of water resources development projects, functional requirements in multi-purpose projects, process of project formulation, project evaluation, strategies for the future-planning and management strategies.

Surface and Ground water Resources: Hydrologic Cycle, Global water resources and Indian water resources, Surface Water Resources, Water Balance, Available Renewable Water Resources, Water Scarcity, The water Balance as a result of Human Interference, Groundwater Resources, Types of Aquifers, Groundwater as a Storage Medium. **7 Hrs.**

Unit–2

Water Governance and water Policy: Legal Framework of water – Substance of National Water Laws – other Key issues – Changing incentives through Regulation – National Water Policy – National Level Commissions – Irrigation Management Transfer Policies and Activities – Legal Registration of Water use as – Legal Changes in Water Allocation, - Role of Local Institutions – Community Based Organizations – Water Policy Reforms:India.

8 Hrs.

Unit–3

Watershed Management: Concept of watershed, introduction to watershed management, stakeholders, watershed management policies. Characteristics of watershed

Integrated water resources management: Natural resources management, agricultural practices, integrated farming, soil conservation, rainwater harvesting, water conservation and recycling, watershed management practices in arid and semi-arid regions, case studies. **8 Hrs.**

Unit–4

Watershed Modeling: Standard modeling approaches and classifications, system concept of watershed modeling, hydrologic processes, modeling of rainfall-runoff process, subsurface flow and groundwater flow. **8 Hrs.**

Unit–5

Flood Management and Modern Techniques in Watershed Management:
Storm water management, drainage system design, routing of floods, through channels and reservoirs, flood control, case studies and flood damage.
Application of GIS and remote sensing in Watershed Management, Decision support system in Watershed Management. **8 Hrs.**

Text Books:

1	K. Subramanya	Engineering Hydrology, Tata McGraw Hill Publishers, New Delhi, 2010 ISBN-13: 978-1259029974
2	Peter P. Mollinga	Integrated Water Resources Management, Water in South Asia Volume I, Sage Publications, 2009 ISBN-10 : 9353280397 ISBN-13 : 978-9353280390
3	Vir Singh Raj	Watershed Planning and Management, Yash Publishing House, Bikaner, 2000 ISBN: 8186882022, ISBN:9788186882023

Reference Books:

1	Allam, Gamal Ibrahim Y	Decision support system for integrated Watershed Management, Colorado University, 1994 ISBN:9781552093306 ISBN:1552093301
2	Murthy, J.V.S.	Watershed Management in India, Wiley Eastern, New Delhi, 2013, 2nd Edition ISBN: 9788122435184

Course Outcomes: The student will be able to;

CO1: Describe the planning and management strategies of water resources for multi purpose development projects.

CO2: Describe the water laws policies related to water allocation, reforms and irrigation management as per national water policy.

CO3: Explain the fundamental concepts of Watershed Behavior and water management and explain the application of modern techniques in watershed management.

CO4: Apply the standard techniques to model the rainfall runoff, subsurface & ground water flow including computation of quantity of useful water available in watersheds.

CO5: Describe the flood management measures and the modern techniques such as GIS & Remote sensing for watershed management and decision support system.

RAILWAYS, AIRPORT AND HARBOUR ENGINEERING

Contact Hours/Week	:	3 (L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	5RCVE16			

Course Objectives: This course will enable students to gain the knowledge of different modes of transportation such as railways, air ports and Harbours. This course also enables the student carry out designing of the runways and taxiways. Provides an opportunity to introduce to the importance and various components of water ways and tunnel engineering, besides comparing the merits and demerits of different modes of transportation system

Unit 1

Historical development of railways, Permanent way and its requirements, Gauges in railway track, railway track cross sections, Coning of wheels, Stresses in railway track, Traction and tractive resistance. **08 Hrs.**

Unit 2

Rails and its requirements, Types of rail sections, Selection of rails, Length of rails, Rail failures, Rail joints-requirements and different types, creep of rails. Sleepers—Functions, Requirements, Types and merits and demerits. Ballast-functions, requirements, types **08 Hrs.**

Unit 3

Geometry of the track—Gradients, Speed of the train, radius, super elevation, Negative super elevation, curves, pints and crossings- Need, turnouts, points of switches and types, crossings and types, Design of turn outs and numerical problems **08 Hrs.**

Unit 4

Introduction to Airport Engineering, Air craft characteristics, Air port planning, Run way design, Taxiway design, Terminal area, Airport layout, Visual aids. **08 Hrs.**

Unit 5

Harbours-Introduction to water transportation, types of harbours, Features of harbours, Tides, Wind and wave, Break waters and their classification, Navigational aids

Tunnels- Introduction, Classification of tunnels, Tunnel surveys, Transferring the centreline, Methods of tunnelling in soft soil, Tunnelling in rock, Tunnel lining, Drainage, ventilation Lighting and dust prevention.

07 Hrs.

Text Books:

1	S.C. Saxena , S.P. Arora	Railway Engineering, Dhanpat rai Publications, ISBN-978-81-89928-83-4, 7th edition
2	S.K.Khanna, M.G.Arora, S.S.Jain	Airport planning and design, Nem chand and Bro, ISBN-81-85240-68-x, 6th edition
3	R. Sreenivasan, S.C. Rangwala	Harbour, Docks and Tunnel Engineering, Charotar Publishing house, 2016 ISBN-10 : 9385039326, ISBN-13 : 978-9385039324

Course Outcomes: After the completion of this course, students will be able to:

CO1: Compare the merits and demerits of different modes of transportation
CO2: Describe the functions and requirements of rails, ballast and sleepers
CO3: Analyze the stresses in railway track and tractive resistances
CO4: Design the geometry of the railway alignment
CO5: Design the runway length & its orientation, taxiways
CO6: Explain the functions of different components of Harbours.
CO7: Explain the methods of tunneling in soft soil and hard rock

ENVIRONMENTAL ENGINEERING LAB

Contact Hours/Week	:	3 (P)	Credits	:	1.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	5RCVL1			

Course Objectives: This course will enable students to:
Objective of this course is to train the students to conduct experiments to assess the quality of water/wastewater, analyze and interpret the results, check for conformity with permissible limits, evaluate the suitability of water for drinking/industrial use and decide on methods and extent of treatment required wherever necessary

1. Determination of pH, Alkalinity and Acidity.
   Determination of Chlorides.
2. Determination of Calcium, Magnesium and Total hardness.
3. Determination of Dissolved Oxygen.
4. Determination of Turbidity by Nephelo turbidity meter.
5. Determination of Iron, Fluoride, Sulphates and Nitrates by data logging spectrophotometer.
6. Jar test for determination of optimum dosage of Alum.
7. Determination of solids in sewage.
8. Determination of BOD and COD.

Lab Manual:

1	Water and Waste water testing Lab Manual

Web Link Address:

1	www.indiawaterportal.org

Course Outcomes: After the completion of this course, students will be able to:

CO1: Determine the water quality parameters for drinking/industrial purposes as per BIS standards.
CO2: Interpret the test results and recommend the water for the specific use.
CO3: Identify & characterize wastewater using standard methods and design wastewater treatment techniques.
CO4: Function as team member to conduct experiments.

TRANSPORTATION ENGINEERING LAB

Contact Hours/Week	:	03 (P)	Credits	:	1.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	NIL	SEE Marks	:	50
Course Code	:	5RCVL2			

Course Objectives: This course will enable students to:
The objective of this course is to expose the students to testing and evaluation of pavement materials namely soil, aggregates and bitumen. Also, to perform bituminous mix design and evaluate the performance of the designed mix.

1. Tests on Soil
   - Plasticity index, grain size analysis
   - Compaction characteristics
   - Relative compaction through sand replacement method
   - CBR
2. Tests on Aggregates
   - Specific gravity and water absorption
   - Strength
   - Particle shape and texture
   - Crushing strength and 10% fines
   - Gradation analysis
3. Tests on Bitumen
   - Specific gravity
   - Penetration value
   - Softening point
   - Ductility value
   - Flash and fire point
4. Mix Design
   - Blending of aggregates
   - Preparation of Marshall test specimens
   - Marshall test
   - Interpretation of data to arrive at optimum binder content (OBC)
   - Indirect tensile strength (ITS)

Text Books:

1	S.K.Khanna, C.E.G.Justo, A. Veeraragavan	"Highway Materials and Pavement Testing" edition 5th 2013 Nem Chand & Brothers, Roorkee. ISBN: 9788185240589, ISBN: 9788185240589

Reference Books:

1	IS codes- (2720) – Methods of tests for soils
2	IS codes- (2386) – Methods of tests for aggregates
3	IS codes- (1202, 1203, 1205, 1208, 1209) – Methods for testing Tar and Bituminous Materials.
4	MS-2 Asphalt Mix Design Methods

Course Outcomes: After the completion of this course, students will be able to:

CO1: Conduct laboratory tests on soil, analyze and interpret the data by comparing with relevant standards.

CO2: Conduct laboratory tests on aggregates, analyze and interpret the data by comparing with relevant standards).

CO3: Conduct laboratory tests on bitumen, analyze and interpret the data by comparing with relevant standards.

CO4: Design bituminous mix, conduct laboratory tests on the designed mix, analyze and interpret the data by comparing with relevant standards.

CO5: Function as a team member.

ADVANCED TECHNICAL TRAINING IN PYTHON

Contact Hours/Week	:	03 (P)	Credits	:	1.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	NIL	SEE Marks	:	50
Course Code	:	5MESL1			

Course learning objectives (CLO):

At the end of the course the student should be able to:

1. Build the logic for a given problem statement by using algorithms using fundamental concepts of the Programming Language Python such as conditional statements, looping constructs, division, mod operations and string manipulation.
2. Implement the Data Structures such as Arrays, Dictionary, Queues, Lists, and Tuples using Python Programming language.
3. Implement File operations such as opening, reading, writing and closing.
4. Understanding the OOPS concepts such as classes, Objects, Inheritance & Polymorphism

Course Outcomes:

Upon successful completion of this course, the student should be able to:

1. Design and develop solutions for particular programming problems using the fundamental conceptsof Python Programming.
2. Implement different data structures like Arrays, Dictionary, Queues, Lists and Tuples.
3. Implement File operation like Open, close reading & writing the file
4. Understand the Object Oriented Concepts like Classes, Objects, Inheritance and Polymorphism

#	*Modules Covered*	*Duration in hrs.*	
1	Fundamentals of Python Programming, IO & Operators	04	
2	Control Statements, Decision Making, Iterations	06	
3	String & String Manipulations	02	
4	Data Structures	14	
5	Functions	02	
6	Fie Operations	02	
7	Python OOPs Concepts	06	
8	Total Course Duration	16 Hours of Lecture	20 Hours of Practise

CIE: 50 Marks

- Students are accessed every week for 35 marks.
- Evaluation includes Problem Analysis, Program Writing and Executing Programs in the Lab (10+15+10).
- Two tests are conducted for 15 marks each.
- Marks distribution (50 Marks) = Average of weekly assessments (35 Marks) + Average of two tests (15 Marks)

SEE: 50Marks

- There are 20 programs in the list divided into two parts A & B, students have to pick one program eachfrom the Part A & Part B
- Both the parts carry equal weightage.
- The evaluation includes Program Write-up + Analysis + Program Execution + Viva (10 + 10 + 20 + 10 = 50 Marks)
- Change of the experiment is allowed only once in the first half an hour of the exam and in such cases the evaluation will be done for 80% of the Marks

Topics Covered

1. Introduction to Programming
   A. History
   B. Features
   C. Setting up Path
   D. Compilation
   E. Data types
   F. Variables

2. Working with IO & Operators
   A. Declaration, Input – Output
   B. Arithmetic Operator
   C. Relational Operators
   D. Assignment Operators
   E. Logical Operators
   F. Membership Operators
   G. Identity Operators
   H. Bitwise Operators
   I. Multi- line Statements
   J. Comment Line

3. Decision Making
   a. Need of Decision Making and Syntax
   b. If
   c. If-else
   d. Nested if
   e. If-else if

4. Iterations
   a. For Loop
   b. While Loop
   c. Nested Loops

5. Control Statements
   a. Break
   b. Continue
   c. Pass

6. String
   a. Creating a String
   b. Memory Allocation
   c. Built Functions in String

7. List
   a.Creating List
   b.Accessing Elements in List
   c.Negative Accessing Elements in List
   d.Slicing in List
   e. Built Functions in List

8. Tuple
   a. Creating Tuples
   b. Immutable
   c. Accessing values in Tuple
   d. Slicing in Tuple
   e. Built Functions in List

9. Dictionary
   a. Creating a Dictionary with Integer Key, Mixed Key, dict(), Pair element, nested Dictionary.
   b. Adding Element to Dictionary
   c. Accessing Element in Dictionary
   d. Built Functions in Dictionary

10. Set
   a. Creating a Set and Built Functions in Set

11. Function

   a. Syntax of Function
   b. With Argument With return type.
   c. With Argument without return type
   d. Without Argument with return type
   e. Without Argument without return type
   f. Predefined, User defined, Anonymous Functions
   g. Scope of variables.

12. File Operations

   a. Open & Close File

   b. Read & Write operations

13. Python OOPS Concepts

a. Classes & Objects

b. Inheritance

c. Encapsulation

d. Polymorphism

   i. Method Overloading

   ii. Method Over Riding

e. Data Abstraction

f. Methods

VI Semester Syllabus

PROJECT MANAGEMENT

Contact Hours/Week	:	2+2 (T+P)	Credits	:	3.0
Total Lecture Hours	:	26	CIE Marks	:	
			Theory	:	50
			Lab	:	50
Total Lab Hours	:	26	SEE Marks	:	
Course Code	:	HSS07D	Theory	:	60
			Lab	:	40

Course Objectives: The objective of this course is to expose the students to concepts of project, scheduling, time-cost relationship, resource allocation, project cost, crashing, quality and contract management. Also, to enable the students to use construction management tools for scheduling, resource allocation, crashing of various infrastructure projects.

Unit-1

Project Planning: Introduction, Project categories, Characteristics of a Project, Project life cycle phases, Function of Project Management. Project Planning - Scope, Planning process and its objective, Types of project plan, Types of networks, Float and its implication on project schedule. Use of leads and lags in logic diagrams. **8 Hrs.**

Unit-2

Financial management: Working Capital Management, Compound Interest and Present Value methods, Discounted Cash Flow Techniques, Capital Budgeting. Managerial economics: Cost Concepts, Break-even analysis, Pricing Techniques, numerical problems.

Project Quality Management: Introduction, Elements of quality, Quality Assurance, Quality Control, Quality planning, quality audit, Quality Checklists, **TQM Tools** - An overview of Flowcharts, Histogram, Pareto diagram, Scatter diagram, Control charts. **9 Hrs.**

Unit-3

Contract Management: Definition, Types of contracts: Classification Based on – Tendering Process, Economic Consideration, Tasks Involved; Main and Sub Contracts, Features, Merits, Demerits, Applicability of the various types of contracts.

Breach of contract: Definition and Classification, Common Breaches by – Principal, Contractor, Damage Assessment, Claims for Damages, Quantum Meruit, Force Majeure or Frustration.

Dispute resolution: General, Methods for dispute resolution – Negotiations, Mediation, Conciliation, Dispute Resolution Boards, Arbitration, Litigation/Adjudication by courts. **9 Hrs.**

Laboratory component- Project Management Lab

Unit-4

Project Scheduling: Introduction, Precedence network analysis (A-O-A network, A-O-N network), Logic diagram, Construction Scheduling techniques like CPM and PERT, Work Breakdown Structure (WBS), - (3Hrs)

- Preparation of detailed WBS for various infrastructural projects. (5Hrs)
- Determination of project duration by adopting critical path for the construction projects (5Hrs). **13 Hrs.**

Unit-5

Resource Scheduling: Resource allocation, Resource smoothening and resource leveling.

Project Cost Management: Time-cost relationship, Direct and indirect cost, concept of crashing. (3Hrs).

- Allocation of resources for construction project. (4Hrs).
- Determination of project duration and cost of construction project on crashing. (6Hrs). **13 Hrs.**

Text Book:

1	Jimmie W. Hinze	Construction Planning and Scheduling, edition 4th 2011,(3rd edition), Publisher: Prentice Hall

Reference Books:

1	User Manual- MS Project & Primavera P6.	
2	Rain Diana	"Training Guide to Microsoft Access", 2008 BPB Publications, New Delhi
3	Raina V.K.	"Construction Management practice", edition 2nd 2009 (1988), Tata – McGraw Hill publishing co.Ltd.
4	Lt. Col. K. K. Chitkara	Construction Project Management, 2/E 2010 Planning, Scheduling and Controlling, Publisher - Tata McGraw-Hill Education
5	George 1.Ritz.	"Total construction project management", 1994 (1994), Tata-McGraw Hill publishing Co
6	Punmia B.C & Khandelwal K.K.	"Project planning and control with PERT and CPM", (1989), 2002 Laxmi publication II edition.

Course Outcomes:

CO1: Describe the concept of project, project life cycle, network and associated terms. (L3)
CO2: Determine project cost through various methods and perform break even analysis for determining optimal crashing condition. (L4)
CO3: Describe the various contracts used in construction, breach and dispute resolution techniques. (L3)
CO4: Prepare WBS for various infrastructural projects, analyze the network through various methods and schedule the project using construction management tools. (L3)
CO5: Allocate resources and perform crashing using construction management tools. (L3)
CO6: Function as a team member (L3).

GEOTECHNICAL ENGINEERING-II

Contact Hours/Week	:	4 + 1 (L+T)	Credits	:	4.5
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	13	SEE Marks	:	50
Course Code	:	6RCV02			

Course Objectives: This course will enable students to:
Introduce the knowledge of site exploration and sampling techniques, stresses in soils due to different types of loading, bearing capacity of foundations, lateral earth pressure behind retaining walls, seepage analysis through earth dams, and stability of earth slopes

Unit 1

Soil Exploration and Sampling Techniques: Introduction, methods of exploration (disturbed & undisturbed samples), planning exploration program, Soil boring (primary boreholes and secondary boreholes), soil sampling (cohesionless soil sampling, disturbed sampling, undisturbed cohesive soil sampling, underwater sampling). Extraction of samples of rock. Standard Penetration Test (SPT), corrections to SPT, SPT correlations. Cone Penetration Test (CPT), CPT correlations for cohesive soil, CPT correlations for cohesionless soils. Geophysical tests (Seismic refraction & electrical resistivity). Ground water table location, number and depth of borings, bore log, soil report.

Stresses in soils: Boussinesq's method of stress distribution for point loads, strip loading, loading on circular area. Pressure distribution Diagrams, Isobars, vertical stress distribution on a horizontal plane, vertical stress distribution on a vertical line. Westergaard's method of stress distribution for point loads, and loading on circular area **11+3 Hrs.**

Unit 2

Bearing capacity of foundations: Introduction, terminology, bearing capacity failures, Terzaghi's bearing capacity equation, Hansen's bearing capacity equation, bearing capacity equation as per IS code, footings with eccentric loadings, Effect of water table, bearing capacity from SPT & CPT. Determination of stress-strain modulus by lab & insitu tests. Immediate settlement of foundations on saturated clay and sandy soil. Tolerable settlement of buildings. **11+3 Hrs**

Unit 3

Lateral earth pressure: Lateral earth pressure at rest, Rankine's active earth pressure, Rankine's passive pressure, Coulomb's active earth pressure, Coulomb's passive earth pressure. Graphical solutions for active and passive earth pressure for cohesionless soils **10+2 Hrs**.

Unit 4

Seepage Analysis: Laplace's equation for flow through soils, characteristics of flow nets, Construction of flow nets for earth dams, sheet pile walls, Phreatic line in earth dams (graphical method), Estimation of quantity of seepage & exit gradient **10+2 Hrs.**

Unit 5

Stability of earth slopes: Types of slopes, types of failure and their causes, Stability of infinite slopes, Stability of finite slopes – Swedish circle method (total stress analysis for cohesive and c-Φ soils), Stability of slopes of earth dams, Taylor's stability number. **10+3 Hrs.**

TEXT BOOKS:

1	Gopal Ranjan & ASR Rao	Basic and Applied Soil Mechanics, New Age International publishers (Revised 2nd Ed.) ISBN: 8122412238, 9788122412239

REFERENCE BOOKS:

1	VNS Murthy	Geotechnical Engineering: Principles and Practices of Soil Mechanics and Foundation Engineering, CRC Press, 2002 ISBN-10: 0824708733, ISBN-13: 978-0824708733
2	B C Punmia, Ashok Kumar Jain and Arun Kumar Jain	Soil Mechanics and Foundations, Laxmi Publications Pvt. Ltd., New Delhi, 2005, 16th Edition ISBN: 8170087910, ISBN:9788170087915
3	Muni Budhu	Soil Mechanics and Foundations, Wiley India Pvt. Ltd., 2007. 2nd Edition. ISBN-10 : 0470556846 ISBN-13 : 978-0470556849

Course Outcomes: After the completion of this course, students will be able to:

CO1: Evaluate general suitability of the site for the proposed civil project using soil exploration techniques.
CO2: Determine the stresses in soils due to various types of loadings using Boussineq's and Westergaard's solution.
CO3: Determine bearing capacity of soils for foundations using theoretical and empirical correlations.
CO4: Determine the lateral earth pressures on earth retaining structures applying using static equilibrium based on Rankine's and Coulomb's theory.
CO5: Determine the seepage loss and stability in various hydraulic structures.
CO6: Analyze the stability of slopes of simple geometry, including the effect pore water pressure.
CO7: Analyse stresses in soils and determine stability of slopes using spread sheet

DESIGN OF STEEL STRUCTURES

Contact Hours/Week	:	4 +1(L+T)	Credits	:	4.5
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	13	SEE Marks	:	50
Course Code	:	6RCV03			

Objectives: The objective of this course is to enable the students:
To introduce the students to the advantages and limitations of steel structures, analysis and design of tension members, compression members, beams and column bases as per relevant standards, design of different types of connections like bolted and welded connections for different structural elements and plastic analysis and design of steel structures.

Unit-1

Advantages and disadvantages of steel structures, loads and load combinations, Design considerations, Limit state method(LSM) of design, codes, specifications and section classification.

BOLTED CONNECTIONS: Introduction, advantages, modes of failures, simple, semi-rigid and rigid connections, Eccentric connections (plane of connection and parallel and perpendicular to the plane of moment), beam to beam, beam to column connections including seated and framed connections, moment resistant connections. **11 Hrs.**

Unit-2

WELDED CONNECTIONS: Advantages, disadvantages, types of welded joints, weld symbols, design of fillet and butt weld joints, Eccentric connections (plane of connection and parallel and perpendicular to the plane of moment), beam to beam, beam to column connections. **9 Hrs.**

Unit-3

Design of Tension and Compression members:
Introduction, sections used for tension members, Design of axially loaded tension members in a truss with bolted/welded connections, design of lug angles, Behaviour of compression members under concentric and eccentric loading, Design of compression members in a roof truss. **10 Hrs.**

Unit-4

Design of Built-up Columns and bases:
Design of built-up compression members including design of lacings and battens, Design of slab base and Gusseted base. **10 Hrs.**

Unit-5

Design of Beams:
Introduction, sections for beams, factors affecting lateral stability, design of laterally supported beams, design of laterally unsupported beams, check for strength, shear and deflection, design of built-up beams and plate girders.

Plastic Analysis and Design:
Introduction to plastic hinge, plastic collapse load, conditions of plastic analysis, redistribution of moments, Theorems of plastic collapse, Plastic analysis of continuous beams and portal frames, design of continuous beams.

12Hrs.

Text Book:

1	S.K.Duggal	Limit state Design of steel structures, edition 2nd 2014 Tata McGraw-Hill, ISBN-978-0-07-070023-9

Reference Books:

1	Dr .Ramachandra & Veerendra Gehlot	Limit state Design of steel structures, 2013 Scientific Publishers (India). ISBN: 8172336144
2	N.Subramanian	Design of steel structures by Limit state method, edition 1st 2014 Oxford University Press.
3	S. M. A. Kazimi, R. S. Jindal	Design of steel structures, edition 2nd 1990, Prentice-Hall of India

Course Outcomes: After the completion of this course, students will be able to:

CO1: Analyze the behavior of different types of bolted and welded connections and design them for different load conditions.

CO2: Analyze and design of simple tension and compression members.

CO3: Analyze and design built-up compression members and base plates.

CO4: Analyze and design the bolted and welded framed connections, beam to beam connection, Beam to column connection etc.

CO5: Determine plastic collapse load for simple continuous beams and portal frames and design these structures as per relevant standards.

TRAFFIC ENGINEERING

Contact Hours/Week	:	3 (L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	6RCVE21			

Course Objectives: This course will enable the students to understand the importance of traffic engineering, its performance on road net work, knowledge of basic laws relating to regulation, planning, designing and operating to achieve safe and efficient movements of person and goods.

Unit 1

Vehicle and Human Characteristics

Road user – Visual characteristics of the drivers, fields of vision, perception – reaction time, pedestrian characteristics, impact of drugs and alcohol, impact of aging, psychological, personality and related factors.

Vehicle Characteristics – Concept of vehicle, types, concept of design vehicle, turning characteristics of the vehicle, breaking characteristics, acceleration characteristics, stopping distance and application, roadway characteristics.

08 Hrs.

Unit 2

Traffic Studies: Traffic volume measurement, data analysis, concept of ADT, AADT, critical hourly volume and its significance, prediction of the traffic growth, importance of peak hour effect.

Speed Studies: Spot speed, speed measurements, interpretation of the data – frequency distribution, cumulative frequency distribution curve, relevant applications.

Speed and Delay Studies: Measurement along the length of the road, assessing the causes of delay, estimation of travel time, computing journey speed, running speed.

Parking Studies: Inventory, characteristics, on and off street parking, numerical problems **08 Hrs.**

Unit 3

O & D Studies: Objectives, methods, presentation of the data and relevant applications.

Accident Studies: Factors influencing accidents, data collection, analysis and remedial measures.

Toll Operation Studies: Fuel, emission and consumption models, air quality models. **07 Hrs.**

Unit 4

Traffic Regulation: Regulation on vehicles, driver, parking, traffic signs (regulatory, warning, informatory), design of traffic signals – cycle length, green phase, red phase, different types of signals – fixed signals, traffic actuator signals, designing the cycle length by Webster method.

Traffic Management: Restrictions on turning movements, one way streets, tidal flows, exclusive bus lanes, closing side street, rotary intersection, numerical problems. **08 Hrs.**

Unit 5

Statistics in Traffic Engineering: Elements of probability, probability distribution – binomial distribution, normal distribution, Poisson's distribution,

sampling, standard deviation, mean, sampling, significance testing, regression analysis, numerical problems. **08 Hrs.**

TEXT BOOKS:

1	SK.Khanna, C.E.G Justo A.Veeraragavan	Highway Engineering, Nem Chand & Bro. ISBN 978-81-85240-72-5, Revised 10th Edition
1.	Dr. L.R.Kadiyali	Traffic Engineering and Transportation Engineering, Khanna publishers, ISBN 81-7409-220-x, 7th edition

REFERENCE BOOKS:

1	C.Jotin Khisty B.Kent Lall	Transportation Engineering, PHI, ISBN978-81-203-2212-7, 3rd Edition
2	Relevant IRC codes	

Course Outcomes: After the completion of this course, students will be able to:

CO1: Analyze the road user and vehicle factors in overall scope of traffic engineering

CO2: Collect the traffic data, analyse and interpret the results

CO3: Explain the causes of accidents and propose the remedial measures.

CO4: Explain the traffic regulations measures and suggest suitable traffic control devices.

CO5: Carry out statistical analysis of the data collected in the field survey

REMOTE SENSING AND GIS

Contact Hours/Week	:	3 (L)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	6RCVE22			

Course Objectives: This course will enable students to:

1. Understand the basic concepts of remote sensing.
2. Analyze satellite imagery and extract the required units.
3. Extract the GIS data and prepare the thematic map.
4. Use the thematic maps for various applications.
5. Enhancement and classify the RS satellite data for various applications.

Unit 1

Basic principles of remote sensing: Concepts of remote sensing; Characteristics of electro- magnetic radiation; electromagnetic spectrum; Interaction between matter and electro- magnetic radiation; Wave length regions of electro- magnetic radiation; types of remote sensing with respect to wave length regions; Definition of radiometry; Black body radiation; Reflectance ; Spectral reflectance of land covers; Spectral characteristics of solar radiation. **07 Hrs.**

Unit 2

Platforms and Sensors:

Types of platforms; Atmospheric condition and altitude; Atmospheric windows; Atmospheric scattering; Types of satellite such as Indian Remote Sensing (IRS) satellites, Landsat, Spot, ERS, Radarsat, Ikonos, Quickbird and Ocean Colour Monitoring (OCM) etc.; Geostationary satellite , Polar orbit satellites, Meteorological satellite. Types of sensors: active and passive sensors, Thermal sensors, Microwaves sensors, Atmospheric sensors, Sonar sensors, Cameras for remote sensing. Sensors resolutions: Spectral, Spatial, Radiometric and Temporal resolutions. **08 Hrs.**

Unit 3

Visual Image interpretation (VIP) and analysis:

Satellite image interpretation, elements of interpretation. Types of imaging: Panchromatic, Multispectral, Hyper- spectral and Stereo images. Techniques of visual interpretation; Generation of thematic maps such as Soil map, Litho-logical map, Drainage map, Land use and Land Cover map. Application of remote sensing in water resources, Urban planning, environmental assessment etc. **07 Hrs.**

Unit 4

Digital Image Processing (DIP):

Digital data manipulation and analysis, preprocessing stages of image: rectification, radiometric correction, atmospheric correction, geometric correction. Image enhancement; spatial feature manipulation; Image classification techniques: Supervised classification and unsupervised classification. False Colored Composite (FCC); Image subset; Image mosaics; Overview of Erdas Imagine software. **07 Hrs.**

Unit 5

Geographical Information Systems (GIS)/Geospatial Technology:

Introduction; GIS definitions and terminology; GIS categories; Components of GIS; Fundamental operations of GIS; Data collection; input and output; GIS data types: Raster and Vector data; Spatial and non spatial data: layered based GIS; Feature based GIS mapping; Map coordinate system; Map projection; Map elements ; Map features; Georeferncing; Digitization; GIS software; GIS applications. Working principles of GPS and its applications. Integrated Applications of Remote sensing and GIS: Applications in land use land cover analysis, change detection, water resources, urban planning, environmental planning, Natural resource management and Traffic management. Location Based Services and its Applications.

10 Hrs.

TEXT BOOKS:

1	Lillesand and Kiefer	Principles of Remote sensing and Image Interpretation, John Wiley and Sons,7th edition, 2015, ISBN: 978-1-118-34328-9
2	Peter A Burrough, Reacheal A McDonnel	Principles of GIS, Oxford, 3rd edition, 2015, ISBN: 9780198742845

REFERENCE BOOKS:

1	John R Jenson	"Remote sensing of the environment", An earth resources perspective , Pearson Education, 2nd edition, 2007, ISBN-13: 9780131889507
2	Anji Reddy M	Remote sensing and Geograperhical information system, B.S. Publications 2008. ISBN: 978-81-7800-135-7

Course Outcomes: After the completion of this course, students will be able to:

CO1: Explain the concept of remote sensing and techniques of data acquisition

CO2: Collect data and delineate various elements from the satellite imagery using their spectral signature.

CO3: Visually interpret the remote sensing data and analyze the digital data by image processing method.

CO4: Make decision based on the GIS analysis on thematic maps.

CO5: Apply Remote sensing, GIS & GPS applications in various engineering projects.

CO6: Perform digital enhancement and classification technique.

THEORY OF ELASTICITY

Contact Hours/Week	:	3 (L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	6RCVE23			

Course Objectives: This course will enable students to:
Analysis of linear elastic materials subjected to mechanical loads and will facilitate solutions to solid mechanics problems.

Unit 1

Introduction to vectors, Definition continuum, difference between theory of elasticity and strength of materials, stress and strain at a point, stress tensor, Equilibrium equations, stress on an oblique plane, stress transformation, principal stresses and their planes as Eigen value problems, maximum shear stress, hydrostatic and deviatoric stress, octahedral stresses, Mohr's circle of stress. **8 Hrs**.

Unit 2

Strain at a point, strain-displacement relations, strain oflinear element, strain quadric, strain tensor, strain transformation, principal strains, maximum shear strain, volumetric strain, spherical and deviatoric strain, Mohr's circle of strain. **7 Hrs**.

Unit 3

Classification of problems of solid mechanics into plane stress, plane strain, axi-symmetric problems with illustrations. Equations of equilibrium for plane stress and plane strain boundary conditions. Strain components in plane stress and plane strain conditions, Boundary conditions. **8 Hrs.**

Unit 4

Generalised Hooke's laws (orthotropy, anisotropy, isotropy), constitutive models for plane stress, plane strain and axi-symmetric problems. Lame's equation, Navier equation, Airy's stress function, Biharmonic equations, Polynomial solutions. **8 Hrs.**

Unit 5

Failure theories: Rankine's theory, Tescas theory, maximum elastic strain theory, octahedral shearing stress theory, maximum elastic energy theory and Mohr's failure theory. **8 Hrs.**

Text Books:

1	Sitharam TG and Govindaraju	Applied Elasticity, Interline publishing Private Ltd., 2008. ISBN 10: 8172960832, ISBN 13: 9788172960834
2	L.S.Srinath	Advanced Mechanics of Solids", Tata McGraw Hill publications Co. Ltd., New Delhi.2010 ISBN-10 : 0070702608 ISBN-13 : 978-0070702608

Course Outcomes: After the completion of this course, students will be able to:

CO1: Calculate the components of stresses such as principal, octahedral and deviatoric in solids by applying the principals of equations of equilibrium, stress transformation and Eigen values.

CO2: Calculate the components of strains such as Principal shear, volumetric, spherical and deviatoric strains by applying the strain-displacement, strain transformation.

CO3: Solve the plane stress, plane strain and axy-symmetric problems using the principles of generalized Hooke's law, constitutive models, Airy's stress function and Biharmonic equations.

CO4: Apply various failure criteria for analyzing and designing structural components.

ROCK MECHANICS

Contact Hours/Week	:	3 (L)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	6RCVE24			

Course Objectives: This course will enable students to:

The main objective of the course is to enable the students to learn the basic knowledge of Rock Mechanics and will help to understand the design aspects of various structures in/on rock such as tunnels and other underground openings , slopes etc. including the determination of physico mechanical properties of intact rock and rock mass, rock discontinuities , stresses and deformations around the excavation, insitu stresses , failure mechanisms, rock pressure and subsidence in rocks

Unit 1

Rock Mechanics: Definition and its importance, rock mass and material form; effects of discontinuities on rock mass. Physical properties of rocks – porosity, density, moisture content, degree of saturation, coefficient of permeability, electrical properties, thermal properties, swelling ,anisotropy, durability. Mechanical properties- strength (compressive, tensile and shear), deformability, elasticity and plasticity, hardness, Engineering classification of rock masses. (by deer & miller) **7 Hrs.**

Unit 2

Objective and methods of rock exploration:

i) By direct core penetration- core boring, core recovery, rock quality designation, fracture frequency.

ii) By indirect penetration- Large diameter calyx hole, logging of core.

Tests for measuring rock strength: Tensile strength test-Brazilian and Bending tests , Flexural strength test- Three point and four point load test, Shear strength test- shear box test and direct shear test on rock cubes.

8 Hrs.

Unit 3

Insitu stresses, Stresses involved in mining various methods of stress measurement, hydro-fracturing technique, flat jack technique, over- coring technique. Underground opening in infinite medium, elastic and elasto-plastic approach. Stress concentration for different shapes of opening, Zone of influence. Failure criteria for rock and rock masses, Mohr Coulomb yield criterion. **8 Hrs**.

Unit 4

Strength and deformability of jointed rock mass, fracture strength of jointed rock mass. Shear strength of rock joints, deformability of rock joints, Concept of joint compliance. Stability of rock slopes, modes of failure, plane failure, wedge failure, circular failure, Toppling failure. **8 Hrs.**

Unit 5

Foundation on rocks, estimation of bearing capacity, stress distribution in rocks, settlement in rocks, pile foundation in rocks. Methods to improve rock mass responses, grouting in rocks, rock bolting, rock anchors.

Rock pressure: pressure arch theory- rectangular opening, circular & long wall working, creep, convergence, rock burst

Subsidence: - Definition and factors governing subsidence, angle of draw, line of break; critical area, sub-critical area, super critical area. Protective measures against subsidence. **8 Hrs.**

TEXT BOOKS:

1	R.E Goodman	Introduction to Rock Mechanics, 2nd edition, 2010, John Wiley & sons ISBN-10 : 8126525665 ISBN-13 : 978-8126525669

REFERENCE BOOKS:

1	T.Ramamurthy	Engineering in Rocks for slopes, Foundation and Tunnels, 2014, Prentice Hall India Pvt. Ltd, ISBN-10 : 8120348796 ISBN-13 : 978-8120348790
2	Jaeger, Cook and Zimmerman	Fundamentals of Rock Mechanics, 4th edition, 2012, Blackwell Publishing ISBN-13 : 978-8126534562
3	L.Obert and Wilbur I. Duvall	Rock mechanics and the design of structures in rock, First edition, 1967, John Wiley & Sons, Inc.ISBN-10 : 0471652350 ISBN-13 : 978-0471652359

Web Link Address:

1	www.nptel.ac.in
2	http://nptel.iitm.ac.in/video.php?courseId=1029&v=XmO2pltg7YBz
3	http://nptel.iitm.ac.in/video.php?courseId=1029&v=SO0suW7TLiCs
4	http://nptel.iitm.ac.in/courses/Webcourse

Course Outcomes: After the completion of this course, students will be able to:

CO1: Describe the physical and mechanical properties of rocks and Engineering classification of rock masses.

CO2: Explain the methods of rock exploration and tests for measuring the rock strength.

CO3a: Determine the in-situ and induced stresses in the rock masses due to the mining operation, also will be able to explain the various methods of stress measurement.

CO3b: Explain the failure criteria for rock and rock masses and obtain the shear parameters.

CO4a: Explain the strength and deformability of jointed rock masses and rock joints and concept of joint compliance.

CO4b: Determine the stability of rock slopes under various modes of failure.

CO5a: Estimate the stress distribution, bearing capacity and settlement of rocks.

CO5b: Explain various methods to improve the rock mass responses, rock pressure and rock burst under various conditions

INSTRUMENTATION AND SENSOR TECHNOLOGIES FOR CIVIL ENGG. APPLICATIONS

Contact Hours/Week	:	3 (L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	6RCVE25			

Course Objectives: This course will enable students to:
To gain knowledge in respect of piezoelectric transducers, fiber optic sensors, redar technology, MEMS and vision based robotic sensing.

Unit 1

Sensor data acquisition systems and architectures: Introduction Concepts in signals and digital sampling, Analog-to-digital conversion, Digital-to-analog conversion, Data acquisition systems, Optical sensing DAQ system

Sensors and their associated algorithms: Introduction, Brief review of commonly used sensing technologies, associated algorithms, Examples of continuous monitoring systems. **8 Hrs.**

Unit 2

Piezoelectric transducers for assessing and monitoring civil infrastructure: Introduction, Principle of piezoelectricity, Piezoelectric materials and the fabrication of piezoelectric transducers, Piezoelectric transducers for SHM applications, Bonding effects, Limitations of piezoelectric transducers, SHM techniques using piezoelectric transducers, Applications of piezoelectric transducer-based SHM

Fiber optic sensors for assessing and monitoring civil infrastructures: Introduction, Properties of optical fibers, Common optical fiber sensors, Future trends, Sources for further information and advice. **8 Hrs**.

Unit 3

Acoustic emission sensors for assessing and monitoring civil infrastructure: Introduction, Fundamentals of acoustic emission (AE) technique, Interpretation of AE signals, AE localization methods, Severity assessment, AE equipment technology, Field applications and structural health monitoring using AE.

Radar technology: radio frequency, interferometric, millimeter wave and terahertz sensors for assessing and monitoring civil infrastructure: Introduction, Brief history of ground penetrating radar (GPR) systems, Current challenges and state of the art systems, Fundamentals of operation, Electromagnetic interactions with materials, Transmitter and receiver design, Laboratory and field studies. **8 Hrs.**

Unit 4

Micro-electro-mechanical-systems (MEMS) for assessing and monitoring civil infrastructure: Introduction, Sensor materials and micromachining techniques, Sensor characteristics, MEMS sensors for SHM, Application examples, Long term technical challenges

Multifunctional materials and nanotechnology for assessing and monitoring civil infrastructure: Introduction, Properties of carbon nanomaterials, Cementitious-based composites, Fiber-reinforced polymer

composites, Polymer-based thin films. **8 Hrs**.

Unit 5

Robotic sensing for assessing and monitoring civil infrastructures: Introduction, Vision-based robotic sensing for structural health monitoring (SHM), Remote robotic sensing for SHM, Vibration-based mobile wireless sensors. **7 Hrs**.

Self Study:

Case Studies - Permanent installation of wireless structural monitoring systems in Bridges, Buildings, Environmental pollution, pavements, flow measurements and geotechnical infrastructures

Course Outcomes: After the completion of this course, students will be able to:

CO1: Explain different types of sensors data acquisition systems, associated algorithms and architectures

CO2: Describe the Piezoelectric transducers and Fiber optics sensors for assessing and monitoring civil infrastructures

CO3: Describe the acoustic emission sensor and radar technology for assessing and monitoring civil infrastructures

CO4: Describe the Micro-electro-mechanical-systems, multifunctional materials and nanotechnology for assessing and monitoring civil infrastructures

CO5: Explain the use of Robotic sensing for assessing and monitoring civil infrastructures and case studies on use of sensors in civil infrastructures.

FUNDAMENTALS OF DATA ANALYTICS

Contact Hours/Week	:	3 (L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	6RCVE26			

Course Objectives: This course will enable students to:

- Get an overall view of data analysis based on CRISP-DM process model.
- Study data quality assessment and visualization techniques for data involving two attributes and for higher dimensional data. Study statistical concepts related to data analysis.
- Understand principles of modeling by going through various data modeling techniques.
- Get a detailed account of data preparation phase.
- Enable students to independently perform data analytic procedures on given data pertaining to civil engineering using Excel.

Unit 1

Introduction to data analytics: Data and knowledge, criteria to assess the knowledge, descriptive statistics of the data, inferential statistics, exploratory data analysis, knowledge discovery in data bases, data analysis processes, SEMMA, CRISP-DM, methods, tasks and tools. **7 Hrs**.

Unit 2

Understanding the data: Attribute understanding, kinds of attributes (nominal, interval, ratio types). Characteristics of one dimensional data, location measures, dispersion measures, and shape measures. Characteristic measures of multidimensional data, data quality, visual analytics of one dimensional data, density plots, box plots, scatter plots. Correlation and covariance. Methods for multidimensional data (just briefing). Analysis of data pertaining to civil engineering. **8 Hrs.**

Unit 3

Principles of data modeling: The four steps of modeling, model classes, black-box models, fitting criteria and score functions, error functions for classification problems, measure of interestingness, closed form algorithm for model fitting. Types of errors. Model validation (briefing on methods). Modeling on the data specific to civil engineering. **8 Hrs.**

Unit 4

Data Preparation: Selection of data, feature selection, selecting top ranked subset of data, cross product, wrapper approach, and correlation based filter. Cleaning data, improving data quality, dealing with missing values, construct data, providing operability, assuring impartiality and maximize efficiency. Complex data types. Implementation of methods on data specific to civil engineering. **8 Hrs**.

Unit 5

Finding patterns in data: Clustering – methods. Hierarchical clustering. Minkowisci, Euclidian, Manhattan, Chebyshev, and cosine dissimilarity measures. Deviation measures. Brief introduction to association rules. Brief introduction to self organizing maps. Implementation of methods on data specific to civil engineering. **8 Hrs.**

TEXT BOOKS:

1	Michel R. Berthold, Christian Borgelt, Frank Hoopner	Guide to Intelligent Data Analysis, Springer- Verlag Publications, ISBN 978-1-84882-259-7, DOI 10.1007/978-1-84882-260-3, London , 2010

REFERENCE BOOKS:

1	Charles M.Zudd, Garry H. Mcchelland, Carry S. Ryan	Data Analysis: A Model Comparison Approach, Routledge Publication, NY, 2009.
2	Allan Agresty	An Introduction to Categorical Data Analysis, 2nd Edition, Wiley Publication
3	Websites	https://www.kdnuggets.com
4		www.kaggle.com
5		www.datameer.com

Course Outcomes: Upon completion of this course, the student will be able to:

CO1: Demonstrate a clear understanding of the concepts and methods, know the exact scopes and possible limitations of each method and task involved. Apply CRISP-DM data analysis processes to civil engineering related data in decision making.

CO2: Apply appropriate data visualization techniques and perform correlation analysis on the real world data pertaining to allied areas of civil engineering.

CO3: Develop appropriate model for the data using the suitable algorithm and validate the so developed model using appropriate validation technique.

CO4: Decide on appropriate method or technique for data preparation and provide operability by assuring impartiality and integrity to the given real world data drawn from various sub domains of civil engineering.

CO5: Perform similarity analysis using similarity metrics and to implement simple clustering technique on the given data set that pertains to civil engineering in one and multiple dimensions.

Assessment:

Two tests, three quizzes and an Assignment

Assignment: Students in groups need to garner data pertaining to civil engineering from public data bases or from elsewhere, apply the appropriate methods learnt during the course, implement the methods using Excel and prepare a small project report. This report will be evaluated for 7 marks.

GEOTECHNICAL ENGINEERING LABORATORY

Contact Hours/Week	:	3 (P)	Credits	:	1.5
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	NIL	SEE Marks	:	50
Course Code	:	6RCVL1			

Course Objectives: This course will enable students to conduct experiments on strength and compressibility characteristics of soils, hydraulic characteristics and analyze and interpret the results and utilize soil properties in the design of foundations and earth structures.

1. Tests for determination of specific gravity using
   a. Density bottle method
   b. Pycnometer method

2. Grain size analysis of soil sample
   a. Dry sieve analysis
   b. Wet sieve analysis
   c. Hydrometer analysis

3. Determination of Insitu density
   a. Core cutter method
   b. Sand replacement method

4. Determination of Consistency Limits
   a. Liquid limit (Casagrande method and static cone penetration method)
   b. Plastic limit
   c. Shrinkage limit

5. Determination of Optimum moisture content and Maximum dry density
   a. Standard Proctor test

6. Determination of Coefficient of Permeability
   a. Constant head permeameter
   b. Variable head permeameter

7. Determination of shear strength parameters
   a. Direct shear test on cohesive and cohesionless soils.
   b. Triaxial Shear test (UU and CU tests)
   c. Unconfined compression test

8. The following tests for demonstration
   a. Determination of free swell index
   b. Determination of relative density of cohesionless soils
   c. Demonstration of different types of augers, Samplers, Rapid moisture meter, Proctor's needle

TEXT BOOKS:

1.	Lambe T W	Soil Testing, John Wiley and Sons, 1951. ISBN 10: 0471511838 ISBN 13: 9780471511830
2.	Shamsher Prakash & Purushottam Kumar Jain	Engineering soil testing, Nem Chand, 1979. ISBN: 81-85240-17-5.
3.	Braja M. Das	Soil Mechanics Laboratory Manual, 8th Ed., Oxford Publ., 2012. ISBN-10 : 0199846375 ISBN-13 : 978-0199846375
4.	IS codes: IS 2720 (part 1 to part 60), SP 36, part I and II	

Course Outcomes: After the completion of this course, students will be able to:

CO1: Determine the index properties, consistency limits. Analyze and interpret the experimental data and classify the soil.
CO2: Determine the compaction characteristics of soils for applications.
CO3: Determine the coefficient of hydraulic conductivity of soils. Analyze and interpret the results and recommend for engineering applications.
CO4: Determine the strength of soils under different drainage conditions. Use the results for the solution of engineering problems.
CO5: Function as team member to conduct experiments.

BUILDING INFORMATION MODELING LABORATORY

Contact Hours/Week	:	3 (P)	Credits	:	1.5
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	NIL	SEE Marks	:	50
Course Code	:	6RCVL2			

Course Objectives: This course will enable students to:

1. Elements (with hands on sessions) of building information modeling software including modeling and modification of building elements- plans, levels, walls, doors and windows.
2. Documentation, managing views, plan and elevation-3D, detailing and drafting views, site design, settings, topo surface, importing and exporting to and from CAD format.

Session 1

Introduction to BIM and Revit Architecture: Overview of the Interface; Starting Projects, Creating Levels & Grids (Datum); Glance on Project Unit Settings, Snaps, Project Information.

Session 2

Drawing and Modifying Walls : Drawing Walls, Curtain Walls, Embedded Walls, Stacked Walls; Using Curtain System, Grids & Mullions in Curtain Walls; Wall Sweep & Wall Reveal; Modifying Walls, Creating Openings; Section and Presentation of Walls Using Edit Type; Helpful Editing Tools, Applying Materials

Modifying Tools: Align (Al), Offset (Of), Mirror-Pick Axis (MM), Mirror-Create Axis (DM), Split Element (SL), Split with Gap, Move (MV), Copy (CO), Rotate (RO), Trim/Extend to Corner (TR), Trim/Extend Single Element, Trim/Extend Multiple Element, Scaling.

Session 3

Doors, Windows & Components: Adding & Editing Doors, Windows & Components Using Library, Creating Model in Place; Creating Columns & Beams by Placing & by Using Grids

Session 4

Creation of Floors and Roof: Roof by Footprint; Flat Roof, Slope Roof, Pitched Roof; Roof by Extrusion; Roof by Soffit, Fascia, Gutter; Modifying Roof, Creating Openings; Creating Ceiling; Creating Floor & Slab Edge; Splitting the Floor and Creating Slope in Floor; Edit Floor & Applying material

Session 5

Stairs, Railing, Ramp (Circulation): Stairs, By Component, By Sketch, Modifying the Stairs using Edit Type- Thread, Raiser, Stringers, Nosing Etc., Modifying Stairs Using Family, Applying Material Railings, Sketch Path, Place on Host, Creation of Baluster & Handrail by Using Family, Applying Material; Ramp

Session 6

Mass Objects: Create Model with Extrusions, Sweeps, Revolves, Blends; Working With X-ray (Form Elements); Transform Mass to Building Elements; Model Site- Topo Surface, Site Component, Parking Component, Modify Site

Session 7

Rendering and walk through and Quantity Estimation of prepared model

TEXT BOOKS:

1	Chuck East Man, Paul Teicholz and others	BIM handbook: A guide building information modeling for owners, Managers, Designers, Engineers, and contractors, 2nd Ed., ISBN-10 : 9780470541371, ISBN-13 : 978-0470541371

Course Outcomes: After the completion of this course, students will be able to:

CO1: Prepare and modify drawing of building elements like plans, levels, walls, doors and windows

CO2: Equipped to 3D modeling of floors, roofs, library elements, and manage view

CO3: Create models with extrusion/sweeps/blends/revolve

CO4: Rendering, walkthrough of prepared building models

CO5: Prepare estimate of building systems using modern tools

APTITUDE RELATED ANALYTICAL SKILL

Contact Hours/Week	:	36 Hrs.	Credits	:	1
Total Lecture Hours	:	36	CIE Marks	:	50
Total Tutorial Hours	:	NIL	SEE Marks	:	50
Course Code	:	ARAS			

Methodology : Instructor led – Concepts with guided question-solving, assignments and homework assessments

Modules Covered:

Sl. No.	Module covered	Duration (in hrs.)
1	Quantitative Aptitude	16
2	Verbal Reasoning	08
3	Logical Reasoning	08
4	Test taking strategies to crack recruiter tests	02
5	Post-Training Assessment along with a debrief	02
	Total Course	**36**

Detailed syllabus:

1. Quantitative Aptitude (with focus on questions from top recruiters) – 16 hours

a) Number System –
- Classification of numbers
- Divisibility tests
- Power cycles and remainders
- Factors and multiples
- Applications of HCF and LCM

b) Profit and Loss, Partnerships and Averages –
- Basic terminology in Profit and Loss
- Partnerships
- Averages and weighted averages
- Mixtures and alligations

c) Time and Work –
- Working with different efficiencies
- Pipes and cisterns
- Work equivalence
- Division of wages

d) Time, Speed and Distance –
- Basics of Time Speed and Distance
- Relative Speed
- Problems based on trains
- Problems based on boats and streams
- Problems based on Races

e) Percentages, Simple and Compound Interest –
- Percentages as fractions and decimals
- Percentage increase / decrease

- Simple interest and compound interest
- Relationship between simple and compound interest

f) Permutation, Combination and Probability –
- Fundamental counting principle
- Basics of permutation and combination
- Computation of permutation
- Circular permutation
- Computation of combination
- Probability

g) Logarithms, Progressions,Geometry and Quadratic Equations –
- Logarithms
- Progressions – Arithmetic, Geometric and Harmonic
- Geometry
- Mensuration
- Quadratic equations

2. Verbal Reasoning (with focus on questions from top recruiters) – 8 hours

a) Reading Comprehension –
- Eyespan
- Speed reading techniques
- Types of questions
- Comprehension strategies

b) Sentence Correction –
- Subject-Verb Agreement
- Parallelism
- Modifiers
- Pronoun Antecedent Agreement
- Verb Time Sequence
- Comparison
- Determiners
- Prepositions

c) Vocabulary –
- Etymology of words
- Prefix and suffix
- Memory techniques to remember words
- Synonyms and antonyms
- Analogy

d) Sentence Completion and Para Jumbles –
- Sentence completion – single blank and double blank questions
- Parajumbles – Moving and anchored jumbles

3. Logical Reasoning (with focus on questions from top recruiters) – 8 hours

a) Coding and Decoding, Series, Analogy, Odd Man Out and Visual Reasoning –
- Coding and decoding
- Number and alphabet series

- Analogy
- Odd man out
- Visual Reasoning

b) Data Arrangements and Blood Relations –
- Linear, circular and distribution arrangements
- Blood Relations

c) Data interpretation and Data Sufficiency –
- Tables
- Pie Charts
- Bar Graphs
- Data Sufficiency

d) Clocks, Calendars, Direction sense and Cubes –
- Clocks
- Calendars (Conventional and shortcut methods to find day of a date)
- Cubes
- Direction Sense

4. Test taking strategies – 2 hours

This module will focus on:
- Understanding patterns of tests (Adaptive, non adaptive, navigation – intra sectional, inter sectional)
- Best strategies to maximize scores and clear cut-offs
- Shortcut strategies on Quantitative Aptitude, Logical Reasoning as well as Verbal Ability to ace sections

5. Post Training Assessment with debrief – 2 hours

An assessment that tests a student on all three sections of Aptitude, followed a detailed student-wise analysis based on:
- Cut-off
- Percentile w.r.t the batch
- Percentile w.r.t. the college
- Corrective measures to be taken to improve the score

In class, there will be a debrief on how the test should have been taken by an ideal test taker to navigate through the difficulties and ace the cut-off.

6. Tests outside training schedule

An ideal aptitude training course is a mix of classroom learning / guided question solving, followed by self-practice. The 'training duration' focuses mainly on laying strong foundations on concepts and ability to solve questions on major aptitude topics. Significant amount of practice is also provided to students through online tests in the form of:

1. Pre-Assessment test
2. Full-length practice tests
3. Company specific tests (patterns and question types of major recruiters should be given exposure to)

SCHEME & SYLLABUS

OF

VII & VIII SEMESTERS

B.E. CIVIL ENGINEERING

2022-23

Vision of theF Department of Civil Engineering

To become a premier Civil Engineering Department offering excellent engineering education in design methods and advanced technologies to the students, to pursue research in thrust areas and to offer professional services to the society.

Mission of the Department of Civil Engineering

The Department is committed to develop competent professionals by offering need based curriculum in Civil Engineering areas, promoting research and innovation to prepare the students for higher study, life-long learning and societal responsibility. The department is also committed to provide good learning environment to develop professional ethics and skills in our students and to provide engineering services to the society.

Programme Educational Objectives of Civil Engineering

PEO#1	Graduates of the program will practice Engineering profession as competent professionals applying fundamentals, state-of-the-art knowledge and technical skills. ***[Theme: Practice Engineering profession as competent professionals]***
PEO#2	Graduates of the program will excel in higher education with life-long learning. ***[Theme: Higher education and life-long learning]***
PEO#3	Graduates of the program will exhibit leadership qualities, communication skills and team spirit. ***[Theme: Communication and team work]***
PEO#4	Graduates of the program will contribute to societal needs with ethical attitude. ***[Theme: Initiated to Society and ethical practice]***

Programme Outcomes of Civil Engineering

The following list of program outcomes describes what graduates are expected to know and be able to do at the time of graduation. Graduates will have:

PSO#1	An ability to conduct standardized field testing on civil engineering

	materials, interpret experimental data and provide conclusions. Demonstrate the construction of masonry, reinforcement fabrication for beams columns, slabs, etc., electrical wiring, assembling of water supply and sanitary layouts, application of painting and welding of joints. *[Short title: CE Field experiments and demonstration].*
PSO#2	An ability to estimate material quantities, cost estimates, prepare specifications, produce engineering drawings by conducting appropriate survey works and 3D modeling of systems/components using modern tools for technical projects *[Short title: CE technical reports and 3D modeling].*
PSO#3	Able to perform analysis and design in at least three to four of the technical areas appropriate to Civil Engineering. *[Short title: CE Technical areas].*

PROGRAM OUTCOMES (POs)

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work:** Function effectively as an individual; and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12.**Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institution affiliated to VTU, Belagavi, Approved by AICTE, New Delhi, Accredited by NAAC with 'A' grade & ISO 9001:2015 Certified)

QUANTITY SURVEYING, VALUATION AND CONTRACT MANAGEMENT

Contact Hours/Week	:	4(L)	Credits	:	4.0
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	7RCV01			

Objectives: The objective of this course is to enable the students:

- To prepare the different types of estimates for various structures, taking out quantities, preparing specifications and rate analysis for buildings.
- To understand the types of Valuation including its preparation, documentation.

Unit I

Introduction: Importance of estimation in civil engineering, different type of estimates, methods of estimations, study of various drawings and preparing estimates. Concept and units of measurement.

Estimation: Calculating the quantities and cost by center line, long wall and short wall methods. Preparing of detailed and abstract of estimates for the buildings of flat and sloped roofs. **12 Hrs.**

Unit II

Building Components: Estimating the quantities and cost of RCC beams, columns and footings, roof slabs, steel truss and industrial sheds, water supply and sewerage works like manhole, septic tank.

Specifications: Definition, objective and writing general and detailed specifications of item of works in buildings, roads, minor bridges and industrial structures.

10 Hrs.

Unit III

Rate analysis from first principles: Definition and purpose, working out quantities and rates for standard items of earthwork, cement concrete mixes, brick and stone masonry, flooring, plastering, RCC works, centering and form work for different RCC items, wood and steel works for doors, windows and ventilators.

10 Hrs.

Unit IV

Measurements of Earth work for roads: Methods for computation of earth work-cross sections- Mean depth or mid-section formula, mean sectional area or Trapezoidal formula. Prismoidal formula, with and without cross slopes.

10 Hrs.

Unit V

Valuation: Purpose and different forms of valuations and methods, factors affecting intrinsic values of land, comparative method, abstractive method, belting method. Cost of structure, BIS rules for measuring plinth area and cubical contents.

Valuation of land with buildings: Rental, land and building, valuation on profit basis, direct comparison of capital value, residual or development methods. Rights and liabilities of lessor and lessee, leasehold properties, freehold properties. Case studies: Valuation of real properties. **10 Hrs.**

Course Outcomes: After the completion of this course, students will be able to:

CO1: Estimate the quantity and cost of the building and other allied civil works as per standard procedures.

CO2: Prepare rate analysis from first principles for various items of civil works.

CO3: Describe the different valuation methods for various types of real properties and perform valuation.

DESIGN OF PRE-STRESSED CONCRETE

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	NIL	SEE Marks	:	50
Course Code	:	7RCV03			

Course Objectives: The objective of the course will enable students to,

Introduce the students to the basic concepts of PSC, stress analysis at transfer, service and ultimate limit states of pre tension and post tension members, analysis and design of PSC members as per IS:1342 including limit states of collapse in flexure, shear and torsion and limit states of serviceability and design and construction aspects of pre-cast and cast in-situ PSC structures.

Unit I

Introduction to PSC structures : Introduction to Pre stressed concrete structures-Basic concepts of Pre-stressing. Historical development, Advantages of pre-stressed concrete. Applications of pre-Stressed concrete, Need for High strength concrete and steel.

Basic Principles of Pre stressing. Tensioning Devices. Pre-tensioning and Post Tensioning Systems. Thermo-Electric Pre-stressing. Chemical Pre-stressing and shear stress.

Analysis of Pre-stress and Bending Stresses. Basic assumptions, Analysis of Pre-stress. Resultant stresses at a section. Pressure line or Thrust line and internal Resisting couple. Stresses in Tendons. Cracking Moment. **8 Hrs.**

Unit II

Losses of Pre stress: Losses of Pre stress. Loss due to elastic deformation of concrete, due to shrinkage of concrete, Creep of concrete, Relaxation of stress in steel, Due to anchorage slip. Total losses allowed for in the design. Determination of jacking force.

Deflection of Pre stressed concrete members. Importance of control of deflections. Factors influencing deflections. Short and long term Deflection. Elastic Deflections under transfer loads and due to different cable profile. Deflection limits as per IS 1343. Effect of creep on deflection. Load verses deflection curve. **7 Hrs.**

Unit III

Flexural Strength of PSC members: Flexural Strength of Pre stressed concrete members. Types of Flexural Failure. Strain compatibility method. Simplified code procedures.

Shear Resistance of PSC members – shear reinforcement – IS code provision. Design of PSC members- Type-I, Type-II, and Type-III design – numerical problems. **8 Hrs.**

Unit IV

Shear and Torsional resistance of PSC members: Shear and Torsional resistance of pre-stressed concrete. Shear and principal stresses. Pre-stressed concrete members in torsion. Ultimate shear resistance of pre-stressed concrete sections. Design of shear reinforcement. **8 Hrs**.

Unit V

Application of pre stressed and post tensioned members: Application of pre-stressed Concrete structures: Poles, pipes, slabs, sleepers, manhole covers, principles of production and testing.

Post tensioned members, Long span members like bridge girders, slabs, construction techniques. **8 Hrs**.

TEXT BOOKS:

1.	N.Krishnaraju	Pre stressed Concrete – TMH, 2018 Edition, McGraw Hill Education, ISBN-10 : 9387886204, ISBN-13 : 978-9387886209

REFERENCE BOOKS:

1.	T.Y.Lin & N.H.Burns	Design of Pre-stressed Concrete Structures – 3rd Edition, 2010, John Willey & Sons. ISBN-10 : 9788126528035
2.	P Dayaratnam	Pre-stressed Concrete Structures-6th edition 2018, CBS publishers and distributers Pvt. Ltd, ISBN978-81-204-1791-5

Course Outcomes: After the completion of this course, students will be able to:

CO1: Describe the basic concept and principles of PSC. Calculate the stress conditions in PSC members due to pre-stress, dead load, and live loads.

CO2: Calculate the losses of pre-stress in pretension and post tension members.

CO3: Analyze and design of PSC members for flexure, shear and torsion as per IS1343 Code.

CO4: Apply the concepts of pretension and post tension members for various Civil Engineering construction practices.

MATRIX METHODS

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	7RCVE31			

Course Objectives: The objective of this course is to enable the students:
To solve problems of continuous beams, trusses, plane frames under loading, support displacement using different approaches of stiffness and flexibility method and to expose then to the use of STAADPRO software.

Unit-1

Review of static indeterminacy, degrees of freedom, degree of kinematic indeterminacy, kinematically unstable structures. Advantages of matrix method of structural analysis, concepts of stiffness and flexibility. **6 Hrs.**
Self study: Determination of static, kinematic and indeterminacy and stability of different types of structural configurations.

Unit-2

Introduction to stiffness and flexibility matrix method, Relationship between flexibility and stiffness matrix, Member stiffness matrix, Local and global co-ordinate system for trusses elements, beams, Analysis of continuous beams, frames by stiffness method - system approach. **9 Hrs.**
Self study: Analysis of spring assembly in series, parallel and combinations

Unit-3

Analysis of continuous beams, plane trusses and plane frames by element approach of stiffness method. **8 Hrs.**
Self Study: Analysis of continuous beams and plane frames with elastic supports and support rotation.

Unit-4

Direct stiffness method, derivation of stiffness matrices of truss and frame elements in global coordinates, Analysis of continuous beams, plane trusses and plane frames by direct stiffness method- System approach. **8 Hrs**
Self Study: Use of STAADPRO software for analysis of continuous beams trusses and plane frames.

Unit-5

Flexibility method: Analysis of continuous beams, Plane trusses and plane frames by system approach and element approach of flexibility method. **8 Hrs.**
Self Study: Analysis of effect of temperature, lack of fit in trusses and plane frames by stiffness and flexibility approach.

Reference Books:

1	C.S.Reddy	Basic Structural Analysis, 3rd edition 2010, Tata McGraw Hill Education Pvt Ltd, New Delhi ISBN 13: 9780070702769 ISBN 10: 0070702764
2	Dr. A.S. Meghre and S.K. Deshmukh,	Matrix Methods of Structural Analysis, 2015 Charotar Publishing House, Anand 388001 ISBN-10 : 819286927X ISBN-13 : 978-8192869278
3	S.Rajasekaran	Computational Structural Mechanics, PHI, New Delhi-2001 ISBN-10 : 9788120317345 ISBN-13 : 978-8120317345

Course Outcomes: After the completion of this course, students will be able to:

CO1: Compute the static and kinematic indeterminacy of different types of structures.

CO2: Formulate the elements stiffness matrix for structural members in local coordinates.

CO3: Compute the forces in structural systems by using system approach to stiffness method.

CO4: Apply direct stiffness method to analyze structures using direct stiffness method.

CO5: Analyze structures using flexibility method.

STRUCTURAL DYNAMICS

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	7RCVE32			

Course Objectives: The objective of this course is to enable the students:

- The basic concepts of structural dynamics, including free and forced vibration response of single degree damped and undamped systems.
- Response under harmonic loading, rotation imbalance, support motion, seismic instruments, response to general system of loading, DLF.
- Free and forced vibration response of two and three degrees of freedom systems, shear building.

Unit I

Dynamics of Single-degree-of-freedom systems:

Introduction to structural dynamics, basic definitions, vibration of single degree of freedom system, undamped, damped free vibrations, logarithmic decrement. **8Hrs.**

Unit II

Harmonic loading and Seismic instruments:

Forced vibrations of single degree freedom system, response of undamped and damped systems subjected to harmonic loading, rotation unbalance, reciprocating balance, support motion, principle of seismic instruments. **8 Hrs**.

Unit III

Duhamel's integral, response due to general system of loading, dynamic load factor, response of SDOF subjected to harmonic excitation, Triangular and rectangular pulse. **8 Hrs**.

Unit IV

Dynamics of Two-degree freedom systems:

Free vibration of two degree of freedom systems, natural frequencies, normal modes, orthogonally property of natural modes, Eigen values. **8 Hrs.**

Unit V

Dynamics of Multi-degree freedom systems:

Multi degree of freedom systems, free vibrations, natural frequencies, mode shapes, forced vibrations. **7 Hrs**.

TEXT BOOKS:

1.	Mario Paz	Structural Dynamics, 5th Ed., Kluwer Academic Publ., 2003. ISBN:1-4020-7667-3

REFERENCE BOOKS:

Course Outcomes: After the completion of this course, students will be able to:

CO1: Determine the vibratory response of idealized single degree freedom systems under free, damped and forced vibration conditions.

CO2: Apply direct integration and numerical techniques to find the response of structures subjected to time dependent vibratory loading.

CO3: Determine the natural frequencies and normal modes of two and three degrees of freedom systems.

CO4: Determine the free and forced vibrations of systems with two and three degrees of freedom.

GROUNDWATER HYDROLOGY

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	7RCVE33			

Course Objectives: This course will enable students to:

1. Understand the interactions between groundwater systems, climate, surface waters and land use.
2. Understand principles of regional groundwater flow and design of wells.
3. Understand the concepts of various surface and subsurface geophysical methods for groundwater exploration.
4. Describe the advantages or consequences of artificial recharge.

Unit I

Introduction

Scope and Importance, Vertical distribution of groundwater, Occurrence in different types of rocks and soils, Definitions of aquifers, aquifuge, aquitard, aquiclude, Confined and Unconfined aquifers, Concept of groundwater balance **6 Hrs.**

Unit II

Fundamentals of Groundwater Flow

Aquifer parameters - Specific yield and specific retention, porosity, storage coefficient, Darcy's Law, Coefficient of permeability and intrinsic permeability, Transmissibility **8 Hrs**.

Unit III

Well Hydraulics

Steady flow: Radial flow in confined and unconfined aquifers, Unsteady flow: General equation–derivation, Theis Method, Cooper and Jacob method, Chow's method, Solution of unsteady flow equations. Interference among wells, partially penetrating wells, and Characteristic well losses **9 Hrs**.

Unit IV

Ground Water Development

Types of wells, Methods of construction of open wells, Methods of construction of tube wells, Tube well design, Artificial groundwater recharge methods, Pumps – working principles, power requirements **10 Hrs.**

Unit V

Ground Water Exploration

Electrical resistivity-surface method, Seismic refraction method, Borehole geophysical techniques: electric logging, radioactive logging, induction logging, sonic logging, and fluid logging **6 Hrs.**

TEXT BOOKS:

1.	David K Todd	Ground Water Hydrology – 3rd Edition, 2006, Wiley & Sons. ISBN: 9788126508365
2.	Raghunath H M	Ground Water – 3rd Edition, 2007, New Age International Publishers. ISBN: 9788122419047

REFERENCE BOOKS:

2.	Chahar, B.R	Groundwater Hydrology, 2014, McGraw Hill, New Delhi. ISBN: 9789339204631

Course Outcomes: After the completion of this course, students will be able to:

CO1:Identify groundwater occurrence in various kinds of aquifer and aquifer properties under different geological environments.

CO2:Describe the properties of porous media that control groundwater flow and transport.

CO3:Apply analytical solutions to solve the flow problems pertaining to steady state and transient groundwater flow.

CO4:Compute the power requirements of pumps and yield of wells.

CO5:Elaborate different techniques of ground water exploration, recharge and harvesting techniques.

BRIDGE ENGINEERING

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	7RCVE34			

Course Objectives : The course introduces the students to various aspects of bridge structures including its components, hydraulic design, design of various type of bridges such as bridges like culverts, slab bridge decks, T-beam bridges, design of post tension concrete bridges, analysis and design of substructures and foundations, construction and maintenance aspects of bridges.

Unit-1

BRIDGE PRELIMINARIES: Introduction to Bridge Engineering, Components of bridges, Investigation of Bridges (Hydraulic investigations, Geotechnical investigations and Traffic Studies), Types of Bridges, and Loading standards, (Road Bridge Loadings)

HYDRAULIC DESIGN: Methods of finding design discharge, natural, artificial and linear water ways, afflux, economic span, depth of scour. **7 Hrs.**

Unit-2

Design of culverts (pipe, and box culverts), Design of reinforced concrete slab bridge decks for IRC class-AA loading and Class-A loading. **8 Hrs.**

Unit-3

SUBSTRUCTURES AND FOUNDATIONS: Bearings and types, Types of abutments, piers and wing walls, forces to be considered for the design, Design of Pier. Design of Abutment.

Types of foundations and forces to be considered for the design. **8 Hrs.**

Unit-4

DESIGN OF RC T-beam bridge with cross beams by Piegaud's and Courbon's method for Class-AA loading, Design of post tensioned pre-stressed concrete slab bridge deck. **8 Hrs.**

Unit-5

Bridge super structure construction: Dependent factors, Site Erection methods, side slewing method, Launching method. Erection of concrete Girders with cranes/derrick. Cantilevering method, incremental method for concrete girders. Inspection of Bridges, Necessary for inspection of Bridges, Procedure for inspections. Inspection of concrete bridges. **8Hrs.**

Text Books:

1	Johnson–Victor	Essentials of Bridge Engineering, 6th edition, 2019-Oxford IBH Publications, New Delhi ISBN-10 : 8120417178 ISBN-13 : 978-8120417175
2	Jagadish T.R. & Jayaram M.A.	Design of Bridge Structures – 3rd edition, 2020, PHI, New Delhi.ISBN-10 : 8120338529, ISBN-13 : 978-8120338524

3	Rajagopalan N.	Bridge Superstructure, 2013, Narosa Publishing House, ISBN 10: 8173196478 ISBN 13: 9788173196478

Reference Books:

2	S.Ponnaswamy	Bridge Engineering, 2nd Edition, 2007
3	Libby	Modern Pre-stressed concrete bridges, 4th Edition, 1990

Course Outcomes: After the completion of this course, students will be able to:

CO1: Select the type of bridge based on the site investigation and compute the design discharge, linear waterway, economic span and depth of scour.

CO2: Design different types of culvert and minor bridges, for different IRC loadings.

CO3: Analyze the stability of Piers and Abutment.

CO4: Design of RCC and post tensioned concrete T-beam bridges for various IRC loading standards.

CO5: Elaborate on various construction techniques of Bridges.

EARTH & EARTH RETAINING STRUCTURES

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	7RCVE35			

Course Objectives: This course will enable students to:

Understand different types of earth and earth retaining structures such as dams, embankment, retaining walls, bulkheads, rockfill dams, Coffer dams, their stability and design considerations.

Unit I

Earth Dams and Embankments: Different types of earthen dams with sketches and their stability. Hydraulic fill and rolled fill methods of construction. Causes of failure of earth dam. Design criteria of earthen dams-stability analysis of earthen dams-seepage control in earthen dams. **8 Hrs.**

Unit II

Retaining Walls: Types of retaining walls, failure of retaining walls by sliding, overturning and bearing. Stability analysis and principles of the design of retaining walls– Gravity retaining wall, Cantilever retaining walls, Counter-fort retaining walls (no structural design) **8 Hrs**.

Unit III

Bulk Heads: Cantilever sheet pile walls:- Types of sheet pile walls- Free cantilever sheet pile-cantilever sheet pile in cohesionless soils- cantilever sheet pile in clay.

Anchored sheet pile walls: - Anchored sheet pile with free earth support in cohesionless and cohesive soils **8 Hrs.**

Unit IV

Rock Fill Dams: Introduction, Origin and usage of rock fill dams, types of rock fill dams, design of rock fill dams.

Braced Cuts: Introduction, Lateral earth pressure on sheeting, different types of sheeting and braced systems – design of various components of bracings. **8 Hrs.**

Unit V

Coffer Dams & Cellular Coffer Dams: Introduction-types of coffer dams-Design of cellular coffer dams on rock by Tennesse Valley Authority (TVA) method, safety against sliding, overturning, vertical shear and stability against bursting **7 Hrs.**

TEXT BOOKS:

1.	Dr. K.R.Arora	Soil Mechanics and Foundation Engineering, 7th Revised edition 2014 Standard publishers & Distributers. ISBN: 81-8014-112-8
2.	S.K. Garg	Soil Mechanics and Foundation Engineering, edition 10th 2015 Khanna Publishers. ISBN: 9788174091048

REFERENCE BOOKS:

1.	Dr. B.C. Punmia	Soil Mechanics and Foundation Engineering, edition 17th 2017, Laxmi publications Ltd. ISBN 81-7008-791-0
2.	S.K. Garg	Hydraulic structures, Khanna Publishers ISBN: 9788174090478
3.	Dr. V.N.S Murthy	Soil Mechanics and Foundation Engineering, edition 1st 2008 Sai Tech. ISBN: 9788123913971, 9788123913971

Course Outcomes: After the completion of this course, students will be able to:

CO1: Classify the types of earthen dams and Identify different causes of failure and seepage control measures for embankment dams

CO2: Compute the earth pressure and analyze retaining walls for their stability

CO3: Identify, explain and analyze various earth retaining structures

PAVEMENT MATERIALS, EQUIPMENT AND CONSTRUCTION

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	7RCVE36			

Course Objectives: This objective of the course will enable students to,
Introduce the student to the materials used in pavement construction, their characterization and assessing their suitability for the pavement application considering the relevant standards and also the student is exposed to design of bituminous mixes. The student will be introduced to various equipment used and the construction methodology adopted in the construction of both flexible and rigid pavements.

Unit-1

Pavement Materials

Aggregates: Origin, classification, requirements, properties and tests on road aggregates, concepts of size and gradation - design gradation, maximum aggregate size, aggregate blending to meet specification.

Bitumen: Origin, preparation, properties and chemical constitution of bituminous road binders, requirements.

Bituminous Emulsions and Cutbacks: Preparation, characteristics, uses and tests.

Adhesion of Bituminous Binders to Road Aggregates: Adhesion failure, mechanism of stripping, tests and methods of improving adhesion.

Modified binders, characteristics, types and applications **8 Hrs.**

Unit-2

Bituminous Mixes: Mechanical properties, dense and open textured mixes, flexibility and brittleness, bituminous mix design method using Marshall Method and specification using different criteria - voids in mineral aggregates, voids in total mix, density, flow, stability, percentage voids filled with bitumen. **8 Hrs.**

Unit-3

Equipment: Equipment in Highway Construction: Various types of equipment for excavation, grading and compaction - their working principle, advantages and limitations. Special equipment for bituminous and cement concrete pavement and stabilized soil road construction. **8 Hrs.**

Unit-4

Construction

Subgrade: Earthwork grading and construction of embankments and cuts for roads. Preparation of subgrade, quality control tests.

Flexible Pavement: Specifications of materials, construction method and field control checks for various types of flexible pavement layers. **8 Hrs.**

Unit-5

Cement Concrete Pavements: Specifications and method of cement concrete pavement construction; Quality control tests; Construction of various types of joints.

Alternate and Marginal Materials for Low volume roads: Scope for use of

alternate marginal/low cost/waste/stabilized local materials, various alternate and waste materials and their strength requirement for road application. **7 Hrs.**

TEXT BOOKS:

1	S.K. Khanna, C.E.G. Justo and A. Veeraragavan	**Highway Engineering**, Nem Chand and Bros. Roorkee, 10th Edition, 2014.
2	Freddy L Roberts, Prithvi S Kandhal, Brown, E R, Lee, D-Y, Kennedy, T W	**Hot Mix Asphalt Materials, Mixture Design and Construction,** 2nd Edition, National Asphalt Pavement Association Research and Education Foundation, Maryland, USA

REFERENCE BOOKS:

1	Yoder and Witczak	**Principles of Pavement Design-** Wiley India Pvt Ltd., second edition, 2011.
2	**Specifications for Roads and Bridges Works [MoRTH]** – 5th Revision, 2013, Indian Roads Congress, New Delhi	
3	Relevant IS codes and IRC codes	

Course Outcomes: After the completion of this course, students will be able to:

CO1: Assess the suitability of various materials used in pavement construction as per the relevant code of practice.

CO2: Design bituminous mixes and analyze its volumetric properties.

CO3: Explore the various equipments used in pavement construction.

CO4: Formulate the methodology to be adopted for the construction of pavements.

CO5: Explore the need for alternate/marginal materials and assess their suitability for low volume roads.

PROFESSIONAL PRACTICE

Contact Hours/Week	:	2L + 2P	Credits	:	2.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	7RCVL1			

Course Objective: The objective of this course is to empower the students with the knowledge of planning and design of highways, irrigation structures, water supply and sanitary structures, small township, to understand the practical applications of surveying and to use total stations and other survey equipment. Also to enable them to work in teams and to develop time management, communication and presentation skills.

Contents of the Course:

1. HIGHWAY PROJECT:

- Preliminary and detailed survey to align a new road (min. 1 to 1.5 km stretch) between two obligatory points considering alternate routes.
- Collection of geotechnical data
- Proposing final alignment along with justification
- Design of roadway section as per the relevant code of practice
- Preparation of necessary drawings and earthwork computation using Civil3D
- Preparation report

2. IRRIGATION PROJECTS:

Covers Major, Medium and Minor projects. Feasibility studies including Environmental, Economic, Financial, Technical, Social and Political.

Preparation of preliminary and final DPR (Detailed Project Report)
Toposheet studies, Hydrological data collection, Gauge meters in dams and canal, Flood discharge/flood control measurements, Geotechnical data collection, site investigation, Geological investigation and estimation costing.

3. Restoration of old tank Project: The work shall consist of

i) Alignment of center line of the existing bund, Longitudinal and cross sectioning.
ii) Generating capacity contours.
iii) Details at existing Waste weir and sluice points.

4. New Tank Project:

The work shall consist of

i) Alignment of center line of the proposed bund, Longitudinal and cross sectioning.
ii) Generating capacity contours.
iii) Planning and designing of sluice and waste weir.
iv Design of bund section.
v) Canal alignment.

5. Water supply and sanitary project: Examination of sources of water supply, Calculation of quantity of water required based on existing and projected population. Preparation of village map by total station survey and Civil 3D, location of sites for ground level reservoir and overhead tanks, underground drainage system surveys for laying the sewers.

- Design of Pumps,
- Design of Ground level reservoir and Overhead Water tanks,
- Assessment of Drinking water quality of the various sources and treatment identification,
- Design of sewage treatment plant for the Community.
- Rain water harvesting scheme for the village.

6. Township Design (Gated Community):

i. Topographical survey of the area
ii. Layout plans- Residential plots, commercial plots, Amenity services (play grounds, in-door stadium, temples, meditation centres, etc.) Parks as per guidelines.
iii. Planning of water supply and sanitary lines. STP, rainwater harvesting, street lighting, intersection signals etc.

Text books:

1	Survey camp manual prepared by the department.
2	Manuals of Surveying-I and Surveying-II prepared by the department.
3	A to Z Practical Building Construction and its Management, Mantri Institute of Development and Research, Third Edition 1998.
4	Manual of water supply and treatment, Ed3, Rev.& updated., 1999., Part-1 and Part-2. Prepared by: Expert committee constituted by Govt. of India., Ministry of Urban development, New Delhi. Published by: Central public health and environmental engineering organization
5	Manual on Sewerage and Sewage treatment systems, Part A – Engineering, Ed3, Rev.& updated., Nov. 2013, Prepared by: Expert committee constituted by Govt. of India., Ministry of Urban development, New Delhi. In collaboration with: Japan international Cooperation agency. Published by : Central public health and environmental engineering organization
6	Detailed project report of Karnataka Urban Water supply and Drainage Board for Providing 24 x 7 water supply scheme to Tiptur city under UIDSSMJ Prepared by: Executive engineer, Karnataka Urban water supply and drainage board division, Tumkur
7	Civil Engineering Hand Book edition 9th 2012 by Gurucharan Singh ISBN: 9788180140204, 9788180140204
8	Pradhana Manthri Grameen Sadak Yojana – Operations Manual, February 2005. Prepared by: National rural roads development agency Ministry of Rural development, New Delhi.

Course Outcomes: After the completion of this course, students will be able to:

CO1: Use modern survey tools to collect field data and generate related drawings using software.

CO2: Prepare contour maps of given topography and to compute reservoir capacity.

CO3: Carry out survey works related to irrigation, water supply, town planning, hydraulics and highway projects.

CO4: Plan the layouts, design hydraulic, highway, water and sanitary structures.

CO5: Prepare project report and develop presentation skills.

CO6: Develop professional etiquettes and working with groups.

INDUSTRIAL PRACTICE

Contact Hours/Week	:	2(P)	Credits	:	2.0
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	7RCVIP			

Course Objectives : The objective of this course is to train the students to industrial practices as relevant to building construction- center line marking, masonry and concrete, form work (carpentry), bar bending, welding, electrical wiring and plumbing works.

Trade: Marking of Centre line for buildings **1 day**

Trade: Masonry and concrete **4 days**

Specification of materials, used in concrete and masonry. Types of mortar, Mixing and placing. Bonds, Pointing, Plastering and curing, Mixing of ingredients of concrete, Conveyance, Lifting, placing and curing.

Concrete Mix Design **1 day**

Trade: Form work Carpentry **3 days**

Types of form work, Fixing for different elements, Removing, storing and reuse.
Field demonstration and Practice.

Trade: Bar bending **3 days**

Study of drawings, Bar bending, Hooks and stirrups, mechanization in Bar bending, Maintenance of stockyard, preparation of bar bending schedule, field demonstration and practice- Footing mat, columns, slabs, beams tying and erection.

Trade: Welding **3 days**

Types of welds, Gas, Arc, TIG, MIG, joints and positions.

Trade: Electrical House wiring **4 days**

Electrical Safety, circuits and testing, PVC wires and cables with modern trends, House wiring, Distribution, Transformers, Mortar and switch gear equipments, industrial wiring.

Trade: Plumbing and Sanitation **4 days**

Plumbing materials, jointing of pipes and fittings, Leakage checks, sanitary appliances installation and maintenance.

Building modeling and design using FEM software (CYPE & STADDPRO)
9 days

Course Outcomes: After the completion of this course, students will be able to:

CO1 : Execute center line marking for buildings.

CO2 : Construct brick and block masonry with different types of bond with regards to joints, plumb line.

C03 : Perform concrete mix design, cast cubes and evaluate strength properties as per IS specifications

CO4 : Prepare bar bending schedule and perform erection of footing, beams, columns and slabs

CO5 : Construct form works for footing, beams, columns and slabs.

CO6 : Plan and execute electrical wiring for buildings.

CO7 : Plan and execute sanitary and plumbing works for buildings.

CO8 : Perform welding for various types of joints.

CO9 : Analyze and design the building frames

CO10: Involve in team work and prepare a report.

VIII Semester

B.E. Civil Engineering

ADVANCED CONCRETE TECHNOLOGY

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	8RCVE1			

Course Objectives: The Objectives of this course is to:

Elucidate the hydration mechanism of cement, role of mineral and chemical admixtures, the properties of fresh concrete, proportioning of concrete mixes, the properties and testing of hardened concrete, quality control measures, creep and shrinkage of concrete, utility of non-destructive testing and special concrete.

Unit I

Hydration of Portland Cement: Chemistry of Hydration, Properties of the Hydration products, microstructure of hydrated cement pastes, properties of hardened cement pastes. Mineral Admixtures and Blended Cements–Pozzolanic Materials, blast furnace slag, blended cements, proportioning with mineral admixtures, effects of properties of fresh and hardening concrete. Chemical admixtures–definitions and classifications, use of admixtures, air–entraining admixtures, water–reducing admixtures. **8 Hrs.**

Unit II

Fresh Concrete: workability, measurement of workability, setting of concrete, tests of fresh concrete. Proportioning concrete mixes – basic considerations, fundamentals of mix design, ACI method of Mix design, IS Methods, British/DOE method. Curing–curing at Ambient Temperatures, Curing at Elevated Temperatures, curing compounds. **7 Hrs**.

Unit III

Hardened Concrete–: Response of concrete to stress – interfacial transition zone (ITZ), modulus of Elasticity, tension and fracture, compression, cyclic loading, multiaxial states of stress, factors affecting strength. Testing of hardened concrete – need for 'Standard' Tests, significance of tests, tests for compressive strength, other concrete tests, assessment of concrete quality. Quality Control – measurement of variability, quality–control charts, failure of meet specified requirements. Time dependent deformation – plastic shrinkage, drying shrinkage, strain rate effects, creep of concrete, prediction of shrinkage and creep. **8 Hrs.**

Unit IV

Testing of concrete: - destructive and Non-destructive testing,

Durability–permeability of concrete, chemical transport, chemical attack, physical attack, cracking in concrete, repair and maintenance of concrete. **8 Hrs.**

Unit V

Special Concretes- Concretes for special applications–lightweight concrete, heavyweight concretes, architectural concrete- stamped concrete, concrete dyes, acids staining, water based staining, overlaying, PC overlays, stamped overlays, quoting, polishing, finishing, engraving, other types of concretes. Cement–polymer composites–latex–modified concrete, polymer–impregnated concrete. Organoceramics. Fiber reinforced concrete–definitions, fiber–matrix bond, mechanics of fiber reinforcement, fabrication of FRC, properties of fiber reinforced concrete, applications of FRC. **8 Hrs.**

TEXT BOOKS:

1.	M.S. Shetty	Concrete Technology, 2005 Chand and co., New Delhi, ISBN-10 : 9788121900034,ISBN-13 : 9788121900034
2.	Sidney Mindess, Young and Darvin	Concrete, PH, 2nd Ed. 2002, ISBN-10 : 0130646326, ISBN-13 : 978-0130646323

REFERENCE BOOKS:

1.	A.M. Neville,	Properties of Concrete, edition 5th 2012 ELBS, Latest Ed.ISBN-13: 978-0273755807, ISBN-10: 0273755803
2.	P.Kumar Mehta and Paulo J.M.Monteiro	Micro structure and properties of concrete, McGrawHill, ISBN:9780071797870

Course Outcomes: After the completion of this course, students will be able to:

CO1: Recommend appropriate types of cement, mineral admixtures, chemical admixtures, to meet the specific performance requirements in respect of fresh and hardened concrete.

CO2: Design concrete mixes as per different national and international codes of practice. Establish correlations between accelerated and conventional strength and use it for estimation of in-situ strength from accelerated curing strength.

CO3: Evaluate the strength of concrete samples from any structure and check the conformity to specified grade as per relevant codes of practice.

CO4: Identify and classify different types of distress based on the symptoms, distribution, age of occurrence and possible causes.

CO5: Identify the different types of deterioration and damage, able to explain the reasons and recommend suitable remedial measures.

CO6: Identify the raw materials required and estimate dosages for special concrete based on specific applications.

DISASTER MANAGEMENT

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	8RCVE2			

Course Objectives: The objective of the course will enable students to,

1. To provide students an exposure to disasters, their significance and types.
2. To ensure that students begin to understand the relationship between 18 vulnerabilities, disasters, disaster prevention and risk reduction.
3. To gain a preliminary understanding of approaches of Disaster Risk Reduction (DRR).
4. To enhance awareness of Institutional processes in the country.
5. To develop rudimentary ability to respond to their surroundings with potential disaster response in areas where they live, with due sensitivity.

Unit I

Introduction Disaster:

Definition, Factors and Significance; Difference Between Hazard and Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude. **7 Hrs**.

Unit II

Repercussions of Disasters and Hazards:

Economic Damage, Loss of Human and Animal Life, Destruction of Ecosystem, Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts and Famines, Landslides and Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks and Spills, Outbreaks of Disease and Epidemics, War and Conflicts. **8 Hrs.**

Unit III

Disaster Prone Areas in India:

Study of Seismic Zones; Areas Prone to Floods and Droughts, Landslides and Avalanches; Areas Prone to Cyclonic and Coastal Hazards with Special Reference to Tsunami; Post-Disaster Diseases and Epidemics. **8 Hrs**.

Unit IV

Disaster Preparedness and Management Preparedness:

Monitoring of Phenomena Triggering a Disaster or Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological and Other Agencies, Media Reports: Governmental and Community Preparedness. **8 Hrs**.

Unit V

Disaster Mitigation:

Meaning, Concept and Strategies of Disaster Mitigation, Emerging Trends in Mitigation. Structural Mitigation and Non-Structural Mitigation, Programs of Disaster Mitigation **8 Hrs.**

TEXT BOOKS:

1.	Nishith, R. and Singh, A.K	Disaster Management in India: Perspectives, issues and strategies. New Royal book Company

REFERENCE BOOKS:

2.	Goel, S.L	Disaster Administration And Management Text And Case Studies", Deep & Deep Publication Pvt. Ltd., New Delhi
3.	Carter, W.N.	Disaster management: A disaster manager's handbook.

Course Outcomes: After the completion of this course, students will be able to:

CO1: Understand the role of disaster management and risk reduction.
CO2: Assess the repercussions of disaster and hazards
CO3: Locate and identify the disaster prone areas.
CO4: Plan the disaster preparedness and management
CO5: Elaborate on disaster mitigation

DESIGN OF EARTHQUAKE RESISTANT STRUCTURES

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	8RCVE3			

Course Objectives: This course will enable students to:

- Study basic principles of earthquake ground motion, seismic zones, seismic resistant building architecture, and dynamic analysis procedure.
- Seismic design and detailing of RC structure and detailing.

Unit I

Earthquake ground motion, Engineering Seismology, Theory of plate tectonics, seismic waves, Magnitude and intensity of earthquakes, local site effects. **8 Hrs.**

Unit II

Seismic design parameters, earthquake ground motion characteristics, response spectra and design spectrum. **8 Hrs.**

Unit III

Structural modeling, Code based seismic design methods, Effect of structural irregularities on seismic performance of RC buildings, Vertical irregularity and plan configuration problems. Seismic resistant building architecture-lateral load resistant systems, building characteristics. **8 Hrs.**

Unit IV

Seismic design philosophy, determination of design lateral forces- Equivalent lateral force procedure, dynamic analysis procedure, Step by step procedure for seismic analysis of RC buildings, response spectrum method. **8 Hrs.**

Unit V

Earthquake resistant analysis and design of RC buildings- Preliminary data, loading data, load combinations, analysis of design of sub-frames, (maximum of 4 storey's, without infills) **7 Hrs.**

Self-Study: Earthquake ductile detailing as per IS13920.

TEXT BOOKS:

1.	P Agarwal and M Shrikande,	Earthquake Resistant Design of Structures, Prentice Hall (India) Ltd, New Delhi, 2011 ISBN:978-81-203-2892-1
2.	IS–1893 (Part I): 2002, IS–13920: 1993,	

REFERENCE BOOKS:

1.	Anil Chopra	Earthquake resistant design 1976
2.	S.K. Duggal	Earthquake resistant design of structures–Oxford University Press, 2007 edition 2nd 2013 ISBN-10 : 0195688171,ISBN-13 : 978-0195688177

Course Outcomes: After the completion of this course, students will be able to:

CO1: Explain the basics of causes, types and classification of earthquakes.

CO2: Describe ground motion characteristics and construction of response and design spectra.

CO3: Analyze the seismic behavior of building system.

CO4: Carryout detailed design of earthquake resistant reinforced concrete buildings.

CO5: Perform ductile detailing of reinforced concrete members as per IS 13920-1993.

FINITE ELEMENT & ANALYSIS

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	25	CIE Marks	:	
			Theory	:	50
			Lab	:	50
Total Lab Hours	:	20	SEE Marks	:	
Course Code	:	8RCVE4	Theory	:	60
			Lab	:	40

Course Objectives: The objective of this course is to enable the students to understand the principles of finite element analysis, formulate the shape functions and element stiffness matrices and Nodal load vectors for 1D,2D elements, applications of standard FE software for the analysis of structural problems.

Unit -1

Introduction:

Basic Concepts of elasticity - stresses and equilibrium, strain displacement relations, stress strain relations, plane stress, plane strain and axisymmetric problems, Approximate methods of structural analysis-Rayleigh Ritz method, Finite element method vs. classical method, Advantages and disadvantages of FEM. **8 Hrs.**

Unit-2

Fundamentals of finite element method: Basic procedure of FEM for structural problems- Process of Discretization, Finite elements used for one, two and three dimensional problems, displacement functions, conditions to be satisfied by displacement functions- invariance, continuity, natural coordinates, construction of displacement functions for 2D truss and beam elements, polynomial shape functions. **9 Hrs.**

Unit-3

Shape functions based on Lagrange's polynomial, Derivation of element stiffness matrices for 1D and 2D elements, equivalent nodal force vectors for beams and CST element, Analysis of simple beams and plane trusses. **8 Hrs.**

Laboratory Component – FE Software

Unit-4

Analysis of bars of constant cross section area, tapered cross section area and stepped bars.

Analysis of cantilever, simply supported, over hanging beams with self-weight, concentrated loads, UDL, moment and UVL with different support conditions.

Analysis of plane frames and plane trusses by ANSYS software. **14 Hrs.**

Unit-5

Stress analysis of rectangular plate with circular hole, plane stress and plane strain problems. **6 Hrs.**

Text Books:

Course Outcomes: After the completion of this course, students will be able to:

CO1: Apply the approximate methods like Rayleigh Ritz method, Galerkin's method to solve the problems on beams for various loading conditions and describe the basic principles involved in FEM.

CO2: Formulate the shape functions or displacement function for 2D truss and beam elements

CO3: Formulate the shape functions for bar elements using Lagrange's polynomial and derive the stiffness matrices and load vectors for beam and truss elements.

CO4: Analyze the structural mechanics problems using FE tool.

CO5: Dynamic analysis of bars and beams subjected to harmonic analysis and

modal analysis using FE tool.

PAVEMENT DESIGN

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	8RCVE5			

Pre-requisite: Transportation Engineering

Course Objectives: The objective of this course is to enable the students to understand the factors affecting pavement design, analyze the stresses developed withing the pavement section and design the pavement sections as per the relevant standards. Also, the student will be exposed to the various modern tools for analyzing the stresses developed within the pavement section.

Unit-1

Factors affecting pavement design – road geometry, subgrade strength and drainage, design wheel load and standard wheel load, configuration concept of ESWL and EWL and their computation by various criteria, WASHO, AASHO, AASHTO road tests. **8Hrs.**

Unit-2

Stresses in flexible pavements – stress and deflections by Boussinesq's half space theory for homogenous systems, Burmister's two-layer theory and applications, three-layer elastic theory – basic principles, assumptions and applications, numerical problems. **8Hrs.**

Unit-3

Design of flexible pavements as per IRC 37-2018, concept of axle load spectrum, vehicle damage factor, lateral placement and lane distribution factor. Effect of repeated wheel loads, standard wheel loads, fatigue and rutting – concepts, design criteria, service life and damage index, mechanistic analysis. **8 Hrs.**

Modern Tool: Application of KENLAYER and IITPAVE tools for stress analysis of flexible pavements.

Unit-4

Stresses in rigid pavements – factors affecting rigid pavement design, modulus of subgrade reaction – determination by plate load tests, concept of radius of relative stiffness, Westergaard's theory for load stresses, Ioannide's modifications, IRC-58 (2015) theory, jointed and continuous reinforced concrete pavements– concept, need for joints, types of joints, their functions and requirements, principles of load transfer by aggregate interlock, role of dowel and tie bars.

Stresses induced due to temperature changes, shrinkage and friction effects – curling stresses, top-down cracking and bottom-up cracking, warping stresses due to moisture, role of temperature and moisture, gradients. Use of Bradbury's charts. **8Hrs.**

Modern Tool: Application of KENSLAB and KGPSLAB tools for stress analysis of rigid pavements.

Unit-5

Design of rigid pavements as per IRC-58 (2015) - Joint spacing, Design of slab

thickness, design of joint details, damage computation for fatigue – use of PCA charts, Miner's hypothesis and cumulative damage. **7 Hrs.**

Self-study: Comparative design of flexible and rigid pavements using IRC design procedure.

TEXT BOOKS:

1	Yoder and Witczak	**Principles of Pavement Design-** Wiley India Pvt Ltd., second edition, 2011.
2	Yang H Huang	**Pavement Analysis and Design**- Pearson Prentice Hall, 2nd Edition, 2008.
3	S.K. Khanna, C.E.G. Justo and A. Veeraragavan	**Highway Engineering**, Nem Chand and Bros. Roorkee, 10th Edition, 2014.

REFERENCE BOOKS:

1	R Srinivasa Kumar	**Highway Engineering,** Universities Press (India) Private Limited, Reprinted 2018
2	Relevant IRC codes.	

Course Outcomes: After the completion of this course, students will be able to:

CO1: Describe the factors affecting pavement design and the concept of ESWL.
CO2: Analyze the stresses in flexible pavements by two layer and three-layer theory.
CO3: Design the flexible pavement as per IRC guidelines and analyze its stability.
CO4: Analyze the stresses in rigid pavements by various methods.
CO5: Design the rigid pavements as per IRC guidelines.

REPAIR AND REHABILITATION OF STRUCTURES

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	8RCVE6			

Course Objectives: The objectives of this course is to investigate the cause of deterioration of concrete structures, strategize of different repair and rehabilitation of structures, and to evaluate the performance of the materials for repair

Unit I

General: Introduction, Cause of deterioration of concrete structures, Diagnostic methods & analysis, preliminary investigations, experimental investigations using NDT, load testing, corrosion mapping, core drilling and other instrumental methods, Quality assurance for concrete construction, as built concrete properties strength, permeability, thermal properties and cracking. **8 Hrs.**

Unit II

Influence on Serviceability and Durability: Effects due to climate, temperature, chemicals, wear and erosion, Design and construction errors, corrosion mechanism, Effects of cover thickness and cracking, methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coatings, and cathodic protection. **8 Hrs**.

Unit III

Maintenance and Repair Strategies: Definitions: Maintenance, repair and rehabilitation, Facets of Maintenance, importance of Maintenance, Preventive measures on various aspects. Inspection, Assessment procedure for evaluating a damaged structure, causes of deterioration, testing techniques **8 Hrs**.

Unit IV

Materials for Repair: Special concrete sand mortars, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, sulphur infiltrated concrete, Ferro cement, Fiber reinforced concrete.

Techniques for Repair: Rust eliminators and polymers coating for rebar during repair foamed concrete, mortar and dry pack, vacuum concrete, Gunite and Shot Crete Epoxy injection, Mortar repair for cracks, shoring and underpinning. **8 Hrs.**

Unit V

Repair, Rehabilitation and Retrofitting of Structures:

Strengthening of Structural elements, Repair of structures distressed due to corrosion, fire, Leakage, earthquake – DEMOLITION TECHNIQUES - Engineered demolition methods - Case studies. **7 Hrs.**

TEXT BOOKS:

1.	Vidivelli.B	Rehabilitation of Concrete Structures Standard Publishes Distribution.1st edition 2009.
2.	Varghese.P.C	Maintenance Repair and Rehabilitation and Minor works of building, Prentice Hall India Pvt

		Ltd 2014.

REFERENCE BOOKS:

1.	Dodge Woodson. R	Concrete Structures, Protection, Repair and Rehabilitation, Butterworth-Heinemann, Elsevier, New Delhi 2012
2.	Dov Kominetzky.M.S.	Design and Construction Failures, Galgotia, Publications Pvt.Ltd.,2001
3.	Ravishankar.K. Krishnamoorthy.T.S	Structural Health Monitoring, Repair and Rehabilitation of Concrete Structures, Allied Publishers, 2004.
4.	Hand book on Seismic Retrofit of Buildings, CPWD and Indian Buildings Congress, Narosa Publishers, 2008.	
5.	Hand Book on Repair and Rehabilitation of RCC Buildings-Director General works CPWD, Govt of India , New Delhi-2002	

Course Outcomes: After the completion of this course, students will be able to:

CO1: Identify the cause of deterioration of concrete structures.

CO2: Describe the principles of repair and rehabilitation of structures

CO3: Explain the concepts of Serviceability and Durability.

CO4: Recognize the ideal material for different repair and retrofitting techniques

DESIGN OF REINFORCED EARTH STRUCTUERS

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	8RCVE7			

Course Objectives: The objectives of this course is to create an understanding of the latest technique such as reinforcing the soil; Analyze the concept of RE so as to ascertain stability of RE structures; Understand the different reinforcing materials that can be used efficiently in soils. Understand design concepts of different RE structures including introductory concepts of Foundations resting of RE soil bed.

Unit I

Basics of Reinforced Earth Construction: Definition, Historical Background, Components, Mechanism and Concept, Advantages and Disadvantage of reinforced earth Construction, Sandwich technique for clayey soil.

Geosynthetics and Their Functions: Historical developments, Recent developments, manufacturing process woven & non-woven, Raw materials – Classification based on materials type – Metallic and Non-metallic, Natural and Man-made, Geosynthetics

Properties and Tests on Materials Properties: Physical, Chemical, Mechanical, Hydraulic, Endurance and Degradation requirements, Testing & Evaluation of properties **8 Hrs.**

Unit II

Design of Reinforced Earth Retaining Walls: Concept of Reinforced earth retaining wall, Internal and external stability, Selection of materials, Typical design problems.

Soil Nailing Techniques: Concept, Advantages & limitations of soil nailing techniques, comparison of soil nailing with reinforced soil, methods of soil nailing, Construction sequence, Components of system, Design aspects and precautions to be taken. **8 Hrs.**

Unit III

Design of Reinforced Earth Foundations: Modes of failure of foundation, Determination of force induced in reinforcement ties – Location of failure surface, tension failure and pull out resistance, length of tie and its curtailment, bearing capacity improvement in soft soils, General guidelines. **8 Hrs.**

Unit IV

Geosynthetics for Roads and Slopes: Roads - Applications to Temporary and Permanent roads, Role of Geosynthetic in enhancing properties of road, control of mud pumping, Enhancing properties of subgrade, Design requirements Slopes – Causes for slope failure, Improvement of slope stability with Geosynthetic, Drainage requirements, Construction technique. Simple Numerical Stability Checking Problems on Reinforced Slopes **8 Hrs**.

Unit V

Geosynthetics - Filter, Drain and Landfills: Filter & Drain – Conventional granular filter design criteria, Geosynthetic filter design requirements, Drain and filter properties, Design criteria – soil retention, Geosynthetic permeability, anti clogging, survivability and durability

Landfills – Typical design of Landfills – Landfill liner & cover, EPA Guidelines, Barrier walls for existing landfills and abandoned dumps **7 Hrs.**

TEXT BOOKS:

1.	Koerner. R.M,	Design with Geosynthetics, Pearson Prentice Hall, 6th Edition Vol. 1 and Vol.2, 2012
2.	SivakumarBabu G. L	An introduction to Soil Reinforcement and Geosynthetics, Universities Press, Hyderabad, 2005
3.	Swami Saran,	Reinforced Soil and its Engineering Applications, I. K. International Pvt. Ltd, New Delhi, Second Edition, 2011

REFERENCE BOOKS:

1.	Venkattappa Rao, G.,& Suryanarayana Raju., G. V.S	Engineering with Geosynthetics, Tata McGraw Hill publishing Company Limited., New Delhi. 1990
2.	Jones, CJEP	Earth reinforcement and Soil structure, Butterworths, London, 1985
3.	Ingold, T.S. & Millar, K.S,	Geotextile Hand Book, Thomas, Telford, London. 1988
4.	Sarsby R W,	Geosynthetics in Civil Engineering, Woodhead Publishing Ltd & CRC Press, 2007

Course Outcomes: After the completion of this course, students will be able to:

CO1: Identify and formulate reinforced earth techniques that are suitable for different soils and structures

CO2: Explain the laboratory testing concepts of geosynthetics

CO3: Design the reinforced earth retaining structures and soil nailing

CO4: Determine the load carrying capacity of Foundations resting on reinforced earth soil bed.

CO5: Describe the application of geosynthetics in drainage and landfill designs

URBAN TRANSPORTATION PLANNING

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	8RCVE8			

Course Objectives: The objective of this course is to introduce the students to elements of urban transit system, planning process, transport studies, trip generation, trip distribution, mode choice and mass transit systems.

Unit-1

Introduction: Characteristics of different modes of transportation; Principles of co-ordination and operation control, Elements in urban transit system, **NUTP Transportation Planning Process:** Factors to be considered; land use transportation planning; Systems approach, integration of transport planning, traffic and land use planning **9 Hrs.**

Unit-2

Transport studies: Planning of different types of surveys and interpretation, travel demand and forecasting Traffic surveys for mass transit system planning **7 Hrs.**

Unit-3

Trip Generation and Distribution: Factors governing trip generation and attraction; Zonal models; Category analysis; Methods of trip distribution; Application of gravity model. **8 Hrs.**

Unit-4

Modal Split and Assignment: Factors affecting modal split; Modal split in transport planning; principles of traffic assignment; Assignment techniques, integration of multimodal transport systems **7 Hrs.**

Unit-5

Mass Transit Systems: Introduction to routing and scheduling, transit system's performance parameters. Corridor identification and corridor screen line analysis. Urban forms and structures: point, linear, radial, poly-nuclear developments and suitable transit systems, Urban goods movement. Preparation of comprehensive plan and transportation system management planning. **8 Hrs.**

TEXT BOOKS:

1	Papacostas, C. S., and Prevedouros, P. D.	Transportation Engineering and Planning. 3rd Edition, Prentice - Hall of India Pvt. Ltd., 2002.
2	Kadiyali, L.R.	Traffic Engineering and Transport Planning, Khanna Publishers, New Delhi, 2013.

REFERENCE BOOKS:

1	Hutchinson, B.G.	Principles of Urban Transport Systems Planning, McGraw Hill, London, 1974.
2	Khisty, C. Jotin and Lall, B. Kent.	Transportation Engineering and Planning, 3rd Edition, Pearson India, 2001.
3	Garber N.J., and Hoel L.A.	Traffic and Highway Engineering, 4th Edition, Cengage Learning, 2009.
4	Relevant IRC codes	

Course Outcomes: After the completion of this course, students will be able to:

CO1: Explain planning process for an effective transportation system.

CO2: Describe the various methods of collecting traffic data to propose an effective transport facility.

CO3: Evaluate zonal trip generation and attraction for inter-zonal trip distribution methods.

CO4: Evaluate transport system for assigning travel trips to various routes for effective management and economic sustainability.

CO5: Elaborate on the urban mass transit system operation and urban goods movement.

NUMERICAL METHODS & APPLICATIONS

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	8RCVE9			

Course Objectives: The objectives of this course is to develop a sound understanding of the various numerical techniques, principles and their application to Civil engineering problems.

Unit I

Introduction to Numerical techniques: Errors, Matrices and Determinants.

Solution of Linear Simultaneous Equation:

a) Gaussian elimination method
b) Gauss-Jordan matrix inversion method
c) Gauss-Siedel method
d) Cholesky method

Application of Solution of Linear System Of Equations To Civil Engineering Problems related to: Construction planning, slope deflection method applied to beams, frames and truss analysis. **8 Hrs**.

Unit II

Solution of non-linear and Transcendental equations for Civil Engineering Problems: a) Bisection method and b) Newton-Raphson method and its applications for solution of non linear algebraic and transcendental equations for problems in hydraulics, irrigation engineering, structural engineering and environmental engineering. **8 Hrs**.

Unit III

Application of Numerical Integration for Solving Civil Engg. Problems:

a) Trapezoidal rule
b) Simpson's one third rule.
c) Newmark's method.

8 Hrs.

Unit IV

Solution of Ordinary Differential Equation to Civil Engineering Problems by:

a) Euler's method
b) Runge Kutta 4^{th} order method

8 Hrs.

Unit V

Application of Finite Difference Technique in Structural Mechanics:

Introduction, expression of derivatives by finite difference: backward differences, forward differences and central differences. Application of finite difference method for analysis of

a) Statically determinate beams,
b) Statically indeterminate beams

Application of Finite difference technique in structural mechanics

a) Buckling of columns
b) Beams on elastic foundation. **7 Hrs**.

TEXT BOOKS:

1.	Chapra S.C. & R.P.Canale	Numerical Methods for Engineers, 6th Ed., McGraw Hill, 2010.
2.	N.Krishna Raju, K.U.Muthu	Numerical methods in Engineering Problem,MacMillan Indian Limited, 1990. 2000

REFERENCE BOOKS:

1.	Iqbal H.Khan, Q. Hassan	Numerical methods for Engineers and Scientists-Galgotia, New Delhi, 1997.
2.	Pallab Ghosh	Numerical methods in Computer Programs in C++, Prentice Hall of India Private Limited, New Delhi, 2006.
3.	Schilling	Numerical methods for engineers using MATLAB and C, I-Edition, 2000 “Thomson Publications”

Course Outcomes: After the completion of this course, students will be able to:

CO1: Formulate and solve civil engineering problems involving linear simultaneous and non-linear algebraic equations by different numerical techniques

CO2: Apply numerical integration for computing areas, volumes and determine the slope and deflections in simple beams by Newmark’s method

CO3: Solve ordinary differential equations related to engineering problems using numerical techniques

CO4: Apply finite difference techniques to solve structural mechanics problems

PREFABRICATED STRUCTURES

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	8RCVE10			

Course Objectives: the objective of this course is to elucidate the need of pre fabrication, materials, large panel construction, proportioning of concrete mixes, construction of roof and floor slabs, design, joints for different structural connections, equivalent design loads for considering abnormal effects such as earthquake, cyclones etc.

Unit I

Introduction: Need for pre fabrication, principles, Materials, Modular coordination, standardization, systems, production, Transportation and erection. **7 Hrs**.

Unit II

Pre-fabricated components: Behaviour of structural components, large panel construction, construction of roof and floor slabs, wall panels, columns and shear walls. **8 Hrs.**

Unit III

Design principles: Disuniting of structures, Design cross section based on efficiency of materials used, Problems associated with joint flexibility and allowance for joint deformation. **8 Hrs** .

Unit IV

Joint in structural members: Joints for different structural connections, dimensions and detailing and design of expansion joints. **8 Hrs**.

Unit V

Design for abnormal Loads- Progressive collapse, code provisions, equivalent design loads for considering abnormal effects such as earthquake, cyclones etc. Importance of avoidance of progressive collapse. **8 Hrs.**

Industry visit: Visit to Pre fabrication industry and preparation of detailed technical report.

TEXT BOOKS:

1.	V.Soudararajan, R.JagadeeshKumar S.Kalpanadevi	"Pre-fabricated structures", ARS Publications, 2013

REFERENCE BOOKS:

1.	Ulrich Knaack, Sharon Chung-Klatte, Reinhard Hasselbach	"Pre-fabricated systems-Principles of construction", 2012, De Gruyter. ISBN-9783034611404, 3034611404

Course Outcomes: After the completion of this course, students will be able to:

CO1: Recommend appropriate types of panels and pre-fabricated units.

CO2: Design the cross section of the panel using different materials

CO3: Design connection for panels and expansion joints.

CO4: Describe the behavior of the pre-fabricated buildings in progressive collapse, earthquake and cyclones.

INDUSTRIAL WASTE TREATMENT

Contact Hours/Week	:	3(L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	Nil	SEE Marks	:	50
Course Code	:	8RCVE11			

Course Objectives: This course will enable the students to characterize industrial waste water and to know their effects on environment, type and characteristics of pollutants in streams and municipal wastes, treat various kinds of wastes using physical, chemical and biological methods and understand the standards and permissible limits for the discharge of treated waste. Understand Air pollutants and their quantification and treatment.

Unit I

Introduction: Characteristics of industrial wastewater, pollutants in industrial wastewater and their effects, population equivalent. Difference between domestic and industrial wastewater, Effect of waste on streams and on municipal treatment plants. Stream quality, standards of stream quality for public water supply, industrial water supply and for aquatic life. Disposal by dilution and numerical examples using Streeter Phelps's equation , Industrial effluent standards for disposal into streams, on land and into sewers. Stream sampling. Economics of wastewater treatment. Legislation to control water pollution. **8 Hrs.**

Unit II

Treatment Methods: Volume, strength reduction, neutralization, equalization and proportioning. Removal of suspended solids by sedimentation, flotation and screening. Removal of colloidal solids by chemical coagulation and adsorption. Removal of organic solids by lagooning in oxidation ponds, activated sludge treatment, modified aeration, dispersed growth aeration, contact stabilization, high-rate aerobic treatment, trickling filtration, spray irrigation, wet combustion, anaerobic digestion, mechanical aeration system, well injection and foam separation. Numerical example on design of: sedimentation tanks, aeration tanks and trickling filters. **8 Hrs**.

Unit III

Combined Treatment: Treatment and disposal of sludge solids by anaerobic and aerobic digestion, vacuum filtration, drying beds, sludge lagooning, incineration, centrifuging and sanitary land filling. Feasibility of treatment of raw industrial wastes with domestic wastes and partially treated industrial wastes with domestic wastes. Discharge of completely treated waste to municipal sewer systems Discharge of partially treated industrial wastes directly to streams Discharge of completely treated wastes to streams or on land. Low cost waste water treatment methods- oxidation ponds, oxidation ditch and aerated lagoons. **8 Hrs.**

Unit IV

Treatment of some industrial waste water: Characteristics, treatment and disposal of industrial wastewater form Dairy industry, Paper and pulp industry, Sugar industry, Tannery industry, cotton textile industry, woollen textile industry and Pharmaceutical industries,. **8 Hrs.**

Unit V

Air pollution: Introduction, Definition of air pollution composition of air. Ambient air sampling, collection of gaseous pollutants. Grab samples, absorption in liquids, and adsorption on solids. Freezeout sampling, collection of particulate pollutants. Dust fall jar, high-volume filtration. Tape sampler, Impingement Electrostatic precipitation, Thermal precipitation. Treatment of gaseous pollutants by Cyclone separator, Filters-Fabric or cloth filters, Reverse jet filter, Envelope type fabric filter and multiple compartment type bag house, Electrostatic precipitators-principles. Pipe type and plate type precipitators. Dry and wet precipitators. Industrial applications of electrostatic precipitators, Scrubbers-spray towers, ventury, cyclone, packed and mechanical scrubbers **7 Hrs**.

TEXT BOOKS:

1.	A.D.Patwardhan	Industrial Waste Water Treatment, PHI, New Delhi, 2008.ISBN-10 : 8120333500 ISBN-13 : 978-8120333505
2.	C.S.Rao	Environmental Pollution control Engineering, Wiley Eastern Publishing Ltd.2018 ISBN-10 : 9386649896, ISBN-13 : 978-9386649898

REFERENCE BOOKS:

1.	Nelson L. Nemerow	Industrial waste water treatment, Wesley Publishing co. ISBN: 9780123724939

Course Outcomes: After the completion of this course, students will be able to:

CO1: Characterize and compute pollution levels in streams before and after the disposal of the industrial waste and apply legislation standards.

CO2: Decide the pre-treatment methods required for different type of industrial waste.

CO3: Design the waste water treatment units.

CO4: Identify the characteristics of industrial wastes and recommend suitable ordering of treatment units.

CO5: Identify air pollutants and their treatment

SCHEME & SYLLABUS

9	NCMC	NMC01	National Service Scheme (NSS)	NSS	All students have to register for any one of the courses namely National Service Scheme, Physical Education (PE) (Sports and Athletics) and Yoga with the concerned coordinator of the course during the first week of III semester. The activities shall be carried out from III semester to VIII semester (for 5 semesters). **SEE for the courses shall be conducted during VIII semester examinations** and the accumulated CIE marks shall be added to the SEE marks. Successful completion of the registered course is mandatory for award of the degree. The events shall be appropriately scheduled by Dean Academic and the same shall be reflected in the calendar prepared for the NSS, PE and Yoga activities.								
		NMC02	Physical Education (PE)(Sports and Athletics)	PE									
		NMC03	Yoga	Yoga									
		NMC04	NCC	NCC									
Course prescribed to Lateral Entry Diploma holders admitted to III semester B.E. programs

		AAP	AICTE Activity Points (Applicable for both Regular and Lateral Entry students)	40 hours community service to be documented and produced for the examination									

Note: BSC: Basic Science Course, **IPCC**: Integrated Professional Core Course; **PCC**: Professional Core Course,
HSMC: Humanity and Social Science & Management Courses, **AEC** –Ability Enhancement Courses. **UHV**- Universal Human Value Courses
L –Lecture, **T** – Tutorial, **P**- Practical/ Drawing, **S** – Self-Study Component, **CIE**: Continuous Internal Evaluation, **SEE**: Semester End Examination

NHS01 Balake Kannada is for students who can't speak, read and write Kannada.
NHS02 Samskrutika Kannada is for students who can speak, read and write Kannada.

Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with Practicals of the same course. Credit for IPCC can be 04 and its Teaching – Learning hours (L : T : P) can be considered as (3: 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from practical part of IPCC shall be included in the SEE question paper.

INT1 - Inter/Intra Institutional Internship: All the students admitted to engineering programs under the **lateral entry category** shall have to undergo mandatory INT1 Inter/Intra Institutional Internship of 03 weeks during the **intervening period of III and IV semesters**. The internship shall be slated for CIE only and will not have SEE. The letter grade earned through CIE shall be included in the IV semester grade card. The internship shall be considered for vertical progression and for the award of degree. Those, who do not take up / complete the internship shall be declared fail and shall have to complete subsequently after satisfying the internship requirements. The faculty coordinator or mentor shall monitor the students' internship progress and interact with them for the successful completion of the internship.

Non-Credit Mandatory Course (NCMC):

(A) Foundation of Engineering Mathematics - I & II

(1) These courses are prescribed for III and IV semesters respectively to **lateral entry Diploma holders** admitted to III semester of B.E. programs. They shall attend the classes during the respective semesters to complete all the formalities of the course and appear for the Continuous Internal Evaluation (CIE). In case, any student fails to register for the said course/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have secured an F grade. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks. **These courses are slated for CIE only and have no SEE.**

(2) Foundation of Engineering Mathematics I and II shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.

(3) Successful completion of the courses Foundation of Engineering Mathematics I and II shall be indicated as PP in the grade card. Non-completion of the courses Foundation of Engineering Mathematics I and II shall be indicated as NP.

(B) National Service Scheme/Physical Education (Sport and Athletics)/Yoga:

(1) Securing 40 % or more in CIE, 35 % or more marks in SEE and 40 % or more in the sum total of CIE + SEE leads to successful completion of the registered course.

(2) In case, students fail to secure 35 % marks in SEE, they have to appear for SEE during the subsequent examinations conducted by the Institute.

(3) In case, any student fails to register for NSS, PE or Yoga/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have not completed the requirements of the course. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks.

(4) Successful completion of the course shall be indicated as PP in the grade card. Non-completion of the course shall be indicated as NP.

(5) These courses shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.

Ability Enhancement Course – III (Offered by the Department)	
N3MEA01	Fundamentals of Digital Manufacturing

NHS01 Balake Kannada is for students who can't speak, read and write Kannada.
NHS02 Samskrutika Kannada is for students who can speak, read and write Kannada.

Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with Practicals of the same course. Credit for IPCC can be 04 and its Teaching – Learning hours (L : T : P) can be considered as (3: 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from practical part of IPCC shall be included in the SEE question paper.

Internship of 04 weeks during the intervening period of IV and V semesters; INT2 Innovation/ Entrepreneurship/ Societal based Internship.

(1) All the students shall have to undergo a mandatory internship of 04 weeks during the intervening period of IV and V semesters. **The internship shall be slated for CIE only and will not have SEE.** The letter grade earned through CIE shall be included in the VI semester grade card. The internship shall be considered as a head of passing and shall be considered for vertical progression and for the award of degree. Those, who do not take up / complete the internship shall be considered under F (fail) grade and shall have to complete subsequently after satisfying the internship requirements.

(2) **Innovation / Entrepreneurship Internship** shall be carried out at industry, State and Central Government / Non-government organizations (NGOs), micro, small, and medium enterprise (MSMEs), Innovation centres or Incubation centres. Innovation need not be a single major breakthrough; it can also be a series of small or incremental changes. Innovation of any kind can also happen outside of the business world. Entrepreneurship internships offers a chance to gain hands on experience in the world of entrepreneurship and helps to learn what it takes to run a small entrepreneurial business by performing intern duties with an established company. This experience can then be applied to future business endeavours. Start-ups and small companies are a preferred place to learn the business tactics for future entrepreneurs as learning how a small business operates will serve the intern well when he/she manages his/her own company. Entrepreneurship acts as a catalyst to open the minds to creativity and innovation. Entrepreneurship internship can be from several sectors, including technology, small and medium-sized, and the service sector.

(3) **Societal or social internship**. Urbanization is increasing on a global scale; and yet, half the world's population still resides in rural areas and is devoid of many things that urban population enjoy. Rural internship is a work-based activity in which students will have a chance to solve/reduce the problems of the rural place for better living. **As proposed under the AICTE rural internship programme, activities under Societal or social internship, particularly in rural areas, shall be considered for 40 points under AICTE activity point programme.**

Evaluation components of CIE marks for Internship-I & II is as follows:

Evaluation by the supervisor under whom the training was carried out	30 marks
Evaluation by DSEC	
(i) Report	20 marks
(ii) Presentation and Viva-voce	50 marks
Total	**100 marks**

No SEE component for Internship I & II.

ENGINEERING MATHEMATICS– III (Civil, Mech., IEM)

Contact Hours/ Week	3 (L)	**Credits**	**3**
Total Lecture Hours	**39**	**CIE Marks**	**50**
Total Tutorial Hours	**00**	**SEE Marks**	**50**
Sub Code	N3MATB	**Semester**	**III**

Prerequisites: Engineering Mathematics-I and Engineering Mathematics-II.

Course objectives:

1. To introduce the concept of analytic function, transformation for mapping.
2. To introduce the concept of complex variables to evaluate the integrals
3. To introduce the concept of partial differential equations, use separation of variable method to solve wave, heat and Laplace equations.
4. To find optimal solutions to engineering problems whose optimum may be a certain quantity, shape and function.
5. To Solve the system of equation analytically and numerically

Course Outcomes:

Upon completion of this course the student will be able to:

1. Determine continuity/differentiability/analyticity of a function and find the derivative of a function. Identify the transformation (L3,L1)
2. Evaluate a contour integral using Cauchy's integral formula. Compute singularities and also the residues(L3).
3. Formulate and solve partial differential equations. Apply separation of variable method to solve wave, heat and Laplace equations (L4).
4. Compute extreme values of a variational problems like geodesics, least time and shortest path(L3).
5. Solve the system of equation analytically and numerically (L3).

UNIT-I : Complex Variables **8 Hours**

Functions of complex variable, Definition of Limit, Continuity, Differentiability. Analytic functions, Cauchy's-Reimann equation in Cartesian and polar forms (Statement only), Properties of analytic functions (Statement only). Geometrical representation of $f(z)=w$, Conformal transformation: $w=e^z$, $w=z+\frac{1}{z}$, $w=z^2$.

UNIT-II: Complex Integration **8 Hours**

Bilinear transformation, Properties, Complex integration, Cauchy's theorem (with proof), Converse of Cauchy's theorem, Cauchy's integral formula (with proof), residues, residues theorem, calculation of residues.

UNIT – III: Partial differential equations (P.D.E.) **8 Hours**

Formation of Partial Differential Equation, Solution of Langrange's Linear P.D.E. of the type Pp+Qq=R. Method of Separation of Variables. **Applications of P.D.E.:** Classification of PDE, solution of one dimensional heat wave and two dimensional Laplace's equation by the method of separation of variables.

UNIT-IV :Calculus of Variation **7 Hours**

Variation of a function and a functional, Extremal of a functional, Variational problems, Euler's equation, Standard Variational problems including geodesics, Minimal surface of revolution, hanging chain and Brachistrochrone problem.

UNIT – V :System of linear algebraic equations **8 Hours**

Rank of a matrix by echelon form, Consistency of a system of linear equations, Gauss elimination method, **Gauss-Jordan method.** Iterative methods - Jacobi, Gauss-Seidel iterative methods.

FOUNDATIONS OF ENGINEERING MATHEMATICS-I

(For Lateral Entry students)

Contact Hours/ Week	**2(L)+2(T)**	**Credits**	**0**
Total Lecture Hours	**26**	**CIE Marks**	**100**
Total Tutorial Hours	**26**	**SEE Marks**	**00**
Sub Code	**N3MATDP**	**Semester**	**III**

Prerequisites: Basics in differential calculus, Integral calculus and vectors.

Course Learning Objectives: This course will enable students to master the basic tools of differential and vector calculus, Taylors series, Indeterminate forms (L' Hospital Rule) and differential equations and become skilled for solving problems in **s**cience and engineering.

Course objectives: This course will enable students to:

1. Known the behavior of the polar curve and its application.
2. Learn the notation of partial differentiation and determine the value of the Jacobians.
3. Learn how a function of single variable can be expanded as a Taylor's series and Maclaurin series and Handle the indeterminate form.
4. Learn how the vectors govern the physical models.
5. Known how the real word problems governed by the first order differential equations.

Course outcomes: After the completion of this course, students will be able to:

1. Apply the knowledge of calculus to solve problems related to polar curves and its applications in determining the amount of bending of the curve. **(L1& L2)**
2. Learn the notation of partial differentiation to calculate rates of change of multivariate functions and solve problems related to composite functions. **(L1& L2)**
3. Illustrate the applications of multivariate calculus to understand the characteristics of vector field. 4.
4. Understand how a function of single variable can be expanded as a Taylor's series and Handle the indeterminate form **(L1& L2)**
5. Apply the analytical methods to solve first order and first degree differential equations and solve some Engineering problems. **(L1& L2)**

UNIT-I: Differential Calculus-I: (5+5) Hours

Polar curves: angle between the radius vector and tangent, angle of intersection of polar curves. Pedal equation for polar curves. Curvature and radius of curvature in pedal form. (Without proof)

UNIT – II: Differential Calculus –II: (6+6) Hours

Partial differentiation: Partial derivatives, Total derivatives, differentiation of composite functions. Jacobians.

UNIT – III:

Differential Calculus –III: (5+5) Hours

Taylor's and Maclaurin's series expansions for one variable **(statement only).** Indeterminate forms L' Hospital Rule (without proof) (Only $\frac{0}{0}, \frac{\infty}{\infty}, 0 \times \infty \; and \; \infty - \infty \; form$)

UNIT-IV:

Vector Calculus: **(5+5) Hours**

Vector Differentiation: scalar and vector fields, Gradient, directional derivative, divergence, curl-physical interpretation; solenoidal and irrotational vector fields-illustrative problems.

UNIT-V:

Differential Equations-I: **(5+5) Hours**

Solution of first order and first degree differential equations: Variable Separable, Linear differential equations and Exact differential equations.

FLUID MECHANICS AND FLUID MACHINERY

Contact Hours/Week	:	3+0+2 (L+T+P)	Credits	:	4.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course	:	IPCC	Course Code	:	N3MEI01

Course Objectives: This course will enable students to:

1. Understand the basics of fluid mechanics. By studying this subject, the student will be capable of understanding the fundamental equations like Continuity equation, Euler's equation and Bernoulli's equation and applying the above equations to solve real time problems.
2. Also gives a broad idea to estimate the fluid properties, different measuring techniques, estimation of fluid flow losses and application of non-dimensional numbers to solve the fluid flow problems.

Unit I	
Introduction, Properties of Fluids: Mass Density, Weight density, specific gravity, Bulk modulus, compressibility, surface tension, capillarity, Viscosity. Introduction to fluid pressure at a point, Hydrostatic law, Pascal's law. Terms of pressure, Pressure measuring devices simple, differential, Inverted differential manometers. Numericals. **Introduction to Hydrostatics:** Total pressure, Center of pressure on horizontal, vertical and inclined surfaces. Buoyancy, center of buoyancy, Metacenter, metacentric height. Numericals.	**7 Hours**
Unit II	
Fluid Kinematics: Introduction, types of flow, Continuity equation in three dimensions (Cartesian co-ordinate system only), Velocity and acceleration. Stream function and velocity potential function. Numericals. **Fluid Dynamics:** Introduction, Euler's equation of motion along a stream line, Derivation of Bernoulli's equation from Euler's equation. Numericals. Impulse- momentum equation, Momentum equation, Application of momentum equation – forces on curved pipes. Fluid flow measurements, Venturimeter, Orifice meter, Pitot-tube, V-notch. Numericals.	**8 Hours**
Unit III	
Flow through Pipes: Frictional losses in pipe Flow-Darcy equation, Chezy equation. Dimensional analysis: Buckingham's π Theorem, Dimensionless numbers. Model analysis and types of similitude. viscous flow of incompressible fluids: Flow of viscous fluid through circular pipes and problems. Impact of jets: force exerted by a jet on stationary and moving vertical plate and curved plate.	**7 Hours**

Unit IV	
Classification of hydraulic turbines, discussions on various efficiencies of Pelton wheel, Francis turbines and Kaplan turbines Specific speed of turbine. (Numericals). Centrifugal Pumps, definition of terms used in the design of centrifugal pumps like manometric head, suction head, delivery head, manometric efficiency, hydraulic efficiency, volumetric efficiency, overall efficiency, multistage centrifugal pumps design procedure. (Numericals).	**8 Hours**
Unit V	
Energy Transfer in fluid machines: Euler Turbine equation; Alternate form of Euler turbine equation, components of energy transfer; Degree of reaction; velocity triangles for different values of degree of reaction, Utilization factor. Vane efficiency; Relation between utilization factor and degree of reaction Numericals. Steam Turbines: Impulse and reaction turbine, Condition for maximum blade efficiency of a single stage impulse turbine, Parson's Turbine (Numerical examples). Reheat factor and factors affecting the reheat factor, Compounding of steam turbine.	**9 Hours**

LABORATORY EXPERIMENTS

Part A		**26 Hours**
1	Determination of coefficient of friction of flow in a pipe.	
2	Determination of minor losses in flow through pipes.	
3	Determination of force developed by impact of jets on vanes i) for 90^0 flat ii) circular	
4	Calibration of flow measuring devices 1. Orifice plate 2. Venturimeter 3. V notch for 90^0	
Part B		
6	Performance testing of Turbines. 1. Pelton wheel 2. Francis Turbine	
7	Performance testing of pumps 1. Centrifugal pumps 2. Reciprocating pump

4.	https://nptel.ac.in/courses/112104117

Course Outcomes: After the completion of this course, student will be able to:

1. **Apply** the knowledge of **engineering** fundamentals of fluid properties to **determine** shear force, power lost in the bearing and pressure using differential and inverted differential manometer by applying hydrostatic law in a fluid flow.
2. **Apply** the **knowledge engineering fundamentals** of hydrostatics to find pressure force, center of pressure exerted by static fluid for vertical, inclined surfaces and **determine** the stability of the floating and submerged object using the concept of buoyancy and floatation.
3. **Determine** velocity and acceleration in a fluid flow region by using concepts of velocity potential function and stream function and **fundamentals of engineering and mathematics**.
4. **Apply** the Bernoulli's equation to fluid flow measuring devices and find the discharge of fluid for fluid flow applications.
5. **Calculate** the energy losses in flow through pipes by using Darcy's and Chezy's equation and **Identify, formulate** relation between non-dimensional numbers with the use of Buckingham's π-theorem for physical phenomenon.

Mapping of Course Outcomes (COs) to Program Outcomes (POs) & Program Specific Outcomes (PSOs)

		POs												PSOs		
		1	2	3	4	5	6	7	8	9	10	11	12	1	2	3

SCHEME END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

ENGINEERING MATERIALS AND METALLURGY

Contact Hours/Week	:	3+0+2 (L+T+P)	Credits	:	4.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course	:	IPCC	Course Code	:	N3MEI02

Course Objectives: The objectives of this course are: Knowledge of Materials and Material Science is very important for all engineers. Knowledge of materials characteristics is very important for design and manufacture of a component and this forms the basic for any mechanical / manufacturing industry. The main objective of this course is to impart knowledge on materials, material science and its characterization. It is useful in mechanical design, analysis, development, research, process planning, production planning and controlling activities of an industry. From this course student will learn

At the end of this course, the students will be able to

1. To distinguish between various types of deformation / fracture occurs in materials.
2. The mechanical properties of materials.
3. Mechanism and type of solidification in metals.
4. Heat treatment of materials and various characteristics obtained due to heat treatment.
5. Conventional and advanced materials with its characteristics and applications.

Unit I	
Mechanical Behavior Materials: Stress- strain diagrams to show ductile and brittle behavior of materials, linear and non-linear elastic behavior, Mechanical properties in plastic range, yield strength, offset yield strength, ductility, ultimate tensile strength, toughness. Plastic deformation of single crystal by slip, dislocation and twinning, deformation of polycrystalline metals. Numerals on Evaluation of Mechanical Properties of Metals using Stress-Strain Diagram.	**8 Hours**
Unit II	
Fracture: Types of fracture, Griffith theory of Brittle fracture, Theoretical Cohesive strength. Creep: Phenomenon with examples, three stages of creep, creep properties, Creep test, stress relaxation. Fatigue: Types of fatigue loading with example, Mechanism of fatigue, fatigue properties, fatigue testing and SN diagram.	**7 Hours**
Unit III	
Solidification: Mechanism of solidification, Homogenous and Heterogeneous Nucleation, crystal growth. Cast metal structures.	
Phase diagram: Solid solutions, Hume Rothary rules, substitution, and interstitial solid solutions, construction of equilibrium diagrams, Interpretation of equilibrium diagram. Numericals on phase diagrams. **Iron Carbon system:** Iron carbon equilibrium diagram description of phases, Solidification of steels and cast irons and invariant reactions.	**8 Hours**

Unit IV	
TTT Diagrams: TTT curves, continuous cooling curves, Effect of cooling rate on TTT diagram, effect of carbon and alloying elements on TTT diagram. **Heat treatment of metals:** Annealing and its types, Normalizing, Hardening, Tempering, Martempering, Austempering, Hardenability, surface hardening methods like Carburizing cyaniding, nitriding flame hardening and induction hardening.	**8 Hours**
Unit V	
Advanced Materials: Composite materials, definition, classification, types of matrix materials & reinforcements, fundamentals of production of FRP's and MMC's, advantages and application of composites. **Smart Materials:** Introduction, Classification, definition of each type of smart material. **Ferrous and non-ferrous materials:** Properties, composition and uses of Grey cast Iron, malleable iron, S.G. iron and steel, Copper alloys- Brasses and Bronzes. Aluminium alloys- Cast Alloys and Wrought alloys, AISI & BIS designation of steels	**8 Hours**

Material Testing Laboratory

Part A	
1) Tensile test for mild steel (0.2% Carbon steel) 2) Compression test for mild steel. 3) Torsion test for mild steel. 4) Bending test for rectangular section of wood	**26 Hours**
Part B	
1) Shear test for mild steel. 2) Rockwell hardness test for mild steel, C.I., Tool Steel. 3) Brinell hardness test for mild steel & Aluminum. 4) Izod Impact tests mild steel. 5) Charpy Impact tests mild steel 6) Preparation of Specimen for Metallographic Examination and microstructural evaluation. i. For Aluminum, Mild Steel and Medium Carbon Steel Metal. ii. Microstructure observation of prepared specimen. 7) Hardening Heat treatment of Medium Carbon Steel and evaluation of Microstructure before and after treatment. 8) Die penetrant test – (Demo) 9) Magnetic particle inspection test – (Demo)

ONLINE RESOURCES:

NPTEL COURSE: Basics of Materials Engineering, By Prof. Ratna Kumar Annabattula, IIT Madras

Course Outcomes: After attending this course student will be able to;

1. Determine and distinguish the various types of deformation in materials and the mechanism of deformation and qualitatively determine standard mechanical properties and types of failures of materials under different loading conditions like tensile, compression, bending, shear, impact and torsion.
2. Explain the various types of solidification occurring during the phase transformation and its effects on the properties of the materials.
3. Interpret the phase transformations occurring in the materials through various alloy phase diagrams and study the microstructure of metallic materials though metallographic examination.
4. Analyse the requirement of various heat treatment methods and also to suggest the appropriate heat treatment method which can be used for various materials and applications.
5. Analyse and evaluate the use of various advanced materials to various applications depending on the requirement and able to determine the flaws in materials by using nondestructive testing techniques.

SCHEME END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

STRENGTH OF MATERIALS

Contact Hours/Week	:	2+2+0 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Course	:	PCC	Course Code	:	N3ME01

Unit I	
Simple stress and strain: Introduction, Stress, Strain, Axially loaded members, Hooke's Law and Poisson's ratio, Extension /Shortening of a bar, bars with cross sections varying in steps, Problems on bars with continuously varying cross sections (circular and rectangular), Principle of super position, Compatibility Equation, Statically Indeterminate Members, Elongation due to self-weight, Volumetric strain, Elastic constants, Thermal stresses.	**6L+6T Hours**
Unit II	
Compound stresses: Introduction, plane stress, stresses on inclined sections, principal stresses and maximum shear stresses, Mohr's circle for plane stress. **Applications of Plane stress:** Introduction, Cylindrical pressure vessels/cylinders, Stresses in thin cylinders, changes in dimensions of a cylinder, Thick cylinders: Lame's equation (no derivation), Stresses and pressure across section.	**5L+5T Hours**
Unit III	
Shear force and bending moment diagrams Introduction, Types of beams, loads and reactions, shear forces and bending moments, Relationship between shear force and bending moments, shear force and bending moment diagrams for different beams subjected to concentrated loads, uniform distributed load (UDL) and couple.	**5L+5T Hours**
Unit IV	
Stresses in beams: Bending Stresses in beams: Introduction, theory of simple bending, assumptions in simple bending, Bending Equation, Problems. Shear stresses in beams: Shear Stress Equation, Shear stresses in built up sections – I section (symmetric) and T section, Problems. **Deflection of beams:** Introduction, differential equation for deflection, Double integration method, Macaulay's method.	**5L+5T Hours**
Unit V	
Torsion of circular shafts and Elastic stability of columns: Introduction, Derivation of torsional equation, Power transmitted by solid and hollow circular shafts. Introduction to columns: Euler's theory for axially loaded elastic long columns, derivation of Euler's load for both ends pinned or hinged, end conditions for other cases, effective length, limitations of Euler's theory.	**5L+5T Hours**

TEXT BOOKS:

1.	S Ramamrutham	Strength of Materials, 20th edition, 2020, Dhanpat Rai Publishing Company Ltd, New Delhi.

REFERENCE BOOKS:

1.	Mechanics of Materials, by Ferdinand Beer & Russell Johnston, Tata MaGraw Hill, 2003.
2.	Strength of Materials, by Nash W.A. Ed 4. Schaum's Outline Series. 2007.
3.	Engineering Mechanics of Solids, by Egor P. Popov, Second Edition, Pearson Education

ONLINE RESOURCES:

1. http://rtlabs.nitk.ac.in/?q=page/strength-materials-lab

Course Outcomes: *After undergoing this course student will be able to*

CO1: Apply engineering fundamentals to **determine** axial and thermal stresses in simple and compound bars.

CO2: Determine the compound stresses on an inclined plane by analytical and graphical method and to **analyze** the stresses in thick and thin cylinders.

CO3: Draw shear force and bending moment diagrams for statically determinate beams.

CO4: Calculate shear and bending stresses and **evaluate** the deflection of beams.

CO5: Determine the shear stresses in circular shafts subjected to torsion. **Calculate** bucking load in columns with various end conditions and interpret the results.

COMPUTER AIDED MACHINE DRAWING LAB

Contact Hours/Week	:	0+0+2 (L+T+P)	Credits	:	1.0
Total Lecture Hours	:	00	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course	:	PCC	Course Code	:	N3MEL01

Part - A	
Introduction to CAD software and 3D modelling from Isometric views (in CAD software only): Review of graphic user interface of the software and review of basic sketching commands and navigational commands. Conversion of isometric views of simple machine parts into 3D model and use it for the preparation of draft sheet by generation of orthographic views and sectional views. (Bureau of Indian Standards conventions are to be followed)	**04 Hours**
Riveted and pin Joints: Drawing of snap head rivet, single riveted lap joint and butt joint with single cover plate only (Chain type only).	**02 Hours**
PART B	
3D modelling, assembly and generation of draft sheet for assembly only (in CAD software only): 1. Flanged Coupling 2. Screw Jack 3. Tool Head of a Shaper (Assignment)	**20 Hours**

Course Outcomes: After undergoing this course, student will be able to
CO-1: Draw orthographic views from the given pictorial view of simple machine parts.
CO - 2: Draw sectional views of different types of riveted joints
CO - 3: Modeling of various machine components using modern tools and to generate 2D & 3D assembled view.

Universal Human Values, Social Connect and Responsibility

Course Code: **NSH04**

Contact Hours/Week	: 1(L)	Credits :	1.0
Total Lecture Hours	: 13	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50

Pre-requisites: Universal Human Values (conducted during induction programme)

Learning objectives:

1. Explore about themselves (human beings), family, society and nature/existence.
2. Appreciate the harmony in the human being, family, society and nature/existence
3. Strengthen holistic perception of co-existence and mutual fulfilment among the four orders of nature.

Unit 1: Understanding Harmony in the Human Being - Harmony in self

Understanding human being as a co-existence of the sentient 'I' and the material 'Body'; Understanding the needs of Self ('I') and 'Body' - happiness and physical facility; Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer); Understanding the characteristics and activities of 'I' and harmony in 'I'; Understanding the harmony of 'I' with the Body: Sanyam and Health, correct appraisal of Physical needs, meaning of Prosperity in detail, Include discussions to differentiate between i)Prosperity and accumulation. ii) Ensuring health vs dealing with disease **5 Hrs.**

Unit 2: Understanding Harmony in the Family and Society - Harmony in Human-Human Relationship

Understanding values in human - human relationship, meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness, Trust and Respect as the foundational values of relationship; Understanding the meaning of Trust, Difference between intention and competence; Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship; Understanding the harmony in the society (society being an extension of family)- Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals. **4 Hrs.**

Unit 3: Understanding Harmony in the Nature and Existence - Whole-existence as Co-existence

Understanding the harmony in the Nature; Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self-regulation in nature; Understanding Existence as Co-existence of mutually interacting units in all-pervasive space; Holistic perception of harmony at all levels of existence. Include discussions on-human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc. **4 Hrs.**

Course Outcomes:

On successful completion of the course, the students will be able to

CO1 Become more aware of themselves, and their surroundings (family, society, nature)

CO2 Become more responsible in life, and value human relationships and human society

CO3 Develop critical ability in handling problems and in finding sustainable solutions

Text Book:

1. Gaur, R.R. & Sangal R – 'Foundation Course in Human Values and Professional Ethics; Presenting a universal approach to value education through self-exploration', Excel Books, Bangalore, 2016, ISBN: 978-8-174-46781-2

Reference Book:

2. Tripathi A.N. – 'Human Values', New Age International Publisher, 2003, ISBN: 81-224-1426-5

Evaluation Pattern:

Two Tests of 25 marks each and 45 minutes duration SEE for 50 marks and examination duration is 90 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	45	25 marks	25 marks
Test-2	14th Week	45	25 marks	25 marks
CIE			50 marks	50 marks
SEE		90	50 marks	50 marks
Total			**100 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern may be hybrid type with MCQs and descriptive questions.*

- *10 Marks MCQs*
- *3 descriptive questions of 5 marks each*
- *All the questions are compulsory*

SEE: *SEE pattern may also be hybrid type with MCQs and descriptive questions.*

- *20 Marks MCQs*
- *1 descriptive question of 10 marks from each of the units (total 3 questions)*
  or
  2 questions of 5 marks from each of the units (total 6 questions)
- *All the questions are compulsory*

ಬಳಕೆ ಕನ್ನಡ
BaLake Kannada (Kannada for Usage)

Contact Hours/ Week	:	0(L) + 2(T) + 0 (P)	Credits	:	1.0
Total Lecture Hours	:	0	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Sub. Code	:	**NSH01**			

Course Learning Objectives:

- To create the awareness regarding the necessity of learning local language for comfortable and healthy life.
- To enable learners to Listen and understand the Kannada language properly.
- To speak, read and write Kannada language as per requirement.
- To train the learners for correct and polite conservation.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. ಬಳಕೆ ಕನ್ನಡವನ್ನು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಬೋಧಿಸಲು ವಿತಾವಿ ಸೂಚಿಸಿರುವ ಪಠ್ಯಪುಸ್ತಕಗಳನ್ನು ಉಪಯೋಗಿಸಬೇಕು.
2. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಉತ್ತೇಜಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.
3. ಪ್ರತಿ ವಿದ್ಯಾರ್ಥಿ ಪುಸ್ತಕವನ್ನು ತರಗತಿಯಲ್ಲಿ ಬಳಸುವಂತೆ ನೋಡಿಕೊಳ್ಳುವುದು ಮತ್ತು ಪ್ರತಿ ಪಾಠ ಮತ್ತು ಪ್ರವಚನಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟಂತೆ ಪೂರಕ ಚಟುವಟಿಕೆಗಳಿಗೆ ತೊಡಗಿಸತಕ್ಕದ್ದು.
4. ಡಿಜಿಟಲ್ ತಂತ್ರಜ್ಞಾನದ ಮುಖಾಂತರ ಇತ್ತೀಚೆಗೆ ಡಿಜಿಟಲೀಕರಣಗೊಂಡಿರುವ ಭಾಷೆ ಕಲಿಕೆಯ ವಿಧಾನಗಳನ್ನು ಪಿಪಿಟಿ ಮತ್ತು ದೃಶ್ಯ ಮಾಧ್ಯಮದ ಮುಖಾಂತರ ಚರ್ಚಿಸಲು ಕ್ರಮ ಕೈಗೊಳ್ಳುವುದು. ಇದರಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ತರಗತಿಯಲ್ಲಿ ಹೆಚ್ಚು ಏಕಾಗ್ರತೆಯಿಂದ ಪಾಠ ಕೇಳಲು ಮತ್ತು ಅಧ್ಯಯನದಲ್ಲಿ ತೊಡಗಲು ಅನುಕೂಲವಾಗುತ್ತದೆ.
5. ಭಾಷಾ ಕಲಿಕೆಯ ಪ್ರಯೋಗಾಲಯದ ಮುಖಾಂತರ ಬಹುಬೇಗ ಕನ್ನಡ ಭಾಷೆಯನ್ನು ಕಲಿಯಲು ಅನುಕೂಲವಾಗುವಂತೆ ಕಾರ್ಯಚಟುವಟಿಕೆಗಳನ್ನು ಮತ್ತು ಕ್ರಿಯಾ ಯೋಜನೆಗಳನ್ನು ರೂಪಿಸುವುದು.

Unit 1

1. Introduction, Necessity of learning a local language. Methods to learn the Kannada language.
2. Easy learning of a Kannada Language: A few tips. Hints for correct and polite conservation, Listening and Speaking Activities
3. Key to Transcription.
4. ವೈಯಕ್ತಿಕ ಸ್ವಾಮ್ಯಸೂಚಕ/ಸಂಬಂಧಿತ ಸರ್ವನಾಮಗಳು ಮತ್ತು ಪ್ರಶ್ನಾರ್ಥಕ ಪದಗಳು - Personal Pronouns, Possessive Forms, Interrogative words 5 ಗಂಟೆಗಳು

Unit 2

1. ನಾಮಪದಗಳ ಸಂಬಂಧಾರ್ಥಕ ರೂಪಗಳು, ಸಂದೇಹಾಸ್ಪದ ಪ್ರಶ್ನೆಗಳು ಮತ್ತು ಸಂಬಂಧವಾಚಕ ನಾಮಪದಗಳು - Possessive forms of nouns, dubitive question and Relative nouns.
2. ಗುಣ, ಪರಿಮಾಣ ಮತ್ತು ವರ್ಣಬಣ್ಣ ವಿಶೇಷಣಗಳು, ಸಂಖ್ಯಾವಾಚಕಗಳು Qualitative, Quantitative and Colour Adjectives, Numerals
3. ಕಾರಕ ರೂಪಗಳು ಮತ್ತು ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು - ಸಪ್ತಮಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯ - (ಆ, ಅದು, ಅವು, ಅಲ್ಲಿ) Predictive Forms, Locative Case 4 ಗಂಟೆಗಳು

Unit 3

1. ಚತುರ್ಥಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯದ ಬಳಕೆ ಮತ್ತು ಸಂಖ್ಯಾವಾಚಕಗಳು - Dative Cases, and Numerals
2. ಸಂಖ್ಯಾಗುಣವಾಚಕಗಳು ಮತ್ತು ಬಹುವಚನ ನಾಮರೂಪಗಳು - Ordinal numerals and Plural markers
3. ನ್ಯೂನ/ನಿಷೇಧಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು ಮತ್ತು ವರ್ಣ ಗುಣವಾಚಕಗಳು - Defective / Negative Verbs and Colour Adjectives 5 ಗಂಟೆಗಳು

Unit 4

1. ಅಪ್ಪಣೆ/ಒಪ್ಪಿಗೆ, ನಿರ್ದೇಶನ, ಪ್ರೋತ್ಸಾಹ ಮತ್ತು ಒತ್ತಾಯ ಅರ್ಥರೂಪ ಪದಗಳು ಮತ್ತು ವಾಕ್ಯಗಳು Permission, Commands, encouraging and Urging words (Imperative words and sentences)
2. ಸಾಮಾನ್ಯ ಸಂಭಾಷಣೆಗಳಲ್ಲಿ ದ್ವಿತೀಯ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ಸಂಭವನೀಯ ಪ್ರಕಾರಗಳು Accusative Cases and Potential Forms used in General Communication
3. 'ಇರು ಮತ್ತು ಇರಲ್ಲ' ಸಹಾಯಕ ಕ್ರಿಯಾಪದಗಳು, ಸಂಭಾವ್ಯಸೂಚಕ ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು - Helping Verbs; "iru and iralla", Corresponding Future and Negation Verbs
4. ಹೋಲಿಕೆ (ತರ-ತಮ), ಸಂಬಂಧ ಸೂಚಕ ಮತ್ತು ವಸ್ತು ಸೂಚಕ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಪದಗಳ ಬಳಕೆ - Comparative, Relationship, Identification and Negation Words 6 ಗಂಟೆಗಳು

Unit 5

1. ಕಾಲ ಮತ್ತು ಸಮಯದ ಹಾಗೂ ಕ್ರಿಯಾಪದಗಳ ವಿವಿಧ ಪ್ರಕಾರಗಳು – Different types of forms of Tense, Time and Verbs
2. -ದ್, -ತ್, -ತು, -ಇತು, -ಆಗಿ, -ಅಲ್ಲ, -ಗ್, -ಕ್, ಇದೆ, ಕ್ರಿಯಾ ಪ್ರತ್ಯಯಗಳೊಂದಿಗೆ ಭೂತ, ಭವಿಷ್ಯತ್ ಮತ್ತು ವರ್ತಮಾನ ಕಾಲ ವಾಕ್ಯ ರಚನೆ. Formation of Past, Future and Present Tense Sentences with Verb Forms
3. Kannada Vocabulary List: ಸಂಭಾಷಣೆಯಲ್ಲಿ ದಿನೋಪಯೋಗಿ ಕನ್ನಡ ಪದಗಳು - Kannada Words in Conversation. 6 ಗಂಟೆಗಳು

ಬಳಕೆ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಅನುಕೂಲಗಳು ಮತ್ತು ಫಲಿತಾಂಶಗಳು:

Course Outcomes

At the end of the Course, The Students will be able to

CO1: Understand the necessity of learning of local language for comfortable life.

CO2: Listen and understand the Kannada language properly.

CO3: Speak, read and write Kannada language as per requirement.

CO4: Communicate (converse) in Kannada language in their daily life with Kannada speakers.

CO5: Speak in polite conservation.

TEXT BOOKS:

ಬಳಕೆ ಕನ್ನಡ - ಲೇಖಕರು: ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration

SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ

Contact Hours/ Week	: 0(L) + 2(T) + 0 (P)	Credits	: 1.0
Total Lecture Hours	: 0	CIE Marks	: 50
Total Tutorial Hours	: 26	SEE Marks	: 50
Sub. Code	: **NSH02**		

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯ ಉದ್ದೇಶಗಳು:

1. ವೃತ್ತಿಪರ ಪದವಿ ವಿದ್ಯಾರ್ಥಿಗಳಾಗಿರುವುದರಿಂದ ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.
2. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಪ್ರಧಾನ ಭಾಗವಾದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳನ್ನು ಸಾಂಕೇತಿಕವಾಗಿ ಪರಿಚಯಿಸಿ ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ ಸಾಹಿತ್ಯ ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಅರಿವು ಹಾಗೂ ಆಸಕ್ತಿಯನ್ನು ಮೂಡಿಸುವುದು.
3. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವನ್ನು ಹಾಗೂ ಅವರುಗಳು ಸಾಧಿಸಿದ ವಿಷಯಗಳನ್ನು ಪರಿಚಯಿಸುವುದು.
4. ಕನ್ನಡ ಶಬ್ದ ಸಂಪತ್ತಿನ ಪರಿಚಯ ಮತ್ತು ಕನ್ನಡ ಭಾಷೆಯ ಬಳಕೆ ಹಾಗೂ ಕನ್ನಡದಲ್ಲಿ ಪತ್ರ ವ್ಯವಹಾರವನ್ನು ತಿಳಿಸಿಕೊಡುವುದು.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡವನ್ನು ಬೋಧಿಸಲು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಪ್ರಸ್ತುತ ಪುಸ್ತಕ ಆಧರಿಸಿ ಬ್ಲಾಕ್ ಬೋರ್ಡ್ ವಿಧಾನವನ್ನು ಅನುಸರಿಸುವುದು. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಪ್ರೇರೇಪಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.
2. ಇತ್ತೀಚಿನ ತಂತ್ರಜ್ಞಾನದ ಅನುಕೂಲಗಳನ್ನು ಬಳಸಿಕೊಳ್ಳುವುದು – ಅಂದರೆ ಕವಿ-ಕಾವ್ಯ ಪರಿಚಯದಲ್ಲಿ ಕವಿಗಳ ಚಿತ್ರಣ ಮತ್ತು ಲೇಖನಗಳು ಮತ್ತು ಕಥೆಕಾವ್ಯಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟ ಧ್ವನಿ ಚಿತ್ರಗಳು, ಸಂಭಾಷಣೆಗಳು, ಈಗಾಗಲೇ ಇತರ ವಿಮರ್ಶಕರು ಬರೆದಿರುವ ವಿಮರ್ಶಾತ್ಮಕ ವಿಷಯಗಳನ್ನು ಪಿಪಿಟಿ, ಡಿಜಿಟಲ್ ಮಾಧ್ಯಮಗಳ ಮುಖಾಂತರ ವಿಶ್ಲೇಷಿಸುವುದು.
3. ನವೀನ ಮಾದರಿಯ ಸಾಹಿತ್ಯ ಬೋಧನೆಗೆ ಸಂಬಂಧಪಟ್ಟ ವಿಧಾನಗಳನ್ನು ಶಿಕ್ಷಕರು ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಅನುಕೂಲವಾಗುವ ರೀತಿಯಲ್ಲಿ ಅಳವಡಿಸಿಕೊಳ್ಳಬಹುದು.

ಘಟಕ ೧: ಲೇಖನಗಳು

೧. ಕರ್ನಾಟಕ ಸಂಸ್ಕೃತಿ – ಹಂ.ಪ. ನಾಗರಾಜಯ್ಯ
೨. ಕರ್ನಾಟಕ ಏಕೀಕರಣ : ಒಂದು ಅಪೂವ ಚರಿತ್ರೆ – ಜಿ. ವೆಂಕಟಸುಬ್ಬಯ್ಯ
೩. ಆಡಳಿತ ಭಾಷೆಯಾಗಿ ಕನ್ನಡ – ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ ಮತ್ತು ಪ್ರೊ. ವಿ. ಕೇಶವಮೂರ್ತಿ
6 ಗಂಟೆಗಳು

ಘಟಕ 2: ಆಧುನಿಕ ಪೂರ್ವದ ಕಾವ್ಯ ಭಾಗ

೧. ವಚನಗಳು: ಬಸವಣ್ಣ, ಅಕ್ಕಮಹಾದೇವಿ, ಅಲ್ಲಮಪ್ರಭು, ಆಯ್ದಕ್ಕಿ ಮಾರಯ್ಯ, ಜೇಡರದಾಸಿಮಯ್ಯ, ಆಯ್ದಕ್ಕಿ ಲಕ್ಕಮ್ಮ
೨. ಕೀರ್ತನೆಗಳು: ಅದರಿಂದೇನೂ ಫಲ ಇದರಿಂದೇನು ಫಲ – ಪುರಂದರದಾಸರು
ತಲ್ಲಣಿಸದಿರು ಕಂಡ್ಯ ತಾಳು ಮನವೇ - ಕನಕದಾಸರು
೩. ತತ್ವಪದಗಳು: ಸಾವಿರ ಕೊಡಗಳ ಸುಟ್ಟು - ಶಿಶುನಾಳ ಶರೀಫ 5
ಗಂಟೆಗಳು

ಘಟಕ 3: ಆಧುನಿಕ ಕಾವ್ಯ ಭಾಗ

1. ಡಿ.ವಿ.ಜಿ. ರವರ ಮಂಕುತಿಮ್ಮನ ಕಗ್ಗದಿಂದ ಆಯ್ದ ಕೆಲವು ಭಾಗಗಳು
2. ಕುರುಡು ಕಾಂಚಾಣ: ದ.ರಾ. ಬೇಂದ್ರೆ
3. ಹೊಸಬಾಳಿನ ಗೀತೆ: ಕುವೆಂಪು 6 ಗಂಟೆಗಳು

ಘಟಕ 4: ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯ

1. ಡಾ. ಸರ್ ಎಂ. ವಿಶ್ವೇಶ್ವರಯ್ಯ : ವ್ಯಕ್ತಿ ಮತ್ತು ಐತಿಹ್ಯ - ಎ.ಎನ್. ಮೂರ್ತಿರಾವ್
2. ಕರಕುಶಲ ಕಲೆಗಳು ಮತ್ತು ಪರಂಪರೆಯ ವಿಜ್ಞಾನ : ಕರೀಗೌಡ ಬೀಚನಹಳ್ಳಿ

5 ಗಂಟೆಗಳು

ಘಟಕ 5: ಕಥೆ ಮತ್ತು ಪ್ರವಾಸ ಕಥನ

1. ಯುಗಾದಿ : ವಸುಧೇಂದ್ರ
2. ಮೆಗಾನೆ ಎಂಬ ಗಿರಿಜನ ಪರ್ವತ : ಹಿ.ಚಿ. ಬೋರಲಿಂಗಯ್ಯ

4 ಗಂಟೆಗಳು

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಪರಿಣಾಮಗಳು (Course Outcomes):

CO1:ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯವಾಗುತ್ತದೆ.

CO2:ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳು ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಆಸಕ್ತಿಯು ಮೂಡುತ್ತದೆ.

CO3:ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

CO4:ಕನ್ನಡ ಭಾಷಾಭ್ಯಾಸ, ಸಾಮಾನ್ಯ ಕನ್ನಡ ಹಾಗೂ ಆಡಳಿತ ಕನ್ನಡದ ಪದಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

TEXT BOOKS:

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ - ಡಾ. ಹಿ.ಚಿ. ಬೋರಲಿಂಗಯ್ಯ ಮತ್ತು ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

FUNDAMENTALS OF DIGITAL MANUFACTURING

Contact Hours/Week	:	1+0+2 (L+T+P)	Credits	:	2.0
Total Lecture Hours	:	13	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course	:	AEC	Course Code	:	N3MEA01

Part A – Additive Manufacturing	
Understanding Manufacturing: concept of manufacturing, need, scope, advantages, limitation, application, materials, classification of manufacturing. AM evolution, Distinction between AM & CNC machining, steps in AM, Classification of AM processes - *Vat Photo polymerization, Material Jetting, Binder Jetting, Extrusion-Based AM Processes, Sheet Lamination AM Processes, Powder Bed Fusion AM Processes*, Advantages of AM and Types of materials for AM. **Practicals –** (a) Modelling & Printing of simple models like hexagonal headed bolt. Hexagonal rod and rounded headed bolt. (b) Modelling and printing of an isometric view using orthographic projections. (c) Modelling and Printing of 3D Printed nut & bolt assembly.	5L+9 P Hours
PART B – CNC Wood router and Laser Engraving & Cutting	
Introduction to CNC wood router, Important Components, working procedure, precautions to be taken while operating, Materials that can be processed in CNC Wood router, applications, advantages and limitations. Introduction to lasing action, Spontaneous and stimulated emission, Properties of Laser Light, Laser components and configurations for different applications, Laser care and safety, Laser Applications in Material Processing: welding, Hardening, Laser Alloying, cladding and Additive Manufacturing, Laser induced material removal: drilling, cutting, marking. **Practicals –** (a) Modelling & creating a Model-1 using CNC wood router. (b) Modelling & creating a Model-2 using CNC wood router. (c) Modelling & Engraving of Profile-1 using Laser Engraving process. (d) Modelling & cutting of Profile -2 using Laser cutting process.	5L + 9P Hours
Part C – CNC Programing and Simulation	
Introduction to NC/CNC/machine tools, Evolution of CNC, operations carried out in CNC machine, Advantage, disadvantages of NC /CNC/DNC machine tools, Application of NC/CNC/DNC. Concept of CNC Programming, CNC axis system Manual Part Programming Format G and M Codes Programs for CNC turning. **Practicals –** (a) Writing CNC part program for turning operations for the Profile-1 and simulating using CNC software. (b) Writing CNC part program for turning operations for the Profile-2 and simulating using CNC software. (c) Writing CNC part program for turning operations for the Profile-3 and simulating using CNC software.	3L + 8P Hours

TEXT BOOKS:

1. Additive Manufacturing: Principles, Technologies and Applications, C.P Paul, A.N Junoop, McGraw Hill, 2021.
2. CAD/CAM Principals and Applications by P N Rao, McGraw Hill 2nd Edition 2010.
3. Lasers: Fundamentals and applications, K. Thyagarajan, Ajoy Ghatak, Springer, 2010, 2nd Edition.

Reference Books:

1. Additive Manufacturing, Second Edition, Amit Bandyopadhyay Susmita Bose, CRC Press Taylor & Francis Group, 2020.
2. Computer Numerical Control: Operation and Programming, - John Stenerson and Kelly Curran PHI, New Delhi, 2009
3. Laser Fundamentals, Willium T Selfvast, Cambridge Univ. Press, 2008.

Course Outcomes:

After undergoing this course student will be able to

CO1: Develop 3D printed model using modelling and 3D printing software.

CO2: Perform laser cutting and engraving for a given applications and develop wooden models using CNC wood router.

CO3: Develop CNC Program for CNC-turning operations and simulate using CNC-Software.

FOUNDATIONS OF ENGINEERING MATHEMATICS-II
(FOR LATERAL ENTRY STUDENTS)

Contact Hours/ Week	2(L)+2(T)	**Credits**	0
Total Lecture Hours	26	**CIE Marks**	100
Total Tutorial Hours	26	**SEE Marks**	00
Sub Code	N4MATDP	**Semester**	IV

Prerequisites: Basics in differential calculus, Integral calculus and vectors.

Course Learning Objectives: This course will facilitate the students with concrete foundation of ordinary differential equations, Laplace transforms, Integral calculus and numerical methods enabling them to acquire the knowledge of these mathematical tools.

Course objectives: This course will enable students to:

1. Solve second and higher order differential equations.
2. Find the Laplace transform of the function f(t).
3. Find the Inverse Laplace transform of the function F(s).
4. Apply the knowledge of numerical methods in the models of various physical and engineering phenomena
5. Solve the integral by using standard integrals (Beta and Gamma) and multiple integrals.

Course outcomes: After the completion of this course, students will be able to:

1. Explain various physical models through higher order differential equations and solve such linear ordinary differential equations. **(L1& L2)**
2. Understand the concept of Laplace transform and obtain Laplace transform of periodic functions and unit step functions. **(L1& L2)**
3. Apply the concept of Laplace transform in solving Linear Differential equations. **(L1& L2)**
4. Apply the Numerical methods to solve Algebraic and transcendental equations and find the polynomials by finite difference method. **(L1& L2)**
5. Apply the concept of to evaluate multiple integrals and Beta and Gamma functions **(L1& L2)**

UNIT-I: Linear Differential Equations: (6+6) Hours

Solution of second and higher order equations with constant coefficients by inverse differential operator method, method of variation of parameters,

UNIT – II: Laplace Transform: (5+5) Hours

Definition, Transforms of elementary functions, properties of Laplace Transform, Laplace Transform of $e^{at} f(t)$, $t^n f(t)$, $\frac{f(t)}{t}$, derivatives and Laplace Transform of Periodic functions'

UNIT-III: Inverse Laplace Transform: (5+5) Hours

Inverse Laplace Transform, Convolution theorem (without proof) and problems Applications –Solution of Linear differential equations using Laplace Transform.

UNIT-IV: Elementary Numerical Methods (5+5) Hours

Finite differences. Interpolation/extrapolation using Newton's forward and backward difference formulae, Newton's divided difference and Lagrange's formulae (All formulae without proof). Solution of polynomial and transcendental equations - Newton-Raphson method (only formula) – Illustrative examples.

UNIT-V: Integral Calculus: (5+5) Hours

Multiple integrals –Evaluation of double and triple Integrals, **Beta and Gamma functions**: Definition, relation between Beta and Gamma functions and simple problems.

OPERATIONS RESEARCH

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course	:	BSC	Course Code	:	**N4ME01**

Course Objectives: To equip the students with the knowledge base on the basic constructs of operations research models for problem - solving and decision making situations in organizations

Unit I	
Introduction: Definition of OR, Historical development, Applications of Operations Research, Features of OR, Main phases of Operations Research study, Limitations of OR. **Linear programming:** Introduction, Formulation of LP Problems, Graphical solution of two variable problems, Solution space, Types of solution – Basic feasible solution, Optimal solution, Infeasible solution, Unbounded solution, Multiple optimum solution, Assumptions in Linear programming problem, Limitations of Linear programming, Applications of Linear programming. **Simplex method:** Slack and Surplus variables, Artificial variable, Standard form of Linear programming, the simplex table, Big M-method (Charnes Penalty Method), Unbounded solution, Multiple optimum solution, Pseudo optimum solution	**8 Hours**
Unit II	
Duality , Dual Simplex Method: Concept of duality, General rules for converting primal to its dual, Duality theory, Advantages of duality, Dual simplex method, Advantages of dual simplex method	**7 Hours**
Unit III	
Transportation model: Introduction, Mathematical Formulation of Transportation problem, Matrix form of Transportation problem, The transportation algorithm, Initial basic feasible solution using North-West corner method, Matrix Minima method and Vogals Approximation method(VAM), Optimal solution using Modified distribution method(MODI), Unbalanced transportation problems, Degeneracy in transportation problem, Alternate optimum solution.	**8 Hours**
Unit IV	
Assignment problem: Introduction, Mathematical Formulation of Assignment problem, Solution to assignment problems using Hungarian method, Unbalanced assignment problem, Restriction in assignment problems, Traveling salesman problem. **Game Theory:** Introduction, Basic definitions, Strategy, pure strategy, mixed strategy, Maximin and Minmax criterion, Saddle point, Optimal strategies and Value of the game, Solution of (mxn) games with and without Saddle point(s), Two-by-Two(2x2) games without Saddle point, Principle of Dominance to reduce the size of the game, Arithmetic method, Modified dominance rule, Graphical method for (2xn) and (mx2) games.	**8 Hours**
Unit V	
PERT-CPM Techniques: Introduction,, Applications of PERT/CPM techniques, Basic steps in PERT/CPM techniques, Network diagram representation, Rules for drawing network diagram, Common errors in	**8 Hours**

drawing network diagram, Fulkerson's i-j Rule, Time estimates and Critical path in network analysis, Probability of completion time of project, Determination of Float and Slack times, Crashing of networks, normal time, crash time, normal cost, crash cost, cost slope, Optimum and Minimum project duration, Optimum and Minimum project cost

Course Outcomes: After attending this course student will be able to:

1. **Identify**, **formulate**, **solve** and **interpret** the results of linear programming problems by graphical/simplex method.
2. **Identify**, **formulate** and **solve** the linear programming problems by duality and dual simplex concepts.
3. Identify, formulate and solve the transportation problems for optimum cost / time / distance.
4. Identify, Formulate and solve assignment problems for optimum cost, Travelling Salesman problem for shortest route and game theory problems for identifying best strategies of the game
5. Apply network techniques like PERT/CPM for managing projects for optimum time/cost, least time schedule and corresponding cost.

There will be 10 questions, two from each unit and the students must answer 5 full questions choosing one question from each unit.

THEORY OF MACHINES

Contact Hours/Week	:	3+0+2 (L+T+P)	Credits	:	4.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course	:	IPCC	Course Code	:	**N4MEI01**

Unit I	
Introduction **Definitions:** Link or element, pairing of elements with degrees of freedom, Grubler's criterion (without derivation), Kinematic chain, Mechanism, Mobility of Mechanism, Inversion, Machine. Kinematic chain with Four bar chain; Single slider crank chain & Double slider crank chain and their inversions. i) Quick return motion mechanisms - Whitworth mechanism ii) Intermittent Motion mechanisms–Geneva mechanism and Ratchet & Pawl mechanism. Cams: Types of cams, Types of followers, Displacement diagrams. Cam profile for roller follower.	**08 Hours**
Unit II	
Velocity and Acceleration Analysis of Mechanisms (Graphical Methods): Velocity and acceleration analysis of Four Bar mechanism and Slider crank mechanism by vector polygons, Relative velocity and acceleration of particles in a common link, relative velocity and accelerations of coincident Particles on separate links, **Static Force Analysis:** Reaction between members without friction. Analysis of engine mechanism, four bar mechanism (without friction).	**08 Hours**
Unit III	
Dynamics of Engine Mechanism: Design of Flywheel and Turning Moment Diagrams for single cylinder and multi cylinder IC Engines. **Gyroscope:** Vectorial representation of angular motion, Gyroscopic couple, Effect of gyroscopic couple on ship, plane, two wheeler and four wheeler.	**09 Hours**
Unit IV	
Spur Gear: Law of gearing, Definitions, Path of contact, Arc of contact, Contact ratio, Backlash and Interference in involute gears (No Problems). **Gear Trains:** Simple gear trains, Compound gear trains for large speed reduction, Reverted gear trains, Epicyclic gear trains, and tabular methods of finding velocity ratio of epicyclic gear trains.	**07 Hours**
Unit V	
Balancing of rotating masses: Static and dynamic balancing, balancing of single rotating mass in same plane and in different planes. Balancing of several rotating masses in same plane and in different planes. **Balancing of Reciprocating masses:** Balancing of reciprocating masses. single cylinder engine, balancing of multi cylinder-inline Engine.	**07 Hours**

List Of Experiments	
1. **Kinematic Mechanisms** 2. Static and Dynamic analysis of mechanisms 3. Gyroscopic behaviour of rotating masses 4. Balancing of rotating masses in a single plane 5. Balancing the rotating masses in different planes 6. Frictional and centrifugal forces in porter governor 7. Frictional and centrifugal forces in proell governor	**26 Hours**

TEXT BOOKS:

ONLINE RESOURCES:

1. https://nptel.ac.in/courses/112104114

Course Outcomes:

After undergoing this course student will be able to:

CO 1 Apply the knowledge of mechanisms for engineering applications

CO 2 To identify and analyse the motion transmitted in planar mechanisms and to find the velocity and acceleration in different links by graphical approach

CO 3 To design a flywheel using turning moment diagram and to determine and analyse the effect of gyroscopic couple in vehicles.

CO 4 To Identify and determine the gear parameters for analysing the velocity ratio in different gear trains

CO 5 To Identify and determine static and Dynamic balancing systems involving rotating and partial balancing of reciprocating masses.

ENGINEERING THERMODYNAMICS

Contact Hours/Week	:	3+0+2 (L+T+P)	Credits	:	4.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course	:	IPCC	Course Code	:	**N4MEI02**

UNIT - I	
Introduction to Engineering Thermodynamics: Basic concepts and definitions: microscopic and macroscopic approaches, thermodynamic system, surrounding and boundary, types of systems with examples, intensive and extensive properties with examples, quasi-static process, cyclic and non-cyclic processes. thermodynamic equilibrium. Zeroth Law of Thermodynamics, Temperature, construction of thermometers. Definition of thermodynamic work and heat, Joule's experiments (equivalence of heat and work). First Law of Thermodynamics: derivation of work done and heat transfer for different processes, application of First law to closed and open system, derivation of steady flow energy equation and its application for various devices. Problems	**7 Hours**
UNIT-II	
Limitations of First law of thermodynamics, heat engine: schematic representation and efficiency, reversed heat engine, schematic representation and Co-efficient of Performance. Statements of the Second law of Thermodynamics, equivalence of the Kelvin-Planck and Clausius statements, reversible and irreversible processes, factors that make a process irreversible, Carnot cycle, derivation of the efficiency of Carnot cycle and its limitations, Inequality of Clausius, Concept of entropy, derivation of entropy change for various process. Concept of available energy and unavailable energy,	**8 Hours**
UNIT-III	
Air-Standard Cycles: Otto Cycle and Diesel Cycle (P-V and T-s diagrams), derivation of efficiency and mean effective pressure. Problems for finding efficiency and mean effective pressure. Brayton cycle: P-V and T-S diagram, Derivation for thermal efficiency, work ratio, and Pressure ratio for maximum power output. Problems IC- Engines: definitions of Brake Power, Indicated Power, Thermal efficiencies etc. Problems on performance of two-stroke and four-stroke SI and CI engines, heat balance, Morse test.	**8 Hours**
UNIT-IV	
Pure substances and Vapour Power Cycle Introduction to pure substance: properties, phase equilibrium diagram, (P-T-V and h-S diagrams), dryness fraction (quality), Steam tables and its use. Simple Rankine cycle; T–s diagram, performance analysis. Problems Reciprocating air Compressor Working principle of single stage reciprocating air compressors, derivation of work input, volumetric efficiency and isothermal efficiency, multistage air	**8 Hours**

compressor, derivation of intermediate pressure for a two stage air compressor, Problems.	
UNIT-V	
Introduction to Refrigeration: unit of refrigeration, Vapour compression refrigeration system(VCR), derivation of COP of VCR. Air refrigeration system: derivation of COP of Air refrigeration system, Problems Psychorometry: Dry bulb temperature, wet bulb, temperature, dew point temperature, partial pressures, specific and relative humidity, humidification and dehumidification, Use of Psychometric chart, Problems.	**8 Hours**
Lab Experiments	
1. Find the viscosity of the given lubricating oil 2. Find the flash and fire point of the given lubricating oil 3. Draw the valve time diagram for a 4 stoke diesel engine. 4. Find the percentage error of the plannimeter. 5. Conduct the performance on a two stroke petrol engine. 6. Conduct the performance on a four stroke petrol engine 7. Conduct the performance on a four stroke Diesel engine 8. Conduct the performance on a reciprocating air compressor. 9. Conduct the test on vapour compression refrigeration. 10. Conduct the test on air conditioning system.	**26 Hours**

TEXT BOOKS

1	Rajput R.K	Engineering Thermodynamics, Eigth Edition (2010) Lakshmi publications (P) LTD.

2.	Yunus A. Cengel, Michael A. Boles and Mehmet Konoglu	Thermodynamics - An Engineering Approach. Ninth Edition, McGraw Hill (June 2019)

Course Outcomes:

After undergoing this course student will be able to:

1. **Identify**, **formulate** and **analyze** Thermodynamic system using first law of thermodynamics and steady flow energy equation.
2. **Apply** the concepts of second law of thermodynamics for the **analysis** of heat engines and reverse heat engines.
3. **Apply** the concepts of air standard cycles to **analyze** and **solve** problems on power cycles and performance of IC engines.
4. **Apply** the concepts of pure substance to **analyse** Rankine cycle and to **solve** problems on vapour power cycles by using Mollier diagram.
5. **Identify** and **analyse** different power absorbing devices like compressors, refrigeration and Air-conditioning equipment.

MACHINE TOOLS, METROLOGY AND MEASUREMENTS

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course	:	PCC	Course Code	:	**N4ME02**

Course Learning Objectives: **In this course student will learn:**

i) About the fundamental knowledge and principles of metal cutting, cutting tool materials, cutting fluids and machine tools.
ii) about standards used for measurement and its importance.
iii) about methods of modern manufacturing like interchangeability and selective manufacturing.
iv) concept of measurement and measurement system.
v) about transducers and its use in measurement systems.
vi) various instruments used in measurement of various parameters like force, pressure, temperature etc.

Unit I	
Theory of Metal Cutting: Single point cutting tool nomenclature, Chip formation, Orthogonal and Oblique cutting, Merchants circle diagram, analysis. Shear angle relationship, tool wear and tool failure, tool life, effects of cutting parameters on tool life, tool failure criteria, Taylor's tool life equation, cutting tool materials and cutting fluids, numerical problems. **Milling Machines:** Indexing- Simple, compound, indexing calculations, numerical on indexing. **Shaper:** Introduction, Driving mechanisms, operations. **Grinding:** Types of abrasives, bonding process, classification, constructional features and applications, cylindrical, surface, and center less grinding.	**8 Hours**
Unit II	
Standards of measurement: Definition and Objectives of metrology, Standards of length - International prototype meter, Imperial standard yard, Wave length standard, subdivision of standards, line and end standard, comparison, Slip gauges, Wringing, Indian Standards (M-81, M-112), Numerical problems on building of slip gauges. **System of limits, Fits, Tolerances and gauging:** Definition of tolerance, limits, deviation etc., Principle of interchangeability and selective assembly, Indian standards, concept of limits of size and tolerances, definition of fits, types of fits and their designation, hole basis system, shaft basis of system, classification of gauges, brief concept of design of gauges (Taylor's principle), Wear allowance and machining allowance on gauges, Types of gauges -plain plug gauge, ring Gauge, snap gauge, limit gauge, Numerical problems on gauges.	**8 Hours**

Unit III	
Comparators Introduction to Comparator, Characteristics, classification of comparators. mechanical comparators, Reed type, Dial gauge LVDT, Pneumatic Comparators, Solex Comparators. **Angular measurements** Bevel Protractor, Sine Principle and. use of Sine bars, Sine centre, use of angle gauges, (numerical on building of angles) **Introduction to Nano and Laser Metrology**: Introduction, nanotechnology and engineering, Scanning Probe Microscope, 3 D measurements, Co-ordinate Measuring Machine (CMM).	**8 Hours**
Unit IV	
Measurements and Measurement systems Definition, Significance of measurement, generalized measurement system, definitions and concept of accuracy, precision, calibration, threshold, sensitivity, hystersis, repeatability, linearity, loading effect, system response-times delay. Errors in Measurements, Classification of Errors. **Transducers (Sensors):** Primary and Secondary transducers, Classification, Electrical, Mechanical, Electronic transducers. **Intermediate modifying and Terminating Devices:** Mechanical systems, inherent problems, introduction to mechanical and electrical amplification, input circuitry and telemetry. Mechanical counters, Cathode Ray Oscilloscope, Oscillographs, X- Y Plotters.	**8 Hours**
Unit V	
Force Measurement Force Measurements: Principle, analytical balance, platform balance, proving ring. **Pressure Measurement:** Principle, use of elastic members, Bridgeman gauge, McLeod gage. **Temperature measurement** Resistance thermometers, thermocouple, law of thermocouples, materials used for construction, Pyrometers.	**7 Hours**

TEXT BOOKS:

1. Manufacturing Technology, P. N Rao, Volume 1, 4th Edition, McGraw Hill (India) Pvt. Ltd. 2014
2. Metrology and Measurements, R.K Jain, Khanna Publications, 2003.

NPTEL course on Metrology & Measurements Link:
http://nptel.ac.in/courses/112106138/

Course Outcomes: After studying this course student will be able to;

CO1. explain the basic concepts of mechanics of metal cutting and the parameters affecting the tool life.
CO1. analyze the use of various standards and to **determine** the use of tolerance andfits in manufacturing.
CO2. interpret the various comparators, limit gauges and angle measuring instruments for various engineering applications.
CO3. explain the generalized measurement system, characteristics of measuring Instruments, errors in measurements and transducers and its applications.
CO4. select and **analyse** the measuring instruments to measure the temperature, pressure, force and its applications.
CO5. apply measurement of various parameters (like Temperature, Force, Pressure etc.) and concept of standardization in every walk of their life effectively.

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

BIOLOGY FOR ENGINEERS		Course Code :	N4CCA01
Contact Hours/ Week	: 2(L)	Credits :	2.0
Total Lecture Hours	: 0	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50

Course Objectives:

1. To familiarize the students with the basic biological concepts and their engineering applications.
2. To enable the students with an understanding of bio-design principles to create novel devices and structures.
3. To provide the students an appreciation of how biological systems can be re-designed as substitute products for natural systems.
4. To motivate the students develop the interdisciplinary vision of biological engineering.

General Instructions for Teaching-Learning

These are sample Strategies, which teacher can use to accelerate the attainment of the various course outcomes.

- Explanation via real life problem, situation modelling, and deliberation of solutions, hands-on sessions, reflective and questioning /inquiry-based teaching.
- Instructions with interactions in classroom lectures (physical/hybrid).
- Use of ICT tools, including YouTube videos, related MOOCs, AR/VR/MR tools.
- Flipped classroom sessions (~10% of the classes).
- Industrial visits, Guests talks and competitions for learning beyond the syllabus.
- Students' participation through audio-video based content creation for the syllabus (as assignments).
- Use of gamification tools (in both physical/hybrid classes) for creative learning outcomes.
- Students' seminars (in solo or group) /oral presentations.

Unit 1: BIOMOLECULES AND THEIR APPLICATIONS

Carbohydrates (cellulose-based water filters, PHA and PLA as bioplastics), Nucleic acids (DNA Vaccine for Rabies and RNA vaccines for Covid19, Forensics – DNA fingerprinting), Proteins (Proteins as food – whey protein and meat analogs, Plant based proteins), lipids (biodiesel, cleaning agents/detergents), Enzymes (glucose-oxidase in biosensors, ligninolytic enzyme in bio-bleaching). **5 Hours**

Unit 2: HUMAN ORGAN SYSTEMS AND BIO DESIGNS - 1

Brain as a CPU system (architecture, CNS and Peripheral Nervous System, signal transmission, EEG, Robotic arms for prosthetics. Engineering solutions for Parkinson's disease). Eye as a Camera system (architecture of rod and cone cells, optical corrections, cataract, lens materials, bionic eye).Heart as a pump system (architecture, electrical signaling - ECG monitoring and heart related issues, reasons for blockages of blood vessels, design of stents, pace makers, defibrillators).

5 Hours

Unit 3: HUMAN ORGAN SYSTEMS AND BIO-DESIGNS - 2

Lungs as purification system (architecture, gas exchange mechanisms, spirometry, abnormal lung physiology - COPD, Ventilators, Heart-lung machine).Kidney as a filtration system (architecture, mechanism of filtration, CKD, dialysis systems). Muscular and Skeletal Systems

as scaffolds (architecture, mechanisms, bioengineering solutions for muscular dystrophy and osteoporosis).

5 Hours

Unit 4: NATURE-BIOINSPIRED MATERIALS AND MECHANISMS

Echolocation (ultrasonography, sonars), Photosynthesis (photovoltaic cells, bionic leaf). Bird flying (GPS and aircrafts), Lotus leaf effect (Super hydrophobic and self-cleaning surfaces), Plant burrs (Velcro), Shark skin (Friction reducing swim suits), Kingfisher beak (Bullet train). Human Blood substitutes - hemoglobin-based oxygen carriers (HBOCs) and perfluorocarbons (PFCs).

5 Hours

Unit 5: TRENDS IN BIOENGINEERING

Bio-printing techniques and materials, 3D printing of ear, bone and skin. 3D printed foods. Electrical tongue and electrical nose in food science, DNA origami and Biocomputing, Bio-imaging and Artificial Intelligence for disease diagnosis. Self- healing Bio-concrete (based on bacillus spores, calcium lactate nutrients and bio-mineralization processes) and Bio-remediation and Bio-mining via microbial surface adsorption (removal of heavy metals like Lead, Cadmium, Mercury, Arsenic).

6 Hours

Course Outcomes

At the end of the course the student will be able to:

CO1: Elucidate the basic biological concepts via relevant industrial applications and case studies.

CO2: Evaluate the principles of design and development, for exploring novel bioengineering projects.

CO3: Corroborate the concepts of bio-mimetics for specific requirements.

CO4: Explore innovative bio-based solutions for socially relevant problems.

Evaluation Pattern

Two Tests of 50 marks each and 90 minutes duration

SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

Activity Based Learning (Suggested Activities in Class)/ Practical Based learning

- Group Discussion of Case studies
- Model Making and seminar/poster presentations
- Design of novel device/equipment like Cellulose-based water filters, Filtration system mimicking the kidney, Bioremediation unit for E-waste management, AI and ML based Bio-imaging,

MACHINE TOOLS & MEASUREMENTS LAB

Contact Hours/Week	:	0+2(L+P)	Credits	:	1.0
Total Practical Hours	:	26	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course	:	PCC	Course Code	:	**N4MEL01**

In this course student will learn;

- Provide the necessary skills to imparting the required shape and size on the given work piece using the different machine tools.
- Provide the necessary skills to measure the various linear dimensions, angular dimensions, strain, tool force and other physical variables.
- Perform the calibration of instruments used in measurement of pressure, temperature displacement and weight.
- Estimation of surface roughness using optical flat.

PART A: MACHINE TOOLS

Turning Practice:

Preparing a model involving the turning operations like Facing, Countersinking, Plain Turning, Step Turning, forming turning (Convex & Concave), Chamfering, Taper turning by swivelling of compound rest method, Thread cutting (V-Thread), Knurling.	**10 Hours**

Shaping & Milling operations

i. One model prepared on shaper containing V-groove /dovetail/ rectangular groove ii. Spur gear teeth cutting on Horizontal milling machine.	**06 Hours**

PART B: MEASUREMENTS

1. Calibration of Pressure Gauge and Load Cell 2. Calibration of Thermocouple 3. Calibration of LVDT 4. Determination of modulus of elasticity of mild steel specimen using strain gauges 5. Measurements using Profile Projector 6. Measurements of angle using Sine bar 7. Measurements of cutting tool forces using Lathe Tool Dynamometer 8. Measurements of gear tooth profile using gear tooth Vernier. 9. Calibration of micrometre using slip gauges 10. Measurement of the flatness using Optical Flats	**10 Hours**

Course Outcomes: After undergoing this course student will be able to

CO1	Impart the shape and size on the work piece as required by the engineering drawing using various machining operations.
CO2	Calibrate measuring instruments and to measure the physical variables such as pressure, weight, temperature, and displacement.
CO3	Determine the modulus of elasticity using strain gauges. Able to determine the cutting tool forces and surface roughness.
CO4	Use various machine tools and measuring instruments.

POs mapping with the COs:

The Course Outcomes of the course Engineering Materials helps to the achievement of the Programme Outcomes as summarized in the following Table.

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3								2			2	3	2	2
CO2	3							2	3			2	3	2	2
CO3	3				3			2	3			3	3	2	2
CO4	3							2	3			2	3	2	2

3-Strong, 2-Medium, 1-Low

SCHEME OF EXAMINATION:

ONE question from Machine tools (Part-A):	25Marks
ONE question from Measurements (Part-B):	15Marks
Viva–Voce:	10Marks
	Total:50

CONSTITUTION OF INDIA AND PROFESSIONAL ETHICS		Course Code: **NSH03**	
Contact Hours/ Week	: 2 (T)	Credits	: 1.0
Total Lecture Hours	: 0	CIE Marks	: 50
Total Tutorial Hours	: 26	SEE Marks	: 50

Course Objectives:

- To introduce the students to the basic structure, fundamental rights and duties enshrined in the constitution of India.
- To introduce to the system of governance at the centre and the states.
- To enlighten the students about the method of amendment to the constitution and special provisions of constitution.
- To enable the students to imbibe ethical practices and moral values.
- To learn from the life story of leaders such as Sir M Visvesvaraya.

Part I: Constitution of India

Unit 1: Introduction to Constitution of India

Salient Features of Indian Constitution, Preamble to the Indian Constitution, Different kinds of fundamental rights, Directive Principles of State Policy, Categorical study of Directive Principles, Relationship between DPSP and Fundamental Rights, Fundamental Duties. Meaning and kinds of human rights and safeguards. **06 Hrs.**

Unit 2: Union and State Governments

Union and State Legislature: Composition and powers of Loksabha, Rajyasabha, Legislative Assembly and Legislative Council. Union and State Executive: The appointment and powers of President, Vice-president, Prime-Minister, Union Council of Ministers, Governor of State, Chief Minister of State and State Council of Ministers. Union and State Judiciary: The Composition and powers of Supreme Court and High Court. **07 Hrs.**

Unit 3: Other Provisions of Constitution

Method of amendment of constitution of India, 42nd and 44th amendment act. Special provisions relating to SC / ST, Women and Children and other backward classes. Electoral process related to the Election Commission of India: Composition, functioning and removal of the Election Commissioner(s).
Human Rights: Meaning, Kinds and Safeguard of Human Rights, State Human Rights Commission and National Human Rights Commission.

05 Hrs.

Part II -Professional Ethics

Unit 4: Professional Ethics and Human Values

Introduction, What is Ethics? Scope of Professional Ethics, Values and Characteristics, Types of values: Negative and positive values, Ethical values for Professional success. ***Case Studies*:** Ethical practices of the reputed Indian Companies: TATA Group, Wipro Technologies. **4 Hrs.**

Unit 5: Professional Code of Conduct

Introduction, Professional Code, Legal System, Ethical and Unethical practices, Making the Professional Code successful. Ethical values of Sir M. Visvesvaraya, Mahatma Gandhi and Swami Vivekananda. **4 Hrs.**

Course Outcomes: On successful completion of the course, the student will be able to:

CO1: Explain the salient features of the Indian Constitution with special emphasis on fundamental rights and duties.

CO2: Describe the Union and State legislature, executive and judiciary.

CO3: Explain the importance of electoral process and help students to follow the ethical practices in elections.

CO4: Demonstrate a clear perspective of the Ethical values and their relevance in the present context of globalization.

CO5: Practice the ethical values proposed and practiced by the great leaders/eminent personalities with particular reference to Sir M. Visvesvaraya.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration

SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

Course Title:	**Advanced Technical Training Lab In Python**		
Course Code	**N4CCA02**		
Contact Hours/Week	0+0+3	Credits	1.0
Total Lecture Hours	0	CIE Marks	50
Total Practical Hours	36	SEE Marks	50

Course Learning Objectives (CLOs):

1. Build the logic for a given problem statement by using algorithms using fundamental concepts ofthe Programming Language Python such as conditional statements, looping constructs, division, mod operations and string manipulation.
2. Implement the Data Structures such as Arrays, Dictionary, Queues, Lists, and Tuples using Python Programming language.
3. Implement File operations such as opening, reading, writing and closing.
4. Understanding the OOPS concepts such as classes, Objects, Inheritance & Polymorphism

Course Outcomes (COs):

Upon successful completion of this course, the student should be able to:

CO1 Design and develop solutions for particular programming problems using the fundamentalconcepts of Python Programming.
CO2 Implement different data structures like Arrays, Dictionary, Queues, Lists and Tuples.
CO3 Implement File operation like Open, close reading & writing the file
CO4 Understand the Object Oriented Concepts like Classes, Objects, Inheritance and Polymorphism

#	***Modules Covered***	***Duration in hrs.***	
1	Fundamentals of Python Programming, IO & Operators	04	
2	Control Statements, Decision Making, Iterations	06	
3	String & String Manipulations	02	
4	Data Structures	14	
5	Functions	02	
6	Fie Operations	02	
7	Python OOPs Concepts	06	
8	Total Course Duration	16 Hrs. Lecture	20 Hrs Practice

CIE: 50 Marks

- Students are accessed every class for 35 marks.
- Evaluation includes Problem Analysis, Program Writing and Executing Programs in the Lab(10 + 15+ 10).
- Two tests are conducted for 15 marks each.
- Marks distribution (50 Marks) =
  Average of Class Assessments (35 Marks) + Average of two tests (15 Marks)

SEE: 50 Marks

- There are 20 programs in the list divided into two parts A & B, students have to pick oneprogram each from the Part A & Part B
- Both the parts carry equal weightage.
- The evaluation includes Program Write-up + Analysis + Program Execution + Viva(10 + 10 + 20 + 10 = 50 Marks)
- Change of the experiment is allowed only once in the first half an hour of the exam and in suchcases the evaluation will be done for 80% of the Marks

Content

1. Introduction to Programming
   a. History
   b. Features
   c. Setting up Path
   d. Compilation
   e. Data types
   f. Variables

2. Working with IO & Operators
   a. Declaration, Input – Output
   b. Arithmetic Operator
   c. Relational Operators
   d. Assignment Operators
   e. Logical Operators
   f. Membership Operators
   g. Identity Operators
   h. Bitwise Operators
   i. Multi- line Statements
   j. Comment Line

3. Decision Making
   a. Need of Decision Making and Syntax
   b. If
   c. If-else
   d. Nested if
   e. If-else if

4. Iterations
   a. For Loop
   b. While Loop
   c. Nested Loops

5. Control Statements
   a. Break
   b. Continue
   c. Pass

6. String
   a. Creating a String
   b. Memory Allocation
   c. Built Functions in String

7. List
   a. Creating List
   b. Accessing Elements in List
   c. Negative Accessing Elements in List
   d. Slicing in List
   e. Built Functions in List

8. Tuple
   a. Creating Tuples
   b. Immutable
   c. Accessing values in Tuple
   d. Slicing in Tuple
   e. Built Functions in List

9. Dictionary
   a. Creating a Dictionary with Integer Key, Mixed Key, dict(), Pair element, nested Dictionary.
   b. Adding Element to Dictionary
   c. Accessing Element in Dictionary
   d. Built Functions in Dictionary

10. Set
   a. Creating a Set and Built Functions in Set

11. Function
   a. Syntax of Function
   b. With Argument With return type.
   c. With Argument without return type
   d. Without Argument with return type
   e. Without Argument without return type
   f. Predefined, User defined, Anonymous Functions
   e. Scope of variables.

12. File Operations
   a. Open & Close File
   b. Read & Write operations

13. Python OOPs Concepts
   a. Classes & Objects
   b. Inheritance
   c. Encapsulation
   d. Polymorphism
      i. Method Overloading
      ii. Method Over Riding
   e. Data Abstraction
   f. Methods

SYLLABUS

OF

V & VI semesters

B.E. MECHANICAL ENGINEERING

2022-23

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMKUR-3

DEPARTMENT OF MECHANICAL ENGINEERING

SCHEME OF TEACHING AND EXAMINATION

FOR STUDENTS ADMITTED DURING ACADEMIC YEAR 2018-19 AND ONWARDS (175 Credits Scheme)

V Semester B.E.

Sl. No	Course	Sub. Code	Title	Teaching Dept.	Teaching hours/Week			Examination				Credits
					L	T	P	Duration Hrs.	CIE Marks	SEE Marks	Total Marks	
1	HSS	HSS06	Management & Entrepreneurship	HSS	3	--	--	3	50	50	100	3.0
2	PC	5RME01	Design of Machine Elements-I	ME	4	1	--	3	50	50	100	4.5
3	PC	5RME02	Turbo Machinery	ME	3	1	--	3	50	50	100	3.5
4	PC	5RME03	Finite Element Methods	ME	4	0	--	3	50	50	100	4.0
5	PE	5RMEEXX	Professional Elective-1	ME	3	0	--	3	50	50	100	3.0
6	OE	OEXX	Open Elective-1	ME	3	--	--	3	50	50	100	3.0
7	PCL	5RMEL1	Machine shop practice	ME	--	--	2	3	50	50	100	1.0
8	PCL	5RMEL2	Fluid Mechanics & Machinery Lab	ME	-	--	2	3	50	50	100	1.0
9		5MESL1	Advanced Technical Training Lab	T & P	-	--	2	3	50	50	100	1.0
10	NCMC	HSS08	Soft Skills	T & P	36 Hours / Sem			CE	--	100	100	0
11	Project	5RMEP1	Mini project Phase I	ME	--	--	2	--	--	--	--	0.0
12		AICTEAP	AICTE Activity Points	Respective Dept.	Minimum 50 Hrs/Semester							--
				Total	20	02	08		450	550	1000	24.0

Mini project: Batch formation, Guide allotment and Identification of topic for Mini-project have to be done during the 5th semester.
Lateral entry students will study Mathematics IV – "Statistics and Probability (4RMAT3)" for 4 credits in addition to the above subjects.
OD: Offering Department; **NCMC :** Non Credit Mandatory Course; **CE**: Contniuous Evaluation

Professional Elective - 1			
5RMEE11	CAD/CAM & CIM	5RMEE13	Fundamentals of Automobile Design (TATA Technologies)
5RMEE12	Non-Destructive Testing	5RMEE14	Metal Forming processes

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMKUR-3

DEPARTMENT OF MECHANICAL ENGINEERING

SCHEME OF TEACHING AND EXAMINATION

FOR STUDENTS ADMITTED DURING ACADEMIC YEAR 2018-19 AND ONWARDS (175 Credits Scheme)

VI Semester B.E.

Sl. No	Course	Sub. Code	Title	Teaching Dept.	Teaching hours/Week			Examination				Credits
					L	T	P	Duration (Hrs.)	CIE Marks	SEE Marks	Total Marks	
1	HSS	HSS07C	Project Management	HSS	3	--	--	3	50	50	100	3.0
2	PC	6RME01	Design of Machine	ME	4	2	--	3	50	50	100	5.0

9	VAC	ARAS	Aptitude Related Analytical Skills	T & P	36 Hrs. / Semester			1.5	50	50	100	1.0
10		AICTEAP	AICTE Activity Points	Respective Dept.	Minimum 50 Hrs/Semester							
				Total	17	02	06		450	450	900	24.0

VAC: Value Added Course; Mini Project to be completed in during the 6th sem.

Note: Students Who have selected Fundamentals of Automobile Design (TATA Technologies) as Professional Elective in 5th Sem should take Advanced Automobile Design (TATA Technologies) as Professional Elective compulsory in 6th sem.

Professional Elective-2		
1	6RMEE21	Total Quality Management
2	6RMEE22	Gas Dynamics
3	6RMEE23	Theory of IC Engines
4	6RMEE24	Experimental Stress Analysis
5	6RMEE25	Advanced Automobile Design (TATA Technologies)

MANAGEMENT AND ENTREPRENEURSHIP

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	HSS06			

Course Objectives: This course will enable students to:

1. To make students to understand the principles and functions of management.
2. To enable students to analyze the importance of staffing, leading and controlling organization.
3. To make students to understand and manage engineering design and quality.
4. To inculcate entrepreneurial qualities and enable them to understand the need of rural entrepreneurship.
5. Enable the students to acquire knowledge about funding agencies, understand procedure in applying for funds and analyze the case studies of successful entrepreneurs.

Unit I	
Introduction to Management: Definition of management, management skills, productivity and effectiveness, efficiency, functions and principles of management. **Planning:** Nature of planning, types of plans- purpose of vision, mission, goals, objectives strategies, policies; steps in planning, MBO. **Organizing:** Formal and informal organization, span of management, the structure andProcess of organizing Organizational structure: line and staff organization, Functional organization, matrix and organization.	**08 Hours**
Unit II	
Staffing: Definition, system approach to HRM, factors affecting staffing, recruitment and selection, job design, skill and characteristics of a manager, selection process and technique. **Leading:** Human factors in managing, motivation, Theory X and Y, the hierarchy of needs theory, leadership behavior and styles. **Controlling:** Basic control process, critical control points and standards, requirement and effective control.	**09 Hours**
Unit III	

Managing Engineering Design and Development: Product and Technology Life Cycles, Nature of Research and development, Research Strategy and organization, Nature of Engineering Design, Systems Engineering / New Product Development. **Managing Production Operations:** Types of production processes, Measures of productivity and indices. Productivity, Work measurement, Maintenance and Facilities (Plant) engineering, quality management and quality assurance. **Engineers in Marketing and service activities:** Marketing and the Engineer, Engineers in Service organizations.	**08 Hours**
Unit IV	
Entrepreneur & Entrepreneurship: Introduction, concept of Entrepreneur, characteristics of an entrepreneur, and qualities of an entrepreneur, functions of an entrepreneur, characteristics of entrepreneurship, factors affecting entrepreneurial growth. Entrepreneurship and economic development- rural, woman and social entrepreneurship **Financing and Institutional Support for Entrepreneurship:** Startups, business plans, venture capitalists, angel investors, funding agencies – commercial banks, development banks, NBFCS and incubation centers. Innovations and project trends.	**08 Hours**
Unit V	
Taxation benefits: Depreciation allowances, rehabilitation allowance, investment allowance and other tax concession benefits to an entrepreneur. **2 Case Studies from Stay Hungry and Stay Foolish – Rashmi Bansal, IIM Ahmedabad:** 1. Success story of naukri.com by Sanjeev Bikhchandani 2. Success story of Make My Trip by Deep Kalra	**06 Hours**

TEXT BOOKS:

1.	Harold Koontz, Heinz Weihrich	Essentials of Management, McGraw Hill Education, 14th Edition, 6th reprint, 2017.
2.	Lucy C. Morse	Managing Engineering and Technology, Pearson Education, 6th Edition, 2015.
3.	S S Khanka	Entrepreneurial Development, S. Chand Publishing, 10th Edition, 2008.

REFERENCE BOOKS:

1.	James A. F. Stoner, R. Edward Freeman, Daniel R. Gilbert	Management, Pearson Education, 6th Edition, 2018.
2.	Rashmi Bansal, Stay Hungry Stay Foolish	IIM Ahmedabad, 1st edition, 2008.
3.	Rashmi Bansal	Connect the Dots, Bushfire Publishers, 1st Edition, 2019.

Course Outcomes: After the completion of this course, student will be able to:

1. Explain various functions of management (L2).Evaluate a contour integral using Cauchy's integral formula. Compute singularities and also the residues.
2. Apply the knowledge of management principles and strategies in various functional areas. (L3).
3. Able to manage engineering design and product development (L3).
4. Able to describe entrepreneurship, its characteristics, and benefits and identify various funding sources for starting a business venture (L3).
5. Explain various taxation benefits enjoyed by an entrepreneur and analyze the characteristics and strategies adopted by successful entrepreneurs. (L2 & L4).

SCHEME END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

DESIGN OF MACHINE ELEMENTS–I

Contact Hours/Week	:	4+1+0 (L+T+P)	Credits	:	4.5
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	13	SEE Marks	:	50
Course Code	:	5RME01			

Course Objectives:

1. To introduce the students to apply knowledge of Strength of Materials, Kinematics and Dynamics of Machinery, Machine drawing courses to design machine elements.
2. To demonstrate how engineering design uses the many principles learned in previous engineering science courses and to show how these principles are practically applied.
3. To develop an ability to design a system, component, or process to meet desired needs within realistic constraints.
4. The emphasis in this course is on machine design: the design and creation of devices that consist of interrelated components used to modify force and/or motion.
5. The type of design addressed in this course is that of detailed design, which is to define the shape, size and material of a particular machine element such that it will not fail under the expected load and operating conditions.

Unit I	
Introduction: Design procedure; types of design; Selection of materials; codes and standards. **Design for Static Strength:** Static loads, Factor of safety Stress concentration, determination of stress concentration factor. Fatigue strength, S-N diagram, endurance limit, modifying factors, Goodman's and Soderberg's relationships, combined variable stresses.	**12+3 Hours**
Unit II	
Theories of failure; Maximum normal stress theory, Maximum shear stress theory, Distortion energy theory with problems. **Impact load:** Introduction; Impact stresses due to axial, bending and Torsional loads with and without the effect of inertia.	**10+3 Hours**
Unit III	

Design of Shafts: Shafts subjected to bending and torsion; design for strength and rigidity with steady loading, ASME and BIS codes used in designing for transmission shafts subjected to fluctuating and combined loads; Couplings: Flange and Flexible couplings.	**10+3 Hours**
Unit IV	
Riveted and Welded joints: Types of Riveted joints; failure of riveted joints, efficiency, boiler joints and structural joints, eccentric loading. **Welded joints:** Types, Strength of butt and fillet welds, **eccentric loading.**	**10+2 Hours**
Unit V	
Threaded Fasteners and Power screws: Stresses in threaded fasteners; Mechanics of power screws; Efficiency and self-locking. Design of power screws; design of screw jack (complete design)	**10+2 Hours**

Design Data Handbooks:

1.	Dr. K. Lingaiah	Design Data Handbooks, Vol. I and Vol. II, Suma Publishers, Bengaluru
2.	K. Mahadevan and Balaveera Reddy	Design Data Handbook ,CBS publication.
3.	Prof.H.G.Patil	Machine Design Data Hand Book, Sri Shashi Prakashan,Belgaum

TEXT BOOKS:

1.	Joseph E Shigley and Charles R. Mischke	Mechanical Engineering Design, Hill International Edition, 6th edition 2003
2.	V.L.Maleev and J.B.Hartman	Machine Design CBS Publishers & Distribution
3	Robert .L.Norton	Machine Design, Pearson Education Asia,New Delhi 2001.

REFERENCE BOOKS:

1.	V.B. Bhandari	Design of Machine Elements, Tata Mcgraw Hill Publishing company Ltd. New Delhi, 2nd edition 2007
2.	Hall, Holowenko and Laughlia	Machine Design, Schaum's Outline series adapted by S.K. Somani Tata Mcgraw Hill Publishing company Ltd. New Delhi, Special Indian Edition 2008.
3.	Maleev and Hartman	Design of Machine Elements, Ed 4, New Delhi. McGraw Hill

Course Outcomes: After attending this course student will be able to;

1. Explain design process, select material and adopt design codes and standards to determine stresses induced in machine elements considering stress concentration, factor of safety and endurance limit.
2. Design machine elements using theories of failure and to determine impact stresses.
3. Design shafts for power transmission subjected to combined loading.
4. Design and analyze riveted and welded joints.
5. Design and analyze power screws for mechanical applications.

SCHEME OF EXAMINATION:

There are 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

TURBO MACHINERY

Contact Hours/Week	:	3+1+0 (L+T+P)	Credits	:	3.5
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	13	SEE Marks	:	50
Course Code	:	5RME02			

Course Objectives: This course will enable students to:

1. Student should be able to understand different positive displacement machines like Pelton wheel, Francis and Kaplan turbines operation and applications.
2. Learn energy transfer in Turbo machines, velocity triangles and Euler turbine equation.
3. Learn energy transfer in power absorbing machines, velocity triangles and relation between utilization factor and degree of reaction.
4. Learn Steam turbine velocity triangles, Compounding, degree of reaction, Utilization factor.
5. Learn general analysis of Centrifugal compressor and Pumps, Concept of Axial compressor and Pumps.

Unit I	
Introduction: Definition of a turbo machine, Parts of a Turbo machine, Comparison with positive displacement machine; Classification of hydraulic turbines, discussions on various efficiencies of Pelton wheel, Francis turbines and Kaplan turbines. Specific speed of turbine. UNIT quantities. Problems concerned to these turbines (Numericals).	**08+3 Hours**
Unit II	
Energy Transfer in power producing machines: Euler Turbine equation; Alternate form of Euler turbine equation -components of energy transfer; Degree of reaction; Effect of blade discharge angle on energy transfer and degree of reaction; velocity triangles for different values of degree of reaction; Utilization factor; Vane efficiency; Relation between utilization factor and degree of reaction; condition for maximum utilization factor - optimum blade speed ratio for different types of turbines(Numericals).	**08+3 Hours**

Unit III	
Energy Transfer in Power absorbing machines: components of energy transfer; Degree of reaction; velocity triangles for different values of degree of reaction; Utilization factor; Vane efficiency; Relation between utilization factor and degree of reaction; General analysis of centrifugal and axial flow compressors. Effect of blade discharge angle on the performance. Theoretical head capacity relationship. Concept of centrifugal pumps and compressors. Concepts of axial flow compressors and pumps (Numericals).	**08+3 Hours**
Unit IV	
Steam and Gas Turbines: Impulse Staging and need for compounding; Velocity and pressure compounding- condition for maximum utilization factor for multi stage turbine with equiangular blades; Condition for maximum blade efficiency, stage efficiency. Effects of Blade and Nozzle losses; Reaction staging; Reheat factor in turbine. (Numerical examples)	**07+2 Hours**
Unit V	
Centrifugal Compressors and Pumps: Centrifugal Compressors- Classification; Expression for overall pressure ratio developed; Blade angles at impeller eye root and eye tip; Slip factor and power input factor; Width of the impeller channel; Compressibility effects-need for pre-whirl vanes; Diffuser design, Flow in the diffuser passage, determination of diffuser inlet vane angle, width and length of the diffuser passages; Surging of centrifugal compressors; Centrifugal Pumps, definition of terms used in the design of centrifugal pumps like manometric head, suction head, delivery head, manometric efficiency, hydraulic efficiency, volumetric efficiency, overall efficiency, multistage centrifugal pumps design procedure. Definitions and problems concerned to UNIT speed, UNIT head and UNIT discharge (Numericals).	**08+2 Hours**

TEXT BOOKS:

1.	V.Kadambi and Manohar Prasad	An Introduction to energy conversion, Volume III- Turbo machinery, , Wiley Eastern Ltd. (1977)
2.	S.M. Yahya	Turbines, Compressors & Fans, Tata-McGraw Hill Co., 2nd Edition (2002)

REFERENCE BOOKS:

1.	D. G. Shepherd	Principles of Turbo Machinery, The Macmillan Company (1964).
2.	V. Ganesan	Gas Turbines, Tata McGraw-Hill Company Limited, 2nd Edition (2002).

Course Outcomes: After attending this course student will be able to;

1. **Analyze** different types of turbomachines with their working principle and classification. **Solve** problems on performance **analysis** with the help of concepts of specific speed and unit quantities
2. **Derive** Euler's turbine equation and **Solve** numericals on power producing machines by **applying** basic principles of turbomachinery.
3. **Distinguish** the alternative forms of Euler's equation to **Solve** numericals on power absorbing machine by **applying** basic principles of turbomachinery.
4. **Distinguish** the working principles of impulse and reaction steam turbines and solve numerical problems with factors affecting turbine efficiency.
5. **Analyse** the performance of centrifugal pumps and compressors to compare the performance of rotary and reciprocating machines.

SCHEME OF EXAMINATION:

There are 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

FINITE ELEMENT METHODS

Contact Hours/Week	:	4+0+0 (L+T+P)	Credits	:	4.0
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	5RME03			

Course Objective :

1. To equip the students with the Finite Element Analysis fundamentals.
2. To enable the students to formulate the design problems into FEA.
3. Possess a good understanding of the theoretical basis of the weighted residual Finite Element Method.
4. To develop proficiency in the application of the finite element method (modeling, analysis, and interpretation of results) to realistic engineering problems through the use of a major commercial general-purpose finite element code
5. Analyze a physical problem; develop experimental procedures for accurately investigating the problem.

Unit I	
Introduction to FEA: Introduction to Numerical Methods, Equilibrium equations in elasticity subjected to body force, traction forces. Stress-strain relations for 1D, 2D, and 3D cases. Plane stress and plane strain condition. Strain-displacement relations in 2-D and 3-D. Definition of von-Mises stress. Introduction to FEM, applications and limitations. FE Library and Structure of a FE packages, Preprocessor – Solver - Post processor.	**10 Hours**
Unit II	
One Dimensional FEM: Finite Element Modelling, Nodal degrees of freedom, Local and Global coordinate systems, Shape functions - Lagrangian polynomial. Formulation of a linear bar element using principle of minimum potential energy. Boundary conditions-elimination method and penalty method. Temperature effects linear bar element. Formulation of quadratic bar element.	**12 Hours**
Unit III	
Trusses and Beams:–Formulation plane trusses element, Stiffness matrix, Problems on point load, Formulation beam element Hermite shape functions for beam element and stiffness matrix. Problems on beams carrying concentrated and UDL loads.	**10 Hours**

Unit IV	
Two dimensional FEA: Formulation of triangular and quadrilateral elements. Shape functions for higher order triangular and quadrilateral elements, Iso parametric – sub parametric – super parametric elements, Convergence criteria, pascal triangle. Introduction to 3-D elements	**10 Hours**
Unit V	
Dynamic considerations, steady state heat transfer: Application of Dynamic analysis, formulation, element mass matrices for 1-D element, truss element, CST element, computation of eigen values and eigen vectors. Problems on stepped bar. One-dimensional steady state heat conduction, thermal boundary conditions and problems on composite wall.	**10 Hours**

TEXT BOOKS:

1.	Chandrupatla and Belegundu	Introduction to Finite elements in Engineering, Pearson education, 2002, **ISBN**-13: 9780130615916
2.	Daryl .L.Logan	A First Course in Finite Element methods, Thomson Learning 3rd Ed., 2001, ISBN-13: 978-0-495-66825-1

REFERENCE BOOKS:

1.	S.S.Rao	The Finite Elements Method in Engineering, Fourth Edition, 2005, **ISBN**: 0750678283
2.	Hutton	Fundamentals of Finite Element method, Mc Graw Hill, 2004, **ISBN**: 0071122311, 9780071122313
3.	J.N.Reddy	Finite Element Method , Tata Mc Graw Hill edition 2002, **ISBN**:0070607419, 9780070607415
4.	Robert Cook et.al	Concepts and application of FEA, John wiley and sons, 2002, **ISBN**: 978-0-471-35605

Course Outcomes: After attending this course student will be able to:

1. Analyze the problems of Solid Mechanics using Galerkin's and Rayleigh Ritz method.
2. Formulation of characteristic equations to solve one-dimensional linear and quadratic bar element by applying the knowledge of mathematics.

3. Finite element formulation of truss and beam element to determine displacement, stress and reaction forces for safe design of structures.
4. Finite element formulation of triangular and quadrilateral elements to find the field variables.
5. Apply finite element method to analyze linear vibration systems and one dimensional heat transfer problems.

SCHEME OF EXAMINATION:

End Semester – There are 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

CAD/CAM & CIM

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	5RMEE11			

Course Objectives: To gain the knowledge of engineering design and manufacturing with automation. The process of CAD and CAM gives the advanced process of design and manufacturing by taking the assistance of computer. The students are well exposed to the present required knowledge of design and manufacturing. Automation process is very important with respect to the present advanced technology in manufacturing. The students will get the knowledge of high volume and quality production, with assembly line balancing and computerized manufacturing planning system. Also the knowledge of computer aided quality control and shop floor control will help the students to compete with the present technology.

Unit I	
Computer Aided Design: Definition of CAD/CAM, product life cycle, Introduction to CAD and CAM. Advantages and disadvantages of CAD and CAM. Basic Hardware structure, input and output devices. **Software configuration of a graphic system:** functions of graphics package, construction of geometry, wire frame and solid modeling, 2D transformations. Introduction to exchange of modeling data -Basic features of IGES, STEP, DXF, and DMIS.	**08 Hours**
Unit II	
Computer Aided Manufacturing: NC elements, Study of NC, CNC and DNC. Overview of different CNC machining centers, CNC turning centers, High-speed machine tools, Machine control unit. Turning tool geometry, milling tooling system, tool presetting, ATC, work holding devices. **CNC Programming:** Steps involved in development of a part program. Manual part programming for turning, drilling, milling operations	**08 Hours**
Unit III	
Automation: Definition, types of automation, Manufacturing model, Reasons for automating an industry, Organization and information process in manufacturing, Types of plant layouts.	

High Volume Production System: Introduction, Production concepts, Mathematical Models, Production economics, break even analysis, Unit cost of production, Automated flow lines, work part Transport, Transfer Mechanism and Buffer Storage.	**08 Hours**
Unit IV	
Analysis of Automated Flow lines and Line Balancing: Analysis of Transfer Lines without storage and with storage, Partial Automation, Methods of Line balancing with examples, Computerized Line Balancing. **Automated Assembly System**: Types, Parts feeding Devices, Automated Material handling System, Automated guided vehicle system.	**08 Hours**
Unit V	
Computerized Manufacturing Planning System: Computer Aided Process Planning: retrieval and generative type, Material Requirement Planning, Capacity Planning, Group technology. **Shop Floor Control & Computer Aided Quality Control:** Factory data Collection System, Automatic identification system. Contact and Non Contact inspection methods, Co-ordinate measuring machine	**07 Hours**

TEXT BOOKS:

1.	P .N. Rao	A text book on CAD/CAM Principles and Application by P .N. Rao, Tata McGraw Hill.2018. ISBN: 0-07-058373-0
2.	Groover	A text book on CAD/CAM by Groover, Tata McGraw Hill.2018. ISBN: 978-81-775-8416-5
3.	MP Groover	A text book on Automation and production systems by MP Groover, Prantice Hall of India, 2018. ISBN: 978-81-203-2418-2

SCHEME OF EXAMINATION:

End Semester – There are 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

NON-DESTRUCTIVE TESTING

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	5RMEE12			

Course Objectives: From this course student will learn:

1. NDT methods are used to detect both the internal and surface Cracks / flaws present in any Material/Component in Machinery.
2. To asses the size of the defects in any manufactured part/component.
3. To detect the leaks in the fluid pipelines.

Unit I	
Introduction: Need for Inspection, Types of inspection Techniques, Benefits of Non-destructive examination, selection of NDT methods, Reliability in NDT. **Visual Examination:** Defects in Materials, Basic Principles, Defects detected by unaided eye, optical aids used for visual inspection	**07 Hours**
Unit II	
Liquid Dye Penetrant Inspection (LPI): Introduction, Principles, Characteristics of penetrants, Inspection Procedure, Penetrant testing materials and methods, Applications and Limitations. **Magnetic Particle Inspection (MPI):** Basic definitions and principles, Magnetization methods, Procedure, continuous and residual methods, sensitivities, demagnetization, Magnetic Particles, Applications, Advantages and Limitations. **Eddy Current Testing (ECT):** Introduction and principles, Instrumentation for ECT, Techniques of ECT, sensitivity, Applications and Limitations	**08 Hours**
Unit III	
Radiography: Introduction, Uses and limitations of radiography, Basic Principles, Electromagnetic Radiation Sources, Production of X-rays, **X-ray** Spectra-radiation sources, Attenuation of radiation, Effect of radiation in the film, Radiographic imaging, Inspection Techniques (Single wall single image**,**	

Double wall penetration, latitude and special) Applications, Viewing and interpretation of radiographs, Radiation hazard, Protection against radiation.	**08 Hours**
Unit IV	
Ultrasonic Testing (UT): Introduction, Nature of sound, Wave velocity & length, Generation of Ultra sound, Characteristics of Ultrasonic Beam, Sound waves at Interfaces, Sound attenuation, display systems, Types of Display, Inspection methods, Defect identification, Immersion testing, sensitivity, surface condition and some applications.	**08 Hours**
Unit V	
Other NDT Methods: Insitu-Metallographic Examination, Replication process, Applications. Accoustic Emission Testing (AET), Instrumentation, Applications. Leak testing, Bubble testing, Helium Leak detector. Principle of Neutron radiography and Laser induced ultrasonics, Applications. Principle of Thermography, Direct method – Heat sensitive paints, Applications	**08 Hours**

TEXT BOOKS:

1.	Barry Hull and Veron John	Non-Destructive Testing – ELBS Edition 1989.
2.	American society of Metals	Metals hand book- for non-destructive evaluation & quality control, V 01-17, 9U1 Edition,. 2001.
3.	Handbooks of American Society	Non destructive testing.2002.

REFERENCE BOOKS:

1.	Baldev Raj, T. Jayakumar and M. Thavasimuthu	– Practical Non Destructive Testing, Narosa Publishers.
2.	J. Prasad and C. G. Krishnadas Nair	–Non-Destructive test and Evaluation of Materials, Tata Mc Graw Hill, 2008

3.	H.K Hajara Choudhary	Workshop Technology, Vol-1, H.K Hajara Choudhary,12th Edition, MPP
4.	O.P Khanna	Workshop Technology, O.P Khanna, Dhanpat rai publications-2001.
5.	K Radhakrishna	Manufacturing Process-1, K Radhakrishna,Sapana.

Course Outcomes: After attending this course student will be able to;

1. Apply the Knowledge of various NDT inspection methods with specific applications.
2. Make use of Liquid Dye Penetrate Inspection (LPI) Magnetic Particle Inspection (MPI) Eddy Current Testing (ECT) techniques for Inspection of defective components.
3. Identify the technique of Radiography method of NDT for the testing, analysis and evaluation of the defects in the components.
4. Experiment with the technique of Ultrasonic method of NDT for the analysis and evaluation of the defects in the components.
5. Utilize the In-situ, Accoustic, Helium Leak test and bubble test to achieve realistic anyalysis rather than mere testing for defects with conventional NDT Methods.

SCHEME OF EXAMINATION:

There are 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

FUNDAMENTALS OF AUTOMOBILE DESIGN (READY ENGINEER BY TATA TECHNOLOGIES)

Contact Hours/Week	:	2+0+2 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	5RMEE13			

Course Objectives:

1. Main intent of the course is to better equip young engineers with latest developments in application of advanced techniques in industrial applications.
2. CADA-1 demonstrates the integration of computer software techniques with engineering design and development of a component.
3. Computer Aided Engineering (CAE) covers the broad usage of computer software to aid in engineering analysis tasks.
4. To provide an insight about various testing methods such as NVH, Durability and Vehicle Crashworthiness employed for optimizing the design.
5. CADA-1 emphasizes the usage of dies and fixtures for the production of a component.

Unit I	
Automotive design and development cycle: Introduction to Design, what is "Good Design", good design examples of all time. What is industrial design? Where Industrial Design is used? Typical product Life cycle, Automotive Design process Design Process for Production release), Design Studio Process or Product Conceptualization process, Case study.	**06 Hours**
Unit II	
Introduction to sessions on styling, What are CAS(Computer Aided Styling) Surfaces or Digital Clay Models? Why CAS Surfaces? What are Class A Surfaes? Role of Class A Surface Engineer, Requirements for a surface to fulfill "Class A surface" Standards, Why Class A? Case Studies for Class A surfaces, Step by Step Process for Bonnet Class A surface Creation.	**08 Hours**

Unit III	
Design and development of Automotive Components Introduction to Body in White(BIW): Various types of BIW, Types of BIW sub systems, various aggregates of BIW. **Bonnet design Case Study:** Function of a bonnet, Inputs for the bonnet. Steps in Bonnet design-develop Hood Package Layout, Develop typical sections, Define Block Surfaces in 3D, Dynamic Clearance Surfaces in 3D and Hood Structural Members. CAE 1(Durability, Crash), Panel Detail Design, Define Body Assembly Process, CAE 2(Durability, Crash, Individual Panel level), Design Updating and Detailing prototypes, Design Updating and Production Release.	**09 Hours**
Unit IV	
Die Design: Introduction, Thermo-elastic stress-strain relations, thin circular disc, Long circular cylinder. Sheet metal parts and their operation like cutting, Non-cutting etc., Presses, Various elements used in die design. Function of each element explained with pictures, Different types of dies, Animations describing the working of dies, this session covers real life 3D examples of die design	**06 Hours**
Unit V	
Fixture Design: Define welding, Describe operations (Spot/Arc welding…), Explain what is meant by Body coordinates, Explain the 3-2-1 principle, Explain need for Fixture, Describe Design Consideration. Explain how to use product GD&T in the Fixture design, List the Fixture Elements. Describe typical operations in sheet metal Fixture (Manual/Pneumatic/Hydraulic fixture). Describe typical Unit Design for Sheet mental parts (Rest/Clamp/location/Slide/Dump units/base), Describe types of Fixture (Spot welding/Arc welding/Inspection Fixture/Gauges).	**10 Hours**

End Semester Exam:

Student should answer five questions out six: Question no.1 is compulsory and any four questions out of remaining 5 questions.

TEXT BOOKS:

1.	L. Morello, Lorenzo Rosti Rossini, Giuseppe Pia, Andrea Tonoli	The automotive body, Volume I : components Design, L. Morello, Lorenzo Rosti Rossini, Giuseppe Pia, Andrea Tonoli, Springer Science & Business Media, 2011, ISBN: 9400705131, 9789400705135
2.	L. Morello, Lorenzo Rosti Rossini, Giuseppe Pia, Andrea Tonoli	The automotive body, Volume II: Systems Design, L. Morello, Lorenzo Rosti Rossini, Giuseppe Pia, Andrea Tonoli, Springer Science & Business Media, 2011, ISBN: 9400705166, 9789400705166
3.	MP Groover	A text book on Automation and production systems by MP Groover, Prantice Hall of India, 2018. ISBN: 978-81-203-2418-2

Course Outcomes: After attending this course student will be able to;

1. **Apply** the concepts of conventional design to computer aided design and styling which includes the surfaces or digital clay models.
2. **Design** and **development** of automotive components.
3. **Apply** the concepts of NVH, Durability and Vehicle Crashworthiness. **Illustrate** the importance of Implicit and Explicit solvers for FEA.
4. **To study** the production cycle of sheet metal components. **Explain** the various sheet metal processes.
5. **To study** the design of dies and also the fixtures suitable for the manufacturing of parts.

SCHEME OF EXAMINATION:

Minimum passing is 30% each in lab and Theory.

But student has to score minimum 40% from both Lab and Theory to pass the subject.

METAL FORMING PROCESSES

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	5RMEE14			

Course Objectives :

1. Aims to provide additional information on several techniques of metal forming Processes.
2. Mechanical & Metallurgical factors involved in forming metals into useful shapes
3. Mathematical analysis of the principal metalworking process.
4. The requirements for the process selection will be added, which are based on advantages and disadvantages.
5. Forming of profiles: rolling, extrusion, strip profile rolling.
6. This involves more complicated process variables.

Unit I	
BASIC CONCEPTS IN METAL FORMING **INTRODUCTION AND CONCEPTS:** Classification of metal working processes, characteristics of wrought products, advantages and limitations of metal working processes. Concepts of true stress, true strain, yield criteria and their significance, Hot and Cold working processes and its effect on mechanical properties. **EFFECTS OF PARAMETERS:** Temperature in metal working, strain rate effects, friction and lubrication, workability of materials, Residual stresses in wrought products. **Forging:** Introduction to forging, classification of forging methods– Smith, drop, press forging, Forging Equipments, forging defects, forging analysis in open die by slab method, numerical.	**08 Hours**
Unit II	
Rolling: Introduction, Classifications, Types of rolling mills, hot and cold rolling, Rolling forces, Analysis of rolling pressure and rolling load, defects in rolled products, simple numerical	**07 Hours**
Unit III	
Extrusion: Types of extrusion processes, extrusion equipment & dies, deformation, lubrication & defects in extrusion. Extrusion dies, extrusion of seamless tubes. Extrusion variables. Simple problems **Drawing:** Rod and wire drawing equipments, analysis of wire drawing	

tube drawing process, Defects in drawn products.	**08 Hours**
Unit IV	
Sheet metal Forming: Introduction, Sheet metal forming methods- Shearing and Blanking, Bending and contouring, Progressive forming, Rubber forming, Stretch forming, Spinning, Embossing and coining. Dies – Progressive, Compound, combination dies. Deep drawing, Re-drawing and methods, Limiting Drawing Ratio (LDR), Forming Limit Diagram, defects of drawn products.	**08 Hours**
Unit V	
High energy rate forming methods: principles, advantages and applications of Explosive forming, Electro hydraulic forms, Electromagnetic forming. **Powder Metallurgy:** Basic steps in Powder metallurgy brief description of methods of production of metal powders, conditioning and blending powders, compaction and sintering application of powder metallurgy components, advantages and limitations	**08 Hours**

TEXT BOOKS:

1.	George E. Dieter	Mechanical Metallurgy, by George E. Dieter, SI Metric Edition McGraw-Hill,2001.
2.	Serope Kalpakjian and Stevan R	Manufacturing Engineering and Technology by Serope Kalpakjian and Stevan R,Prentice-Hall, 2001.

REFERENCE BOOKS :

1.	Khanna O P and Lal.M	Text book on production Tech, Khanna publishers 2001.
2.	P. N Rao,	Manufacturing Technology Volume 1, 4th Edition, McGraw Hill (India) Pvt. Ltd. 2014.
3.	Hajra Chowdary	Workshop technology, volume 1 and volume 2

Course Outcomes: After attending this course student will be able to;

1. By studying this course the students will be able to get the knowledge of stress, strain and ability of metal to work.
2. Learn the forging operation, its total force requirement.
3. Know about wire drawing, extrusion and rolling process. Get the basics of high energy rate forming process.

SCHEME OF EXAMINATION:

There are 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

MACHINE SHOP PRACTICE

Contact Hours/Week	:	0+0+2 (L+T+P)	Credits	:	1.0
Total Lecture Hours	:		CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	5RMEL1			

Course Learning Objectives:

1. To familiarize with different machine tools.
2. To learn skills of metal removal by conventional & CNC machining.
3. To learn use of different measuring instruments.
4. To learn capabilities of different machine tools.
5. To learn ability to write NC program for machining.

Part - A	
a. Machining on lathe Two models to be machined with each model having any five combinations of following operations • Facing • Countersinking • Plain Turning • Step Turning • Forming (Convex & Concave) • Chamfering • Taper turning by swiveling of compound rest method & Tail stock off-set method • Thread cutting (V-Thread) • Knurling • Eccentric Turning (Demonstration) **b. Machining on Shaper & Miller** i. One model to be prepared on shaper containing V-groove /dovetail/ rectangular groove. ii. Spur gear teeth cutting on Horizontal milling machine.	
PART B	
CNC Part programming a) Turning models(Facing, Countersinking, Plain Turning, Step Turning, Forming (Convex & Concave), Chamfering, Thread cutting (V-Thread), Knurling) Model 1: - containing at least five of the above operations Model 2: - containing above of the above operations	

b) Milling Operation Model 1: - Horizontal Milling Gear cutting operation one model Model 2 - - Horizontal Milling profiling c) Drilling Operation Model 1: - Drilling holes in triangular pattern Model 2: - Drilling holes in circular pattern (maximum two circles)	

REFERENCE BOOKS:

1.	Hajra Choudhury, S.K Bose.	Workshop Technology (Vol2) by Hajra Choudhury, S.K Bose.
2.	R.K. Jain	Production Technology by R.K. Jain.
3.	Groover	CAD/CAM: Computer-Aided Design and Manufacturing By Groover.

Course Outcomes: After attending this course student will be able to;

1. Learn various Machine tools, Cutting tools and Tool materials, Machining conditions, Machining processes and Cutting conditions.
2. Learn the automation in Manufacturing, Off-line and on-line Programming for Machining simulation.
3. Prepare the various profiles on cylindrical samples using lathe Machines, Reactangular blocks using shaping machines and milling Machine.
4. Prepare the offline manual part programming using word address format (Funac) to prepare the simulation of machining

SCHEME OF EXAMINATION:

One question should be set from Part-A with any four/five different operations on lathe =25 marks
One question should be set from Part-B =15 marks
Viva Voce =10 marks

Total = 50 marks

FLUID MECHANICS & MACHINERY LABORATORY

Contact Hours/Week	:	0+0+2 (L+T+P)	Credits	:	1.0
Total Lecture Hours	:		CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	5RMEL2			

Course Learning Objectives:

1. Testing the fluid flow concept studied in the theory Fluid Mechanics and Turbo machines .
   Example: Impact of jet, minor losses & friction losses in pipes.
2. Practical experience in measurement of fluid flow Example: Venturimeter, 90^o V-notch.
3. To find the characteristics of Hydraulic machines like turbines and pump by conducting performance tests.

Part - A	
1. Determination of coefficient of friction of flow in a pipe. 2. Determination of minor losses in flow through pipes. 3. Determination of force developed by impact of jets on vanes i.) for 90^0 flat ii.) circular 4. Calibration of flow measuring devices i) Orifice plate ii) Venturi meter iii) V notch for 90^0	
PART B	
5. Performance testing of Turbines iv) Pelton wheel v) Francis Turbine vi) Kalpan Turbine 6. Performance testing of pumps vii) Single stage centrifugal pumps and Reciprocating pump	

Course Outcomes: In this course after conducting experiments individually and in groups students will be able to

1. Conduct experiment to **measure** and **calculate** the different types of losses of flow in a pipe.

2. **Determine** the hydraulic coefficients of various flow measuring devices and to **measure** discharge.
3. **Analyze** the performance and characteristic behaviour of hydraulic machines.

SCHEME OF EXAMINATION:

One question Part-A	=15 marks
One question Part-B	=25 marks
Viva Voce	=10 marks
Toatl	= 50 marks

SYLLABUS

OF

VI semester

B.E. MECHANICAL ENGINEERING

2022-23

PROJECT MANAGEMENT

(Common to Mechanical & IEM)

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	HSS07C			

Course Objectives:

With the concept of managing Big Projects under costs and time constraints, it is imperative, that people working in manufacturing/process/service industry have a very good understanding of the general and advanced concepts of Project Management. It is with this motivation that this course is designed, to meet the demand in the market from, UG students coming from a variety of fields, be it Engineering or Management.

This course will enable students to:

1. Explain the role, importance and Concepts of Project Management
2. Describe importance of Generation and Screening of Project Ideas
3. Apply Tools & Techniques of Project Management in handling projects.
4. Explain the importance of coordination, communication and scheduling and controlling of project management.
5. Explain how the Performance Measures are being carried out in Project Management

Unit I	
Concepts of Project Management: Concepts of a Project, Portfolio, Program, Categories of projects, Phases of project life cycle, Roles and responsibility of project leader, tools and techniques for project management Planning, Organizing and staffing the project team, Skills / abilities required for project manager, ten knowledge Areas, Authorities and responsibilities of project manager, Project organization and types, accountability in project execution, controls, tendering and selection of contractors.	**09 Hours**
Unit II	
Generation and Screening of Project Ideas: Generation of Ideas, Create WBS, Monitoring the Environment, Corporate Appraisal, Scouting for project ideas, Sources of positive net present value.Capital expenditures: Importance and difficulties, Phases of capital Budgeting, Levels of decision making, Facts of Project Analysis,	

Feasibility Study: A schematic diagram, Objectives of Capital Budgeting.	**07 Hours**
Unit III	
Market & Demand Analysis: Situational Analysis and Specifications of Objectives, Collection of Secondary Information, conduct of Market Survey, Characterization of the Market, Demand Forecasting, and MarketPlanning. Administrative aspects of capital investment. Tools & Techniques of Project Management: Bar (GANTT) chart, bar chart for combined activities, logic diagrams and networks, Critical path method (CPM) Project evaluation and review Techniques (PERT) Planning. (Numerical problems)	**08 Hours**
Unit IV	
Project Scheduling, co-ordination and control: Project implementation scheduling, effective time management, different scheduling techniques, resources allocation method. PLM concepts. Project direction, communication in a project, MIS project co-ordination, role of MIS in project control, Performance-control, schedule- control, cost -Control.	**07 Hours**
Unit V	
Performance Measures in Project Management: Performance indicators, Performance improvement for the CM & DM companies for better project management, project management and environment. Project Management Models and Certifications: An Introduction to SEI, CMM model and Project Management Institute USA – Importance of the same for the Industry and practitioners. **Case Studies on Project Management**: Case studies covering project planning, scheduling, communication, use of tools & techniques, project model, Performance measurement, (Related to industrial projects) **Assignment**: Any two case studies by using MS software.	**08 Hours**

2.	Weist&Levy,	A Management-Guide to PERT and CPM, Eastern Economy of PHI, 2002.
3.	L.S.Srinnath,	PERT & CPM, Affiliated East West Press Pvt.ltd, 2002.
4.	Moder Joseph and Philips Cerel R	Project management with PERT and CPM, 2nd Edition, New York VAN Norstrand, Reinhold-1976.

Course Outcomes: After the completion of this course, student will be able to:

1. Explain the basic concept of project management and roles and responsibilities of project leader (Level-1).
2. Discuss the generation and screening of project ideas and describe the procedure involved in awarding the project (Level-2).
3. Analyse the different market scenarios while allocating the project and discuss the tools and techniques used in PM (Level-3).
4. Demonstrate the ability to schedule, coordinate and control the projects (Level-3).
5. Describes the various performance measurement techniques in PM and analyze the PM environment (Level-4).

SCHEME END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

DESIGN OF MACHINE ELEMENTS -II

Contact Hours/Week	:	4+2+0 (L+T+P)	Credits	:	5.0
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Course Code	:	6RME01			

Course Objectives: This course will enable students to:

1. To study and design different types of springs of different cross sections and load conditions and to analyze stress distribution in leaf spring.
2. Understand the difference between straight beam and curved beam, To study the stress distribution in crane hooks, punching press, clamps and closed rings. To study different types of clutches and breaks and principle of uniform wear and pressure theory, To design different types of clutches and brakes
3. Defining different terminologies in gear, to design spur and helical gears for strength, dynamic load and wear load, Understand equivalent number of teeth for helical gear.
4. Understand equivalent number of teeth for bevel gear, To design bevel and worm gears for strength, dynamic load and wear load, To study the efficiency of worm gear drive and its importance.
5. To study different lubricants and their properties, Mechanics of lubrication, importance of bearing characteristic number, and to design journal and ball bearing.

Unit I	
SPRINGS: Types of Springs; Stresses in Helical coil springs of circular cross section, Energy stored in springs, Leaf springs, Stresses in Leaf springs; Equalized stresses.	**10+06 Hours**
Unit II	
CURVED BEAMS: Differences between straight and curved beams, loads and stresses in curved beams of standard cross sections in hooks, punching press and C-clamps. **BRAKES**: Internal Expanding Brakes, Disc Brakes; **CLUTCHES**: Cone clutch and single plate clutch.	**10+06 Hours**

Unit III	
SPUR GEARS: Definitions; Stresses in gear tooth; Lewis equation and form factor. Design for strength, dynamic load and wear load, Specifications and materials; Importance of Hertz Contact stress. **HELICAL GEARS:** Definitions; Formative number of teeth, Design based on strength, dynamic load and wear loads, Normal and Transverse pitch, Different forces on Helical gear tooth.	**12+06 Hours**
Unit IV	
BEVEL GEARS: Definitions, Formative number of teeth, Design based on strength, dynamic load and wear loads, Cone pitch angle, Back cone radius, Acute, Obtuse and right angled bevel gears. **WORM GEARS:** Definitions; based on strength, dynamic, wear loads and efficiency of worm gear drives, Thermal equilibrium of worm gears, Self locking of worm gear drives.	**10+04 Hours**
Unit V	
LUBRICATION AND BEARINGS: Lubricants and their properties, bearing characteristic number, Bearing modulus, Heat balancing, Minimum oil film thickness, Design procedure for Journal bearings. **BALL BEARINGS:** Static and Dynamic capacity, Equivalent load, Rating Life, selection of suitable bearings on rated life.	**10+04 Hours**

DESIGN DATA HANDBOOKS:

1	Dr. K. Lingaiah	Design Data Handbook, Vol. 1 & Vol. 2, Suma Publication: Bangalore
2	K. Mahadevan and Balaveera Reddy	Design Data Handbook, CBS Publication

TEXT BOOKS:

1.	Joseph E Shigley	Mechanical Engineering Design, McGraw Hill International Edition, 6th Edition (2003)
2.	V B Bhandari	Design of Machine Elements, Tata McGraw Hill Publishing Company Ltd, New Delhi, 2nd Edition(2007) .

REFERENCE BOOKS:

1.	M.F.Spotts, T.E Shoup, L.E. Hornberger, S.R.Jayaram and C V Venkatesh	Design of Machine Elements, Pearson Education (2006)
2.	Hall, Holowenko and Laughlir (Schaum's outline series adapted by S. K. Somani)	Machine Design, TATA McGraw Hill Publishing Company Ltd. New Delhi, Special Indian Edition (2008)
3.	Maleev and Hartman	Design of Machine Elements

Course Outcomes: After the completion of this course, student will be able to:

1. Design and analyze helical and leaf springs for the given application.
2. Differentiate between Straight and Curved beam and determine stresses in curved beams for given applications. And also Design brakes and clutches for the given application.
3. Design spur and helical gears for the given application.
4. Design Bevel and worm gears for the given application.
5. Select appropriate lubricant and bearings for the given application

SCHEME END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

INDUSTRIAL ROBOTICS

Contact Hours/Week	:	4+0+0 (L+T+P)	Credits	:	4.0
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	6RME02			

Course Objectives: In this course student will learn;

1. To gain the knowledge of robotic system, its construction, configurations and control system.
2. To gain the knowledge about robot arm kinematics, dynamics.
3. To get the idea of robot end effectors for industrial applications, robot programming.
4. To obtain the knowledge of robot cell design and economic analysis of robotics.
5. To get the knowledge of robot applications in manufacturing, assembly and inspection.

Unit I	
Introduction, Classification and structure of robotic system: Automation and robotics, brief history of robotics, Robot anatomy, work volume, robot drive systems, control system and dynamic response, precision of movement, advantages and disadvantages of drive systems. Control system and components: Mathematical models, transfer functions, control system for robot joint, types of controllers with their transfer functions. Robot Actuation and Feedback components: position, velocity sensors, Actuators, power transmission system.	**10 Hours**
Unit II	
Robot motion analysis and control: Robot Arm Kinematics : Kinematics - Introduction, forward and reverse transformation for 2D and 3D freedom arm, rotation matrix, composite rotation matrix, rotation matrix about an arbitrary axis, Euler angles representation, homogeneous transformations, links, joints and their parameters, D-H representation, numerical examples. Robot Arm Dynamics: Lagrange -Euler formulations -Joint velocities, kinetic energy, potential energy and motion equations or a robot manipulator, configuration of a robot controller	**11Hours**

Unit III	
Robot end effectors and sensors: Mechanical grippers and other types of grippers, types of robotic sensors, its working principle, uses and applications, machine vision. **Robot programming:** Introduction, methods of programming, Robot languages - AML and VAL programming with graphics, storing and operating, Task programs.	**11 Hours**
Unit IV	
Robot cell design and control: Robot cell layouts, work cell control, error detection and recovery, work cell controller, robot cycle time analysis. **Economic analysis for Robotics:** Methods of economic analysis, subsequent use of the robot, differences in production rates, indirect costs and savings in a robot application project, robot project analysis.	**10 Hours**
Unit V	
Robot applications in Manufacturing: Considerations in robot material handling, material transfer applications, machine loading and un loading, process operations – spot welding, arc welding, spray coating and other applications. **Assembly and Inspection:** Assembly automation, parts presentation methods, assembly operations, Remote centre compliance device, assembly system configuration, inspection automation.	**10 Hours**

TEXT BOOKS:

1.	M.P.Groover.	Industrial Robotics Mc Graw Hill International Editions , 2019, ISBN: 978-0-07-026509-7

REFERENCE BOOKS:

1.	K.S. Fu, R.C. Gonzales and Lee.	A Text book on Robotics Mc Graw Hill International Editions 2018, ISBN: 978-0-07-026510-3.
2.	Yorem Koren	A Text book on Robotics for Engineers McGraw Hill International Editions 2018, ISBN: 0-07-035399-9.

Course Outcomes: After the completion of this course, student will be able to:

1. **Explain** the fundamentals of robotic system, configurations and control system.
2. **Apply** the concept of kinematics and dynamics for robot motion analysis, and also **formulate** the rotation matrices.
3. **Explain** different robotic programming languages and **develop** programs for simple applications.
4. **Describe** the robot cell layouts and **explain** the economic analysis for a robotic project.
5. **Describe** robotic applications in manufacturing and **explain** the assembly and inspection process using robots.

SCHEME END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

TOTAL QUALITY MANAGEMENT

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	6RMEE21			

Course Objectives: This course will enable students to:

1. To incorporate the importance of quality aspects in today's competitive era.
2. To understand the customer requirements and offer the products which is needed.
3. To know the strategies adopted by an organization for different production techniques.
4. To understand the importance of leadership ,change management and team development.
5. To create an awareness of certification by ISO.

Unit I	
Introduction : Definition, Quality Dimensions, Quality aspects – Quality of Design, Quality of Conformance and Quality of Performance, TQM Cultural change, Historical Review, Discussion on Benefits of TQM, Quality,Garvin's Nine dimensions of Quality, TQM frame work, Contribution of Quality Gurus-Juran (Quality Triology), Discussion on Demmings (14 Principles of Management), Contribution of Crosby,Ishikawa and Taguchi.	**08 Hours**
Unit II	
Customer Orientation-Customer Focus, Customer satisfaction model Quality Function Deployment(QFD), Customer Satisfaction Measurement, Kano Model. **Problem Solving** Tools-Problem Solving Process, Seven QC Tools, Seven Management tool.	**08 Hours**
Unit III	
Continuous Improvement Strategies-Deming Wheel, Zero Defect Concept, Benchmarking, Six sigma. **Preventive Techniques**-Failure Mode Effect Analysis, Poke Yoke. **Quality Ambience**- Five S for Quality Ambience, Time Management. **Quality**	**08 Hours**

Control– Offline quality control, statistical quality control **Statistical Quality Control – Causes of Variation in Quality, Central limit Theorem, Control charts for variables and attribute (simple problems only), Process capability studies (theory only).**	
Unit IV	
Leadership-Top Management Commitment, Leadership for TQM, Change Management, Motivational Strategies, Quality Circle Philosophy. **Team Development**-Synergy, Team Building, Types of Teams, Characteristics of Successful Teams, Team Members Roles, Effective Team Meetings, Common Team Problems.	**08 Hours**
Unit V	
Quality Certification-ISO 9000 series Certification ISO 9001: 2008 Certification, ISO 14000 Series Certification, Quality auditing, Quality Awards. TQM Road Map: Measurement of Quality, TQM Road Map, TQM Implementation Strategy, When TQM Fails.	**07 Hours**

TEXT BOOKS:

1.	L. Suganthi &Anand	Total Quality Management, PHI-2004.
2.	Amitava Mitra	Fundamentals of Quality Control and Improvement, Third Edition, John Wiley & Sons publication

REFERENCE BOOKS:

1.	Dale H Besterfield	Total Quality Management, Pearson Education,3rd Edition
2.	Poornima M Charanthimath	Total Quality Management, Pearson Education
3.	Juran J.M	A History For Managing For Quality, ASQC Quality Press, 1995
4.	A Mahajan	Statistical Quality Control, Dhanapat Rai & Co. (P) Ltd.

Course Outcomes: After the completion of this course, student will be able to:

1. **Explain** the concept and philosophies of quality and **Discuss** the contributions of quality gurus and their relevance to the management of modern organizations.
2. **Explain** various tools to capture the voice of customer and how QFD can be used to translate those requirements into product specifications; **Demonstrate** the ability to apply 7 QC and 7 management tools to solve industry related problems.
3. **Analyze** the appropriate techniques for achieving continuous improvements and Explain the procedure to apply the same.
4. **Analyze** the strategies for leadership, change management and team development in achieving organizational excellence.
5. **Explain** the procedure for obtaining ISO 9000,9001& 14000 certification and conducting quality audits; **Explain** the road map for obtaining quality awards and implementing TQM.

SCHEME END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

GAS DYNAMICS

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	6RMEE22			

Course Objectives: This course will enable students to:

1. Basic concepts of thermodynamics, compressible fluid flow and conservation laws.
2. The physical aspects of isentropic flows, area-Mach number relations.
3. Flow through constant area duct with friction and heat transfer.
4. Characteristics of Normal shock.
5. Classification and working of air-breathing and non-air breathing engines.

Unit I	
Fundamentals of Compressible Flows Energy equation for a non-flow process, flow process, the adiabatic energy equation, Stagnation velocity of sound, Mach number and its significance, Stagnation Pressure, Temperature, Density and Enthalpy, Reference velocities, Effect of Mach number on compressibility. Various regions of flow, Wave propagation -Mach cone and Mach angle.	**08 Hours**
Unit II	
One Dimensional Isentropic Flow Comparison of isentropic and adiabatic processes, one dimensional isentropic flow in ducts of varying cross-section- nozzles and diffusers, operation of nozzles under varying pressure ratio, mass flow rate in nozzles, critical properties and choking, area ratio as function of Mach number, shock waves in nozzles, discharge coefficients, and nozzle calculations Working charts and gas tables.	**08 Hours**
Unit III	
Flow in constant area duct with friction (Fanno flow): Fanno curveand Fanno flow equations, solution of Fanno flow equations, variation of flow properties, variation of Mach number with duct length, isothermal flow in constant area duct with friction(no problems on isothermal flows), tables and charts for Fanno flow. Flow in constant area duct with heat transfer (Rayleigh flow):	

Simple heating relation of a perfect gas, Rayleigh curve and Rayleigh flow equations, variations of flow properties, maximum heat transfer, tables and charts for Rayleigh flow.	**08 Hours**
Unit IV	
Wave Phenomenon **Normal Shock:** Development of different shock waves, governing equations, Prandtl-Mayer relation, Rankine-Hugoniot relation, Mach number in the downstream of normal shock, variation of flow parameters across the normal shock (oblique shocks-concept only)	**07 Hours**
Unit V	
Operational requirements, types of combustion systems, some important factors affecting combustion in gas turbine combustors. Broad classification of propulsion systems, air-breathing and non-air-breathing engines. **Aircraft Propulsion Devices**: Classification of Aircraft engines, Piston-Prop, Turbojet, Turboprop, Turbofan, Ramjet and scramjet engines. **Rocket Propulsion Devices:** Types of rocket engines, Solid, Liquid and Hybrid Rockets. Comparison of rocket engines.	**08 Hours**

TEXT BOOKS:

1.	S.M. Yahya.	Gas Dyamics
2.	V. Babu	Fundamentals of Gas Dynamics, 2nd Edition (2015), Wiley Publications.
3.	V. Babu	Fundamentals of Propulsion, ANE Books, 2009.

REFERENCE BOOKS:

1.	Prof H S Mukunda	Understanding Aerospace Chemical Propulsion, I. K. International Publishing House Ltd.
2.	Robert D. Zucker and Oscar Biblarz	Fundamentals of Gas Dynamics, 2nd Edition, John Wiley and Sons, INC.

Course Outcomes: After the completion of this course, student will be able to:

1. Apply the basic concepts of thermodynamics, fluid mechanics to solve compressible flow problems.
2. Apply the principles of gas dynamics to identify, analyze and solve compressible flow problems in a variable area-ratio ducts.
3. Apply gas dynamics principles to solve normal and oblique shock problems.
4. Differentiate Fanno flow and Rayleigh flow and apply these to analyze and solve fluid flow problems.
5. Discuss different types of combustors and study typical gas turbine combustor.

SCHEME END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

THEORY OF IC ENGINES

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	6RMEE23			

Course Objectives:

1. This course is intended to teach the fundamental concepts of IC engines.
2. The student will become familiar with the basic concepts and advanced concepts in IC engines.
3. The student will understand about emissions and emission norms imposed to IC engines.
4. The student will also learn about alternate fuels that are used for IC engines.

Unit I	
Introduction to IC Engines: Heat Engines, Development, and classification of IC engines, Engine Structure and its components, Engine Nomenclature, Working, Application, Thermodynamic analysis of IC engines. Actual working of 4-stroke Petrol, Diesel, and Gas engines and valve timing diagrams, Actual working of 2-stroke petrol, Diesel, and Gas engines and the corresponding port timing diagram, comparison of SI and CI engines, Engine power and efficiencies. (Problems)	**08 Hours**
Unit II	
Fuel-Air Cycles and their Analysis: Introduction to Fuel-air cycles, Factors affecting Air-standard cycles, Comparison of Air-standard and Fuel-Air cycles, Effect of operating variables on cycle analysis, Difference between an Actual cycle and a Fuel-Air cycle for CI and SI engines.	**08 Hours**
Unit III	
Combustion in SI and CI Engines: Stages of Combustion, Delay period or Ignition lag and factors affecting the lag, Flame propagation and factors affecting it, Abnormal combustion and knocking in SI engines, factors affecting knock, its effect, and control, Knock measurement, its	**08 Hours**

rating and Anti knock agents, Detonation, factors affecting, and controlling of detonation in CI engines, Rating of CI engine fuels, Comparison of knocking in SI and CI engines, Combustion chambers for SI and CI engines. No designs	
Unit IV	
Modern IC Engines: Dual fuel and multi fuel engines, stratified charged engines, Adiabatic engines, Variable compression ratio engines, Wankel rotary engines, turbocharger engines, MPFI, CRDI engines	**08 Hours**
Unit V	
Future Fuels for IC Engines: Alcohols, LPG, CNG, Vegetable oils, Pros and cons of alternative fuels. **Emissions from IC Engines :** Emissions of SI and CI engines, Measurement techniques used to measure pollutants (NDIR Analyser, FID, Chemi-luminescence Analyzer and Smoke measurement by Obscuration method), Emission standards.	**07 Hours**

TEXT BOOKS:

1.	V.Ganesan	Internal Combustion Engines, Tata McGraw Hill Company, 2008

REFERENCE BOOKS:

1.	Mathur and Sharma	A Course in Internal Combustion Engines, Dhanpat Rai & Co. (P) Ltd.
2.	Domkundwar & Domkundwar	A Course in Internal Combustion Engines, Dhanpat Rai & Co. (P) Ltd.
3.	R.K.Rajput	Thermal Engineering, Laxmi Publications.
4.	Colin R. Ferguson	Internal CombustionEngines, C. John Wiley & Sons, 1986.
5.	Edward F. Obert	IC Engines, International edition, 1973

Course Outcomes: After the completion of this course, student will be able to:

1. **List components and Explain working of typical IC engine**.
2. **Distinguish** and **compare** air-standard cycles, fuel air cycles and actual working cycles of an IC engine.
3. Analyze and Explain combustion phenomenon in SI and CI engines.
4. **Compare** modern techniques used in IC engines to increase their performance
5. **Explain** about importance alternate fuels that are used as a substitute fuels in IC engines. **Analyse** mechanisms and controlling methods for emission norms imposed to IC engines.

SCHEME END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

EXPERIMENTAL STRESS ANALYSIS

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	6RMEE24			

Course Objectives: This course will enable students to:

1. The course covers the basic aspects of experimental stress analysis that includes exhaustive treatment of the most versatile techniques like photo-elasticity and strain gauges.
2. In this course students learn to apply modern experimental stress analysis techniques to measure strains and stresses in engineering components and structures.
3. The course includes strain gage measurements and analysis, photo-elasticity and stress analysis.
4. It provides the fundamental aspects of different experimental techniques such as Brittle Coatings and Holography.

Unit I	
Electrical Resistance Strain Gages: Principle of operation and requirements, Types of electrical resistance strain gauges and their uses. Gage sensitivity and gage factor, Performance Characteristics, Environmental effect. Strain Gage circuits. Potentiometer circuit: derivation for the increment of open circuit voltage, Constant current potentiometer circuit. Wheatstone bridges: Balanced and unbalanced, requirement for balance. Strain Analysis Methods: Two element, three element rectangular and delta rosettes, Correction for transverse strain effects, Stress gage, Plane shear gage.	**08 Hours**
Unit II	
Photo-elasticity: Nature of light, wave theory of light - optical interference, Stress optic law – effect of stressed model in plane and circular polariscope, Isoclinics & Isochromatics, Fringe order determination- Fringe multiplication techniques, Calibration photoelastic model materials.	**08 Hours**
Unit III	
Analysis of Two dimensional photo elasticity: Separation methods: Shear difference method, Analytical separation	**09 Hours**

methods, Model to prototype scaling. Analysis of Three dimensional photo elasticity: Stress freezing method, Effective stresses, Stress separation, Shear difference method and Oblique incidence method. Secondary principal stresses, Scattered light photo-elasticity, Scattered light polariscope and stress data Analyses.	
Unit IV	
Coating Methods: a) Photoelastic Coating Method: Birefringence coating techniques sensitivity, Sensitivity Reinforcing and thickness effects – data reduction – Stress separation techniques Photoelastic strain gauges b) Brittle Coating Method: Brittle coating technique principles, data analysis – coating materials, coating techniques.	**08 Hours**
Unit V	
Holography: Introduction, equation for plane wave and spherical waves, intensity, Coherence, Spherical radiator as an object (record process), Hurter, Driffeld curves, Reconstruction process, Holographic interferometry, Realtime and double exposure methods, Displacement measurement, Isopachics.	**08 Hours**

TEXT BOOKS:

1.	Dally, J W, and Riley, W.F	Experimental Stress Analysis, 4th Edition McGraw-Hill Inc., New York 2005.
2.	Srinath, L S, Raghava, M.R., Lingaiah, K., Garagesha, G., Pant B., and Ramachandra, K.	Experimental Stress Analysis, Tata McGraw- Hill, New Delhi (1984).
3.	Sadhu Singh	Experimental Stress Analysis, Khanna publisher.

REFERENCE BOOKS:

1.	M.M.Frocht	Photoelasticity Vol I and Vol II, John Wiley & sons.
2.	Perry and Lissner,	Strain Gauge Prime
3.	Kuske	Photo Elastic Stress Analysis, , Albrecht & Robertson John Wiley & Sons.
4.	Dave and Adam	Motion Measurement and Stress Analysis.
5.	Hetyenyi, M. Harper	Hand book of Experimental Stress Analysis, John Wiley and Sons Inc., New York 1972.

Course Outcomes: After the completion of this course, student will be able to:

1. Understand concept of stress and strain.
2. Understand underlying principles in using strain gages.
3. Mount strain gages, take measurements and analyze the obtained data.
4. Understand basic principles of photo elasticity, and use it as an analysis tool.

SCHEME END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

ADVANCED AUTOMOBILE DESIGN

(READY ENGINEER BY TATA TECHNOLOGIES)

Contact Hours/Week	:	2+0+2 (L+T+P)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	6RMEE25			

Course Objectives: To train the students about the industrial approach for the design and analysis of a component. To provide an insight about various testing methods such as NVH, Durability and Vehicle Crashworthiness employed for optimizing the design. To facilitate the use of Computer Aided Engineering (CAE) which covers the broad usage of computer software to aid in engineering analys tasks? To impart the knowledge on EuroNCAP test regulation for automobiles. To teach them about various operations performed on sheet metal and its formability.

Unit I	
Computer Aided Engineering: Introduction to Computer Aided Engineering (CAE) and its importance in the Product Lifecycle Management(PLM). Introduction to Finite Element Analysis (FEA) and its application in various domains like NVH, Durability and Vehicle Crashworthiness. Brief history of FEA with the timeline over all these years of its evolution. Introduction to Pre-processor, Post processor and solvers. Importance of discretization of design space using elements and nodes on various automobile components along with importance of Stiffness Matrix. Emphasize on importance of Implicit and Explicit solvers along with various types of pre and post processors.	**09 Hours**
Unit II	
Durability, NVH: Importnace of oil canning on an automobile hood with a case study relating to Durability domain. Free-free modal analysis on the hood which is a case study related to NVH domain. Crashworthiness: Introduction to vehicle crashworthiness and bio-mechanics. It starts with a revision of Newtonian laws, energy management and emphasis of impulse in car crashes. It takes Head	

impact analysis as a case study on the hood of an automobile which is a EuroNCAP test regulation. The session also emphasizes the importance of Head performance criteria (HPC) in determining severity of injury.	**08 Hours**
Unit III	
Importance of Failure Criteria, Von-Mises Stress: Introduction to failure criteria by explaining the analogy of using uni-axial test results for predicting triaxial results in reality. This session talks about the Mohr's circle and explains in detail von-Mises stress criteria; application of various failure criteria on brittle or ductile materials.	**08 Hours**
Unit IV	
Steel Metal Formability: What is Sheet metal design and manufacturing cycle? What is simultaneous Engineering(SE) feasibility study? Autobody and its parts, important constituents of an automobile, what is sheet metal? Sheet metal processes.	**07 Hours**
Unit V	
Types of draw dies, draw Model development, considerations while developing draw model. Forming simulations, Material properties, Forming Limit Curve (FLD), pre processing, post processing. Sheet Metal Formability – Simulation.	**06 Hours**

10.	Prakash Hiralal Joshi	Jigs and Fixtures, Tata McGraw-Hill Education, 2010, ISBM: 0070680736, 9780070680739.

Course Outcomes: After the completion of this course, student will be able to:

1. Apply the concepts of NVH, Durability and Vehicle Crashworthiness. Illustrate the importance of Implicit and Explicit solvers for FEA.
2. Apply the knowledge of modal analysis on hood.
3. Identify the analogy of using uni-axial test result to determine failure

criteria. Construct a 3D model in software and Analyze the failure criteria.
4. Identify various Trim Materials and sheet metal process used in Automobiles.
5. Identify various draw dies used in Automobiles.

SCHEME END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Evaluation	**Theory**	**Lab**	**Average**
CIE	50	50	50
SEE	100	50	50
		Total	100

Minimum passing is 30% each in lab and Theory. But student has to score minimum 40% from both Lab and Theory to pass the subject.

COMPUTER AIDED MODELING AND ANALYSIS LABORATORY (CAM & A Lab)

Contact Hours/Week	:	0+0+3 (L+T+P)	Credits	:	1.5
Total Lecture Hours	:		CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	6RMEL1			

Course Objectives:

1. Student should be able to analyse bars, trusses and beams problems for others and deformation analysis.
2. Can learn to analyse thermal conduction and convection problems.
3. Can learn to analyse fluid flow problems and analyse dynamic problems.

Part - A

1. Stress analysis of Stepped bar subjected to axial loading.
2. FE Analysis of tapered bar with axial loading.
3. Stress analysis of stepped bar subjected to thermal loading.
4. Stress analysis of a bar due to self weight.
5. Drawing SFD, BMD and finding the maximum deflection under the given loading in beams.
    a. Cantilever beam
    b. Simply supported beam
6. Stress analysis of truss.

PART - B

1. Modeling and Stress analysis of 2D bracket.
2. Stress analysis in a half symmetry model of a culvert.
3. Stress analysis of a rectangular plate with a circular hole
4. Thermal Analysis of square cross section
5. Thermal Analysis across furnace wall
6. Thermal Analysis across composite section

REFERENCE BOOKS:

1	Daryl L Logan	A first course in the Finite element method, Thomason, Third Edition
2	Hutton	Fundaments of FEM, McGraw Hill, 2004

3	George R. Buchanan	Finite Element Analysis, Schaum Series

Course Outcomes: Upon undergoing this course the students are able to:

1) Illustrate the basic features of FEM package - ANSYS V13.0 analysis package and create geometry, discretize, apply boundary conditions to solve 1-D and 2-D problems such as bars, beams, trusses, frames, and plate structures under different loading conditions.

2) Determine the deflection of beams subjected to point, uniformly distributed loads, and plot shear force and bending moment diagrams.

3) Analyze 1-D and 2-D heat transfer problems for the given boundary conditions.

SCHEME END EXAMINATION:

ONE question from part –A : 20 Marks (05 Write up +15)
ONE question from part –B : 20 Marks (05 Write up +15)
Viva –Voce : 10 Marks
Total: 50 Marks

ENERGY CONVERSION LABORATORY

Contact Hours/Week	:	0+0+3 (L+T+P)	Credits	:	1.5
Total Lecture Hours	:		CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	6RMEL2			

Course Objectives: This course will enable students to

1. Understand different PV & TS diagram for Air standard cycles, (Carnot Cycle, Otto Cycle, Diesel Cycle, Dual Cycle, & MEP for the same)
2. Learn the Calculations of the engine performance parameters like finding BP, IP, Mechanical efficiency, drawing heat balance sheet etc,
3. Learn concepts different types of loading on the engines.
4. Learn concepts of the operations of the Valves of an IC engines Can Observe and understand the opening and closing of the valves.
5. Learn the basics of the properties of the lubricating oil like flash point, fire point viscosity of the oil etc.
6. Learn to measure area of an irregular surface etc.

PART – A

1. Determination of Flash point and Fire point of lubricating oil using Abel Pensky and Martin (closed) / Cleavland (Open Cup) Apparatus.
2. Determination of Calorific value of solid, liquid and gaseous fuels.
3. Determination of Viscosity of a lubricating oil using Redwoods, Saybolts and Torsion Viscometers.
4. Valve Timing/ opening diagram of an I.C. engine (4 stroke).
5. Use of planimeter

PART – B

1. Performance Tests on I.C. Engines, Calculations of IP, BP, Thermal efficiencies, SFC, FP, heat balance sheet for

a) Four stroke Diesel Engine
b) Four stroke Petrol Engine
c) Multi Cylinder Diesel/Petrol Engine, (Morse test)
d) Two stroke Petrol Engine

e) Variable Compression Ratio I.C. Engine.
2. Performance evaluation of air compressor two stage.
3. Performance evaluation of Blower.

Course Outcomes: After the completion of this course, student will be able to:

1. Conduct experiments and to Evaluate the properties(Flash point, Fire point and Viscosity) of different fuels and lubricating oils using different types of flash and fire point testers and viscometers.(Individual).
2. Experimentally draw and analyze the valve timing diagram and study the effect of valve timing on performance of engine. Study different methods of area measurements techniques and calculate the percentage error in the measurement of given area using Planimeter (Individual).
3. Conduct performance tests on different types of IC engines to analyse the performance parameters and draw the heat balance sheet. (Group)

SCHEME END EXAMINATION:

ONE question from part –A	: 15 Marks (05 Write up +10)
ONE question from part –B	: 25 Marks (05 Write up +20)
Viva –Voce	: 10 Marks
	Total: 50 Marks

SYLLABUS

OF

VII SEMESTER B.E.

For the academic year 2022-23

MECHANICAL VIBRATIONS

Contact Hours/ Week	**: 3(L) + 1(T)**	**Credits : 3.5**
Total Lecture Hours	**: 39**	**CIE Marks : 50**
Total Tutorial Hours	**: 13**	**SEE Marks : 50**
Sub. Code	**: 7RME03**	

Course Objectives: This course will enable students to:

1. Understand the importance of vibrations in mechanical design of machine parts that operate in vibratory conditions
2. Carry out basic analysis of single degree of freedom linear systems subjected to free and forced vibrations
3. Understand the various numerical methods to find the approximate natural frequency of a multi-degree of freedom systems.
4. Understand the vibratory phenomenon which will help to analyze some simple engineering vibratory problems.

Unit I	
Introduction: Causes of Vibration and Classification, Modeling of vibratory systems, types of vibrations, Degree of freedom – Single, Two and Multi DOF, S.H.M, principle of super position applied to Simple Harmonic Motions, Vector representation of displacement, Velocity and acceleration, Beats phenomenon, Concept of Fourier theorem and simple problems.	**7+2 Hours**
Unit II	
Undamped single degree of freedom systems: Undamped free vibrations, natural frequency of free vibration systems by Newton's method and Energy method, Equivalent stiffness of spring combinations, Effect of mass of spring and compound pendulum.	**7+2 Hours**
Unit III	
Damped single degree of freedom systems: Different types of damping, concept of critical damping and its importance, study of response of viscous damped systems for cases of under damping, critical and over damping, Logarithmic decrement.	**7+3 Hours**
Unit IV	
Forced Vibration of single degree of freedom systems: Steady state solution with viscous damping due to harmonic excitation, Magnification Factor, Frequency response curve, Reciprocating and rotating unbalance, Vibration isolation - transmissibility ratio. Base excitation, Critical speed of shaft without damping, Vibration measuring instruments - Vibrometers and Accelerometers.	**9+3 Hours**

Unit V	
Computational methods for Multi degree Freedom systems: Introduction, Influence coefficients, Maxwell reciprocal theorem Orthogonality of principal modes, Method of matrix iteration, Stodola method, Holzer's method.	**9+3 Hours**

TEXT BOOKS:

1.	G.K. Grover	Mechanical Vibrations, 8th Edition, Nemchand and Bros. Roorkee

REFERENCE BOOKS:

1	Singiresu. S. Rao	Mechanical Vibrations, Pearson education Inc, 6th Edition.
2	William T. Thomson, Marie Dillon Dahleh and Chandramouli Padmanabhan	Theory of Vibration with applications, 5th Edition, Pearson Education.
3	Kelly	Mechanical Vibrations, Schaum's Outline Series, Mc Graw Hill

Online Resources:

1. Virtual lab for experiential learning

(ii) http://rtlabs.nitk.ac.in/?q=page/vibration-lab
(iii) https://dom-nitk.vlabs.ac.in/List%20of%20experiments.html

2. NPTEL Lecture

(i) https://nptel.ac.in/courses/112/103/112103112/
(ii) https://nptel.ac.in/courses/112/103/112103111/
(iii) https://nptel.ac.in/courses/112/105/112105055/

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Course Outcomes: After the completion of this course, student will be able to:

1. **Apply** the knowledge of mathematics and fundamentals of engineering to formulate equations of motion.

2. **Determine** the natural frequency of single degree free undamped mechanical vibration systems.
3. **Formulate** governing equations of motion and **determine** the natural frequencies for damped mechanical vibration systems.
4. **Determine** and **analyze** forced Mechanical vibration Systems.
5. **Identify** the numerical methods to **determine** the natural frequencies and mode shapes of multi degree of freedom systems.

HEAT AND MASS TRANSFER

Contact Hours/ Week	**: 4 (L) + 1(T)**	**Credits :**	**4.5**
Total Lecture Hours	**: 52**	**CIE Marks :**	**50**
Total Tutorial Hours	**: 13**	**SEE Marks :**	**50**
Sub. Code	**: 7RME04**		

Course Objectives:

1. To make aware the students the fundamentals of heat and mass transfer phenomena
2. After successfully completing this course, he / she will be to analyze heat transfer by conduction, convection and radiation.
3. To Carry out calculations to enable the analysis and design of heat exchangers, condensers.
4. To analyze diffusion process.

Unit I	
Introductory Concepts and Definitions: Modes of heat transfer; basic laws governing conduction, convection and radiation heat transfer; thermal conductivity; convective heat transfer coefficient; radiation heat transfer coefficient; combined heat transfer mechanism. Conduction- Basic equations: General form of one dimensional heat conduction equation in rectangular, cylindrical and spherical coordinates. Derivation on three dimensional conduction in rectangular coordinate system, discussion on three dimensional conduction equation in cylindrical and spherical coordinate systems (No derivation). Boundary conditions of first, second and third kinds. Numerical problems.	**10+2 Hours**
Unit II	
One- Dimensional Heat Conduction: One dimensional, steady state heat conduction without heat generation through plane slabs, cylinders and spheres. Concept of thermal resistance, Electrical analogy, Heat transfer through composite slabs, cylinders and spheres, contact resistance, Combined conduction and convection, overall heat transfer co-efficient, Variable thermal conductivity, Critical thickness of insulation for cylinder and sphere, steady state heat conduction through fins of uniform rectangular cross section, fin effectiveness and fin efficiency. Numerical examples **Unsteady State Conduction:** Transient conduction in solids with negligible internal temperature gradients (Lumped system analysis), Biot number and Fourier number. Analytical solution of one dimensional transient conduction in a slab subjected to convective boundary condition. Use of transient temperature charts (Heislers Charts) for slabs, cylinders and spheres, Numerical examples.	**14+3 Hours**

Unit III	
Convection: Buckingham π Theorem for free and forced convection, Dimensionless numbers in convection & their physical significance. Use of various correlations in forced convection heat transfer, flow over a flat plate, Flow through circular ducts. Free convection heat transfer from vertical surface and, horizontal surfaces. **Boiling and Condensation:** Types of condensation; Nusselt's theory for laminar condensation on a vertical flat surface- expression for film thickness and heat transfer coefficient; use of correlations for condensation on inclined flat surfaces, horizontal tube and horizontal tube banks; Reynolds number for condensate flow; regimes of pool boiling-pool boiling correlations, Numericals.	**8+2 Hours**
Unit IV	
Heat Exchangers: Classification of heat exchangers, flow arrangements, fouling factor, LMTD for parallel flow and counter flow heat exchangers, Effectiveness, NTU method, expression for effectiveness of a parallel flow and counter flow heat exchangers, Numericals.	**10+3 Hours**
Unit V	
Radiation: Definitions of various terms used in radiation heat transfer, concept of a black body, Kirchoffs law, Lambert's Cosine Law, Stefan-Boltzman's law, Planck's distribution law, Wein's displacement law, thermal radiation, Radiation heat exchange between two parallel infinite black surfaces, between two parallel infinite gray surfaces, determination of view factors or configuration factor, radiation shielding, radiation heat exchange in an enclosure, Numerical problems. **Mass Transfer:** Definitions of terms used in mass transfer analysis; Fick's first law of diffusion, steady state equimolal counter diffusion in gases; steady state unidirectional diffusion in gases; steady state diffusion in liquids; correlations for determining mass diffusivity in gases in liquids.	**10+3 Hours**

TEXT BOOKS:

1.	Heat Transfer	Sukhatme S.P., Orient Longmon.Ed2011
2.	Heat and Mass Transfer	R. K. Rajput, S.Chand & Company Ltd., 3rd Edition, 2006.

REFERENCE BOOKS:

1	A Heat Transfer- A Basic Approach	M. N. Ozisik, McGraw Hill, 1985
2	Heat Transfer	J. P. Holman, McGraw Hill, New York, 9th Edition, 2002

Online Resources:

1. https://nptel.ac.in/courses/112/101/112101097/
2. https://onlinecourses.nptel.ac.in/noc20_ch21/preview

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Course Outcomes: After the completion of this course, student will be able to:

1. Differentiate basic modes of heat transfer and apply their governing equations to Solve problems.
2. Identify, Formulate and Analyze 1-D Steady and Unsteady state Heat Transfer for different geometry using heat transfer charts.
3. Analyze Convection heat transfer for different flow configurations. Evaluate Boiling and Condensation principle for phase transformation.
4. Differentiate and classify heat exchangers and solve problems on effectiveness of different heat exchangers. Analyse their performance using data handbook**.**
5. Apply the basic principles of radiation to solve real time problems. Use the basic principles of mass transfer phenomena to solve problems on steady state diffusion to calculate mass diffusivity in liquid and gases.

TOOL ENGINEERING

Contact Hours/ Week	**: 3 (L)**	**Credits :**	**3**
Total Lecture Hours	**: 39**	**CIE Marks :**	**50**
Total Tutorial Hours	**: 0**	**SEE Marks :**	**50**
Sub. Code	**: 7RMEE31**		

Course Objectives: This course will enable students to:

1. Learn basics of sheet metal operations
2. Understand the working of press tool for various sheet metal cutting operations
3. Understand the techniques for manufacturing of metallic components.
4. Understand the techniques for manufacturing of plastic components.
5. Identify the parting surface, feed system and ejection systems for the components.
6. Understand the principle of jigs and fixtures and their applications.

Unit I	
Introduction : Bending dies – Introduction, bend allowance, spring back, edge bending die design. Drawing dies – Single action, double action and triple action dies, factors affecting drawing, drawing die design. Design problems on bend allowance calculation for simple components	**7 Hours**
Unit II	
Press Tool : Working of a power press and classification of presses. Components of a simple die, press tool operation, die accessories, shearing action in punch and die, clearance, shear on punch and die, center of pressure and problems, scrap strip layout. Simple, progressive, compound, combination and inverted dies. Design problems on blanking and piercing dies for simple components	**10 Hours**
Unit III	
Die casting : Terminology: Core, cavity, sprue, slug, fixed and movable cores, finger cams, draft, ejector pins ejector plates, gate, goosenozzle, over-flow, platten, plunger, runner, vent, water-line etc. Types of Dies: Single cavity, multicavity dies, combination dies, unit dies, advantages and disadvantages of types of dies. Die casting dies: Die casting alloys, defects in die casting, finishing trimming and inspection of die casting components, safety.	**8 Hours**
Unit IV	
Injection Moulding: Injection moulding machine and its elements, general configuration of a mould. 2 plate and 3 plate mould. Introduction, to gate, runner, parting surface, ejection system. Core and cooling system. Introduction to compression, transfer, blow moulding, extrusion, forming and calendaring.	**7 Hours**
Unit V	

Jigs and Fixtures: Definition of Jigs and Fixtures, Difference between jigs and fixtures, Advantages, Steps for design. Location, Degree of freedom, 3-2-1 principles, choice of location, redundant location.	**7 Hours**

TEXT BOOKS:

1	Pye R. G.W.	Injection mould design, New York, John Wiley & Sons 12nd Ed., 1989.
2	R.G.W.Pye	Injection Mould Design, Affiliated East-West Press Pvt., Ltd., New Delhi, 4th Ed., 2000, ISBN: 9788176710107.

3. http://www.nitc.ac.in/dept/me/jagadeesha/mev303/CHAPT_INTRODUCTION_TO_JIGS_AND%20FIXTURES.pdf

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Course Outcomes: After the completion of this course, student will be able to:

- Able to Illustrate press tool types and press tool operations which make them aware of type applications for which this knowledge can be applied.
- Students will explain the working of press tool elements and their functions
- Students will assess the Casting die elements and their functions
- Students will describe the plastic processing, injection molding, extrusion and blow molding
- Categorize and justify the requirements of Jigs and Fixtures for Manufacturing, Testing and Assembly

THEORY OF ELASTICITY

Contact Hours/ : 3 (L) **Credits : 3**

Total Lecture Hours : 39	**CIE Marks : 50**
Total Tutorial Hours : 0	**SEE Marks : 50**
Sub. Code : 7RMEE32	

Course Objectives: This course will enable students to:

1. To introduce to students the concepts of stresses, strains and stress-strain relationships, as well as the basic theory of elasticity.
2. To develop students with an understanding of how stresses and strains within engineering components are related to both loads and displacements imposed at their boundaries and to inertial loads.
3. To prepare students for the use of different methods to analyze the stresses and strains within engineering components.
4. To allow students become familiar with problem formulations and solutions in elasticity and prepare students for future study in advanced engineering mechanics.

Unit I	
Introduction: Definition and Notation for forces and stresses. Components of stresses, equations of Equilibrium, Specification of stress at a point. Principal stresses and shear stressesand Mohr's diagram in three dimensions. Boundary conditions. Stress transformation, Stress components on an arbitrary plane, Stress invariants, Octahedral stresses, Decomposition of state of stress.	**9 Hours**
Unit II	
Introduction to Strain: Deformation, Strain displacement relations, Strain components, state of strain at a point, Principal strain, Strain transformation, Compatibility equations, Cubical dilatation	**7 Hours**
Unit III	
Stress- Strain Relations and the General Equations of Elasticity: Generalized Hooke's law in terms of engineering constants. Formulation of elasticity problems. Existence and uniqueness of solution, Saint-Venant's principle, Principle of superposition and reciprocal theorem.	**8 Hours**
Unit IV	
Two Dimensional problems in Cartesian Co-ordinates: Airy's stress function, investigation for simple beam problems. Bending of a narrow cantilever beam under end load, simply supported beam with uniform load, Use of Fourier series to solve two dimensional problems.	**7 Hours**
Unit V	

Thermal Stresses: Introduction, Thermo- elastic stress-strain relations, Thin circular disc, Long circular cylinder. Torsion of Prismatic Bars: Torsion of Circular and elliptical cross section bars, Soap film analogy, Membrane analogy.	**8 Hours**

TEXT BOOKS:

1.	Timoshenko and Goodier	"Theory of Elasticity"- McGraw Hill Book Company.
2.	L. S. Sreenath	"Advanced Mechanics of Solids"- Tata McGraw Hill Company.
3.	Richard G Budyans	Advanced strength and applied stress analysis, Second edition, McGraw Hill International, Edition 1999.

REFERENCE BOOKS:

2. https://nptel.ac.in/courses/105/105/105105177/

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Course Outcomes: After the completion of this course, student will be able to:

1. Analyze the state of stress in three dimensions.
2. Develop and analyze the state of strain and compatibility relations.

3. Develop and apply the stress-strain relations and the general equations of elasticity to practical problems.
4. Develop Airy's stress function and investigate simple beam problems with the use of Fourier series.
5. Analyze thermal stress in 3 Dimensional bodies and torsion of prismatic bars.

INDUSTRIAL HYDRAULICS & PNEUMATICS

Contact Hours/	**: 3 (L)**	**Credits : 3**
Total Lecture Hours	**: 39**	**CIE Marks : 50**
Total Tutorial Hours	**: 0**	**SEE Marks : 50**
Sub. Code	**: 7RMEE33**	

Course Objectives: In this course student will

1. Understand Hydraulic and Pneumatic principles.
2. Identify and describe the basic operation of Hydraulic/Pneumatic systems.
3. Understand the Application of hydraulic systems.
4. Understand the function, construction and operation of the main hydraulic control components.
5. Be able to read and understand the hydraulic circuit diagrams. Understand the function, construction and operation of most of the hydraulic control components.

Unit I	
Introduction to Hydraulic Power: Pascal's Law. Structure of Hydraulic Control System. The Source of Hydraulic power : Pumps Pumping theory, Pump Classification, Gear Pumps, Vane Pumps, Piston Pumps, Pump Performance, Pump Selection. Variable displacement Pumps.	**8 Hours**
Unit II	
Hydraulic Actuators and Motors: Linear Hydraulic Actuators [cylinders], Mechanics of Hydraulic Cylinder Loading, Hydraulic Rotary Actuators, Gear Motors, Vane Motors, Piston Motors, Hydraulic Motor Theoretical Torque, Power and Flow Rate, Hydraulic Motor Performance. Control Components in Hydraulic Systems Directional Control Valves- Symbolic representation, Constructional features, Pressure control Valves- direct and pilot operated types, Flow Control Valves.	**8 Hours**
Unit III	
Design and Analysis of Hydraulic circuits: Control of Single and' Double-Acting Hydraulic Cylinder, Regenerative Circuit, Pump unloading circuit, Double Pump Hydraulic System, Counter Balance Valve Application, Hydraulic Cylinder Sequencing Circuits, Locked Cylinder using Pilot Check Valve, Cylinder Synchronizing Circuits, Speed Control of Hydraulic Cylinder, Speed Control of Hydraulic Motors, Accumulators and Accumulator Circuits	**9 Hours**
Unit IV	

Maintenance of Hydraulic Systems Hydraulic Oils- Desirable Properties, Genera! Type of Fluids, Sealing Devices, Reservoir system, Filters and Strainers, Problem caused by Gases in Hydraulic Fluids, Wear of Moving Parts due to solid-Particle Contamination, Temperature control, Trouble shooting. **Introduction to Pneumatic control:** Gas law, Choice of working medium, characteristics and Production of compressed air- Compressors, Preparation of compressed air- Driers, Filters, Regulators, Lubricators. Structure of Pneumatic control system. 8Hours	**7 Hours**
Unit V	
Pneumatic Valves: Direction control Valves, Impulse valve, Speed regulators, Quick exhaust valve, Time delay valve, Shuttle valve, Twin Pressure valve and Solenoid operated Valve. **Basic Pneumatic Circuits:** Control of Single & Double acting Cylinders, Time Delay circuit, Use of quick exhaust valve in a circuit for speed controlling.	**7 Hours**

TEXT BOOKS:

Online Resources

1. https://nptel.ac.in/courses/112/105/112105047/
2. https://onlinecourses.nptel.ac.in/noc21_me51/preview

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Course Outcomes: After the completion of this course, student will be able to:

1. **Applying** Pascal's law to hydraulic systems**. Selecting** pumps and **analyzing** them for given application**.**
2. **Explain** the working principle of hydraulic cylinders, motors and control valves. **Calculation** related to power of actuators.
3. **Determine** appropriate components and Analyzing logical arrangement of components used for hydraulic systems.
4. **Explain** the working principle of pneumatic control systems and troubleshooting methods for fluid power circuits maintenance.
5. **Explain** the Working pneumatic control valves and their operation.

TRIBOLOGY

Contact Hours/	**: 3 (L)**	**Credits : 3**
Total Lecture Hours	**: 39**	**CIE Marks : 50**
Total Tutorial Hours	**: 0**	**SEE Marks : 50**
Sub. Code	**: 7RMEE34**	

Course Objectives: The course makes the students to

1. Understand the fundamentals of interfacial contact, adhesion, friction, wear and lubrication.
2. Learn about Lubrication of surfaces in relative motion to achieve reduced friction and wear.
3. Manipulate and identify the parameters which govern performance of tribological systems that are found in engineering practice.
4. Understand lubrication theory for hydrostatic and hydrodynamic bearing applications.
5. Learn about the contact of solid surfaces and their interactions.
6. Understand the genesis of friction, the theories/laws of sliding and rolling friction.
7. Learn about consequences of wear, wear mechanisms, wear theories and analysis of wear problems.

Unit I	
Introduction to Tribology: Properties of oils and equation of flow: Viscosity, Newton's law of viscosity, Hagen-Poiseuille law, flow between parallel stationary planes, viscosity measuring apparatus. Lubrication principles, classification of lubricants, Numericals.	**07 Hours**
Unit II	
Hydrodynamic lubrication: Friction forces and power loss in lightly loaded bearing, Petroff's law, Numericals, Tower's experiments, mechanism of pressure development in an oill film, Reynold's investigation and Reynold's equation in two dimensions.	**07 Hours**
Unit III	
Idealized journal bearing: Introduction to Idealized journal bearing, load carrying capacity, condition for equilibrium, Sommerfeld's number and its significance; partial bearings and end leakages in journal bearing, numerical problems. Slider/Pad bearing with a fixed and pivoted shoe; pressure distribution, load carrying capacity, coefficient of friction, frictional resistance in a pivoted shoe bearing, Numericals.	**10 Hours**
Unit IV	

Hydrostatic lubrication: Introduction to hydrostatic lubrication, hydrostatic step bearings, load carrying capacity and oil flow through the hydrostatic step bearing, Numericals. Bearing materials: commonly used bearings materials, properties of typical bearing materials. Advantages and disadvantages of bearing materials.	**09 Hours**
Unit V	
Behavior of Tribological Components: Selection, friction, wear of ceramic materials, wear measurements, effects of speed temperature and pressure. Tribological measures, Material selection, improved design, surface engineering	**06 Hours**

TEXT BOOKS:

3. https://onlinecourses.nptel.ac.in/noc20_mm12/preview

SCHEME OF END EXAMINATION: There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Course Outcomes: After going through this course the student will be able to:

1. Apply the basic theories of friction, wear and lubrication to identify critical parameters in a tribological system.
2. Make predictions of the performance and behavior of a tribological system based on these critical parameters.
3. Design or choose efficient and robust tribological systems such as hydrodynamic bearings, hydrostatic bearings and dry sliding bearings, for the needs of a specific application.

Improve the tribological properties of a machine component surface to improve reliability.

AUTOMATIC CONTROL ENGINEERING

Contact Hours/ Week	: 3	Credits:	3
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: 0	SEE Marks:	50
Sub. Code	: 7RMEE35		

Course Objectives: In this course student will learn;

1. To learn mathematical modeling of mechanical systems.
2. To learn a basic understanding of feedback control systems theory.
3. To learn the ability to perform analysis and design of linear feedback control systems.
4. To learn physical & mathematical skills to solve linear control problems.
5. Draw figures, graphs and block diagrams to summarize, solve & present control engineering problems.

Unit I	
INTRODUCTION: Concepts of automatic controls, open and closed loop systems, concepts of feedback. Requirements of an ideal control system. **Transfer function:** Mathematical Modelling of Mechanical Systems having translational, and Rotational motion. **Types of controllers** -Proportional, Integral, Proportional Integral, Proportional Integral Differential controllers (Basic concepts only).	**08 Hours**
Unit II	
Block Diagrams and Signal Flow Graphs: Transfer Function definition, block representation of system elements, reduction of block diagrams. Signal flow graphs: Mason's gain formula.	**07 Hours**
Unit III	
TRANSIENT AND STEADY STATE RESPONSE ANALYSIS: Introduction, First order and second order system response to step, ramp and Impulse inputs, Transient response specifications (No derivation). System stability- Routh's-Hurwitz Criterion.	**08 Hours**
Unit IV	
FREQUENCY RESPONSE ANALYSIS USING BODE PLOTS: Introduction to polar plots and nyquist plots. stability criterion, Bode attenuation diagrams, Stability Analysis using Bode plots, phase & gain margin.	**08 Hours**

Unit V	
ROOT LOCUS PLOTS: Definition of root loci, General rules for constructing root loci, Analysis using root locus plots. Stability analysis	**08 Hours**

   https://lpsa.swarthmore.edu/Root_Locus/RLDraw.html

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Course Outcomes: After going through this course the student will be able to:

1. Identify and formulate governing differential equations for Linear mechanical systems by applying Laplace transformation to determine transfer function.
2. Apply rules of block diagram and signal flow graph to analyze mechanical system and hence determine overall transfer function.

3. To analyze transient and steady state response of control systems using principles of mathematics.
4. Apply frequency response principles to determine stability of the systems.
5. Apply Root locus principles to determine stability of the control system and interpret results.

INDUSTRY 4.0

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 7RMEE36		

Course Outline: Industry 4.0 concerns the transformation of industrial processes through the integration of modern technologies such as sensors, communication, and computational processing.

Unit I	
Smart Manufacturing and Industry 4.0: Need for Industry 4.0, Advantages, Generalised model of the industrial revolution, Comparison of 4th Industrial 4.0 with previous revolutions, Concepts and Components of Industry 4.0, Internet of Things (IoT), Industry Internet of Things (IIoT), Case studies: Healthcare, Oil and Gas Industries, Smart Office, Logistics, Retail.	**8 Hours**
Unit II	
Framework and Technologies for enabling Industry 4.0: Introduction, Framework for 4.0, Stages of formation of Industry 4.0, key indicators for monitoring of Industry 4.0 formulation. Technologies – Machine Vision, Cyber-physical systems, Autonomous Robots and Collaborative Robots, Cloud Manufacturing, Digital Twin, Cloud technologies, Cyber Security, Virtual/Augmented Reality, Big Data, Machine Learning, and Data Analytics.	**8 Hours**
Unit III	
Machine Vision for Industry 4.0: Introduction, Need for vision systems, Functions of machine vision system, Imaging devices – Vidicon Camera, CCD, Lightning Techniques, Analog to Digital Signal Conversion, Image Storage, Simple numericals, Image processing and analysis – Techniques , Training the vison system, Applications.	**8 Hours**
Unit IV	
Machine to Machine (M2M) Communication Practice: Introduction to M2M; Definition M2M, Characteristics of M2M, M2M Current Landscape, M2M standards, M2M markets, M2M market adoption – Drivers and Barriers, M2M Value Chain, Business Modes, Early implementations and deployment of M2M communications. Smart Cards in M2M Communication – Security and Privacy issues in M2M communication, hardware based security solutions, Smart Card Properties	**8 Hours**

for M2M environments.	
Unit V	
Advances in Industry 4.0 Smart factories: Comparison of smart factories with traditional factories, Case studies: GE and Siemens Practical Application of the Industry 4.0 Concept in various industry domains Augmented reality: AR hardware and software technologies, industrial applications of AR Cyber Security: Ethics in cyberspace, Security threats and vulnerability of IOT, Industrial challenges, Cyber security measures.	**7 Hours**

Course Outcomes:

On completion of this course, the student will,

1. Learn the basic concepts of Industry 4.0
2. Apply the framework and key technologies involved in Industry 4.0
3. Apply machine vision in Industry 4.0
4. Describe how M2M communication different from Industry 4.0
5. Analyse and evaluate the importance of adopting Industry 4.0 in industries

FUNDAMENTALS OF ELECTRIC AND HYBRID VEHICLE TECHNOLOGY

Contact Hours/ Week	: 3 (L)	Credits:	3.0
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: 0	SEE Marks:	50
Sub. Code	: 7RMEE37		

Course Outline: This course introduces the fundamental concepts, principles, analysis and design of hybrid and electric vehicles. The material for this course will be prepared in such a manner that it will be useful for undergraduate students. This course goes deeper into the various aspects of hybrid and electric drive train such as their configuration, types of electric machines that can be used, energy storage devices, etc.

Course Objective: Students will be able to:

1. To help students be thorough with the concepts of Electric vehicles (EVs) and its advantages to traditional ICE vehicles in the longer run.
2. To allow students to learn the basic structure of an EV and Hybrid Vehicles
3. To provide insights into the electric motors and allied accessories that are essential for proper functioning of an EV system.
4. To enable students to learn to synthesize and characterize high performance nanomaterials for Li battery application. To enable students to design and assemble battery components and test them.
5. To help students understand the challenges and opportunities present in Battery thermal Management systems

Unit-1 Conventional IC engine vehicle – Its Limitations and environmental impact Introduction to Electric Vehicles: EV System, EV History, Electric Vehicles and the Environment, EV Advantages, EV Market, Usage Patterns for Electric Road Vehicles Types of Electric Vehicles – EV Architecture: Battery Electric Vehicles, The IC Engine/Electric Hybrid Vehicle, Fuelled EVs, EVs using Supply Lines, EVs which use Flywheels or Supercapacitors, Solar-Powered Vehicles, Vehicles using Linear Motors, EVs for the Future.	08 Hours
Unit-2 Introduction to Hybrid Vehicles: types of hybrid vehicles, Hybrid electric vehicle, series and parallel HEV's, merits and Demerits of hybrid electric vehicles. Performance of Electric vehicles, Tractive effort and energy consumption in normal driving, regenerative braking, drive cycles: simple and standard, Numericals on electric performance.	08 Hours

Unit-3 Electric vehicle power train – Brief outline of electric motor, battery pack, invertor, charger and convertor, Electric Motors- AC/DC Motors/ Generators, Brushed DC Motor/ Brushless DC Motor – Torque Characteristics, motor layout, torque vectoring, switched reluctance motors, induction motors, Basics of EV suspension.	08 Hours
Unit-4 Batteries: Types, Lithium-ion battery-materials, current trend, battery charging and discharging cycles, use of batteries in powertrain. Battery management system (BMS): Introduction, Illustration of BMS, battery pack capacity and range, Battery state evaluation: State of charge (SOC), State of health (SOH), State of Life (SOL).	07 Hours
Unit-5 Battery thermal Management systems: Thermal Issues of Li-ion battery, Operating Requirements, Overall Heat Transfer Co-efficient, Phase Change Material (PCM), Technologies of BTMS, Evaluation of Different Technologies, Modelling of BTMS.	08 Hours

Text Books:

1) James Larminie, John Lowry, Electric Vehicle Technology Explained, John Wiley & Sons Ltd, 2nd ed., 2012
2) K. T. Chau - Electric Vehicle Machines and Drives Design, Analysis and Application-Wiley-IEEE Press (2015)

4) Christopher D. Rahn, Chao Yang Wang - Battery Systems Engineering,2013 edition, John Wiley and Sons Ltd.

Reference Books:

1) C.C. Chan and K.T. Chau, Modern Electric Vehicle Technology, Oxford University Press, 2001.
2) Ali Emadi, Handbook of Automotive Power Electronics and Motor Drives, CRC Press Taylor & Francis Group, 2005
3) Iqbal Hussein, Electric and Hybrid Vehicles: Design Fundamentals, CRC Press Taylor & Francis Group, 2003.

DESIGN LABORATORY

Contact Hours/ Week	: 2 (P)	Credits : 1.0
		CIE Marks : 50
Sub. Code	: 7RMEL1	SEE Marks : 50

Course Objectives: The course makes the students to

1. To conduct experiment and determine the natural frequency of longitudinal, transverse and torsional vibration systems.
2. To balance the rotating masses in single and multiple plane.
3. To understand the working of Governors, Gyroscopes and stain gauges in order to calculate the related forces/couple/Stresses

List of Experiments

1. Natural frequency of free longitudinal vibration of spring mass system
2. Torsional vibration of single rotor shaft systems
3. Free vibrations of two rotor system
4. Longitudinal vibrations of a spring-mass damper system
5. Balancing of rotating masses in a single plane
6. Balancing the rotating masses in different planes
7. Frictional and centrifugal forces in porter governor
8. Frictional and centrifugal forces in proell governor
9. Critical speed of a whirling shaft
10. Gyroscopic behavior of rotating masses
11. Stress concentration factor using strain gauges
12. Rectangular rosette to determine the state of principal stresses
13. Determine the material fringe value by photo elastic method
14. Determine the material fringe value using a simply supported beam
15. Stress concentration using photo elastic technique
16. Plot the pressure distribution across the journal bearing

Course Outcomes:

1. **Apply** the engineering knowledge to **determine** the natural frequency, logarithmic decrement, critical speed, damping ratio and damping coefficient on longitudinal and torsional single degree of freedom vibrating systems.

2. **Identify** and **calculate** the balancing masses for rotating masses in single and multiple planes, equilibrium speed, sensitiveness, power and effort of Governor and Gyroscopic couple.

3. **Apply** the engineering knowledge to **determine** the stresses, stress concentration, principal stresses in members subjected to individual and combined loads using photo elasticity and Strain gauge techniques.

4. Determine the equilibrium speed, sensitiveness, power and effort of Porter/Prowel /Hartnel Governor.

5. Calculate the Pressure distribution in Journal bearing.

Scheme for Examination:

Experiment 1 – 20 Marks
Experiment 2 – 20 Marks
Viva-Voce –10 Marks

Total : 50 Marks

HEAT TRANSFER LAB

Contact Hours/ Week	: 2 (P)	Credits :	1.0
		CIE Marks :	50
Sub. Code	: 7RMEL2	SEE Marks :	50

Course Objectives :

- Students will examine the basic laws of heat transfer
- Students will conduct the experiments related to different modes of heat transfer
- Students will practically understand the working of different heat transfer equipment.

List of Experiments

1. Determination of thermal conductivity of a metal rod.
2. Determination of thermal conductivity of a given liquid.
3. Determination of thermal conductivity of insulating material.
4. Heat transfer through natural convection.
5. Heat transfer through forced convection.
6. Heat transfer through pin fin (Natural and Forced)
7. Estimation of Stefen Boltzman constant.
8. Emissivity of a surface.
9. Heat transfer through a composite wall.
10. Parallel flow and counter flow heat exchangers.
11. Boiling and condensation. (Demonstration)
12. Air condition test rig. (Demonstration)

Course Outcomes: In this course after conducting experiments in group student will be able to

1. **Conduct** experiments to **calculate the** thermal conductivity of different materials. (metal rod, liquid, and insulating material, composite wall). (Individual).
2. **Conduct** experiments to calculate the heat transfer coefficient and **compare** it with analytically determined heat transfer coefficient for natural and forced convection.

3. **Conduct** experiments to calculate the heat transfer coefficient for extended surfaces for natural and forced convection to calculate the effectiveness of fin.
4. Experimentally determine the emissivity and Stefan Boltzman Constant for the given surface.
5. **Conduct** experiment and calculate the effectiveness of heat exchanger for parallel and counter evaluation. (Group)

Scheme for Examination:

Experiment 1 – 20 Marks
Experiment 2 – 20 Marks
Viva-Voce – 10 Marks

Total : 50 Marks

SYLLABUS

OF

VIII Semester B.E.

INDUSTRIAL ENGINEERING AND ERGONOMICS

Contact Hours/ Week	**: 3**	**Credits :**	**3.0**
Total Lecture Hours	**: 39**	**CIE Marks :**	**50**
Total Tutorial Hours	**: 0**	**SEE Marks :**	**50**
Sub. Code	**: 8RMEE41**		

Course Objectives:

1. The students will get the knowledge of Ergonomics and Industrial design.
2. The students will get the knowledge of Productivity and Work Study.
3. Students will get the knowledge on Work Measurement, Predetermined time standards.
4. Students will get the knowledge Various Process charts and Man-Machine relationship.
5. Also the knowledge of Industrial design and its approach in Manufacturing systems.

Unit I	
PRODUCTIVITY & WORK STUDY: Definition of productivity, factors affecting productivity, definition, objective & scope of work study, Basic procedure, human factors in work study, work study & management, work study & supervisor, work study &worker.	**07 Hours**
Unit II	
METHOD STUDY: Definition, objective & scope, charts to record movements in shop, process charts, flow process charts(Man and Machine type), Multiple activity charts, two handed process charts, Micro motion study, SIMO chart, principles of motion economy.	**08 Hours**
Unit III	
WORK MEASUREMENT: Definition, objectives, Basic procedure, techniques of work measurement, work sampling, need of confidence levels, sample size determination, Procedure for selecting random observation, Uses of work sampling, Predetermined time standards, different forms of PTS System, Uses of PTS system. simple problems.	**08 Hours**
Unit IV	
TIME STUDY: Definition, time study equipments, Basic steps, selection of jobs, steps in time study, breaking jobs into elements, recording information, rating, standard performance, scales of rating, factors affecting rate of working, allowances, Calculation of allowances, standard time determination.	**08 Hours**
Unit V	

INTRODUCTION TO INDUSTRIAL DESIGN: Elements of design structure for industrial design in manufacturing systems. Ergonomics and **Industrial Design:** Introduction, general approach to the man machine relationship, workstation design-working position. Types of man machine systems.	**08 Hours**

TEXT BOOKS:

1	ILO	Work study, 3rd edition, 2006
2	Sanders & McCormick	Human Factor Engineering, McGraw Hill Publications.

REFERENCE BOOKS:

1	Brain Shakel	Applied Ergonomics Hand Book, Butterworth Scientific, London 1988

5	M.Mahajan	Industrial Engineering and Production Management, Dhanpat Rai & Co Delhi, 2001.

ONLINE RESOURCES:

1. nptel.ac.in/courses/112/107/112107142

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

COURSE OUTCOMES:

1. Impart knowledge and skills of work study and productivity concepts in industries.
2. Study the existing process, analyze, evaluate, design and develop proposed practices, charts using method study techniques.
3. Collect data, analyze the manufacturing techniques by work measurement.
4. Analyze and draw the man, machine chart to improve the efficiency of the work cycle by time study method.
5. Describe and analyze the ergonomic concepts in designing the industrial equipments, tools and machines with respect to human capabilities.

THEORY OF GAS TURBINE

Contact Hours/ Week	**: 3**	**Credits :**	**3.0**
Total Lecture Hours	**: 39**	**CIE Marks :**	**50**
Total Tutorial Hours	**: 0**	**SEE Marks :**	**50**
Sub. Code	**: 8RMEE42**		

Course Objectives: The course enables the students to

1. Learn basic principles and working of various gas turbine cycles.
2. Recognize the importance of different operating parameters of gas turbines components.
3. Identify Ideal and practical cycle for various gas turbine configurations and analyze them to find the performance of these cycles.
4. Identify and analyze factors considered in combustion chamber design and its performance.
5. Learn the details of blade materials, manufacturing, fixing and cooling aspects of turbine blades.

Unit I	
Introduction: Open and closed gas turbine cycle arrangements, Basic requirements of the working fluids, Assumptions of simple gas turbine cycles, The simple gas turbine cycle with, Heat exchange, Reheat and Intercooled cycles.	**08 Hours**
Unit II	
Ideal Cycles and Their Analysis Assumptions in Ideal Cycle Analysis, The Simple Gas Turbine Cycle, The Heat Exchange Cycle, The Reheat Cycle, The Reheat and Heat Exchange Cycle, The Intercooled Cycle, The Intercooled Cycle with Heat Exchanger, Comparison of Various Cycles. Worked Examples	**08 Hours**
Unit III	
Practical Cycle and Their Analysis: Introduction, assumptions, stagnation properties, compressor and turbine efficiency, pressure and flow losses, heat exchanger effectiveness, effect of varying mass flow, effect of variable specific heat, mechanical losses, loss due to incomplete combustion, cycle efficiency, polytropic efficiency. Worked examples	**08 Hours**
Unit IV	
Combustion System: Introduction, combustion theory applied to gas turbine combustor, factors affecting combustion chamber design, factors affecting combustion chamber performance, requirements of combustion chamber, the process of combustion in a gas turbine, combustion chamber geometry, mixing and dilution, combustion chamber arrangements	**08 Hours**
Unit V	

Turbine Blades: Blade Materials, Blade Manufacturing Techniques-Forging, casting, Fabrications and powder metallurgy, Blade Fixing, Problems of High Temperature Operation, Blade Cooling (external and internal)-Liquid Cooling, Air Cooling.	**07 Hours**

TEXT BOOKS:

1	V. Ganesan	Gas Turbines, Second edition, Tata McGraw-Hill.
2	R. Yadav	Steam & Gas Turbines and Power Plant Engineering, 7th Revised Edition, Central Publishing House.

REFERENCE BOOKS:

1	Cohen and Rogers	Gas Turbines Theory, Pearson, 7th Edition.
2	J.F. Lee	Theory and design of stream and gas turbine, McGraw Hill, 1954.

Online Resources

1. https://nptel.ac.in/courses/112/106/112106166/
2. https://nptel.ac.in/courses/101/106/101106033/

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Course Outcomes: After going through this course the student will be able to:

1. Apply the knowledge of engineering fundamentals to explain the working principle of various gas turbine configurations.
2. To identify and perform ideal cycle analysis to solve gas turbine problems by considering different variables affecting performance of gas turbine.
3. To identify and perform practical cycle analysis to solve gas turbine problems by considering different real time variables affecting performance of gas turbine.
4. To identify the important factors to be considered in designing of combustion chamber and affecting the performance of it.
5. To apply the knowledge related to turbine blade materials, manufacturing techniques and various blade cooling methods to solve practical problems on gas turbine blades.

SOLAR ENERGY

Contact Hours/ Week	**: 3**	**Credits :**	**3.0**
Total Lecture Hours	**: 39**	**CIE Marks :**	**50**
Total Tutorial Hours	**: 0**	**SEE Marks :**	**50**
Sub. Code	**: 8RMEE43**		

Course Objectives : The course makes the students to

1. The student will learn the various available forms of energy.
2. The student understand the methods of generating non conventional energy.
3. The student will study the various applications of solar energy and their economic analysis

Unit I	
Introduction to Energy Sources: World and India's Energy production and its reserves, Basics of Alternative Energy Sources like Wind energy, Biomass, OTEC, Tidal, Waves, Fuel cells, Energy from Hydrogen, Nuclear and Geothermal. Solar Radiation Thermal conversion of solar energy, its collection and storage, Solar radiation outside the Earth's atmosphere, Radiation at the Earth's surface, Instruments to measure radiation and sun shine, Solar radiation data, Solar radiation geometry, Availability of solar radiation, Radiation on tilted surface.	**04+06 Hours**
Unit II	
Liquid Flat Plate collector: Performance Analysis, Transmissivity - absorptivity product, Overall Loss Coefficient, Heat transfer correlation, Collector efficiency factor, Heat removal factor, Parameters affecting performance, Testing procedure. Problems.	**07 Hours**
Unit III	
Concentrating collectors: FPC with plane reflectors, Cylindrical Parabolic collectors, Compound Parabolic Collectors, Central Receiver Collector. Advantages and disadvantages of concentrating collectors. Selective Absorber Coating.	**06 Hours**
Unit IV	
Photovoltaic Cells: Solar cell Principle, Conversion efficiency and Power output, Basic system for power generation, Photovoltaic Arrays, Advantages and Disadvantages, Applications of Solar Cells. **Thermal Energy Storage System:** Sensible Heat storage, Latent Heat Storage, Thermo chemical Storage, Solar Ponds, Description, Performance analysis, Experimental studies, Operational Problems.	**08 Hours**
Unit V	

Applications of Solar Energy: Solar Water Heating, Heating and Cooling of Buildings, Thermo Electric conversion, Power generation, PV cells, Solar distillation, Pumping, Cooking, Hydrogen production. Hybrid system: Solar energy with other types of energy for production and transport. **Economic Analysis:** Net present value concept, Life Cycle Cost method, Cost-benefit Comparison method, Pay back Period method.	**06+02 Hours**

TEXT BOOK

4	D.S. Chauhan and S.K.Srivastava	Non Conventional Energy Resources, New Age International Publishers.

Online Resources

https://nptel.ac.in/courses/112/105/112105051/

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Course Outcomes: After the completion of this course, student will be able to:

1. Identifying and formulating types of Solar radiation.
2. Designing a solar collector and its performance evaluation with environmental considerations.
3. Using research-based knowledge and research methods to distinguish different types of concentrating collectors.
4. Selecting and applying appropriate techniques to evaluate the conversion efficiency and power output of a photovoltaic cell and solar thermal energy storage system.
5. Applications of solar energy in the context of societal, health, safety, legal and cultural issues.

SMART MATERIALS & MEMS

Contact Hours/ Week	**: 3**	**Credits :**	**3.0**
Total Lecture Hours	**: 39**	**CIE Marks :**	**50**
Total Tutorial Hours	**: 0**	**SEE Marks :**	**50**
Sub. Code	**: 8RMEE44**		

Course Objectives:

1. Develop an ability to apply knowledge of science and engineering
2. To develop an ability to understand mechanism of working of different smart materials, or process to meet desired needs within realistic constraints.
3. The determination of properties of shape memory alloys and martensite transformation in shape memory alloys.
4. The Characterization of Shape Memory alloys in Effect of composition, damping properties and corrosion properties.
5. To provide a foundation for the study of MEMS.

Unit I	
Introduction to Smart Materials: Types and classification of materials, Smart materials, Classification of smart materials, General principles of smart materials.	**08 Hours**
Unit II	
Smart Materials: Principle, mechanism of working of piezoelectric, magnetostrictive, electrostrictive, magnetorheological, electrorheological materials, smart gels etc., Applications of these smart materials	**08 Hours**
Unit III	
Shape Memory Alloys (SMAs): Shape Memory Alloy, properties (Shape memory effect and superelasticity) and preparation of shape memory alloys, types of SMAs, martensitic transformations in SMAs, martensitic crystal structures in SMAs	**08 Hours**
Unit IV	
Characterization of SMAs: Effect of composition, grain refinement and other factors on shape memory characteristics of SMAs, damping and corrosion properties of SMAs, bio-medical and engineering applications of SMAs	**08 Hours**
Unit V	
MEMS: General working principles and mechanisms of MEMS, classification of MEMS, preparation of MEMS, characterization of MEMS, application of MEMS	**07 Hours**

3. https://nptel.ac.in/content/storage2/courses/112104173/Mod_1_smart_mat_lec_1.pdf

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Course Outcomes: After the completion of this course, student will be able to:

- Able to explain the Smart materials with General principles, and classification of smart materials.
- Students will describe the ability to synthesis of Shape Memory Alloys.
- Students will assess the different properties of Shape Memory alloys and martensic transformation in SMA
- Students will analyze Characterization of Shape Memory Alloys.
- To Evaluate Damping, corrosion, Composition analysis, grain refinement of Shape Memory Alloys.

AUTOMOBILE ENGINEERING

Contact Hours/ Week	**: 3**	**Credits :**	**3.0**
Total Lecture Hours	**: 39**	**CIE Marks :**	**50**
Total Tutorial Hours	**: 0**	**SEE Marks :**	**50**
Sub. Code	**: 8RMEE51**		

Course Objectives:

- To identify and explain the knowledge on the principle of an automobile engine, which is commonly adopted in all the vehicles.
- To gain the knowledge of various systems supporting for the satisfactory working of engine.
- To describe the power transmission from engine to wheels through clutches and gear box up to driving wheels.
- To gain the knowledge of vehicle control procedure and safety measures for the user.
- To get the knowledge of modern developments in the automobile sector such as emission control, interiors in automobiles.
- To understand the principle of electric vehicles

Unit I	
Engine components, cooling & lubrication system: Components of an automobile, engine systems, construction details, cylinder arrangements and their relative merits, liners, piston, piston rings, piston pin, connecting rod, crankshaft, valves, valve actuating mechanisms, valve timing diagrams, Compression ratio, cooling requirements, methods of cooling, components of water cooling system, objectives of lubrication, different lubrication system arrangements, oil pumps, air filters .	**08 Hours**
Unit II	
Fuels supply and Ignition System: Fuel supply system, conventional fuels, fuel mixture requirements, principle of carburetor, idling circuit, multi point and single point fuel injection system, fuel transfer pumps and injector, fuel filters. **Ignition Systems:** Requirements and types, battery Ignition system, electronic ignition, automatic ignition advance methods. **Steering system**: Steering geometry, steering linkages, steering gears, power steering, over, under & neutral steer.	**08 Hours**
Unit III	
Transmission System: **Clutches**: Principle, Single plate, multi plate and centrifugal clutches. **Gear box:** Functions and necessity of transmission, constant mesh and synchromesh gear box, freewheeling mechanism, fluid coupling and torque converters, Epicyclical gear box, principle of automatic transmission. **Drive to wheels**: Propeller shaft, Hotchkiss and torque tube drives, principle of differential, rear axle, different arrangements of fixing the wheels to rear axle. **Tyres:** Types of tyres, cross section of a truck tyre, carcass types and tyre materials	**08Hours**
Unit IV	

Suspension System: Requirements, Shock absorbers, leaf spring, coil spring, independent suspension for front wheel and rear wheel. air and hydrolastic suspension system. **Brakes**: Types of brakes, mechanical, air, vacuum and hydraulic braking systems, construction and working of master and wheel cylinder, brake shoe arrangements, disk brakes, drum brakes, advantages and disadvantages of different braking systems, brakes on front, rear and all wheels. ABS.	**08 Hours**
Unit V	
Introduction to electric vehicles: Basic concept of electric traction, introduction to various electric drive-train topologies, power flow control in electric drive-train topologies, fuel efficiency analysis. **Modern development in Automobiles**: Automotive exhaust emissions, sources of emission control, emission standards, Driving cycle, pressure charging, (super and turbo charging), Alternative fuels for automotive traction, car air conditioning. Dash board indicators.	**07 Hours**

TEXT BOOKS:

1	Kirpal Singh	Automobile Engineering, Vol.I& II 2018 13th Edition
2	S.Srinivasan	Automotive Mechanics, Tata McGraw Hill, 2018.

REFERENCE BOOKS

1	R.B.Gupta	Automobile Engineering, Satya Prakashan, 2019
2	Narang	Automobile Engineering, Khanna Publishers 2019
3	Crouse	Automotive Mechanics, McGraw Hill 2019
4	Joseph Heithner	Automotive Mechanics, CBS Publishers, 2019
5	K.K.Jain and R.B. Arshana	Automobile Engineering, Tata McGraw Hill, 2018

Online resources:

1. www.car-engineer.com
2. https://nptel.ac.in/courses/107/106/107106088/

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Course Outcomes: After completion of this course, student will be able to:

1. Summarize the concepts of automobile and components of IC engine. Outline various valve actuating mechanisms, cooling system and lubricating system.
2. Outline fuel and ignition systems. Illustrate types of carburetor, MPFI and fuel injection pumps. Summarize electronic and battery ignition systems.
3. Summarize working of clutches and gearbox mechanisms. Demonstrate drive to wheels and working of differential. Illustrate the steering system, steering geometry and correct steering with power steering system.
4. Illustrate and compare types of suspension system. Classify the types of brakes and summarize their advantages and disadvantages.
5. Outline the basic concept of electric vehicles with traction and fuel efficiency. Summarize about emission standards and alternate fuels.

NON-TRADITIONAL MACHINING

Contact Hours/ Week : 3	**Credits : 3.0**

Total Lecture Hours	**: 39**	**CIE Marks :**	**50**
Total Tutorial Hours	**: 0**	**SEE Marks :**	**50**
Sub. Code	**:8RMEE52**		

Course Objectives:

1. To Learn modern machining practice for high strength, hardness & thermally resistive materials.
2. To learn capabilities of different types energies for machining.
3. To learn effects of different parameters on machining process.
4. To communicate understanding of machining technique effectively.

Unit I	
Introduction History, Classification, comparison between Traditional and non-Traditional Machining, process selections. **Mechanical Process: Ultrasonic machining(USM)** Introduction, Equipment, tool materials & tool Size, Abrasive slurry, Cutting tool system design:-Magnetostriction assembly. Mechanics of cutting:-Theory of Effect of parameter:-Effect of amplitude and frequency [Initial vibration, Effect of grain diameter, Effect of applied static, Effect of slurry, Tool & work material, USM process Characteristics:-Material removal rate, tool wear, Accuracy, surface finish, Applications. **Water jet Machining** Introduction, Cutting Equipment, machining Process, advantages and applications	**07 Hours**
Unit II	
Abrasive Jet Machining (AJM) Introduction, Equipment, Variables in AJM:- Carrier Gas, Type of abrasive, Size or abrasive grain, velocity of the abrasive jet, Mean No. abrasive particles per unit volume of the carrier gas, Work material stand off distance(SOD), nozz1e design, Shape of cut. Process characteristics- Material removal rate, Nozzle wear, Accuracy (surface finish. Applications, Advantages & Disadvantages of AJM. Abrasive Jet Machining (AJM) Introduction, Cutting Equipment, machining Process, advantages and applications	**08 Hours**
Unit III	
i) Electrochemical Removal Process Introduction, Study of ECM machine, Elements of ECM process:- Cathode tool, Anode work piece, source of DC power, Electrolyte. Chemistry of the process, ECM process characteristics-Material removal rate, Accuracy. Surface finish., ECM Tooling:-ECM tooling technique, example, Tool & insulation materials, Tool size Electrolyte flow arrangement, Handling of slug., Economics of	

ECM, Applications such as Electrochemical turning, Electrochemical Grinding. Electrochemical Honing, debarring, Advantages, Limitations. **ii) Chemical Machining(CHM)** Introduction, Elements of process, Chemical blanking Process:- Preparation of work piece preparation of masters, masking with photo resists, etching blanking, Accuracy of chemical blanking, Application of chemical blanking, chemical milling(Contour machining) Process steps-masking, Etching, process characteristics of CHM material removal rate accuracy, surface finish, Hydrogen embitterment, Advantages & application of CHM.	**08 Hours**
Unit IV	
Thermal Metal Removal Processes : Electrical discharge machining(EDM)-introduction, machine, mechanism of removal, dielectric fluid, spark generator, EDM tool design Electrode feed control, Electrode manufacture, Electrode EDM tool design: Choice of machining operation, electrode material selection, under sizing and length of electrode Machining time. Flushing-Pressure flushing, suction side flushing, pulsed flushing synchronized with movement, EDM process characteristics: Metal removal rate. Accuracy surface finish, Heat affected Zone. Machine tool selection, Application: EDM accessories applications, discharge grinding, Traveling wire EDM	**08 Hours**
Unit V	
i) Plasma Arc Machining(PAM) Introduction. Equipment thermal generation of plasma, selection of gas, Metal removal, PAM parameters, Process characteristics precautions, Applications, Advantages and limitations. **ii) Electron Beam Machining** Generation and control of Electron beam, electron beam machining theory, process Capabilities & limitations **iii) Laser Beam Machining** Introduction, Apparatus, Material Removal, cutting speed and accuracy of cut, advantages and limitations.	**08 Hours**

TEXT BOOKS:

1	PANDEY & SHAH	Modern Machining Process, TATA McGraw Hill
2	Vijay K Jain	Advanced Machining Processes, Allied Publishers.
3.	BHATTACHARAYA	New technology BHATTACHARAYA, 2000

2	Hassan El-Hofy,	Advanced Machining Processes by Hassan El-Hofy, McGraw-Hill SCHEME

ONLINE RESOURCES:

1. nptel.ac.in/courses/112/105/112105212

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Course Outcomes: After attending this course student will be able to

1. Get the knowledge of salient features in NTM processes & types of energies used in NTM methods.
2. Get the ability to distinguish between different NTM processes.
3. Get the ability to understand chemical machining & electrochemical machining.
4. Get the ability to distinguish between laser beam and ultrasonic machining processes.
5. Get the ability to understand about the advantages, drawbacks & applications of the modern machining processes.

PRODUCT LIFE CYCLE MANAGEMENT

Contact Hours/ Week	**: 3**	**Credits :**	**3.0**
Total Lecture Hours	**: 39**	**CIE Marks :**	**50**
Total Tutorial Hours	**: 0**	**SEE Marks :**	**50**
Sub. Code	**:8RMEE53**		

Course Objectives:

1. To familiarize the students with the need, benefits and components of PLM.
2. To acquaint students with Product Data Management & PLM strategies
3. To give insights into new product development program and guidelines for designing and developing a product and Virtual Product Development.
4. To familiarize the students with environmental aspects in Product Design.
5. To acquaint students with Digital manufacturing and PLM strategy.

Unit I	
Introduction to Product Lifecycle Management (PLM): Product Lifecycle Management (PLM), Need for PLM, Product Lifecycle Phases, Opportunities of Globalization, Pre-PLM Environment, PLM Paradigm, Importance & Benefits of PLM, Widespread Impact of PLM, PLM Applications **PLM Strategies:** Industrial strategies, Strategy elements, its identification, selection and implementation, Developing PLM Vision and PLM Strategy, Change management for PLM	**08 Hours**
Unit II	
Product Design: Product Design and Development Process, Engineering Design, Product Design in the Context of the Product Development Process, Relation with the Development Process Planning Phase, Relation with the Post design Planning Phase, Methodological Evolution in Product Design, Concurrent Engineering, Characteristic Features of Concurrent Engineering, Concurrent Engineering and Life Cycle Approach, New Product Development (NPD) and Strategies, Product Configuration and Variant Management, The Design for X System.	**12 Hours**
Unit III	
Product Data Management (PDM): Product and Product Data, PDM systems and importance, Components of PDM, Reason for implementing a PDM system, financial justification of PDM, barriers to PDM implementation. **Virtual Product Development Tools:** For components, machines, and manufacturing plants, 3D CAD systems and realistic rendering techniques, Digital mock-up, Model building, Model analysis, Modeling and simulations in Product Design, Examples/Case studies	**08 Hours**
Unit IV	

Integration of Environmental Aspects in Product Design: Sustainable Development, Design for Environment, Need for Life Cycle Environmental Strategies, Useful Life Extension Strategies, End-of-Life Strategies, Introduction of Environmental Strategies into the Design Process, Life Cycle Environmental Strategies and Considerations for Product Design	**05 Hours**
Unit V	
Digital Manufacturing Digital manufacturing, benefits of digital manufacturing, manufacturing the first-one, Ramp up, virtual learning curve, production planning. **Developing a PLM strategy and conducting a PLM assessment** Strategy, Impact of strategy, implementing a PLM strategy, PLM initiatives to support corporate objectives. Infrastructure assessment, assessment of current systems and applications.	**06 Hours**

TEXT BOOKS :

1	John Stark	"Product Lifecycle Management: Paradigm for 21st Century Product Realisation", Springer.
2	Fabio Giudice, Guido La Rosa, Antonino Risitano,	"Product Design for the environment"

ONLINE RESOURCES:
https://onlinecourses.swayam2.ac.in/imb19_mg01/preview

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit

Course Outcomes: After attending this course student will be able to

1. Gain knowledge about phases of PLM, PLM strategies and methodology for PLM feasibility study and PDM implementation.
2. Illustrate various approaches and techniques for designing and developing products.
3. Apply product engineering guidelines / thumb rules in designing products.

4. Acquire knowledge in applying virtual product development tools for components, machining and manufacturing plant.
5. Acquire knowledge in Digital manufacturing and PLM strategy.

RAPID PROTOTYPING

Contact Hours/ Week	**: 3**	**Credits :**	**3.0**
Total Lecture Hours	**: 39**	**CIE Marks :**	**50**
Total Tutorial Hours	**: 0**	**SEE Marks :**	**50**
Sub. Code	**: 8RMEE54**		

COURSE OBJECTIVES:

1. The purpose of this course is to introduce the concept of Rapid Prototyping & its application.
2. The students must be exposed to different RP techniques, like SLS and FDM.
3. The students have to understand the working of LOM, SGC machines and concept modelers
4. The students must understand the advantage of RP in Rapid Tooling.
5. The students must be exposed to RP process optimization techniques.

Unit I	
INTRODUCTION: Need for the compression in product development, history and development of RP systems, Survey of applications, Growth of RP industry, and classification of RP systems. Stereo lithography Principle, Process parameter, Process details, Data preparation, data files and machine details, Application	**08 Hours**
Unit II	
RP MACHINES Type of machines and process, Laser sintering, Principle of operation, process parameters, Data preparation for SLS, applications. Fusion deposition modeling, Process parameter, Path generation, applications	**08 Hours**
Unit III	
LAMINATED OBJECT MANUFACTURING: Principle, of operation, LOM materials. Process details, application. Solid ground curing, machine details, applications **CONCEPTS MODELERS:** Principle, Thermal jet printer, Sander's model market, 3-D printer. Genisys Xs printer HP system 5, object Quadra systems	**08 Hours**
Unit IV	
RAPID TOOLING: Indirect Rapid tooling -Silicone rubber tooling –Aluminum filled epoxy tooling Spray metal tooling. Direct Rapid Tooling, Rapid Tool, DMILS, Sand casting tooling, Laminate tooling soft Tooling vs. hard tooling. **SOFTWARE FOR RP:** STL files, Overview of Solid view, magics, Mimics, magic communicator, etc., Collaboration tools	**08 Hours**

Unit V	
RAPID MANUFACTURING PROCESS OPTIMIZATION: factors influencing accuracy. Data preparation errors, Part building errors, Error in finishing, influence of build orientation. **ALLIED PROCESSES:** vacuum casting, surface digitizing, surface generation from point cloud, surface modification-data transfer to solid models	**07 Hours**

NPTEL

1. https://nptel.ac.in/courses/112/104/112104265/

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit

COURSE OUTCOMES: Upon completion of this course the student will be able to:

1. Describe **t**he history and growth of Rapid Prototyping, Data preparation for RP and data Files used in RP Systems.
2. Explain the working of SLS and FDM processes, process parameters & materials
3. Explain the working of LOM & SGC processes and concept modelers with the specifications.
4. Explain the indirect and direct rapid tooling methods.
5. Analyze RP process optimization**.**

.

POWER PLANT ENGINEERING

Contact Hours/ Week	**: 3**	**Credits :**	**3.0**
Total Lecture Hours	**: 39**	**CIE Marks :**	**50**
Total Tutorial Hours	**: 0**	**SEE Marks :**	**50**
Sub. Code	**: 8RMEE61**		

Course Objectives:

1. The student will learn about different methods of power generation using Thermal, hydroelectric and nuclear power plants.
2. The student is imparted with the skill of calculating cost of power generation and learn about different types of tariff for electrical energy.

Unit I	
Steam Power Plant: Different types of fuels used for steam generation, Equipment for burning coal in lump form, strokers, different types, Oil burners, Advantages and Disadvantages of using pulverized fuel, Equipment for preparation and burning of pulverized coal, unit system and bin system. Pulverized fuel furnaces, cyclone furnace, Coal and ash handling, Generation of steam using forced circulation, high and supercritical pressures, A brief account. of L Mont., Benson, Velox, Schmidt., Loeffer and Ramson steam generators.	**08 Hours**
Unit II	
Chimneys: Natural, forced, induced and balanced draft, Calculations involving height of chimney to produce a given draft. Accessories for the Steam Generator such as super-heaters desuperheater control of super heaters, Economizers, Air Pre-heaters and re-heaters. Cooling Towers and Ponds: Different types of towers.	**07 Hours**
Unit III	
Diesel Engine Plant -Engines for Power Generation: Method of starting diesel engines, Cooling and lubrication system for the diesel engine. Filters, centrifuges, Oil heaters, Intake and exhaust system, Layout of a diesel power plant. Gas Turbine Power Plant: Advantages and disadvantages of the gas turbine plant, Open and closed cycle turbine plants with the accessories.Numerical problems on reheater, regenerator and intercoolers.	**08 Hours**
Unit IV	
Hydro-Electric Plants: Storage and pondage, flow duration and mass curves, hydrographs, Low, medium and high head plants, pumped storage plants, Penstock, water hammer, surge tanks,' gates and valves, power house, general layout. A brief description of some of the important Hydel installations in India. Choice of site for power station, load estimation, load duration curve, load factor, capacity factor, use factor, diversity factor,	

demand factor Effect of variable load on power plant, selection of the number and size of units.	**08 Hours**
Unit V	
Nuclear Power Plant: Principles of release of nuclear energy fusion and fission reactions. Nuclear fuels used in the reactors. Multiplication and thermal utilization factors. Elements of the Nuclear reactor, Moderator, control rod, fuel rods, coolants. Brief description of reactors of the following types -Pressurized water reactor, Boiling water reactor, Sodium graphite reactor, Fast Breeder reactor, Homogeneous graphite reactor and gas cooled reactor.Radiation hazards, Shieldings, Radio active waste disposal	**08 Hours**

TEXT BOOK

1	P.K Nag	Power Plant Engineering, P.K Nag. Tata Mc Graw Hill 2nd ed. 2001
2	Domakundawar, Dhanpath Rai	Power Plant Engineering, Power Plant Engineering 2003

2. https://nptel.ac.in/courses/112/107/112107291/

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit

Course Outcomes: After attending this course student will be able to

1. **Explain** the different systems of steam power plant like boilers, coal and ash handling and different furnaces.
2. **Evaluate** the height of chimney and different air circulation systems and boiler accessories.
3. **Explain** the working of diesel and gas turbine power plant for power generation.
4. **Access** the given site suitability for establishing the hydroelectric power plant and compare its types.
5. **Explain** the working of different types of nuclear power plants with their merits and demerits.

MECHATRONICS

Contact Hours/ Week	**: 3**	**Credits :**	**3.0**
Total Lecture Hours	**: 39**	**CIE Marks :**	**50**
Total Tutorial Hours	**: 0**	**SEE Marks :**	**50**
Sub. Code	**: 8RMEE62**		

Course Objectives:

1. This Subject covers the basic concepts of the various devices used for the automated machine tools and manufacturing systems to increase the productivity with accuracy.
2. The important devices covered include the applications of hydraulic and Pneumatic, sensors and feed-back devices, Electronics.
3. This Subject also covers the topics like controls systems, condition monitoring.

Unit I	
Introduction : Definition of Mechatronics, Multi-disciplinary scenario, origins. Evolution of Mechatronics, An over view of mechatronics. Design of mechatronics system. Measurement system and function of main elements of measurement systems. Objectives, advantages and disadvantages of mechatronics. Microprocessor based controllers. Principle of working of machines like CNC, automatic camera, engine management system, automatic washing machine. **Review of Transducers and Sensors:** Definition and classification of transducers – with a simple sketches , Principle. (No detailed discussions on different type of transducers), Working of transducer with a simple Example, Definition and classification of sensors. Principle of working and applications of light sensors, proximity sensors and Hall effect sensors	**08 Hours**
Unit II	
ElectricalActuators: Actuator and actuator system. Classifications of actuator system with examples. Mechanical switches. Concept of bouncing Methods of Preventing bouncing of mechanical switches. Solenoids, Relays. **Solid state switches** - Diodes, Thyristors, Triacs, Transistors, Darlington pair. Electrical actuator. Principle, construction and working of AC, DC motors. Stepper motors, permanent magnet motors, servomotors, Servo systems and control.	**08 Hours**
Unit III	
Hydraulic Actuators Valves -Classifications, Pressure Control Valves -Pressure relief valves, Pressure regulating/reducing valves, Pressure sequence valve. Flow control valves -Principle, needle valve, globe valve. Direction control valve -Sliding spool valve. Solenoid operated.	**06 Hours**

Symbols of hydraulic elements. Hydraulic cylinders - constructional features, classification and application Hydraulic motors -Types, vane motors and piston motors, applications	
Unit IV	
Digital logic & Microprocessor Digital logic, Number systems, Logic gates, Boolean algebra, Karnaugh maps, Applications of logic gates, Sequential logic gates. Introduction to Microprocessor, 8085A processor architecture Terminology- such as, CPU, Memory and address, ALU, assembler. Data, registers, Fetch cycle, write cycle, state, bus, interrupts. Micro controllers -difference between microprocessor and micro controllers. Requirements for control and their implementation in micro controllers	**09 Hours**
Unit V	
Signal Conditioning Concept, necessity, op-amps, protection, filtering, wheat stone bridge - Digital Signals -Multiplexer. Data acquisition -Introduction to digital signal processing -Concepts and different methods	**08 Hours**

5. https://mechatronics.ucmerced.edu/

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Course Outcomes: After attending this course student will be able to

1. **Apply** the knowledge of fundamentals of different engineering disciplines in mechatronic products.
2. **Identify** and incorporate the electrical actuators in products of Mechatronics.
3. **Determine** the performance of mechatronic system with Hydraulic components.
4. Analyze different logic gates and its application with 8085 microprocessor architecture.
5. Interpret and compare the digital filters for processing of discrete time in Signal conditioning.

COMPOSITE MATERIALS

Contact Hours/ Week	**: 3**	**Credits :**	**3.0**
Total Lecture Hours	**: 39**	**CIE Marks :**	**50**
Total Tutorial Hours	**: 0**	**SEE Marks :**	**50**
Sub. Code	**: 8RMEE63**		

Course Objectives

Composite materials are extending the horizons of designers in all branches of engineering, and yet the degree to which this happening can easily pass unperceived. In Composite materials, materials are combined in such a way as to enable us to make better use of their virtues while minimizing to some extent the effects of their deficiencies. Tougher and lighter materials to properties that can be tailored to suit particular design requirements. Complex shapes can be easily manufactured. Hence, cheaper and better solutions. This course is intended to impart thorough knowledge of processing aspects of composite materials, Properties and their applications. The specific Objectives are

1. To get an understanding about what composite materials are and how they are classified.
2. To study the manufacturing methods for producing PMC's and MMC's
3. To study the various physical, mechanical and elevated temperature properties of MMC's
4. To study the different machining and joining methods used for composites

Unit I	
Introduction to composite Materials: Definition and Classification of composites based on matrix and reinforcement, Characteristics of composite Materials, Role of Matrix and Reinforcements, Fibrous composites,Laminated Composites and Particulate composites, Factors which determine the properties of composites, Benefits of composites. Properties and types of matrices and reinforcements, Interface in composites, types and bonds at the interface	**06 Hours**
Unit II	
Manufacturing Process for MMC's: Introduction, Metallic matrices, Classification of MMC's, Need for production of MMC's, Interface Reactions, Processing methods like powder metallurgy, diffusion bonding. Melt Stirring, Compo/Rheo Casting, Squeeze casting, Liquid melt Infiltration, spray deposition and Insitu Processes Properties of MMC's: Physical, Mechanical, Wear, Machinability and other properties. Effect of Size, Shape and distribution of particulate on properties	**08 Hours**
Unit III	
Fiber reinforced plastic processing: Lay up and curing, fabricating process- open and closed mould process- hand lay up techniques-	

structural laminate bag molding, production procedures for bag molding- filament winding, pultrusion, pulforming, thermo-forming, injection, injection molding, liquid molding, blow molding	**08 Hours**
Unit IV	
Introduction, types of ceramic matrices, Advantages of CMC's over other composites, Processing of CMC's. Fabrication of Composites: Cutting and Machining of Composites: Water jet cutting, Laser Beam Cutting, Reciprocating Knife Cutting, Cutting of Cured Composite, Abrasive water jet cutting. Joining of Composites: Mechanical Fastening, Adhesive Bonding and Welding processes	**10 Hours**
Unit V	
Mechanics of Composite Materials : Continuous Fibres: Iso-stress Condition, Iso-strain Condition, Critical Volume Fraction of Fibre and minimum Volume fraction of fibre, Simple Numericals, and Mechanics of Discontinuous fibers, Stress Vs Strain Curves for PMC's, MMC's Application of Composites: Automobile, Aircrafts, missiles, Space hardware, Electrical and electronics, marine, recreational and Sports equipment, future potential of composites.	**07 Hours**

Online Resources:

1. https://nptel.ac.in/courses/112/104/112104229/

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Course Outcomes: After the completion of this course, student will be able to:

CO1: Describe the properties and synthesis of fibre reinforcements, matrix materials and identify matrix-reinforcement combination for given engineering application – PO1 (1)

CO2: Select an appropriate MMC's synthesizing process for engineering applications such as Filters, Piston, Bearings, connecting rod etc., confirming to given specifications and also compare the advantages of MMC's with monolithic materials - PO_2 (2)

CO3: Identify and select a suitable manufacturing technique for FRP's with an understanding the limitations of the technique – PO_2 (2)

CO4 : Identify and Describe the joining and machining methods employed in FRP's and MMC's to achieve joining/machining in composites - PO_1 (1)

CO5: Apply the fundamental principles micro mechanics such as rule of mixture to arrive at properties such as density, strength, modulus of an engineering composite – PO_2 (2)

PRODUCTION AND OPERATIONS MANAGEMENT

Contact Hours/ Week	**: 3**	**Credits :**	**3.0**

Total Lecture Hours	**: 39**	**CIE Marks :**	**50**
Total Tutorial Hours	**: 0**	**SEE Marks :**	**50**
Sub. Code	**: 8RMEE64**		

Course Objectives:
The objectives of this course are:

1. To Demonstrate how the Production operations management function interacts with the other functional areas within an organization and explain the significance of the decision-making process in Operations Management.

2. To Recognize the importance of forecasting & apply forecasting techniques.

3. To Demonstrate the concept of aggregate planning & principles underlying materials requirements planning.

4. To Apply different scheduling methods to solve shop floor problems.

5. To Explain the principles of Inventory planning and requirement.

Unit I	
OPERATIONS AND PRODUCTIVITY CONCEPTS Introduction. Historical development of POM, Definition, Operations Management system concepts, Types of production systems, Productivity, Factors affecting productivity **FACILITIES LOCATION** Types of location, Factors to be considered, Facility location models Mathematical model, Simple median model, Transportation -linear programming **FACILITIES LAYOUT** Determinants of facility layout, Objectives, Types of layout, Layout models, Simple graphic approach, Load distance analysis	**08 Hours**
Unit II	
DEMAND FORECASTING Cost of forecasting, Factors affecting forecasting, Uses of forecasting, Forecasting decision methodology, Classification of forecasting methods, Opinion and Judgmental methods, Time series methods, Forecasting procedure, Selection of forecasting model, Methods of estimating, trend, Moving average, least squares, seasonal indexes, Exponential smoothing, Regression or correlation analysis, Forecast controls	**08 Hours**
Unit III	
MATERIAL AND CAPACITY REQUIREMENT PLAN MRP, MRP Terminology, material and capacity planning flow chart, MRP components, Master production schedule, Inventory status file, Capacity requirement planning, capacity planning decisions, Decision tree analysis, structure of decision tree, Inputs and Outputs	**08 Hours**

of a CRP system, Just-in-Time production system (JIT), Problems on decision tree	
Unit IV	
SCHEDULING Factors affecting scheduling, Principles of scheduling, Scheduling strategies, Forward and Backward scheduling, Scheduling guidelines, Scheduling methodology, Charts and Boards, Priority decision rules, Johnson's Rule, Johnson's rule of 'N' jobs on three machines, 'N' jobs on 'M' machines	**08 Hours**
Unit V	
INVENTORY CONTROL Importance of inventory, Objectives of inventory control, Factors affecting inventory control, Inventory costs, Costs trade-off and economic order quantity (EOQ), Economic lot size, Parameters of inventory control (Re-ordering systems), Deterministic inventory models, ABC analysis	**07 Hours**

SCHEME OF END EXAMINATION:

There will be 10 questions, two from each unit and the students have to answer 5 full questions choosing one question from each unit.

Course Outcomes:

Upon completion of this course the student will be able to:

- **CO1:** Discuss how operations management has evolved, the trends in OM and factors affecting productivity and operations decision making (level- 1, 2).
- **CO2:** Calculate capacity requirement for given situation and Examine, analyze, evaluate, and apply Forecasting techniques to the Production operations management (Level -1, 2).
- **CO3:** Evaluate and execute Aggregate plan and Material Requirements Plan (Level 1, 3).
- **CO4:** Interpret the concepts of scheduling and sequencing (Level 1, 2).
- **CO5:** Discuss the principles of Inventory planning and requirement (level 1).

VISION of the Institute

To develop young minds in a learning environment of high academic ambience by synergising spiritual values and technologies competence.

MISSION of the Institute

To continuously strive for the total development of students by educating them in state-of the-art-technologies and helping them imbibe professional ethics and societal commitment, so that they emerge as competent professionals to meet the global challenges.

VISION of the Department:

To be the premier center for education and research in Electrical and Electronics Engineering and to produce globally competent engineers with ethical values.

MISSION of the Department:

- Develop as a center of Excellence for Electrical and Electronics Engineering education by providing the state-of –the-art infrastructure, industry relevant curriculum and effective teaching learning process.
- Contribute to the development of nation by pursuing research and development in the thrust areas of Electrical and Electronics Engineering such as Power Systems, Electrical Machines, Power Electronics and Renewable Energy Systems.
- Enable graduates to be professionally competent with strong ethical values.

PROGRAM EDUCTAIONAL OBJECTIVES (PEOs)

1. Pursuing successful career in the Electrical and Electronics Engineering and allied fields and opt for higher studies, research and to be an entrepreneur.
2. Designing solutions to Power System Engineering, Electrical Machines, Power Electronics and Renewable Energy Systems for specific industry applications and real-life problems using broad engineering knowledge.
3. Demonstrating professionalism, Ethical behavior and lifelong learning.

SCHEME & SYLLABUS

OF

III & IV SEMESTERS

B.E. ELECTRICAL &

ELECTRONICS ENGINEERING

2022-23

(A) PROGRAM OUTCOMES

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
13. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

(B) PROGRAM SPECIFIC OUTCOMES (PSOs)

1. Analyze, Design and Assess the performance of Electrical Power System and its constituent equipment
2. Analyze, Design and Develop Power Electronic Systems.

9	NCMC	NMC01	National Service Scheme (NSS)	NSS	All students have to register for any one of the courses namely National Service Scheme, Physical Education (PE) (Sports and Athletics) and Yoga with the concerned coordinator of the course during the first week of III semester. The activities shall be carried out from III semester to VIII semester (for 5 semesters). **SEE for the courses shall be conducted during VIII semester examinations** and the accumulated CIE marks shall be added to the SEE marks. Successful completion of the registered course is mandatory for award of the degree. The events shall be appropriately scheduled by Dean Academic and the same shall be reflected in the calendar prepared for the NSS, PE and Yoga activities.								
		NMC02	Physical Education (PE) (Sports and Athletics)	PE									
		NMC03	Yoga	Yoga									
		NMC04	NCC	NCC									
Course prescribed to Lateral Entry Diploma holders admitted to III semester B.E. programs													
10	NCMC	N3MATDP	Foundation of Engineering Mathematics - I	Maths	2	2	0		-	100	-	100	0
		AAP	AICTE Activity Points	40 hours community service to be documented and produced for the examination									

take up / complete the internship shall be declared fail and shall have to complete subsequently after satisfying the internship requirements. The faculty coordinator or mentor shall monitor the students' internship progress and interact with them for the successful completion of the internship.

Non-Credit Mandatory Course (NCMC):

(A) Foundation of Engineering Mathematics - I & II

(1) These courses are prescribed for III and IV semesters respectively to **lateral entry Diploma holders** admitted to III semester of B.E. programs. They shall attend the classes during the respective semesters to complete all the formalities of the course and appear for the Continuous Internal Evaluation (CIE). In case, any student fails to register for the said course/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have secured an F grade. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks. **These courses are slated for CIE only and have no SEE.**

(2) Foundation of Engineering Mathematics I and II shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.

(3) Successful completion of the courses Foundation of Engineering Mathematics I and II shall be indicated as PP in the grade card. Non-completion of the courses Foundation of Engineering Mathematics I and II shall be indicated as NP.

(B) National Service Scheme/Physical Education (Sport and Athletics)/Yoga:

(1) Securing 40 % or more in CIE, 35 % or more marks in SEE and 40 % or more in the sum total of CIE + SEE leads to successful completion of the registered course.

(2) In case, students fail to secure 35 % marks in SEE, they have to appear for SEE during the subsequent examinations conducted by the Institute.

(3) In case, any student fails to register for NSS, PE or Yoga/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have not completed the requirements of the course. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks.

(4) Successful completion of the course shall be indicated as PP in the grade card. Non-completion of the course shall be indicated as NP.

(5) These courses shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.

Innovation/ Entrepreneurship/ Societal based Internship.

(1) All the students shall have to undergo a mandatory internship of 04 weeks during the intervening period of IV and V semesters. **The internship shall be slated for CIE only and will not have SEE.** The letter grade earned through CIE shall be included in the VI semester grade card. The internship shall be considered as a head of passing and shall be considered for vertical progression and for the award of degree. Those, who do not take up / complete the internship shall be considered under F (fail) grade and shall have to complete subsequently after satisfying the internship requirements.

(2) **Innovation / Entrepreneurship Internship** shall be carried out at industry, State and Central Government / Non-government organizations (NGOs), micro, small, and medium enterprise (MSMEs), Innovation centres or Incubation centres. Innovation need not be a single major breakthrough; it can also be a series of small or incremental changes. Innovation of any kind can also happen outside of the business world. Entrepreneurship internships offers a chance to gain hands on experience in the world of entrepreneurship and helps to learn what it takes to run a small entrepreneurial business by performing intern duties with an established company. This experience can then be applied to future business endeavours. Start-ups and small companies are a preferred place to learn the business tactics for future entrepreneurs as learning how a small business operates will serve the intern well when he/she manages his/her own company. Entrepreneurship acts as a catalyst to open the minds to creativity and innovation. Entrepreneurship internship can be from several sectors, including technology, small and medium-sized, and the service sector.

(3) **Societal or social internship**. Urbanization is increasing on a global scale; and yet, half the world's population still resides in rural areas and is devoid of many things that urban population enjoy. Rural internship is a work-based activity in which students will have a chance to solve/reduce the problems of the rural place for better living. **As proposed under the AICTE rural internship programme, activities under Societal or social internship, particularly in rural areas, shall be considered for 40 points under AICTE activity point programme.**

ENGINEERING MATHEMATICS III (EC, TC, EE, IT)

Contact Hours/ Week	:3 (L)	Credits:	3
Total Lecture Hours	:39	CIE Marks:	50
Total Tutorial Hours	:00	SEE Marks:	50
Sub Code	: N3MATA		

Prerequisites: Engineering Mathematics-I and Engineering Mathematics-II.

Course objective:

1. To introduce the concept of analytic function, transformation for mapping.
2. The concept of complex variables to evaluate the integrals.
3. Introduce partial differential equations, use separation of variable method to solve wave, heat and Laplace equations.
4. To develop and conduct appropriate experimentation, analyze and interpret data and use engineering judgment to draw conclusion.
5. Introduction of Finite difference approximation to derivatives to partial differential equations.

Course Outcomes: Upon completion of this course the student will be able to:

1. Determine continuity/differentiability/analyticity of a function and find the derivative of a function. Identify the transformation (L3, L1)
2. Evaluate a contour integral using Cauchy's integral formula. Compute singularities and also the residues (L3).
3. Formulate and solve partial differential equations. Apply separation of variable method to solve wave, heat and Laplace equations (L4).
4. Apply least square method to fit a curve for the given data and evaluate the correlation coefficient and regression lines for the data (L3)
5. Compute the numerical solution of partial differential equations (L4).

UNIT-I

Complex Variables: Functions of complex variable, Definition of Limit, Continuity, Differentiability. Analytic functions, Cauchy's-Reimann equation in Cartesian and polar forms (Statement only), Properties of analytic functions (Statement only). Geometrical representation of $f(z)=w$, Conformal transformation: $w=e^z$, $w=z+\frac{1}{z}$, $w=z^2$. **8 Hrs**

UNIT-II

Complex Integration: Bilinear transformation, Properties, Complex integration, Cauchy's theorem (with proof), Converse of Cauchy's theorem, Cauchy's integral formula (with proof), residues, residues theorem, calculation of residues. **8 Hrs**

UNIT – III

Partial differential equations (P.D.E.): Formation of Partial Differential Equation, Solution of Langrange's Linear P.D.E. of the type Pp+Qq=R. Method of Separation of Variables. **Applications of P.D.E.:** Classification of PDE, Solution of one dimensional heat, wave and two dimensional Laplace's equations by the method of separation of variables. **8Hrs**

UNIT-IV

Statistics: Introduction, Definitions, Curve Fitting, equation of Straight line, parabola and exponential, correlation and regression, formula for correlation coefficient, regression lines and angle between the regression lines. **7 Hrs**

UNIT – V

Numerical Solutions to the Partial differential equations: Introduction, Finite difference approximation to derivatives, Elliptic equations, Solution of Laplace's equations, Parabolic equations, Solution of heat equation, Hyperbolic equations, Solution of wave equation. **8 Hrs**

DIGITAL ELECTRONICS CIRCUIT

Contact Hours/ Week	:3+0+2 (L+T+P)	Credits:	4.0
Total Lecture Hours	:39	CIE Marks:	50
Total Tutorial Hours	:0	SEE Marks:	50
Total Practical Hours	:26	Sub. Code:	N3CESI01

Course Objectives:

1. The properties of basic gates and simplifications of Boolean expressions using K Maps.
2. The fundamentals of combinational & sequential circuits with design examples.
3. The functionality of various memory devices.
4. Verilog data types with operators and to develop Verilog codes for digital blocks in different modelling.

Course Outcomes: After the completion of the course, students will be able to:

1. Apply the knowledge of K Maps for simplification of Boolean expressions and describe Verilog data types & operators
2. Design combinational circuits and develop dataflow, gate level and behavioral Verilog code.
3. Identify flip flops and analyze shift registers and asynchronous counters and develop behavioral Verilog code.
4. Analyze and design synchronous sequential circuits and develop behavioral Verilog code.
5. Analyze different memories and design of logic circuits using programmable logic devices.
6. Design and implement Digital circuit using MSI components along with Verilog HDL.

Unit I

Properties of Logic Gates: Noise Margin, Fan-out, Propagation Delay, Power Dissipation. Voltage and current parameters.

Simplification of Boolean Expressions: Canonical forms, Karnaugh maps (3 and 4 variable)

Introduction to Verilog HDL: HDL basic concepts: Syntax & semantics, Data types, Operators, HDL modeling types, Developing HDL code for Logic Circuits using HDL program **08 Hrs**

Unit II

Combinational Logic Circuits: Binary adders and subtracters, carry look-ahead adder, Decimal adders, Comparators- one bit and two bit, Decoders, Encoder, Multiplexer, Logic design using decoders and multiplexers. Modeling combinational logic circuits using dataflow, gate level and behavioral Verilog HDL program.

Self-study component: Decoder with 7-segment display, Parallel to serial conversion using MUX **08 Hrs**

Unit III

Sequential Circuits: Basic bi-stable element, Latches- SR Latch using NAND gates, D Latch, Gated D Latch, Flip-flops – SR, D, JK and T, Characteristic equations, Flip flop conversions Registers: shift register-SISO, SIPO, PISO, Universal shift register, Counters: asynchronous and MOD counter, ring Counter and Johnson counter, Modeling sequential circuits using behavioral Verilog HDL program

Self-study component: Tasks in Verilog HDL **08 Hrs**

Unit IV

Sequential Design: Introduction, Synchronous counter design, Mealy and Moore Models, Sequential circuit design using Mealy Model, Synchronous Sequential Circuit Analysis.

Self-study component: Develop Verilog code for sequence detector using Mealy model. **08 Hrs**

Unit V

Memory Devices: Memory types and terminology- Memory organization and operation, Memory reading and writing, RAMs, ROMs and PROMs. Read Only Memory-ROM organization, Rom timing, types of ROMs, Applications of ROMs, Semiconductor RAMs-Static RAMs, Dynamic RAMs, ROMs, Read-Write cycle of ROM and RAM.

Self-study component: Programmable logic Devices- PAL, PLA, PROM. **07Hrs**

TEXT BOOKS

1	Donald D. Givone	Digital Principles and Design, TATA McGraw-hill Edition 2017
2	A.Anand Kumar	Fundamentals of Digital circuits, PHI; 4th edition 2016
3	Samir Palnitkar	"Verilog HDL A guide to Digital Design and Synthesis" Second Edition, Pearson Education ,2003

REFERENCE BOOKS

1	Ronald J Tocci, Neal S Widmer and Regory L Moss.	Digital Systems Principles and Applications, 12th Edition, Pearson, 2017.
2	Charles H. Roth. Jr.	Digital Systems Design using Verilog, Thomson Learning, Inc, 1st edition 2015.
3	R D Sudhakar Samuel	Logic Design, Sanguine technical Publishers,2004

DIGITAL ELECTRONICS LAB (Only for CIE)

Course Objective:

To impart knowledge on

1. The practical aspects of various combinational and sequential circuits
2. Simulation of Verilog codes and verification of test bench waveforms

Course Outcomes

At the end of the course, students will be able to

1. Design and implement combinational circuits
2. Design and implement different sequential circuits
3. Simulate combinational circuits, shift registers and counters using Verilog HDL

List of experiments

Part-A Hardware Experiments:

1. Realization of Parallel Adder/ Subtractor
2. Multiplexer: Adder and Subtractor using MUX
3. Use of Decoder Chip to Drive Led Display
4. Realization of One Bit Magnitude Comparator
5. Design 3-bit up-counter using T-FF

Part-B Verilog Experiments

1. Write Verilog code for full adder using
   i) Dataflow description
   ii) Gate-level description
2. Write Verilog code for 4:1 MUX using
   i) Dataflow description
   ii) Gate-level description
   iii) Behavioral Description
3. Write Verilog code for 2:4 decoder using
   i) Dataflow description
   ii) Gate-level description
   iii) Behavioral Description
4. Write Verilog code for D FF, JK FF, T FF using Behavioral description
5. Write Verilog code for up/down counter

ANALOG ELECTRONIC CIRCUITS

Contact Hours/Week	: 3	Credits:3
Total Lecture Hours	: 39	CIE Marks:50
Sub. Code	: N3CES2	SEE Marks:50

The course objectives:

1. Introduction of MOSFET device and design of fundamental MOSFET analog circuits
2. Discuss the concept of Opamp as a black-box and design of basic Opamp based circuits.
3. Introduction to Linear ICs and design of 555 timer, Data converters and PLL based circuits.
4. Discuss and analyze various applications of Diode and introduce the concept of Power amplifiers

Course outcomes: After the completion of the course, students will be able to:

1. Able to understand the MOSFET structure, its working, small signal model
2. Able to design and analyze CS, CG, CD and Differential amplifiers
3. Able to understand the need of Power amplifiers and design Class A, Class B power amplifiers.
4. Able to design power supply and understand wave shaping circuits using diodes.
5. Able to design Opamp based amplifies, Schmitt triggers, generators, and rectifiers.
6. Able to design of circuits using Timer, PLL, ADC and DAC ICs.

UNIT I

Working Principle of MOS capacitor and MOSFET (1 hr), I-V characteristics of MOSFET, Small signal models (2hrs), Biasing of MOSFET amplifiers, Design of Common Source amplifier(2hrs), high frequency model, Miller's Theorem, frequency response of CS amplifier(3hrs). **7 Hrs**

UNIT II

CG and CD and Cascode amplifiers (2 hrs), Current mirrors, amplifiers with active loads (2 hrs) The MOS differential pair and their small signal operation (2 hrs) Differential amplifiers with active load (3 hrs). **9Hrs**

UNIT III

OPAMP: Opamp as a black box, Various applications of op-amps like inverting and non-inverting amplifiers, voltage follower, summing amplifier (2 hrs), Integrators, differentiators (1hr), Instrumentation amplifier, Square wave generator (2 hrs), Schmitt trigger, Precision rectifier (2 hrs). **7Hrs**

UNIT IV

Linear ICs: 555 timer IC and its application Astable, Mono stable MV (2 hrs). PLL 565 IC (1 hr), **DAC:** basics (1 hr), binary weighted R-DAC and R-2R DAC (2hrs), **ADC:** DAC based ADC, Successive approximation ADC, Flash ADC (2 hrs). **8Hrs**

UNIT V

Diode and its applications: Rectifier and power supply design (2 hrs), Clipping and clamping circuits (3 hrs). *Power amplifiers: Classification, Class A, B, AB andclass C power amplifiers*. (3 hrs). **8 Hrs**

Text Books:

1.	*Behzad Razavi "Fundamentals of Microelectronics", 2 nd Edition,2013, Wiley*
2.	*Adel S. Sedra, Kenneth Carless Smith, "Microelectronic Circuits", Oxford University. 6th Edition. 2014*
3.	Sergio Franco, Design with Operational amplifiers and Analog Integrated circuits, Third Edition, Mc Graw Hill

Note: 3 text books due to wide variety of topics, Normal font in the syllabus means text book 1, *Italic* is text book 2 and underlined is text book 3.

ELECTRIC CIRCUIT ANALYSIS

Contact Hours/ Week	:3+0+2 (L+T+P)	Credits:	4.0
Total Lecture Hours	: 39	CIE Marks:	50
Total Practical Hours	: 26	SEE Marks:	50
Course Code	: N3EEI03		

Course objectives: This course will enable students to:

1. About how the reduction of network is done using the techniques and to solve the DC&AC circuits using loop and node analysis.
2. Different theorems and apply those to solve the circuits.
3. To solve first and second order differential equations to obtain steady state and transient response in series & parallel RLC circuits.
4. About the analysis of balanced and unbalanced three phase circuits and the concept of resonance in RLC circuits.
5. The concept of mutually coupled circuits and current locus diagram.

Course outcomes: After the completion of the course, students will be able to:

1. Apply the techniques to reduce the network and to solve both DC and AC circuits using loop and node analysis.
2. Apply the network theorems to analyze both DC and AC circuits.
3. Obtain the steady state and transient responses of series and parallel R-L, R-C, R-L-C circuits.
4. Analyze the balanced and unbalanced star and delta connected circuits and concept of resonance in series and parallel circuits
5. Analyze the coupled circuits and to obtain the current locus diagrams of R-L-C circuits

UNIT I

Basic Circuit Concepts: Network reduction of resistive circuits by source transformation and star–delta transformation techniques. Loop and node analysis with linearly dependent and independent sources for DC and AC circuits. **8 Hrs**

UNIT II

Network Theorems: Superposition theorem, Reciprocity theorem, Thevenin's theorem, Norton's theorem, Maximum power transfer, Millman's theorem. Concept of duality and dual networks. **8 Hrs**

UNIT III

Solution of First and Second order networks: initial and final conditions in network elements, Solution of first and second order differential equations for Series and parallel R-L, R-C, R-L-C circuits, forced and free response, time constants, steady state and transient state response. **8 Hrs**

UNIT IV

Three-phase circuits: Analysis of balanced & unbalanced star and delta connected loads, Neutral shift. Resonance in RLC circuits: Series resonance, parallel resonance, Resonance curve, Q-factor and Bandwidth in series and parallel resonance circuits. **8 Hrs**

UNIT V

Coupled Circuits & Locus Diagrams: Analysis of coupled circuits, Dot convention, conductively coupled equivalent circuits, Current locus diagrams in series and parallel RLC circuits.

7 Hrs

TEXT BOOKS:

1	Hayt Kemmerly and Durbin.	Engineering Circuit Analysis. Ed 6. THM. 2002.
2	M E Van Valkenburg	Network Analysis. Ed 3. PHI. 2002.

REFERENCE BOOKS:

1	Carlson A. Bruce	Circuits. Thomson learning. 2002.
2	Joseph Edminister & Nahvi M.	Theory and problems of Electric Circuits. Ed. 3. THM.

Laboratory component: (Only for CIE)

1. Measurement of low resistance using Kelvin's Double Bridge (KDB).
2. Measurement of inductance using Maxwell's bridge & determination of Q-factor.
3. Measurement of Capacitance using De-sauty's Bridge & determination of Dissipation Factor.
4. Measurement of Power in a balanced 3-Phase Circuits using Two Wattmeter for Star & Delta Connected Loads.
5. Resonance Characteristics for series and parallel circuits.
6. Verification of Network Theorems (both hardware and simulation)
7. Simulation of RL, RC and RLC circuits with DC excitation.
8. Simulation of RL, RC and RLC circuits with AC excitation.
9. Locus diagrams of RLC circuits using MATLAB.

ANALOG ELECTRONIC CIRCUITS LAB

Lab Hours/ Week	: 0+0+2(L+T+P)	Credits:	1.0
Sub. Code	: N3EEL01	CIE Marks:	50
		SEE Marks:	50

Course Objectives: Analyze to design, and test various electronic circuits based on semiconductor devices.

Course Outcomes: Student will be able to:

CO1: Design a regulated power supply for the given specifications.

CO2: Test and analyze clipping & clamping circuits.

CO3: Design and test Instrumentation amplifier.

CO4: Rigup & test precision rectifiers.

CO5: Design and test multi-vibrators using 555 timers.

CO6: Design and test data converter circuits.

LIST OF EXPERIMENTS

1. Power supply– Full wave rectifier, Design with C filters for specific load voltage & current and ripple factor.
2. Clipping and clamping circuits.
3. RC coupled single stage CE amplifier– frequency response, determination of voltage gain, input and output impedances with and without by-pass capacitor.
4. RC coupled single stage MOSFET amplifier– frequency response, determination of voltage gain, input and output impedances with and without by-pass capacitor.
5. Class AB Push-pull amplifier- determination of conversion efficiency.
6. Basic op-amp circuits.
7. Precision rectifiers.
8. 555 Timer – Astable and Monostable multivibrator.
9. DAC & ADC
10. Sinusoidal waveform generator (Wein Bridge)/ (RC Phase shift)
11. Generation of Sine, Square & Triangular waveforms (Function Generator) using ICL8038 IC.
12. LM 723 Voltage Regulators (High and Low voltage)

Experiments 11 to 12 are Open ended experiment.

Universal Human Values, Social Connect and Responsibility

Contact Hours/Week	: 1+0+0+0 (LTPS)	Credits:	1.0
Total Lecture Hours	: 13	CIE Marks:	50
Total Tutorial Hours	: 00	SEE Marks:	50
Course Code	: **NHS04**		

Pre-requisites: Universal Human Values (conducted during induction programme)

Course objectives:

1. Explore about themselves (human beings), family, society and nature/existence.
2. Appreciate the harmony in the human being, family, society and nature/existence
3. Strengthen holistic perception of co-existence and mutual fulfilment among the four orders of nature.

Course Outcomes: On successful completion of the course, the students will be able to

1. Become more aware of themselves, and their surroundings (family, society, nature)
2. Become more responsible in life, and value human relationships and human society
3. Have better critical ability in handling problems and in finding sustainable solutions

Unit I

Understanding Harmony in the Human Being - Harmony in self

Understanding human being as a co-existence of the sentient 'I' and the material 'Body'; Understanding the needs of Self ('I') and 'Body' - happiness and physical facility; Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer); Understanding the characteristics and activities of 'I' and harmony in 'I'; Understanding the harmony of 'I' with the Body: Sanyam and Health, correct appraisal of Physical needs, meaning of Prosperity in detail, Include discussions to differentiate between i)Prosperity and accumulation. ii) Ensuring health vs dealing with disease. **5 Hrs.**

Unit II

Understanding Harmony in the Family and Society - Harmony in Human-Human Relationship

Understanding values in human - human relationship, meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness, Trust and Respect as the foundational values of relationship; Understanding the meaning of Trust, Difference between intention and competence; Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship; Understanding the harmony in the society (society being an extension of family)- Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals. **4 Hrs.**

Unit III

Understanding Harmony in the Nature and Existence - Whole-existence as Co-existence

Understanding the harmony in the Nature; Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self-regulation in nature; Understanding Existence as Co-existence of mutually interacting units in all-pervasive space; Holistic perception of harmony at all levels of existence. Include discussions on-human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc. **4 Hrs.**

1. Gaur, R.R. & Sangal R – 'Foundation Course in Human Values and Professional Ethics; Presenting a universal approach to value education through self-exploration', Excel Books, Bangalore, 2016, ISBN: 978-8-174-46781-2

Reference Book:

1. Tripathi A.N. – 'Human Values', New Age International Publisher, 2003, ISBN: 81-224-1426-5

Evaluation Pattern:

Two Tests of 25 marks each and 45 minutes duration

SEE for 50 marks and examination duration is 90 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	45	25 marks	25 marks
Test-2	14th Week	45	25 marks	25 marks
CIE			50 marks	50 marks
SEE		90	50 marks	50 marks
Total			**100 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern may be hybrid type with MCQs and descriptive questions.*

- *10 Marks MCQs*
- *3 descriptive questions of 5 marks each*
- *All the questions are compulsory*

SEE: *SEE pattern may also be hybrid type with MCQs and descriptive questions.*

- *20 Marks MCQs*
- *1 descriptive question of 10 marks from each of the units (total 3 questions) or*
  2 questions of 5 marks from each of the units (total 6 questions)
- *All the questions are compulsory*

baLake Kannada (Kannada for Usage)

Contact Hours/ Week	: 2 (T)	Credit:	1.0
Total Lecture Hours	: 0	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course Code	: NHS01		

Course Learning Objectives:

1. To create the awareness regarding the necessity of learning local language for comfortable and healthy life.
2. To enable learners to Listen and understand the Kannada language properly.
3. To speak, read and write Kannada language as per requirement.
4. To train the learners for correct and polite conservation.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. □□□□ □□□□□□□□□□ □□□□□□□□□□ □□□□□□□□ □□□□□□□ □□□□□□ □□□□□□□□□□ □□□□□□□□□□□□□□□□□□ □□□□□□□□□□□□.
2. □□□□□□ □□□□□ □□□□□□□□□□□□□ □□□□□□□□ □□□□□□□□□□□□□□□□□ □□□□□□□□□□□□□□ □□□□□ □□□□□□□□□□ □□□□□□□□□ □□□□□□□□ □□□□□ □□□□□□□□□□□□□.
3. □□□□□ □□□□□□□□□□ □□□□□□□□□□□ □□□□□□□□□□ □□□□□□□□□ □□□□□□□□□□□□□□□ □□□□□ □□□□□ □□□ □□□□□ □□□□□□□□ □□□ □□□□□□□□ □□□□□□□□□□□□ □□□□ □□□□□□□□□□□□□□ □□□□□□□□□□□□□□□□.
4. □□□□□□□□ □□□□□□□□□□□□ □□□□□□□□ □□□□□□□□□□ □□□□□□□□□□□□□□□□□□□□ □□□□□ □□□□□□□ □□□□□□□□□□□□ □□□□□□ □□□□□ □□□□□ □□□□□□□□ □□□□□□□□ □□□□□□□□ □□□□□ □□□□□□□□□□□□□. □□□□□□□ □□□□□□□□□□□□□□□□□□ □□□□□□□□□□□ □□□□□□□ □□□□□□□□□□□□□ □□□ □□□□□□ □□□□□□ □□□□□□□□□□□□ □□□□□□□ □□□□□□□□□□□□□□□□□□□□.
5. □□□□□ □□□□□□□ □□□□□□□□□□□ □□□□□□□□ □□□□□□□ □□□□□□ □□□□□□□□□□ □□□□□□□ □□□□□□□□□□□□□□□□□□ □□□□□□□□□□□□□□□□□□□□□□□ □□□□□□ □□□□□□□ □□□□□□□□□□□□□ □□□□□□□□□□□.

Unit I

1. Introduction, Necessity of learning a local language. Methods to learn the Kannada language.
2. Easy learning of a Kannada Language: A few tips. Hints for correct and polite conservation, Listening and Speaking Activities
3. Key to Transcription.

4. □□□□□□□□□ □□□□□□□□□□□□/□□□□□□□□ □□□□□□□□□□□ □□□□□□ ಪ್ರಶ್ನಾರ್ಥಕ □□□□□□ - Personal Pronouns, Possessive Forms, Interrogative words

5 Hrs

Unit II

1. □□□□□□□□ ಸಂಬಂಧಾರ್ಥಕ □□□□□□□, □□□□□□□□□□□□ □□□□□□□□□□□□ □□□□□□ □□□□□□□□□□ □□□□□□□□□ - Possessive forms of nouns, dubitive question and Relative nouns.
2. □□□, □□□□□□□ □□□□□□ ವರ್ಣಬಣ್ಣ □□□□□□□□□□, □□□□□□□□□□□□□□□ Qualitative, Quantitative and Colour Adjectives, Numerals
3. ಕಾರಕ ರೂಪಗಳು ಮತ್ತು ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು - ಸಪ್ತಮಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯ - (ಆ, ಅದು, ಅವು, ಅಲ್ಲಿ) Predictive Forms, Locative Case

4 Hrs

Unit III

1. ಚತುರ್ಥಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯದ ಬಳಕೆ ಮತ್ತು ಸಂಖ್ಯಾವಾಚಕಗಳು - Dative Cases, and Numerals
2. ಸಂಖ್ಯಾಗುಣವಾಚಕಗಳು ಮತ್ತು ಬಹುವಚನ ನಾಮರೂಪಗಳು - Ordinal numerals and Plural markers
3. ನ್ಯೂನ/ನಿಷೇಧಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು ಮತ್ತು ವರ್ಣ ಗುಣವಾಚಕಗಳು - Defective / Negative Verbs and Colour Adjectives

5 Hrs

Unit IV

1. ಅಪ್ಪಣೆ/ಒಪ್ಪಿಗೆ, ನಿರ್ದೇಶನ, ಪ್ರೋತ್ಸಾಹ ಮತ್ತು ಒತ್ತಾಯ ಅರ್ಥರೂಪ ಪದಗಳು ಮತ್ತು ವಾಕ್ಯಗಳು Permission, Commands, encouraging and Urging words (Imperative words and sentences)
2. ಸಾಮಾನ್ಯ ಸಂಭಾಷಣೆಗಳಲ್ಲಿ ದ್ವಿತೀಯ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ಸಂಭವನೀಯ ಪ್ರಕಾರಗಳು Accusative Cases and Potential Forms used in General Communication
3. 'ಇರು ಮತ್ತು ಇರಲ್ಲ' ಸಹಾಯಕ ಕ್ರಿಯಾಪದಗಳು, ಸಂಭಾವ್ಯಸೂಚಕ ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು - Helping Verbs; "iru and iralla", Corresponding Future and Negation Verbs
4. ಹೋಲಿಕೆ (ತರ-ತಮ), ಸಂಬಂಧ ಸೂಚಕ ಮತ್ತು ವಸ್ತು ಸೂಚಕ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಪದಗಳ ಬಳಕೆ - Comparative, Relationship, Identification and Negation Words

6 Hrs

Unit 5

1. ಕಾಲ ಮತ್ತು ಸಮಯದ ಹಾಗೂ ಕ್ರಿಯಾಪದಗಳ ವಿವಿಧ ಪ್ರಕಾರಗಳು – Different types of forms of Tense, Time and Verbs
2. -ದ್, -ತ್, -ತು, -ಇತು, -ಆಗಿ, -ಅಲ್ಲ, -ಗ್, -ಕ್, ಇದೆ, ಕ್ರಿಯಾ ಪ್ರತ್ಯಯಗಳೊಂದಿಗೆ ಭೂತ, ಭವಿಷ್ಯತ್ ಮತ್ತು ವರ್ತಮಾನ ಕಾಲ ವಾಕ್ಯ ರಚನೆ. Formation of Past, Future and Present Tense Sentences with Verb Forms
3. Kannada Vocabulary List: ಸಂಭಾಷಣೆಯಲ್ಲಿ ದಿನೋಪಯೋಗಿ ಕನ್ನಡ ಪದಗಳು - Kannada Words in Conversation.

6 Hrs

ಬಳಕೆ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಅನುಕೂಲಗಳು ಮತ್ತು ಫಲಿತಾಂಶಗಳು: **Course Outcomes**

At the end of the Course, The Students will be able

1. To understand the necessity of learning of local language for comfortable life.

2. To Listen and understand the Kannada language properly.
3. To speak, read and write Kannada language as per requirement.
4. To communicate (converse) in Kannada language in their daily life with Kannada speakers.
5. To speak in polite conservation.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration
SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*

CONSTITUTION OF INDIA AND PROFESSIONAL ETHICS

Contact Hours/ Week	: 2 (T)	Credits:	1.0
Total Lecture Hours	: 0	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course Code	: NHS03		

Course Objectives:

1. To introduce the students to the basic structure, fundamental rights and duties enshrined in the constitution of India.
2. To introduce to the system of governance at the centre and the states.

3. To enlighten the students about the method of amendment to the constitution and special provisions of constitution.
4. To enable the students to imbibe ethical practices and moral values.
5. To learn from the life story of leaders such as Sir M Visvesvaraya.

Course Outcomes: On successful completion of the course, the student will be able:

1. To orient students on the salient features of the Indian Constitution with special emphasis on fundamental rights and duties.
2. To provide an overview of the Union and State legislature, executive and judiciary.
3. To explain the importance of electoral process and help students appreciate the ethical practices in elections.
4. To facilitate the students to have a clear perspective of the Ethical values and their relevance in the present context of globalization.
5. To enable the students familiarize themselves with the ethical values proposed and practiced by the great leaders / eminent personalities with particular reference to Sir M. Visvesvaraya.

Part I: Constitution of India

Unit I

Introduction to Constitution of India: Salient Features of Indian Constitution, Preamble to the Indian Constitution, Different kinds of fundamental rights, Directive Principles of State Policy, Categorical study of Directive Principles, Relationship between DPSP and Fundamental Rights, Fundamental Duties. Meaning and kinds of human rights and safeguards. **6 Hrs.**

Unit II

Union and State Governments: Union and State Legislature: Composition and powers of Loksabha, Rajya Sabha, Legislative Assembly and Legislative Council. Union and State Executive: The appointment and powers of President, Vice-president, Prime-Minister, Union Council of Ministers, Governor of State, Chief Minister of State and State Council of Ministers. Union and State Judiciary: The Composition and powers of Supreme Court and High Court. **7 Hrs.**

Unit III

Other Provisions of Constitution: Method of amendment of constitution of India, 42nd and 44th amendment act. Special provisions relating to SC / ST, Women and Children and other backward classes. Electoral process related to the Election Commission of India: Composition, functioning and removal of the Election Commissioner(s). **Human Rights:** Meaning, Kinds and Safeguard of Human Rights, State Human Rights Commission and National Human Rights Commission. **5 Hrs.**

Part II -Professional Ethics

Unit IV

Professional Ethics and Human Values: Introduction, what is Ethics? Scope of Professional Ethics, Values and Characteristics, Types of values: Negative and positive values, Ethical values for Professional success. ***Case Studies*:** Ethical practices of the reputed Indian Companies: TATA Group, Wipro Technologies. **4 Hrs.**

Unit V

Professional Code of Conduct: Introduction, Professional Code, Legal System, Ethical and Unethical practices, Making the Professional Code successful. Ethical values of Sir M. Visvesvaraya, Mahatma Gandhi and Swami Vivekananda.

4 Hrs.

INTRODUCTION OF SOLAR PHOTOVOLTAIC (INTEGRATED)

Lab Hours/ Week	: 0+0+2(L+T+P)	Credits:	2.0
Total Practical hours/Week	: 26	CIE Marks:	50
Total Theory hours/Week	: 13		
Sub. Code	: N3EEA01	SEE Marks:	50

Solar Photovoltaic (SPV) systems: Operating principle, Photovoltaic cell concepts, Types of solar cells, fabrication of SPV cells, Cell, module, array (Series and

parallel connections),Concept of bypass diodes, SPV system components and their characteristics, Variation of I-V and P-V characteristics of a solar cell with Insolation and Temperature, Impact of shading condition on solar cell, Applications, Present Status of Solar Power in India.

LIST OF EXPERIMENTS

1. Demonstration of I-V and P-V Characteristics of PV Module with Varying radiation and Temperature.
2. Demonstration of I-V and P-V Characteristics of Series and Parallel Combination of PV Modules.
3. Experiment on the effect of variation of tilt angle on PV module Power.
4. Demonstration of the effect of shading on module Output Power.
5. Demonstration of working of diodes as Bypass diode and Blocking Diode.
6. Power flow calculations of stand-alone PV system of DC load with Battery
7. Power flow calculations of stand-alone PV system of AC load with Battery
8. Power flow calculations of stand-alone PV system of DC and AC load with Battery

Electrical Wiring

Lab Hours/ Week	: 0+0+2(L+T+P)	Credits:	2.0
Total Practical hours/Week	: 26	CIE Marks:	50
Total Theory hours/Week	: 13		
Sub. Code	: N3EEA02	SEE Marks:	50

Basic Circuit Concepts, Electrical wiring layout, Design and Drawing, Type of loads, Load calculation, Electrical safety and earthing,

LIST OF EXPERIMENTS

1. Fluorescent lamp wiring
2. Stair case wiring
3. Measurement of electrical quantities-voltage current, power & power factor in RLC circuit
4. Residential house wiring using fuse, switch, MCB, indicator, lamp and energy meter
5. Measurement of energy using single phase energy meter.
6. Measurement of resistance to earth of electrical equipment.
7. Study of Earthing

TRANSFORM TECHNIQUES IN ELECTRICAL ENGINEERING

Contact Hours/Week	:	3 (L)	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	0	SEE Marks	:	50
Course Code	:	N4EE04			

Course Objectives: This course will enable students to:

1. Understand the fundamental characteristics of signals and systems.
2. Development of the mathematical skills to solve problems involving convolution, filtering, modulation and sampling
3. Understand the process of sampling and the effects of under sampling.
4. Analyze system properties based on impulse response and Fourier analysis.

Course Outcomes: After the completion of this course, students will be able to:

1. **Describe** the properties and analyze continues time and Discrete time signals and systems.
2. **Analyze** the Time Domain Representation of LTI Systems.
3. **Apply and Analyze** Fourier analysis tools like FT and DTFT to continuous time and discrete time signals.
4. **Apply** Z-Transform to time domain signals.
5. **Apply** the technique of Laplace transform to analyze both DC and AC circuits.

UNIT I

Introduction: Definition of signals and systems, Mathematical Representation, Classification of signals, Operation on signals, Elementary signals, Systems viewed as interconnection of operations, Properties of systems. **8 Hrs**

UNIT II

Time Domain Representation of LTI Systems: Introduction, impulse response representation of LTI systems, Properties of impulse response representation, difference equation representation of LTI systems. **8 Hrs**

UNIT III

Fourier Transforms of signals and its application: Introduction, Discrete Time non periodic signals: DTFT representation, Continuous Time non periodic signals: FT representation, Properties of Fourier transforms and DTFT. Introduction, Frequency response of LTI systems, Fourier Transform representation of periodic signals, Fourier Transform representation of Discrete time signals, Sampling, reconstruction of continuous time signals. **8 Hrs**

UNIT IV

Z-Transform: Introduction, Properties of ROC, Properties of Z-transform, inversion of Z-transform, Transform analysis of LTI systems, stability & causality, Unilateral Z-transform and its application **7 Hrs**

UNIT V

Laplace Transform: Wave form synthesis- Determination of Laplace Transform of different types of wave forms using unit step, ramp and other

signals**, Solution** of networks with DC and AC excitation, Application of Fourier series to the circuits applied with non- sinusoidal signals.

8 Hrs

TEXT BOOKS:

1.	Simon Haykin.	Signals and Systems. 2nd Edition. John Wiley 2002.
2.	J. G. Proakis and D. G. Manolakis	Digital Signal Processing: Principles, Algorithms and Applications, PHI, 1997.

REFERENCE BOOKS:

2.	Oppenheim and Willsky.	Signals and Systems. Pearson India; 2nd edition,2015

CONTROL SYSTEMS

Contact Hours/ Week	: 3+0+2 (L+T+P)	Credits: 4.0
Total Lecture Hours	: 39	CIE Marks:50
Total Practical Hours	: 26	SEE Marks:50
Sub. Code	: N4CESI01	

Course Objectives: This course will enable students to:

1. To understand concepts of the mathematical modeling, Definitions, Classification, Relative merits and demerits of open and closed loop systems, Linear and non-linear systems, Transfer function, Block diagrams reduction techniques and signal flow graphs applicable to electrical network.
2. Steady-state errors and error constants, Concepts and applications of P, PD, PI and PID types of control.
3. Feedback control and stability analysis in Time and Frequency domains: Definition, Routh-Hurwitz criterion and Root locus techniques
4. Stability analysis in Time and Frequency domains: Nyquist criterion, Bode plots, Relative stability, Gain margin and phase margins.
5. Compensation: Lead, Lag and lag-lead compensators, Design of compensating networks for specified control system performance. State Space Analysis: State models, State space equations, Transfer function, Transfer model, State space representation of dynamic systems.

Course Outcomes: After the completion of this course, students will be able to:

1. **Formulate** the mathematical model for linear-time-invariant systems and obtain the transfer functions using block diagram reduction technique and signal flow graphs.
2. **Analyze** transient and steady state responses for first order and second order linear-time-invariant systems with standard signals. **Design and analyze** the performance of feedback controllers to improve the stability of linear-time-invariant systems.

3. **Analyze and interpret** the stability of linear-time invariant systems by applying RH criteria and root locus techniques.
4. **Analyze and interpret the** stability of linear-time-invariant systems in frequency domain analysis by Nyquist plot and Bode plot techniques.
5. **Design** of Lead, lag and lead-Lag compensators for improving the stability of linear-time-invariant systems and develop **the** state models for the linear-time-invariant systems.

UNIT I

Modeling of linear-time-invariant Systems: Introduction to control system, Open loop and Closed loop systems. Mathematical models of physical systems– mechanical systems, Electrical systems.

- Translational and rotational systems
- Transfer function of Electrical networks, Relevant examples

Block diagrams and signal flow graphs: Block diagram algebra/ signal Flow graph, Mason's gain formula applicable to electrical systems. **7Hrs**

UNIT II

Time Response Analysis: Unit step response of first and second order linear-time-invariant systems, time domain specifications, transient response of second order linear-time-invariant systems, steady state error analysis.

Feedback Controllers: Design of feedback controllers based on timeresponse applicable to electrical systems. Relevant examples.

8Hrs

UNIT III

Concept of Stability: **Frequency Response Analysis:** Routh-Hurwitz Criteria, Relative Stability analysis. **Root–Locus Techniques**: The root locus concepts, Construction of Root-loci, effect of addition of poles and zeros to the linear time invariant systems and its applications to electrical systems. Relevant examples and applications. **8Hrs**

UNIT IV

Frequency-response analysis: Frequency domain specifications, Correlation between time and frequency response, Polar plots, Bode plots, Closed-loop frequency response (Transfer function) from Bode Plot, Nyquist stability, Relative stability using Nyquist Stability criterion-Gain and phase margin, Stability analysis in Electrical systems. Relevant examples and applications. **8Hrs**

UNIT V

System Compensation: Design of Lead compensator, Lag compensator, Lag-Lead compensation as applicable to electrical systems. Suitable examples and applications.

State variable analysis: Concepts of state, state space, state variable, state model of electrical systems, State equation, solution of state equation, state transition

matrix. **8Hrs**

TEXT BOOKS:

2.	Nagrath and Gopal M.	Control Systems Engineering. Ed 4, New Age International (P) Limited.2005. ISBN 10: 8122422845ISBN 13: 9788122422849.

REFERENCE BOOKS:

1.	Ogata K.	Modern Control Engineering. Ed 4. Pearson Education Asia/PHI. 2002.
2.	Kuo C. Benjamin	Automatic Control Systems, Wiley; 9th edition,2014 Language: English, ISBN 10: 9788126552337 ISBN-13: 978-8126552337

LAB COMPONENTS (Only for CIE)

1. Using MATLAB/ SCILAB/Any tool:

a) Simulation of a second order system and determination of step response and evaluation of time domain specifications for any given electrical system.

b) Evaluation of the effect of additional poles and zeroes on time response of a given second order system.

c) Evaluation of effect of pole location on stability.

d) Effect of loop gain of a negative feedback system on stability of a given electrical system.

2. To study step response transient and steady state response of a second order system series RLC electrical circuit for □ □11,□ □1, and □ □1.
3. To study the effect of P, PI, PD and PID controller on step response of a feedback control system using hardware setup.
4. To design a phase lead compensating network for the given specifications, and determine maximum phase lead and the frequency obtain its frequency response.

   a) Experiment to draw the frequency response characteristic of a given lead compensating network.

   b) To determine the transfer function from obtained frequency response characteristics.
5. To design phase lag compensating network for the given specifications and determine the maximum phase lag and the frequency and obtain its frequency response.

   (a) Experiment to draw the frequency response characteristic of a given lag compensating network.

   (b) To determine the transfer function from obtained frequency response characteristics.
6. Experiment to draw the frequency response characteristic of a given lag- lead compensating network.

7. Using MATLAB/SCILAB:

   a) To examine the relationships between open-loop frequencyresponse and stability, open loop frequency and closed loop transient response

   b) To study the effect of addition closed loop poles and zeroes on closed loop transient response.

8. Using MATLAB/SCILAB

   a) Effect of open loop and zeroes on root locus contour

   b) To estimate effect of open loop, gain on the transient response ofclosed loop system by using Root locus

   c) Comparative study of Bode, Nyquist and Root locus with respect to Stability of a system.

9. Design a P, PI, PID controller using trial and error method and study its transient and steady state behavior for each type of inputs.

EMBEDDED SYSTEMS

Contact Hours/ Week	: 3+0+2 (L+T+P)	Credits:	4.0
Total Lecture Hours	: 39	CIE Marks:	50
Total Practical Hours	: 26	SEE Marks:	50
Sub. Code	: N4CESI02		

Course Objectives: This course will enable students to:

1. Understand hardware and software design requirements of embedded systems.
2. Develop application software using 8051 microcontrollers
3. Describe the role of embedded system in IoT.

Course Outcomes: After the completion of this course, students will be able to:

1. CO1 Apply the knowledge of engineering fundamentals to describe embedded systems and analyse the IoT conceptual framework.
2. CO2 Analyse the architectural features of 8051 and design memory interfacing.
3. CO3 Analyze the 8051-instruction set and develop the arithmetic and logical programs using the instructions in various addressing modes.
4. CO4 Analyse and develop the programming applications using timer/counter, I/O ports and serial communication.
5. CO5 Illustrates the interrupt concept in 8051 and develop ALP to interface the microcontroller with peripherals.

UNIT-I

Introduction to Embedded systems: Introduction, Embedded system Vs General purpose computing system, classification of embedded system, typical embedded system, core of embedded system, sensors and actuators, Embedded RTOS. (Text-1) Introduction to Microcontroller family, 8051 block diagram. (Text- 3)

Introduction to Internet of Things (IoT): Definition, vision, conceptual framework, Major components of IoT system. (Text-2) **7 Hrs**

UNIT-II

Introduction to Microcontroller: Features, architecture, programming model, pin description of the 8051, memory organization, register banks, stack, PSW, addressing modes and External memory interfacing (Program and Data Memory). (Text-3) **8 Hrs**

UNIT-III

Instruction set of 8051: Data transfer instructions, Arithmetic Instructions, Logical Instructions, Branch control instructions, Bit oriented instructions.
Application Programs: Incrementing, Decrementing, Addition, Subtraction, Multiplication and Division, Decimal Arithmetic, sorting programs. (Text-3)

8 Hrs

UNIT-IV

8051 Peripherals: I/O Ports: Input /output port structures of 8051, Programming of ports. **Timer/Counter:** Programming 8051 Timers, Counter Programming (Programming using Assembly language)
Serial Communication: Basics of Serial Communication, 8051 Connections to RS-232, and 8051 Serial port Programming. (Programming using Assembly language) (Text-3). **8Hrs**

UNIT-V

Interrupts: 8051 Interrupts, Programming Timer Interrupts, Programming External Hardware Interrupts, Programming the Serial Communication Interrupts, Interrupt Priority in the 8051. (Programming using Assembly language)
Interfacing with peripheral: Interfacing 8051 to LCD, DAC, ADC 0804 and keyboard. (Text-3) (Programming using Assembly language) **8Hrs**

TEXT BOOKS:

1.	Shibu K V	Introduction to Embedded Systems, 2nd edition, Tata Mc Graw Hill Education Pvt. Ltd., 2017
2.	Raj Kamal	Internet of Things: Architecture and Design Principles, 1st edition, Mc Graw Hill Education Pvt. Ltd., 2017.
3.	Muhammad Ali Mazidi and Janice Gillespie Mazidi and Rollin D. McKinlay	The 8051 Microcontroller and Embedded Systems using assembly and C, II Edition Pearson, 2009.

REFERENCE BOOKS:

1.	Kenneth J. Ayala	The 8051 Microcontroller, Ed III, Thomson Delmar Learning, 2005

INTEGRATED LAB (For CIE only)

Objectives: This course will enable students to:

1. Develop and debug 8051 ALP to solve complex problems
2. Program Embedded system for IoT applications

Part A: 8051 Assembly Language Programming using Keil

1. Assembly Language Programs on addition, subtraction, multiplication, division of numbers.
2. Assembly Language Programs for searching and sorting of numbers, averaging of numbers.
3. Assembly Language Programs to find GCD, LCM, Counters.
4. ALP on Timers and serial communication

Part B: 8051 C programming Using Keil software (interfacing programs)

1. Interfacing programs using C: i) DAC ii) Keyboard and LCD
iii) Elevator iv) DC motor/stepper motor v) ADC

Part C: IoT for sensor data acquisition using IoT Evaluation board

Familiarization with arduino board and perform necessary software installation.

1. To interface LED/Buzzer with arduino and to write a program to turn on LED for 1sec after every 2 sec.
2. To interface push button/digital sensor (IR/LDR) with arduino and write a program to turn on LED when push button is pressed. Integrating temperature sensor and humidity sensor with IoT to read environmental readings.
3. To demonstrate the role of RTOS in handling data-shared problems

Part D: open- ended experiments:

1. Design a home automation through integrating the required sensors using IoT.
2. Develop a calculator to perform arithmetic operations.
3. Generate different wave patterns using the DAC interface.

ELECTRICAL MACHINES-I

Contact Hours/ Week	: 3+0 (L+T)	Credits:	3.0
Total Lecture Hours	: 39	CIE Marks:	50
Sub. Code	: N4EE03	SEE Marks:	50

Course Outcomes:

1. Understand the basic concepts of magnetic circuits and DC machine.
2. Understand operation and analyse the performance of DC machine.
3. Analyse the differences in operation of different dc machine configurations and testing of dc machines
4. Analyse the performance of synchronous machine and determine voltage regulation
5. Analyse parallel operation of synchronous generators and the performance of synchronous motor.

UNIT-1

Review of magnetic circuits-Visualization of magnetic fields produced by a bar magnet and a current carrying coil -through air and through a combination of iron and air; influence of highly permeable materials on the magnetic flux lines. B-H curve of magnetic materials; flux-linkage vs current characteristic of magnetic circuits; linear and nonlinear magnetic circuits;

Basic construction of a DC machine, magnetic structure - stator yoke, stator poles, pole-faces or shoes, air gap and armature core, Equation for induced EMF in an armature coil. Armature reaction Effects - Elementary armature coil and commutator, lap and wave windings, construction of commutator, linear commutation. Methods of improving Commutation. **8 hrs**

UNIT-2

Types of DC machines, Types of field excitations - separately excited, shunt and series. Open circuit characteristic of separately excited DC generator, voltage build-up in a shunt generator, critical field resistance and critical speed. V-I characteristics.

Derivation of back EMF equation, armature MMF wave, derivation of torque equation, armature reaction, air gap flux density distribution with armature reaction **8 Hrs**

UNIT-3

Torque-speed characteristics of separately excited, shunt and series motors. Applications of DC motors, Speed control of DC shunt and series motors. Losses and efficiency, load testing and back-to-back testing of DC machines.

Synchronous machines: Constructional features, types, Excitation systems, EMF equation. **7 Hrs**

UNIT-4

Synchronous machines (Continued): Types of Armature windings, Terms used in armature windings, Coil-span factor and distribution factors - Armature leakage reactance, Armature reaction and its effects, synchronous reactance and impedance. Equivalent circuit and phasor diagram. Voltage regulation. Determination of voltage regulation by EMF, MMF & ZPF-methods. Numerical examples. **8 Hrs**

UNIT-5

Parallel operation of alternators -synchronization and load division. Effect of change in excitation and input power. power angle characteristics. Hunting.

Synchronous Motors: Introduction **,** Effect of load on synchronous motor, Equivalent circuit, Power developed in a synchronous motor. Effect of change in excitation, V – Curves. Methods of starting, Synchronous condenser, Applications. **8 Hrs**

BIOLOGY FOR ENGINEERS

Contact Hours/ Week : 2(T) Credits : 2.0

Total Lecture Hours	: 0	CIE Marks	: 50
Total Tutorial Hours	: 26	SEE Marks	: 50
Course Code	:		

Course objectives:

1. To familiarize the students with the basic biological concepts and their engineering applications.
2. To enable the students with an understanding of bio-design principles to create novel devices and structures.
3. To provide the students an appreciation of how biological systems can be re-designed as substitute products for natural systems.
4. To motivate the students, develop the interdisciplinary vision of biological engineering.

Course Outcomes: At the end of the course the student will be able to

1. Elucidate the basic biological concepts via relevant industrial applications and case studies.
2. Evaluate the principles of design and development, for exploring novel bioengineering projects.
3. Corroborate the concepts of bio-mimetics for specific requirements.
4. Explore innovative bio-based solutions for socially relevant problems.

General Instructions for Teaching-Learning

These are sample Strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. Explanation via real life problem, situation modelling, and deliberation of solutions, hands-on sessions, reflective and questioning /inquiry-based teaching.
2. Instructions with interactions in classroom lectures (physical/hybrid).
3. Use of ICT tools, including YouTube videos, related MOOCs, AR/VR/MR tools.
4. Flipped classroom sessions (~10% of the classes).
5. Industrial visits, Guests talks and competitions for learning beyond the syllabus.
6. Students' participation through audio-video based content creation for the syllabus (as assignments).
7. Use of gamification tools (in both physical/hybrid classes) for creative learning outcomes.
8. Students' seminars (in solo or group) /oral presentations.

Unit I

BIOMOLECULES AND THEIR APPLICATIONS

Carbohydrates (cellulose-based water filters, PHA and PLA as bioplastics), Nucleic acids (DNA Vaccine for Rabies and RNA vaccines for Covid19, Forensics – DNA fingerprinting), Proteins (Proteins as food – whey protein and meat analogs, Plant based proteins), lipids (biodiesel, cleaning

agents/detergents), Enzymes (glucose-oxidase in biosensors, ligninolytic enzyme in bio-bleaching). **5 Hrs**

Unit II

HUMAN ORGAN SYSTEMS AND BIO DESIGNS - 1

Brain as a CPU system (architecture, CNS and Peripheral Nervous System, signal transmission, EEG, Robotic arms for prosthetics. Engineering solutions for Parkinson's disease). Eye as a Camera system (architecture of rod and cone cells, optical corrections, cataract, lens materials, bionic eye). Heart as a pump system (architecture, electrical signaling - ECG monitoring and heart related issues, reasons for blockages of blood vessels, design of stents, pace makers, defibrillators). **5 Hrs**

Unit II

HUMAN ORGAN SYSTEMS AND BIO-DESIGNS - 2

Lungs as purification system (architecture, gas exchange mechanisms, spirometry, abnormal lung physiology - COPD, Ventilators, Heart-lung machine). Kidney as a filtration system (architecture, mechanism of filtration, CKD, dialysis systems). Muscular and Skeletal Systems as scaffolds (architecture, mechanisms, bioengineering solutions for muscular dystrophy and osteoporosis). **5 Hrs**

Unit IV

NATURE-BIOINSPIRED MATERIALS AND MECHANISMS

Echolocation (ultrasonography, sonars), Photosynthesis (photovoltaic cells, bionic leaf). Bird flying (GPS and aircrafts), Lotus leaf effect (Super hydrophobic and self-cleaning surfaces), Plant burrs (Velcro), Shark skin (Friction reducing swim suits), Kingfisher beak (Bullet train). Human Blood substitutes - hemoglobin-based oxygen carriers (HBOCs) and perfluorocarbons (PFCs). **5 Hrs**

Unit V

TRENDS IN BIOENGINEERING

Bio-printing techniques and materials, 3D printing of ear, bone and skin. 3D printed foods. Electrical tongue and electrical nose in food science, DNA origami and Biocomputing, Bio-imaging and Artificial Intelligence for disease diagnosis. Self- healing Bio-concrete (based on bacillus spores, calcium lactate nutrients and bio-mineralization processes) and Bio-remediation and Bio-mining via microbial surface adsorption (removal of heavy metals like Lead, Cadmium, Mercury, Arsenic).

Evaluation Pattern

Two Tests of 50 marks each and 90 minutes duration

SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks

Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

Suggested Learning Resources:

ELECTRICAL MACHINES-I LAB

Lab Hours/ Week	: 0+0+2(L+T+P)	Credits:	1.0
Sub. Code	: N4EEL01	CIE Marks:	50
		SEE Marks:	50

LIST OF EXPERIMENTS

1. OCC of DC shunt generator
2. Load characteristics of DC shunt generator.
3. Load characteristics of DC shunt motor.
4. Speed control of DC shunt motor
5. Hopkinson's test
6. Synchronization of Alternator
7. Voltage Regulation of Alternator by E.M.F and M.M.F method
8. Voltage Regulation of Alternator by Z.P.F method
9. V and inverted V curves of Synchronous motor

Course outcomes: After the completion of this course, students will be able to:

1. Perform study of electrical machines by conducting tests
2. Analyse speed control of DC machines
3. Test a given DC machine.
4. Determine voltage regulation of alternators

5. Analyse the performance of synchronous motor.

ENVIRONMENTAL SCIENCE

ENVIRONMENTAL SCIENCE		Course Code: **NHS05**
Contact Hours/ Week	: 2 (T)	Credits: 1.0
Total Lecture Hours	: ---	CIE Marks: 50
Total Tutorial Hours	: 26	SEE Marks: 50
Course Code	: NHS05	

Course Objectives:

1. To introduce the importance and scope of environmental science, importance of natural resources due to deforestation, agricultural practices, and adverse environmental effects, pesticides, soil erosion and mining.
2. To analyze different types of energy – renewable, non-renewable and energy conservation, impact of environmental pollution on water quality, air quality, soil pollution and noise pollution,
3. To analyze the importance of solid waste management – disposal, treatment of different types of solid waste including MSW, e-waste, biomedical waste.
4. To communicate societal impact of environmental issues – ozone layer depletion, GHG effects, water conservation and harvesting and environmental protection & acts

Course Outcomes: On successful completion of the course, the student will be able:

1. Analyze the importance and scope environmental science, importance of forestation, effects of deforestation, land degradation, adverse effects of mining on environment, using the principles of natural sciences estimate the runoff from rainfall.
2. Analyze the Renewable sources of energy and formulate, review literature, estimate power potential of solar & wind energy by using the principles of natural sciences.
3. Analyze the effects of pollution of air, water, soil & noise on humans and environment identify & analyze the pollution problems related to air, water, soil & noise and quantify pollution levels & draw valid inferences using the principles of engineering sciences.
4. Analyze Impact of solid waste on human health and environment, it's safe disposal and estimate the noise level and moisture content of waste.
5. Analyze the sustainable development, its importance, current global environmental issues, Present state & central governments protection acts, compute carbon foot print using data (vehicles/industries) & assess its impact on environment.

Unit-I

Introduction: Environmental science – definition, importance, scope and Environmental problems. Components of Environment and their interaction. Ecology – Basic concepts and principles, Ecosystem - definition, properties, functions, structure and types.

Natural Resources – I: Classification of resources; Forest Resources – Uses of Forest, Deforestation, causes of deforestation, Environmental effects of

deforestation and solutions; Water resources – uses, over-utilization of water, conservation of water, Hydrological cycle; Mineral resources – Types of minerals, conservation of mineral resources, Mining & its adverse effects; Numerical problems on rainfall & runoff. **6 Hrs.**

Unit-II

Natural Resources – II: Land resources – Soil properties, Soil classification, Land degradation, Soil erosion, Soil conservation. Energy Resources – Classification of sources of energy; Sources of electric energy generation with their advantages and disadvantages; solar energy, Wind energy, Ocean energy, Ocean thermal energy conversion (OTEC), Tidal energy. Geothermal energy, Biomass energy, Hydrogen energy, Thermal power hydroelectric power – Principals and environmental impacts; Conservation of Electrical energy; Numerical problems on solar energy, Wind power. **5 Hrs.**

Unit-III

Environmental Pollution – I: definition, Sources of pollution – Natural sources, & Anthropogenic; Pollutants – Classification & their effects on environment.

Air pollution – Sources of air pollution, Effect of air pollution on human health, animals, plants & climate, prevention of air pollution, Control of air pollution, Ambient air quality standards, steps for controlling air pollution.

Water pollution – Water quality–Potable water, Wholesome water, Sources of water pollution Polluted water & Contaminated water, Sources of water pollution, effects of water pollution on human health and ecology, control of water pollution, water quality and characteristics, BIS water quality standards. Numerical problems on pH and hardness of water. **5 Hrs.**

Unit-IV

Environmental Pollution – II: Noise pollution – Sources of noise, Measuring Sound, Impact of Noise pollution, Effects on human health & its control methods.

Waste Management: Types and sources of waste, Municipal solid wastes (MSW) – collection and transportation of refuse; Waste management techniques – source reduction, recycling or reusing and disposal; Industrial solid waste; hazardous waste – characteristics, impacts; Impacts on human health and environment; e-waste – Problems and solutions; Agricultural waste management; Hospital or Biomedical waste – Impacts on human health, storage, treatment methods and disposal. Numerical problems on noise pollution and moisture content. **5 Hrs.**

Unit-V

Environment Development, Protection and Legislations: Water conservation and quality, Rainwater harvesting, Environmental ethics; Environmental challenges – Climate change, Global warming, Greenhouse effect, ozone layer depletion, acid rain, El Nino, population growth and explosion. Government efforts on environmental protection – policies, acts, rules and guidelines; National organizations, public awareness,

environmental education and training. Carbon credits and offsetting. Numerical problem on rainwater harvesting and carbon foot print. **5 Hrs.**

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration

SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

FOUNDATIONS OF ENGINEERING MATHEMATICS-I

(For Lateral Entry students)

Contact Hours/ Week	2(L)+2(T)	Credits	0
Total Lecture Hours	26	CIE Marks	100
Total Tutorial Hours	26	SEE Marks	00
Sub Code	N3MATDP	Semester	III

Prerequisites: Basics in differential calculus, Integral calculus and vectors.

Course Learning Objectives: This course will enable students to master the basic tools of differential and vector calculus, Taylors series, Indeterminate forms (L' Hospital Rule) and differential equations and become skilled for solving problems in science and engineering.

Course objectives: This course will enable students to:

1. Known the behavior of the polar curve and its application.
2. Learn the notation of partial differentiation and determine the value of the Jacobians.
3. Learn how a function of single variable can be expanded as a Taylor's series and Maclaurin series and handle the indeterminate form.
4. Learn how the vectors govern the physical models.
5. Known how the real word problems governed by the first order differential equations.

Course outcomes: After the completion of this course, students will be able to:

1. Apply the knowledge of calculus to solve problems related to polar curves and its applications in determining the amount of bending of the curve. **(L1& L2)**
2. Learn the notation of partial differentiation to calculate rates of change of multivariate functions and solve problems related to composite functions. **(L1& L2)**
3. Illustrate the applications of multivariate calculus to understand the characteristics of vector field. 4.
4. Understand how a function of single variable can be expanded as a Taylor's series and handle the indeterminate form **(L1& L2)**
5. Apply the analytical methods to solve first order and first-degree differential equations and solve some Engineering problems. **(L1& L2)**

UNIT-I

Differential Calculus-I: Polar curves: angle between the radius vector and tangent, angle of intersection of polar curves. Pedal equation for polar curves. Curvature and radius of curvature in pedal form. (Without proof).

10 Hrs

UNIT – II

Differential Calculus –II: Partial differentiation: Partial derivatives, Total derivatives, differentiation of composite functions. Jacobians. **12 Hrs**

UNIT – III

Differential Calculus –III: Taylor's and Maclaurin's series expansions for one variable **(statement only).** Indeterminate forms L' Hospital Rule (without proof) (Only $\frac{0}{0}, \frac{\infty}{\infty}, 0 \times \infty \; and \; \infty - \infty \; form$). **10 Hrs**

UNIT-IV

Vector Calculus: Vector Differentiation: scalar and vector fields, Gradient, directional derivative, divergence, curl-physical interpretation; solenoidal and irrotational vector fields-illustrative problems. **10 Hrs**

UNIT-V

Differential Equations-I: Solution of first order and first-degree differential equations: Variable Separable, Linear differential equations and Exact differential equations. **10 Hrs**

Foundations of Engineering Mathematics-II
(For Lateral Entry students)

Contact Hours/ Week	: 2(L)+2(T)	Credits: 0

Total Lecture Hours	: 26	CIE Marks:	100
Total Tutorial Hours	: 26	SEE Marks:	00
Sub Code	: N4MATDP	Semester:	IV

Prerequisites: Basics in differential calculus, Integral calculus and vectors.

Course Learning Objectives: This course will facilitate the students with concrete foundation of ordinary differential equations, Laplace transforms, Integral calculus and numerical methods enabling them to acquire the knowledge of these mathematical tools.

Course objectives: This course will enable students to:

1. Solve second and higher order differential equations.
2. Find the Laplace transform of the function f(t).
3. Find the Inverse Laplace transform of the function F(s).
4. Apply the knowledge of numerical methods in the models of various physical and engineering phenomena
5. Solve the integral by using standard integrals (Beta and Gamma) and multiple integrals

Course outcomes: After the completion of this course, students will be able to:

1. Explain various physical models through higher order differential equations and solve such linear ordinary differential equations. (L1& L2)
2. Understand the concept of Laplace transform and obtain Laplace transform of periodic functions and unit step functions. (L1& L2)
3. Apply the concept of Laplace transform in solving Linear Differential equations. (L1& L2)
4. Apply the Numerical methods to solve Algebraic and transcendental equations and find the polynomials by finite difference method. (L1& L2)
5. Apply the concept of to evaluate multiple integrals and Beta and Gamma functions (L1& L2)

UNIT-I

Linear Differential Equations: Solution of second and higher order equations with constant coefficients by inverse differential operator method, method of variation of parameters **(6+6) Hrs**

UNIT – II

Laplace Transform: Definition, transforms of elementary functions, properties of Laplace Transform, Laplace Transform of $e^{at} f(t)$, $t^n f(t)$, $\frac{f(t)}{t}$, derivatives and Laplace Transform of Periodic functions. **(5+5) Hrs**

UNIT-III

Inverse Laplace Transform: Inverse Laplace Transform, Convolution theorem (without proof) and problems Applications –Solution of Linear differential equations using Laplace Transform. **(5+5) Hrs**

UNIT-IV

Elementary Numerical Methods: Finite differences. Interpolation/ extrapolation using Newton's forward and backward difference formulae, Newton's divided difference and Lagrange's formulae (All formulae without proof). Solution of polynomial and transcendental equations - Newton-Raphson method (only formula) – Illustrative examples. **(5+5) Hrs**

UNIT-V

Integral Calculus: Multiple integrals –Evaluation of double and triple Integrals, Beta and Gamma functions: Definition, relation between Beta and Gamma functions and simple problems. **(5+5) Hrs**

VISION of the Institute

To develop young minds in a learning environment of high academic ambience by synergising spiritual values and technologies competence.

MISSION of the Institute

To continuously strive for the total development of students by educating them in state-of the-art-technologies and helping them imbibe professional ethics and societal commitment, so that they emerge as competent professionals to meet the global challenges.

VISION of the Department

To be the premier center for education and research in Electrical and Electronics Engineering and to produce globally competent engineers with ethical values.

MISSION of the Department

- Develop as a center of Excellence for Electrical and Electronics Engineering education by providing the state-of –the-art infrastructure, industry relevant curriculum and effective teaching learning process.
- Contribute to the development of nation by pursuing research and development in the thrust areas of Electrical and Electronics Engineering such as Power Systems, Electrical Machines, Power Electronics and Renewable Energy Systems.
- Enable graduates to be professionally competent with strong ethical values.

PROGRAM EDUCTAIONAL OBJECTIVES (PEOs)

1. Pursuing successful career in the Electrical and Electronics Engineering and allied fields and opt for higher studies, research and to be an entrepreneur.
2. Designing solutions to Power System Engineering, Electrical Machines, Power Electronics and Renewable Energy Systems for specific industry applications and real-life problems using broad engineering knowledge.
3. Demonstrating professionalism, Ethical behavior and lifelong learning.

SCHEME & SYLLABUS

OF

V & VI SEMESTERS

B.E. ELECTRICAL & ELECTRONICS

ENGINEERING

2022-23

(A) PROGRAM OUTCOMES

Engineering Graduates will be able to:

1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

(B) PROGRAM SPECIFIC OUTCOMES (PSOs)

1. Analyze, Design and Assess the performance of Electrical Power System and its constituent equipment
2. Analyze, Design and Develop Power Electronic Systems

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institute affiliated to Visvesvaraya Technological University, Belagavi, Approved by AICTE, New Delhi)

POWER SYSTEMS-I

Contact Hours/Week	:	4 (L)	Credits	:	4.0
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	--	SEE Marks	:	50
Course Code	:	5REE01			

Course Objectives: This course will enable students to:

1. Understand the components of transmission system
2. Understand the performance of transmission lines
3. Acquire knowledge about the generation and measurement of high voltages

Unit I

Typical Transmission and Distribution system scheme: Standard voltages for transmission. Advantages of high voltage transmission. Feeders, Distributors & Service mains

Line parameters: Calculation of resistance, Skin effect, Proximity effect. Calculation of inductance of single phase, three phase lines with equilateral and unsymmetrical spacing. Transposition, Bundled conductors. Inductance of composite conductor lines. Capacitance - Calculation for two wires and three phase lines, capacitance calculation for 3 phase lines with equilateral and unsymmetrical spacing. Effect of Earth on capacitance of transmission line. **10 Hrs**

Unit II

Overhead transmission lines: Sag calculation in overhead conductors – a) Suspended on level supports (b) supports at different levels. Effect of wind and ice on tension and sag at erection. Stringing charts. Sag Templates.

Characteristics and performance of power transmission lines: Short transmission lines, medium transmission lines, Nominal T and π method, equivalent T and π network, Ferranti effect, representation of long transmission lines, ABCD constants, P-V and Q-V coupling. **10 Hrs**

Unit III

Insulators: Types, potential distribution over a string of suspension insulators. String efficiency and methods of increasing string efficiency, Arcing Horns, Guard Ring. Causes of failure of insulators. Testing of insulators. **Corona**: Phenomena, expression for disruptive and visual critical voltages and corona power loss.

Underground Cables: Types, material used. Insulation resistance, thermal rating of cables, charging current. Grading of cables, capacitance grading and inter sheath grading, testing of cables.

10 Hrs

Unit IV

Distribution: Radial and ring main systems, AC and DC distribution: calculation for concentrated loads and uniform loading.

Power System Transients:

Types of system transients, Travelling waves and propagation of surges, Reflection and refraction of Travelling waves, Bewley Lattice diagram, Generation of Over-voltages on Transmission lines - Lightning and Switching surges, Protection of Transmission lines against Over-voltages, Insulation Coordination **11 Hrs**

Unit V

Generation of AC, DC and Impulse voltages

Cascade connection of Transformers, Series resonant circuit - Principle of operation and advantages. Cockcroft- Walton type high voltage DC set. Calculation of Voltage regulation, Ripple and Optimum number of stages for minimum voltage drop. Analysis of single stage impulse generator - Expression for output voltage. Multistage impulse generator working on Marx principle.

Measurement of High voltages: Standard sphere gap for measurement of HV AC, HVDC and impulse voltages; Factors affecting the measurements.

11 Hrs

TEXT BOOKS:

1.	Soni Gupta & Bhatnagar	A Course of Electrical Power, Dhanpatrai and Sons (New Delhi)
2.	D. P. Kothari and I J Nagrath	Modern Power System Analysis, Tata McGraw - Hill. 4th Edition,2011, ISBN (13): 978-0-07-107775-0, ISBN(10):0-07-107775-8
3.	C.L.Wadhwa	Electrical Power Systems, Wiley Eastern

REFERENCE BOOKS:

1.	C.L.Wadhwa	High Voltage Engineering, TMH
2.	S.M.Singh	Electric Power Generation Transmission and Distribution, Prentice Hall of India
3.	W.D. Stevenson and Grainger	Power System Analysis, TMH
4.	J.B Gupta	A course in power systems, Published by S.K.Kataria & sons, New-Delhi.

Course Outcomes: After the completion of this course, students will be able to:

1. **Compute** inductance and capacitance of T-lines with transposition for symmetrical and unsymmetrical spacing of conductors.
2. **Design** overhead lines by computing sag when the towers are at same height and different levels by considering the effects of wind and ice coating on the conductors and **Develop** mathematical models for T-lines and analyze performance of T- lines and determine ABCD parameters.
3. **Determine** the voltage distribution in the string of insulators to compute string efficiency and **analyze** the performance of underground cables.
4. **Interpret** various distribution schemes with regard to AC and DC and to compute over voltages during power system transients
5. **Explain** the generation and measurement of AC, DC and Impulse voltages for testing purposes

CONTROL SYSTEMS

Contact Hours/Week	:	4 (L)	Credits	:	4.0
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	--	SEE Marks	:	50
Course Code	:	5REE02			

Course Objectives: This course will enable students to:

1. To understand concepts of the mathematical modeling, Definitions, Classification, Relative merits and demerits of open and closed loop systems, Linear and non-linear systems, Transfer function, Block diagrams and signal flow graphs
2. Steady-state errors and error constants, Concepts and applications of P, PD, PI and PID types of control.
3. Feedback control and stability analysis in Time and Frequency domains: Definition, Routh-Hurwitz criterion and Root locus techniques
4. Stability analysis in Time and Frequency domains: Nyquist criterion, Bode plots, Relative stability, Gain margin and phase margins.
5. Compensation: Lead, Lag and lag-lead compensators, Design of compensating networks for specified control system performance. State Space Analysis: State models, State space equations, Transfer function, Transfer model, State space representation of dynamic systems, State transition matrix

Unit I

Modeling of linear-time-invariant Systems: Introduction to control system, Open loop and Closed loop systems. Mathematical models of physical systems–mechanical systems, Electrical systems.

- Translational and rotational systems (mechanical accelerometer, lever systems excluded).
- Transfer function of Electrical networks and DC motor

Block diagrams and signal flow graphs: Block diagram algebra/ signal Flow graph, Mason's gain formula. **10 Hrs**

Unit II

Time Response Analysis: Standard test signals, Unit step response of first and second order linear-time-invariant systems, time domain specifications, transient response of second order linear-time-invariant systems, steady state error analysis.

Simple Feedback Controllers: Design of feedback controllers based on time response including the calculation of steady state error. **10Hrs**

Unit III

Concept of Stability: **Frequency Response Analysis:** Routh-Hurwitz Criteria, Relative Stability analysis. **Root–Locus Techniques**: The root locus concepts, Construction of Root-loci, effect of addition of poles and zeros to the linear time invariant systems and its applications. **11Hrs**

Unit IV

Frequency-response analysis: Frequency domain specifications, Correlation between time and frequency response, Polar plots, Bode plots, Closed-loop frequency response (Transfer function) from

Bode Plot, Nyquist stability, Relative stability using Nyquist Stability criterion-Gain and phase margin.

11 Hrs

Unit V

System Compensation: Lead compensator, Lag compensator, Lag-Lead compensation (Excluding design)

State variable analysis: Concepts of state, state space, state variable, state model of electrical systems, Eigen values and stability analysis. State equation, solution of state equation, state transition matrix.

10 Hrs

TEXT BOOKS:

1.	Richard C. Dorf and Robert H. Bishop	Modern Control Systems, 11th Edition, Pearson Education, 2008

REFERENCE BOOKS:

1.	Nagrath and Gopal M.	Control Systems Engineering. Ed 4. New Age International (P) Limited. 2005.
2.	Ogata K.	Modern Control Engineering. Ed 4. Pearson Education Asia/PHI. 2002.
3.	Kuo C. Benjamin	Automatic Control Systems
4.	Gopal M.	Control Systems – Principles and Design. TMH. 1999.

Course Outcomes: After the completion of this course, students will be able to:

1. **Formulate** the mathematical model for linear-time-invariant systems and **obtain** the transfer functions using block diagram reduction technique and signal flow graphs.
2. **Analyze** transient and steady state responses for first order and second order linear-time-invariant systems with standard signals. **Design and analyze** the performance of feedback controllers to improve the stability of linear-time-invariant systems.
3. **Analyze and interpret** the stability of linear-time invariant systems by applying RH criteria and root locus techniques.
4. **Analyze and interpret** the stability of linear-time-invariant systems in frequency domain analysis by Nyquist plot and Bode plot techniques.
5. **Design** of Lead, lag and lead-Lag compensators for improving the stability of linear-time-invariant systems and **develop** the state models for the linear-time-invariant systems.

POWER ELECTRONICS

Contact Hours/Week	:	3 (L)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	5REE03			

Course Objectives: This course will enable students to:

1. understand the theory and applications of power electronics systems.
2. understand the characteristics of different power electronics switches and different types of gate drive control and isolation of gate and base drive techniques.
3. understand the switching behaviour and design of power electronics circuits such as DC/DC, AC/DC, DC/AC and AC/AC converters.
4. understand various single phase and three phase power converter circuits and their applications
5. understand the various PWM techniques and multilevel inverters.

Unit I

Power devices: Introduction, Types of power electronics circuits, Control Characteristics, Power MOSFETs- basic characteristics and switching characteristics, IGBTs- basic structure and switching characteristics, Gate drive circuit for MOSFET. Thyristors: Introduction, static characteristics, two transistor model, turn-on methods, turn-on and turnoff characteristics. **7 Hrs**

Unit II

Controlled rectifiers: Protection of thyristor -di/dt and dv/dt, Thyristor Firing circuits-RC and UJT. Introduction, Principle of phase-controlled converter operation, full converters and dual converters. Three phase half wave converters, three-phase full converter (constant current operation mode only), applications. **8 Hrs**

Unit III

DC-DC converters: Introduction, Principle and operation of Buck, Boost and Buck-Boost converter with resistive and RL load, Performance parameters, Chopper classification **8 Hrs**

Unit IV

Inverters: Introduction, Principle of operation, performance parameters, single phase bridge inverters, Voltage control of single-phase inverters, (linear modulation over modulation square wave operation), three phase inverters (120^0 and 180^0conduction) **8 Hrs**

Unit V

PWM converters and applications: PWM technique-SPWM, MSPWM, AC voltage controllers Introduction, Principles of on and off control, Principles of phase control, Single phase controllers with restive loads and Inductive loads. Multilevel inverters- introduction. Cycloconverters (Single phase Bridge Type), Applications. **8 Hrs**

TEXT BOOKS:

1.	M H Rashid	Power Electronics, Third edition, Prentice Hall of India Pvt. Ltd., Pearson Singapore –Asia New Delhi, 2003
2.	Daniel W Hart	Power Electronics, Tata McGraw Hill, 2011.

REFERENCE BOOKS:

1.	M D Singh and Khanchandani K B	"Power Electronics", TMH Publishing Company Limited, reprint 2001.
2.	Ned Mohan, T.M.Undeland, T.M.Robbins,	Power electronics converters, application & Design, JohnWiley 2003
3.	P.C. Sen	Power electronics, 17th edn., Tata McGrawHill publishing company limited (2001)

Course Outcomes: After the completion of this course, students will be able to:

1. Analyze the switching characteristics of IGBT, MOSFET and thyristor
2. Analyze the turn on and turn off characteristics of thyristor and the different types of controlled rectifier circuits.
3. Analyse the operation of DC-DC choppers
4. Analyse the operation of voltage source inverters.
5. Analyze operation of Ac voltage controller and multilevel inverter.

CIRCUITS AND MEASUREMENTS LAB

Lab Hours/ Week	: 3	Credits:	1.5
Sub. Code	: 5REEL01	CIE Marks:	50
		SEE Marks:	50

List of Experiments:

1. Measurement of low resistance using Kelvin's Double Bridge (KDB).
2. Measurement of inductance using Maxwell's bridge & determination of Q-factor.
3. Measurement of Capacitance using De-sauty’s Bridge & determination of Dissipation Factor.
4. Determination of Ratio & Phase Angle Error in Current Transformer (CT).
5. Measurement of Power in a balanced 3-Phase Circuits using Two Wattmeter for Star & Delta Connected Loads.
6. Measurement of Power in a single-phase circuit by using CTs and PTs.
7. Resonance Characteristics for series and parallel circuits.
8. Verification of Thevenin’s & Maximum Power Transformer Theorem.
9. Measurement of current using Hall Effect sensors. (Open ended)
10. Temperature measurement using instrumentation amplifier. (open ended)

Course Outcomes: After the completion of this course, students will be able to:

1. Measure the resistance, inductance, capacitance, ratio and phase angle error using suitable circuits/bridges.
2. Acquire hands on experience and knowledge on working of CT/PT and measurement of 3-phase power using single phase wattmeters.

ELECTRICAL MACHINES LAB-II

Lab Hours/ Week	: 3	Credits:	1.5
Sub. Code	: 5REEL02	CIE Marks:	50
		SEE Marks:	50

List of Experiments:

1. Load test on 3-phase Induction motor – performance evaluation (Torque-slip, BHP-efficiency, BHP-PF, Slip-BHP)
2. No-load & Blocked rotor tests on 3 phase Induction motor - Circle Diagram, formulation of equivalent circuit
3. Speed control of 3 phase slip ring Induction motor- rotor Resistance control, stator voltage control
4. Load test on 1 phase Induction 5. Motor
5. No-load & Blocked rotor tests on 1 phase Induction motor, formulation of equivalent circuit
6. Synchronization of Alternator
7. Voltage Regulation of Alternator by E.M.F and M.M.F method
8. Voltage Regulation of Alternator by Z.P.F method
9. V and inverted V curves of Synchronous motor
10. Demonstration of Self excited induction generator [Open Ended]

Course Outcomes: After the completion of this course, students will be able to:

1. Conduct suitable experiment to determine regulation of alternators
2. Conduct suitable experiment to determine performance characteristics of induction motor

POWERS SYSTEMS-II

Contact Hours/Week	:	4+1 (L+T)	Credits	:	4.5
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	13	SEE Marks	:	50
Course Code	:	6REE01			

Course Objectives: This course will enable students to:

1. represent power system using single line diagram
2. carryout fault studies of a power system
3. understand the difficulties in breaking a circuit and the importance of circuit breaker in an electrical system
4. understand different protection schemes used in a power system

Unit I

Representation of Power System Components

One line-diagram, impedance and reactance diagrams. Per unit system, The steady state model of Synchronous machine, Representation of Loads. **12 Hrs**

Unit II

Symmetrical 3 Phase faults: Transients on a Transmission Line, Short Circuit of a Synchronous machine (On No Load), Short Circuit of a Loaded Synchronous Machine, Selection of Circuit Breakers.

Symmetrical components: Resolution of unbalanced phasors into their symmetrical components. Phase shift of symmetrical components in star-delta transformer bank. Power in terms of symmetrical components. Sequence circuits of power system elements (alternator, transformer and transmission line). Measurement of sequence impedances of synchronous generator, Sequence Networks. **14Hrs**

Unit III

Unsymmetrical faults: Symmetrical component analysis of Unsymmetrical faults on an unloaded alternator with and without fault impedance, Symmetrical component analysis of Unsymmetrical faults on a power system with and without fault impedance. Open conductor faults, Neutral grounding.

10+02 Hrs

Unit IV

Switchgear: The process of breaking of a current: the arc, arc voltage and arc interruption, Restriking voltage and Recovery voltage, resistor switching, Current chopping, Interruption of capacitive current Air break circuit breaker, SF_6 circuit breaker, vacuum circuit breaker, DC Circuit breaking, rating of circuit breakers, Testing of circuit breakers. 13 **Hrs**

Unit V

Attributes of Protection schemes, Back-up Protection. Protection schemes (Over-current, directional, distance protection, differential protection) and their application. **13 Hrs**

TEXT BOOKS:

1.	W.D. Stevenson and Grainger	Power System Analysis, 2nd Ed., TMH, 2016
2.	Nagrath and D. P. Kothari	Modern Power System Analysis, Tata McGraw - Hill. 2/e.

REFERENCE BOOKS:

1.	Hadi Sadat	Power system Analysis, TMH
2.	Bergen Arthur R	Power system analysis, 2/e, Pearson Education
3.	GL Kusic	Computer Aided power system analysis, PHI

Course Outcomes: After the completion of this course, students will be able to:

1. **Represent** power system network components in the form of single line diagram by computing per unit values
2. **Analyze** the effects of three phase faults occurring at the terminals of loaded and unloaded synchronous generators and **compute** symmetrical components
3. **Analyze** the unsymmetrical faults occurring in different power system components using the concept of symmetrical components
4. **Compute** Restriking voltages during circuit interruption and **explain** the operation of circuit breakers
5. **Analyze** different protective schemes

SIGNALS AND SYSTEMS

Contact Hours/Week	:	4+1 (L)	Credits	:	4.5
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	13	SEE Marks	:	50
Course Code	:	6REE02			

Course Objectives: This course will enable students to:

1. Understand the fundamental characteristics of signals and systems.
2. Development of the mathematical skills to solve problems involving convolution, filtering, modulation and sampling
3. Understand the process of sampling and the effects of under sampling.
4. Analyze system properties based on impulse response and Fourier analysis.

Unit I

Introduction: Definition of signals and systems, Mathematical Representation, Classification of signals, Operation on signals, Elementary signals, Systems viewed as interconnection of operations, Properties of systems. **13Hrs**

Unit II

Time Domain Representation of LTI Systems: Introduction, impulse response representation of LTI systems, Properties of impulse response representation, difference equation representation of LTI systems. **13 Hrs**

Unit III

Fourier Transforms of signals and its application: Introduction, Discrete Time non periodic signals: DTFT representation, Continuous Time non periodic signals: FT representation, Properties of Fourier transforms and DTFT. Introduction, Frequency response of LTI systems, Fourier Transform representation of periodic signals, Fourier Transform representation of Discrete time signals, Sampling, reconstruction of continuous time signals. **15 Hrs**

Unit IV

Z-Transform: Introduction, Properties of ROC, Properties of Z-transform, inversion of Z-transform, Transform analysis of LTI systems, stability & causality, Unilateral Z-transform and its application.

12 Hrs

Unit V

Discrete Fourier transform: Introduction, Fourier representations of finite-duration sequences, properties of DFT, Linear convolution using DFT, computation of Circular convolution and correlation.

12Hrs

TEXT BOOKS:

1.	Simon Haykin.	Signals and Systems. 2nd Edition. John Wiley 2002.
2.	J. G. Proakis and D. G. Manolakis	Digital Signal Processing: Principles, Algorithms and Applications, PHI, 1997.

REFERENCE BOOKS:

1.	Schaum Series.	Signals and Systems. McGraw-Hill; 1 edition,1995
2.	Oppenheim and Willsky.	Signals and Systems. Pearson India; 2nd edition,2015

Course Outcomes: After the completion of this course, students will be able to:

1. Describe the properties and analyze continues time and Discrete time signals and systems.
2. Analyze the Time Domain Representation of LTI Systems.
3. Apply and Analyze Fourier analysis tools like FT and DTFT to continuous time and discrete time signals.
4. Apply Z-Transform to time domain signals.
5. Apply DFT-Transform to time domain signals

CONTROL SYSTEMS LAB

Lab Hours/ Week	: 3	Credits:	1.5
Sub. Code	: 6REEL01	CIE Marks:	50
		SEE Marks:	50

Course Objectives: This course will enable students to:

1. Familiarize with the modelling of second order systems and determination of step response and time domain specifications.
2. Familiarize with the time response of second order system with the effect of addition of poles and zeros.
3. To study the effect of P, PI, PD and PID controller on step response of a feedback control system.
4. To simulate and analyze the stability of the second order system using MATLAB/SCILAB software and design the compensators.

List of Experiments:

1. Using MATLAB/SCILAB a) Simulation of a typical second order system and determination of step response and evaluation of time domain specifications b) Evaluation of the effect of additional poles and zeroes on time response of second order system c) Evaluation of effect of pole location on stability d) Effect of loop gain of a negative feedback system on stability
2. (a) To design a passive RC lead compensating network for the given specifications, viz., the maximum phase lead and the frequency at which it occurs and to obtain its frequency response. (b) To determine experimentally the transfer function of the lead compensating network.
3. (a) To design RC lag compensating network for the given specifications., viz., the maximum phase lag and the frequency at which it occurs, and to obtain its frequency response. (b) To determine experimentally the transfer function of the lag compensating network.
4. Experiment to draw the frequency response characteristic of a given lag- lead compensating network.
5. To study the effect of P, PI, PD and PID controller on step response of a feedback control system (Using control engineering trainer/process control simulator).Verify the same by simulation.
6. a) Experiment to draw the speed – torque characteristic of a two - phase A.C. servomotor. b) Experiment to draw speed torque characteristic of a D.C. servomotor.
7. To determine experimentally the frequency response of a second -order system and evaluation of frequency domain specifications.
8. Using MATLAB/SCILAB a) Simulate a D. C. position control system and obtain its step response b) To verify the effect of the input wave form, loop gain system type on steady state errors. c) To perform a trade-off study for lead compensation d) To design a PI controller and study its effect on steady state error
9. Using MATLAB/SCILAB a) To examine the relationships between open-loop frequency response and stability, open loop frequency and closed loop transient response b) To study the effect of addition closed loop poles and zeroes on closed loop transient response

10. Using MATLAB/SCILAB a) Effect of open loop and zeroes on root locus contour b) To estimate effect of open loop gain on the transient response of closed loop system by using Root locus c) Comparative study of Bode, Nyquist and Root locus with respect to Stability.

Course Outcomes: After the completion of this course, students will be able to:

1. To analyze the response of physical systems represented in transfer function.
2. To understand the stability of an Electrical, mechanical and other physical systems
3. To Design controllers, compensators using MATLAB software

POWER ELECTRONICS LAB

Lab Hours/ Week	: 3	Credits:	1.5
Sub. Code	: 6REEL02	CIE Marks:	50
		SEE Marks:	50

List of experiments:

1. Static characteristics of SCR and TRIAC
2. Static characteristics of MOSFET and IGBT.
3. Controlled HWR using RC Triggering circuit.
4. Single phase FWR with R, RL and motor load.
5. Speed control of a separately excited DC motor using an IGBT/MOSFET chopper (Four quadrants)
6. Single phase PWM Inverter
7. Three phase full wave bridge inverter circuit.
8. Speed control of a single-phase induction motor
9. Buck and Boost DC-DC converter
10. Three phase full wave bridge converter

Course Outcomes: After the completion of this course, students will be able to:

1. Analyse the switching characteristics of different power electronic devices.
2. Apply the knowledge of Power Electronics to design triggering circuit.
3. Design and Analyse power converters
4. Understand and analyse the speed control of electrical machines using power converters

Professional Electives

SOFT COMPUTING

Contact Hours/ Week	: 3(L)	Credits:	3
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Course Code	: REEE1		

Course Objectives: This course will enable students to:

1. Understanding the introducing the fundamental theory and concepts of computational intelligence methods, in particular neural networks, fuzzy systems, genetic algorithms and their applications in the area of machine intelligence.
2. To understand the fundamental theory and concepts of neural networks, neuro-modeling, several neural network paradigms and its applications.
3. To understand the concepts of fuzzy sets, knowledge representation using fuzzy rules, approximate reasoning, fuzzy inference systems, and fuzzy logic control and other machine intelligence applications of fuzzy logic.
4. To understand the basics of an evolutionary computing paradigm known as genetic algorithms and its application to engineering optimization problems.

Unit I

Introduction: What is Soft Computing? Difference between Hard and Soft computing, Requirement of Soft computing, major Areas of Soft Computing, and applications of Soft Computing. Introduction to Python Programming.

5 Hrs

Unit II

Neural Networks: What is Neural Network, Learning rules and various activation functions, Single layer Perceptrons, Back Propagation networks, Architecture of Backpropagation (BP) Networks, Backpropagation Learning, Variation of Standard Back propagation Neural Network, Introduction to Associative Memory, Adaptive Resonance theory and Self Organizing Map, Recent Applications. Implementation of BP network algorithm using Python programming.

10 Hrs

Unit III

Fuzzy Systems: Fuzzy Set theory, Fuzzy versus Crisp set, Fuzzy Relation, Fuzzification, Minmax Composition, Defuzzification Method, Fuzzy Logic, Fuzzy Rule based systems, Predicate logic, Fuzzy Decision Making, Fuzzy Control Systems, Fuzzy Classification. Implementation of Fuzzy control system using Python programming. **10 Hrs**

Unit IV

Genetic Algorithm: History of Genetic Algorithms (GA), Working Principle, Various Encoding methods, Fitness function, GA Operators- Reproduction, Crossover, Mutation, Convergence of GA, Bit wise operation in GA, Multi-level Optimization. **8 Hrs**

Unit V

Hybrid Systems: Sequential Hybrid Systems, Auxiliary Hybrid Systems, Embedded Hybrid Systems, Neuro-Fuzzy Hybrid Systems, Neuro-Genetic Hybrid Systems, Fuzzy-Genetic Hybrid Systems. Implementation of hybrid systems using python programming. **6 Hrs**

TEXT BOOKS:

1	J.S.R.Jang, C.T.Sun and E.Mizutani	Neuro-Fuzzy and Soft Computing, Pearson Education 2004, ISBN 0132610663, 9780132610667
2	Simon O. Haykin	Artificial Neural Network, PHI, 2003, ISBN 0131471392, 9780131471399
3.	Elaine Rich, Kevin Knight	Artificial Intelligence TMH, 2009, ISBN 0071337156, 9780071337151
1.	Dan W. Patterson	Introduction to AI and Expert System, PHI, 2009, ISBN 0876927770, 9780876927779

5.	NPTEL link	

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the hard and soft computing techniques
2. Understand and Apply the concepts of Artificial neural networks and its applications
3. Understand and Apply the concepts of Fuzzy logic and its applications
4. Solving multi-objective optimization problems using Evolutionary algorithms or Genetic algorithms.
5. Applications of Soft computing hybrid techniques to solve problems in different application domains

COMPUTER ARCHITECTURE

Contact Hours/ Week	: 3(L)	Credits:	3
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Course Code	: REEE2		

Course Objectives: This course will enable students to:

1. Understand the impact of instruction set architecture on cost-performance of computer design.
2. Design a pipeline for consistent execution of instructions with minimum hazards.
3. Understand contemporary microprocessor designs and identify various design techniques employed.

Unit I

BASIC STRUCTURE OF A COMPUTER SYSTEM: Functional Units – Basic Operational Concepts – Performance – Instructions: Language of the Computer – Operations, Operands – Instruction representation – Logical operations – decision making – MIPS Addressing.

7 Hrs

Unit II

ARITHMETIC FOR COMPUTERS: Addition and Subtraction – Multiplication – Division – Floating Point Representation – Floating Point Operations – Subword Parallelism

8 Hrs

Unit III

PROCESSOR AND CONTROL UNIT: A Basic MIPS implementation – Building a Datapath – Control Implementation Scheme – Pipelining – Pipelined datapath and control – Handling Data Hazards & Control Hazards – Exceptions. **8 Hrs**

Unit IV

PARALLELISIM: Parallel processing challenges – Flynn‘s classification – SISD, MIMD, SIMD, SPMD, and Vector Architectures - Hardware multithreading – Multi-core processors and other Shared Memory Multiprocessors - Introduction to Graphics Processing Units, Clusters, Warehouse Scale Computers and other Message-Passing Multiprocessors.

8 Hrs

Unit V

MEMORY & I/O SYSTEMS: Memory Hierarchy - memory technologies – cache memory – measuring and improving cache performance – virtual memory, TLB 's – Accessing I/O Devices – Interrupts – Direct Memory Access – Bus structure – Bus operation – Arbitration – Interface circuits - USB.

8 Hrs

TEXT BOOKS:

1.	Carl Hamacher, Zvonko Vranesic, Safwat Zaky	Computer Organization, McGraw Hill Education; 5th edition ,2011, ISBN-13: 978-1259005275

REFERENCE BOOKS:

1.	Clive Maxfiel	Pearson Education; Third edition, 2017, ISBN-10: 9789332585607
2.	NPTEL LINK	https://nptel.ac.in/courses/106106092/

Course Outcomes:

After the completion of this course, students will be able to:

1. **Describe** computer architecture concepts and mechanisms related to the design of modern processors, memories, and networks and explain how these concepts and mechanisms interact
2. **Evaluate** various design alternatives and make a compelling quantitative and/or qualitative argument for why one design is superior to the other approaches.
3. **Demonstrate** the ability to implement and verify designs of varying complexity at the register-transfer-level.
4. **Create** new designs at the register-transfer-level and the associated effective testing strategies
5. **Write** concise yet comprehensive technical reports that describe designs implemented at the register-transfer-level, explain the testing strategy used to verify functionality, and evaluate the designs to determine the superior approach.

ELECTROMAGNETIC WAVES

Contact Hours/ Week	: 3(L)	Credits:	3
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Course Code	: REEE3		

Course Objectives: This course will enable students to:

1. Understand guided electromagnetic wave propagation in transmission lines
2. Understand the basic concepts of waveguides and antennas

Unit I

Transmission Lines: Introduction, Concept of distributed elements, Equations of voltage and current, standing waves and impedance transformation, Lossless and low-loss transmission lines, Power transfer on a transmission line, Analysis of transmission line in terms of admittances, Transmission line calculations with the help of Smith chart, Applications of transmission line, Impedance matching using transmission lines.

7 Hrs

Unit II

Review of Maxwell's Equations: Basic quantities of Electromagnetics, Basic laws of Electromagnetics: Gauss's law, Ampere's Circuital law, Faraday's law of Electromagnetic induction. Maxwell's equations Surface charge and surface current, Boundary conditions at media interface.

Uniform Plane Wave Homogeneous unbound medium, Wave equation for time harmonic fields, Solution of the wave equation, Uniform plane wave, Wave polarization, Wave propagation in conducting medium, Phase velocity of a wave, Power flow and Poynting vector.

11Hrs

Unit III

Plane Waves at Media Interface: Plane wave in arbitrary direction, Plane wave at dielectric interface, Reflection and refraction of waves at dielectric interface, Total internal reflection, Wave polarization at media interface, Brewster angle, Fields and power flow at media interface, Lossy media interface, Reflection from conducting boundary.

7 Hrs

Unit IV

Waveguides: Parallel plane waveguide: Transverse Electric (TE) mode, transverse Magnetic (TM) mode, Cut-off frequency, Phase velocity and dispersion. Transverse Electromagnetic (TEM) mode,

Analysis of waveguide-general approach, rectangular waveguides.

7 Hrs

Unit V

Antennas: Radiation parameters of antenna, Potential functions, Solution for potential functions, Radiations from Hertz dipole, near field, far field, Total power radiated by a dipole, Radiation resistance and radiation pattern of Hertz dipole, Hertz dipole in receiving mode.

7Hrs

TEXT BOOKS:

1.	R.K.Shevgaonkar	"Electromagnetic Waves", Tata McGraw Hill, 2005.

REFERENCE BOOKS:

1.	D. K. Cheng	"Field and Wave Electromagnetics", Addison-Wesley, 1989.
2.	M.N.O. Sadiku,	"Elements of Electromagnetics", Oxford University Press, 2007.
3.	C. A. Balanis	"Advanced Engineering Electromagnetics", John Wiley & Sons, 2012.
4.	C. A. Balanis	"Antenna Theory: Analysis and Design", John Wiley & Sons, 2005.
5.	NPTEL link	https://nptel.ac.in/courses/117/101/117101056/

Course Outcomes: After the completion of this course, students will be able to:

1. Analyse transmission lines and estimate voltage and current at any point on transmission line for different load conditions
2. Provide solution to real life plane wave problems for various boundary conditions.
3. Analyse the field equations for the wave propagation in special cases such as lossy and low loss dielectric media.
4. Visualize TE and TM mode patterns of field distributions in a rectangular wave-guide.
5. Understand and analyse radiation by antennas.

NANO SCIENCE AND NANO TECHNOLOGY

Contact Hours/ Week	: 3(L)	Credits : 3
Total Lecture Hours	: 39	CIE Marks : 50
Total Tutorial Hours	: -	SEE Marks : 50
Course Code	:REEE4	

Course Objectives: This course will enable students to:

1. To understand the foundational knowledge of the Nanoscience and related fields.
2. To understand the Nanoscience and Applications
3. To understand the synthesis of nanomaterials and their application and the impact of nanomaterials on environment

Unit I

Introduction: Definition of Nano, Scientific revolution-Atomic Structure & atomic size, emergence & challenges of nanoscience, carbon age-new form of carbon (CNT- Graphene), influence of nano over micro/macro, size effects and crystals, large surface to volume ration, surface effects on the properties.

5 Hrs

Unit II

PHYSICO-CHEMICAL METHODS OF NANOSTRUCTURED MATERIALS: Solution growth techniques of 1D-2D nano structures:- Synthesis of metallic, semiconducting and oxide nanoparticles – homo- and hetero-nucleation growth methods – template-based synthesis (electrochemical, electrophoretic, Melt and solution, CVD, ALD) – Gas Phase Synthesis of Nanopowders: – Vapor (or solution) – liquid – solid (VLS or SLS) growth – the Need for Gas/vapor State Processing – Main Stages of Gas Phase Synthesis – Applicability of the methods. **8 Hrs**

Unit III

CHARACTERIZATION OF NANOPHASE MATERIALS: Fundamentals of the techniques – experimental approaches and data interpretation – applications/limitations of Xray characterization: – X-ray sources – wide angle, extended x-ray absorption technique – Electron microscopy: SEM/TEM – high resolution imaging – defects in nanomaterials – Spectroscopy: – electron energy-loss mechanisms – electron filtered imaging – prospects of scanning probe microscopes – optical spectroscopy of metal/semiconductor nanoparticles **8 Hrs**

Unit IV

NANOSCALE PROPERTIES: Magnetism:- Magnetic Moment in clusters/Nanoparticles – Magnetic Order – coercivity – Magnetocrystalline Anisotropy – thermal activation and Superparamagnetic effects – Electronics and Optoelectronics:- Quantum Confinement of Superlattices and Quantum Wells –

Dielectric Constant of Nanoscale Silicon – Doping of a Nanoparticle – Excitonic Binding and Recombination Energies – Capacitance in a Nanoparticle – Diffusion in Nanocrystalline Materials – Diffusion In Grain Boundaries Of Metals. **12 Hrs**

Unit V

Optical Properties, Photoconductivity, Optical absorption & transmission, Photoluminescence, Fluorescence, Phosphorescence, Electroluminescence. Magnetic Materials: Basic Magnetic Phenomena; Diamagnetism, Paramagnetism, Ferromagnetism, Anti-ferromagnetism, Application of Nanomaterial molecular electronics, biological and environmental, membrane based application, polymer based applications in electrical engineering **6 Hrs**

TEXT BOOKS:

1.	Ajoy K. Ghatak, S. Lokanathan	Quantum Mechanics: Theory and Applications
2.	Chriss Bins	Introduction to Nanoscience and Nanotechnology 2nd ed., Wiley, A John Wiley & Sons, INC., Publication, 2010
3.	T. Pradeep	Nano The essentials, Understanding Nano science and Naotechnology, Tata McGraw-Hill Publishing Company Limited, NEW DELHI, 2007, DOI: 10.1036/0071548297, ISBN:9780071548298
4.	Wesley Crowell Sanders	Basic Principles of Nanotechnology, CRC Press; Taylor & Francis, 2018, 1351054406, ISBN 13: 9781351054409

REFERENCE BOOKS:

1.	G. Schmidt	Nanoparticles: From theory to applications 2nd ed., Wiley-VCH Verlag, Weinheim, 2010, ISBN: 978-3-527-32589-4
2.	Geoffrey A Ozin, André Arsenault, Ludovico Cademartiri	Nanochemistry: A Chemical Approach to Nanomaterials, Royal Society of Chemistry, Cambridge UK 2005.

Course Outcomes: After the completion of this course, students will be able to:

1. **Understand** the Concepts of Nanoscience, challenges of Nanoscience and Nanotechnology. Advantages of Nanotechnology over Micro technology
2. **Understand** the structural properties of nanomaterials. Concepts of mechanical-physical-chemical properties of nanocomposites.
3. **Understand** the electronic properties of nanomaterials
4. **Understand** the Optical properties of nanomaterials
5. **Apply** the concept of nanotechnology in electrical, mechanical, electronics, bio and environmental engineering fields.

ELECTRICAL POWER UTILIZATION

Contact Hours/ Week	: 3(L)	Credits:	3
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Course Code	: REEE5		

Course Objectives: This course will enable students to:

1. Impart knowledge on electrical energy-based heating and welding.
2. Impart how to design the traction system considering economic and technology upgradation.
3. Understand the basic principles of light control and types of light schemes.
4. Explore working of electric and hybrid electric vehicles technology.

Unit I

Heating and welding: Advantage and method of electric heating, resistance heating, Induction heating, dielectric heating, the arc furnace, heating of building, electric welding, resistance and arc welding, Ultrasonic welding, Electric welding equipment. **8 Hrs**

Unit II

Electrolytic process: Fundamental principles, extraction, refining of metals, electroplating, factors affecting electro deposition process. **3 Hrs**

Electric traction: Introduction, requirements of an ideal traction, System of traction, speed time curve, tractive effort, co-efficient of adhesion, selection of traction motors, method of speed control, energy saving by series parallel control. **5 Hrs**

Unit III

Electric traction: AC traction, AC traction equipment, AC series motor characteristics, regenerative braking, linear induction motor and their use, Diesel electric equipment, train lighting system, Specific energy, Factors affecting specific energy consumption

8 Hrs

Unit IV

Illumination: Laws of illumination, distribution and control of lighting, lighting calculation, factory lighting, flood lighting, street lighting, different types of lamps-incandescent, fluorescent, vapour, CFL, LED and their working, comparison, Glare and its remedy. **8 Hrs**

Unit V

INTRODUCTION TO ELECTRIC AND HYBRID VEHICLES: Introduction to Hybrid Electric Vehicles: History of hybrid and electric vehicles.

Electric Drive-trains: Basic concept of electric traction, introduction to various electric drive-train topologies, power flow control in electric drive-train topologies.

Hybrid Electric Drive-trains: Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies. **7 Hrs**

TEXT BOOKS:

1.	Openshaw Taylor	Utilization of Electric Energy, The Orient Blackswan Publishers, ISBN: 8125016406 (Chapter: 1,2,3,6)
2.	Mehrdad, Ehsani, Yimin Gao, Sabastien. E. Gay, Ali Emadi	Modern Electric, Hybrid Electric and Fuel Cell Vehicles, Standards media, Edition 2, 2009, ISBN: 9781420053982

REFERENCE BOOKS:

1.	J. B. Gupta	Utilization of Electric Power & Electric Traction, S.K. Kataria & Sons, 2013 Edition, ISBN: 9350142589
2.	NPTEL link	

Course Outcomes: After the completion of this course, students will be able to:

1. Design heating elements and interpret welding processes.
2. Interpret refining of metals, factors affecting electroplating and Analyse speed time curves
3. Analyse equipments for AC traction systems and interpret braking energy returned to lines.
4. Design lighting schemes and select proper lamps.
5. Analyse performance of electric and hybrid vehicles.

ENERGY AUDITING AND DEMAND SIDE MANAGEMENT

Contact Hours/ Week	: 3(L)	Credits:	3
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Course Code	: REEE6		

Course Objectives: This course will enable students to:

1. To impart basic concepts & knowledge of electrical energy scenario in India & world
2. To make them aware of energy conservation & energy conservation opportunities
3. To make them to understand energy economic analysis
4. To make them know about energy auditing, energy elements, measurements in energy auditing
5. To impart knowledge on electrical system optimization, energy efficient motors, energy efficient lighting, availability-based tariff (ABT)
6. To impart basic concepts of demand side management, load management, benefits and different techniques of DSM

Unit I

INTRODUCTION: Audit purpose, scope, Energy Auditing and Conservation Concepts & its importance- energy conservation opportunities in electrical power supply sector- Energy efficiency, Energy Security. Per capita energy consumption. Energy conservation act-2001 & its features

ENERGY ECONOMIC ANALYSIS: The time value of money concept, developing cash flow models, payback analysis, depreciation, numerical problems. **8 Hrs**

Unit II

ENERGY AUDITING: Introduction, Elements of energy audits, energy use profiles, measurements in energy audits, presentation of energy audit results.Energy management program-organization structure, energy policy and planning. **8 Hrs**

Unit III

ENERGY MANAGEMENT IN MOTORS: Energy performance of motors, opportunities to improve drive efficiency, determining electric motor operating loads, determination of motor efficiency and losses, energy efficient motors. **8 Hrs**

Unit IV

ENERGY MANAGEMENT IN LIGHTING: Choice of lighting, energy saving, control of lighting, lighting standards, Use of different lighting technologies, power factor improvement and location of capacitors, Tariff, Availability Based Tariff (ABT) **8 Hrs**

Unit V

DEMAND SIDE MANAGEMENT: Introduction to DSM, concept, benefits of DSM, planning and implementation, load management as a DSM strategy, Different techniques of DSM-time of day pricing, time of day models for planning. Load priority technique, promotion of high efficient technologies.

7 Hrs

TEXT BOOKS:

1.	Wayne C Turner & Steve Doty	Energy Management Handbook, Sixth Edition,2007, The Fairmont Press
2.	Albert Thumann	Fundamentals of Energy Engineering, Prentice Hall Inc, Englewood Cliffs, New Jersey.
3.	A S. Pabla	Electrical Power distribution, TMH, 5th edition, 2004

REFERENCE BOOKS:

1.	Barney Cape hart, Wayne Turner, William Kennedy	Guide to Energy Management,Fifth Edition,2006,The Fairmont Press
2.	Ashok V. Desai	Energy Demand – Analysis, Management and Conservation, Wiley Eastern, 2005.
3.	Tripathy S.C	Electrical Energy utilization and conservation, TMH, 1991
4.		Hand book on energy auditing ,TERI (Tata Energy Research Institute)

Course Outcomes: After the completion of this course, students will be able to:

1. Able to have knowledge on energy conservation & energy conservation opportunities
2. Know about concept of energy economic analysis & energy auditing
3. Able to describe about demand side management and its techniques.
4. Capable of identifying energy efficient motors and energy efficient lighting systems

TESTING AND COMMISSIONING OF ELECTRICAL EQUIPMENT

Contact Hours/ Week	: 3(L)	Credits:	3
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Course Code	: REEE7		

Course Objectives: This course will enable students to:

1. Understand the need for testing of electrical equipment
2. Understand the methods of testing electrical equipment as per national and international standards
3. Understand various steps in erection and commissioning of electrical equipment

Unit I

TRANSFORMERS

Specifications: Power and distribution transformers as per BIS standards.

Erection and Commissioning: Dispatch, Inspection upon arrival at site, Handling, Installation: Location and site preparation, Oil filling, Drying of transformers, Commissioning: Checks before commissioning

Testing of Power Transformers:

(i) Preliminary tests

(ii) Routine tests: Measurement of winding resistance, measurement of voltage ratio and check of voltage vector relationship, Measurement of impedance voltage and load loss, measurement of no-load loss and current, measurement of insulation resistance **8 Hrs**

Unit II

TRANSFORMERS

(ii) Routine tests (contd.): Separate source voltage withstand test, induced over-voltage withstand test

(iii) Type test: Temperature rise test

Impulse Testing: Lightning impulse test circuit, switching impulse test, Measurement and recording of impulses, Fault detection

Short circuit testing of Power Transformers

Transformer auxiliaries: Gas operated relay, Temperature indicators, Pressure relief valve

8 Hrs

Unit III

INDUCTION MOTORS:

Specifications: Site conditions, Enclosures, Cooling, rated conditions of voltage, frequency and output of motors, Duty, I.P. protection, dimensions, Performance values, overload, temperature rise, efficiency and power factor, tolerance, markings, information to be given at the stage of enquiry and placing order for supply.

Installation and commissioning: Location of the motors (including the foundation details) & its control apparatus, Foundation and leveling, Insulation resistance, Alignment, fitting of pulleys & coupling Checks before commissioning, Commissioning of motor, Temperature rise

Tests on Induction motor: Insulation resistance test, High voltage test, resistance test, reduced voltage running up test **8 Hrs**

Unit IV

INDUCTION MOTORS (contd.):

Tests on Induction motor (contd.): Performance characteristics: No load test, Open circuit test, Locked rotor test, pull up and pull-out torque, Speed-torque and speed-current curves, Load test. Temperature-rise test.

SYNCHRONOUS MACHINES:

Specifications: As per BIS standards.

Installation: Physical inspection, foundation details, alignments, excitation systems, cooling and control gear, drying out.

Tests: Measurement of Insulation resistance, tests for short circuited field turns, Polarity test for field poles, Resistance of windings, High voltage test.

8 Hrs

Unit V

SYNCHRONOUS MACHINES (contd.):

Tests (Contd.): Checking of shaft current and bearing insulation resistance, Determination of irregularities of voltage waveform, Overspeed test, Line charging capacity, Measurement of open-circuit and short-circuit characteristics, zero power factor characteristics, Determination of synchronous machine quantities from tests, Temperature-rise tests, Instantaneous short-circuit withstand test

7 Hrs

TEXT BOOKS:

1.	BHEL	Transformers, BHEL, TMH, 2nd ed, 2003

REFERENCE BOOKS:

1.	Indian standards	Relevant Bureau of Indian Standards
2.	H. N. S. Gowda,	A Handbook on Operation and Maintenance of Transformers, Published by H. N. S. Gowda, 2006
3.		J and P Transformer Book, Elsevier Publication.2011

Course Outcomes: After the completion of this course, students will be able to:

1. explain specifications of transformers, induction and synchronous machines
2. describe various tests performed on transformers at the manufacturer site and prior to commissioning
3. explain various methods of installation of induction machines and synchronous machines
4. describe various tests performed on induction machines at the manufacturer site and prior to commissioning
5. describe various tests performed on synchronous machines at the manufacturer site and prior to commissioning

ELECTRICAL MACHINE DESIGN

Contact Hours/ Week	: 3(L)	Credits:	3
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Course Code	: REEE8		

Course Objectives: This course will enable students to:

1. understand the principles of electrical machine design
2. design electrical machines as per the specifications

Unit I

Principles of electrical machine design and **Design of DC machines:** Introduction, general concepts, limitations in design, Different types of materials and insulation used in electrical machines. Introduction to heating and cooling of electrical machines.
Output equation, choice of specific loadings and choice of number of poles, design of main dimensions of the DC machines. **8 Hrs**

Unit II

Design of DC machines (continued): Design of armature, armature windings, no. of slots, commutators and brushes (basic concepts only), magnetic circuit - estimation of ampere turns, design of yoke and pole, Unbalanced magnetic pull (Qualitative analysis only) **7 Hrs**

Unit III

Design of transformers (Single phase and three phase): Output equation, choice of specific loadings, main dimensions of the core, design of primary and secondary coils. Estimation of no-load current, Design of tank & number of tubes. Estimation of leakage reactance **8 Hrs**

Unit IV

Design of Induction motors: Output equation, choice of specific loadings, main dimensions of three phase induction motor, Stator winding design, choice of length of air-gap, design of rotor bars and end rings. Design of slip-ring induction motor. Estimation of no-load current. **8 Hrs**

Unit V

Design of synchronous machines: Output equation, choice of specific loadings, Main dimensions of three phase synchronous machine. Design of armature winding. Slot design. Short circuit ratio. Design of rotor and field winding of salient pole synchronous machine. Design of rotor of non-salient pole synchronous machine. **8 Hrs**

TEXT BOOKS:

1.	A.K. Sawhney	A course in Electrical Machine Design, Dhanpatrai & Sons, New Delhi
2.	V.N. Mittle	Design of Electrical Machines, II edition. Standard Publishers, Delhi

REFERENCE BOOKS:

1.	M.G. Say	Performance & design of AC Machines. CBS, New Delhi.
2.	R.K. Aggarwal	Principles of electrical machine design, S.K. Kataria & Sons. Delhi.

Course Outcomes: After the completion of this course, students will be able to:

1. Explain the basic design of electrical machines, types of materials and limitations in design
2. Apply basic concepts and knowledge in design of DC machines
3. Apply basic concepts and knowledge in design of Transformers
4. Design Induction motors as per specifications
5. Design synchronous machines as per specifications

EMBEDDED SYSTEMS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE9		

Course Objectives: This course will enable students to:

1. Understand modern embedded systems
2. Program embedded systems using ARM processor

Unit I

INTRODUCTION TO EMBEDDED SYSTEMS: An Embedded System, Processor in the System, Other Hardware Units, Software Embedded into a System, Exemplary Embedded Systems, Embedded System-On-Chip (SOC) and in VLSI Circuit, Complex System design and Processors, Design Process and design Example, Classification of Embedded System, Skill required for an Embedded system designer. **8 Hrs**

Unit II

ARM PROCESSORS AND PERIPHERALS: ARM Design Philosophy, Registers, Program Status Register, Instruction Pipeline, Interrupts and Vector Table, Architecture Revision, ARM Processor Families. Application-specific instruction-set processors (ASIP's), Timers, counters, and watchdog timers.

8 Hrs

Unit III

MEMORY AND INTERFACING: Memory write ability and storage permanence, Composing memories, Memory hierarchy and cache, Communication basics, Microprocessor interfacing: I/O addressing, interrupts, Direct memory access, Arbitration. Serial Protocols, Parallel protocols, Wireless protocols. **8 Hrs**

Unit IV

INTER-PROCESS COMMUNICATION AND SYNCHRONISATION OF PROCESSES, TASKS AND THREADS: Multiple Processes in an Application, Tasks, Task states, task and data, Semaphores, Shared data, Interposes communication, Signal function, Queue function, and pipe function.

7 Hrs

Unit V

REAL TIME OPERATING SYSTEMS: Operating System Services, Process management, Timer function, Event Function, Memory management, Device File and IO management, Real Time Operating Systems, Basic design using RTOS.

8 Hrs

TEXT BOOKS:

1.	Raj Kamal	Embedded System, Architecture, Programming and Design-, TMH, 2nd Edition 2008.
2.	Frank Vahid/Tony Givargis	A Unified Hardware/Software Introduction-, Wiley student edition 2002.

3.	Andrew N. Sloss, Dominic Symes, Chris Wright	ARM Systems Developer's Guides- Designing & Optimizing System Software –, 2008, Elsevie

REFERENCE BOOKS:

1.	Valvano, J.W,	Embedded Microcomputer Systems: Real time interfacing- Cengage Learning, 2nd Edition 5th Indian reprint,2009
2.	NPTEL LINK	https://nptel.ac.in/courses/108105057/

Course Outcomes: After the completion of this course, students will be able to:

1. Interpret designing an embedded system, component, process to meet desired needs within realistic constraints.
2. Illustrate the key features of embedded systems in terms of computer hardware and be able to discuss their functions and aware of the key factors affecting computing hardware.
3. Design embedded solutions to real world situations using (embedded) computer systems interfaced to digital hardware.
4. Use Inter-Process Communication and Synchronization of Processes in embedded solutions.
5. Analyze and Design real time embedded systems and their relevance in real world scenario.

FPGA BASED SYSTEM DESIGN

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE10		

Course Objectives: This course will enable students to:

1. Understand Digital system design using HDL
2. Know FPGA architecture, interconnect and technologies.
3. Understand configuring and implementing digital embedded system, microcontrollers, microprocessors, DSP algorithm on FPGA

Unit I

Introduction : Digital system design options and tradeoffs, Design methodology and technology overview, High Level System Architecture and Specification: Behavioral modelling and simulation, Hardware description languages, combinational and sequential design, state machine design, synthesis issues, test benches. **8 Hrs**

Unit II

Overview of FPGA architectures and technologies FPGA Architectural options, granularity of function and wiring resources, coarse V/s fine grained, vendor specific issues (emphasis on Xilinx and Altera) **8 Hrs**

Unit III

Logic block architecture: FPGA logic cells, timing models, power dissipation I/O block architecture: Input and Output cell characteristics, clock input, Timing, Power dissipation

8 Hrs

Unit IV

Placement and Routing Programmable interconnect -Partitioning and Placement, Routing resources, delays; Applications -Embedded system design using FPGAs, DSP using FPGAs, Dynamic architecture using FPGAs, reconfigurable systems, application case studies.

8 Hrs

Unit V

Applications: Simulation/implementation exercises of combinational, sequential and DSP kernels on Xilinx/Altera boards. **7 Hrs**

TEXT BOOKS:

1.	W.Wolf	"FPGA based system design", Pearson, 2004. ISBN-13: 978-8131724651

REFERENCE BOOKS:

1.	Clive Maxfield	The Design Warriors's Guide to FPGAs", Elsevier, 2004. ISBN-13: 978-0750676045
2.	NPTEL LINK	https://nptel.ac.in/courses/117108040/

Course Outcomes: After the completion of this course, students will be able to:

1. Design reconfigurable digital systems.
2. Demonstrate and Debug the embedded systems before the actual product is developed.
3. Design finite state machines for various applications.
4. Design dynamic architectures using FPGA's.
5. Implement, Design and develop embedded system using EDA tools.

ADVANCED POWER ELECTRONICS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE11		

Course Objectives: This course will enable students to:

1. Study advanced converters used in industrial applications
2. Understand the design principles of power electronic converters

Unit I

D.C-D.C Switched mode converter topologies: Buck, boost, buck-boost and CUK converters, full bridge D.C-D.C converter-Detailed theory, working principles, modes of operation, with detailed circuits

and wave forms, applications, merits and demerits, design principle, boundary values, problems

8 Hrs

Unit II

Forward, fly back push pull converters working principles, modes of operation, with detailed circuits and wave forms, applications **8 Hrs**

Unit III

DC-AC Switched mode inverters: single phase inverter, three phase inverters. SPWM inverter-detail theory, working principles, modes of operation with circuit analysis, applications, merits and demerits, design principle, problems.

8 Hrs

Unit IV

Resonant converters: classification of resonant converters, Series and parallel loaded resonant converters, Z.V.S, and Z.C.S switching principle and working. High frequency D.C. link converters.

8 Hrs

Unit V

Power supplies: Power conditioning and uninterruptible power supplies, Solar power based bidirectional inverter-Design principle, operation and problems.

7 Hrs

TEXT BOOKS:

1.	Ned Mohan, T.M.Undeland, T.M.Robbins,	Power electronics converters, application & Design, JohnWiley 2003
2.	P.C.Sen	Modern Power Electronics-, S Chand Ltd., 2005
3.	A.I Pressman	Switching Power Supply Design ,McGraw Hill, 2007

REFERENCE BOOKS:

1.	Dubey G.K. Asarbada, E.R.K	Power Electronics Devices, IETE book, series V .1 TMH 1986
2.	Murplhy J.M.D Turnnbull, F.G	Power Electronics Control in A.C. Motors Pergamon, 1988
3.	Rashid M.H.	Power electronics - circuits, devices, application/3rd ed, Prentice Hall India, 2003

Course Outcomes: After the completion of this course, students will be able to:

1. Describe & Analyze working Principle of buck, boost, buck-boost converters.
2. Describe working principle of forward, fly-back and push pull converters.
3. Describe & Analyze the characteristics of DC-AC switched mode inverters.
4. Analyze resonant converters & high frequency inductors and transformers.
5. Describe uninterrptible power supplies & Solar power based bidirectional inverter

ADVANCED CONTROL THEORY

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE12		

Course Objectives: This course will enable students

- To impart basic concepts & knowledge of state variables to the students.
- To make them aware of different representations of systems using state variables
- To train them to obtain transfer function from state model and to give a deep insight into state equations, STM and its properties.
- To stress the importance of PI,PD and PID controllers in the design of system and to make them to know the concepts of controllability and observability of systems
- To expose the students to comprehensive intricacies involved in the design of modern control systems such as pole placement techniques and state regulator design
- To make them aware of various nonlinearities and their analysis.

Unit I

State variable analysis: Introduction, Concept of state, State variables, and state model of linear systems, Linearization of state equation.

State space Representation using physical variables, phase variables and canonical variables. Diagonalisation, Eigen values and Eigen vectors, Generalized Eigen vectors.

8 Hrs

Unit II

State variable analysis (Continued):

Derivations of Transfer function from state model. Solution of state equation, state transition matrix & its properties, computation using Laplace transformation, Cayley-Hamilton method.

8 Hrs

Unit III

Controllability and observability: Basic concepts, Kalman's test, Gilberts test, Duality property, Effect of pole-zero cancellation on controllability and observability.

8 Hrs

Unit IV

Pole placement Design: Introduction, Stability improvements by state feedback, Necessary and sufficient conditions for arbitrary pole placement. State Regulator design, Design of state Observers.

8 Hrs

Unit V

Non-linear systems: Introduction, Common physical non-linearities. Phase plane method. singular points, stability of non-linear systems. Limit Cycles. Construction of phase trajectories.

7 Hrs

TEXT BOOKS:

1.	M.Gopal	Digital Control and State Variable Methods, 2nd ed, Tata Mc Graw Hill, 2003
2.	I.J.Nagrath and M.Gopal	Control System Engineering", New Age International, 2008.

REFERENCE BOOKS:

1.	Katsuhiko Ogata	State Space Analysis of Control Systems, Prentice Hall Inc., 1967
2.	Benjamin C Kuo and FaridGolnaraghi	Automatic Control Systems", 8th ed., John Wiley & Sons, 2003.
3.	Katsuhiko Ogata	Modern Control Engineering, 4th ed., PHI/Pearson Education, 2002.
4.	M.N.Bandyopadhya y	Control Engineering, PHI, 2003
5.	Tokel Glad & Lennart L Jung	Control Theory, CRC press, 2003

Course Outcomes: After the completion of this course, students will be able to:

1. Provide state models of systems and represent systems in different state variable configurations.
2. Give solution of state equation using different methods.
3. Analyse PI, PD and PID systems and assess controllability and observability of system.
4. Implement pole placement design and state observer design.
5. Explain various nonlinearities.

COMPUTER NETWORKS

Contact Hours/ Week	: 3(L)	Credits:	3
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Course Code	: REEE13		

Course Objectives: This course will enable students to:

1. Understand general-purpose computer networks.
2. Master the computer network applications.
3. Understand the principles and concepts on computer networks.

Unit I

INTRODUCTION: Data Communications; Networks; the Internet; Protocols and Standards; Layered tasks; The OSI Model and the layers in the OSI model; TCP / IP Protocol Suite.

8Hrs

Unit II

DATA, SIGNALS, AND DIGITAL TRANSMISSION: Analog and digital signals; Transmission impairment; Data rate limits; Performance; Digital-to-Digital conversion; Analog-to-Digital conversion; Transmission modes.

ANALOG TRANSMISSION AND MULTIPLEXING: Digital - to - Analog conversion; Analog - to - Analog conversion; Multiplexing; Spread spectrum.

8 Hrs

Unit III

TRANSMISSION MEDIA, ERROR DETECTION AND CORRECTION: Twisted pair cable, Coaxial cable, Fibre-Optic cable, Radio waves, Microwaves, Infrared. Introduction to error detection / correction; Block coding; Linear block codes; Cyclic codes, Checksum.

DATA LINK CONTROL: Framing; Flow and Error control; Protocols; Noiseless channels; Noisy channels; HDLC; Point-to-point Protocol - framing, transition phases.

8 Hrs

Unit IV

MULTIPLE ACCESS, ETHERNET: Random Access; Controlled Access; Channelization. Ethernet: IEEE standards; Standard Ethernet and changes in the standard; Fast Ethernet; Gigabit Ethernet.

8 Hrs

Unit V

WIRELESS LANS AND CONNECTION OF LANS: IEE 802.11; Bluetooth. Connecting devices; Backbone Networks; Virtual LANs.

OTHER TECHNOLOGIES: Cellular telephony; SONET / SDH: Architecture, Layers, Frames; STS multiplexing. ATM: Design goals, problems, architecture, switching, layers.

7Hrs

TEXT BOOKS:

1.	Behrouz A. Forouzan	Data Communications and Networking , Tata McGraw-Hill, 4th Edition, 2006. ISBN-13: 978-0070634145

REFERENCE BOOKS:

1.	Alberto Leon, Garcia and Indra Widjaja	Communication Networks: Fundamental Concepts and Key Architectures ,Tata McGraw- Hill, 2nd Edition, 2004. ISBN-13: 978-0070595019

Course Outcomes: After the completion of this course, students will be able to:

1. Explain basic communication protocols
2. Understand the various communication media
3. Explain standard communication protocols for wireless networks

ELECTRICAL ESTIMATION AND COSTING

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE14		

Course Objectives: This course will enable students to:

1. Know about the importance and principles of estimation
2. Understand on the various functions of Estimations.
3. Familiarize with IE rules, IE ACT and on Indian and international standards.
4. Acquire the knowledge on the wiring accessories, service mains, control circuits and power circuits
5. Estimate the engineering needs for the design of overhead transmission lines, distribution lines and substations

Unit I

Principles of Estimation: Introduction to Estimation and Costing, Electrical Schedule, Catalogues, Market Survey and Source Selection, Recording of Estimates, Determination of Required Quantity of Material, Labour Conditions, Determination of Cost Material and Labour, Contingencies, Overhead Charges, Profit, Purchase System, Purchase Enquiry and Selection of Appropriate Purchase Mode, Comparative Statement, Purchase Orders, Payment Of Bills, Tender Form, General Idea about IE Rule, Indian Electricity(IE) Act and IE Rules -29,30,45,46,47,50,51,54,55,77 and79

8 Hrs

Unit II

Wiring and Accessories: Introduction, Distribution of energy in a Building, PVC Casing and Capping, Conduit Wiring, Desirability of Wiring. Types of cables used in Internal Wiring, Multi Strand Cables, Voltage Grading and Specification of Cables. Main Switch and Distribution Board, Conduits and its accessories and Fittings. Lighting Accessories and Fittings, Types of Fuses, Size of Fuse, Fuse

Units, Earthing Conductor. General rules for internal wiring, Design of Lighting Points, Determination of total Load, lighting points and its number, total load, sub-circuits, size of conductor

8 Hrs

Unit III

Service Mains: Introduction, Types, Estimation of Underground and Overhead Service Connections. **Design and Estimation of Power Circuits:** Introduction, Important Considerations Regarding Motor Installation Wiring, Input Power, Input Current to Motors, Rating of Cables, Rating of Fuse, Size of Condit, Distribution Board Main Switch and Starter **8 Hrs**

Unit IV

Estimation of Overhead Transmission and Distribution Lines: Components of Transmission System Erection: Cross Arms, Pole Brackets and Clamps, Guys and Stays, Conductors Configuration Spacing and Clearances, Span Lengths, Lightning Arrestors, Phase Plates, Danger Plates, Anti Climbing Devices, Bird Guards, Beads of Jumpers, Muffs, Points to be Considered at the Time of Erection of Overhead Lines, Erection of Supports, Setting of Stays, Fixing of Cross Arms, Fixing of Insulators, Conductor Erection. Repairing and Jointing of Conductors, Dead End Clamps, Positioning of Conductors and Attachment to Insulators, Jumpers, Tee-Offs, Earthing of Transmission Lines, Guarding of Overhead Lines, Clearances of Conductor from Ground, Spacing Between Conductors, Important Specifications.

8 Hrs

Unit V

Estimation of Substations: Main Electrical connection, Graphical Symbols for Various Types of Apparatus and Circuit Elements on Substation, main Connection Diagram, Single Line Diagram of Typical Substations, Equipment for Substation, Substation Auxiliaries Supply, Substation Earthing. **7 Hrs**

TEXT BOOKS:

1	J. B. Gupta	A Course in Electrical Installation Estimating and Costing, 9th Edition, 2012, Katson Books
2	S.L. Uppal and G.C. Garg,	Electrical Wiring, Estimating & Costing, Khanna publishers, 2008.

REFERENCE BOOKS:

1	S. Singh and R. D. Singh	"Electrical estimating and costing", Dhanpat Rai and Co., 1997.
2	K. B. Raina,	"Electrical Design, Estimating & Costing", New age International, 2007.

Course Outcomes: After the completion of this course, students will be able to:

1. Explain the purpose of estimation and costing, market survey, estimates, and purchase enquiries, preparation of tenders, comparative statements and payment of bills.
2. Understand the distribution of energy in a building, wiring and methods of wiring.

3. Understand the preliminary design of lighting points and its number, total load, sub-circuits, size of conductor
4. Discuss types of service mains and estimation of service mains and power circuits.
5. Discuss estimation of overhead transmission and distribution system and its components. And the main components of a substation, preparation of single line diagram of a substation and earthing of a substation.

COMPUTATIONAL ELECTROMAGNETICS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE15		

Course Objectives: This course will enable students to:

1. Understand the need for using computational techniques in design of electrical equipment
2. Learn different analytical and computational techniques for solving electromagnetic field problems

Unit I

Introduction: Conventional design methodology, Computer aided design aspects – Advantages. Review of basic fundamentals of Electrostatics and Electromagnetics. Development of Helmhotz equation, energy transformer vectors- Poynting and Slepian, magnetic Diffusion-transients and time-harmonic.

7 Hrs

Unit II

Analytical Methods Analytical methods of solving field equations, method of separation of variables, Roth's method, integral methods- Green's function, method of images.

7 Hrs

Unit III

Finite Difference Method (FDM) Finite Difference schemes, treatment of irregular boundaries, accuracy and stability of FD solutions, Finite-Difference Time-Domain (FDTD) method- Uniqueness and convergence **7 Hrs**

Unit IV

Finite Element Method (FEM) Overview of FEM, Variational and Galerkin Methods, shape functions, lower and higher order elements, vector elements, 2D and 3D finite elements, efficient finite element computations. **9 Hrs**

Unit V

Special Topics {Background of experimental methods-electrolytic tank, R-C network solution, Field plotting (graphical method)}, hybrid methods, coupled circuit - field computations, electromagnetic - thermal and electromagnetic - structural coupled computations, solution of equations, Method of moments,Poisson's fields.

Applications Low frequency electrical devices, static / time-harmonic / transient problems in transformers, rotating machines, actuators. CAD packages.

9 Hrs

TEXT BOOKS:

1.	M. N. O. Sadiku	"Numerical Techniques in Electromagnetics", CRC press, 2001.

REFERENCE BOOKS:

1.	P. P. Silvester and R. L. Ferrari	"Finite Element for Electrical Engineers", Cambridge University press, 1996
2.	NPTEL link	https://nptel.ac.in/courses/108/101/108101090/

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the basic concepts of electromagnetics.
2. Understand computational techniques for computing fields.
3. Apply the techniques to simple real-life problems.

HVDC TRANSMISSION

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE16		

Course Objectives: This course will enable students to:

- To expose the students to various aspects of HVDC technology and the recent developments.
- To make the students understand the analysis of the converters and their controls.
- To make the students understand the basics of HVDC system protection, harmonics and filters.
- Understand the basics of VSC-HVDC transmission systems

Unit I

Introduction to HVDC systems: DC Power transmission technology, Comparison of AC and DC Transmission (Economics, Technical Performance and Reliability), Application of DC Transmission, Types of HVDC Systems, Components of a HVDC system, Modern trends in DC transmission. Description of different converter circuits, half wave, full wave, bridge rectifier circuits, 3 phase –1 way and 3 phase 2- way circuits. **7Hrs**

Unit II

Analysis of converter circuits: Analysis of 3 phase –1 way, 3 phase 2- way rectifier circuits. Choice of converter configuration. Analysis of 6P Graetz circuit, calculation of average direct voltage and current without overlap and with overlap less than 60^0. Numerical problems. Equivalent circuit of 6P rectifier circuit. Inverter operation, Voltage and current equations, commutation failure.

8 Hrs

Unit III

Control Strategies, Equivalent circuit of HVDC system, basic means of control and power reversal, Limitation of manual control, constant voltage verses constant current control, desired features of control and actual control characteristics, Modifications of control characteristics, constant minimum ignition angle control and constant current control, and constant extinction angle control, tap changer control and power control.,

Firing Angle Controls individual pulse control, equivalent pulse control, control hardware

Higher level controllers: frequency control, reactive power control, sub synchronous damping control.

8 Hrs

Unit IV

Protection, Harmonics and Filter circuits. General introduction to protection, DC smoothing reactor, Prevention of consequent commutation failure, converter faults, clearing of line faults and re-energizing the line, Surge arresters, over current and over voltage protection, characteristic and non-characteristic harmonics, troubles caused by harmonics, means of reducing harmonics, telephone interference, performance indices, harmonic analysis, types of filters.

8 Hrs

Unit V

VSC–HVDC systems Introduction, comparison of LCC-HVDC and VSC-HVDC systems, advantages and applications of VSC–HVDC systems, types of VSC converters 2 level, 3 level and MMC, control of VSC-HVDC link. Harmonics, PWM schemes: Selective Harmonic Elimination, Sinusoidal Pulse Width Modulation, Equations in the rotating frame. Real and Reactive power control using a VSC.

MTdc Links

Multi-Terminal and Multi-Infeed Systems, Series and Parallel MTdc systems using LCCs, MTDC systems using VSCs. Introduction to Modular Multi-level Converters.

8 Hrs

TEXT BOOKS:

1. K.R.Padiyar, HVDC Power Transmission Systems, New Age International Publishers, 3rd Ed. 2015.
2. E. W. Kimbark Direct Current Transmission-Volume-I, Wiley Interscience, 1971.

REFERENCE BOOKS:

1. S. Kamakshaiah,V. Kamaraju HVDC Transmission, Tata McGraw-Hill Edition. 2011.

Course Outcomes: After the completion of this course, students will be able to:

1. demonstrate complete knowledge of HVDC technology.
2. understand and analyse converters and the associated controllers.
3. understand various aspects of harmonics and filters of HVDC systems
4. familiar with the recent developments in the high voltage dc transmission area.

ELECTRIC DRIVES

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE17		

Course Objectives: This course will enable students to:

1. Understand the operation and control of dc drives
2. Understand the operation and control of induction motor drives

Unit I

DC motor characteristics : Review of emf and torque equations of DC machine, review of torque-speed characteristics of separately excited dc motor, change in torque-speed curve with armature voltage, example load torque-speed characteristics, operating point, armature voltage control for varying motor speed, flux weakening for high speed operation.

Chopper fed DC drive : Review of dc chopper and duty ratio control, chopper fed dc motor for speed control, steady state operation of a chopper fed drive, armature current waveform and ripple, calculation of losses in dc motor and chopper, efficiency of dc drive, smooth starting.

8 Hrs

Unit II

Multi-quadrant DC drive : Review of motoring and generating modes operation of a separately excited dc machine, four quadrant operation of dc machine; single-quadrant, two-quadrant and four-quadrant choppers; steady-state operation of multi-quadrant chopper fed dc drive, regenerative braking.

7 Hrs

Unit III

Closed-loop control of DC Drive: Control structure of DC drive, inner current loop and outer speed loop, dynamic model of dc motor – dynamic equations and transfer functions, modeling of chopper as gain with switching delay, plant transfer function for controller design, current controller specification and design, speed controller specification and design **7 Hrs**

Unit IV

Induction motor characteristics : Review of induction motor equivalent circuit and torque-speed characteristic, variation of torque-speed curve with (i) applied voltage, (ii) applied frequency and (iii) applied voltage and frequency, typical torque-speed curves of fan and pump loads, operating point, constant flux operation, flux weakening operation.

Review of three-phase voltage source inverter, generation of three-phase PWM signals, sinusoidal modulation, space vector theory, conventional space vector modulation;

8 Hrs

Unit V

Scalar control or constant V/f control of induction motor constant V/f : steady-state performance analysis based on equivalent circuit, speed drop with loading, slip regulation.

Control of slip ring induction motor : Impact of rotor resistance of the induction motor torque-speed curve, operation of slip-ring induction motor with external rotor resistance, starting torque, power electronic based rotor side control of slip ring motor, slip power recovery. **8 Hrs**

TEXT BOOKS:

1.	G. K. Dubey	"Power Semiconductor Controlled Drives", Prentice Hall, 1989.
2.	R. Krishnan	"Electric Motor Drives: Modeling, Analysis and Control", Prentice Hall, 2001.

REFERENCE BOOKS:

1.	G. K. Dubey	"Fundamentals of Electrical Drives", CRC Press, 2002.
2.	W. Leonhard,	"Control of Electric Drives", Springer Science & Business Media, 2001.

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the characteristics of dc motors and induction motors
2. Understand the principles of speed-control of dc motors and induction motors.
3. Understand the power electronic converters used for dc motor and induction motor speed control.

POWER SYSTEM OPERATION AND CONTROL

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE18		

Course Objectives: This course will enable students to:

1. Have an overview of SCADA and its application for real time operation and control of power systems.
2. Model power-frequency dynamics to design power-frequency controller and to understand needs of control of speed governing system & area load frequency control.
3. Model reactive power-voltage interaction and the control actions to be implemented for maintaining the voltage profile against varying system load.
4. Study the economic operation of power system.
5. Understand the security analysis, states of power system and contingency analysis.

Unit I

CONTROL CENTER OPERATION OF POWER SYSTEMS: Introduction to SCADA, control center, digital computer configuration, automatic generation control, area control error, operation without central computers, expression for tie-line flow and frequency deviation, parallel operation of generators, area lumped dynamic model. **8 Hrs**

Unit II

AUTOMATIC GENERATION CONTROL: Automatic voltage regulator, automatic load frequency control, AVR control loops of generators, performance of AVR, ALFC of single area systems- Speed Governor, Turbine, Generator and Load models, steady state response, concept of control area, multi-area systems, POOL operation-two area systems, modeling the tie line, tie-line bias control.

8 Hrs

Unit III

CONTROL OF VOLTAGE AND REACTIVE POWER: Introduction, generation and absorption of reactive power, relation between voltage, power and reactive power at a node, single machine infinite bus systems, methods of voltage control, sub synchronous resonance, voltage stability, voltage collapse. **8 Hrs**

Unit IV

UNIT COMMITMENT: Review of Economic Operation of Power Systems. Statement of the Unit Commitment problem, need and importance of unit commitment, methods-priority lists method, dynamic programming method, constraints, spinning reserve, and examples.

8 Hrs

Unit V

POWER SYSTEM SECURITY: Introduction, factors affecting power system security, power system contingency analysis, detection of network problems, network sensitivity methods, calculation of network sensitivity factor, contingency ranking.

7 Hrs

TEXT BOOKS:

1.	I J Nagarath and D P Kothari	Modern Power System Analysis,TMH, 4th Edition, 2011, ISBN-10: 0071077758
2.	Allen J Wood & Woollenberg	Power generation, operation and control-. John Wiley and Sons, Second Edition, 2009, ISBN-10: 8126508388
3.	O.J Elgerd	Electrical Energy Systems Theory, , McGraw Hill Education, 2nd Edition, 2017, ISBN-10: 007099286X
4.	Robert H Miller, James H Malinowski	Power System Operation, , TMH, 3rd Edition, 2009, ISBN-10: 0070671125

REFERENCE BOOKS:

1.	Abhijit Chakrabarti and Sunita Halder	Power System Analysis, Operation and Control, , PHI, Second Edition, 2010, ISBN-10: 8120340159
2.	S. Sivaganaraju & G. Sreenivasan,	Power System Operation and Control, Pearson, 2009, ISBN-10: 8131726622

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the SCADA system & central operation control of power system
2. Analyze the automatic generation control of power stations
3. Explain the control of voltage & reactive power
4. Understand the security, analysis, states of power system & contingency analysis.

LINE-COMMUTATED AND ACTIVE PWM RECTIFIERS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE19		

Unit I

Rectifiers with passive filtering: 1-phase full-wave diode rectifier with L, C and LC filter; 3-phase diode rectifier with L, C and LC filter; continuous and discontinuous conduction, input current waveshape, effect of source inductance; commutation overlap. 1-phase thyristor rectifier with L and LC filter; 3-phase thyristor rectifier with L and LC filter; continuous and discontinuous conduction, input current waveshape. **9 Hrs**

Unit II

Multi-Pulse converter: Review of transformer phase shifting, generation of 6-phase ac voltage from 3-phase ac, 6- pulse converter and 12-pulse converters with inductive loads, steady state analysis, commutation overlap, notches during commutation.

8 Hrs

Unit III

Single-phase ac-dc single-switch boost converter: Review of dc-dc boost converter, power circuit of single-switch ac-dc converter, steady state analysis, unity power factor operation, closed-loop control structure. **7 Hrs**

Unit IV

Ac-dc bidirectional boost converter: Review of 1-phase inverter and 3-phase inverter, power circuits of 1-phase and 3-phase ac-dc boost converter, steady state analysis, operation at leading, lagging and unity power factors. Rectification and regenerating modes. Phasor diagrams, closed-loop control structure. **7 Hrs**

Unit V

Isolated single-phase ac-dc flyback converter: Dc-dc flyback converter, output voltage as a function of duty ratio and transformer turns ratio. Power circuit of ac-dc flyback converter, steady state analysis, unity power factor operation, closed loop control structure. **8 Hrs**

TEXT BOOKS:

1.	G. De	Principles of Thyristorised Converters, Oxford & IBH Publishing Co, 1988
2.	J.G. Kassakian, M. F. Schlecht and G. C. Verghese	Principles of Power Electronics, AddisonWesley, 1991.
3.	L. Umanand	Power Electronics: Essentials and Applications, Wiley India, 2009.
4.	N. Mohan and T. M. Undeland,	Power Electronics: Converters, Applications and Design, John Wiley & Sons, 2007.
5.	R. W. Erickson and D. Maksimovic,	Fundamentals of Power Electronics, Springer Science & Business Media, 2001

Course Outcomes: After the completion of this course, students will be able to:

1. Analyse controlled rectifier circuits.
2. Understand the operation of line-commutated rectifiers – 6 pulse and multi-pulse configurations
3. Understand the operation of PWM rectifiers – operation in rectification and regeneration modes and lagging, leading and unity power factor mode.

DISCRETE CONTROL SYSTEMS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE20		

Course Objectives: This course will enable students to:

1. Understand and design discrete control systems
2. Design discrete control systems using pole placement and optimal control techniques

Unit I

DISCRETE DATA CONTROLLED SYSTEM: Basic discrete-time signals, time domain models for discrete-time systems, transfer function models, stability on the Z-plane & the Jury stability criterion, sampling as impulse modulation, sampled spectra and aliasing, filtering.

8 Hrs

Unit II

MODELS OF DIGITAL CONTROL DEVICES: Z-domain description of sampled continuous-time plants, Z-domain description of systems with dead-time, implementation of digital controllers, Z-plane specifications of control system design.

8 Hrs

Unit III

CONTROL SYSTEM ANALYSIS USING STATE VARIABLE METHOD: Eigen values and eigen vectors, solution of state equations, concept of controllability & observability. Kalman's and Gilbert's tests. **8 Hrs**

Unit IV

POLE PLACEMENT TECHNIQUES: Stability improvements by state feedback, necessary & sufficient conditions for arbitrary pole-placement, state regulator design, design of state observers. **8 Hrs**

Unit V

OPTIMAL CONTROL: Parameter optimization & optimal control problems, quadratic performance index, optimal state regulator through the matrix-riccati equation.

7 Hrs

TEXT BOOKS:

1.	M. Gopal	Digital control & state variable methods, TMH, 2003
2.	Ogata K	Modern control engineering., Prentice Hall, 2010
3.	De-kink	Optimal control Theory: An Introduction, Courier Corporation 2004

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the concept of state, state variables & state model.
2. Compute the realization of digital controllers & digital filters.
3. Design discrete control system by convolution methods.
4. Design state observer.

FLEXIBLE AC TRANSMISSION SYSTEMS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE21		

Course Objectives: This course will enable students to:

1. Understand concepts of FACTS and working of various FACTS devices
2. Understand the application of FACTS devices in power systems

Unit I

FACTS-Concepts and general system configuration: Transmission, interconnection, flow of power in AC system, power flow and dynamic stability consideration, of a transmission interconnection, relative importance of controllable parameters, basic types of FACTs controllers, shunt, series, combined shunt and series connected controllers. **8 Hrs**

Unit II

Thyristor-based Flexible AC Transmission Controllers: Description and Characteristics of Thyristor-based FACTS devices: Static VAR Compensator (SVC), Thyristor Controlled Series Capacitor (TCSC), Thyristor Controlled Braking Resistor and Single Pole Single Throw (SPST) Switch. Configurations/Modes of Operation, Harmonics and control of SVC and TCSC. Fault Current Limiter. **8 Hrs**

Unit III

Self and line commutated current source converter: Basic concepts, 3 phase full wave rectifier, thyristor based converter, current sourced converter with turnoff devices, current sourced versus voltage source converter. **7 Hrs**

Unit IV

STATIC SHUNT COMPENSATORS SVC AND STATCOM: Objective of shunt compensation, methods of controllable Var generation, static Var compensator, SVC and STA TCOM, comparison between, SVC and STATCOM. **8 Hrs**

Unit V

STATIC SERIES COMPENSATORS: GCSC, TSSC, TCSC and SSSC, objectives of series compensation, variables impedance type of series compensation, switching converter type series compensation, external control for series reactive compensators.

8 Hrs

TEXT BOOKS:

1.	Narayan G Hingorani & Laszlo Gyugyi	Understanding FACTS - Concepts and technology of flexible AC Transmission system, IEEE Press, standard publisher, 2001.

REFERENCE BOOKS:

1.	S.Rao	EHV - AC, HVDC Transmission & Distribution Engineering, ,Khanna publishers, 3rd edition 2003
2.	K.R. Padiyar	FACTS - Controllers in Power Transmission distribution, New age publishers , 2007

Course Outcomes: After the completion of this course, students will be able to:

1. Analyze FACTS, concepts and general system configuration
2. Solve Voltage Sourced Converter problems
3. Formulate self and line commutated current source converter, static shunt compensator and STATCOM

ADVANCED ELECTRIC DRIVES

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE22		

Course Objectives: This course will enable students to:

1. Understand advanced techniques in Induction motor control
2. Understand the operation and control of synchronous motor drives

Unit I

Induction motor drives: Different transformations and reference frame theory, modeling of induction machines **8 Hrs**

Unit II

Induction motor drives (contd.):voltage fed inverter control-v/f control, vector control, direct torque and flux control(DTC). **8 Hrs**

Unit III

Synchronous motor drives : Modeling of synchronous machines, open loop v/f control, vector control **8 Hrs**

Unit IV

Permanent magnet motor drives: Introduction to various PM motors, BLDC and PMSM drive configuration, comparison, block diagrams, Speed and torque control in BLDC and PMSM. **8 Hrs**

Unit V

Switched reluctance motor drives: Evolution of switched reluctance motors, various topologies for SRM drives, comparison, Closed loop speed and torque control of SRM. **7 Hrs**

TEXT BOOKS:

1.	B. K. Bose	Modern Power Electronics and AC Drives, Pearson Education, Asia, 2003.

REFERENCE BOOKS:

1.	R. Krishnan	Permanent Magnet Synchronous and Brushless DC motor Drives, CRC Press, 2009.
2.	P. C. Krause, O.Wasynczuk and S.D. Sudhoff	"Analysis of Electric Machinery and Drive Systems", John Wiley & Sons, 2013.

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the operation of power electronic converters and their control strategies.
2. Understand the vector control strategies for ac motor drives

POWER SYSTEM DYNAMICS AND CONTROL

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE23		

Course Objectives: This course will enable students to:

1. The basic concepts of dynamics of power system
2. The model of synchronous machines, excitation & prime mover modeling
3. Formulation of Load modeling
4. The transient stability evaluation using simulators

Unit I

INTRODUCTION: Basic concepts, Review of classical methods.
SYSTEM MODELING AND DYNAMICS OF SYNCHRONOUS GENERATOR:
Modeling of synchronous machine, Swing equation, Park's transformation – Park's voltage equation, Park's mechanical equation (torque). Applications –
Voltage build up in synchronous machine, and (b) Symmetrical short circuit of generator.

8 Hrs

Unit II

SYSTEM MODELING AND DYNAMICS OF SYNCHRONOUS GENERATOR

Solution for transient analysis, Operational impedance, Relationship between Tdo' and Tdo", Algebraic constraints.
EXCITATION AND PRIME MOVER CONTROLLERS: Introduction, Types of excitation, AVR with and without ESS, TGR, Amplifier PSS, Static exciters.

8 Hrs

Unit III

MODELING OF PRIME MOVERS: Introduction, Three major components, Block diagram, Hydraulic turbine, Steam turbine. **8 Hrs**

Unit IV

LOAD MODELING: Introduction, Two approaches – Polynomial model and Exponential model. Small Signal Angle Stability: Small signal angle stability with SMIB system, detailed model of SMIB

8 Hrs

Unit V

TRANSIENT STABILITY ANALYSIS: Simulation for Transient stability Evaluation, Transient stability controllers. **7 Hrs**

TEXT BOOKS:

1.	Padiyar K.R	Power System Dynamics, Stability and Control,., Interline Publications., 2004
2.	Prabha Kundur.	Power System Stability and Control, TMH, 9th Reprint., 1994

REFERENCE BOOKS:

1.	Marija Ilic;John Zaborszky,	Dynamics and Control of Large Electric Power Systems, IEEE Press and John Wiley & Sons, Inc, 2007
2.	Paul M. Anderson and A. A. Fouad	Power System Control and Stability(Revised Printing), IEEE Press and John Wiley & Sons, Inc, 2002
3.		Selected topics from IEEE Transaction and Conference Proceedings

Course Outcomes: After the completion of this course, students will be able to:

1. understand basic concepts of power system dynamics
2. to model synchronous machines
3. formulate load modelling
4. evaluate the Transient stability phenomenon using simulators

SOLAR AND WIND ENERGY CONVERSION SYSTEMS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE24		

Course Objectives: This course will enable students to:

1. understand and design solar PV systems
2. understand and design wind energy conversion systems

Unit I

Introduction to PV: Need for sustainable energy sources, Importance of wind and solar power generations, solar radiations and its measurements, Construction and operation of PV cell, Operational characteristics, Single diode modelling ,series and parallel resistances, Efficiency limits, factors affecting performance, PV modules, Power Calculations **8 Hrs**

Unit II

MPPT-Converter-Battery Selection: MPPT, Necessity ,Types of MPPT ,P&O and IC methods ,DC-DC converters(Buck, Boost, Buck-Boost, CUK),DC-AC Inverters (Grid Connected),Configuration of Stand- alone and Grid Connected PV Systems. Storage Batteries, Factors affecting Battery Performance, Battery Sizing, Charge Controllers.

8Hrs

Unit III

Fundamentals of Wind Energy Conversion Systems: Introduction to Wind Energy Conversion Systems ,Fundamentals of Wind Energy, Wind Curves, Wind Turbine Systems,Control of Wind Turbines, Wind Energy Conversion System Components.

7 Hrs

Unit IV

Electrical Machines in Wind Turbines: Electrical Machines in Wind Turbines , PMSG, Induction Generators, DFIG- Principle of Operation-Construction-Characteristics and Selection(Modelling Excluded),Voltage And frequency Control, Grid Integration of Wind Energy Conversion Systems. **8 Hrs**

Unit V

Fuel Cell and Hybrid Power Generation: Fuel Cells-Working Principle and Types of Fuel Cells-Hybrid PV-Fuel Cell Systems, Hybrid Wind-Fuel Cell systems, Hybrid PV-Wind Systems. Applications of PV, Wind and Fuel Cell Systems-Irrigation Pump sets, Roof Top systems, Hybrid Vehicles. **8 Hrs**

TEXT BOOKS:

1.	Chetan Singh Solanki	Solar Photovoltaics: Fundamentals, Technologies and Applications, 2nd Edition ,PHI publishers
2.	Alireza Khaligh and Omer C.Onar	ENERGY HARVESTING - Solar, Wind, and Ocean Energy Conversion Systems, Energy, Power Electronics, and Machines Series,CRC Press Publications
3.	D.P Kothari, K.C. Singal and Rakesh Ranjan	Renewable Energy Sources and Emerging Technologies 2nd Edition, PHI Learning Pvt Ltd.

REFERENCE BOOKS:

1.	Djamila Rekioua and Ernest Matagne	."Optimization of Photovoltaic Power Systems- Modelization, Simulation and Control",Springer Publications.
2.	NPTEL link	

Course Outcomes: After the completion of this course, students will be able to:

1. Model the solar PV cell, analyze the P-V and I-V characteristics and interpret the factors influencing the performance of SPV system.
2. Analyze the operation of Power electronic converters used in SPV systems.
3. Describe the principle of WECS and factors influencing for the power generation using WECS.
4. Explain the principle, operation and control of Generators used in WECS.
5. Describe the system configuration of hybrid systems for electrical applications.

INDUSTRIAL ELECTRICAL SYSTEMS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE25		

Course Objectives: This course will enable students to:

1. Familiarize with the various Industrial Electrical System components.

2. Develop Knowledge on electrical systems wiring for Residential and Commercial Systems
3. Understand and deal with the complete Industrial electrical systems
4. Understand Industrial drawing and SLD, Design Ratings and specification of Electrical system components
5. understand the PLC and SCADA based Industrial control Systems design

Unit I

Electrical System Components: LT system wiring components- Basic function, Type, Rating, and selection of Fuse, MCB, MCCB, ELCB,RCCB, Contactor, Isolator, Relays, MPCB, Switch Fuse Unit, LT-cables, CT's and PT's, wires, switches, and distribution box. LT-Tariff structure. Metering and protection systems. Symbols and single line diagram (SLD) of a wiring system both control and power diagrams. Electric shock and Electrical safety practices

8 Hrs

Unit II

Residential and Commercial Electrical Systems: Types of residential and commercial wiring systems, general rules and guidelines for installation, load calculation and sizing of wire, rating of main switch, distribution board and protection devices, earthing system calculations, requirements of commercial installation, deciding lighting scheme and number of lamps, earthing of commercial installation, selection and sizing of components. **8 Hrs**

Unit III

Industrial Lighting: Overview of the basics of lighting system design, Lamps and Luminaries type, Types of Industrial Lighting Systems, Factors to be considered in design of Interior and Exterior Lightings, Manual calculations on Interior system design, simple illustrative numerical problems on Interior lighting design, Basics of Street lighting design(exterior lighting), Manual calculations on street lighting, simple illustrative numerical problems on Street lighting design, Emergency lighting system for Industries **7 Hrs**

Unit IV

Industrial Electrical Systems I: Development of Single line diagram of an Industry covering Main receiving Grid Substation, Main control Station, Power Control Centers(PCC), and Motor Control centers(MCC). Cable and Switchgear selection, Control of HT and LT Systems, Interlocks, HT connection, Specification and selection of LT breakers, Industrial loads, motors, Starting of Motors (DOL, Star delta, VFD) both control and power, Lightning Protection, Earthing design, Power factor correction – kVAR calculations. **8 Hrs**

Unit V

Industrial Electrical Systems II: DG Systems, UPS System, Electrical Systems for the elevators, Battery banks, Sizing the DG, UPS and Battery Banks, Selection of UPS and Battery Banks. Study of basic PLC, Role of in automation, advantages of process automation, PLC based control system design, Panel Metering and Introduction to SCADA system for distribution automation.

8 Hrs

TEXT BOOKS:

1.	S.L. Uppal and G.C. Garg,	"Electrical Wiring, Estimating & Costing", Khanna publishers, 2008.
2.	K. B. Raina,	"Electrical Design, Estimating & Costing", New age International, 2007.

REFERENCE BOOKS:

1.	S. Singh and R. D. Singh	"Electrical estimating and costing", Dhanpat Rai and Co., 1997.
2.	H. Joshi	"Residential Commercial and Industrial Systems", McGraw Hill Education, 2008

Course Outcomes: After the completion of this course, students will be able to:

1. Describe the electrical wiring systems and components with standard symbols, SLD and drawings.
2. Understand the residential, commercial electrical system and associated components.
3. Understand the various terminologies of Illumination and Preliminary design of Lighting systems for Industry premises.
4. Understand the Industrial distribution system both HT & LT systems.
5. Understand the Industrial motor controls, Controls using PLC, SCADA, and the functioning of redundant supply systems.

SMART GRID

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE26		

Course Objectives: This course will enable students to:

To create the practical insight about the modernization of Electrical Power System and hence study several issues involved in realization of Smart Grid

Unit I

Introduction to Smart Grid

Evolution of Electric Grid, Evolution of Indian National Grid, Regulatory authorities in Indian Power sector, Concept of Smart Grid, Definitions, Need of Smart Grid, Functions of Smart Grid, Opportunities & Barriers of Smart Grid, Difference between conventional & smart grid, Present development & International policies in Smart Grid.

8 Hrs.

Unit II

Smart Substations

Substation Automation equipment-block diagram, Intelligent electronic devices: Bay controller, Remote terminal units, Faults in the distribution system, Components for fault isolation and restoration, Fault location, isolation and restoration, Voltage regulation

8Hrs

Unit III

Sensing, Measurement, Control and Automation Technologies:

Smart metering: Key components of smart metering, overview of the hardware used, Signal acquisition, Signal conditioning, Analogue to digital conversion, Computation, Input/output, Communication.

Communications infrastructure and protocols for smart metering: Home-area network, Neighbourhood area network, Data concentrator, Meter data management system, Protocols for communications, Demand-side integration, Services provided by DSI, Implementations of DSI ,Hardware support to DSI implementations, Flexibility delivered by prosumers from the demand side.

8 Hrs

Unit IV

RENEWABLE ENERGY AND STORAGE: Renewable Energy Resources, Sustainable Energy Options for the Smart Grid, Penetration and Variability Issues Associated with Sustainable Energy Technology ,Demand Response Issues

8 Hrs

Unit V

Distributed Energy Resources: Small scale distributed generation sources, Sustainable Energy Options for the Smart Grid: Solar Energy, Solar Power Technology, Modelling PV Systems, Wind Turbine Systems, Biomass-Bioenergy , Small and Micro Hydropower, Fuel Cell Geothermal Heat Pumps Penetration and Variability Issues Associated with Sustainable Energy Technology Demand Response Issues, Electric Vehicles and Plug-in Hybrids, Advantages and disadvantages of DG.

Power Quality Management In Smart Grid: Power Quality & EMC in Smart Grid, Power Quality issues of Grid connected Renewable Energy Sources, Power Quality Conditioners for Smart Grid, Power Quality monitoring, Power Quality Audit.

7 Hrs

TEXT BOOKS:

1	Janaka Ekanayake Kithsiri Liyanage Jianzhong Wu Akihiko Yokoyama	Smart Grid: Technology and Applications, Publisher: Wiley (2015),ISBN-13: 978-8126557356

REFERENCE BOOKS:

1.	James Momoh	Smart Grid, Fundamentals of Design and Analysis Wiley 1st Edition, 2012, ASIN: B01JXWU4U6
2.	NPTEL LINK	https://nptel.ac.in/courses/108107113/

Course Outcomes: After the completion of this course, students will be able to:

1. **Differentiate** progress made by different stakeholders in the design and development of smart grid.
2. **Explain** measurement techniques using Phasor Measurement Units and smart meters
3. **Discuss** tools for the analysis of smart grid and design, operation and performance
4. **Discuss** classical optimization techniques and computational methods for smart grid design, planning and operation and Explain predictive grid management and control technology for enhancing the smart grid performance
5. **Develop** cleaner, more environmentally responsible technologies for the electric system.

ELECTRICAL AND HYBRID VEHICLES

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE27		

Course Objectives: This course will enable students to:

1. Understand the components of electrical and hybrid vehicles
2. Understand he energy storage and energy management techniques used in electric vehicles

Unit I

Introduction: Conventional Vehicles: Basics of vehicle performance, vehicle power source characterization, transmission characteristics, mathematical models to describe vehicle performance. Introduction to Hybrid Electric Vehicles: History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies. **7 Hrs**

Unit II

Hybrid Electric Drive-trains: Hybrid Electric Drive-trains: Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis. **8 Hrs**

Unit III

Electric Trains: Electric Drive-trains: Basic concept of electric traction, introduction to various electric drivetrain topologies, power flow control in electric drive-train topologies, fuel efficiency analysis. Electric Propulsion unit: Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

8 Hrs

Unit IV

Energy Storage: Energy Storage: Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices. Sizing the drive system: Matching the electric machine and the internal combustion engine (ICE), Sizing the propulsion motor, sizing the power electronics, selecting the energy storage technology, Communications, supporting subsystems

8 Hrs

Unit V

Energy Management Strategies: Energy Management Strategies: Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies. Case Studies: Design of a Hybrid Electric Vehicle (HEV), Design of a Battery Electric Vehicle (BEV). **8 Hrs**

TEXT BOOKS:

1.	C. Mi, M. A. Masrur and D. W. Gao	Hybrid Electric Vehicles: Principles and Applications with Practical Perspectives, John Wiley & Sons, 2011.
2.	S. Onori, L. Serrao and G. Rizzoni,	Hybrid Electric Vehicles: Energy Management Strategies, Springer, 2015.
3.	M. Ehsani, Y. Gao, S. E. Gay and A. Emadi	Modern Electric, Hybrid Electric, and Fuel Cell Vehicles: Fundamentals, Theory, and Design, CRC Press, 2004
4.	T. Denton	Electric and Hybrid Vehicles, Routledge, 2016.

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the models to describe hybrid vehicles and their performance.
2. Understand the different possible ways of energy storage.
3. Understand the different strategies related to energy storage systems.

CONTROL SYSTEMS DESIGN

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE28		

Course Objectives: This course will enable students to:

1. To understand concepts of Time and Frequency domain specifications.
2. To understand the concept of compensator. Design of Lag, lead lag-lead compensator in time domain and Realization of compensators.
3. To understand the design of P, PI, PD and PID controllers in time domain and frequency domain for I, II and III order systems.
4. To understand the concept of controllability & observability

Unit I

Design Specifications: Introduction to time domain and frequency domain design specification and its physical relevance. Effect of gain on transient and steady state response. Effect of addition of pole on system performance. Effect of addition of zero on system response.

8 Hrs

Unit II

Design of Classical Control System in the time domain: Introduction to compensator. Design of Lag, lead lag-lead compensator in time domain. Feedback and Feed forward compensator design. Feedback compensation. Realization of compensators.

8 Hrs

Unit III

Design of Classical Control System in frequency domain: Compensator design in frequency domain to improve steady state and transient response.

Feedback and Feed forward compensator design using bode diagram. **8 Hrs**

Unit IV

Design of PID controllers: Design of P, PI, PD and PID controllers in time domain and frequency domain for I, II and III order systems. Control loop with auxiliary feedback -Feed forward control. **7 Hrs**

Unit V

Control System Design in state space

Review of state space representation. Concept of controllability & observability, effect of pole zero cancellation on the controllability & observability of the system, pole placement design through state feedback. Ackerman's Formula for feedback gain design. Design of Observer. Reduced order observer. Separation Principle. **8 Hrs**

TEXT BOOKS:

1.	N. Nise	Control system Engineering, John Wiley, 2000.
2.	I. J. Nagrath and M. Gopal	Control system engineering, Wiley, 2000.
3.	M. Gopal	Digital Control Engineering, Wiley Eastern, 1988
4.	K. Ogata	Modern Control Engineering, Prentice Hall, 2010.
5.	B. C. Kuo	Automatic Control system, Prentice Hall, 1995

REFERENCE BOOKS:

1.	J. J. D'Azzo and C. H. Houpis	Linear control system analysis and design (conventional and modern), McGraw Hill, 1995.
2.	R. T. Stefani and G. H. Hostetter	Design of feedback Control Systems, Saunders College Pub, 1994.

Course Outcomes: After the completion of this course, students will be able to:

1. Understand various design specifications
2. Design of compensators to satisfy the desired design specifications in time domain
3. Design of compensators to satisfy the desired design specifications in frequency domain
4. Design controllers in time domain and frequency domain to satisfy the desired design specifications using simple controller structures (P, PI, PID, compensators).
5. Design controllers using the state-space approach

ELECTRIC POWER QUALITY

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE29		

Course Objectives: This course will enable students to:

1. Understand the definition and standards of power quality phenomena
2. Understand power quality mitigation techniques

Unit I

Introduction to Power Quality Disturbances: Understanding Power quality, types of power quality disturbances, power quality indices, Causes and effects of power quality disturbances

8 Hrs

Unit II

Harmonics: Causes and effects of harmonics, converter configuration and their contribution to supply harmonics, other sources of harmonics ,Radio interference, supply standards, elimination/suppression of harmonics, classical solutions & their drawbacks, passive input filters, transformer connections,

8 Hrs

Unit III

Active Filters: Elimination/suppression of harmonics using active power filters - topologies, and their control methods, PWM converter as a voltage source active filter, current source active filter, constant tolerance band control, variable tolerance band control **8 Hrs**

Unit IV

Short Interruptions and Voltage Sag:

Short Interruptions: Introduction, terminology, origin of short interruptions, monitoring of short interruptions, influence on equipment, single phase tripping, stochastic prediction of short interruptions.

Voltage Sags - Characterization: Introduction, voltage sag magnitude, voltage sag duration, three phase unbalance, phase angle jumps, magnitude and phase angle jumps for three phase unbalanced sags, other characteristic of voltage sags, load influence on voltage sags, sag due starting of induction motors.

8 Hrs

Unit V

Mitigation of Interruptions and Voltage Sags:

Voltage Sags – Equipment Behavior: Introduction, computers and consumer electronics, adjustable speed AC drives, adjustable speed DC drives, other sensitive load.

Overview of mitigation methods, power system design – redundancy through switching and parallel operation, system equipment interface. **7 Hrs**

REFERENCE BOOKS:

1.	R.C. Dugan	Power Quality, TMH, 2012
2.	A.J. Arrillga and Watson	Power system harmonics, John Wiley and Sons, 2004
3.	Math H J Bollen	Understanding Power Quality Problems; Voltage Sags and Interruptions, Wiley India, 2011

Course Outcomes: After the completion of this course, students will be able to:

1. Interpret the Electrical power quality issues, their Characterization, causes and consequences on power system
2. Interpret the Characterization of harmonics and its effect on power system, suppression of harmonics by classical methods and Design suitable filters
3. Analyze the principle of suppression oh harmonics by Active filters, Interpret the configuration and operation of Active filters
4. Interpret the Characterization of Short Interruptions and Voltage Sag and its effect on power system
5. Analyze the principle of Elimination/ suppression techniques of interruption and voltage sag

POWER SYSTEM PROTECTION

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE30		

Course Objectives: This course will enable students to:

1. Understand the operation of power system protection schemes
2. Model and simulate power system protection schemes

Unit I

Introduction and Components of a Protection System: Principles of Power System Protection, Relays, Instrument transformers, Circuit Breakers

Faults and Over-Current Protection: Review of Fault Analysis, Sequence Networks. Introduction to Overcurrent Protection and overcurrent relay co-ordination.

8 Hrs

Unit II

Equipment Protection Schemes: Directional, Distance, Differential protection. Transformer and Generator protection. Bus bar Protection, Bus Bar arrangement schemes.

8 Hrs

Unit III

Digital Protection: Computer-aided protection, Fourier analysis and estimation of Phasors from DFT. Sampling, aliasing issues. **8 Hrs**

Unit IV

Modeling and Simulation of Protection Schemes CT/PT modeling and standards, Simulation of transients using Electro-Magnetic Transients (EMT) programs. Relay Testing.

8 Hrs

Unit V

System Protection: Effect of Power Swings on Distance Relaying. System Protection Schemes. Under-frequency, under-voltage and df/dt relays, Out-of-step protection, Synchro-phasors, Phasor Measurement Units and Wide-Area Measurement Systems (WAMS). Application of WAMS for improving protection systems.

7 Hrs

TEXT BOOKS:

1.	Y. G.Paithankar and S. R. Bhide	"Fundamentals of power system protection", Prentice Hall, India, 2010.

REFERENCE BOOKS:

1.	J.L. Blackburn	"Protective Relaying: Principles and Applications", Marcel Dekker, New York, 1987.
2.	A. G. Phadke and J. S.Thorp	"Computer Relaying for Power Systems", John Wiley & Sons, 1988.

3.	A. G. Phadke and J. S. Thorp	"Synchronized Phasor Measurements and their Applications", Springer, 2008.
4.	D. Reimert,	"Protective Relaying for Power Generation Systems", Taylor and Francis, 2006.

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the different components of a protection system.
2. Evaluate fault current due to different types of fault in a network.
3. Understand the protection schemes for different power system components.
4. Understand the basic principles of digital protection.
5. Understand system protection schemes, and the use of wide-area measurements.

INSULATION ENGINEERING

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE31		

Course Objectives: This course will enable students to:

1. Understand breakdown phenomena in solid, liquid and gaseous insulation
2. Understand ageing phenomena in electrical insulation

Unit I

Insulation System in Power Apparatus: Insulation system in capacitors, bushings, transformers, Models of failure of insulation systems. Insulation in rotating machines.

8 Hrs

Unit II

Dielectric Phenomena: Dielectric phenomena in solid insulation. Macroscopic approach for describing the dielectric phenomena, microscopic treatment for dielectric phenomena.

8 Hrs

Unit III

Properties of Insulation Materials: Introduction to properties of solid insulating materials (both of natural origin and synthetic types). Properties of liquid insulating materials, Review of breakdown phenomena in solid and liquid insulating medial.

8 Hrs

Unit IV

Gaseous Insulation: Requirement of gaseous insulation. Breakdown processes: Types of collision, Elastic and Inelastic collisions, Collision cross section, Mobility of ions, Diffusion of charges, Emission of radiation and excitation, various secondary processes and recombination, Mobility controlled and Diffusion controlled breakdown. **8 Hrs**

Unit V

Ageing Phenomena: Failure of electrical insulation due to ageing. Ageing mechanisms-Thermal ageing, Electrical ageing, combined thermal and electrical ageing. Analysis of Insulation failure data: Power law model, Graphical estimation of power law constants, procedure, ageing data, plotting position and cumulative failure probability. **7 Hrs**

TEXT BOOKS:

1.	Ravindra Arora, Wolfgang Mosch	High Voltage Insulation Engineering**,** New age International Publishers Ltd., 1995

REFERENCE BOOKS:

1.	Nasser E	Fundamentals of gaseous ionization and plasma electronics, John Wiley Interscience, New York, 1971

Course Outcomes: After the completion of this course, students will be able to:

1. Understand Insulation system in power apparatus
2. Analyze the Dielectric phenomena in power apparatus
3. Understand the Ageing phenomena
4. Analyze the insulation failure data

VISION of the Institute

To develop young minds in a learning environment of high academic ambience by synergising spiritual values and technologies competence.

MISSION of the Institute

To continuously strive for the total development of students by educating them in state-of the-art-technologies and helping them imbibe professional ethics and societal commitment, so that they emerge as competent professionals to meet the global challenges.

VISION of the Department

To be the premier center for education and research in Electrical and Electronics Engineering and to produce globally competent engineers with ethical values.

MISSION of the Department

- Develop as a center of Excellence for Electrical and Electronics Engineering education by providing the state-of –the-art infrastructure, industry relevant curriculum and effective teaching learning process.
- Contribute to the development of nation by pursuing research and development in the thrust areas of Electrical and Electronics Engineering such as Power Systems, Electrical Machines, Power Electronics and Renewable Energy Systems.
- Enable graduates to be professionally competent with strong ethical values.

PROGRAM EDUCTAIONAL OBJECTIVES (PEOs)

1. Pursuing successful career in the Electrical and Electronics Engineering and allied fields and opt for higher studies, research and to be an entrepreneur.
2. Designing solutions to Power System Engineering, Electrical Machines, Power Electronics and Renewable Energy Systems for specific industry applications and real-life problems using broad engineering knowledge.
3. Demonstrating professionalism, Ethical behavior and lifelong learning.

SCHEME & SYLLABUS

OF

VII & VIII SEMESTERS

B.E. ELECTRICAL & ELECTRONICS ENGINEERING

2022-23

(A) PROGRAM OUTCOMES

Engineering Graduates will be able to:

1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

(B) PROGRAM SPECIFIC OUTCOMES (PSOs)

1. Analyze, Design and Assess the performance of Electrical Power System and its constituent equipment
2. Analyze, Design and Develop Power Electronic Systems

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institute affiliated to Visvesvaraya Technological University, Belagavi, Approved by AICTE, New Delhi)

SCHEME OF TEACHING AND EXAMINATION EFFECTIVE FROM 2021-22 (ELECTRICAL AND ELECTRONICS ENGINEERING)

VII Semester

Sl. No.	Course	Course Code	Course Title	Teaching Department	Teaching hrs/week			Examination				Credits
					Theory lecture	Tutorial	Practical/ Drawing	Duration in hrs.	SEE Marks	CIE Marks	Total Marks	
1	PC	7REE01	Power Systems-III	EE	4	1	--	3	50	50	100	**4.5**

30. Power System protection(REEE30)
31. Insulation Engineering(REEE31)

POWER SYSTEMS-III

Contact Hours/Week	:	4 + 1 (L+T)	Credits	:	4.5
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:	13	SEE Marks	:	50
Course Code	:	7REE01			

Course Objectives:

This course will enable students to:

1. Formulate Network matrices to carry out power system studies
2. To carry out power system studies
3. To understand control of active and reactive power flow in power systems

UNIT-I

NETWORK TOPOLOGY AND MARTICES: Introduction. Elementary graph theory, oriented graph, tree, co-tree, Tie-set and Tie-set schedule, basic cut-sets, basic loops. Incidence matrices-Element to node incidence matrix and bus incidence matrix. Tree-branch path, Basic cut-set, augmented cut-set, basic loop and Augmented loop, Primitive network–impedance form and admittance form. Formulation of Y_{Bus} by inspection method and singular transformation method ($Y_{BUS} = A^T yA$), Formation of Bus Impedance matrix by step-by-step building algorithm. **12 Hrs.**

UNIT-II

LOAD FLOW STUDIES: Introduction, Load flow equations, Classification of buses, Operating constraints, Data for load flow studies, Gauss & Gauss-Seidal method of Load flow solution – Algorithm and flow chart for PQ and PV buses (numerical problem for one iteration only), Acceleration of convergence; Newton Raphson's Method- Algorithm and flow chart for NR method in polar coordinates (numerical problem for one iteration only). Algorithm and flow chart for Fast Decoupled load flow method, Comparison of Load Flow Methods.

15 Hrs.

UNIT-III

ECONOMIC OPERATION OF POWER SYSTEM: Introduction, Performance curves, Economic generation scheduling neglecting losses and generator limits, Economic generation scheduling including generator limits and neglecting losses; Iterative techniques; Economic Dispatch including transmission losses – approximate penalty factor, iterative technique for solution of economic dispatch with losses; Derivation of transmission loss formula.

15 Hrs.

UNIT-IV

Stability Studies:

Steady state & transient stability. Rotor dynamics and swing equation. Power angle equation for salient and non-salient pole machines. Equal-area criterion of stability evaluation and its application. Numerical solution of Swing Equation-Modified Euler's method, Runge-Kutta IV order method. Representation of power system for transient stability studies, load representation, network performance equations. Solution techniques with flow charts.

13 Hrs.

UNIT-V

Control of Frequency and Voltage

Turbines and Speed-Governors, Frequency dependence of loads, Droop Control and Power Sharing. Automatic Generation Control. Generation and absorption of reactive power by various components of a Power System. Excitation System Control in synchronous generators, Automatic Voltage Regulators. Shunt Compensators, Static VAR compensators and STATCOMs. Tap Changing Transformers. Power flow control using embedded dc links, phase shifters.

12 Hrs.

TEXT BOOKS:

1	Nagrath I.J and Kothari D.P	Modern Power System analysis, McGraw Hill Education, 4th Edition Paperback – 2011, ISBN-10 : 0071077758; ISBN-13 : 978-0071077750
2	Stagg G.W and El Abiad A.H	Computer Methods in Power System Analysis, Medtech, Paperback –2019 ISBN-10 : 9388716159; ISBN-13 : 978-9388716154

REFERENCE BOOKS:

1	Pai M.A.	Computer Techniques in Power System Analysis, McGraw Hill Education, 3rd edition, 2017, ISBN-10 : 9789332901131; ISBN-13 : 978-9332901131
2	L.P.Singh	Advanced Power System Analysis and Dynamics, New Age International Private Limited, Sixth edition, 2012, ISBN-10 : 8122433707; ISBN-13 : 978-8122433708
3	W.D. Stevenson	Elements of power system analysis, McGraw Hill Education, 4th edition, 2017, ISBN-10 : 9339212142; ISBN-13 : 978-9339212148

Course outcomes:

Upon completion of this course, the student will be able to:

CO1: **Formulate** different incidence matrices, Y-BUS and Z-BUS for a given power system network.
CO2: **Analyze** the given power system in a steady state using different numerical methods.
CO3: **Determine** the conditions for economic scheduling of thermal power generation by neglecting and considering the transmission losses and Transmission loss co-efficient.
CO4: **Analyze** the stability of a synchronous machine subjected to sudden disturbances and swing equation using numerical methods.
CO5: **Understand** the methods to control voltage, frequency and power flow in a given power system network.

DIGITAL SIGNAL PROCESSING AND ARCHITECTURE

Contact Hours/Week	:	4	Credits	:	4.0
Total Lecture Hours	:	52	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	7REE02			

Course Objectives: This course will enable students to:

1. Understand the fundamental characteristics of digital signal processing.
2. Development of the mathematical skills to solve problems involving convolution, filtering, modulation and sampling
3. Analyze different techniques of digital signal processing that are fundamental to various industrial applications.
4. Learn the basis of DSP systems, its theory and practical implementation of different kind of algorithms
5. know DSP architectures and interfacing of memory and I/O peripherals to the DSP processors

Unit I

Computation of DFT: Fourier representations of finite-duration sequences, properties of DFT(Qualitative),Decimation-in-time and decimation-in-frequency radix-2 FFT and IFFT algorithms, FFT of a composite number, Applications of FFT algorithms, Linear filtering approach to computation of the DFT - Goertzel and Chirp transform algorithms. **10 Hrs**

Unit II

Filter design Techniques: Ideal filter characteristics, low-pass, high-pass and band-pass filters; digital resonators, notch filters, comb filters, all-pass filters, Minimum phase systems.

Design of FIR filters: Issues in filter design, importance of linear phase, freque cy response of linear phase FIR filters, locations of zeros of FIR filters, Design techniques of FIR filters, windowing, frequency sampling method, design of Hilbert transformer, differentiators, comparison of FIR and IIR filters. Basic structures for FIR systems: Direct, Cascade, Linear Phase, frequency sampling and Lattice structures.

10 Hrs

Unit III

Design of IIR filters: Elementary properties of IIR filters, Techniques for determining IIR filter coefficients, frequency transformations in analog domain. Introduction to analog filters, Digital filter design from continuous-time filters, impulse invariant transformation and bilinear transformation methods. Structures for IIR systems: Direct, Cascade, Parallel, and Lattice structures.

10 Hrs

Unit IV

DIGITAL SIGNAL PROCESSORS : Introduction to the TMSLF2407 DSP Controller, Peripherals, Types of Physical Memory, Software Tools, C2xx DSP Core and Code Generation, Components of the C2xx DSP Core, Mapping External Devices to the C2xx Core and the Peripheral Interface, Registers, Memory, Memory Addressing Modes, Programming Using the C2xx DSP Instruction Set

12 Hrs

Unit V

DIGITAL SIGNAL PROCESSORS INTERFACING : General Purpose Input/Output (GPIO) Functionality, Pin Multiplexing (MUX) and General Purpose I/O Overview, Multiplexing and General Purpose I/O Control Registers, Using the General Purpose I/O Ports, Interrupts on the TMS320LF2407, Interrupt Hierarchy, Initializing and Servicing Interrupts in Software, Interrupt Usage Exercise, The Analog-to-Digital Converter (ADC).Application of DSP - Numerical relay **10 Hrs**

TEXT BOOKS:

1.	J. G. Proakis and D. G. Manolakis	Digital Signal Processing: Principles, Algorithms and Applications, Pearson Education India (1 January 2007)**ISBN-**10 : 9788131710005
2.	Sen M. Kuo	Digital Signal Processors: Architectures, Implementations, and Applications Pearson Education India; 1st edition (1 January 2005) ISBN-10 : 8131717933

REFERENCE BOOKS:

1.	S. K. Mitra	Digital Signal Processing: A computer-Based Approach. TMH. 2/E, 2013. ISBN-10 : 1259098583
2.	Lonnie C. Ludeman	Fundamentals of Digital Signal Processing, John Wiley & sons. ISBN-10 : 0471613061

Course Outcomes: After the completion of this course, students will be able to:

1. Apply the knowledge of DFT to analyze the properties of signal processing.
2. Apply different FFT computation methods to find DFT of the signals.
3. Analyze and design FIR filters by selecting appropriate windows for the required specifications.
4. Analyze and design IIR filters using bilinear and impulse invariant techniques for develop mathematical model
5. Formulate the structures for FIR and IIR systems to analyze filters.
6. Gets an in-depth knowledge of DSP processors their architectures.

POWER SYSTEMS LABORATORY

Lab Hours/ Week	: 3	Credits :	1.5
Sub. Code	: 7REEL01	CIE Marks :	50
		SEE Marks :	50

Course Objectives: This course will enable students to:

1. Understand the working of protective relays in a power system.
2. Develop programs for power system simulation
3. Understand the high voltage testing techniques

List of experiments:

1. Operating characteristics and calculation of error in operating time for over-current relay (solid state or electromechanical type and numeric)
2. Operating characteristics of over-voltage or under-voltage relay (numeric)
3. Operation of Negative sequence relay
4. Spark over characteristics of air insulation subjected to high voltage AC-with Spark over voltage corrected to STP
5. Measurement of HVAC and HVDC using standard spheres
   a) Y bus formation for systems with & without mutual coupling, by singular transformation & inspection method.
   b) Determination of Bus currents, bus power & line flows for a specified system voltage (bus) profile.
   c) Formation of Zbus by Z-bus building algorithm
6. (a) Load flow analysis for a 3 Bus system using gauss seidel method (Ybus to be given as data)
   (b) Formation of Jacobian for a system not exceeding 4 buses * (no PV buses) in polar co-ordinates
   (c) Given a power system & its Jacobian, to conduct load flow analysis using Newton Raphson method (no PV Buses) -
7. To determine fault currents & voltages in a single transmission line system with Y-Δ transformers, at a specified location for SLGF, DLGF, LLF
8. Optimal generator scheduling for thermal power plants. (open ended)
9. Power system study on a practical power system (open ended)
10. Field plotting using FEM package fo rany one model- Cable/Capacitor/Transmission line/Sphere gap Models (Open ended)

Course outcomes:

Upon completion of this course, the student will be able to:

CO1: Conduct investigation of Breakdown strength of air under HVAC
CO2: Determine the characteristics of different protective relaying devices
CO3: Develop a program to formulate network matrices by different methods for power system network and to carry out power system studies on a power system

Professional Electives

SOFT COMPUTING

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE1		

Course Objectives: This course will enable students to:

1. Understanding the introducing the fundamental theory and concepts of computational intelligence methods, in particular neural networks, fuzzy systems, genetic algorithms and their applications in the area of machine intelligence.
2. To understand the fundamental theory and concepts of neural networks, neuro-modeling, several neural network paradigms and its applications.
3. To understand the concepts of fuzzy sets, knowledge representation using fuzzy rules, approximate reasoning, fuzzy inference systems, and fuzzy logic control and other machine intelligence applications of fuzzy logic.
4. To understand the basics of an evolutionary computing paradigm known as genetic algorithms and its application to engineering optimization problems.

Unit I

Introduction: What is Soft Computing? Difference between Hard and Soft computing, Requirement of Soft computing, major Areas of Soft Computing, and applications of Soft Computing. Introduction to Python Programming.

5 Hrs

Unit II

Neural Networks: What is Neural Network, Learning rules and various activation functions, Single layer Perceptrons, Back Propagation networks, Architecture of Backpropagation(BP) Networks, Backpropagation Learning, Variation of Standard Back propagation Neural Network, Introduction to Associative Memory, Adaptive Resonance theory and Self Organizing Map, Recent Applications. Implementation of BP network algorithm using Python programming.

10 Hrs

Unit III

Fuzzy Systems: Fuzzy Set theory, Fuzzy versus Crisp set, Fuzzy Relation, Fuzzification, Minmax Composition, Defuzzification Method, Fuzzy Logic, Fuzzy Rule based systems, Predicate logic, Fuzzy Decision Making, Fuzzy Control Systems, Fuzzy Classification. Implementation of Fuzzy control system using Python programming. **10 Hrs**

Unit IV

Genetic Algorithm: History of Genetic Algorithms (GA), Working Principle, Various Encoding methods, Fitness function, GA Operators- Reproduction, Crossover, Mutation, Convergence of GA, Bit wise operation in GA, Multi-level Optimization.

8 Hrs

Unit V

Hybrid Systems: Sequential Hybrid Systems, Auxiliary Hybrid Systems, Embedded Hybrid Systems, Neuro-Fuzzy Hybrid Systems, Neuro-Genetic Hybrid Systems, Fuzzy-Genetic Hybrid Systems. Implementation of hybrid systems using python programming.

6 Hrs

TEXT BOOKS:

5.	NPTEL link	

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the hard and soft computing techniques
2. Understand and Apply the concepts of Artificial neural networks and its applications
3. Understand and Apply the concepts of Fuzzy logic and its applications
4. Solving multi-objective optimization problems using Evolutionary algorithms or Genetic algorithms.
5. Applications of Soft computing hybrid techniques to solve problems in different application domains

COMPUTER ARCHITECTURE

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	: REEE2		

Course Objectives: This course will enable students to:

1. Understand the impact of instruction set architecture on cost-performance of computer design.
2. Design a pipeline for consistent execution of instructions with minimum hazards.
3. Understand contemporary microprocessor designs and identify various design techniques employed.

Unit I

BASIC STRUCTURE OF A COMPUTER SYSTEM: Functional Units – Basic Operational Concepts – Performance – Instructions: Language of the Computer – Operations, Operands – Instruction representation – Logical operations – decision making – MIPS Addressing.

7 Hrs

Unit II

ARITHMETIC FOR COMPUTERS: Addition and Subtraction – Multiplication – Division – Floating Point Representation – Floating Point Operations – Subword Parallelism

8 Hrs

Unit III

PROCESSOR AND CONTROL UNIT: A Basic MIPS implementation – Building a Datapath – Control Implementation Scheme – Pipelining – Pipelined datapath and control – Handling Data Hazards & Control Hazards – Exceptions. **8 Hrs**

Unit IV

PARALLELISIM: Parallel processing challenges – Flynn‘s classification – SISD, MIMD, SIMD, SPMD, and Vector Architectures - Hardware multithreading – Multi-core processors and other Shared Memory Multiprocessors - Introduction to Graphics Processing Units, Clusters, Warehouse Scale Computers and other Message-Passing Multiprocessors.

8 Hrs

Unit V

MEMORY & I/O SYSTEMS: Memory Hierarchy - memory technologies – cache memory – measuring and improving cache performance – virtual memory, TLB's – Accessing I/O Devices – Interrupts – Direct Memory Access – Bus structure – Bus operation – Arbitration – Interface circuits - USB.

8 Hrs

TEXT BOOKS:

1.	Carl Hamacher, Zvonko Vranesic, Safwat Zaky	Computer Organization, McGraw Hill Education; 5th edition ,2011, ISBN-13: 978-1259005275

REFERENCE BOOKS:

2.	NPTEL LINK	https://nptel.ac.in/courses/106106092/

Course Outcomes:

After the completion of this course, students will be able to:

1. **Describe** computer architecture concepts and mechanisms related to the design of modern processors, memories, and networks and explain how these concepts and mechanisms interact
2. **Evaluate** various design alternatives and make a compelling quantitative and/or qualitative argument for why one design is superior to the other approaches.
3. **Demonstrate** the ability to implement and verify designs of varying complexity at the register-transfer-level.
4. **Create** new designs at the register-transfer-level and the associated effective testing strategies
5. **Write** concise yet comprehensive technical reports that describe designs implemented at the register-transfer-level, explain the testing strategy used to verify functionality, and evaluate the designs to determine the superior approach.

ELECTROMAGNETIC WAVES

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE3		

Course Objectives: This course will enable students to:

1. Understand guided electromagnetic wave propagation in transmission lines
2. Understand the basic concepts of waveguides and antennas

Unit I

Transmission Lines: Introduction, Concept of distributed elements, Equations of voltage and current, Standing waves and impedance transformation, Lossless and low-loss transmission lines, Power transfer on a transmission line, Analysis of transmission line in terms of admittances, Transmission line calculations with the help of Smith chart, Applications of transmission line, Impedance matching using transmission lines.

7 Hrs

Unit II

Review of Maxwell's Equations: Basic quantities of Electromagnetics, Basic laws of Electromagnetics: Gauss's law, Ampere's Circuital law, Faraday's law of Electromagnetic induction. Maxwell's equations Surface charge and surface current, Boundary conditions at media interface.

Uniform Plane Wave Homogeneous unbound medium, Wave equation for time harmonic fields, Solution of the wave equation, Uniform plane wave, Wave polarization, Wave propagation in conducting medium, Phase velocity of a wave,Power flow and Poynting vector.

11Hrs

Unit III

Plane Waves at Media Interface: Plane wave in arbitrary direction, Plane wave at dielectric interface, Reflection and refraction of waves at dielectric interface, Total internal reflection, Wave polarization at media interface, Brewster angle, Fields and power flow at media interface, Lossy media interface, Reflection from conducting boundary.

7 Hrs

Unit IV

Waveguides: Parallel plane waveguide: Transverse Electric (TE) mode, transverse Magnetic(TM) mode, Cut-off frequency, Phase velocity and dispersion. Transverse Electromagnetic (TEM) mode, Analysis of waveguide-general approach, Rectangular waveguides.

7 Hrs

Unit V

Antennas: Radiation parameters of antenna, Potential functions, Solution for potential functions, Radiations from Hertz dipole, Near field, Far field, Total power radiated by a dipole, Radiation resistance and radiation pattern of Hertz dipole, Hertz dipole in receiving mode.

7Hrs

TEXT BOOKS:

1.	R.K.Shevgaonkar	"Electromagnetic Waves", Tata McGraw Hill, 2005.

REFERENCE BOOKS:

1.	D. K. Cheng	"Field and Wave Electromagnetics", Addison-Wesley, 1989.
2.	M.N.O. Sadiku,	"Elements of Electromagnetics", Oxford University Press, 2007.
3.	C. A. Balanis	"Advanced Engineering Electromagnetics", John Wiley & Sons, 2012.
4.	C. A. Balanis	"Antenna Theory: Analysis and Design", John Wiley & Sons, 2005.
5.	NPTEL link	https://nptel.ac.in/courses/117/101/117101056/

Course Outcomes: After the completion of this course, students will be able to:

1. Analyse transmission lines and estimate voltage and current at any point on transmission line for different load conditions
2. Provide solution to real life plane wave problems for various boundary conditions.
3. Analyse the field equations for the wave propagation in special cases such as lossy and low loss dielectric media.
4. Visualize TE and TM mode patterns of field distributions in a rectangular wave-guide.
5. Understand and analyse radiation by antennas.

NANO SCIENCE AND NANO TECHNOLOGY

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE4		

Course Objectives: This course will enable students to:

1. To understand the foundational knowledge of the Nanoscience and related fields.
2. To understand the Nanoscience and Applications
3. To understand the synthesis of nanomaterials and their application and the impact of nanomaterials on environment

Unit I

Introduction: Definition of Nano, Scientific revolution-Atomic Structure & atomic size, emergence & challenges of nanoscience, carbon age-new form of carbon (CNT- Graphene), influence of nano over micro/macro, size effects and crystals, large surface to volume ration, surface effects on the properties. **5 Hrs**

Unit II

PHYSICO-CHEMICAL METHODS OF NANOSTRUCTURED MATERIALS: Solution growth techniques of 1D-2D nano structures:- Synthesis of metallic, semiconducting and oxide nanoparticles – homo- and hetero-nucleation growth methods – template-based synthesis (electrochemical, electrophoretic, Melt and solution, CVD, ALD) – Gas Phase Synthesis of Nanopowders: – Vapor (or solution) – liquid – solid (VLS or SLS) growth – the Need for Gas/vapor State Processing – Main Stages of Gas Phase Synthesis – Applicability of the methods. **8 Hrs**

Unit III

CHARACTERIZATION OF NANOPHASE MATERIALS: Fundamentals of the techniques –

experimental approaches and data interpretation – applications/limitations of Xray characterization: – X-ray sources – wide angle, extended x-ray absorption technique – Electron microscopy: SEM/TEM – high resolution imaging – defects in nanomaterials – Spectroscopy: – electron energy-loss mechanisms – electron filtered imaging – prospects of scanning probe microscopes – optical spectroscopy of metal/semiconductor nanoparticles **8 Hrs**

Unit IV

NANOSCALE PROPERTIES: Magnetism:- Magnetic Moment in clusters/Nanoparticles – Magnetic Order – coercivity – Magnetocrystalline Anisotropy – thermal activation and Superparamagnetic effects – Electronics and Optoelectronics:- Quantum Confinement of Superlattices and Quantum Wells – Dielectric Constant of Nanoscale Silicon – Doping of a Nanoparticle – Excitonic Binding and Recombination Energies – Capacitance in a Nanoparticle – Diffusion in Nanocrystalline Materials – Diffusion In Grain Boundaries Of Metals. **12 Hrs**

Unit V

Optical Properties, Photoconductivity, Optical absorption & transmission, Photoluminescence, Fluorescence, Phosphorescence, Electroluminescence. Magnetic Materials: Basic Magnetic Phenomena; Diamagnetism, Paramagnetism, Ferromagnetism, Anti-ferromagnetism, Application of Nanomaterial molecular electronics, biological and environmental, membrane based application, polymer based applications in electrical engineering **6 Hrs**

TEXT BOOKS:

1.	Ajoy K. Ghatak, S. Lokanathan	Quantum Mechanics: Theory and Applications
2.	Chriss Bins	Introduction to Nanoscience and Nanotechnology 2nd ed., Wiley, A John Wiley & Sons, INC., Publication, 2010
3.	T. Pradeep	Nano The essentials, Understanding Nano science and Naotechnology, Tata McGraw-Hill Publishing Company Limited, NEW DELHI, 2007, DOI: 10.1036/0071548297, ISBN:9780071548298
4.	Wesley Crowell Sanders	Basic Principles of Nanotechnology, CRC Press; Taylor & Francis, 2018, 1351054406, ISBN 13: 9781351054409

REFERENCE BOOKS:

1.	G. Schmidt	Nanoparticles: From theory to applications 2nd ed., Wiley-VCH Verlag, Weinheim, 2010, ISBN: 978-3-527-32589-4
2.	Geoffrey A Ozin, André Arsenault, Ludovico Cademartiri	Nanochemistry: A Chemical Approach to Nanomaterials, Royal Society of Chemistry, Cambridge UK 2005.

Course Outcomes: After the completion of this course, students will be able to:

1. **Understand** the Concepts of Nanoscience, challenges of Nanoscience and Nanotechnology. Advantages of Nanotechnology over Micro technology
2. **Understand** the structural properties of nanomaterials. Concepts of mechanical-physical-chemical properties of nanocomposites.
3. **Understand** the electronic properties of nanomaterials
4. **Understand** the Optical properties of nanomaterials
5. **Apply** the concept of nanotechnology in electrical, mechanical, electronics, bio and environmental engineering fields.

ELECTRICAL POWER UTILIZATION

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE5		

Course Objectives: This course will enable students to:

1. Impart knowledge on electrical energy-based heating and welding.
2. Impart how to design the traction system considering economic and technology upgradation.
3. Understand the basic principles of light control and types of light schemes.
4. Explore working of electric and hybrid electric vehicles technology.

Unit I

Heating and welding: Advantage and method of electric heating, resistance heating, Induction heating, dielectric heating, the arc furnace, heating of building, electric welding, resistance and arc welding, Ultrasonic welding, Electric welding equipment.

8 Hrs

Unit II

Electrolytic process: Fundamental principles, extraction, refining of metals, electroplating, factors affecting electro deposition process. **3 Hrs**

Electric traction: Introduction, requirements of an ideal traction, System of traction, speed time curve, tractive effort, co-efficient of adhesion, selection of traction motors, method of speed control, energy saving by series parallel control

5 Hrs

Unit III

Electric traction: AC traction, AC traction equipment, AC series motor characteristics, regenerative braking, linear induction motor and their use, Diesel electric equipment, train lighting system, Specific energy, Factors affecting specific energy consumption

8 Hrs

Unit IV

Illumination: Laws of illumination, distribution and control of lighting, lighting calculation, factory lighting, flood lighting, street lighting, different types of lamps-incandescent, fluorescent, vapour, CFL, LED and their working, comparison, Glare and its remedy.

8 Hrs

Unit V

INTRODUCTION TO ELECTRIC AND HYBRID VEHICLES: Introduction to Hybrid Electric Vehicles: History of hybrid and electric vehicles

Electric Drive-trains: Basic concept of electric traction, introduction to various electric drive-train topologies, power flow control in electric drive-train topologies.

Hybrid Electric Drive-trains: Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies.

7 Hrs

TEXT BOOKS:

1.	Openshaw Taylor	Utilization of Electric Energy, The Orient Blackswan Publishers, ISBN: 8125016406 (Chapter: 1,2,3,6)
2.	Mehrdad, Ehsani, Yimin Gao, Sabastien. E. Gay, Ali Emadi	Modern Electric, Hybrid Electric and Fuel Cell Vehicles, Standards media, Edition 2, 2009, ISBN: 9781420053982

REFERENCE BOOKS:

1.	J. B. Gupta	Utilization of Electric Power & Electric Traction, S.K. Kataria & Sons, 2013 Edition, ISBN: 9350142589
2.	NPTEL link	

Course Outcomes: After the completion of this course, students will be able to:

1. Design heating elements and interpret welding processes.
2. Interpret refining of metals, factors affecting electroplating and Analyse speed time curves
3. Analyse equipments for AC traction systems and Interpret braking energy returned to lines.
4. Design lighting schemes and select proper lamps.
5. Analyse performance of electric and hybrid vehicles.

ENERGY AUDITING AND DEMAND SIDE MANAGEMENT

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE6		

Course Objectives: This course will enable students to:

1. To impart basic concepts & knowledge of electrical energy scenario in India & world
2. To make them aware of energy conservation & energy conservation opportunities
3. To make them to understand energy economic analysis
4. To make them know about energy auditing, energy elements, measurements in energy auditing
5. To impart knowledge on electrical system optimization, energy efficient motors, energy efficient lighting, availability based tariff(ABT)
6. To impart basic concepts of demand side management, load management, benefits and different techniques of DSM

Unit I

INTRODUCTION: Audit purpose, scope, Energy Auditing and Conservation Concepts & its importance- energy conservation opportunities in electrical power supply sector- Energy efficiency, Energy Security. Per capita energy consumption. Energy conservation act-2001 & its features

ENERGY ECONOMIC ANALYSIS: The time value of money concept, developing cash flow models, payback analysis, depreciation, numerical problems. **8 Hrs**

Unit II

ENERGY AUDITING: Introduction, Elements of energy audits, energy use profiles, measurements in energy audits, presentation of energy audit results.Energy management program-organization structure, energy policy and planning.

8 Hrs

Unit III

ENERGY MANAGEMENT IN MOTORS: Energy performance of motors, opportunities to improve drive efficiency, determining electric motor operating loads, determination of motor efficiency and losses, energy efficient motors,

8 Hrs

Unit IV

ENERGY MANAGEMENT IN LIGHTING: Choice of lighting, energy saving ,control of lighting, lighting standards, Use of different lighting technologies ,power factor improvement and location of capacitors, Tariff, Availability Based Tariff (ABT)

8 Hrs

Unit V

DEMAND SIDE MANAGEMENT: Introduction to DSM, concept, benefits of DSM, planning and implementation, load management as a DSM strategy, Different techniques of DSM-time of day pricing, time of day models for planning. Load priority technique, promotion of high efficient technologies.

7 Hrs

TEXT BOOKS:

1.	Wayne C Turner & Steve Doty	Energy Management Handbook, Sixth Edition,2007, The FairMont Press
2.	Albert Thumann	Fundamentals of Energy Engineering , Prentice Hall Inc, Englewood Cliffs, New Jersey.
3.	A S. Pabla	Electrical Power distribution, TMH, 5th edition, 2004

REFERENCE BOOKS:

1.	Barney Cape hart, Wayne Turner, William Kennedy	Guide to Energy Management,Fifth Edition,2006,The Fairmont Press
2.	Ashok V. Desai	Energy Demand – Analysis, Management and Conservation, Wiley Eastern, 2005.
3.	Tripathy S.C	Electrical Energy utilization and conservation, TMH, 1991
4.		Hand book on energy auditing ,TERI (Tata Energy Research Institute)

Course Outcomes: After the completion of this course, students will be able to:

1. Able to have knowledge on energy conservation & energy conservation opportunities
2. Know about concept of energy economic analysis & energy auditing
3. Able to describe about demand side management and its techniques.
4. Capable of identifying energy efficient motors and energy efficient lighting systems

TESTING AND COMMISSIONING OF ELECTRICAL EQUIPMENT

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE7		

Course Objectives: This course will enable students to:

1. Understand the need for testing of electrical equipment
2. Understand the methods of testing electrical equipment as per national and international standards
3. Understand various steps in erection and commissioning of electrical equipment

Unit I

TRANSFORMERS

Specifications: Power and distribution transformers as per BIS standards.

Erection and Commissioning: Dispatch, Inspection upon arrival at site, Handling, Installation: Location and site preparation, Oil filling, Drying of transformers, Commissioning: Checks before commissioning

Testing of Power Transformers:

(i) Preliminary tests

(ii) Routine tests: Measurement of winding resistance, measurement of voltage ratio and check of voltage vector relationship, Measurement of impedance voltage and load loss, measurement of no load loss and current, measurement of insulation resistance

8 Hrs

Unit II

TRANSFORMERS

(ii) Routine tests (contd.) : Separate source voltage withstand test, Induced over-voltage withstand test

(iii) Type test: Temperature rise test

Impulse Testing: Lightning impulse test circuit, Switching impulse test, Measurement and recording of impulses, Fault detection

Short circuit testing of Power Transformers

Transformer auxiliaries: Gas operated relay, Temperature indicators, Pressure relief valve

8 Hrs

Unit III

INDUCTION MOTORS:

Specifications: Site conditions, Enclosures, Cooling, Rated conditions of voltage, frequency and output of motors, Duty, I.P. protection, dimensions, Performance values, overload, temperature rise, efficiency and power factor, tolerance, markings, information to be given at the stage of enquiry and placing order for supply.

Installation and commissioning : Location of the motors (including the foundation details) & its control apparatus, Foundation and leveling, Insulation resistance, Alignment, fitting of pulleys & coupling

Checks before commissioning, Commissioning of motor, Temperature rise

Tests on Induction motor: Insulation resistance test, High voltage test, resistance test, reduced voltage running up test **8 Hrs**

Unit IV

INDUCTION MOTORS(contd.):

Tests on Induction motor (contd.): Performance characteristics: No load test, Open circuit

test, Locked rotor test, Pull up and Pull out torque, Speed-torque and speed-current curves, Load test. Temperature-rise test.

SYNCHRONOUS MACHINES:

Specifications: As per BIS standards.

Installation: Physical inspection, foundation details, alignments, excitation systems, cooling and control gear, drying out.

Tests: Measurement of Insulation resistance, tests for short circuited field turns, Polarity test for field poles, Resistance of windings, High voltage test. **8 Hrs**

Unit V

SYNCHRONOUS MACHINES(contd.):

Tests (Contd.): Checking of shaft current and bearing insulation resistance, Determination of irregularities of voltage waveform, Overspeed test, Line charging capacity, Measurement of open-circuit and short-circuit characteristics, Zero power factor characteristics, Determination of synchronous machine quantities from tests, Temperature-rise tests, Instantaneous short-circuit withstand test **7 Hrs**

TEXT BOOKS:

1.		Transformers, BHEL, TMH, 2nd ed, 2003

REFERENCE BOOKS:

1.		Relevant Bureau of Indian Standards
2.		A Handbook on Operation and Maintenance of Transformers, Published by H. N. S. Gowda, 2006
3.		J and P Transformer Book, Elsevier Publication.2011

Course Outcomes: After the completion of this course, students will be able to:

1. explain specifications of transformers, induction and synchronous machines
2. describe various tests performed on transformers at the manufacturer site and prior to commissioning
3. explain various methods of installation of induction machines and synchronous machines
4. describe various tests performed on induction machines at the manufacturer site and prior to commissioning
5. describe various tests performed on synchronous machines at the manufacturer site and prior to commissioning

ELECTRICAL MACHINE DESIGN

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE8		

Course Objectives: This course will enable students to:

1. understand the principles of electrical machine design
2. design electrical machines as per the specifications

Unit I

Principles of electrical machine design and **Design of DC machines:** Introduction, general concepts, limitations in design, Different types of materials and insulation used in electrical

machines. Introduction to heating and cooling of electrical machines.
Output equation, choice of specific loadings and choice of number of poles, design of main dimensions of the DC machines

8 Hrs

Unit II

Design of DC machines (continued): Design of armature, armature windings, no. of slots, commutators and brushes (basic concepts only), magnetic circuit - estimation of ampere turns, design of yoke and pole, Unbalanced magnetic pull (Qualitative analysis only)

7 Hrs

Unit III

Design of transformers (Single phase and three phase): Output equation, choice of specific loadings, main dimensions of the core, design of primary and secondary coils. Estimation of no-load current, Design of tank & number of tubes. Estimation of leakage reactance **8 Hrs**

Unit IV

Design of Induction motors: Output equation, choice of specific loadings ,main dimensions of three phase induction motor, Stator winding design, choice of length of air-gap, design of rotor bars and end rings. Design of slip-ring induction motor. Estimation of no-load current.

8 Hrs

Unit V

Design of synchronous machines: Output equation, choice of specific loadings, Main dimensions of three phase synchronous machine. Design of armature winding. Slot design. Short circuit ratio. Design of rotor and field winding of salient pole synchronous machine. Design of rotor of non-salient pole synchronous machine.

8 Hrs

TEXT BOOKS:

1.	A.K.Sawhney	A course in Electrical Machine Design, Dhanpatrai & Sons, New Delhi
2.	V.N.Mittle	Design of Electrical Machines, II edition. Standard Publishers, Delhi

REFERENCE BOOKS:

1.	M.G.Say	Performance & design of AC Machines. CBS, New Delhi.
2.	R.K.Aggarwal	Principles of electrical machine design, S.K.Kataria & Sons. Delhi.

Course Outcomes: After the completion of this course, students will be able to:

1. Explain the basic design of electrical machines, types of materials and limitations in design
2. Apply basic concepts and knowledge in design of DC machines
3. Apply basic concepts and knowledge in design of Transformers
4. Design Induction motors as per specifications
5. Design synchronous machines as per specifications

EMBEDDED SYSTEMS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE9		

Course Objectives: This course will enable students to:

1. Understand modern embedded systems
2. Program embedded systems using ARM processor

Unit I

INTRODUCTION TO EMBEDDED SYSTEMS: An Embedded System, Processor in the System, Other Hardware Units, Software Embedded into a System, Exemplary Embedded Systems, Embedded System-On-Chip (SOC) and in VLSI Circuit, Complex System design and Processors, Design Process and design Example, Classification of Embedded System, Skill required for an Embedded system designer.

8 Hrs

Unit II

ARM PROCESSORS AND PERIPHERALS: ARM Design Philosophy, Registers, Program Status Register, Instruction Pipeline, Interrupts and Vector Table, Architecture Revision, ARM Processor Families. Application-specific instruction-set processors (ASIP's), Timers, counters, and watchdog timers. **8 Hrs**

Unit III

MEMORY AND INTERFACING: Memory write ability and storage permanence, Composing memories, Memory hierarchy and cache, Communication basics, Microprocessor interfacing: I/O addressing, interrupts, Direct memory access, Arbitration. Serial Protocols, Parallel protocols, Wireless protocols. **8 Hrs**

Unit IV

INTER-PROCESS COMMUNICATION AND SYNCHRONISATION OF PROCESSES, TASKS AND THREADS: Multiple Processes in an Application, Tasks, Task states, task and data, Semaphores, Shared data, Interposes communication, Signal function, Queue function, and pipe function. **7 Hrs**

Unit V

REAL TIME OPERATING SYSTEMS: Operating System Services, Process management, Timer function, Event Function, Memory management, Device File and IO management, Real Time Operating Systems, Basic design using RTOS. **8 Hrs**

TEXT BOOKS:

1.	Raj Kamal	Embedded System, Architecture, Programming and Design-, TMH, 2nd Edition 2008.
2.	Frank Vahid/Tony Givargis	A Unified Hardware/Software Introduction-, Wiley student edition 2002.
3.	Andrew N. Sloss, Dominic Symes, Chris Wright	ARM Systems Developer's Guides- Designing & Optimizing System Software –, 2008, Elsevie

REFERENCE BOOKS:

1.	Valvano, J.W,	Embedded Microcomputer Systems: Real time interfacing-Cengage Learning, 2nd Edition 5th Indian reprint,2009
2.	NPTEL LINK	https://nptel.ac.in/courses/108105057/

Course Outcomes: After the completion of this course, students will be able to:

1. Interpret designing an embedded system, component, process to meet desired needs within realistic constraints.
2. Illustrate the key features of embedded systems in terms of computer hardware and be able to discuss their functions and aware of the key factors affecting computing hardware.
3. Design embedded solutions to real world situations using (embedded) computer systems interfaced to digital hardware.
4. Use Inter-Process Communication and Synchronization of Processes in embedded solutions.
5. Analyze and Design real time embedded systems and their relevance in real world scenario.

FPGA BASED SYSTEM DESIGN

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE10		

Course Objectives: This course will enable students to:

1. Understand Digital system design using HDL
2. Know FPGA architecture, interconnect and technologies.
3. Understand configuring and implementing digital embedded system, microcontrollers, microprocessors, DSP algorithm on FPGA

Unit I

Introduction : Digital system design options and tradeoffs, Design methodology and technology overview, High Level System Architecture and Specification: Behavioral modelling and simulation, Hardware description languages, combinational and sequential design, state machine design, synthesis issues, test benches. **8 Hrs**

Unit II

Overview of FPGA architectures and technologies FPGA Architectural options, granularity of function and wiring resources, coarse V/s fine grained, vendor specific issues (emphasis on Xilinx and Altera) **8 Hrs**

Unit III

Logic block architecture: FPGA logic cells, timing models, power dissipation I/O block architecture: Input and Output cell characteristics, clock input, Timing, Power dissipation **8 Hrs**

Unit IV

Placement and Routing Programmable interconnect -Partitioning and Placement, Routing resources, delays; Applications -Embedded system design using FPGAs, DSP using FPGAs, Dynamic architecture using FPGAs, reconfigurable systems, application case studies. **8 Hrs**

Unit V

Applications: Simulation/implementation exercises of combinational, sequential and DSP kernels on Xilinx/Altera boards. **7 Hrs**

TEXT BOOKS:

1.	W.Wolf	"FPGA based system design", Pearson, 2004. ISBN-13: 978-8131724651

REFERENCE BOOKS:

1.	Clive Maxfield	The Design Warriors's Guide to FPGAs", Elsevier, 2004. ISBN-13: 978-0750676045
2.	NPTEL LINK	https://nptel.ac.in/courses/117108040/

Course Outcomes: After the completion of this course, students will be able to:

1. Design reconfigurable digital systems.
2. Demonstrate and Debug the embedded systems before the actual product is developed.
3. Design finite state machines for various applications.
4. Design dynamic architectures using FPGA's.
5. Implement, Design and develop embedded system using EDA tools.

ADVANCED POWER ELECTRONICS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE11		

Course Objectives: This course will enable students to:

1. Study advanced converters used in industrial applications
2. Understand the design principles of power electronic converters

Unit I

D.C-D.C Switched mode converter topologies: Buck, boost, buck-boost and CUK converters, full bridge D.C-D.C converter-Detailed theory, working principles, modes of operation, with detailed circuits and wave forms, applications, merits and demerits, design principle, boundary values, problems

8 Hrs

Unit II

Forward, fly back push pull converters working principles, modes of operation, with detailed circuits and wave forms, applications **8 Hrs**

Unit III

DC-AC Switched mode inverters: single phase inverter, three phase inverters. SPWM inverter-detail theory, working principles, modes of operation with circuit analysis, applications, merits and demerits, design principle, problems.

8Hrs

Unit IV

Resonant converters: classification of resonant converters, Series and parallel loaded resonant converters, Z.V.S, and Z.C.S switching principle and working. High frequency D.C. link converters. **8 Hrs**

Unit V

Power supplies: Power conditioning and uninterruptible power supplies, Solar power based bidirectional inverter-Design principle, operation and problems.

7 Hrs

TEXT BOOKS:

1.	Ned Mohan,	Power electronics converters, application & Design, JohnWiley

	T.M.Undeland, T.M.Robbins,	2003
2.	P.C.Sen	Modern Power Electronics-, S Chand Ltd., 2005
3.	A.I Pressman	Switching Power Supply Design ,McGraw Hill, 2007

REFERENCE BOOKS:

1.	Dubey G.K. Asarbada, E.R.K	Power Electronics Devices, IETE book, series V .1 TMH 1986
2.	Murplhy J.M.D Turnnbull, F.G	Power Electronics Control in A.C. Motors Pergamon, 1988
3.	Rashid M.H.	Power electronics - circuits, devices, application/3rd ed, Prentice Hall India, 2003

Course Outcomes: After the completion of this course, students will be able to:

1. Describe & Analyze working Principle of buck, boost, buck-boost converters.
2. Describe working principle of forward, fly-back and push pull converters.
3. Describe & Analyze the characteristics of DC-AC switched mode inverters.
4. Analyze resonant converters & high frequency inductors and transformers.
5. Describe uninterrptible power supplies & Solar power based bidirectional inverter

ADVANCED CONTROL THEORY

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE12		

Course Objectives: This course will enable students

- To impart basic concepts & knowledge of state variables to the students.
- To make them aware of different representations of systems using state variables
- To train them to obtain transfer function from state model and to give a deep insight into state equations, STM and its properties.
- To stress the importance of PI,PD and PID controllers in the design of system and to make them to know the concepts of controllability and observability of systems
- To expose the students to comprehensive intricacies involved in the design of modern control systems such as pole placement techniques and state regulator design
- To make them aware of various nonlinearities and their analysis.

Unit I

State variable analysis: Introduction, Concept of state, State variables, and state model of linear systems, Linearization of state equation.

State space Representation using physical variables, phase variables and canonical variables. Diagonalisation, Eigen values and Eigen vectors, Generalized Eigen vectors. **8 Hrs**

Unit II

State variable analysis(Continued):

Derivations of Transfer function from state model. Solution of state equation, state transition matrix & its properties, computation using Laplace transformation, Cayley-Hamilton method. **8 Hrs**

Unit III

Controllability and observability: Basic concepts, Kalman's test, Gilberts test, Duality

property, Effect of pole-zero cancellation on controllability and observability.

8 Hrs

Unit IV

Pole placement Design: Introduction, Stability improvements by state feedback, Necessary and sufficient conditions for arbitrary pole placement. State Regulator design, Design of state Observers.

8 Hrs

Unit V

Non-linear systems: Introduction, Common physical non-linearities. Phase plane method. singular points, stability of non-linear systems. Limit Cycles. Construction of phase trajectories.

7 Hrs

TEXT BOOKS:

1.	M.Gopal	Digital Control and State Variable Methods, 2nd ed, Tata Mc Graw Hill, 2003
2.	I.J.Nagrath and M.Gopal	Control System Engineering", New Age International, 2008.

REFERENCE BOOKS:

1.	Katsuhiko Ogata	State Space Analysis of Control Systems, Prentice Hall Inc., 1967
2.	Benjamin C Kuo and FaridGolnaraghi	Automatic Control Systems", 8th ed., John Wiley & Sons, 2003.
3.	Katsuhiko Ogata	Modern Control Engineering, 4th ed., PHI/Pearson Education, 2002.
4.	M.N.Bandyopadhyay	Control Engineering, PHI, 2003
5.	Tokel Glad & Lennart L Jung	Control Theory, CRC press, 2003

Course Outcomes: After the completion of this course, students will be able to:

1. Provide state models of systems and represent systems in different state variable configurations.
2. Give solution of state equation using different methods.
3. Analyse PI,PD and PID systems and assess controllability and observability of system.
4. Implement pole placement design and state observer design.

COMPUTER NETWORKS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE13		

Course Objectives: This course will enable students to:

1. Understand general-purpose computer networks.
2. Master the computer network applications.
3. Understand the principles and concepts on computer networks.

Unit I

INTRODUCTION: Data Communications; Networks; the Internet; Protocols and Standards; Layered tasks; The OSI Model and the layers in the OSI model; TCP / IP Protocol Suite. **8Hrs**

Unit II

DATA, SIGNALS, AND DIGITAL TRANSMISSION: Analog and digital signals; Transmission impairment; Data rate limits; Performance; Digital-to-Digital conversion; Analog-to-Digital conversion; Transmission modes.

ANALOG TRANSMISSION AND MULTIPLEXING: Digital - to - Analog conversion; Analog - to - Analog conversion; Multiplexing; Spread spectrum.

8 Hrs

Unit III

TRANSMISSION MEDIA, ERROR DETECTION AND CORRECTION: Twisted pair cable, Coaxial cable, Fibre-Optic cable, Radio waves, Microwaves, Infrared. Introduction to error detection / correction; Block coding; Linear block codes; Cyclic codes, Checksum.

DATA LINK CONTROL: Framing; Flow and Error control; Protocols; Noiseless channels; Noisy channels; HDLC; Point-to-point Protocol - framing, transition phases.

8 Hrs

Unit IV

MULTIPLE ACCESS, ETHERNET: Random Access; Controlled Access; Channelization. Ethernet: IEEE standards; Standard Ethernet and changes in the standard; Fast Ethernet; Gigabit Ethernet. **8 Hrs**

Unit V

WIRELESS LANS AND CONNECTION OF LANS: IEE 802.11; Bluetooth. Connecting devices; Backbone Networks; Virtual LANs.

OTHER TECHNOLOGIES: Cellular telephony; SONET / SDH: Architecture, Layers, Frames; STS multiplexing. ATM: Design goals, problems, architecture, switching, layers. **7Hrs**

TEXT BOOKS:

1.	Behrouz A. Forouzan	Data Communications and Networking , Tata McGraw-Hill, 4th Edition, 2006. ISBN-13: 978-0070634145

REFERENCE BOOKS:

1.	Alberto Leon, Garcia and Indra Widjaja	Communication Networks: Fundamental Concepts and Key Architectures ,Tata McGraw- Hill, 2nd Edition, 2004. ISBN-13: 978-0070595019

Course Outcomes: After the completion of this course, students will be able to:

1. Explain basic communication protocols
2. Understand the various communication media
3. Explain standard communication protocols for wireless networks

ELECTRICAL ESTIMATION AND COSTING

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE14		

Course Objectives: This course will enable students to:

1. Know about the importance and principles of estimation
2. Understand on the various functions of Estimations.
3. Familiarize with IE rules, IE ACT and on Indian and international standards.
4. Acquire the knowledge on the wiring accessories, service mains, control circuits and power circuits
5. Estimate the engineering needs for the design of overhead transmission lines, distribution lines and substations

Unit I

Principles of Estimation: Introduction to Estimation and Costing, Electrical Schedule, Catalogues, Market Survey and Source Selection, Recording of Estimates, Determination of Required Quantity of Material, Labour Conditions, Determination of Cost Material and Labour, Contingencies, Overhead Charges, Profit, Purchase System, Purchase Enquiry and Selection of Appropriate Purchase Mode, Comparative Statement, Purchase Orders, Payment Of Bills, Tender Form, General Idea about IE Rule, Indian Electricity(IE) Act and IE Rules -29,30,45,46,47,50,51,54,55,77 and79

8 Hrs

Unit II

Wiring and Accessories: Introduction, Distribution of energy in a Building, PVC Casing and Capping, Conduit Wiring, Desirability of Wiring. Types of cables used in Internal Wiring, Multi Strand Cables, Voltage Grading and Specification of Cables. Main Switch and Distribution Board, Conduits and its accessories and Fittings. Lighting Accessories and Fittings, Types of Fuses, Size of Fuse, Fuse Units, Earthing Conductor. General rules for internal wiring, Design of Lighting Points, Determination of total Load, lighting points and its number, total load, sub-circuits, size of conductor

8 Hrs

Unit III

Service Mains: Introduction, Types, Estimation of Underground and Overhead Service Connections. **Design and Estimation of Power Circuits:** Introduction, Important Considerations Regarding Motor Installation Wiring, Input Power, Input Current to Motors,

Rating of Cables, Rating of Fuse, Size of Condit, Distribution Board Main Switch and Starter **8 Hrs**

Unit IV

Estimation of Overhead Transmission and Distribution Lines: Components of Transmission System Erection: Cross Arms, Pole Brackets and Clamps, Guys and Stays, Conductors Configuration Spacing and Clearances, Span Lengths, Lightning Arrestors, Phase Plates, Danger Plates, Anti Climbing Devices, Bird Guards, Beads of Jumpers, Muffs, Points to be Considered at the Time of Erection of Overhead Lines, Erection of Supports, Setting of Stays, Fixing of Cross Arms, Fixing of Insulators, Conductor Erection. Repairing and Jointing of Conductors, Dead End Clamps, Positioning of Conductors and Attachment to Insulators, Jumpers, Tee-Offs, Earthing of Transmission Lines, Guarding of Overhead Lines, Clearances of Conductor from Ground, Spacing Between Conductors, Important Specifications. **8 Hrs**

Unit V

Estimation of Substations: Main Electrical connection, Graphical Symbols for Various Types of Apparatus and Circuit Elements on Substation, main Connection Diagram, Single Line Diagram of Typical Substations, Equipment for Substation, Substation Auxiliaries Supply, Substation Earthing.

7 Hrs

TEXT BOOKS:

1	J. B. Gupta	A Course in Electrical Installation Estimating and Costing, 9th Edition, 2012, Katson Books
2	S.L. Uppal and G.C. Garg,	Electrical Wiring, Estimating & Costing, Khanna publishers, 2008.

REFERENCE BOOKS:

1	S. Singh and R. D. Singh	"Electrical estimating and costing", Dhanpat Rai and Co., 1997.
2	K. B. Raina,	"Electrical Design, Estimating & Costing", New age International, 2007.

Course Outcomes: After the completion of this course, students will be able to:

1. Explain the purpose of estimation and costing, market survey, estimates, and purchase enquiries, preparation of tenders, comparative statements and payment of bills.
2. Understand the distribution of energy in a building, wiring and methods of wiring.
3. Understand the preliminary design of lighting points and its number, total load, sub-circuits, size of conductor
4. Discuss types of service mains and estimation of service mains and power circuits.
5. Discuss estimation of overhead transmission and distribution system and its components. And the main components of a substation, preparation of single line diagram of a substation and earthing of a substation.

COMPUTATIONAL ELECTROMAGNETICS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE15		

Course Objectives: This course will enable students to:

1. Understand the need for using computational techniques in design of electrical equipment
2. Learn different analytical and computational techniques for solving electromagnetic field problems

Unit I

Introduction: Conventional design methodology, Computer aided design aspects – Advantages. Review of basic fundamentals of Electrostatics and Electromagnetics. Development of Helmhotz equation, energy transformer vectors- Poynting and Slepian, magnetic Diffusion-transients and time-harmonic.

7 Hrs

Unit II

Analytical Methods Analytical methods of solving field equations, method of separation of variables, Roth's method, integral methods- Green's function, method of images.

7 Hrs

Unit III

Finite Difference Method (FDM) Finite Difference schemes, treatment of irregular boundaries, accuracy and stability of FD solutions, Finite-Difference Time-Domain (FDTD) method- Uniqueness and convergence

7 Hrs

Unit IV

Finite Element Method (FEM) Overview of FEM, Variational and Galerkin Methods, shape functions, lower and higher order elements, vector elements, 2D and 3D finite elements, efficient finite element computations.

9 Hrs

Unit V

Special Topics {Background of experimental methods-electrolytic tank, R-C network solution, Field plotting (graphical method)}, hybrid methods, coupled circuit - field computations, electromagnetic - thermal and electromagnetic - structural coupled computations, solution of equations, Method of moments,Poisson's fields.

Applications Low frequency electrical devices, static / time-harmonic / transient problems in transformers, rotating machines, actuators. CAD packages. **9 Hrs**

TEXT BOOKS:

1.	M. N. O. Sadiku	"Numerical Techniques in Electromagnetics", CRC press, 2001.

REFERENCE BOOKS:

1.	P. P. Silvester and R. L. Ferrari	"Finite Element for Electrical Engineers", Cambridge University press, 1996
2.	NPTEL link	https://nptel.ac.in/courses/108/101/108101090/

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the basic concepts of electromagnetics.
2. Understand computational techniques for computing fields.
3. Apply the techniques to simple real-life problems.

HVDC TRANSMISSION

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE16		

Course Objectives: This course will enable students to:

- To expose the students to various aspects of HVDC technology and the recent developments.
- To make the students understand the analysis of the converters and their controls.
- To make the students understand the basics of HVDC system protection, harmonics and filters.
- Understand the basics of VSC-HVDC transmission systems

Unit I

Introduction to HVDC systems: DC Power transmission technology, Comparison of AC and DC Transmission (Economics, Technical Performance and Reliability), Application of DC Transmission, Types of HVDC Systems, Components of a HVDC system, Modern trends in DC transmission. Description of different converter circuits, half wave, full wave, bridge rectifier circuits, 3 phase –1 way and 3 phase 2- way circuits.

8Hrs

Unit II

Analysis of converter circuits: Analysis of 3 phase –1 way, 3 phase 2- way rectifier circuits. Choice of converter configuration. Analysis of 6P Graetz circuit, calculation of average direct voltage and current without overlap and with overlap less than 60^0. Numerical problems. Equivalent circuit of 6P rectifier circuit. Inverter operation, Voltage and current equations, commutation failure.

8Hrs

Unit III

Control Strategies, Equivalent circuit of HVDC system, basic means of control and power reversal, Limitation of manual control, constant voltage verses constant current control, desired features of control and actual control characteristics, Modifications of control characteristics, constant minimum ignition angle control and constant current control, and constant extinction angle control, tap changer control and power control.,

Firing Angle Controls individual pulse control, equivalent pulse control, control hardware

Higher level controllers: frequency control, reactive power control, sub synchronous damping control.

8 Hrs

Unit IV

Protection, Harmonics and Filter circuits. General introduction to protection, DC smoothing reactor, Prevention of consequent commutation failure, converter faults, clearing of line faults and re-energizing the line, Surge arresters, over current and over voltage protection, characteristic and non-characteristic harmonics, troubles caused by harmonics, means of reducing harmonics, telephone interference, performance indices, harmonic analysis, types of

filters.

8Hrs

Unit V

VSC–HVDC systems Introduction, comparison of LCC-HVDC and VSC-HVDC systems, advantages and applications of VSC–HVDC systems, types of VSC converters 2 level, 3 level and MMC, control of VSC-HVDC link. Harmonics, PWM schemes: Selective Harmonic Elimination, Sinusoidal Pulse Width Modulation, Equations in the rotating frame. Real and Reactive power control using a VSC.

MTdc Links

Multi-Terminal and Multi-Infeed Systems, Series and Parallel MTdc systems using LCCs, MTDC systems using VSCs. Introduction to Modular Multi-level Converters.

7 Hrs

TEXT BOOKS:

1. K.R.Padiyar, HVDC Power Transmission Systems, New Age International Publishers, 3rd Ed. 2015.
2. E. W. Kimbark Direct Current Transmission-Volume-I, Wiley Interscience, 1971.

REFERENCE BOOKS:

1. S. Kamakshaiah,V. Kamaraju HVDC Transmission, Tata McGraw-Hill Edition. 2011.

Course Outcomes: After the completion of this course, students will be able to:

1. demonstrate complete knowledge of HVDC technology.
2. understand and analyse converters and the associated controllers.
3. understand various aspects of harmonics and filters of HVDC systems
4. familiar with the recent developments in the high voltage dc transmission area.

ELECTRIC DRIVES

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE17		

Course Objectives: This course will enable students to:

1. Understand the operation and control of dc drives
2. Understand the operation and control of induction motor drives

Unit I

DC motor characteristics : Review of emf and torque equations of DC machine, review of torque-speed characteristics of separately excited dc motor, change in torque-speed curve with armature voltage, example load torque-speed characteristics, operating point, armature voltage control for varying motor speed, flux weakening for high speed operation.

Chopper fed DC drive : Review of dc chopper and duty ratio control, chopper fed dc motor for speed control, steady state operation of a chopper fed drive, armature current waveform and ripple, calculation of losses in dc motor and chopper, efficiency of dc drive, smooth starting.

8 Hrs

Unit II

Multi-quadrant DC drive : Review of motoring and generating modes operation of a separately excited dc machine, four quadrant operation of dc machine; single-quadrant, two-quadrant and four-quadrant choppers; steady-state operation of multi-quadrant chopper fed dc drive, regenerative braking.

7 Hrs

Unit III

Closed-loop control of DC Drive: Control structure of DC drive, inner current loop and outer speed loop, dynamic model of dc motor – dynamic equations and transfer functions, modeling of chopper as gain with switching delay, plant transfer function for controller design, current controller specification and design, speed controller specification and design

7 Hrs

Unit IV

Induction motor characteristics : Review of induction motor equivalent circuit and torque-speed characteristic, variation of torque-speed curve with (i) applied voltage, (ii) applied frequency and (iii) applied voltage and frequency, typical torque-speed curves of fan and pump loads, operating point, constant flux operation, flux weakening operation.

Review of three-phase voltage source inverter, generation of three-phase PWM signals, sinusoidal modulation, space vector theory, conventional space vector modulation; **8 Hrs**

Unit V

Scalar control or constant V/f control of induction motor constant V/f : steady-state performance analysis based on equivalent circuit, speed drop with loading, slip regulation.

Control of slip ring induction motor : Impact of rotor resistance of the induction motor torque-speed curve, operation of slip-ring induction motor with external rotor resistance, starting torque, power electronic based rotor side control of slip ring motor, slip power recovery. **8 Hrs**

TEXT BOOKS:

1.	G. K. Dubey	"Power Semiconductor Controlled Drives", Prentice Hall, 1989.
2.	R. Krishnan	"Electric Motor Drives: Modeling, Analysis and Control", Prentice Hall, 2001.

REFERENCE BOOKS:

1.	G. K. Dubey	"Fundamentals of Electrical Drives", CRC Press, 2002.
2.	W. Leonhard,	"Control of Electric Drives", Springer Science & Business Media, 2001.

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the characteristics of dc motors and induction motors
2. Understand the principles of speed-control of dc motors and induction motors.
3. Understand the power electronic converters used for dc motor and induction motor speed control.

POWER SYSTEM OPERATION AND CONTROL

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE18		

Course Objectives: This course will enable students to:

1. Have an overview of SCADA and its application for real time operation and control of power systems.
2. Model power-frequency dynamics to design power-frequency controller and to understand needs of control of speed governing system & area load frequency control.
3. Model reactive power-voltage interaction and the control actions to be implemented for maintaining the voltage profile against varying system load.

4. Study the economic operation of power system.
5. Understand the security analysis, states of power system and contingency analysis.

Unit I

CONTROL CENTER OPERATION OF POWER SYSTEMS: Introduction to SCADA, control center, digital computer configuration, automatic generation control, area control error, operation without central computers, expression for tie-line flow and frequency deviation, parallel operation of generators, area lumped dynamic model.

8 Hrs

Unit II

AUTOMATIC GENERATION CONTROL: Automatic voltage regulator, automatic load frequency control, AVR control loops of generators, performance of AVR, ALFC of single area systems- Speed Governor, Turbine, Generator and Load models, steady state response, concept of control area, multi-area systems, POOL operation-two area systems, modeling the tie line, tie-line bias control.

8 Hrs

Unit III

CONTROL OF VOLTAGE AND REACTIVE POWER: Introduction, generation and absorption of reactive power, relation between voltage, power and reactive power at a node, single machine infinite bus systems, methods of voltage control, sub synchronous resonance, voltage stability, voltage collapse.

8 Hrs

Unit IV

UNIT COMMITMENT: Review of Economic Operation of Power Systems. Statement of the Unit Commitment problem, need and importance of unit commitment, methods-priority lists method, dynamic programming method, constraints, spinning reserve, and examples.

8 Hrs

Unit V

POWER SYSTEM SECURITY: Introduction, factors affecting power system security, power system contingency analysis, detection of network problems, network sensitivity methods, calculation of network sensitivity factor, contingency ranking.

7 Hrs

TEXT BOOKS:

1.	I J Nagarath and D P Kothari	Modern Power System Analysis,TMH, 4th Edition, 2011, ISBN-10: 0071077758
2.	Allen J Wood & Woollenberg	Power generation, operation and control-. John Wiley and Sons, Second Edition, 2009, ISBN-10: 8126508388
3.	O.J Elgerd	Electrical Energy Systems Theory, , McGraw Hill Education, 2nd Edition, 2017, ISBN-10: 007099286X
4.	Robert H Miller, James H Malinowski	Power System Operation, , TMH, 3rd Edition, 2009, ISBN-10: 0070671125

REFERENCE BOOKS:

1.	Abhijit Chakrabarti and Sunita Halder	Power System Analysis, Operation and Control, , PHI, Second Edition, 2010, ISBN-10: 8120340159
2.	S. Sivaganaraju & G. Sreenivasan,	Power System Operation and Control, Pearson, 2009, ISBN-10: 8131726622

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the SCADA system & central operation control of power system
2. Analyze the automatic generation control of power stations
3. Explain the control of voltage & reactive power

4. Understand the security, analysis, states of power system & contingency analysis.

LINE-COMMUTATED AND ACTIVE PWM RECTIFIERS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE19		

Unit I

Rectifiers with passive filtering: 1-phase full-wave diode rectifier with L, C and LC filter; 3-phase diode rectifier with L, C and LC filter; continuous and discontinuous conduction, input current waveshape, effect of source inductance; commutation overlap. 1-phase thyristor rectifier with L and LC filter; 3-phase thyristor rectifier with L and LC filter; continuous and discontinuous conduction, input current waveshape.

9 Hrs

Unit II

Multi-Pulse converter: Review of transformer phase shifting, generation of 6-phase ac voltage from 3-phase ac, 6- pulse converter and 12-pulse converters with inductive loads, steady state analysis, commutation overlap, notches during commutation.

8 Hrs

Unit III

Single-phase ac-dc single-switch boost converter: Review of dc-dc boost converter, power circuit of single-switch ac-dc converter, steady state analysis, unity power factor operation, closed-loop control structure.

7 Hrs

Unit IV

Ac-dc bidirectional boost converter: Review of 1-phase inverter and 3-phase inverter, power circuits of 1-phase and 3-phase ac-dc boost converter, steady state analysis, operation at leading, lagging and unity power factors. Rectification and regenerating modes. Phasor diagrams, closed-loop control structure.

7 Hrs

Unit V

Isolated single-phase ac-dc flyback converter: Dc-dc flyback converter, output voltage as a function of duty ratio and transformer turns ratio. Power circuit of ac-dc flyback converter, steady state analysis, unity power factor operation, closed loop control structure.

8 Hrs

TEXT BOOKS:

1.	G. De	Principles of Thyristorised Converters, Oxford & IBH Publishing Co, 1988
2.	J.G. Kassakian, M. F. Schlecht and G. C. Verghese	Principles of Power Electronics, AddisonWesley, 1991.
3.	L. Umanand	Power Electronics: Essentials and Applications, Wiley India, 2009.
4.	N. Mohan and T. M. Undeland,	Power Electronics: Converters, Applications and Design, John Wiley & Sons, 2007.
5.	R. W. Erickson and D. Maksimovic,	Fundamentals of Power Electronics, Springer Science & Business Media, 2001

Course Outcomes: After the completion of this course, students will be able to:

1. Analyse controlled rectifier circuits.

2. Understand the operation of line-commutated rectifiers – 6 pulse and multi-pulse configurations
3. Understand the operation of PWM rectifiers – operation in rectification and regeneration modes and lagging, leading and unity power factor mode.

DISCRETE CONTROL SYSTEMS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE20		

Course Objectives: This course will enable students to:

1. Understand and design discrete control systems
2. Design discrete control systems using pole placement and optimal control techniques

Unit I

DISCRETE DATA CONTROLLED SYSTEM: Basic discrete-time signals, time domain models for discrete-time systems, transfer function models, stability on the Z-plane & the Jury stability criterion, sampling as impulse modulation, sampled spectra and aliasing, filtering. **8 Hrs**

Unit II

MODELS OF DIGITAL CONTROL DEVICES: Z-domain description of sampled continuous-time plants, Z-domain description of systems with dead-time, implementation of digital controllers, Z-plane specifications of control system design.

8 Hrs

Unit III

CONTROL SYSTEM ANALYSIS USING STATE VARIABLE METHOD: Eigen values and eigen vectors, solution of state equations, concept of controllability & observability. Kalman's and Gilbert's tests. **8 Hrs**

Unit IV

POLE PLACEMENT TECHNIQUES: Stability improvements by state feedback, necessary & sufficient conditions for arbitrary pole-placement, state regulator design, design of state observers. **8 Hrs**

Unit V

OPTIMAL CONTROL: Parameter optimization & optimal control problems, quadratic performance index, optimal state regulator through the matrix-riccati equation.

7 Hrs

TEXT BOOKS:

1.	M. Gopal	Digital control & state variable methods, TMH, 2003
2.	Ogata K	Modern control engineering., Prentice Hall, 2010
3.	De-kink	Optimal control Theory: An Introduction, Courier Corporation 2004

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the concept of state, state variables & state model.
2. Compute the realization of digital controllers & digital filters.
3. Design discrete control system by convolution methods.
4. Design state observer.

FLEXIBLE AC TRANSMISSION SYSTEMS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE21		

Course Objectives: This course will enable students to:

1. Understand concepts of FACTS and working of various FACTS devices
2. Understand the application of FACTS devices in power systems

Unit I

FACTS-Concepts and general system configuration: Transmission, interconnection, flow of power in AC system, power flow and dynamic stability consideration, of a transmission interconnection, relative importance of controllable parameters, basic types of FACTs controllers, shunt, series, combined shunt and series connected controllers.

8 Hrs

Unit II

Thyristor-based Flexible AC Transmission Controllers: Description and Characteristics of Thyristor-based FACTS devices: Static VAR Compensator (SVC), Thyristor Controlled Series Capacitor (TCSC), Thyristor Controlled Braking Resistor and Single Pole Single Throw (SPST) Switch. Configurations/Modes of Operation, Harmonics and control of SVC and TCSC. Fault Current Limiter. **8 Hrs**

Unit III

Self and line commutated current source converter: Basic concepts, 3 phase full wave rectifier, thyristor-based converter, current sourced converter with turnoff devices, current sourced versus voltage source converter. **7 Hrs**

Unit IV

STATIC SHUNT COMPENSATORS SVC AND STATCOM: Objective of shunt compensation, methods of controllable Var generation, static Var compensator, SVC and STA TCOM, comparison between, SVC and STATCOM.

8 Hrs

Unit V

STATIC SERIES COMPENSATORS: GCSC, TSSC, TCSC and SSSC, objectives of series compensation, variables impedance type of series compensation, switching converter type series compensation, external control for series reactive compensators.

8 Hrs

TEXT BOOKS:

1.	Narayan G Hingorani & Laszlo Gyugyi	Understanding FACTS - Concepts and technology of flexible AC Transmission system, IEEE Press, standard publisher, 2001.

REFERENCE BOOKS:

1.	S.Rao	EHV - AC, HVDC Transmission & Distribution Engineering, ,Khanna publishers, 3rd edition 2003
2.	K.R. Padiyar	FACTS - Controllers in Power Transmission distribution, New age publishers , 2007

Course Outcomes: After the completion of this course, students will be able to:

1. Analyze FACTS, concepts and general system configuration

2. Solve Voltage Sourced Converter problems
3. Formulate self and line commutated current source converter, static shunt compensator and STATCOM

ADVANCED ELECTRIC DRIVES

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE22		

Course Objectives: This course will enable students to:

1. Understand advanced techniques in Induction motor control
2. Understand the operation and control of synchronous motor drives

Unit I

Induction motor drives: Different transformations and reference frame theory, modeling of induction machines **8 Hrs**

Unit II

Induction motor drives (contd.):voltage fed inverter control-v/f control, vector control, direct torque and flux control(DTC). **8 Hrs**

Unit III

Synchronous motor drives : Modeling of synchronous machines, open loop v/f control, vector control **8 Hrs**

Unit IV

Permanent magnet motor drives: Introduction to various PM motors, BLDC and PMSM drive configuration, comparison, block diagrams, Speed and torque control in BLDC and PMSM. **8 Hrs**

Unit V

Switched reluctance motor drives: Evolution of switched reluctance motors, various topologies for SRM drives, comparison, Closed loop speed and torque control of SRM. **7 Hrs**

TEXT BOOKS:

1.	B. K. Bose	Modern Power Electronics and AC Drives, Pearson Education, Asia, 2003.

REFERENCE BOOKS:

1.	R. Krishnan	Permanent Magnet Synchronous and Brushless DC motor Drives, CRC Press, 2009.
2.	P. C. Krause, O.Wasynczuk and S.D. Sudhoff	"Analysis of Electric Machinery and Drive Systems", John Wiley & Sons, 2013.

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the operation of power electronic converters and their control strategies.
2. Understand the vector control strategies for ac motor drives

POWER SYSTEM DYNAMICS AND CONTROL

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE23		

Course Objectives: This course will enable students to:

1. The basic concepts of dynamics of power system
2. The model of synchronous machines, excitation & prime mover modeling
3. Formulation of Load modeling
4. The transient stability evaluation using simulators

Unit I

INTRODUCTION: Basic concepts, Review of classical methods.

SYSTEM MODELING AND DYNAMICS OF SYNCHRONOUS GENERATOR: Modeling of synchronous machine, Swing equation, Park's transformation – Park's voltage equation, Park's mechanical equation (torque). Applications – Voltage build up in synchronous machine, and (b) Symmetrical short circuit of generator. **8 Hrs**

Unit II

SYSTEM MODELING AND DYNAMICS OF SYNCHRONOUS GENERATOR

Solution for transient analysis, Operational impedance, Relationship between Tdo' and Tdo", Algebraic constraints.

EXCITATION AND PRIME MOVER CONTROLLERS: Introduction, Types of excitation, AVR with and without ESS, TGR, Amplifier PSS, Static exciters. **8 Hrs**

Unit III

MODELING OF PRIME MOVERS: Introduction, Three major components, Block diagram, Hydraulic turbine, Steam turbine. **8 Hrs**

Unit IV

LOAD MODELING: Introduction, Two approaches – Polynomial model and Exponential model. Small Signal Angle Stability: Small signal angle stability with SMIB system, detailed model of SMIB **8 Hrs**

Unit V

TRANSIENT STABILITY ANALYSIS: Simulation for Transient stability Evaluation, Transient stability controllers. **7 Hrs**

TEXT BOOKS:

1.	Padiyar K.R	Power System Dynamics, Stability and Control,., Interline Publications., 2004
2.	Prabha Kundur.	Power System Stability and Control, TMH, 9th Reprint., 1994

REFERENCE BOOKS:

1.	Marija Ilic;John Zaborszky,	Dynamics and Control of Large Electric Power Systems, IEEE Press and John Wiley & Sons, Inc, 2007
2.	Paul M. Anderson and A. A. Fouad	Power System Control and Stability(Revised Printing), IEEE Press and John Wiley & Sons, Inc, 2002

3.		Selected topics from IEEE Transaction and Conference Proceedings

Course Outcomes: After the completion of this course, students will be able to:

1. understand basic concepts of power system dynamics
2. to model synchronous machines
3. formulate load modelling
4. evaluate the Transient stability phenomenon using simulators

SOLAR AND WIND ENERGY CONVERSION SYSTEMS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE24		

Course Objectives: This course will enable students to:

1. understand and design solar PV systems
2. understand and design wind energy conversion systems

Unit I

Introduction to PV: Need for sustainable energy sources, Importance of wind and solar power generations, solar radiations and its measurements, Construction and operation of PV cell, Operational characteristics, Single diode modelling ,series and parallel resistances, Efficiency limits, factors affecting performance, PV modules, Power Calculations

8 Hrs

Unit II

MPPT-Converter-Battery Selection: MPPT, Necessity ,Types of MPPT ,P&O and IC methods ,DC-DC converters(Buck, Boost, Buck-Boost, CUK),DC-AC Inverters (Grid Connected),Configuration of Stand- alone and Grid Connected PV Systems. Storage Batteries, Factors affecting Battery Performance, Battery Sizing, Charge Controllers.

8Hrs

Unit III

Fundamentals of Wind Energy Conversion Systems: Introduction to Wind Energy Conversion Systems ,Fundamentals of Wind Energy, Wind Curves, Wind Turbine Systems,Control of Wind Turbines, Wind Energy Conversion System Components.

7 Hrs

Unit IV

Electrical Machines in Wind Turbines: Electrical Machines in Wind Turbines , PMSG, Induction Generators, DFIG- Principle of Operation-Construction-Characteristics and Selection(Modelling Excluded),Voltage And frequency Control, Grid Integration of Wind Energy Conversion Systems. **8 Hrs**

Unit V

Fuel Cell and Hybrid Power Generation: Fuel Cells-Working Principle and Types of Fuel Cells-Hybrid PV-Fuel Cell Systems, Hybrid Wind-Fuel Cell systems, Hybrid PV-Wind Systems. Applications of PV, Wind and Fuel Cell Systems-Irrigation Pump sets, Roof Top systems, Hybrid Vehicles. **8 Hrs**

TEXT BOOKS:

1.	Chetan Singh Solanki	Solar Photovoltaics: Fundamentals, Technologies and Applications, 2nd Edition ,PHI publishers
2.	Alireza Khaligh and Omer	ENERGY HARVESTING - Solar, Wind, and Ocean Energy Conversion Systems, Energy, Power Electronics, and Machines

	C.Onar	Series,CRC Press Publications
3.	D.P Kothari, K.C. Singal and Rakesh Ranjan	Renewable Energy Sources and Emerging Technologies 2nd Edition, PHI Learning Pvt Ltd.

REFERENCE BOOKS:

1.	Djamila Rekioua and Ernest Matagne	."Optimization of Photovoltaic Power Systems- Modelization, Simulation and Control",Springer Publications.
2.	NPTEL link	

Course Outcomes: After the completion of this course, students will be able to:

1. Model the solar PV cell, analyze the P-V and I-V characteristics and interpret the factors influencing the performance of SPV system.
2. Analyze the operation of Power electronic converters used in SPV systems.
3. Describe the principle of WECS and factors influencing for the power generation using WECS.
4. Explain the principle, operation and control of Generators used in WECS.
5. Describe the system configuration of hybrid systems for electrical applications.

INDUSTRIAL ELECTRICAL SYSTEMS

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE25		

Course Objectives: This course will enable students to:

1. Familiarize with the various Industrial Electrical System components.
2. Develop Knowledge on electrical systems wiring for Residential and Commercial Systems
3. Understand and deal with the complete Industrial electrical systems
4. Understand Industrial drawing and SLD, Design Ratings and specification of Electrical system components
5. understand the PLC and SCADA based Industrial control Systems design

Unit I

Electrical System Components: LT system wiring components- Basic function, Type, Rating, and selection of Fuse, MCB, MCCB, ELCB,RCCB, Contactor, Isolator, Relays, MPCB, Switch Fuse Unit, LT-cables, CT's and PT's, wires, switches, and distribution box. LT-Tariff structure. Metering and protection systems. Symbols and single line diagram (SLD) of a wiring system both control and power diagrams. Electric shock and Electrical safety practices **8 Hrs**

Unit II

Residential and Commercial Electrical Systems: Types of residential and commercial wiring systems, general rules and guidelines for installation, load calculation and sizing of wire, rating of main switch, distribution board and protection devices, earthing system calculations, requirements of commercial installation, deciding lighting scheme and number of lamps, earthing of commercial installation, selection and sizing of components.

8 Hrs

Unit III

Industrial Lighting: Overview of the basics of lighting system design, Lamps and Luminaries type, Types of Industrial Lighting Systems, Factors to be considered in design of Interior and

Exterior Lightings, Manual calculations on Interior system design, simple illustrative numerical problems on Interior lighting design, Basics of Street lighting design(exterior lighting), Manual calculations on street lighting, simple illustrative numerical problems on Street lighting design, Emergency lighting system for Industries

7 Hrs

Unit IV

Industrial Electrical Systems I: Development of Single line diagram of an Industry covering Main receiving Grid Substation, Main control Station, Power Control Centers(PCC), and Motor Control centers(MCC). Cable and Switchgear selection, Control of HT and LT Systems, Interlocks, HT connection, Specification and selection of LT breakers, Industrial loads, motors, Starting of Motors (DOL, Star delta, VFD) both control and power, Lightning Protection, Earthing design, Power factor correction – kVAR calculations.

8 Hrs

Unit V

Industrial Electrical Systems II: DG Systems, UPS System, Electrical Systems for the elevators, Battery banks, Sizing the DG, UPS and Battery Banks, Selection of UPS and Battery Banks. Study of basic PLC, Role of in automation, advantages of process automation, PLC based control system design, Panel Metering and Introduction to SCADA system for distribution automation. **8 Hrs**

TEXT BOOKS:

1.	S.L. Uppal and G.C. Garg,	"Electrical Wiring, Estimating & Costing", Khanna publishers, 2008.
2.	K. B. Raina,	"Electrical Design, Estimating & Costing", New age International, 2007.

REFERENCE BOOKS:

1.	S. Singh and R. D. Singh	"Electrical estimating and costing", Dhanpat Rai and Co., 1997.
2.	H. Joshi	"Residential Commercial and Industrial Systems", McGraw Hill Education, 2008

Course Outcomes: After the completion of this course, students will be able to:

1. Describe the electrical wiring systems and components with standard symbols, SLD and drawings.
2. Understand the residential, commercial electrical system and associated components.
3. Understand the various terminologies of Illumination and Preliminary design of Lighting systems for Industry premises.
4. Understand the Industrial distribution system both HT & LT systems.
5. Understand the Industrial motor controls, Controls using PLC, SCADA, and the functioning of redundant supply systems.

SMART GRID

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE26		

Course Objectives: This course will enable students to:

To create the practical insight about the modernization of Electrical Power System and hence study several issues involved in realization of Smart Grid

Unit I

Introduction to Smart Grid

Evolution of Electric Grid, Evolution of Indian National Grid, Regulatory authorities in Indian Power sector, Concept of Smart Grid, Definitions, Need of Smart Grid, Functions of Smart Grid, Opportunities & Barriers of Smart Grid, Difference between conventional & smart grid, Present development & International policies in Smart Grid.

8Hrs.

Unit II

Smart Substations

Substation Automation equipment-block diagram, Intelligent electronic devices: Bay controller, Remote terminal units, Faults in the distribution system, Components for fault isolation and restoration, Fault location, isolation and restoration, Voltage regulation

8 Hrs

Unit III

Sensing, Measurement, Control and Automation Technologies:

Smart metering: Key components of smart metering, overview of the hardware used, Signal acquisition, Signal conditioning, Analogue to digital conversion, Computation, Input/output, Communication.

Communications infrastructure and protocols for smart metering: Home-area network, Neighbourhood area network, Data concentrator, Meter data management system, Protocols for communications, Demand-side integration, Services provided by DSI, Implementations of DSI ,Hardware support to DSI implementations, Flexibility delivered by prosumers from the demand side.

8 Hrs

Unit IV

RENEWABLE ENERGY AND STORAGE: Renewable Energy Resources, Sustainable Energy Options for the Smart Grid, Penetration and Variability Issues Associated with Sustainable Energy Technology ,Demand Response Issues

8 Hrs

Unit V

Distributed Energy Resources: Small scale distributed generation sources, Sustainable Energy Options for the Smart Grid: Solar Energy, Solar Power Technology, Modelling PV Systems, Wind Turbine Systems, Biomass-Bioenergy , Small and Micro Hydropower, Fuel Cell Geothermal Heat Pumps Penetration and Variability Issues Associated with Sustainable

Energy Technology Demand Response Issues, Electric Vehicles and Plug-in Hybrids, Advantages and disadvantages of DG.

Power Quality Management In Smart Grid: Power Quality & EMC in Smart Grid, Power Quality issues of Grid connected Renewable Energy Sources, Power Quality Conditioners for Smart Grid, Power Quality monitoring, Power Quality Audit.

7 Hrs

TEXT BOOKS:

1	Janaka Ekanayake Kithsiri Liyanage Jianzhong Wu Akihiko Yokoyama	Smart Grid: Technology and Applications, Publisher: Wiley (2015),ISBN-13: 978-8126557356

REFERENCE BOOKS:

1.	James Momoh	Smart Grid, Fundamentals of Design and Analysis Wiley 1st Edition, 2012, ASIN: B01JXWU4U6
2.	NPTEL LINK	https://nptel.ac.in/courses/108107113/

Course Outcomes: After the completion of this course, students will be able to:

1. **Differentiate** progress made by different stakeholders in the design and development of smart grid.
2. **Explain** measurement techniques using Phasor Measurement Units and smart meters
3. **Discuss** tools for the analysis of smart grid and design, operation and performance
4. **Discuss** classical optimization techniques and computational methods for smart grid design, planning and operation and Explain predictive grid management and control technology for enhancing the smart grid performance
5. **Develop** cleaner, more environmentally responsible technologies for the electric system.

ELECTRICAL AND HYBRID VEHICLES

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE27		

Course Objectives: This course will enable students to:

1. Understand the components of electrical and hybrid vehicles
2. Understand he energy storage and energy management techniques used in electric vehicles

Unit I

Introduction: Conventional Vehicles: Basics of vehicle performance, vehicle power source characterization, transmission characteristics, mathematical models to describe vehicle performance. Introduction to Hybrid Electric Vehicles: History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

7 Hrs

Unit II

Hybrid Electric Drive-trains: Hybrid Electric Drive-trains: Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

8 Hrs

Unit III

Electric Trains: Electric Drive-trains: Basic concept of electric traction, introduction to various electric drivetrain topologies, power flow control in electric drive-train topologies, fuel efficiency analysis. Electric Propulsion unit: Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

8 Hrs

Unit IV

Energy Storage: Energy Storage: Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices. Sizing the drive system: Matching the electric machine and the internal combustion engine (ICE), Sizing the propulsion motor, sizing the power electronics, selecting the energy storage technology, Communications, supporting subsystems

8 Hrs

Unit V

Energy Management Strategies: Energy Management Strategies: Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies. Case Studies: Design of a Hybrid Electric Vehicle (HEV), Design of a Battery Electric Vehicle (BEV).

8 Hrs

TEXT BOOKS:

1.	C. Mi, M. A. Masrur and D. W. Gao	Hybrid Electric Vehicles: Principles and Applications with Practical Perspectives, John Wiley & Sons, 2011.
2.	S. Onori, L. Serrao and G. Rizzoni,	Hybrid Electric Vehicles: Energy Management Strategies, Springer, 2015.
3.	M. Ehsani, Y. Gao, S. E. Gay and A. Emadi	Modern Electric, Hybrid Electric, and Fuel Cell Vehicles: Fundamentals, Theory, and Design, CRC Press, 2004
4.	T. Denton	Electric and Hybrid Vehicles, Routledge, 2016.

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the models to describe hybrid vehicles and their performance.
2. Understand the different possible ways of energy storage.
3. Understand the different strategies related to energy storage systems.

CONTROL SYSTEMS DESIGN

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE28		

Course Objectives: This course will enable students to:

1. To understand concepts of Time and Frequency domain specifications.

2. To understand the concept of compensator. Design of Lag, lead lag-lead compensator in time domain and Realization of compensators.
3. To understand the design of P, PI, PD and PID controllers in time domain and frequency domain for I, II and III order systems.
4. To understand the concept of controllability & observability

Unit I

Design Specifications: Introduction to time domain and frequency domain design specification and its physical relevance. Effect of gain on transient and steady state response. Effect of addition of pole on system performance. Effect of addition of zero on system response.

8 Hrs

Unit II

Design of Classical Control System in the time domain: Introduction to compensator. Design of Lag, lead lag-lead compensator in time domain. Feedback and Feed forward compensator design. Feedback compensation. Realization of compensators.

8 Hrs

Unit III

Design of Classical Control System in frequency domain: Compensator design in frequency domain to improve steady state and transient response.
Feedback and Feed forward compensator design using bode diagram.

8 Hrs

Unit IV

Design of PID controllers: Design of P, PI, PD and PID controllers in time domain and frequency domain for I, II and III order systems. Control loop with auxiliary feedback -Feed forward control.

7 Hrs

Unit V

Control System Design in state space

Review of state space representation. Concept of controllability & observability, effect of pole zero cancellation on the controllability & observability of the system, pole placement design through state feedback. Ackerman's Formula for feedback gain design. Design of Observer. Reduced order observer. Separation Principle.

8 Hrs

TEXT BOOKS:

1.	N. Nise	Control system Engineering, John Wiley, 2000.
2.	I. J. Nagrath and M. Gopal	Control system engineering, Wiley, 2000.
3.	M. Gopal	Digital Control Engineering, Wiley Eastern, 1988
4.	K. Ogata	Modern Control Engineering, Prentice Hall, 2010.
5.	B. C. Kuo	Automatic Control system, Prentice Hall, 1995

REFERENCE BOOKS:

1.	J. J. D'Azzo and C. H. Houpis	Linear control system analysis and design (conventional and modern), McGraw Hill, 1995.
2.	R. T. Stefani and G. H. Hostetter	Design of feedback Control Systems, Saunders College Pub, 1994.

Course Outcomes: After the completion of this course, students will be able to:

1. Understand various design specifications
2. Design of compensators to satisfy the desired design specifications in time domain

3. Design of compensators to satisfy the desired design specifications in frequency domain
4. Design controllers in time domain and frequency domain to satisfy the desired design specifications using simple controller structures (P, PI, PID, compensators).
5. Design controllers using the state-space approach

ELECTRIC POWER QUALITY

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE29		

Course Objectives: This course will enable students to:

1. Understand the definition and standards of power quality phenomena
2. Understand power quality mitigation techniques

Unit I

Introduction to Power Quality Disturbances: Understanding Power quality, types of power quality disturbances, power quality indices, Causes and effects of power quality disturbances **8 Hrs**

Unit II

Harmonics: Causes and effects of harmonics, converter configuration and their contribution to supply harmonics, other sources of harmonics ,Radio interference, supply standards, elimination/suppression of harmonics, classical solutions & their drawbacks, passive input filters, transformer connections, **8 Hrs**

Unit III

Active Filters: Elimination/suppression of harmonics using active power filters - topologies, and their control methods, PWM converter as a voltage source active filter, current source active filter, constant tolerance band control, variable tolerance band control **8 Hrs**

Unit IV

Short Interruptions and Voltage Sag:

Short Interruptions: Introduction, terminology, origin of short interruptions, monitoring of short interruptions, influence on equipment, single phase tripping, stochastic prediction of short interruptions.

Voltage Sags - Characterization: Introduction, voltage sag magnitude, voltage sag duration, three phase unbalance, phase angle jumps, magnitude and phase angle jumps for three phase unbalanced sags, other characteristic of voltage sags, load influence on voltage sags, sag due starting of induction motors. **8 Hrs**

Unit V

Mitigation of Interruptions and Voltage Sags:

Voltage Sags – Equipment Behavior: Introduction, computers and consumer electronics, adjustable speed AC drives, adjustable speed DC drives, other sensitive load.

Overview of mitigation methods, power system design – redundancy through switching and parallel operation, system equipment interface. **7 Hrs**

REFERENCE BOOKS:

1.	R.C. Dugan	Power Quality, TMH, 2012
2.	A.J. Arrillga and Watson	Power system harmonics , John Wiley and Sons, 2004
3.	Math H J Bollen	Understanding Power Quality Problems; Voltage Sags and

		Interruptions, Wiley India, 2011

Course Outcomes: After the completion of this course, students will be able to:

1. Interpret the Electrical power quality issues, their Characterization, causes and consequences on power system
2. Interpret the Characterization of harmonics and its effect on power system, suppression of harmonics by classical methods and Design suitable filters
3. Analyze the principle of suppression oh harmonics by Active filters, Interpret the configuration and operation of Active filters
4. Interpret the Characterization of Short Interruptions and Voltage Sag and its effect on power system
5. Analyze the principle of Elimination/ suppression techniques of interruption and voltage sag

POWER SYSTEM PROTECTION

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE30		

Course Objectives: This course will enable students to:

1. Understand the operation of power system protection schemes
2. Model and simulate power system protection schemes

Unit I

Introduction and Components of a Protection System: Principles of Power System Protection, Relays, Instrument transformers, Circuit Breakers

Faults and Over-Current Protection: Review of Fault Analysis, Sequence Networks. Introduction to Overcurrent Protection and overcurrent relay co-ordination.

8 Hrs

Unit II

Equipment Protection Schemes: Directional, Distance, Differential protection. Transformer and Generator protection. Bus bar Protection, Bus Bar arrangement schemes.

8 Hrs

Unit III

Digital Protection: Computer-aided protection, Fourier analysis and estimation of Phasors from DFT. Sampling, aliasing issues. **8 Hrs**

Unit IV

Modeling and Simulation of Protection Schemes CT/PT modeling and standards, Simulation of transients using Electro-Magnetic Transients (EMT) programs. Relay Testing.

8 Hrs

Unit V

System Protection: Effect of Power Swings on Distance Relaying. System Protection Schemes. Under-frequency, under-voltage and df/dt relays, Out-of-step protection, Synchro-phasors, Phasor Measurement Units and Wide-Area Measurement Systems (WAMS). Application of WAMS for improving protection systems. **7 Hrs**

TEXT BOOKS:

1.	Y. G.Paithankar and S. R. Bhide	"Fundamentals of power system protection", Prentice Hall, India, 2010.

REFERENCE BOOKS:

1.	J.L. Blackburn	"Protective Relaying: Principles and Applications", Marcel

		Dekker, New York, 1987.
2.	A. G. Phadke and J. S.Thorp	"Computer Relaying for Power Systems", John Wiley & Sons, 1988.
3.	A. G. Phadke and J. S. Thorp	"Synchronized Phasor Measurements and their Applications", Springer, 2008.
4.	D. Reimert,	"Protective Relaying for Power Generation Systems", Taylor and Francis, 2006.

Course Outcomes: After the completion of this course, students will be able to:

1. Understand the different components of a protection system.
2. Evaluate fault current due to different types of fault in a network.
3. Understand the protection schemes for different power system components.
4. Understand the basic principles of digital protection.
5. Understand system protection schemes, and the use of wide-area measurements.

INSULATION ENGINEERING

Contact Hours/ Week	: 3(L)	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: -	SEE Marks :	50
Course Code	:REEE31		

Course Objectives: This course will enable students to:

1. Understand breakdown phenomena in solid, liquid and gaseous insulation
2. Understand ageing phenomena in electrical insulation

Unit I

Insulation System in Power Apparatus: Insulation system in capacitors, bushings, transformers, Models of failure of insulation systems. Insulation in rotating machines. **8 Hrs**

Unit II

Dielectric Phenomena: Dielectric phenomena in solid insulation. Macroscopic approach for describing the dielectric phenomena, Microscopic treatment for dielectric phenomena. **8 Hrs**

Unit III

Properties of Insulation Materials: Introduction to properties of solid insulating materials (both of natural origin and synthetic types). Properties of liquid insulating materials, Review of breakdown phenomena in solid and liquid insulating medial. **8 Hrs**

Unit IV

Gaseous Insulation: Requirement of gaseous insulation. Breakdown processes: Types of collision, Elastic and Inelastic collisions, Collision cross section, Mobility of ions, Diffusion of charges, Emission of radiation and excitation, various secondary processes and recombination, Mobility controlled and Diffusion controlled breakdown. **8 Hrs**

Unit V

Ageing Phenomena: Failure of electrical insulation due to ageing. Ageing mechanisms-Thermal ageing, Electrical ageing, combined thermal and electrical ageing. Analysis of Insulation failure data: Power law model, Graphical estimation of power law constants, procedure, ageing data, plotting position and cumulative failure probability. **7 Hrs**

TEXT BOOKS:

1.	Ravindra Arora, Wolfgang Mosch	High Voltage Insulation Engineering**,** New age International Publishers Ltd., 1995

REFERENCE BOOKS:

1.	Nasser E	Fundamentals of gaseous ionization and plasma electronics, John Wiley Interscience, New York, 1971

Course Outcomes: After the completion of this course, students will be able to:

1. Understand Insulation system in power apparatus
2. Analyze the Dielectric phenomena in power apparatus
3. Understand the Ageing phenomena
4. Analyze the insulation failure data

SCHEME & SYLLABUS

OF

III & IV SEMESTERS B.E.

ELECTRONICS AND COMMUNICATION ENGINEERING

AY : 2022-23

(Applicable to 2021-22 Batch)

Vision

To create professionally competent and socially sensitive Electronics and Communication engineers capable of working in multicultural global environment.

Mission

To provide a congenial environment for superior learning experience and offer high quality education relevant to the current and future needs of the society and careers of students in the field of Electronics and Communication Engineering.

Programme Educational Objectives:

The graduates of Electronics and Communication engineering programme are able to :

a) Design and build systems for providing solutions to real life problems in the area of Electronics and Communication.

b) Be a successful entrepreneur, build careers in Industry, government, public sector undertakings, pursue higher education and research.

c) Work individually, within multidisciplinary teams and lead the team following sound professional and ethical practices.

Graduate attributes: Program Outcomes (POs)

1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes (PSOs)

A graduate of the Electronics and Communication Engineering Program will demonstrate

1. The ability to analyse and design systems in the areas related to microelectronics, Communication, Signal Processing and embedded systems for solving real world problems (Professional Skills).

2. The ability to identify problems in the areas of communication and embedded systems and provide efficient solutions using modern tools/algorithm individually or working in a team (Problem solving Skills).

9	NCMC	NMC01	National Service Scheme (NSS)	NSS	All students have to register for any one of the courses namely National Service Scheme, Physical Education (PE) (Sports and Athletics) and Yoga with the concerned coordinator of the course during the first week of III semester. The activities shall be carried out from III semester to VIII semester (for 5 semesters). SEE for the courses shall be conducted during VIII semester examinations and the accumulated CIE marks shall be added to the SEE marks. Successful completion of the registered course is mandatory for award of the degree. The events shall be appropriately scheduled by Dean Academic and the same shall be reflected in the calendar prepared for the NSS, PE and Yoga activities.

ENGINEERING MATHEMATICS–III

Contact Hours/ Week	3 (L)	Credits	3
Total Lecture Hours	39	CIE Marks	50
Total Tutorial Hours	00	SEE Marks	50
Sub Code	N3MATA	Semester	III

Prerequisites: Engineering Mathematics-I and Engineering Mathematics-II.

Course Objectives: This course will enable students to:

1. To introduce the concept of analytic function, transformation for mapping.
2. The concept of complex variables to evaluate the integrals.
3. Introduce partial differential equations, use separation of variable method to solve wave, heat and Laplace equations.
4. To develop and conduct appropriate experimentation, analyze and interpret data and use engineering judgment to draw conclusion.
5. Introduction of Finite difference approximation to derivatives to partial differential equations.

UNIT-I

Complex Variables : Functions of complex variable, Definition of Limit, Continuity, Differentiability. Analytic functions, Cauchy's-Reimann equation in Cartesian and polar forms (Statement only), Properties of analytic functions (Statement only). Geometrical representation of $f(z)=w$, Conformal transformation: $w=e^z$, $w=z+\frac{1}{z}$, $w=z^2$. **8 Hours**

UNIT-II

Complex Integration : Bilinear transformation, Properties, Complex integration, Cauchy's theorem (with proof), Converse of Cauchy's theorem, Cauchy's integral formula (with proof), residues, residues theorem, calculation of residues. **8 Hours**

UNIT – III

Partial differential equations (P.D.E.) : Formation of Partial Differential Equation, Solution of Langrange's Linear P.D.E. of the type Pp+Qq=R. Method of Separation of Variables. **Applications of P.D.E.:** Classification of PDE, Solution of one dimensional heat, wave and two dimensional Laplace's equations by the method of separation of variables. **8 Hours**

UNIT-IV

Statistics : Introduction, Definitions, Curve Fitting, equation of Straight line, parabola and exponential, correlation and regression, formula for correlation coefficient, regression lines and angle between the regression lines. **7 Hours**

UNIT – V

Numerical Solutions to the Partial differential equations : Introduction, Finite difference approximation to derivatives, Elliptic equations, Solution of Laplace's equations, Parabolic equations, Solution of heat equation, Hyperbolic equations, Solution of wave equation. **8 Hours**

Text Book:

1	B.S.Grewal	"Higher Engineering Mathematics", 43rd edition, Khanna Publications, 2015. ISBN;978-81-7409-195-5.

Reference Books:

1	Ramana B.V.	**"**Higher Engineering Mathematics"**,** latest edition, Tata-McGraw Hill, 2016. ISBN;0-07-053516-7.

4	Louis A. Pipes and Lawrence R. Harvill	"Applied Mathematics for Engineers and Physicists", 3rd edition, McGraw Hill, 2014.

Course Outcomes: After the completion of this course, students will be able to:

CO1. Determine continuity/differentiability/analyticity of a function and find the derivative of a function. Identify the transformation (L3,L1)

CO2. Evaluate a contour integral using Cauchy's integral formula. Compute singularities and also the residues(L3).

CO3. Formulate and solve partial differential equations. Apply separation of variable method to solve wave, heat and Laplace equations (L4).

CO4. Apply least square method to fit a curve for the given data and evaluate the correlation coefficient and regression lines for the data (L3)

CO5. Compute the numerical solution of partial differential equations (L4).

SIGNALS AND SYSTEMS

Contact Hours/ Week	: 3	Credits :	4.0
Total Lecture Hours	: 39	CIE Marks :	50
Lab Hours/Week	: 2	SEE Marks :	50
Sub. Code	: N3ECI01		

Course Objectives: This course will enable students to:

1. Perform basic signal processing operations applying linear algebra
2. Study the characteristics, representation and properties of signals and systems in time as well as frequency domains
3. Evaluate the behavior of an LTI system
4. Apply transformations on signals

Unit I

Basics of Linear Algebra: Systems of Linear equations, Row reduction and Echelon forms, solutions to linear systems, Vectors in Rn, Linear combinations, the equation Ax=b, Linear independence Linear transformations (Text 1) **8 Hrs.**

Unit II

Basics of Signals: Vector space, subspaces, Null spaces, column spaces, Bases, Spanning set. (Text1) Definition of signals and systems, mathematical representations, classification of signals, elementary signals. **8 Hrs.**

Unit III

Discrete time systems : Operations on discrete time signals**,** Properties of discrete time systems, Impulse response representation of LTI Discrete time systems, Linear convolution of discrete time systems: Graphical method, properties of discrete time LTI systems in terms of impulse response representation, step response. **8 Hrs**.

Unit IV

Fourier Transforms : Discrete time non periodic signals: DTFT and Inverse DTFT representations, continuous time non periodic signals: FT and IFT, properties of FT. **8 Hrs.**

Unit V

Z-Transform: Introduction, Properties of ROC, Properties of Z-transform, inverse Z-transform (Partial fraction expansion method), Transform analysis of LTI systems, stability & causality. **7 Hrs**

TEXT BOOKS:

2	https://www.digimat.in/nptel/courses/video/108104100/L02.html
3	https://nptel.ac.in/courses/117104074

Course Outcomes: After the completion of this course, students will be able to:

CO1. Apply Linear Algebra techniques for Signal processing

CO2. Apply knowledge of mathematics and Engineering fundamentals to Identify and characterize different classes of signals

CO3. Identify, formulate the methodology to compute the response and analyze the properties of an LTI system

CO4. Identify Fourier Representations and analyze the signals in time and frequency domain for non periodic signals

CO5. Apply ZT for broader characterization of discrete time signals and LTI systems.

CO6. Demonstrate the basic concepts of signal processing using MATLAB/SCILAB

Integrated Lab

1. Generation of Signals: periodic, non-periodic, Discrete, continuous, complex signals
2. Energy computation: real and complex signals
3. Response calculation of Discrete LTI system: Convolution and Solutions to DE
4. Frequency domain representations of single tone and multi tone sinusoidal signals
5. Sampling theorem verification
6. Verification of Rayleigh's Energy theorem
7. Plotting spectrum of discrete time signals
8. Analyzing stability and causality of a system through its transfer function
9. Solving system of linear equations.

DIGITAL ELECTRONIC CIRCUITS

Contact Hours/ Week :	3+0+2 (L+T+P)	Credits : 4.0
Total Lecture Hours :	39	CIE Marks : 50
Total Tutorial Hours :	00	SEE Marks : 50
Total Practical Hours :	26	
Sub. Code :	N3CES1	

Course Objectives: This course will enable students to:

1. Study the properties of basic gates and simplifications of Boolean expressions using K Maps.
2. Study the fundamentals of combinational & sequential circuits with design examples.
3. Study the functionality of various memory devices.
4. Study the Verilog data types with operators and to develop Verilog codes for digital blocks in different modelling.

Unit I

Properties of Logic Gates: Noise Margin, Fan-out, Propagation Delay, Power Dissipation. Voltage and current parameters.

Simplification of Boolean Expressions: Canonical forms, Karnaugh maps (3 and 4 variable)

Introduction to Verilog HDL: HDL basic concepts: Syntax & semantics, Data types, Operators, HDL modeling types, Developing HDL code for Logic Circuits using HDL program **08 Hours**

Unit II

Combinational Logic Circuits: Binary adders and subtracters, Carry look-ahead adder, Decimal adders, Comparators- one bit and two bit, Decoders, Encoder, Multiplexer, Logic design using decoders and multiplexers. Modeling combinational logic circuits using dataflow, gate level and behavioral Verilog HDL program.

Self-study component: Decoder with 7-segment display, Parallel to serial conversion using MUX 08 Hours

Unit III

Sequential Circuits: Basic bi-stable element, Latches- SR Latch using NAND gates, D Latch, Gated D Latch, Flip-flops – SR, D, JK and T, Characteristic equations, Flip flop conversions Registers: shift register- SISO, SIPO, PISO, Universal shift register, Counters: asynchronous and MOD counter, ring Counter and Johnson counter, Modeling sequential circuits using behavioral Verilog HDL program

Self-study component: Tasks in Verilog HDL 08 Hours

Unit IV

Sequential Design: Introduction, Synchronous counter design, Mealy and Moore Models, Sequential circuit design using Mealy Model, Synchronous Sequential Circuit Analysis.

Self-study component: Develop Verilog code for sequence detector using Mealy model. **08 Hours**

Unit V

Memory Devices: Memory types and terminology- Memory organization and operation, Memory reading and writing, RAMs, ROMs and PROMs. Read Only Memory-ROM organization, Rom timing, types of ROMs, Applications of ROMs, Semiconductor RAMs-Static RAMs, Dynamic RAMs, ROMs, Read-Write cycle of ROM and RAM.

Self-study component: Programmable logic Devices- PAL, PLA, PROM.

07Hours

TEXT BOOKS

1	Donald D. Givone	Digital Principles and Design, TATA McGraw-hill Edition 2017
2	A.Anand Kumar	Fundamentals of Digital circuits,PHI; 4th edition 2016
3	Samir Palnitkar	"Verilog HDL A guide to Digital Design and Synthesis" Second Edition, Pearson Education ,2003

REFERENCE BOOKS

1	Ronald J Tocci, Neal S Widmer and Regory L Moss.	Digital Systems Principles and Applications, 12th Edition, Pearson, 2017.
2	Charles H. Roth. Jr.	Digital Systems Design using Verilog, Thomson Learning, Inc, 1st edition 2015.
3	R D Sudhakar Samuel	Logic Design, Sanguine technical Publishers,2004

Course Outcomes: At the end of the course Student will be able to:

CO1. Apply the knowledge of K Maps for simplification of Boolean expressions and describe Verilog data types & operators
CO2. Design combinational circuits and develop dataflow, gate level and behavioral Verilog code.
CO3. Identify flip flops and analyze shift registers and asynchronous counters and develop behavioral Verilog code.
CO4. Analyze and design synchronous sequential circuits and develop behavioral Verilog code.
CO5. Analyze different memories and design of logic circuits using programmable logic devices.
CO6. Design and implement Digital circuit using MSI components along with Verilog HDL.

Pedagogy:	**Chalk and talk and PPT**
WEB Links & Video Lectures Video Links (e-resources)	**https://nptel.ac.in/courses/108106177** Online tool & Open source software: Multisim, GHDL https://nptel.ac.in/courses/108105132 https://nptel.ac.in/courses/117106086

DIGITAL ELECTRONIC LAB (Only for CIE)

List of experiments

Part-A Hardware Experiments:

1. Realization of Parallel Adder/ Subtractor
2. Multiplexer: Adder and Subtractor using MUX
3. Use of Decoder Chip To Drive Led Display
4. Realization of One Bit Magnitude Comparator
5. Design 3-bit up-counter using T-FF

Part-B Verilog Experiments

1. Write Verilog code for full adder using
   (i) Dataflow description
   (ii) Gate-level description

2. Write Verilog code for 4:1 MUX using
   (i) Dataflow description
   (ii) Gate-level description
   (iii) Behavioral Description

3. Write Verilog code for 2:4 decoder using
   (i) Dataflow description
   (ii) Gate-level description
   (iii) Behavioral Description

4. Write Verilog code for D FF, JK FF, T FF using Behavioral description

5. Write Verilog code for up/down counter

ANALOG ELECTRONIC CIRCUITS

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: N3CES2	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Understand the working of MOSFET device and design fundamental MOSFET analog circuits.
2. Discuss the concept of Opamp as a black-box and design of basic Opamp based circuits.
3. Understand the working of Linear ICs and design of 555 timer, Data converters and PLL based circuits.
4. Discuss and analyze various applications of Diode and introduce the concept of Power amplifiers.

Unit I

Working Principle of MOS capacitor and MOSFET, I-V characteristics of MOSFET, Small signal models, Biasing of MOSFET amplifiers, Design of Common Source amplifier, high frequency model, Miller's Theorem, frequency response of CS amplifier. **7 hrs**

Unit II

CG and CD and Cascode amplifiers, Current mirrors, amplifiers with active loads. The MOS differential pair and their small signal operation. Differential amplifiers with active load. **9 hrs**

Unit III

OPAMP: Opamp as a black box, Various applications of op-amps like inverting and non-inverting amplifiers, voltage follower, summing amplifier, Integrators, differentiators, Instrumentation amplifier, Square wave generator, Schmitt trigger, Precision rectifier. **7 hrs**

Unit IV

Linear ICs: 555 timer IC and its application Astable, Mono stable MV. PLL 565 IC, **DAC:** basics, binary weighted R-DAC and R-2R DAC, **ADC:** DAC based ADC, Successive approximation ADC , Flash ADC. **8 hrs**

Unit V

Diode and its applications: Rectifier and power supply design, Clipping and clamping circuits. Power amplifiers: Classification, Class A, B, AB and class C power amplifiers. **8 hrs**

Text Books:

1.	Behzad Razavi "Fundamentals of Microelectronics", 2 nd Edition,2013,Wiely
2.	Adel S. Sedra, Kenneth Carless Smith, "Microelectronic Circuits", Oxford University. 6th Edition. 2014
3.	Sergio Franco, Design with Operational amplifiers and Analog Integrated circuits, Third Edition, Mc Graw Hill

Course Outcomes: After the completion of this course, students will be able to:

CO1. Understand the MOSFET structure, its working, small signal model

CO2. Design and analyze CS, CG, CD and Differential amplifiers

CO3. Understand the need of Power amplifiers and design Class A, Class B power amplifiers.

CO4. Design power supply and understand wave shaping circuits using diodes.

CO5. Design Opamp based amplifies, Schmitt triggers, generators, and rectifiers.

CO6. Design of circuits using Timer, PLL, ADC and DAC ICs.

ANALOG ELECTRONIC CIRCUITS LAB

Lab Hours / Week	: 2	Credits :	1.0
Sub. Code	: N3ECL01	CIE Marks :	50
		SEE Marks :	50

Pre requisites :

Foundation of Electronics

Course Objectives: This course will enable students to:

1. Design and demonstrate various applications of diodes.
2. Design and analysis of amplifiers using MOSFET.
3. Design and analysis of various applications of Linear IC's.

Rig Up Experiments :

1. Regulated DC power supply.
2. Analog to Digital Converters.
3. Digital to Analog Converters.
4. Class-B push pull power amplifier.
5. Instrumentation amplifier

Rig Up Experiments using Analog Discovery 2 – NI Edition Kit

6. Clippers and Clampers.
7. Precision Rectifiers using op-amp
8. Schmitt trigger using op-amp.
9. Monostable multivibrators using 555 timer
10. Astable multivibrators using 555 timer
11. MOSFET amplifier (common source)

Study Experiments :

1. Simulation of two level clipping circuit using zener diodes.
2. Simulation of MOSFET / Transistor as switch.
3. Fabrication of MOS capacitor
4. Simulation of Op-Amp applications such as inverting, Non inverting amplifiers, Summer, Integrator, Differentiator.

Open Ended Experiments :

1. Design and testing of variable regulated DC power supply.
2. Interfacing Mic and Speaker through IC power amplifier.
3. Write the block diagram for a scheme which pumps water from ground floor to overhead tank and design a circuitry which will show the water level of the overhead tank.
4. Driving a relay using ULN 2003 drivers to switch ON appliances.
5. Design a data acquisition system to display temperature in a range of _____ and with an accuracy of _____ %.

E-Resources :

1	https://ae-iitr.vlabs.ac.in/List%20of%20experiments.html

Course Outcomes : After the completion of this course, students will be able to:

CO1. Identify a suitable electronic device and design, rig-up, demonstrate the various analog circuits for given specifications and interpret the results.
CO2 Use modern tool to design and test the working principle of analog electronic circuits.
CO3 Demonstrate ability to provide efficient solutions for complex engineering problems in the area of microelectronics individually and working in a team.

UNIVERSAL HUMAN VALUES, SOCIAL CONNECT AND RESPONSIBILITY

Contact Hours/ Week	: 1(L)	Credits :	1
Total Lecture Hours	: 13	CIE Marks :	50
Sub. Code	: NSH04	SEE Marks :	50

Pre-requisites: Universal Human Values (conducted during induction programme)

Learning objectives:

1. Explore about themselves (human beings), family, society and nature/existence.
2. Appreciate the harmony in the human being, family, society and nature/existence
3. Strengthen holistic perception of co-existence and mutual fulfilment among the four orders of nature.

Unit 1

Understanding Harmony in the Human Being - Harmony in self :
Understanding human being as a co-existence of the sentient 'I' and the material 'Body'; Understanding the needs of Self ('I') and 'Body' - happiness and physical facility; Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer); Understanding the characteristics and activities of 'I' and harmony in 'I'; Understanding the harmony of 'I' with the Body: Sanyam and Health, correct appraisal of Physical needs, meaning of Prosperity in detail, Include discussions to differentiate between i) Prosperity and accumulation. ii) Ensuring health vs dealing with disease **5 Hrs.**

Unit 2

Understanding Harmony in the Family and Society - Harmony in Human-Human Relationship
Understanding values in human - human relationship, meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness, Trust and Respect as the foundational values of relationship; Understanding the meaning of Trust, Difference between intention and competence; Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship; Understanding the harmony in the society (society being an extension of family)- Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals. **4 Hrs.**

Unit 3

Understanding Harmony in the Nature and Existence - Whole-existence as Co-existence

Understanding the harmony in the Nature; Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self-regulation in nature; Understanding Existence as Co-existence of mutually interacting units in all-pervasive space; Holistic perception of harmony at all levels of existence. Include discussions on-human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc. **4 Hrs.**

Course Outcomes: After the completion of this course, students will be able to:

CO1. Become more aware of themselves, and their surroundings (family, society, nature).

CO2. Become more responsible in life, and value human relationships and human society.

CO3. Develop critical ability in handling problems and in finding sustainable solutions.

Text Book:

1	Gaur, R.R. & Sangal R	Foundation Course in Human Values and Professional Ethics; Presenting a universal approach to value education through self-exploration', Excel Books, Bangalore, 2016, ISBN: 978-8-174-46781-2.

Reference Book:

1	Tripathi A.N.	Human Values', New Age International Publisher, 2003, ISBN: 81-224-1426-5

Evaluation Pattern:

Two Tests of 25 marks each and 45 minutes duration

SEE for 50 marks and examination duration is 90 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	45	25 marks	25 marks
Test-2	14th Week	45	25 marks	25 marks
CIE			50 marks	50 marks
SEE		90	50 marks	50 marks
Total			**100 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern may be hybrid type with MCQs and descriptive questions.*

- *10 Marks MCQs*
- *3 descriptive questions of 5 marks each*
- *All the questions are compulsory*

SEE: *SEE pattern may also be hybrid type with MCQs and descriptive questions.*

- *20 Marks MCQs*
- *1 descriptive question of 10 marks from each of the units (total 3 questions) or*

  2 questions of 5 marks from each of the units (total 6 questions)
- *All the questions are compulsory*

□□□□ □□□□□ - baLake Kannada (Kannada for Usage)

Contact Hours/ Week	: 0(L) + 2(T) + 0 (P)	Credits	: 1.0
Total Lecture Hours	: 0	CIE Marks	: 50
Total Tutorial Hours	: 26	SEE Marks	: 50
Sub. Code	: **NSH01**		

Course Learning Objectives:

- To create the awareness regarding the necessity of learning local language for comfortable and healthy life.
- To enable learners to Listen and understand the Kannada language properly.
- To speak, read and write Kannada language as per requirement.
- To train the learners for correct and polite conservation.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

ಪ್ರಶ್ನಾರ್ಥಕ □□□□□ - Personal Pronouns, Possessive Forms, Interrogative words5 □□□□□□□□

Unit 2

1. □□□□□□□□ ಸಂಬಂಧಾರ್ಥಕ □□□□□□□, □□□□□□□□□□□□ □□□□□□□□□□□□ □□□□□□ □□□□□□□□□□□ □□□□□□□□□□ - Possessive forms of nouns, dubitive question and Relative nouns.
2. □□□, □□□□□□□ □□□□□□ ವರ್ಣಬಣ್ಣ □□□□□□□□□□, □□□□□□□□□□□□□□□□ Qualitative, Quantitative and Colour Adjectives, Numerals
3. ಕಾರಕ ರೂಪಗಳು ಮತ್ತು ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು - ಸಪ್ತಮಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯ - (ಆ, ಅದು, ಅವು, ಅಲ್ಲಿ) Predictive Forms, Locative Case 4 □□□□□□□□

Unit 3

1. ಚತುರ್ಥಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯದ ಬಳಕೆ ಮತ್ತು ಸಂಖ್ಯಾವಾಚಕಗಳು - Dative Cases, and Numerals
2. ಸಂಖ್ಯಾಗುಣವಾಚಕಗಳು ಮತ್ತು ಬಹುವಚನ ನಾಮರೂಪಗಳು - Ordinal numerals and Plural markers
3. ನ್ಯೂನ/ನಿಷೇಧಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು ಮತ್ತು ವರ್ಣ ಗುಣವಾಚಕಗಳು - Defective / Negative Verbs and Colour Adjectives 5 □□□□□□□□

Unit 4

1. ಅಪ್ಪಣೆ/ಒಪ್ಪಿಗೆ, ನಿರ್ದೇಶನ, ಪ್ರೋತ್ಸಾಹ ಮತ್ತು ಒತ್ತಾಯ ಅರ್ಥರೂಪ ಪದಗಳು ಮತ್ತು ವಾಕ್ಯಗಳು
   Permission, Commands, encouraging and Urging words (Imperative words and sentences)
2. ಸಾಮಾನ್ಯ ಸಂಭಾಷಣೆಗಳಲ್ಲಿ ದ್ವಿತೀಯ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ಸಂಭವನೀಯ ಪ್ರಕಾರಗಳು
   Accusative Cases and Potential Forms used in General Communication
3. 'ಇರು ಮತ್ತು ಇರಲ್ಲ' ಸಹಾಯಕ ಕ್ರಿಯಾಪದಗಳು, ಸಂಭಾವ್ಯಸೂಚಕ ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು - Helping Verbs; "iru and iralla", Corresponding Future and Negation Verbs
4. ಹೋಲಿಕೆ (ತರ-ತಮ), ಸಂಬಂಧ ಸೂಚಕ ಮತ್ತು ವಸ್ತು ಸೂಚಕ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಪದಗಳ ಬಳಕೆ - Comparative, Relationship, Identification and Negation Words 6 □□□□□□□□

Unit 5

1. ಕಾಲ ಮತ್ತು ಸಮಯದ ಹಾಗೂ ಕ್ರಿಯಾಪದಗಳ ವಿವಿಧ ಪ್ರಕಾರಗಳು – Different types of forms of Tense, Time and Verbs

2. -ದ್, -ತ್, -ತು, -ಇತು, -ಆಗಿ, -ಅಲ್ಲ, -ಗ್, -ಕ್, ಇದೆ, ಕ್ರಿಯಾ ಪ್ರತ್ಯಯಗಳೊಂದಿಗೆ ಭೂತ, ಭವಿಷ್ಯತ್ ಮತ್ತು ವರ್ತಮಾನ ಕಾಲ ವಾಕ್ಯ ರಚನೆ. Formation of Past, Future and Present Tense Sentences with Verb Forms
3. Kannada Vocabulary List: ಸಂಭಾಷಣೆಯಲ್ಲಿ ದಿನೋಪಯೋಗಿ ಕನ್ನಡ ಪದಗಳು - Kannada Words in Conversation. 6 □□□□□□□

ಬಳಕೆ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಅನುಕೂಲಗಳು ಮತ್ತು ಫಲಿತಾಂಶಗಳು:

Course Outcomes

At the end of the Course, The Students will be able to

CO1: Understand the necessity of learning of local language for comfortable life.
CO2: Listen and understand the Kannada language properly.
CO3: Speak, read and write Kannada language as per requirement.
CO4: Communicate (converse) in Kannada language in their daily life with Kannada speakers.
CO5: Speak in polite conservation.

TEXT BOOKS:

□□□□ □□□□□ - ಲೇಖಕರು: ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration
SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

ELECTRONIC CIRCUIT ANALYSIS

Contact Hours/Week	:	T:1, L:2	Credits	:	2
Course Code	:	N3ECA01	CIE Marks	:	50
			SEE Marks	:	50

Course Objectives: This course will enable students to:

1. Learn the usage of modern tools to analyze given electrical and electronic circuits.
2. Understand the implementation process of digital systems on FPGA.

List of experiments using open source (LT-Spice, Multisim and Virtual Lab)

1. Circuit analysis using LT-Spice
2. Verification of Thevenin's and Norton's Theorem using LT-Spice.
3. Verification of Superposition, Reciprocity and Maximum power transfer Theorem using LT-Spice.
4. Design and demonstration of 2nd order low-pass and high-pass filter using LT-Spice.
5. Design and demonstration of narrow band-pass and band-reject filter using LT-Spice.
6. Design and demonstration of differential amplifier using LT-Spice.
7. Design 4:1 Multiplexer, develop a verilog code to design and implement on FPGA
8. Design a 4 bit synchronous up/down Counter, develop verilog code and implement on FPGA

E-Resources :

1	LT-Spice Tutorial https://www.youtube.com/watch?v=JRcyHuyb1V0
2	Introduction to Multisim https://www.youtube.com/watch?v=VMdFhL5Ms84
3	Virtual Labs http://vlabs.iitkgp.ernet.in/asnm/ http://www.falstad.com/circuit/e-index.html

Course Outcomes:

After the completion of this course, students will be able to,

CO1 Analyze given electrical and electronic circuit in steady state using LT-Spice.

CO2 Analyze electrical circuit and verify circuit theorems using LT-Spice.

CO3 Design filters and verify using LT-Spice.

CO4 Design and Implement digital systems on FPGA using Xlinix.

FOUNDATIONS OF ENGINEERING MATHEMATICS-I
(FOR LATERAL ENTRY STUDENTS)

Contact Hours/ Week	2(L)+2(T)	Credits	0
Total Lecture Hours	26	CIE Marks	100
Total Tutorial Hours	26	SEE Marks	00
Sub Code	N3MATDP	Semester	III

Prerequisites: Basics in differential calculus, Integral calculus and vectors.

Course Learning Objectives: This course will enable students to master the basic tools of differential and vector calculus, Taylors series, Indeterminate forms (L' Hospital Rule) and differential equations and become skilled for solving problems in science and engineering.

Course objectives: This course will enable students to:

1. Known the behavior of the polar curve and its application.
2. Learn the notation of partial differentiation and determine the value of the Jacobians.
3. Learn how a function of single variable can be expanded as a Taylor's series and Maclaurin series and Handle the indeterminate form.
4. Learn how the vectors govern the physical models.
5. Known how the real word problems governed by the first order differential equations.

UNIT-I

Differential Calculus-I: (5+5) Hours

Polar curves: angle between the radius vector and tangent, angle of intersection of polar curves. Pedal equation for polar curves. Curvature and radius of curvature in pedal form. (Without proof)

UNIT – II

Differential Calculus –II: (6+6) Hours

Partial differentiation: Partial derivatives, Total derivatives, differentiation of composite functions. Jacobians.

UNIT – III

Differential Calculus –III: **(5+5) Hours**

Taylor's and Maclaurin's series expansions for one variable **(statement only).** Indeterminate forms L' Hospital Rule (without proof) (Only $\frac{0}{0}, \frac{\infty}{\infty}, 0 \times \infty \; and \; \infty - \infty \; form$)

UNIT-IV

Vector Calculus: **(5+5) Hours**

Vector Differentiation: scalar and vector fields, Gradient, directional derivative, divergence, curl-physical interpretation; solenoidal and irrotational vector fields-illustrative problems.

UNIT-V

Differential Equations-I: **(5+5) Hours**

Solution of first order and first degree differential equations: Variable Separable, Linear differential equations and Exact differential equations.

Course outcomes: After the completion of this course, students will be able to:

CO1. Apply the knowledge of calculus to solve problems related to polar curves and its applications in determining the amount of bending of the curve. **(L1& L2)**

CO2. Learn the notation of partial differentiation to calculate rates of change of multivariate functions and solve problems related to composite functions. **(L1& L2)**

CO3. Illustrate the applications of multivariate calculus to understand the characteristics of vector field. 4.

CO4. Understand how a function of single variable can be expanded as a Taylor's series and Handle the indeterminate form **(L1& L2)**

CO5. Apply the analytical methods to solve first order and first degree differential equations and solve some Engineering problems. **(L1& L2)**

IV SEMESTER

PROBABILITY AND RANDOM PROCESS

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: N4MAT	SEE Marks :	50

Course objective:

To introduce students to the basic tools required to build and analyze probabilistic models

Unit I

Introduction, Review of Probability Theory-Experiments, sample space, Events, Axioms, Joint and conditional probabilities. Baye's Theorem, Independence, Discrete Random Variables, Cumulative distribution function (CDF), Probability density function (PDF), Gaussian random variable, Uniform RV, Exponential RV. Engineering application-An optical communication system. **8 Hrs**

Unit II

Operations on a Single R V: Expected value, Expected value of functions of Random variables, Moments, Central Moments, Conditional expected values. Transformation of Random variables, Engineering application-Scalar quantization, Entropy and source coding. **8 Hrs**

Unit III

Pairs of Random variables, Joint Cumulative distribution function, Joint Probability density function, Joint probability mass functions, Conditional Distribution, density and mass functions, Expected values involving pairs of Random variables, Independent Random variables, Jointly Gaussian Random variables. Engineering application-Mutual information, Channel capacity and channel coding. **8 Hrs**

Unit IV

Multiple Random Variables: Joint and conditional probability mass functions, CDF, PDF, Expected value involving multiple Random variables, Gaussian Random variable in multiple dimensions. Engineering application-Linear prediction of speech. **7 Hrs**

Unit V

Random Process: Definition and characterization, Mathematical tools for studying Random Processes, Stationary and Ergodic Random processes, properties of Autocorrelation function. Example Processes: Markov processes, Gaussian Processes, Poisson Processes. Engineering application-Shot noise in a pn junction diode, computer communication network. **8 Hrs**

TEXT BOOK:

1	S L Miller and D C Childers	Probability and Random processes: with applications to Signal processing and communication Academic Press/ Elsevier, Second Edition, 2014

REFERENCE BOOKS:

1	A. Papoullis and S U Pillai	Probability, Random variables and stochastic processes McGraw Hill, 4th Edition, 2002.
2	Peyton Z Peebles	Probability, Random variables and Random signal principles TMH 4th Edition 2007
3	H Stark and Woods	Probability, statistics and random processes for engineers, Pearson 2012.

E-Resources: (Web links and video Lectures)

1	https://archive.nptel.ac.in/noc/courses/noc15/SEM2/noc15-ec07/
2	https://www.youtube.com/watch?v=wMflxR3KsXg

Course outcomes: After the completion of this course, students will be able to

CO1. Apply the knowledge of basics of probability and random variable theory to represent variability/uncertainty
CO2. Analyze randomness/uncertainty in data using statistics of a random variable
CO3. Model random phenomena using pairs of random variables
CO4. Develop matrix notation to represent and analyze multidimensional random variables
CO5. Characterize real world information using random processes

CONTROL SYSTEMS

Contact Hours/Week	:	3 (L)	Credits	:	4.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Lab Hours/Week	:	2	SEE Marks	:	50
Course Code	:	N4ECI01			

Course Objectives: This course will enable students to:

1. Understand concepts of the mathematical modeling, signal flow graphs applicable to electrical network.
2. Do stability analysis in Time and Frequency domains: Nyquist criterion, Bode plots, Relative stability, Gain margin and phase margins.

Unit I

Modeling of linear-time-invariant Systems: Introduction to control system, Open loop and Closed loop systems. Mathematical models of physical systems–mechanical systems, Electrical systems. Translational and rotational systems, Transfer function of Electrical networks, Relevant examples

Block diagrams and signal flow graphs: Block diagram algebra/ signal Flow graph, Mason's gain formula applicable to electrical systems. **7 Hrs**

Unit II

Time Response Analysis: Unit step response of first and second order linear-time-invariant systems, time domain specifications, transient response of second order linear-time-invariant systems, steady state error analysis.

Feedback Controllers: Design of feedback controllers based on time response applicable to electrical systems. Relevant examples. **8 Hrs**

Unit III

Concept of Stability: **Frequency Response Analysis:** Routh-Hurwitz Criteria, Relative Stability analysis. **Root–Locus Techniques**: The root locus concepts, Construction of Root-loci, effect of addition of poles and zeros to the linear time invariant systems and its applications to electrical systems. Relevant examples and applications. **8 Hrs**

Unit IV

Frequency-response analysis: Frequency domain specifications, Correlation between time and frequency response, Polar plots, Bode plots, Closed-loop frequency response (Transfer function) from Bode Plot, Nyquist stability, Relative stability using Nyquist Stability criterion-Gain and phase margin, Stability analysis in Electrical systems. Relevant examples and applications.

8 Hrs

Unit V

System Compensation: Design of Lead compensator, Lag compensator, Lag-Lead compensation as applicable to electrical systems. Suitable examples and applications.

State variable analysis: Concepts of state, state space, state variable, state model of electrical systems, State equation, solution of state equation, state transition matrix. **8 Hrs**

TEXT BOOKS:

1.	Richard C. Dorf and Robert H. Bishop	Modern Control Systems, Ed 13, Pearson Education, 2013.
2.	Nagrath and Gopal M.	Control Systems Engineering. Ed 4, New Age International (P) Limited. 2005.

REFERENCE BOOKS:

1.	Ogata K.	Modern Control Engineering. Ed 4. Pearson Education Asia/PHI. 2002.
2.	Kuo C. Benjamin	Automatic Control Systems, Wiley; 9thedition, 2014

E-Resources:

1	https://nptel.ac.in/courses/108106098
2	https://nptel.ac.in/courses/107106081

Course Outcomes: After the completion of this course, students will be able to:

CO1. Formulate the mathematical model for linear-time-invariant systems and obtain the transfer functions using block diagram reduction technique and signal flow graphs.

CO2. Analyze transient and steady state responses for first order and second order linear-time-invariant systems with standard signals. Design and analyze the performance of feedback controllers to improve the stability of linear-time-invariant systems.

CO3. Analyze and interpret the stability of linear-time invariant systems by applying RH criteria and root locus techniques.

CO4. Analyze and interpret the stability of linear-time-invariant systems in frequency domain analysis by Nyquist plot and Bode plot techniques.

CO5. Design of Lead, lag and lead-Lag compensators for improving the stability of linear-time-invariant systems and develop the state models for the linear-time-invariant systems.

Lab Components:

Using 20-sim/MATLAB/ SCILAB:

1. Simulation of a second order system and determination of step response and evaluation of time domain specifications for any given electrical system.
2. Evaluation of the effect of additional poles and zeroes on time response of a given second order system.
3. Evaluation of effect of pole location on stability.
4. Evaluation effect of loop gain of a negative feedback system on stability of a given electrical system.

5. To study step response transient and steady state response of a second order system series RLC electrical circuit for $\xi < 1$, $\xi = 1$, and $\xi > 1$.
6. To study the effect of P, PI, PD and PID controller on step response of a feedback control system.
7. To design a Phase lead/lag/lead-lag compensating network for the given specifications, and determine maximum phase lead and the frequency obtain its frequency response.
8. To draw the frequency response characteristic of a given Phase lead/lag/lead-lag compensating network.
9. To study effect of open loop and zeroes on root locus contour
10. Comparative study of Bode, Nyquist and Root locus with respect to Stability of a system.

EMBEDDED SYSTEMS

Contact Hours/Week	:	3 (L)	Credits	:	4.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Lab Hours/Week	:	2	SEE Marks	:	50
Course Code	:	N4ECI02			

Course Objectives: This course will enable students to:

1. Understand hardware and software design requirements of embedded systems.
2. Develop application software using 8051 microcontroller
3. Describe the role of embedded system in IoT

Unit-I

Introduction to Embedded systems: Introduction, Embedded system Vs General purpose computing system, classification of embedded system, typical embedded system, core of embedded system, sensors and actuators, Embedded RTOS. (Text-1) Introduction to Microcontroller family, 8051 block diagram. (Text- 3)

Introduction to Internet of Things (IoT): Definition, vision, conceptual framework, Major components of IoT system. (Text-2) **07 Hrs**

Unit-II

Introduction to Microcontroller: Features, architecture, programming model, pin description of the 8051, memory organization, register banks, stack, PSW, addressing modes and External memory interfacing (Program and Data Memory). (Text-3). **08 Hrs**

Unit-III

Instruction set of 8051: Data transfer instructions, Arithmetic Instructions, Logical Instructions, Branch control instructions, Bit oriented instructions.

Application Programs: Incrementing, Decrementing, Addition, Subtraction, Multiplication and Division, Decimal Arithmetic, sorting programs. (Text-3) **08 Hrs**

Unit-IV

8051 Peripherals:

I/O Ports: Input /output port structures of 8051, Programming of ports.

Timer/Counter: Programming 8051 Timers, Counter Programming (Programming using Assembly language)

Serial Communication: Basics of Serial Communication, 8051 Connections to RS-232, and 8051 Serial port Programming. (Programming using Assembly language) (Text-3). **08 Hrs**

Unit-V

Interrupts: 8051 Interrupts, Programming Timer Interrupts, Programming External Hardware Interrupts, Programming the Serial Communication Interrupts, Interrupt Priority in the 8051. (Programming using Assembly language)

Interfacing with peripheral: Interfacing 8051 to LCD, DAC, ADC 0804 and keyboard. (Text-3) (Programming using Assembly language). **08 Hrs**

TEXT BOOKS:

1.	Shibu K V	Introduction to Embedded Systems, 2nd edition, Tata Mc Graw Hill Education Pvt. Ltd., 2017
2.	Raj Kamal	Internet of Things: Architecture And Design Principles, 1st edition, Mc Graw Hill Education Pvt. Ltd., 2017.
3.	Muhammad Ali Mazidi and Janice Gillespie Mazidi and Rollin D. McKinlay	The 8051 Microcontroller and Embedded Systems using assembly and C, II Edition Pearson, 2009.

REFERENCE BOOKS :

1.	Kenneth J. Ayala	The 8051 Microcontroller, Ed III, Thomson Delmar Learning, 2005.

E-Resources:

1	https://nptel.ac.in/courses/108105102
2	https://www.youtube.com/playlist?list=PL0E131A78ABFBFDD0
3	https://onlinecourses.nptel.ac.in/noc22_cs93/preview

Course Outcomes:

After the completion of this course, students will be able to:

CO1. Apply the knowledge of engineering fundamentals to describe embedded systems and analyse the IoT conceptual framework.

CO2. Analyse the architectural features of 8051 and design memory interfacing.

CO3. Analyze the 8051 instruction set and develop the arithmetic and logical programs using the instructions in various addressing modes.

CO4. Analyse and develop the programming applications using timer/counter, I/O ports and serial communication.

CO5. Illustrates the interrupt concept in 8051 and develop Assembly Language Program to interface the microcontroller with peripherals.

CO6. Design, implement and test the algorithms using 8051 Assembly Language & C Programs .

Integrated Lab

Objectives: This course will enable students to:

1. Develop and debug 8051 ALP to solve complex problems
2. Program Embedded system for IoT applications

Part A: 8051 Assembly Language Programming using Keil

1. Assembly Language Programs on addition, subtraction, multiplication, division of numbers.
2. Assembly Language Programs for searching and sorting of numbers, averaging of numbers.
3. Assembly Language Programs to find GCD, LCM, Counters.
4. Assembly Language Programs on Timers and serial communication

Part B: 8051 C programming Using Keil software (interfacing programs)

1. Interfacing programs using C: i) DAC ii) Keyboard and LCD iii) Elevator iv) DC motor/stepper motor v) ADC

Study Experiments

Part C: IoT for sensor data acquisition using IoT Evaluation board Familiarization with arduino board and perform necessary software installation.

1. To interface LED/Buzzer with arduino and to write a program to turn on LED for 1sec after every 2 sec.
2. To interface push button/digital sensor (IR/LDR) with arduino and develop a program to turn on LED when push button is pressed. Integrating temperature sensor and humidity sensor with IoT to read environmental readings.
3. To demonstrate the role of RTOS in handling data-shared problems

Part D: open- ended experiments:

1. Design a home automation through integrating the required sensors using IoT.
2. Develop a calculator to perform arithmetic operations.
3. Generate different wave patterns using the DAC interface.

COMMUNICATION SYSTEMS-I

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Lab work	: 0	SEE Marks :	50
Sub. Code	: N4EC01		

Course Objectives: This course will enable students to:

1. Understand analog modulation and demodulation techniques.
2. Discuss sampling process and pulse modulation techniques.

Unit I

Introduction: Analog vs Digital Communication, Review of Fourier series and Fourier transform, Energy spectral density and bandwidth, Baseband and Passband Signals, The structure of a passband signal: Time domain relationships, Frequency domain relationships, Complex baseband equivalent of passband filtering, General comments on complex baseband. **8 Hrs**

Unit II

Analog Modulation: Double sideband suppressed carrier modulation, Conventional AM, quadrature amplitude modulation, Angle modulation, limiter discriminator demodulation, FM spectrum. **9 Hrs**

Unit III

Analog Communication Systems: The Superheterodyne receiver, The phase locked loop, PLL applications, Mathematical model for the PLL, PLL Analysis, FM radio, Analog broadcast TV. **8 Hrs**

Unit IV

Noise Modeling: Noise model and SNR benchmark, SNR for amplitude modulation, SNR for angle modulation, SNR maximization. **7 Hrs**

Unit V

Sampling and Quantization: Sampling Theorem, time division multiplexing, pulse modulation, quantization noise, robust quantization, delta modulation. **7 Hrs**

Text Books :

1.	Upamanyu Madhow	Introduction to Communication Systems, Cambridge University Press, 2018.
2	Simon Haykin	Digital Communications, John Wiley, 2012

Reference Books

1	K Sam Shanmugam	Digital and Analog Communication Systems", John Wiley, 2011
2	Shu Lin and Daniel J Costello	Error Control Coding", Pearson Education Ltd., 2011

E-Resources:

1	https://sites.google.com/iittp.ac.in/naveenkp/teaching/lectures

Course Outcomes: After the completion of the course students will be able to:

CO1. Develop the complex baseband representation of passband signals.

CO2. Derive analog modulated signal using different techniques.

CO3. Derive the message signal from band pass signal using different techniques.

CO4. Design systems in receiver section.

CO5. Compute digital equivalent of the analog signal.

COMMUNICATION SYSTEMS LAB

Contact Hours/ Week	: 2	Credits :	1
Total Lecture Hours	: 0	CIE Marks :	50
Lab work	: 2	SEE Marks :	50
Sub. Code	: N4ECL01		

Course Objectives : This course will enable students to

1. Understand the process of modulation and demodulation in communication systems.
2. Understand the sampling and quantization process.

I. Rig Up Experiments:

1. Design and demonstrate the generation and demodulation of standard amplitude modulated signal.
2. Design a ring modulator to generate double sideband suppressed carrier amplitude modulated signal.
3. Design and demonstrate frequency modulation system.
4. Design and demonstrate frequency mixer.
5. Design and demonstrate pulse amplitude modulation and demodulation
6. Design and demonstrate pulse width modulation and demodulation.
7. Design and demonstrate pulse position modulation and demodulation

II. Simulation Experiments using Matlab/Scilab/Octave:

1. Compute the spectrum of AM and FM signal
2. Verification of Sampling theorem
3. Simulation of Pulse code modulation system
4. Non uniform quantization using A-law and – μ-law.
5. Delta modulator and demodulator

III. Open Ended Experiments:

1. Develop AM radio using super heterodyne receiver.
2. Develop FM stereo transmitter and receiver.
3. Develop AM, DSBSC, SSBSC and VSBSC transmitters and compare the power requirements.
4. Design FM demodulator using phase locked loop.
5. Design frequency synthesizer using phase locked loop.

Course Outcomes: After the completion of this course, students will be able to:

CO1. Demonstrate generation and detection of analog modulated signals.

CO2. Design frequency mixer.

CO3. Design and demonstrate pulse modulated signals.

CO4. Analyze the effect of sampling frequency for signal discretization.

CO5. Perform signal quantization.

CO6. Design and demonstrate systems in transmitter and receiver sections

CONSTITUTION OF INDIA AND PROFESSIONAL ETHICS

Contact Hours/ Week	: 2 (T)	Credits	: 1.0
Total Lecture Hours	: 0	CIE Marks	: 50
Total Tutorial Hours	: 26	SEE Marks	: 50
Sub. Code	: NSH03		

Course Objectives:

- To introduce the students to the basic structure, fundamental rights and duties enshrined in the constitution of India.
- To introduce to the system of governance at the centre and the states.
- To enlighten the students about the method of amendment to the constitution and special provisions of constitution.
- To enable the students to imbibe ethical practices and moral values.
- To learn from the life story of leaders such as Sir M Visvesvaraya.

Part I: Constitution of India

Unit 1

Introduction to Constitution of India :

Salient Features of Indian Constitution, Preamble to the Indian Constitution, Different kinds of fundamental rights, Directive Principles of State Policy, Categorical study of Directive Principles, Relationship between DPSP and Fundamental Rights, Fundamental Duties. Meaning and kinds of human rights and safeguards. **06 Hrs.**

Unit 2

Union and State Governments :

Union and State Legislature: Composition and powers of Loksabha, Rajyasabha, Legislative Assembly and Legislative Council. Union and State Executive: The appointment and powers of President, Vice-president, Prime-Minister, Union Council of Ministers, Governor of State, Chief Minister of State and State Council of Ministers. Union and State Judiciary: The Composition and powers of Supreme Court and High Court. **07 Hrs.**

Unit 3

Other Provisions of Constitution

Method of amendment of constitution of India, 42nd and 44th amendment act. Special provisions relating to SC / ST, Women and Children and other backward classes. Electoral process related to the Election Commission of India: Composition, functioning and removal of the Election Commissioner(s).

Human Rights: Meaning, Kinds and Safeguard of Human Rights, State Human Rights Commission and National Human Rights Commission.

05 Hrs.

Part II -Professional Ethics

Unit 4

Professional Ethics and Human Values

Introduction, What is Ethics? Scope of Professional Ethics, Values and Characteristics, Types of values: Negative and positive values, Ethical values for Professional success. ***Case Studies*:** Ethical practices of the reputed Indian Companies: TATA Group, Wipro Technologies. **4 Hrs.**

Unit 5: Professional Code of Conduct

Introduction, Professional Code, Legal System, Ethical and Unethical practices, Making the Professional Code successful. Ethical values of Sir M. Visvesvaraya, Mahatma Gandhi and Swami Vivekananda. **4 Hrs.**

TEXT BOOKS:

1	M Rajaram	The Constitution of India and Professional Ethics', 3rd Edition, 2011, New Age International Publications, ISBN: 978-8122438284.
2	J N Pandey	Constitutional Law of India', 49th Ed., 2012, Central Law Agency Publishing, 2016 ISBN: 978-9384852412.

REFERENCE BOOKS:

1	M.V. Pylee	'Constitution of India', 5th Ed., Vikas Publishing House, New Delhi.
2	D.D. Basu	'Shorter Constitution of India', 2e, Lexis Nexis, 2015, ISBNN: 978-9357434467
3	D.D. Basu	'Commentary on the Indian Constitution' (Vol. 10), Butter worth's, Wadhwa Nagar, Nagpur, 2016, ISBN: 978-9350356661.
4	OC Fcrrell, John Paul Fraedrich, Linda Ferrell	'Business Ethics: Ethical Decision Making and Cases', Biztantra, New Delhi, 2014, ISBN: 978-1285423715
5	Swami Vivekananda	"My India: The India Eternal" – Ramakrishna Mission Institute of Culture, Kolkata, 1993.
6	S G Hundekar (Edition)	'Business Ethics and Human Values', Excel Books, New Delhi, 2009, ISBN-978-8174467386
7	U N Gupta	'Human Rights : Conventions and Indian Law', 2014, ISBN 978-8126903788

Course Outcomes: On successful completion of the course, the student will be able to:

CO1. Explain the salient features of the Indian Constitution with special emphasis on fundamental rights and duties.

CO2. Describe the Union and State legislature, executive and judiciary.

CO3. Explain the importance of electoral process and help students to follow the ethical practices in elections.

CO4. Demonstrate a clear perspective of the Ethical values and their relevance in the present context of globalization.

CO5. Practice the ethical values proposed and practiced by the great leaders/eminent personalities with particular reference to Sir M. Visvesvaraya.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration

SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

BIOLOGY FOR ENGINEERS

Contact Hours/ Week	: 2(L)	Credits :	2.0
Total Lecture Hours	: 0	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50
Course Code	: BE		

Course Objectives:

1. To familiarize the students with the basic biological concepts and their engineering applications.
2. To enable the students with an understanding of bio-design principles to create novel devices and structures.
3. To provide the students an appreciation of how biological systems can be re-designed as substitute products for natural systems.
4. To motivate the students develop the interdisciplinary vision of biological engineering.

General Instructions for Teaching-Learning

These are sample Strategies, which teacher can use to accelerate the attainment of the various course outcomes.

- Explanation via real life problem, situation modelling, and deliberation of solutions, hands-on sessions, reflective and questioning /inquiry-based teaching.
- Instructions with interactions in classroom lectures (physical/hybrid).
- Use of ICT tools, including YouTube videos, related MOOCs, AR/VR/MR tools.
- Flipped classroom sessions (~10% of the classes).
- Industrial visits, Guests talks and competitions for learning beyond the syllabus.
- Students' participation through audio-video based content creation for the syllabus (as assignments).
- Use of gamification tools (in both physical/hybrid classes) for creative learning outcomes.
- Students' seminars (in solo or group) /oral presentations.

Unit 1

BIOMOLECULES AND THEIR APPLICATIONS:

Carbohydrates (cellulose-based water filters, PHA and PLA as bioplastics), Nucleic acids (DNA Vaccine for Rabies and RNA vaccines for Covid19, Forensics – DNA fingerprinting), Proteins (Proteins as food – whey protein and meat analogs, Plant based proteins), lipids (biodiesel, cleaning agents/detergents), Enzymes (glucose-oxidase in biosensors, ligninolytic enzyme in bio-bleaching). **5 Hours**

Unit 2

HUMAN ORGAN SYSTEMS AND BIO DESIGNS – 1:

Brain as a CPU system (architecture, CNS and Peripheral Nervous System, signal transmission, EEG, Robotic arms for prosthetics. Engineering solutions for Parkinson's disease). Eye as a Camera system (architecture of rod and cone cells, optical corrections, cataract, lens materials, bionic eye).Heart as a pump system (architecture, electrical signaling - ECG monitoring and heart related issues, reasons for blockages of blood vessels, design of stents, pace makers, defibrillators). **5 Hours**

Unit 3

HUMAN ORGAN SYSTEMS AND BIO-DESIGNS – 2:

Lungs as purification system (architecture, gas exchange mechanisms, spirometry, abnormal lung physiology - COPD, Ventilators, Heart-lung machine).Kidney as a filtration system (architecture, mechanism of filtration, CKD, dialysis systems). Muscular and Skeletal Systems as scaffolds (architecture, mechanisms, bioengineering solutions for muscular dystrophy and osteoporosis). **5 Hours**

Unit 4

NATURE-BIOINSPIRED MATERIALS AND MECHANISMS :

Echolocation (ultrasonography, sonars), Photosynthesis (photovoltaic cells, bionic leaf). Bird flying (GPS and aircrafts), Lotus leaf effect (Super hydrophobic and self-cleaning surfaces), Plant burrs (Velcro), Shark skin (Friction reducing swim suits), Kingfisher beak (Bullet train). Human Blood substitutes - hemoglobin-based oxygen carriers (HBOCs) and perfluorocarbons (PFCs).

5 Hours

Unit 5

TRENDS IN BIOENGINEERING :

Bio-printing techniques and materials, 3D printing of ear, bone and skin. 3D printed foods. Electrical tongue and electrical nose in food science, DNA origami and Biocomputing, Bio-imaging and Artificial Intelligence for disease diagnosis. Self- healing Bio-concrete (based on bacillus spores, calcium lactate nutrients and bio-mineralization processes) and Bio-remediation and Bio-mining via microbial surface adsorption (removal of heavy metals like Lead, Cadmium, Mercury, Arsenic). **6 Hours**

Course Outcomes: After the completion of this course, students will be able to:

CO1. Elucidate the basic biological concepts via relevant industrial applications and case studies.
CO2. Evaluate the principles of design and development, for exploring novel bioengineering projects.
CO3. Corroborate the concepts of bio-mimetics for specific requirements.
CO4. Explore innovative bio-based solutions for socially relevant problems.

Evaluation Pattern

Two Tests of 50 marks each and 90 minutes duration
SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*

- Design of novel device/equipment like Cellulose-based water filters, Filtration system mimicking the kidney, Bioremediation unit for E-waste management, AI and ML based Bio-imaging,

ADVANCED TECHNICAL TRAINING LAB IN C, DATA STRUCTURE , C++

Course Code :	**N4CESL1**		
Contact Hours/Week :	0+0+3	Credits :	1.0
Total Lecture Hours :	0	CIE Marks :	50
Total Practical Hours :	36	SEE Marks :	50

Course learning objectives (CLOs):

1. Build the logic for a given problem statement by using algorithms using fundamental concepts of the Programming Language C such as conditional statements, looping constructs, division, mod operations and string manipulation.
2. Implement the Data Structures such as Stacks, Queues, Lists, and Trees using C Programming language.
3. Implement the fundamental concepts of Object Oriented Programming Concepts, such as Classes, Objects, Abstraction, Encapsulation, Polymorphism, Constructors, Over Loading and Over Riding.

Course Outcomes:

Upon successful completion of this course, the student should be able to:

CO1 Design and develop solutions for particular programming problems using the fundamentalconcepts of C Programming.

CO2 Implement different data structures like Stacks and Queues using static and dynamicmemory allocation techniques.

CO3 Design & Implement Object oriented concepts of C++ programming such as Classes,Objects, Inheritance, polymorphism for a given problem statement.

#	***Modules Covered***	***Duration in hrs.***	
1	C Programming	15	
2	Data Structures	15	
3	C++ Programming	06	
	Total Course Duration	16 Hrs. Lecture	20 Hrs Practice

CIE: 50 Marks

- Students are accessed every class for 35 marks.
- Evaluation includes Problem Analysis, Program Writing and Executing Programs in the Lab(10 + 15+ 10).
- Two tests are conducted for 15 marks each.
- Marks distribution (50 Marks) =
  Average of class assessments (35 Marks) + Average of two tests (15 Marks)

SEE: 50 Marks

- There are 20 programs in the list divided into two parts A & B, students have to pick oneprogram each from the Part A & Part B
- Both the parts carry equal weightage.
- Evaluation includes Program Write-up + Analysis + Program Execution + Viva(10 + 10 + 20 + 10 = 50 Marks)
- Change of Experiment is allowed once in a first half an hour and in such cases evaluation is donefor 80% of the Marks

Contents

1. Structure of a 'C' Program
   a. Main Function
   b. Input & Output
   c. C Tokens
2. Keyword and Identifiers
3. Operators
4. Variables
5. Control Statements
   a. Conditional Statements
      - If
      - If-else
      - Simple
      - Nested
      - Multiple
      - switch
   b. Looping Statements
      - while
      - do-while
      - for
6. Arrays
   - Single Dimensional
   - Two Dimensional
   - String as Character Arrays

7. Functions and Recursive Functions
8. Pointers
9. Structures and Unions
10. Enumerations
11. Files

12. Introduction to Data Structures
    a. Space Complexity
    b. Time Complexity
13. Classification of data structures
    a. Linear Data structures
    b. Non-Linear Data Structures
14. Array Versus Linked List
15. Linked List
    a. Single Linked List
    b. Double Linked List
    c. Circular Linked List
16. Stack
    a. Push
    b. Pop
17. Queue
    c. Enqueue
    d. Dequeue
17. Searching Techniques
    a. Linear Search
    b. Binary Search
18. Sorting Techniques
    a. Bubble Sort
    b. Insertion Sort
19. Sorting Techniques
    a. Bubble Sort
    b. Insertion Sort
    c. Selection Sort
    d. Merge Sort
    e. Quick Sort
20. Tree
    a. Pre-Order
    b. In-Order
    c. Post-Order
21. Graph
    a. DFS
    b. BFS
22. Introduction to Object Oriented Programming and C++

23. Introduction to Object Oriented Programming and C++
24. Difference between C and C++
25. C++ Programming Structures and Input/output Functions
26. OOPs Concepts
    a. Class and Object
    b. Abstraction
    c. Encapsulation
    d. Inheritance
    e. Polymorphism
27. Implementation of the OOPs Concepts

FOUNDATIONS OF ENGINEERING MATHEMATICS-II
(FOR LATERAL ENTRY STUDENTS)

Contact Hours/ Week	2(L)+2(T)	Credits	0
Total Lecture Hours	26	CIE Marks	100
Total Tutorial Hours	26	SEE Marks	00
Sub Code	N4MATDP	Semester	IV

Prerequisites: Basics in differential calculus, Integral calculus and vectors.

Course Learning Objectives: This course will facilitate the students with concrete foundation of ordinary differential equations, Laplace transforms, Integral calculus and numerical methods enabling them to acquire the knowledge of these mathematical tools.

Course objectives: This course will enable students to:

1. Solve second and higher order differential equations.
2. Find the Laplace transform of the function f(t).
3. Find the Inverse Laplace transform of the function F(s).
4. Apply the knowledge of numerical methods in the models of various physical and engineering phenomena
5. Solve the integral by using standard integrals (Beta and Gamma) and multiple integrals

Course outcomes: After the completion of this course, students will be able to:

CO1. Explain various physical models through higher order differential equations and solve such linear ordinary differential equations. **(L1& L2)**

CO2. Understand the concept of Laplace transform and obtain Laplace transform of periodic functions and unit step functions. **(L1& L2)**

CO3. Apply the concept of Laplace transform in solving Linear Differential equations. **(L1& L2)**

CO4. Apply the Numerical methods to solve Algebraic and transcendental equations and find the polynomials by finite difference method. **(L1& L2)**

CO5. Apply the concept of to evaluate multiple integrals and Beta and Gamma functions **(L1& L2)**

UNIT-I

Linear Differential Equations:

Solution of second and higher order equations with constant coefficients by inverse differential operator method, method of variation of parameters,

(6+6) Hours

UNIT – II

Laplace Transform:

Definition, Transforms of elementary functions, properties of Laplace Transform, Laplace Transform of $e^{at} f(t)$, $t^n f(t)$, $\frac{f(t)}{t}$, derivatives and Laplace Transform of Periodic functions'. **(5+5) Hours**

UNIT-III

Inverse Laplace Transform:

Inverse Laplace Transform, Convolution theorem (without proof) and problems Applications –Solution of Linear differential equations using Laplace Transform. **(5+5) Hours**

UNIT-IV

Elementary Numerical Methods :

Finite differences. Interpolation/extrapolation using Newton's forward and backward difference formulae, Newton's divided difference and Lagrange's formulae (All formulae without proof). Solution of polynomial and transcendental equations - Newton-Raphson method (only formula) – Illustrative examples. **(5+5) Hours**

UNIT-V

Integral Calculus:

Multiple integrals –Evaluation of double and triple Integrals, **Beta and Gamma functions**: Definition, relation between Beta and Gamma functions and simple problems. **(5+5) Hours**

SCHEME & SYLLABUS

OF

V & VI SEMESTERS B.E.

ELECTRONICS AND COMMUNICATION ENGINEERING

AY : 2022-23

(Applicable to 2020-21 Batch)

Vision

To create professionally competent and socially sensitive Electronics and Communication engineers capable of working in multicultural global environment.

Mission

To provide a congenial environment for superior learning experience and offer high quality education relevant to the current and future needs of the society and careers of students in the field of Electronics and Communication Engineering.

Programme Educational Objectives:

The graduates of Electronics and Communication engineering programme are able to :

a) Design and build systems for providing solutions to real life problems in the area of Electronics and Communication.

b) Be a successful entrepreneur, build careers in Industry, government, public sector undertakings, pursue higher education and research.

c) Work individually, within multidisciplinary teams and lead the team following sound professional and ethical practices.

Graduate attributes and Program Outcomes (POs)

1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes (PSOs)

A graduate of the Electronics and Communication Engineering Program will demonstrate

1. The ability to analyse and design systems in the areas related to microelectronics, Communication, Signal Processing and embedded systems for solving real world problems (Professional Skills).

2. The ability to identify problems in the areas of communication and embedded systems and provide efficient solutions using modern tools/algorithm individually or working in a team (Problem solving Skills).

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

MANAGEMENT AND ENTREPRENEURSHIP

Contact Hours/Week	:	3+0+0	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	HSS06			

Course Objectives: This course will enable students to:

1. Understand the principles and functions of management.
2. Analyze the importance of planning, organizing, staffing, leading and
3. controlling organization.
4. Understand and manage engineering design and quality
5. Inculcate entrepreneurial qualities and understand the need of rural
6. entrepreneurship
7. Acquire knowledge about funding agencies, understand procedure in applying for funds and analyze the cases of successful entrepreneurs

Unit I

Introduction to Management: Definition of management, management skills, productivity and effectiveness, efficiency, functions and principles of management.

Planning: Nature of planning, types of plans- purpose of vision, mission, goals, objectives strategies, policies; steps in planning, MBO, Strategic planning

Organizing: Formal and informal organization, span of management, the structure and Process of organizing, Organizational structure: line and staff organization, Functional organization, matrix organization. **8 Hours**

Unit II

Staffing: Definition, systems approach to HRM, factors affecting staffing, recruitment and selection, job design, skill and characteristics of a manager, selection process and techniques.

Leading: Human factors in managing, motivation, Theory X and Y, the hierarchy of needs theory, leadership behaviour and styles.

Controlling: Basic control process, critical control points and standards, Benchmarking requirements for effective control. **9 Hours**

UNIT – III

Managing Engineering Design and Development: Product and Technology Life Cycles, Nature of Research and Development, Research Strategy and organization, Nature of Engineering Design, Systems Engineering / New Product Development.

Managing Production/Operations: Types of production processes, Forecasting, Work measurement, Maintenance and Facilities (Plant) Engineering, Total Quality Management, Lean Manufacturing

Engineers in Marketing and service activities: Marketing and the Engineer, Engineers in Service organizations. **8 Hours**

UNIT – IV

Entrepreneur & Entrepreneurship: Introduction, concept of Entrepreneur, characteristics of an entrepreneur, and qualities of an entrepreneur, functions of an entrepreneur, characteristics of entrepreneurship, factors affecting entrepreneurial growth. Entrepreneurship and economic development-rural, woman and social entrepreneurship

Financing and Institutional Support for Entrepreneurship: Startups, business plans, venture capitalists, angel investors, funding agencies - commercial banks, development banks, NBFCS and incubation centres. Innovations and project trends.

8 Hours

UNIT – V

Taxation benefits: Depreciation allowances, rehabilitation allowance, investment allowance and other tax concession benefits to an entrepreneur.

2 Case Studies from Stay Hungry and Stay Foolish – Rashmi Bansal, IIM Ahmedabad:

1) Success story of naukri.com by Sanjeev Bikhchandani
2) Success story of Make My Trip by Deep Kalra. **6 Hours**

TEXT BOOKS:

1.	Harold Koontz, Heinz Weihrich	Essentials of Management, McGraw Hill Education, 10th Edition, 2015
2.	Lucy C. Morse	Managing Engineering and Technology, Pearson Education, 6th Edition, 2015.
3.	S.S. Khanka	Entrepreneurial Development, S. Chand Publishing, 4th Edition, Reprint 2020. ISBN 978-81-219-1801-5

REFERENCE BOOKS:

1.	James A.F. Stoner, R. Edward Freeman, Daniel R. Gilbert	Management, Pearson Education, 6th Edition, 2018.
2.	Rashmi Bansal	Stay Hungry Stay Foolish, IIM Ahmedabad, 1st Edition, 2008.
3.	Rashmi Bansal	Connect the Dots, Bushfire Publishers, 1st Edition, 2019.

Course Outcomes: After the completion of this course, students will be able to:

CO1. Explain various functions of management (L2).

CO2. Apply the knowledge of management principles and strategies in various functional areas. (L3).

CO3. Manage engineering design and product development (L3).

CO4. Describe entrepreneurship, its characteristics, and benefits and identify various funding sources for starting a business venture (L3).

CO5. Explain various taxation benefits enjoyed by an entrepreneur and analyze the characteristics and strategies adopted by successful entrepreneurs. (L2 & L3)

MICROWAVE ENGINEERING

Contact Hours/ Week	: 3+1+0	Credits: 3.5
Total Lecture Hours	: 39	CIE Marks : 50
Total Tutorial Hours	: 13	SEE Marks : 50
Course Code	: 5REC01	

Course Objectives: This course will enable students to:

1. Understand lumped and distributed circuit concepts.
2. Discuss different impedance matching techniques for transmission lines
3. Learn the behavior of planar transmission lines and working principle of vacuum tubes and solid state devices.
4. Understand the working principles of various microwave passive devices using S-parameters.

UNIT 1

RF Transmission Lines: Concept of lumped elements and distributed elements, Parameters, (Line equations, Lossless line, Distortion less line, Input impedance- qualitative analysis only), reflection coefficient, transmission coefficient, SWR, standing wave patterns, mismatch losses.

Smith charts: Solve basic transmission line problems by graphical approach. **8+3 hours**

UNIT 2

Impedance transformations for matching: (i) QWT: Input impedance, applications. (ii) Single stub impedance matching (Smith Chart Approach).

Waveguides: The TEm,n and TMm,n waves in rectangular waveguides-(qualitative analysis only), Excitation of waveguides, Guide terminations, Rectangular resonant cavity. **8+3 hours**

UNIT 3

Microwave network theory: S-parameter properties(No proof), S matrix representation of Two-port & multi-port network.

Microwave passive devices: Phase shifters, Attenuators, Wave guide Tees (Derivation of S-matrix for E-plane, H-plane & Magic Tee), Isolators, Circulators, Directional couplers. **8+2 hours**

UNIT 4

Planar transmission lines: Microstrip line (geometry, design eequations), strip line, coplanar waveguide, slot lines - geometry only.

Microwave Filters: Design of Low Pass Filter(Butterworth & Chebyshev filter).

Microwave measurements: Introduction, slotted line, spectrum analyzer, network analyzer, VSWR meter & measurements.

8+3 hours

UNIT 5

Microwave vacuum tube devices: Two cavity Klystron Amplifier, Reflex klystron, Magnetron, Travelling Wave Tube Amplifier (construction & working principle, No design equations)

Microwave solid state devices: PIN diode as a switch, GUNN diode operation, MESFETs: construction and principle of working.

7+2 hours

Text Books:

1	Matthew N. O. Sadiku and S.V. Kulkarni	"Principles of Electromagnetics", 6th Edition Oxford Univ. Press, 2015.
2	John D Ryder	"Networks, Lines and Fields", 2nd Edition, PHI, 2015
3	Annapurna Das, Sisir K Das	"Microwave Engineering", 4th Edition, McGraw Hill, 2020.

Reference Book:

1	David M. Pozar	"Microwave Engineering", 4th Edition, John Wiley & Sons Inc., 2012.

E-Resources :

1	https://nptel.ac.in/courses/117101119
2	https://www.digimat.in/nptel/courses/video/108101112/L01.html
3	https://nptel.ac.in/courses/108101112
4	https://nptel.ac.in/courses/108103141

Course Outcomes: After the completion of this course, students will be able to:

CO1. Analyse the behavior of open wire lines and waveguides.
CO2. Apply impedance matching techniques for maximum power transmission.
CO3. Analyse waveguide Tees and passive devices using S-parameters.
CO4. Design micro strip lines and microwave filters.
CO5. Explain the working of microwave vacuum tube devices, solid state devices and measurement devices.

DIGITAL SIGNAL PROCESSING

Contact Hours/ Week	: 3+1+0	Credits: 3.5
Total Lecture Hours	: 39	CIE Marks : 50
Total Tutorial Hours	: 13	SEE Marks : 50
Course Code	: 5REC02	

Course Objectives: This course will enable students to:

1. Represent and analyze information from analog world to digital domain.
2. Discuss algorithms to reduce computations involved in converting the signal from time to frequency domain and vice-versa.
3. Prepare the students to design and realize digital filters for applications in real world.

UNIT 1

Introduction to Digital Signal Processing: Basic elements of a Digital Signal Processing system, advantages of DSP over analog signal processing, Concept of frequency in continuous time and discrete-time domain (Section 1.3), Importance of Sampling (Section 1.4), Frequency ranges of natural signals,(Section 4.2.10).

Discrete Fourier Transform: Introduction, Fourier representations of finite- duration sequences, Properties of DFT, Linear convolution using DFT, Computation of Circular convolution and correlation, Relationship of DFT to other transforms, Spectral analysis using DFT.

Efficient Computation of DFT – Fast Fourier Transform Algorithms. **10+4 Hrs**

UNIT 2

Frequency Domain Analysis of LTI Systems: Frequency Response of a system with a rational system function, Computation of frequency response function, Ideal Filter Characteristics, Lowpass, Highpass, and Band pass filters, Digital Resonators, Notch Filters, Comb Filters, All pass filters, Digital sinusoidal oscillators, Invertibility of linear tine invariant systems, Minimum-phase, maximum phase and mixed phase system, System identification and de-convolution. **7+2 Hrs**

UNIT 3

Design and Realization of FIR Filters: Issues in filter design, importance of linear phase, Frequency response of linear phase FIR filters, Locations of zeros of FIR filters, Design techniques of FIR filters- Windowing method and Frequency sampling method

Applications of FIR filters: Design of Hilbert transformer and Ideal differentiators **6+2Hrs**

UNIT 4

Design of IIR filters: Elementary properties of IIR filters, Techniques for determining IIR filter coefficients, Frequency transformations in analog domain. Digital filter design from continuous time filters- Impulse invariant technique and Bilinear transformation methods. Comparison of FIR and IIR filters. (Butterworth and Chebyshev Filter tables can be used) **9+3Hrs**

UNIT 5

Basic structures for FIR systems: Direct, Cascade, Linear Phase and Frequency sampling structures.

Basic structures for IIR systems: Direct, Cascade, and Parallel structures.

Applications: Filtering of long sequences: Overlap-save method and overlap-add method, DCT for Image Compression, DTMF Generation and Detection, Musical sound processing: Single echo and multiple echo filters. **7+2Hrs**

Text Books:

J. G. Proakis and D. G.Manolakis	Digital Signal Processing: Principles, Algorithms and Applications, Fourth Edition, PHI, 2014.
Alan V Oppenheim and Ronald W. Schafer	Discrete-Time Signal Processing, PHI, 3/E, 2014.

Reference Book:

1	S. Sanjit K. Mitra	Digital Signal Processing: A computer-Based Approach. TMH. 4/E, 2013.
2	Lonnie C. Ludeman	Fundamentals of digital signal processing, John Wiley &Sons,2009

E-Resources:

1	https://ocw.mit.edu/courses/res-6-008-digital-signal-processing-spring-2011/video_galleries/video-lectures/

Course Outcomes: After the completion of this course, students will be able to:

CO1. Represent and process information in digital domain as a function of time or frequency

CO2. Characterize discrete time LTI systems in the frequency domain.

CO3. Design a digital FIR filter for a given specification

CO4. Design a digital IIR filter for a given specification

CO5. Implement discrete time systems and basic signal processing algorithms for applications in Communication and Signal Processing

COMMUNICATION SYSTEMS – II

Contact Hours/Week	: 4+0+0	Credits	: 4
Total Lecture Hours	: 52	CIE Marks	: 50
Sub. Code	: 5REC03	SEE Marks	: 50

Course Objectives: This course will enable students to:

1. Understand different digital modulation and demodulation techniques and its applications.
2. Learn source and channel encoding and decoding techniques.

UNIT 1

Digital Modulation Techniques: Sampling Theorem, Signal Constellations, Bandwidth occupancy, Power Spectral Density, PSD of a linearly modulated signal. Design of bandlimited channels, Nyquist criterion for ISI avoidance, Bandwidth efficiency, power bandwidth tradeoffs, The Nyquist criterion at the link level. Linear modulation as a building block, Orthogonal and bi orthogonal modulation. **10 Hrs**

UNIT 2

Optimum Demodulation - I: Hypothesis testing: Error probabilities, ML and MAP decision rules, Soft decisions. Signal space concepts: Representing signals as vectors, modeling WGN in signal space, Hypothesis testing in signal space, optimal reception in AWGN, Geometry of the ML decision rule. **12 Hrs**

UNIT 3

Optimum Demodulation - II: Performance analysis of ML reception: The geometry of errors, Performance with binary signaling. M-ary signaling: scale-invariance and SNR, Performance analysis for M-ary signaling, Performance analysis for M-ary orthogonal modulation. Bit error probability, Link Budget Analysis. **8 Hrs**

UNIT 4

Fundamental Limits on Performance: Uncertainty, Information and Entropy, Source Coding Theorem, Huffman Coding, Discrete memory less Channels, Mutual Information, Channel Capacity, Channel Coding Theorem, Channel Capacity Theorem. **10 Hrs**

UNIT 5

Error Control Coding: Types of Codes, Linear Block Codes, Cyclic Codes – Generator polynomial, Parity Check Polynomial, Encoding, Syndrome Calculation, Algebraic Structure, Convolution Coding, Convolution encoder in time and transform domain, Viterbi decoding. **12 Hrs**

Text Books:

Upamanyu Madhow	"Introduction to Communication Systems", Cambridge University Press, 2014.
Simon Haykin	"Digital Communications", John Wiley, 2012.

Reference Books

K Sam Shanmugam	"Digital and Analog Communication Systems", John Wiley, 2011
Shu Lin and Daniel J Costello	"Error Control Coding", Pearson Education Ltd., 2011.

E-Resources :

2	https://www.youtube.com/watch?v=r0hJxzJyIw8
3	https://www.youtube.com/watch?v=_iGdElwJ87s&pbjreload=101

Course Outcomes: After the completion of this course, students will be able to:

CO1. Compare digital modulation techniques using different parameters.
CO2. Apply the knowledge of random process to demodulate signals in presence of noise.
CO3. Analyze the information characteristics of a discrete source and channels.
CO4. Apply different error control coding and decoding techniques to design and develop a communication channel.

DIGITAL SIGNAL PROCESSING LAB

Contact Hours/Week	:	3	Credits	:	1.5
Total Lecture Hours	:		CIE Marks	:	50
Course Code	:	5RECL1	SEE Marks	:	50

Course Objectives: This course will enable students to:

1. Learn signal representations in time and frequency domain using any open source software.
2. Understand design of digital filter and implement basic signal processing algorithms by coding using a high level programming language.

PART - A: Experiments using MATLAB:

1. Generation of signals
2. DTFT of discrete-time signals
3. Discrete Fourier transform
4. Linear filtering
5. Spectral analysis using DFT
6. Design of Notch filter
7. Design of Resonator
8. Design of Comb filter
9. Design of All pass filter
10. Design of low pass FIR filters using windowing
11. Design of digital Differentiator
12. Design of Digital Hilbert Transformer
13. Design & Verification of IIR Butterworth low pass filters
14. Design & Verification of IIR Chebyshev low pass filters

PART - B: Signal processing using C / Python

1. Signal generation
2. Linear convolution and Circular convolution
3. DFT computation
4. Noise suppression using digital filters

Course outcomes:

After the completion of this course, students will be able to:

CO1. Determine the response of a system for an arbitrary input

CO2. Perform spectral analysis of a signal and determine the frequency response of a system

CO3. Design a digital FIR filter for a given specification and use it in implementing special systems like Hilbert transformer and differentiator.

CO4. Design a digital IIR filter for a given specification and use it to suppress unwanted signals.

CO5. Implement basic signal processing algorithms for applications in communication, signal processing.

Changes or modifications in any subject should be done using the following table:

Sl No	Existing syllabus	Proposed syllabus	Justification

COMMUNICATION SYSTEMS-II LAB

Contact Hours/Week	:	3	Credits	:	1.5
Total Lecture Hours	:		CIE Marks	:	50
Course Code	:	5RECL2	SEE Marks	:	50

Course Objectives: This course will enable students to:

1. Learn determination of various parameters for directional coupler, power divider and ring resonator using Microwave Integrated Circuit kit
2. Understand use of microwave bench for measurement of unknown impedance and to plot the mode curves of reflex klystron.
3. Understand the process of sampling and digital modulation and demodulation techniques.
4. Learn simulation of source and channel encoder and decoder using open source software.

I. Rig Up Experiments:

A.Experiments Related to Communication Channels and Microwave Engineering:

1. Directional Coupler- To determine coupling factor & isolation Loss for Parallel-line & Branch-line couplers.
2. (i)Power Divider- To measure S-parameters.
   (ii)Ring Resonator- To determine Effective Dielectric constant.
3. Measurement of Unknown impedance
4. To plot Mode curves of Reflex Klystron
5. To determine Reflection coefficient & VSWR for different loads using Microwave Office

B. Experiments Related to Communication Systems – II:

6. Flat Top Sampling
7. Binary Phase Shift Keying– Generation and Detection
8. Binary amplitude Shift Keying– Generation and Detection

II. Simulations using (Scilab/Octave/MATLAB):

9. Source Coding –Huffman Coding
10. Channel Coding – Linear Block Code

Open Ended Experiments

1. Design a microwave filter for the given specifications using Microwave Office.
2. Generate a QPSK waveform for a given message signal using two BPSK modulators.
3. Generate (7,4) cyclic code
4. Generate (3,2,1) cyclic code

E-Resources :

1	https://sites.google.com/view/communicationsystems-ii/home?authuser=3

Course Outcomes: After the completion of this course, students will be able to:

CO1. Analyze the performance of different microwave passive devices and mode curve pattern of reflex klystron.
CO2. Measure unknown impedance for different loads using microwave bench.
CO3. Simulate and analyze different transmission lines.
CO4. Design a circuit to reconstruct the message signal from flat top samples and verify sampling theorem.
CO5. Design and analyze modulator and demodulator for binary amplitude & phase shift key
CO6. Apply an appropriate modern tool to analyze source and channel coding techniques.

ADVANCED TECHNICAL TRAINING LAB

Lab Hours/ Week	: 36 hours	Credits :	1
Sub. Code	: 5CESL1	CIE Marks :	50
		SEE Marks :	50

COURSE OBJECTIVES:

- Strengthen their understanding of C, C++ and Data Structures
- Write effective codes on C and C++Programming

OVERALL SYLLABUS BREAKUP:

S. No	Module name	Classroom (Hours)	Lab (Hours)	Total duration
1	C Programming	2	3	5
2	C++	6	0	6
3	Data Structures	12	3	15
Total duration (Hours)		30	6	36

COURSE PLAN:

C Programming (15 hours)				
S. No	Topics covered	Learning outcome	Type of learning	Duration
1	Introduction of Programming Languages • Structure of a 'C' Program • Main function • Input & Output • 'C' Tokens • Keywords and Identifiers • Operators • Constants • Variables • Data Types • Scope and Lifetime of Variables Control Statements, if, if else, if else if ladder, switch cases and related programs, Looping & Branching - for loop, while loop and Do while loop, Conversion	To make the student to a level where he/she will start thinking about the logics of programs and will be thorough with the basic syntax and semantics of C programming language.	Class room	6

2	Emphasis on Concepts of Pointers with implementation and MCQs, Array pointers, Structure & Union , Functions, Recursion, Enum, Type def, structures , union	Understanding the user defined datatypes Advanced concepts of C.	Classroom	6
3	C Programming Lab - I	Important programs implementation in company point of view. Getting familiar with different	Lab	3

Data Structures (15 hours)				
1	Introduction to Data Structures: The factors that efficiency depends upon 1) Space complexity 2) Time complexity(step - count method) • Classification of data structures: • Linear data structures • Nonlinear data structures • Array vs. Linked List • Types of linked list : singly , doubly, circular (introduction) • Linked list	To make the student familiarized with the core DS concepts. Sound conceptual understanding on linked lists and types, and applying them in programs.	Class room	6
	• Types of linked list:+ *a) Singly linked list :* Applications, Operations on singly linked list • Inserting a node: into an empty list, at beginning, at the end, at intermediate • Deleting a node: form an empty list, at beginning, at the end, at intermediate • Traversal *b) Circular linked list:* • Applications, Operations on			

	circular linked list *c) Doubly linked list:* Applications, Operations on doubly linked list • Difference between singly, doubly, circular Stack: • Push and Pop operation • Applications Q Queue: • Enqueue and Dequeue operation			

2	Searching Techniques:
	• Linear Search (real life examples), explain the working with an example, Complexity Analysis
	• Binary Search:
	  • Need of binary search
	  • Working with example
	  • Complexity
	Analysis Sorting Techniques:
	• *Bubble sort:* Introduction, Explain with example, Applications, Complexity analysis.
	• *Insertion sort:* Introduction, Explain with example, Applications, Complexity analysis.
	• *Selection sort:* Introduction, Explain with example, Applications, Complexity analysis.
		Programming strategies will be thoroughly explained for students	Classroom	6

	• *Quick sort:* Introduction, Explain with example, Applications, Complexity analysis. • *Merge Sort:* Introduction, Explain with example, Applications, Complexity analysis. Tree: • Why do we need a tree as a data structure? • Applications • Binary tree: Introduction, types of tree, important equations.			

DS Programming Lab - I	Important DS programs implementation n in company point of view.	Lab	3

Course Outcomes: After the completion of this course, students will be able to:

CO1. Design and develop solutions for particular programming problems using the fundamental concepts of C Programming.

CO2. Implement different data structures like Stacks and Queues using static and dynamic memory allocation techniques.

CO3. Design & Implement Object oriented concepts of C++ programming such as Classes, Objects, Inheritance, polymorphism for a given problem statement.

VI SEMESTER
PROJECT MANAGEMENT

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: HSS07B	SEE Marks:	50

Course Objectives: This course will enable students to:

1. Comprehend the students with the basic idea about the program, project and portfolio.
2. To impart knowledge about various factors for analyzing the projects based on resource, quality, technical and financial aspects.
3. To expose the students to grasp the procedures to project scheduling and communication.
4. Equip the students with various tools available to finance, monitor and control projects.
5. To acquaint the students about steps involved in efficient management of projects and stakeholders.

Unit 1

Introduction: Project, Program, and portfolio, Operations management, Product life cycle, Project life cycle, Project management life cycle, Ten Knowledge areas, Role of project manager and PMO, Ten Project Knowledge areas with their associated processes

Project Integration Management: Develop project charter, Develop project management plan, Direct & manage project work, Monitor control project, Perform integrated change control, Close project / phase. **7 Hrs.**

Unit 2

Project scope management: Plan scope management, Collect requirements, Define scope, Create WBS, Validate Scope, Control scope.

Project Schedule management: Plan schedule management, Define activities, Sequence activities, Estimate activity durations, Develop schedule, and Control schedule. **8 Hrs.**

Unit 3

Project cost management: Plan cost management, Estimate cost, Determine budget, and Control costs.

Project quality management: Plan quality management, Manage quality and Control quality

Project resource management: Plan resource management, Estimate activity resources, Acquire resources, Develop team, Manage team and Control resources. **8 Hrs.**

Unit 4

Project communication management: Plan communication management plan, Manage communications and Monitor communications

Project risk management: Plan risk management, Identify risks, Perform qualitative risk analysis, Perform quantitative risk analysis, Plan risk responses, Implement risk responses and Monitor risks.

Project Procurement management: Plan procurement management, Conduct procurement, Control procurements. **8 Hrs.**

Unit 5

Project stake holder management: Identify stake holders, Plan stake holder management, Manage stake holder engagement, and Monitor stake holder engagement

A case study relevant to the domain knowledge of the department is taken up to explain the principles of the project management as brought out above.

8 Hrs.

Text book:

1	Project Management Book of Knowledge (PMBOK), 6th Edition, PMI, USA

Reference book:

1	Prasanna Chandra	Project Planning: Analysis, Selection, Implementation and Review, MC- Graw Hill Education, Edition VIII, 2017.

E-Resources :

1	https://onlinecourses.nptel.ac.in/noc21_mg71/preview
2	https://nptel.ac.in/courses/110107081

Course Outcomes: After the completion of this course, students will be able to:

CO1. Outline the procedure for analyzing a project
CO2. Define the rationale of work breakdown structure
CO3. Illustrate the use of network techniques for successful project implementation
CO4. Design the procedures for overall financial analysis of the project alongside the resource requirement and ideal quality
CO5. Identify the sources and process for communication, risk management and procurement
CO6. Build a comprehensive plan for stakeholder management

IOT NETWORK TECHNOLOGY

Contact Hours/ Week	: 4+0+0	Credits: 4
Total Lecture Hours	: 52	CIE Marks : 50
Course Code	: 6REC01	SEE Marks : 50

Course Objectives: This course will enable students to:

1. Build an understanding of the fundamental concepts of computer networking.
2. Describe the data communication aspects in computer networks.
3. Discuss protocols related to data link layer, network layer and transport layer
4. Understand and build IoT framework using Raspberry Pi.

UNIT – I

Introduction: OSI model, TCP/IP model, comparison.
Physical layer: Topology, Line configuration, Data flow, Manchester encoding, TDM.
Data link layer: Framing, Flow control protocols: stop and wait, sliding window (go back n and selective repeat). (Text-1) **10 Hrs**

UNIT – II

Data Link Control: Error detecting code: CRC, HDLC – Information frame. Multiple access protocols; Slotted ALOHA, CSMA/CD, Reservation, Polling, Token passing, CDMA. (Text-1) **10 Hrs**

UNIT – III

Network Layer- Logical addressing: Ipv4 addresses, Ipv6 addresses, **Internet Protocol:** Ipv4, Ipv6, and Transition from Ipv4 to Ipv6.
Routing Algorithms: Shortest Path Routing, Distance Vector Routing, Link State Routing. (Text-1).
Transport Layer: Process to process delivery, UDP, TCP. **12 Hrs**

UNIT – IV

Wired LAN: Ethernet, IEEE standards, Standard Ethernet, IEEE 802.3 Changes in the standards.
Wireless LAN: IEEE 802.11, Bluetooth, Connecting LANs, Backbone networks and virtual LANs. (Text-1)

Internet of Things: Introduction, Definition & Characteristics of IoT, Physical design of IoT, Logical design of IoT. (Text-2) **10 Hrs**

Unit V

IoT enabling Technology: WSN, cloud computing, communication protocols, embedded systems, IoT levels and deployment templates.

IoT Physical device and Endpoints: Introduction to Raspberry Pi, board architecture, OS on Raspberry Pi, Raspberry Pi interfaces, Programming Raspberry Pi with python. (Text-2). **10 Hrs**

TEXT BOOK:

1	Behrouz A Forouzan	Data Communications and Networking, 5th Edition, McGraw Hill, 2012.
2	Arshdeep Bahga, Vijay Madisetti	Internet of Things- a Hands on Approach, 1st edition, VPT, 2014

REFERENCE BOOKS:

1	William Stallings	Data and Computer Communication, 8th Edition, Pearson Education PHI, 2011.
2	Andrew S Tanenbaum	Computer Networks – 5th Edition, Pearson Education PHI, 2011.

Course Outcomes: After the completion of this course, students will be able to:

CO1. Describe OSI reference model, TCP/IP suite and analyze framing and flow control techniques.

CO2. Demonstrate error control mechanisms and evaluate multiple access protocols

CO3. Analyse routing algorithms and evaluate the network performance.

CO4. Compare frame formats of IEEE standards for wired and wireless LANs

CO5. Apply the knowledge of computer network onto IoT paradigm and analyse IoT physical devices.

WIRELESS COMMUNICATION

Contact Hours/ Week	: 4	Credits :	4
Total Lecture Hours	: 52	CIE Marks :	50
Course Code	: 6REC02	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Learn the cellular concept and traffic theory.
2. Understand challenges in wireless communication and fading in wireless channel.

Unit I

Introduction to 3G/4G/5G Wireless Communication: Introduction, 2G, 3G, 4G, 5G wireless standards, Overview of cellular communication

The Cellular Concept - System Design Fundamentals: Introduction, Frequency Reuse, Channel Assignment Strategies, Handoff Strategies, Interference and System Capacity, Trunking and Grade of Service, Improving Coverage & Capacity in Cellular Systems. **8 Hrs**

Unit II

Principles of Wireless Communications: The wireless communication environment, Modelling of wireless channel, System model for narrowband signals, Rayleigh fading wireless channel, BER performance of wireless systems for various modulations, Intuition for BER in a fading channel, Channel estimation in wireless systems. **14 Hrs**

Unit III

The wireless Channel: Basics of wireless channel modelling, Average delay spread in outdoor cellular channels, Coherence bandwidth in wireless communications, Relation between ISI and coherence bandwidth, Doppler fading in wireless systems, Doppler impact on a wireless channel, Coherence time of the wireless channel, Jakes model for wireless channel correlation, Implications of channel time. **12 Hrs**

Unit IV

Code Division Multiple Access (CDMA): Introduction to CDMA, Basic CDMA mechanism, Spreading codes based on pseudo-noise sequences, Advantages of CDMA, CDMA near-far problem and power control. **10 Hrs**

Unit V

Orthogonal Frequency Division Multiplexing (OFDM): Introduction to OFDM, Subcarrier concept, OFDM signal generation, IFFT/FFT operations in OFDM, Addition of cyclic prefix, End-to-End system modelfor OFDM.

Multiple-Input Multiple-Output (MIMO): Introduction to MIMO,MIMO system model.

Diversity in Wireless Communications: Multiple Receive Antenna system model, Symbol detection in multiple antenna systems, BER in multi-antenna wireless systems, Diversity Order. **8 Hrs**

Text Books

1	Aditya K Jagannatham	Principles of Modern Wireless Communication Systems, Mc. Graw-Hill Education (India), 2019
2	Theodore S. Rappaport	Wireless Communications-Principles and Practice, 2e, Pearson Education, 2002.

Reference Books

1	Andreas, F. Molisch	Wireless Communications, John Wiley & Sons, 2011.
2	Andrea Goldsmith	Wireless Communications, Cambridge University Press, 2005.

E-Resources:

1	https://www.youtube.com/watch?v=fPTrifr-wLw&list=PLTgNKd4RxFTY_rhPBYyFJ-qVwMHNgebJe

Course Outcomes: After the completion of this course, students will be able to:

CO1. Apply cellular concepts and traffic theory to evaluate the signal reception performance in a cellular network
CO2. Model of wireless fading channel and characterize the bit error rate performance in wireless communication system
CO3. Design of 3G/4G wireless communication system
CO4. Analyze OFDM based wireless networks
CO5. Compare 3G, 4G and 5G technologies

WIRELESS COMMUNICATION LAB

Contact Hours/Week	:	3	Credits	:	1.5
Total Lecture Hours	:		CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	6RECL1			

Course Objectives: This course will enable students to:

1. Appreciate the theoretical concepts in *wireless communication* through hands-on experiments using GNU radio software combine with universal software defined peripheral.

Experiments:

1. Two tone loop back
2. Generation and detection of ASK and FSK
3. FM Transmitter and Receiver
4. BER analysis for M-ary PSK
5. Eye Diagram plot
6. M-ary PSK Generation with channel model and reception with frequency offset, timing offset and phase recovery
7. Digital Broadcasting of audio and video signals
8. Simulation of Frequency selective fading channel
9. Measurement of Doppler spread and delay in multipath channel
10. Orthogonal Frequency Division Modulator and Demodulator
11. CDMA Transmitter and Receiver
12. MIMO wireless communication system

Open Ended Experiments:

1. Comparison of bit error rates for M-ary FSK, M-ary PSK and M-ary QAM

2. Performance Comparison of AWGN, Flat Fading and Frequency Selective Fading Channel for Wireless Communication System using 4-QPSK

Course Outcomes: After the completion of this course, students will be able to:

CO1. Analyse and demonstrate various advanced modulation techniques for given specifications and interpret the results.
CO2. Use moderate tool to design and demonstrate FM transmitter and FM receiver.
CO3. Analyse, design and verify the performance of quadrature and M-ary PSK modulation techniques with channel model and signal recovery.
CO4. Measure multipath propagation parameters.
CO5. Demonstrate different wireless technologies.
CO6. Demonstrate the ability to provide efficient solutions for complex engineering problems in the area of wireless advanced communication individually and working in a team.

IOT NETWORK TECHNOLOGY LAB

Contact Hours/Week	:	3	Credits	:	1.5
Total Lecture Hours	:		CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	6RECL2			

Course Objectives: This course will enable students to:

1. Implement the Error correction and detection techniques of Data link layer using C programming.
2. Implement the routing protocols of network layer using C programming.
3. Setup and simulate the wired and wireless LAN scenarios using network simulator.
4. Integrate the Raspberry Pi controller to Internet of Things (IoT) for sensor data acquisition.

PART A (using C language)

1. Develop a program to find the transmitted data with CRC code for the given bit stream and generator polynomial.
2. Develop a program for detecting an error in the received data using CRC for the given generator polynomial.
3. Develop a program to detect and correct the error in the received data using Hamming code.
4. Develop a program to implement a link state routing algorithm for a given network graph and build a routing table for the given node.

PART B (using NS-2 simulator)

1. Simulate an Ethernet LAN using N nodes (6-10), change error rate and data rate and compare throughput.
2. Simulate an Ethernet LAN using N nodes and set multiple traffic nodes and determine collisions across different nodes.
3. Simulate a simple BSS with transmitting nodes in wireless LAN by simulation and determine the performance with respect to transmission of packets.

Part C: IoT for sensors data acquisition using IoT Evaluation board

1. Develop a program on Raspberry pi to upload temperature and humidity data to thingspeak cloud.
2. Develop a program on Raspberry pi to publish temperature data to MQTT broker.
3. Develop a program on Raspberry pi to subscribe to MQTT broker for temperature data and print it.
4. Develop a program to create TCP server on Raspberry pi and respond with humidity data to TCP client when requested.

Part D: open- ended experiments:

1. Develop a program to perform byte stuffing and bit stuffing for a given data.
2. Develop a program to encode the given bits using Hamming code.
3. Develop a program to find the loop less path with 'N' nodes in a network using Spanning tree algorithm.
4. Develop a program on Raspberry pi to retrieve temperature and humidity data from thingspeak cloud.
5. Develop a program to create UDP server on Raspberry pi and respond with humidity data to UDP client when requested

Course Outcomes: After the completion of this course, students will be able to:

CO1. Apply the knowledge of engineering fundamentals to design an algorithm for a given problem.
CO2. Create, implement and test the algorithms using C Programming.
CO3. Simulate and evaluate wired and wireless LAN using Network simulator.
CO4. Integrate sensors with the Raspberry Pi controller to IoT using various IoT Protocols.
CO5. Demonstrate the ability to provide efficient solutions for complex engineering problems in the area of embedded systems individually

PROFESSIONAL ELECTIVES

LINEAR ALGEBRA AND APPLICATIONS

Contact Hours/Week	:	3	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Course Code	:	RECE09	SEE Marks	:	50

Course Objectives: This course will enable students to:

1. Understanding basic concepts of systems of linear equations, characterize a linear system in terms of consistent or in-consistent. If consistent weather it has unique solution of multiple solutions. Determine linear dependence among vectors.
2. Express vectors in terms of linear combinations of other vectors, their span, and how they are related to each other geometrically.
3. Construct and interpret linear transformations. Characterize linear transforms using the concepts of existence and uniqueness.
4. Determine whether a vector is in a subspace spanned by a set of vectors. Construct a basis for a subspace. Characterize a matrix using the concept of rank, column-space, null-space.
5. Diagonalize a matrix using eigen vectors and eigen values. Construct an orthogonal basis for a subspace using Gram-Schmidt Process. Determine the best possible solution to an inconsistent system. Develop a regression model for a set of data points
6. Develop an algorithm to transform a number of (possibly) correlated variables into a smaller number of uncorrelated variables and thereby achieve dimensional reduction. Apply principle component analysis for feature extraction

Unit-1

System of Linear Equations, Row Reduction and Echelon Forms, Vector Equations, Linear combinations, Matrix equation Ax=b, Solution sets of linear systems, Linear Independence. **7 Hrs**

Unit-2

Linear Transformation, Matrix of linear transformation, Existence and Uniqueness, Isomorphism, Inverse of a matrix, Invertible matrix theorem, Determinant, determinant as area & volume. **8 Hrs**

Unit-3

Vector Spaces and subspaces, null spaces, column spaces and linear transformations, linearly independent sets: Bases, Spanning Set, Dimension of a vector space, rank. **8 Hrs**

Unit-4

Eigen values & Eigenvectors, The Characteristic Equation, Diagonalization, Inner product, outer product, length and orthogonality, orthogonal sets, orthogonal projections, Gram-Schmidt Process, Least square problems, Least-square lines. **8 Hrs**

Unit-5

Diagonalization of symmetric matrices, Quadratic forms, Constrained optimization, Singular value decomposition, Principal Component Analysis: Application to image processing. **8 Hrs**

Text Books:

1.	David C. Lay	Linear Algebra and its Application, Pearson Education, Fifth Edition. 2016

Reference Books:

1.	Strang, G.	Linear Algebra and its Applications, Third Edition, Thomson Learning.
2.	Seymour Lipschutz	Schaum's Outline of Linear Algebra, Sixth Edition. 2017.
3.	Kenneth Hoffman and Ray Kunze	"Linear Algebra", 2nd edition, Pearson Education (Asia) Pte. Ltd.Prentice Hall of India, 2004.

E-Resources :

1	https://onlinecourses.nptel.ac.in/noc22_ma45

Course Outcomes: After the completion of this course, students will be able to:

CO1. Interpret existence and uniqueness of solutions to linear equations
CO2. Evaluate basis and dimension of image and kernel of transformation
CO3. Construct a spanning set/basis for a vector space or subspace.
CO4. Apply Gram-Schmidt Process to construct an orthogonal basis for a subspace.
CO5. Evaluate the best possible solution for an inconsistent system with least square error.
CO6. Develop a suitable regression model for the given set of data.
CO7. Apply mathematical tools such as PCA and SVD for dimensional reduction (feature extraction) and image processing applications.

RANDOM PROCESSES

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE17	SEE Marks :	50

Course objectives: This course enable the students to

1. Learn the basic tools required to build probabilistic models.
2. Analyze probabilistic models.

Unit 1

Review of Probability Theory-Experiments, sample space, Events, Axioms, Joint and conditional probabilities,. Baye's Theorem, Independence, Discrete Random Variables, Cumulative distribution function (CDF), Probability density function (PDF), Gaussian random variable, Uniform RV, Exponential RV. **8 Hrs**

Unit 2

Operations on a Single R V: Expected value, Expected value of functions of Random variables, Moments, Central Moments, Conditional expected values. Transformation of Random variables. **8 hrs**

Unit 3

Pairs of Random variables, Joint Cumulative distribution function, Joint Probability density function, Joint probability mass functions, Conditional Distribution, density and mass functions, Expected values involving pairs of Random variables, Independent Random variables, Jointly Gaussian Random variables. **8 Hrs**

Unit 4

Multiple Random Variables: Joint and conditional probability mass functions, CDF, PDF, Expected value involving multiple Random variables, Gaussian Random variable in multiple dimensions. **7 Hrs**

Unit 5

Random Process: Definition and characterization, Mathematical tools for studying Random Processes, Stationary and Ergodic Random processes, Properties of Autocorrelation function. Example Processes: Markov processes, Gaussian Processes, Poisson Processes. **8 Hrs**

TEXT BOOK:

1.	S L Miller and D C Childers	Probability and Random processes: with applications to Signal processing and communication Academic Press/ Elsevier, Second Edition, 2014

REFERENCE BOOKS:

1.	A. Papoullis and S U Pillai	Probability, Random variables and stochastic processes McGraw Hill, 4th Edition, 2002.
2.	Peyton Z Peebles	Probability, Random variables and Random signal principles TMH 4th Edition 2007
3.	H Stark and Woods	Probability, statistics and random processes for engineers, Pearson 2012.

E-Resources :

1	https://nptel.ac.in/courses/117104117

Course outcomes: After the completion of this course, students will be able to

CO1. Apply the knowledge of basics of probability and random variable theory to solve problems in communication systems.

CO2. Identify various parameters that describe important features of a random variable and use them to analyze randomness in data

CO3. Perform computations and model random phenomena using pairs of random variables

CO4. Develop matrix notation to represent and analyze multidimensional random variables

CO5. Identify mathematical tool to characterize various random processes such as Markov, Gaussian, Poisson etc.

OPTICAL FIBER COMMUNICATION

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE01	SEE Marks :	50

Course objectives: This course enable the students to

1. Understand basics of optical communication system
2. Understand the propagation of light through optical fiber waveguide and the losses that occur in the optical fiber
3. Acquire knowledge on the engineering problems of optical communication like receiver characteristics, optical links and multiplexing techniques using WDM concepts.

Unit 1

OVERVIEW OF OPTICAL FIBER COMMUNICATION: Introduction, Historical development, general system, advantages, disadvantages, and applications of optical fiber communication, optical fiber waveguides, Ray theory, cylindrical fiber, single mode fiber, cutoff wave length, Mode- field diameter. **8 Hrs**

Unit 2

TRANSMISSION CHARACTERISTICS OF OPTICAL FIBERS: Introduction, Attenuation, absorption, scattering losses, bending loss, dispersion, Intra model dispersion, Inter model dispersion. **7 Hrs**

Unit 3

OPTICAL SOURCES AND DETECTORS: Introduction, LED's, LASER diodes, Photo detectors, Photo detector noise, Response time, double hetero structure Photo diodes, comparison of photo detectors.

OPTICAL RECEIVER: Introduction, Optical Receiver Operation, receiver sensitivity, quantum limit, eye diagrams, coherent detection, burst mode receiver, operation, Analog receivers. **8 Hrs**

Unit 4

ANALOG AND DIGITAL LINKS: Analog links – Introduction, overview of analog links, CNR, multichannel transmission techniques, RF over fiber, key link parameters, Radio over fiber links, microwave photonics.

Digital links – Introduction, point–to–point links, System considerations, link power budget, resistive budget, short wave length band and transmission distance for single mode fibers, Power penalties, Modal noise and chirping. **8 Hrs**

Unit 5

WDM CONCEPTS AND COMPONENTS: WDM concepts, overview of WDM operation principles, WDM standards, multiplexer, Isolators and circulators, dielectric thin film filters, active optical components, MEMS technology, variable optical attenuators, tunable optical filters, dynamic gain equalizers, optical drop multiplexers, polarization controllers, chromatic dispersion compensators, tunable light sources. **8 Hrs**

Text Books:

1	John M. Senior	**Optical Fiber Communication,** 3rdEdition, Pearson Education, 2009.
2	Gerd Keiser	**Optical Fiber Communications,** 5th Edition, Tata Mc-Graw Hill, 2017.

Reference Books:

1	Joseph C Palais	**Fiber Optic Communication, 5**th Edition, Pearson Education, 2004.

1	https://www.youtube.com/watch?v=-ap00IUJm7k&list=PLFW6lRTa1g83YaqmM9r2MAAiJVY93bOP7

Course Outcomes:

After the completion of this course, students will be able to:

CO1. Analyze the basic parameters of optical fiber

CO2. Explain the channel impairments like losses and dispersion

CO3. Describe the principles of optical sources and detectors

CO4. Compare the characteristics of optical fiber receivers

CO5. Analyze Analog links, Digital links and WDM concepts

ADVANCED COMPUTER ARCHITECTURE

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE26	SEE Marks:	50

Course Objectives: This course will enable students to:

1. Learn multiprocessors and multicomputer.
2. Compare the performance issues related to parallel processing.

Unit 1

Parallel computer models: The state of computing, Multiprocessors and multi computers, Multi-vector and SIMD computers. **7 Hrs**

Unit 2

Program and network properties: Conditions of parallelism, Data and resource Dependences, Hardware and software parallelism, Program partitioning and scheduling, Grain Size and latency, Program flow mechanisms, Control flow versus data flow, Data flow Architecture, Demand driven mechanisms, Comparisons of flow mechanisms. **8 Hrs**

Unit 3

Principles of Scalable Performance: Performance Metrics and Measures, Parallel Processing Applications, Speedup Performance Laws, Scalability Analysis and Approaches. **7 Hrs**

Unit 4

Advanced processors: Advanced processor technology, Instruction-set Architectures, CISC Scalar Processors (VAX 8600, Motorola MC 68040) RISC Scalar Processors (SPARC, Intel i860) Superscalar Processors (IBM RS/6000), VLIW Architectures, Vector and Symbolic processors. **9 Hrs**

Unit 5

Pipelining: Linear pipeline processor, nonlinear pipeline processor, Instruction pipeline Design, Mechanisms for instruction pipelining, Dynamic instruction scheduling, Branch Handling techniques, branch prediction. **8 Hrs**

TEXT BOOK :

1	Kai Hwang	Advanced computer architecture; Edition 3, TMH, 2003.

REFERENCE BOOKS:

1	Kai Hwang and Zu	Scalable Parallel Computers Architecture, MGH. 1998.
2	M.J Flynn	Computer Architecture, Pipelined and Parallel Processor Design, Narosa Publishing. 1995, Edition I
3	D.A.Patterson And J.L.Hennessy	Computer Architecture: A quantitative Approach, Morgan Kauffmann Feb., 2002. Edition V, 2011

E-Resources :

3	https://onlinecourses.nptel.ac.in/noc21_cs95/preview
4	https://www.digimat.in/nptel/courses/video/106102229/L01.html

Course Outcomes: After the completion of this course, students will be able to:

CO1. Analyze the various parallel computing models like multiprocessors and multicomputers, multi-vector and SIMD computers.

CO2. Identify and analyse the program and network properties to improve the performance.

CO3. Analyze the principles of scalable performance such as performance metrics and measures, parallel processing applications, speedup performance laws.

CO4. Analyze and compare the advanced processor technology.

CO5. Design linear and nonlinear pipeline processors.

DIGITAL IMAGE PROCESSING

Contact Hours/Week	:	3	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	RECE10			

Course Objectives: This course will enable students to:

1. Understand fundamentals of digital image processing.
2. Learn different image processing algorithms.

Unit-1

Digital Image Fundamentals: Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Image Sampling and Quantization, Some Basic Relationships between Pixels, connected component analysis.

Two-dimensional orthogonal & unitary transforms, Two dimensional Discrete Fourier transform, Discrete cosine transform, Hadamard transform, Haar transform, KL transform. **8 Hrs**

Unit -2

Enhancement in Spatial and Frequency Domain: Some Basic Intensity Transformation Functions, Histogram Processing, Fundamentals of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters.

Image Smoothing Using Frequency Domain Filters, Image Sharpening Using Frequency Domain Filters. **8 Hrs**

Unit -3

Image Restoration: A Model of the Image Degradation/Restoration Process, Restoration in the Presence of Noise Only-Spatial Filtering, Linear, Position-Invariant Degradations, Estimating the Degradation Function, Inverse Filtering, Minimum Mean Square Error (Wiener) Filtering, Geometric Mean Filter. **8 Hrs**

Unit-4

Image Segmentation: Fundamentals, Point, Line and Edge Detection, Hough transform, Thresholding, Region-Based Segmentation. **7 Hrs**

Unit -5

Morphological Image Processing: Preliminaries, Erosion and Dilation, Opening and Closing, The Hit-or-Miss Transformation, Some Basic Morphological Algorithms. **8 Hrs**

TEXT BOOKS:

1	Rafael C. Gonzalez and Richard E. Woods	Digital Image Processing, IV edition, Pearson Education, 2018.
2	Anil K. Jain	Fundamentals of Digital Image Processing, PHI,2011.

REFERENCE BOOKS:

1	Jayaraman, Esakkirajan, Veerakumar	Digital Image Processing and Analysis, Mc Graw Hill India, 2009.

E-Resources :

1	https://nptel.ac.in/courses/117105079
2	https://nptel.ac.in/courses/108106168

Course Outcomes:

After the completion of this course, students will be able to:

CO1. Identify various steps and components in a digital image processing system, analyze digital images in spatial and transform domain

CO2. Choose a suitable technique in spatial or frequency domain to enhance a given image

CO3. Develop a suitable model for image degradation and perform image restoration

CO4. Apply various image segmentation techniques to partition image into regions or objects

CO5. Apply suitable morphological operations to extract image components that are useful in the representation and description of region shapes

CO6. Use modern engineering tools to develop image processing systems working in a team

MACHINE LEARNING

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE19	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Learn a spectrum of machine learning algorithms with a sound mathematical background
2. Understand technical know-how of applying these algorithms for different real-world applications.

Unit -1

Introduction :

Review of Probability Theory and Linear Algebra, Probability densities, Expectations and covariance, Bayesian probabilities, Curve fitting, Bayesian curve fitting, Model selection, The Curse of Dimensionality, Decision Theory, Minimizing the misclassification rate, Minimizing the expected loss, The reject option, Inference and decision, Loss functions for regression

8 Hrs.

Unit -2

Linear Models for Regression:

Linear Basis Function Models, The Bias-Variance Decomposition: Maximum likelihood and least squares, Geometry of least squares, Bayesian Linear Regression, Bayesian Model Comparison, Limitations of Fixed Basis Functions **8 Hrs.**

Unit -3

Linear Models for Classification :

Discriminant Functions, Two classes and multiple classes, Fischer linear discriminant, Probabilistic Generative Models, Maximum likelihood solution, Discrete features, Probabilistic Discriminative Models, Fixed basis functions, Logistic regression, Multiclass logistic regression, Perceptron, Support Vector Machines **8 Hrs.**

Unit -4

Unsupervised Learning :

Clustering: Agglomerative clustering, Batchelor and Wilkins algorithm, Graph-based clustering, k-means, adaptive hierarchical clustering, Gaussian mixture model **7 Hrs.**

Unit -5

Neural Networks :

Neural Networks - Introduction, Early Models, Perceptron Learning, Feed-forward Network Functions, Network Training, Parameter optimization, Local quadratic approximation, Gradient descent optimization Error Backpropagation, Backpropagation **8 Hrs.**

TEXT BOOKS:

1.	Christopher Bishop	Pattern Recognition and Machine Learning, Springer, 2011
2.	Richard O Duda, Peter E Hart, David G Stock	Pattern Classification, John Wiley and Sons, Authorised reprint by Wiley India, 2012.

REFERENCE BOOKS:

1	S.Theodoridis and K.Koutroumbas	Pattern Recognition, 4th Ed., Academic Press, 2009.
2	Earl Gose, Richard Johnsonbaugh and Steve Jost,	Pattern Recognition and Image Analysis, Prentice-Hall of India, 2016.

Course Outcomes: After the completion of this course, students will be able to:

CO1. Explain the fundamental issues and challenges of machine learning: data collection, pre-processing, feature extraction, training, evaluation, model selection, model complexity, Error criterion (L2)

CO2. Use Bayesian decision theory to determine the discriminant function for a two-class problem (L3)

CO3. Apply algorithms to learn linear regression models to predict the value of a continuous valued output given a training data consisting of univariate/multivariate input features (L4)

CO4. Apply learning algorithms based on logistic regression, Support Vector Machines to predict discrete valued output given a training data comprising of features and corresponding class labels (L4)

CO5. Apply algorithms based on neural networks to perform simple learning tasks like speech recognition, digit recognition, optical character recognition and similar cognitive applications (L4)

CO6. Apply unsupervised learning algorithms to learn patterns from given training set of unlabeled data points (L4)

(Knowledge levels: *L1: Remembering, L2: Understand, L3: Apply, L4: Analysis, L5: Evaluate, L6: Create****)***

SPEECH PROCESSING

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE11	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Understand the characteristics of speech signal
2. Apply signal processing concepts to speech signal
3. Get an insight into a few applications of speech processing.

Unit-I

Production and Classification of Speech Sounds: Anatomy and physiology of speech production, spectrographic analysis of speech, categorization of speech sounds Digital models for the speech signal: The acoustic theory of speech production. **8 Hrs**

Unit-2

Time domain models for speech processing: Short-time energy, average magnitude, average zero-crossing rate, speech vs. silence discrimination using energy and zero-crossings, pitch period estimation using a parallel processing approach, short-time autocorrelation function, average magnitude difference function, pitch period estimation using autocorrelation

Short-time Fourier analysis: Fourier transform interpretation, Linear filtering interpretation, Sampling rates of STFT in time and frequency, Filter bank summation method of short-time synthesis, Overlap addition method of short-time synthesis. **8 Hrs**

Unit -3

Homomorphic Speech Processing: Homomorphic systems for convolution, complex cepstrum of speech, pitch detection, formant estimation. **7 Hrs**

Unit -4

Linear prediction analysis of speech: Principles of linear prediction, Computation of the gain for the model, Solution of the LPC equations, Comparison between autocorrelation and covariance methods, Frequency domain interpretation of mean squared prediction error, synthesis of speech from LP parameters, pitch detection and formant analysis using LPC parameters. **8 Hrs**

Unit -5

Applications: Speaker recognition systems, speech recognition systems, isolated word recognition, connected word recognition and large vocabulary word recognition, hidden Markov models, Three basic problems of HMM, Types of HMM. **8 Hrs**

Text Book:

1	Lawrence R. Rabiner and Ronald W. Schafer	Digital processing of speech signals, Second Indian Reprint, Pearson Education 2005

Reference Books:

1	Thomas F. Quatieri	Discrete-time speech signal processing Principles and Practice, First Indian Reprint, Pearson Education 2004
2	Lawrence R. Rabiner, Biing-Hwang Juang, B. Yegnanarayana	Fundamentals of speech recognition", Pearson Education, 2009

E-Resources :

1	https://nptel.ac.in/courses/117105145

Course Outcomes: After the completion of this course, students will be able to:

CO1. Classify speech sounds based on source of excitation in English and Hindi languages (L2)

CO2 Use time domain features like short-time energy and zero crossing rate (ZCR), autocorrelation function, average magnitude difference equation for making speech/non speech distinction (L3)

CO3. Use short time Fourier transform for analysis and synthesis of speech (L2)

CO4. Compare acoustic model, linear prediction and homomorphic filtering approaches for modelling speech (L3)

CO5. Distinguish between template matching, vector quantization and probabilistic model, HMM for use in speech recognition (L2)

CO6. Demonstrate communication skills and capacity for self learning through technical paper reading and report writing (L3)

ADVANCED SIGNAL PROCESSING

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE12	SEE Marks :	50

Course Objectives: This course will enable students to:

1. To understand the fundamentals of multirate signal processing.
2. Learn its applications in communication systems and signal processing

Unit-1

Review of Signals and Systems – Discrete time processing of continuous signals - Frequency domain analysis of a digital filter; Quantization error; Fourier Analysis – DFT, DTFT, DFT as an estimate of the DTFT for Spectral estimation. DFT for convolution, DFT/DCT for compression, FFT. Ideal Vs non ideal filters,Digital Filters – State Space realization, Robust implementation of Digital Filters, Robust implementation of equi – ripple FIR digital filters. **8 Hrs**

Unit-2

Multirate Systems and Signal Processing. Fundamentals – Problems and definitions; Up sampling and down sampling; Sampling rate conversion by a rational factor;
Multistage implementation of digital filters; Efficient implementation of multirate systems. **8 Hrs**

Unit -3

DFT filter banks and Transmultiplexers – DFT filter banks, Maximally Decimated DFT filter banks and Transmultiplexers. Application of transmultiplexers in communications Modulation. **8 Hrs**

Unit -4

Maximally Decimated Filter banks – Vector spaces, Two Channel Perfect Reconstruction conditions; Design of PR filters Lattice Implementations of Orthonormal Filter Banks, Applications of Maximally Decimated filter banks to an audio signal. **8 Hrs**

Unit -5

Introduction to Time Frequency Expansion; The STFT; The Gabor Transform, The Wavelet Transform; The Wavelet transform; Recursive Multi resolution Decomposition. **7 Hrs**

Text Books:

1	Roberto Cristi	Modern Digital Signal Processing, Cengage Publishers, India, (erstwhile Thompson Publications), 2003.

Reference Books:

1	S.K. Mitra	Digital Signal Processing: A Computer Based Approach, III Ed, Tata McGraw Hill, India, 2007.
2	E.C. Ifeachor and B W Jarvis	Digital Signal Processing, a practitioners approach, II Edition, Pearson Education, India, 2002 Reprint.
3	Proakis and Manolakis	Digital Signal Processing, Prentice Hall 1996 (third edition).

Course Outcomes : After the completion of this course, students will be able to:

CO1. Design and Analyze discrete time systems and implement

CO2. Derive an efficient implementation of discrete time system using multirate operations and polyphase decomposition

CO3. Design and analyze filter banks and transmultiplexers using DFT concept

CO4. Analyze perfect reconstruction filter banks using orthogonal basis functions and time frequency representation of signals

CO5. Demonstrate the capacity of self-learning and communication skills through simulation of discrete time systems using Matlab/Scilab/Simulink

WAVELET TRANSFORMS

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE14	SEE Marks :	50

Course Objectives: This course will enable students to:

1. To establish the theory necessary to understand and use wavelets in signal processing.
2. To understand the different types of wavelets.
3. To apply wavelets for speech, image and video compression

Unit-1

Introduction: Review of Fourier theory, why wavelets, filter banks, multi-resolution analysis?

Continuous time bases and wavelets: Introduction, C-T wavelets, definition of CWT, CWT as a correlation, Constant Q-Factor filtering interpolation and time-frequency resolution, CWT as an operator, inverse CWT. **10 Hrs**

Unit-2

Discrete-time bases and wavelets: Approximation of vectors in nested linear vector spaces, (i) example of approximating vectors in nested subspaces of a finite dimensional linear vector space: (ii) example of approximating vectors in nested subspaces of an infinite dimensional of vectors in linear vector spaces. **8 Hrs**

Unit -3

Multi-resolution analysis: Formal definition of MRA, construction of a general orthonormal MRA (i) scaling function and subspaces, (ii) implication of dilation equation and orthogonality, a wavelet basis for MRA (i) two scale relations for (t), (ii) basis for the detail subspace (iii) direct sum decomposition, digital filtering interpolation (i) decomposition filters, (ii) reconstruction of the signal, Example MRA (i) bases for the approximations subspaces and Harr scaling function, (ii) bases for detail subspaces and Harr wavelet. **10 Hrs**

Unit -4

Examples of wavelets: Examples of orthogonal basis generating wavelets, (i) Daubechies D_4 scaling function and wavelet (ii) band limited wavelets, interpreting orthogonal MRAs for discrete time MRA (iii) basis functions for DWT. **6 Hrs**

Unit -5

Applications: Speech, audio, image and video compression, denoising, feature extraction, inverse problems. **5 Hrs**

Text Book:

1	Raghuveer M. Rao and Ajit S. Bopardikar	Wavelet transforms-Introduction to theory and applications, Pearson Education 2000

Reference Books:

1	Prasad and Iyengar	Wavelet transforms, Wiley Eastern, 2001
2	Gilbert Strang and Nguyen Yegnanarayana	Wavelet and filter banks, Wellesley Cambridge press, 1996

Course Outcomes : After the completion of this course, students will be able to:

CO1. Understand the basics of continuous wavelet transform and its properties

CO2. Implement discrete type wavelets for vectors approximation

CO3. Apply multi-resolution analysis for subspaces

CO4. Analyse different types of wavelets

CO5. Illustrate the use of wavelets for Speech, audio, image and video compression

POWER ELECTRONICS

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE37	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Understand fundamentals of power semiconductor devices
2. Learn applications of power electronics

Unit - 1

Power Semiconductor Devices: Introduction, power semiconductor devices, control characteristics of power devices, types of power electronic circuits, thyristor characteristics, two transistor model of thyristor, Thyristor turn on, gate triggering circuits, Resistance firing circuit, resistance capacitance firing circuit, resistance capacitor full wave firing circuit, UJT relaxation oscillator, PUT triggering, natural commutation and forced commutation (qualitative analysis) **9 Hrs**.

Unit – 2

AC Voltage controllers : Introduction, principle of on-off control, principle of phase control, single phase bidirectional controller with resistive load, single phase controllers with inductive load . **7 Hrs**.

Unit – 3

Controlled Rectifiers : Introduction, principle of phase controlled converter operation, single phase semi converter, single phase full converter, single phase dual converter, three phase semi converter, three phase full converter. **7 Hrs.**

Unit - 4

DC Choppers : Introduction, basic chopper classification, basic chopper operation, control strategies, chopper configuration, Jones and Morgan chopper **8 Hrs.**

Unit - 5

Inverters : Introduction, classification of inverters, performance parameters of inverters, single phase half bridge voltage source inverter, single phase full bridge inverters, Three phase inverters 120^0 conduction mode and 180^0 conduction mode, self commutated inverters, parallel inverter. **8 Hrs.**

TEXT BOOKS:

1	Muhammad H.Rashid	Power Electronics: Circuits, Devices and Applications, Pearson Education India Publisher, 3rd Edition, 2014.
2	M. D. Singh &K.B.Khanchandani	Power Electronics, Tata McGraw-Hill Education Publisher, 2nd Edition, 2011.

REFERENCE BOOKS:

1	Daniel W. Hart	Power Electronics, Tata McGraw-Hill Education Publisher, 2011.

Course Outcomes: After the completion of this course, students will be able to:

CO1. Explain the characteristics of power semiconductor devices, design and compare different triggering methods.

CO2. Contrast different ac voltage converters

CO3. Analyse and design single phase and three phase controlled rectifiers.

CO4. Compare different configurations of choppers for power control.

CO5. Illustrate the principle of operation of inverters and distinguish between different inverters.

CO6. Demonstrate capability of self learning, team work and communication skills through micro project.

DSP ALGORITHMS AND ARCHITECTURE

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE13	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Learn the architecture of digital signal processors
2. Implement DSP algorithms.

Unit-1

Introduction to Digital Signal Processing

Introduction, A Digital Signal-Processing System, The Sampling Process, Discrete Time Sequences, Discrete Fourier Transform (DFT) and Fast Fourier Transform (FFT), Linear Time-Invariant Systems, Digital Filters, Decimation and Interpolation. **Architectures for Programmable Digital Signal-Processing Devices:** Introduction, Basic Architectural Features, DSP Computational Building Blocks. **8 Hrs**

Unit-2

Architectures for Programmable Digital Signal-Processing Devices(Contd…): Bus Architecture and Memory, Data Addressing Capabilities, Address Generation Unit, Programmability an Program Execution, Speed Issues, Features for External Interfacing. **Programmable Digital Signal Processors:** Introduction, Commercial Digital Signal-processing Devices, Architecture of TMS320C54xx Digital Signal Processors, Data Addressing Modes of TMS320C54xx Processors. **8 Hrs**

Unit -3

Programmable Digital Signal Processors (Contd…): Memory Space of TMS320C54xx Processors, Program Control, TMS320C54xx Instructions and Programming, On-Chip peripherals, Interrupts of TMS320C54xx Processors, Pipeline Operation of TMS320C54xx Processors. **8 Hrs**

Unit -4

Implementations of Basic DSP Algorithms

Introduction, The Q-notation, FIR Filters, IIR Filters, Implementation of FFT Algorithms, Introduction, An FFT Algorithm for DFT Computation, A Butterfly Computation, Overflow and Scaling, Bit-Reversed Index Generation, FFT Implementation on the TMS320C54xx, Computation of the Signal Spectrum. **8 Hrs**

Unit -5

Interfacing Memory and Parallel I/O Peripherals to Programmable DSP Devices

Introduction, Memory Space Organization, External Bus Interfacing Signals, Memory Interface, Parallel I/O Interface, Programmed I/O, Interrupts and I/O, Direct Memory Access (DMA). **7 Hrs**

TEXT BOOK:

1	Avatar Singh and S. Srinivasan	Digital signal processing Implementations using DSP microprocessors with examples from TMS320C54xx, Tenth Indian Reprint, Cengage Learning, 2010

REFERENCE BOOKS:

1	Texas Instruments	TMS320C54x DSP Reference Set Vol. 1: CPU and peripherals, 2001
2	Texas Instruments	TMS320C54x DSP Reference Set Vol. 2: Mnemonic Instruction Set, 2001
3	Ifeachor E. C., Jervis B. W.	Digital signal processing: A practical approach 2e, Pearson Education, 2002
4	B. Venakataramani and M. Bhaskar	Digital signal processors, TMH, 2002

Course Outcomes: After the completion of this course, students will be able to:

CO1. Analyse basic signal processing concepts and apply them for DSP processor implementation.

CO2. Identify the need of basic DSP operations, formulate the logic and provide hardware solutions to implement these operations

CO3. Identify and apply the architectural features of TMS320C54xx to provide efficient design solutions

CO4. Develop ALP for TMS320C54xx DSP processors exploring different functional units and addressing modes

CO5. Provide solutions for signal processing problems by implementing FFT, FIR and IIR algorithms on TMS320C54xx processor.

CO6. Design an interfacing circuit to connect DSP processor to memory and peripherals.

ERROR CONTROL CODING

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE07	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Learn techniques of traditional coding theory concepts
2. Implement algorithms for error detection and correction.

Unit 1

Introduction to Algebra: Groups, Fields, Binary Field Arithmetic, Construction of Galois Field GF (2m) and its basic properties, Computation using Galois Field GF (2m) Arithmetic. **8 Hrs**

Unit 2

Vector spaces : Properties, matrices, Construction of G and H matrix, Single parity check codes, repetition codes, self dual codes Reed – Muller codes.
Systematic and Non systematic cyclic codes, Encoding using Multiplication circuits, Encoder circuit using parity polynomial, Meggitt decoder, Error trapping decoding, Cyclic Hamming codes, (23, 12) Golay code, Shortened cyclic codes. **8 Hrs**

Unit 3

BCH Codes: Binary primitive BCH codes, Decoding procedures, Implementation of Galois field Arithmetic, Implementation of Error correction. Non – binary BCH codes: q – ary Linear Block Codes, Primitive BCH codes over GF (q), Reed – Solomon Codes, Decoding of Non – Binary BCH and RS codes: The Berlekamp - Massey Algorithm.
Majority Logic Decodable Codes: One – Step Majority logic decoding, one – step Majority logic decodable Codes, Two – step Majority logic decoding, Multiple – step Majority logic decoding. **8 Hrs**

Unit 4

Convolutional Codes: Encoding of Convolutional codes, Structural properties, Distance properties, Viterbi Decoding Algorithm for decoding, Soft – output Viterbi Algorithm, Stack and Fano sequential decoding Algorithms, Majority logic decoding. **8 Hrs**

Unit 5

Turbo coding: Introduction to Turbo coding and their distance properties, Design of Turbo codes.

Burst – Error – Correcting Codes: Burst and Random error correcting codes, Concept of Inter – leaving, cyclic codes for Burst Error correction – Fire codes, Convolutional codes for Burst Error correction. **7 Hrs**

Text Books:

1	Shu Lin & Daniel J. Costello, Jr	Error Control Coding, Pearson / Prentice Hall, Second Edition, 2011.

Reference Books:

1	Blahut, R.E.	Algebraic Codes for Data Transmission Cambridge University Press, 2012.

Course outcomes: After the completion of this course, students will be able to:

CO1. Construct Galois fields as per the requirement and perform computations using Galois Field arithmetic.

CO2. Design various linear block codes and cyclic codes as per the specifications and develop encoding/decoding circuits.

CO3. Design BCH codes as per the specifications and perform Decoding.

CO4. Perform encoding/decoding of convolution codes.

CO5. Design Turbo Codes, Burst and random error correcting codes.

EMBEDDED SYSTEM DESIGN

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE43	SEE Marks :	50

Couse Objectives: At the end of this course students will

1. Exhibit the knowledge of representing the hardware and software in unified way.
2. Formulate the problems and choose suitable design, processor technology and integrating the embedded system.
3. Develop a supplement to design a software architecture in real time digital systems.

Unit 1

Introduction: Overview, Optimizing the Metrics, Processor Technology, Design Technology

Custom Single Purpose Processors: Custom Single Purpose Processors design, optimizing Program, FSMD, data path & FSM. **8 Hrs**

Unit 2

General purpose processors and ASIP's: Software and operation of general purpose processors, Programmer's View, Development Environment, ASIP's, Microcontrollers, DSP.

Standard Peripherals: Timers and Applications, PWM's & Application, UART, Stepper Motor Controls, A/D Converters.

8 Hrs

Unit 3

Memory: Different types of ROM's & RAM's, Cache System.

Interfacing: Introduction to Interfacing, Interrupts and DMA, Communication: serial Protocols, Parallel Protocols, Wireless Protocols.

10 Hrs

Unit 4

Interrupts: Basics, Shared Data Problem, Interrupt latency,

Introduction to Real Time Operating System: Tasks and states,scheduler, tasks and data, shared data problem, reentrancy, Semaphores and shared data, semaphores problem, semaphore variants. **7 Hrs**

Unit 5

Real Time Operating System Services: Message Queues, Mail boxes, and Pipes, Timer Functions, Events, Memory Management, Interrupt Routines in an RTOS environment. **6 hrs**

TEXT BOOKS:

1	Frank Vahid and Tony Givargis	Embedded system Design, John Wiley, 2002.
2	David E,Simon	An Embedded Software Primer, Pearson Education, 1999.

REFERENCE BOOKS :

1	Tammy Noergaard	Embedded Systems Architecture – A Comprehensive Guide for Engineers and Programmers, Elsevier Publication, 2005.

E-Resources :

1	https://www.youtube.com/watch?v=TP1_F3IVjBc&list=PLJ5C_6qdAvBEUjcu1ka0QY9G-zoOlXqCL
2	https://www.youtube.com/watch?v=docZGkYbruw&list=PLJ5C_6qdAvBEUjcu1ka0QY9G-zoOlXqCL&index=3

Course Outcomes: After the completion of this course, students will be able to:

CO1. Apply the knowledge of digital system fundamentals to describe the importance of embedded computing systems and their unique Characteristic features, processor and design technology.

CO2. Design custom single purpose processor, analyze the FSMD, FSM and optimize the processor.

CO3. Identify and contrast the features of the general purpose processors and ASIP's processor design technologies, and illustrate the standard peripherals used to improve the productivity of the embedded system.

CO4. Design memory and the communication protocols in building an embedded system.

CO5. Apply the knowledge of software architecture to describe the difference between various embedded system architectures and the interrupt mechanism for embedded software design.

CO6. Analyse the typical RTOS services for embedded system software and apply the various intercommunication and scheduling strategies for building the embedded system software.

ARTIFICIAL NEURAL NETWORKS

Contact Hours/Week	:	3	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	RECE16			

Course Objectives: This course will enable students to:

1. Learn basic differences between human and machine intelligence. Understand the attractive features of the biological neural networks to realize some of features through parallel and distributed processing models.
2. Explain the biological and mathematical foundations of neural network models.
3. Learn different learning models to train an artificial neural network.
4. Identify various pattern recognition tasks & select suitable neural network architectures.
5. Design, build and train neural networks to solve various pattern recognition tasks.

Unit-I

Review of Linear algebra: Linear combination of vectors, linearly dependent and independent set of vectors, Vector space, subspace, basis, rank, Eigen vectors, orthogonal vectors, inner product, outer product.(No questions will appear in the end exam from these topics)

Basics of Artificial Neural Networks: Trends in computing, Pattern and Data, Pattern recognition tasks. Basic methods of pattern recognition, Basics of Artificial Neural Networks, Biological Neural Network, Models of neuron: McCulloch-Pitts Model, Perceptron, Adaline, topology, Supervised and unsupervised learning, Basic learning laws, Realization of logic functions using MP neuron. **7 Hrs**

Unit-II

Functional units of ANN & Single layer perceptron: Basic ANN Models (architectures) for Pattern recognition task**,** Pattern recognition tasks by i) Feed-forward ii) Feed-back iii) competitive learning Neural networks. Feed-forward neural network: Linear associative network, Analysis of pattern classification networks, Linear separability, Perceptron convergence theorem. **7 Hrs**

Unit-III

Multi-Layer perceptron: Linear Inseparability**:** Hard problems, MLFFNN: Back propagation learning, Draw backs of back propagation algorithm, Heuristics to improve the performance of Back propagation learning discussion on error back propagation, Convolution neural network (**CNN**). **8 Hrs**

Unit-IV

Feedback Neural Networks: Analysis of pattern storage networks, The Hopfield Model, Energy analysis of Hopfield model, State transition diagram, Pattern storage: Hard problems, Stochastic Networks and simulated annealing.

Competitive learning network: Basic competitive learning, Analysis of pattern clustering Networks. Analysis of Feature Mapping Network

9 Hrs

Unit-V

Architectures for complex pattern recognition tasks: Bidirectional associative memory, Architecture of Radial basis function (RBF) networks, Theorems for function approximation, RBF networks for function approximation, Covers theorem on separability of patterns, The XOR problem, RBF Networks for pattern Classification, comparison of RBF with MLP networks. **8 Hrs**

Text Books:

1	https://onlinecourses.nptel.ac.in/noc22_cs73/course
2	https://onlinecourses.nptel.ac.in/noc22_cs124

Course Outcomes: After the completion of this course, students will be able to:

CO1. Distinguish between human and machine intelligence
CO2. Analyze various learning methods of neural networks.
CO3. Illustrate the use of feed-forward neural network for simple pattern recognition tasks.
CO4. Illustrate use of feed-back neural network for pattern storage problems.
CO5. Apply Radial basis function networks for complex pattern recognition tasks

APPLIED EMBEDDED SYSTEMS

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE35	SEE Marks :	50

Course objective: This course will enable students to:

1. Understand the implementation and applications of the embedded system.
2. Discuss the common controllers used to build the embedded system.
3. Learn the various software development approaches and an operating system services required.

Unit 1

Introduction:

An embedded system, Processors embedded into a system, Embedded hardware units and devices in a system, Embedded software in a system, Examples of embedded systems, Embedded system on chip (SoC) and use of VLSI circuits design technology, Complex systems design and processors, Design process in embedded system, Formalism of system design, Design process and design examples, Classification of embedded systems, Skills required for an embedded system designer.

6 hrs

Unit 2

Embedded controller (PIC)

CPU architecture and instruction sets: Hardware architecture and pipelining, program memory consideration, Register file structure and Addressing modes, CPU register, Instruction set, Loop time subroutine

Timer2 and Interrupts: Timer2 use interrupt logic, Timer2 Scalar Initialization.

External interrupts and Timers: Timer0 Compare/capture mode, Timer1/CCP programmable period scalar. Timer1 and sleep mode, PWM O/P Port B change interrupts. **10 hrs**

Unit 3

Low Power embedded controller:

Low Power embedded systems, Key differentiating factors between different MSP430 families. Target applications.

MSP430 RISC CPU architecture**,** Compiler friendly features, Instruction set, Clock system, Reset system, Memory subsystem. On chip peripherals. Watchdog Timer, Comparator, Op-Amp, Basic Timer, Real Time Clock (RTC),

ADC, DAC, SD16. Using the Low power features of MSP430. Low power modes, Clock request feature, Low power programming and Interrupt.

8 hrs

Unit 4

PROGRAM MODELING CONCEPTS

Program models, Data flow graph models, State machine programming models for event controlled programs, Modeling of multiprocessor systems, UML modeling. **5 hrs**

Embedded RTOS

Inter process communication, Process Management, Timer Functions, Event Functions, Memory management, Device, File, and IO Subsystems Management, Interrupt Routines in RTOS environment and handling of interrupt source calls by RTOS, Introduction to Real Time Operating System, Basic Design Using a Real Time Operating System, RTOS Task Scheduling Models, Latency, Response Times, Deadline as Performance Metric, Latency and Deadlines as Performance Metric in Scheduling Models For Periodic, Sporadic and Aperiodic Tasks, CPU Load as Performance Metric, Sporadic Task Model Performance Metric. OS security issues.

4 hrs

Unit 5

Devices and communication buses: Serial communication devices, wireless devices, Networked embedded system, wireless and mobile system protocols.

3 hrs

Case Studies of applications: Design of RTC, Wireless sensor network with Chipcon RF interfaces. **3 hrs**

Text Books :

1	Embedded Systems: Architecture and Programming	Raj Kamal, TMH. 2011
2	Design with PIC Microcontrollers	John B Pitman, Pearson Education Asia, edition 2002
3	MSP430 Microcontroller Basics	John Davies, Elsevier, 2010

Reference Books:

1	PIC microcontroller	Mid range reference manual
2	MSP430 user's guide	user's guide

E-Resources:

1	https://nptel.ac.in/courses/108102169
2	https://nptel.ac.in/courses/108102045

Course Outcomes:

Upon completion of this course the student will be able to:

CO1. Apply the engineering knowledge to develop an embedded application.
CO2. Analyze and evaluate the common embedded controllers and their peripherals.
CO3. Design the programming models of embedded systems and implement on the RTOS platforms.
CO4. Evaluate various software models and metrics relevant to embedded system application.
CO5. Build and evaluate the different classes of embedded system using common hardware and software development platforms and environment.

COMPUTATIONAL ELECTROMAGNETICS

Contact Hours/Week	: 3	Credits :3
Total Lecture Hours	: 39	CIE Marks :50
Course Code	: RECE44	SEE Marks :50

Course Objectives: This course will enable students to:

1. Understand the concepts of computational electromagnetics.
2. Understand numerical stability and boundary conditions.
3. Understand the concepts of FDTD and Finite Element Method.

Unit -1

Analytical Methods : Introduction, Separation of variables, Separation of variables in rectangular coordinates – Laplace equation, Separation of variables in cylindrical coordinates – Laplace equation. **8 Hrs**

Unit-2

Finite Difference Methods: Finite Difference Schemes, Finite differencing of Parabolic PDE, Hyperbolic PDEs, Accuracy and Stability, Absorbing boundary conditions of FDTD, Programming Aspects. **8 Hrs**

Unit-3

Variational Methods: Calculus of variations, construction of functions from PDEs, weighted residual method, Eigen value problems. **8 Hrs**

Unit-4

Moment Methods: Introduction, Integral equations, Green's function for free space, Applications- Quasi static problems and Pocklington's integral equation. **8 Hrs**

Unit-5

Finite Element Method: Introduction, Solution of Laplace's equation, Solution of Poisson's equation, Solution of wave equation. **7 Hrs**

TEXT BOOKS:

1	Matthew. N.O Sadiku	Numerical Techniques in Electromagnetics with MATLAB, CRC Press Taylors and Francies Group, 3rd Edition, 2009.
2	Constantine A Balanis	Advanced Engineering Electromagnetic, John Wiley & Sons, 2nd Edition, 2012.

REFERENCE BOOKS:

1	Nathan Ida	Engineering Electromagnetic, Springer, 2nd Edition, 2007.
2	Anastasis C. Polycarpou	Introduction to the Finite Element Method Electromagnetics, Morgon & Claypool Publishers, 1st Edition, 2006.

E-Resources :

1	https://nptel.ac.in/courses/108106152
2	https://www.youtube.com/playlist?list=PLRWKj4sFG7-4l5a3TsBwpc3-STQ2XjKXv

Course Outcomes: After the completion of this course, students will be able to:

CO1. Analyze the Laplace's equation using analytical methods.

CO2. Apply residual calculus in deriving and analyzing various computational techniques.

CO3. Apply and analyze Green's function for free space.

CO4. Classify and Prioritize different CEM techniques based on the applications.

CO5. Apply and analyze Poisson's and Laplace's equations using finite element method.

DATA SCIENCE

Contact Hours/week	: 3 + 0	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE 45		

COURSE OBJECTIVES:

This Course will enable students to:

1. Describe the concept of data science, its scope in business and explain the available techniques. (L1, L2)
2. Understand Predictive modeling, explain supervised segmentation and given data set should be able to select (through solving) the attribute for segmentation using the available techniques. (L2, L3)
3. Explain the concept of Classification and classify (solve) a given data set. (L3)
4. Understand and describe the concept of similarity, neighbors and clustering and apply it for any real world data. (L3, L4)
5. Explain the concepts of mining text and other data science tasks and techniques. (L2, L4)

UNIT-1

Introduction: Data-Analytic Thinking: The Ubiquity of Data Opportunities, Example: Hurricane Frances, Example: Predicting Customer Churn. Data Science, Engineering, and Data-Driven Decision Making, Data Processing and "Big Data", Data and Data Science Capability as a Strategic Asset, Data-Analytic Thinking.

Business Problems and Data Science Solutions: From Business Problems to Data MiningTasks, Supervised Versus Unsupervised Methods, Data Mining and Its Results, The Data Mining Process, Business Understanding, Data Understanding, Data Preparation, Modeling, Evaluation, Deployment, Other Analytics Techniques and Technologies: Statistics, Database Querying, Data Warehousing, Regression Analysis, Machine Learning and Data Mining.

07 Hrs

UNIT-2

Introduction to Predictive Modeling: From Correlation to Supervised Segmentation Models, Induction, and Prediction, Supervised Segmentation, Selecting Informative Attributes Example: Attribute Selection with Information Gain, Supervised Segmentation with Tree-Structured Models, Visualizing Segmentations, Trees as Sets of Rules, Probability Estimation, Example: Addressing the Churn Problem with Tree Induction. **08 Hrs**

UNIT-3

Fitting a Model to Data: Classification via Mathematical Functions: Linear DiscriminantFunctions, Optimizing an Objective Function, An Example of Mining a Linear Discriminant from Data, Linear Discriminant Functions for Scoring and Ranking Instances, Support Vector Machines briefly, Regression via Mathematical Functions, Class Probability Estimation and Logistic "Regression". Logistic Regression: Some Technical Details. Example: Logistic Regression versus Tree Induction, Non Linear Functions, Support vector machines and Neural Networks. Over fitting and Its Avoidance: Fundamental Concepts, Exemplary Techniques, Regularization, Genaralization, Over fitting, Over fitting Examined. **8 Hrs**

UNIT-4

Similarity, Neighbors, and Clusters: Similarity and Distance, Nearest-Neighbor Reasoning,Example: Whiskey Analytics, Nearest Neighbors for Predictive Modeling, How Many Neighbors and How Much Influence? Geometric Interpretation, Overfitting, and Complexity Control. Issues with Nearest-Neighbor Methods. Some important Technical Details Relating to Similarities and neighbors. Clustering, Example: Whiskey Analytics Revisited, Hierarchical Clustering, Nearest Neighbors Revisited: Clustering Around Centroids. Understanding the Results of Clustering. **8 Hrs**

UNIT-5

Decision Analytic Thinking I: What is a Good Model?: Evaluating Classifiers Plain Accuracyand its Problems, The confusion matrix, Problems with unbalanced Classes, Problems with Unequal Costs and Benefits.

Representing and Mining Text:

Why Text Is Important? Why Text Is Difficult?

Representation, Bag of Words, Term Frequency, Measuring Sparseness: Inverse Document

Frequency, Combining Them: TFIDF, Example: Jazz Musicians

Other Data Science Tasks and Techniques: Co-occurrences and Associations: Finding Items That Go Together, Measuring Surprise: Lift and Leverage, Example: Beer and Lottery Tickets, Associations Among Facebook Likes, Profiling: Finding Typical Behavior, Link Prediction and Social Recommendation. **8 Hrs**

TEXT BOOKS:

1	Foster Provost and Tom Fawcett	Data Science for Business, Published by O'ReillyMedia, Inc. July 2013: First Edition.

REFERENCE BOOKS:

1	Rachel Schutt& Cathy O'Neil	Doing Data Science ,O'Reilly Media, October2013: First Edition.
2	Hector Cuesta,	Practical Data Analysis, PACKT Publishing, First published:October 2013
3	Michael R. Berthold,Christian Borgelt, Frank Hijppner, Frank Klawonn	Guide to Intelligent Data Analysis, Springer-Verlag London Limited 2010.

Course outcomes: After the completion of this course, students will be able to:

CO1. Apply the knowledge of mathematics to explain the concept of data science, the available techniques in data science and its scope in business.

CO2. Develop a Decision tree based on supervised segmentation and predict the class for a given data set by selecting (through solving) the attribute for segmentation using the available techniques.

CO3. Analyze the given data set, and solve a problem by performing Classification using the basics of mathematics and data science.

CO4. Develop solutions to group entities in data set and apply it for the given real world data using the basic knowledge of similarity, neighbors and clustering.

CO5. Analyze the importance of mining text (social data) and formulate the association rules based on market basket analysis.

MODERN WIRELESS STANDARDS

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE46	SEE Marks :	50

Course Objectives: This course will enable students to :

1. Learn different wireless architectures
2. Understand different wireless standards
3. Acquire the knowledge about the technologies related to 5G wireless standard

Unit -1

GSM Architecture, interfaces and Radio link features: Introduction, GSM frequency bands, GSM PLMN, Objectives of a GSM PLMN, GSM PLMN Services, GSM Subsystems, GSM Subsystems entities, GSM interfaces, The radio interface (MS to BSC), Abits interface (BTS to BSC), A interface (BSC to MSC), Interfaces between other GSM entities, Mapping of GSM layers onto OSI layers. Radio link measurements, Radio link features of GSM, Dynamic power control, Discontinuous transmission (DTX), SFH, Future techniques to reduce interface in GSM, channel borrowing, smart antenna. **8 Hrs**

Unit - 2

GSM logical channels and frame structure: Introduction, GSM logical channels, allowed logical channel combinations, TCH multi frame for TCH/H, CCH multi frame, GSM frame structure, GSM bursts, Normal burst, Synchronization burst, Frequency correction channel burst, Access burst, Data encryption in GSM, Mobility management, Location registration, Mobile identification. **8 Hrs**

Unit - 3

Code Division Multiple Access: Introduction to CDMA technology, IS 95 system architecture, Air interface, Physical and logical channels of IS 95, Forward link and Reverse link operation, Physical and Logical channels of IS 95 CDMA, IS 95 CDMA call processing, soft handoff, evolution of IS 95 (CDMA One) to CDMA 2000, CDMA 2000 layering structure and channels. **8 Hrs**

Unit - 4

Higher generation Cellular standards: 3G standards, evolved EDGE, enhancement in 4G standard, Architecture and representative protocols, call flow for LTE, VoLTE, UMTS. **8 Hrs**

Unit - 5

5G Wireless Standards: Non Orthogonal Multiple Access, Co-operative communication systems, Co-operative MIMO model, Massive MIMO, Cognitive Radio and Spectrum Sensing, millimetre wave. **7 Hrs**

TEXT BOOKS :

1	V.K.Garg, J.E.Wilkes	Principles and Applications of GSM, PHI 5th Edition, 2008
2	V.K.Garg, J.E.Wilkes	IS-95 CDMA and CDMA 2000, PHI, 4th Edition, 2009
3	Afif Osseiran, Jose F. Monserat, Patrick Marsch	5G Mobile and Wireless Communiation Technology, 1st Edition, Cambridge University Press, 2016.

REFERENCE BOOKS :

1	Andy Dornan	The essential guide to wireless communications applications: from cellular systems to Wi-Fi, 2nd Edition, Prentice Hall, 2002.
2	Misra	Wireless Communications and Networks: 3G & Beyond, Tata McGraw-Hill, 2009.

Course Outcomes : After the completion of this course, students will be able to:

CO1. Analyze the architecture of different wireless standards

CO2. Differentiate between logical channels and frame structure

CO3. Analyse CDMA based wireless networks

CO4. Demonstrate higher generation cellular standards

CO5. Identify and analyse the technologies of 5G wireless standards

SYSTEM ON CHIP

Contact Hours/ Week	: 3	Credits: 3
Total Lecture Hours	: 39	CIE Marks : 50
Total Tutorial Hours	: 0	SEE Marks : 50
Course Code	: RECE47	

Prerequisites: Basics of processor architecture, embedded systems

Course Objectives: This course will enable students to

1. Understand the fundamentals of designing System-on-Chip and system architecture
2. Apply these fundamentals to design different real-world System on Chip Devices.

UNIT-I

Introduction to the Systems Approach: System Architecture, Components of the system, Hardware & Software, Processor Architectures, Memory and Addressing. System level interconnection, an approach for SOC Design, System Architecture and Complexity. **8 Hrs**

UNIT – II

Processors: Introduction, Processor Selection for SOC, Basic concepts in Processor Architecture, Basic concepts in Processor Micro Architecture, Basic elements in Instruction handling.

Buffers : Minimizing Pipeline Delays, Branches, More Robust Processors, Vector Processors and Vector Instructions extensions, VLIW Processors, Superscalar Processors **8 Hrs**

UNIT – III

Memory Design for SOC : System-on-Chip and Board-Based Systems, SoC External Memory DDR, Flash, SoC Internal Memory: Placement, Size of Memory, Scratchpads and Cache Memory, SoC (On-Die) Memory Systems, Board-based (Off-Die) Memory System, Interaction between processor and memory. **8 Hrs**

UNIT- IV

Interconnect architectures for SoC : Bus architecture, SOC Standard buses, Analytic bus models, Beyond the bus: Network on Chip (NOC) with switch interconnects, NOC examples, Layered Architecture and NIU, Evaluating Interconnect networks C **8 Hrs**

UNIT- V

Applications of SoCs : SOC Design approach, Applications of SoC for AES, Image processing, Video and 3D graphics. **7 Hrs**

TEXT BOOKS:

1	Michael J. Flynn and Wayne Luk	Computer System Design System-on-Chip Wiley India Pvt. Ltd
2	Steve Furber,	ARM System on Chip Architecture, Addison Wesley Professional, 2nd Edition, 2000

REFERENCE BOOKS:

1	Michael Keating, Pierre Bricaud	Reuse Methodology Manual for System on Chip designs, Kluwer Academic Publishers, 2nd edition, 2008.
2	Design of System on a Chip: Devices and Components	Ricardo Reis, 1st Edition, 2004.

E-Resources :

1	https://onlinecourses.nptel.ac.in/noc21_ee09/preview
2	https://archive.nptel.ac.in/courses/117/106/117106093/

Course Outcomes: After the completion of this course, students will be able to:

CO1. Learn the System on Chip design, Architecture and complexity in designing

CO2. Apply the design concepts for Processors and interconnect architecture

CO3. Recognize the type of memory required to design System on a Chip device

CO4. Design a modern System-on-a-Chip Device.

AUTOMOTIVE ELECTRONICS

Contact Hours/ Week	: 3	Credits: 3
Total Lecture Hours	: 39	CIE Marks : 50
Total Tutorial Hours	: 0	SEE Marks : 50
Course Code	: RECE48	

Prerequisites: Processor architecture, embedded systems, Control systems

Course Objectives: This course will enable students to

1. Understand the fundamentals of automotive electronics for vehicles.
2. Acquire the technical knowledge of applying these fundamentals to commercial vehicles.
3. Analyse the future trend of automotive electronics

UNIT I

Basics of Electronics in Automotive: Overview automotive electronics, Motoronic Engine management system [Text 1]. Chassis Control domain- Traction control system, Anti Braking System, adaptive cruise control system, Occupant Safety system. Body electronics domains- Lighting, window, central locking electric system [Text 2] **8 Hrs**

UNIT II

Vehicle system architecture: Hardware architecture, software architecture, Network architecture. [Text 1]

Control theory: open loop control, closed loop control- case study fuel control system, speed control system, Steering components.*[Text 3]* **7 Hrs**

UNIT III

Automotive networking: OSI and Autosar standards, basics of vehicle automotive system networking, Bus system: Requirements, classification, CAN, LIN, MOST, Bluetooth, Flex-ray, Coupling systems. [Text 1] **8 Hrs**

UNIT IV

Automotive sensors and measurements: Features of vehicle sensors**,** classification, smart sensors- Position sensors, Speed and RPM sensors, Pressure sensors, flow sensors, wave propagation sensors, image sensors. [Text 1]

Automotive MCUs for vehicular control: Power MCU, NXP automotive MCU case study [Text 4, 5] **8 Hrs**

UNIT V

Automotive Diagnostics: Electronic Control System Diagnostics, Service Bay, Diagnostic Tool, On-board Diagnostics, Model-Based Sensor Failure Detection, Expert Systems in Automotive Diagnosis. [Text 3]

Future trends of Automotive Electronics: Electric Vehicles, Hybrid Vehicles, Augmentation, and Autonomous driving assistance. [Text 1]
Case study: Contemporary commercial automotive vehicle. **8 Hrs**

Text Books:

1	Bosch Automotive Electrics and Automotive Electronics Systems and Components, Networking and Hybrid Drive	Robert Bosch Gmbh (Ed.), 5th edition, John Wiley& Sons Inc., 2007.
2	Fundamentals of Motor Vehicle Technology on Chassis and Body Electronics	Hillier's, Fifth Edition, Nelson Thrones, 2007
3	Understanding Automotive Electronics	William B. Ribbens, 5th Edition, Butterworth, Heinemann Woburn, 1998.
4	SPC58 2B Line - 32 bit Power Architecture automotive MCU	STM Reference Manual
5	S32K3 Microcontrollers	NXP Reference manual, 2022 edition.

Course Outcomes: After the completion of this course, students will be able to:
CO1. Describe the basic Vehicular design and the basic electronics block associated with.
CO2. Analyse the vehicular architecture and design the control systems involved in automotive principles.
CO3. Analyse and apply the networking principles in automotive electronics
CO4. Analyse the measurement tools and Controller architecture involved in design of automotive vehicles.
CO5. Analyze the future trends and design an automotive electronics based vehicle.

SCHEME & SYLLABUS

OF

VII & VIII SEMESTERS B.E.

ELECTRONICS AND COMMUNICATION ENGINEERING

AY: 2022-23

(Applicable to 2019-20 Batch)

Vision

To create professionally competent and socially sensitive Electronics and Communication engineers capable of working in multicultural global environment.

Mission

To provide a congenial environment for superior learning experience and offer high quality education relevant to the current and future needs of the society and careers of students in the field of Electronics and Communication Engineering.

Programme Educational Objectives :

The graduates of Electronics and Communication engineering programme are able to :

a) Design and build systems for providing solutions to real life problems in the area of Electronics and Communication.

b) Be a successful entrepreneur, build careers in Industry, government, public sector undertakings, pursue higher education and research.

c) Work individually, within multidisciplinary teams and lead the team following sound professional and ethical practices.

Graduate attributes and Program Outcomes (POs)

1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes (PSOs)

A graduate of the Electronics and Communication Engineering Program will demonstrate

1. The ability to analyse and design systems in the areas related to microelectronics, Communication, Signal Processing and embedded systems for solving real world problems (Professional Skills).

2. The ability to identify problems in the areas of communication and embedded systems and provide efficient solutions using modern tools/algorithm individually or working in a team (Problem solving Skills).

CMOS VLSI DESIGN

Contact Hours/ Week	: 4 +0+0	Credits :	4
Total Lecture Hours	: 52	CIE Marks :	50
Sub. Code	: 7REC01	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Analyze the impact of fabrication technologies: Methods for optimizing the area, speed, and power of circuit layouts.
2. Design and implement combinational circuit.
3. Design and implement sequential system by considering specifications.
4. Analyze the impact of RC effect in post simulation.

UNIT-1

VLSI Design Flow:
Design Specification, Design Entry, Functional Simulation, Planning Placement and Routing. MOSFET I-V characteristics, Current equation

Combinational Circuit Design:
CMOS Inverter, CMOS Logic circuits, NAND Gate, NOR Gate, Compound Gates, Pass Transistors and Transmission Gates, Tristate buffer, Multiplexers.

DC Transfer Characteristic:
CMOS Inverter DC Characteristics, Beta Ratio Effect, Noise Margin, Pass Transistor Characteristics, NAND and NOR DC characteristics

10 Hrs

UNIT-2

CMOS Processing Technology:
Introduction, CMOS Technologies: Wafer Formation, Photolithography, Well and Channel Formation, Silicon Dioxide, Isolation, Gate Oxide, Gate and Source/Drain Formations, Contacts and Metallization, Passivation, Metrology**.**

Layout Design Rules: Well rules, transistor rules, contact rules, metal rules, via rules, other rules. Layout design: CMOS Inverter, Complex logic gates by using Euler graph. **10 Hrs**

UNIT-3

Circuit characterization and performance estimation: Introduction, delay estimation: Switch level RC delay models, linear delay model, logical effort, parasitic delay Logical effort and transistor sizing: delay in a logic gate, delay in multistage logic networks, choosing the best number of stages Power dissipation: static

dissipation, dynamic dissipation, low power design. Interconnect: resistance, capacitance, delay, crosstalk **10 Hrs**

UNIT-4

Circuit Families: Static CMOS, Ratioed Circuits: Pseudo nMOS, Tristate circuits, Dynamic Circuits: Domino Logic, Dual rail logic networks: Cascode Voltage Switch Logic and Complementary Pass-Transistor Circuits. BiCMOS logic circuits: Basic BiCMOS circuit, static behavior, switching delay in BiCMOS logic circuits, BiCMOS applications.

MOS Transistor Theory:

Introduction, Ideal I-V characteristics, C-V Characteristics, Simple MOS Capacitance Models, detailed MOS Gate Capacitance Model, MOS diffusion capacitance model, Non ideal I-V Effects, Velocity saturation and Mobility Degradation, Channel Length Modulation, Body effect, Sub threshold conduction, Junction Leakage, Tunnelling and Temperature dependence **12 Hrs**

UNIT-5

Data path Subsystem:

Addition/Subtraction: Single-Bit Addition, Carry-Propagate Addition, One/Zero Detectors, Comparators, Boolean Logical Operations using MUX, Unsigned array multiplication.

Sequential MOS Logic Circuits:

Behavior of Bistable element, SR Latch Circuit, Clocked latch and Flip Flop Circuits, CMOS D-Latch and Edge Triggered Flip-Flop.

Semiconductor memories:

Introduction, dynamic random access memory, static random access memory. **10 Hrs**

Text Books

1	Neil H.E. Weste, David Money Harris	CMOS VLSI Design: A Circuits and Systems Perspective, Pearson, 4th Edition, 2017.
2	Sung MO Kang, Yusuf Leblebici, Chulwoo Kim	CMOS Digital Integrated Circuits: Analysis and Design, Tata McGraw Hill, 4th Edition, 2014.

Reference Books

1	Douglas A. Pucknell & Kamran Eshraghian	Basic VLSI Design, PHI, 3rd Edition (Original edition – 1994), 2005.
2	John P. Uyemura	Introduction to VLSI Circuits and Systems, John Wiley, 2002.
3	Neil H.E. Weste, Kamran Eshraghian	Principles of CMOS VLSI Design: A Systems Perspective, Addison Wesley, 2nd Edition, 1993.

1	https://onlinecourses.nptel.ac.in/noc21_ee09/preview
2	https://archive.nptel.ac.in/courses/117/106/117106093/

Course Outcomes: After the completion of this course, students will be able to:

CO1. Analyze transient and DC characteristics of CMOS circuits

CO2. Describe the various processing steps for an integrated circuits and apply λ -based design rules to construct optimized layout.

CO3. Estimate the delay and power dissipation in CMOS circuits.

CO4. Design and compare advanced MOS circuit families. Analyze the secondary effects on MOSFET characteristics.

CO5. Design and analyze various arithmetic building blocks and memory cells.

CO6. Demonstrate capability of self-learning, team work and communication skills.

ANTENNAS & PROPAGATION

Contact Hours/ Week	: 4	Credits :	4
Total Lecture Hours	: 52	CIE Marks :	50
Sub. Code	: 7REC02	SEE Marks :	50

Course Objectives: This course will enable students to :

1. To understand the parameters of an antenna
2. To know the different antenna arrays & their patterns
3. To design different types of antennas
4. To study the propagation issues related to modern communication system

UNIT-1

Antenna Basics : Basic antenna parameters, patterns, beam area, radiation intensity, beam efficiency, directivity, gain, antenna aperture, effective height, radio communication link, fields from oscillating dipole, antenna field zones, shape-impedance considerations. (T1, T2)

12 Hrs

UNIT-2

Point Sources & Antenna arrays: Introduction, power theorem and applications, radiation intensity, power patterns, field patterns, phase patterns, arrays of two isotropic point sources, non- isotropic similar point sources, pattern multiplication, pattern synthesis, array of n –isotropic sources of equal amplitude and spacing, null directions (broadside case, end-fire case and general case with equal currents of any phase). (T1, T2)

10 Hrs

UNIT-3

Fields: The short electric dipole, the fields of short dipole, radiation resistance, thin linear antenna, radiation resistance of $\lambda/2$ antenna, fields of thin linear antenna, loop antenna (general case), field comparison of short dipole and small loop, field pattern, radiation resistance, directivity, radiation efficiency. Helical and Yagi-Uda Antennas: Helical antenna, helical geometry, design considerations of monofilar axial-mode helical antenna, dipole arrays with parasitic elements, yagi-Uda array. (T1, T2) **10 Hrs**

UNIT-4

Micro strip antenna: Slot antenna, complementary antenna, horn antenna, reflector antenna (corner reflector, parabolic reflector), broadband frequency independent antenna, rumsey's principle, log-periodic antennas. (T1, T2)

Antennas for special applications: Antennas for terrestrial mobile communication systems, antennas for ground penetrating radar (GPR), Embedded antennas, Ultra-wide band antennas for digital applications, plasma antennas. (Only Qualitative analysis). (T1, T2)

Introduction to Smart Antennas: Need for smart antennas, overview, smart antenna configurations, architecture of smart antenna system, benefits, drawbacks, basic principles. (T3) **10 Hrs**

UNIT-5

Propagation of radio waves: Factors involved in propagation of radio waves, the ground waves, reflection of waves by the surface of the earth, space wave propagation, atmospheric effect in space wave propagation, general picture of the ionosphere and its effect on radio waves, mechanism by which the ionosphere affects radio wave propagation, refraction and reflection of sky waves by the ionosphere, ray paths, skip distance, and maximum usable frequency. (T1, T2) **10 Hrs**

Text books:

1	John D Kraus, Ronald J Marhefka, Ahmad S. Khan	Antennas and Propagation, 5th edition, Mc Graw Hill, 2017.
2	K. D. Prasad	Antennas and Propagation, Satya Prakashan, 2009.
3	Frank B Gross,	Smart Antennas with Matlab: Principles and Applications in Wireless Communication-McGraw-Hill, 2015.

Reference book:

1	Constantine A. Balanis	Antenna Theory- Analysis & Design, 4th edition, John Wiley & Sons, 2016.

E-Resources:

1	https://archive.nptel.ac.in/courses/108/101/108101092/

Course Outcomes: After the completion of this course, students will be able to:

CO1. Compute basic antenna parameters
CO2. Analyze broadside, end-fire, extended end-fire antenna arrays
CO3. Apply field equations for short dipole, thin linear and loop antennas
CO4. Design fixed frequency, broad band and microwave antennas
CO5. Analyze ground wave space wave and sky wave propagation

VLSI LAB

Contact Hours/ Week	: 3	Credits : 1.5
Sub. Code	: 7RECL1	CIE Marks : 50
		SEE Marks : 50

Digital /Analog design using **CADENCE / NG Spice / Magic**

1. Transient analysis of CMOS Logic circuit for the given Boolean expressions
2. Transient analysis of Boolean expressions using pass transistor logic
3. (i)Transient analysis of transmission gates and designing of multiplexer using transmission gates
   (ii) Design of Logical unit using Multiplexer
4. (i) Design of Master slave D – flip flop and T – Flip Flop using CMOS and to verify its transient analysis.
   (ii) Transient analysis of asynchronous Counter
5. (i) CMOS full adder design using minimum number of transistors and to verify its transient analysis.
   (ii) Parallel adder using full adder
6. Transient and DC Analysis of CMOS Inverter for the given specifications and optimized layout design and post simulation
7. Transient and DC Analysis of CMOS NAND2 and NOR2 for the given specifications and optimized layout design and post simulation
8. Transient and AC Analysis of Common source amplifier circuit and to extract RC components and back annotation
9. Transient and AC Analysis of Common drain amplifier circuit and to extract RC components and back annotation
10. Transient and AC Analysis of Single Stage differential amplifier circuit and optimized layout design and post simulation

Open Ended Experiment:

1. Design of op-amp using differential amplifier, Common source / Common Drain amplifier
2. Schmitt trigger circuit design.
3. Design of 4 bit binary weighted DAC / 4-bit R-2R Ladder DAC
4. Design of Ring Oscillator for the given frequency
5. Design of Linear feedback shift register
6. Design a circuit to measure Noise margin
7. Design of array multiplier

Course Outcomes: After the completion of this course, students will be able to:

CO1. Apply the Boolean laws and simplify the given expression to design and simulate CMOS circuit.
CO2. Compare the logic circuits realized using PASS transistor and Transmission gates (TGs) with respect to the number of transistors, time delays and output logic levels.
CO3. Design sequential CMOS circuits and perform the transient analysis.
CO4. Design combinational circuits and perform the transient analysis.
CO5. Design CMOS circuits and Draw the optimized layouts, back annotate and analyze.
CO6. Analyze the various MOSFET Amplifier circuits for different configurations Compare the results with/without parasitic.
CO7. Demonstrate the ability to provide efficient solutions for complex problems in the area of microelectronics individually and in a team.

Professional Electives

MEDICAL IMAGE PROCESSING

Contact Hours/Week	:	3+0+0	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Course Code	:	RECE18	SEE Marks	:	50

Course Objectives: This course will enable students to:

1. Understand various medical imaging modalities, acquisition techniques with advantages and limitations.
2. Understand processing of medical images to improve visualization and extract region of interest.

Unit-1

Introduction to Bio-medical Images: Introduction, Block diagram of Computer Aided Diagnosis (CAD), Objectives of bio medical image analysis, Nature of biomedical images, body temperature as an image, Transillumination, Medical imaging types and modalities: X-ray Imaging, Computed Tomography (CT), Nuclear medicine imaging, Ultrasound Imaging, Magnetic Resonance Imaging (MRI). **8 Hrs**

Unit -2

Image Quality and Information content: Difficulties in biomedical Image acquisition and analysis, Characterization of Image quality, review of concept of sampling and quantization, spatial and gray level resolution, optical density, dynamic range, contrast, histogram, entropy, blur and spread functions with reference to medical images, Fourier spectra of biomedical images. **8 Hrs**

Unit -3

Biomedical Image denoising: Characterization of artifacts or noise in biomedical images, examples of noise PDFs, power line interference in biomedical images, physiological interference, signal dependent noise, multiframe averaging in confocal microscopy, mean filters, order statistics filters. Noise reduction in nuclear medicine imaging. **8 Hrs**

Unit-4

Biomedical Image enhancement: Digital subtraction angiography, Dual energy and energy subtraction X-ray imaging, temporal subtraction, Gray scale transforms, Histogram transformation, unsharp masking, high frequency emphasis, homomorphic filtering applied to medical images. **7 Hrs**

Unit -5

Biomedical Image Segmentation: Thresholding and binarization, detection of isolated points and lines, edge detection, Laplacian of Gaussian (LOG), Canny's method for edge detection, Fourier domain methods for edge detection, region growing, splitting and merging applied to Medical Images. **8 Hrs**

Text Books:

1	Rangaraj M Rangayyan	Biomedical Image Analysis, CRC Press, I Edition, 2004.
2	Geoff Dougherty	Digital Image Processing for Medical Applications, I Edition, Cambridge University Press, 2010.

Reference Books:

1	Klaus D. Toennies	Guide to Medical Image Analysis-Methods and Algorithms, I Edition, Springer, 2012.
2	James S Dankan and Nicholas Ayache	Medical Image Analysis: Progress over two decades and the Challenges ahead, IEEE Transactions on PAMI, vol 22, No. 1, Jan 2000
3	Rafael C. Gonzalez and Richard E. Woods	Digital Image Processing, IV edition, Pearson Education, 2018.

E-Resources:

1	https://onlinecourses.nptel.ac.in/noc22_bt34/preview
2	https://onlinecourses.nptel.ac.in/noc20_ee40/preview

Course Outcomes: After the completion of this course, students will be able to:

CO1. Identify various blocks of computer aided diagnosis system and objectives of biomedical image analysis, compare and contrast various medical imaging modalities

CO2. Identify the difficulties in biomedical image acquisition and analysis, characterize medical images w r t resolution, contrast, and entropy.

CO2. Characterize noise/artifacts in biomedical images, apply suitable filters for denoising

CO4. Choose and apply a suitable technique to enhance biomedical images

CO5. Apply various image segmentation techniques for partitioning of medical images to identify the regions of interest

MIMO WIRELESS COMMUNICATION

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Course Code	: RECE41	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Understand the fundamentals of MIMO systems.
2. Learn capacity of MIMO systems and space time codes.

Unit I

Introduction to MIMO channel models: Diversity-multiplexing trade-off, transmit diversity schemes, advantages and applications of MIMO systems, Fading Channel Models: Uncorrelated - fully correlated - separately correlated - keyhole MIMO fading models, parallel decomposition of MIMO channel, Power allocation in MIMO: Uniform - adaptive - near optimal power allocation. **8 Hrs**

Unit II

MIMO Channel Capacity: Capacity for deterministic MIMO Channels: SISO – SIMO – MISO – MIMO, Capacity of random MIMO channels: SISO – SIMO – MISO - MIMO(Unity Channel Matrix, Identity Channel Matrix), Capacity of independent identically distributed channels, Capacity of separately correlated Rayleigh fading MIMO channels, Capacity of keyhole Rayleigh fading MIMO channel **8 Hrs**

Unit III

Space-Time Codes: Advantages, code design criteria, Alamouti space-time codes, SER analysis of Alamouti space-time code over fading channels, Space-time block codes, Space-time trellis codes, Performance analysis of Space-time codes over separately correlated MIMO channel, Space-time turbo codes, BLAST Architectures: VBLAST – HBLAST – SCBLAST - DBLAST. **8 Hrs**

Unit IV

MIMO Detection Techniques: Maximum Likelihood, Zero Forcing, Minimum Mean Square Error, Zero Forcing Equalization with Successive Interference Cancellation, Minimum Mean Square Error Successive Interference Cancellation, Lattice Reduction based detection. **8 Hrs**

Unit V

Advances in MIMO : Spatial modulation, MIMO based cooperative communication and cognitive radio, multiuser MIMO, cognitive-femtocells and Massive MIMO Systems, MIMO Applications in RADAR, Satellite Communication, Wi-Fi.

7 Hrs

Text Books :

1	R. S. Kshetrimayum	Fundamentals of MIMO Wireless Communications, Cambridge University Press, 2017

Reference Books :

1	A. Chokhalingam and B. S. Rajan	Large MIMO systems, Cambridge University Press, 2014.
2	B. Kumbhani and R.S. Kshetrimayum	MIMO Wireless Communications over Generalized Fading Channels, CRC Press, 2017.
3	T. L. Marzetta, E. G. Larsson, H. Yang and H. Q. Ngo	Fundamentals of Massive MIMO, Cambridge University Press, 2016.

E-Resources:

1	https://nptel.ac.in/courses/117105132

Course Outcomes: After the completion of this course, students will be able to:

CO1. Analyze the advantages of MIMO systems.

CO2. Determine the capacity and bit error rate for a given digital modulation scheme of SIMO, MISO, MIMO wireless communication system in Rayleigh frequency flat and frequency selective fading environment.

CO3. Analyze the inherent spatial diversity in MIMO channels through properly designed space-time codes.

CO4. Describe various algorithms used to detect the received signal in MIMO systems.

CO5. Describe the applications of MIMO systems.

SMART MATERIALS AND SMART SYSTEMS

Contact Hours/Week	:	3+0+0	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Course Code	:	RECE40	SEE Marks	:	50

Course Objectives: This course will enable students to:

1. Introduce smart materials and systems in miniaturization.
2. Understand the overview of physical and chemical techniques for thin film deposition.
3. Describe various aspects of electronic devices and circuits.
4. Understand working principles of characterization tools.
5. Understand case studies of microsystems integrated with electronics.

UNIT-I

Basics of Smart materials

Smart materials, structures and Systems, Integrated Microsystems, Specialized material for Microsystems, Application of smart materials and Microsystems. **7 Hrs**

UNIT-II

Fabrication Technology

Thermal oxidation, Thin film deposition, Doping, Lithography, Etching, Silicon micromachining, Advanced processes for microfabrication, Metalization. **8 Hrs**

UNIT – III

Semiconductor Devices

Metal-semiconductor junctions, Schottky vs. Ohmic junctions, Band gap diagrams, I-V Characteristics, p-n junctions, Equlibrium and under bias (forward and reverse), Band Diagrams, I-V characteristics, Junction breakdown, Heterojunctions, The Bipolar Junction transistor, Electronic Amplifiers. **9 Hrs**

UNIT-IV

Thin film Characterization

Overview of thin film characterization, Imaging techniques: Scanning electron microscopy (SEM), AFM, Structural properties: X-ray diffraction (XRD), Electrical properties: Resistance/resistivity –four point probe, Vander Pauw, Mechanical properties: Stress-curvature measurements. **8 Hrs**

UNIT – V

Actuators and Sensors

Silicon Capacitive Accelerometer, Conductometric Gas sensor, Portable Blood Analyzer, Smart materials and Systems, Integration of Micro and smart systems, CMOS First, MEMs First, Case studies of integrated microsystem. **7 Hrs**

Text Books:

1	S.M.Sze	Semiconductor devices: Physics and Technology, 2nd edition, Wiley, 2008.
2	G.K. Ananthasuresh, K.J. Vinoy,, S. Gopalakrishnan, K. N. Bhat, V.K. Aatre	Micro and Smart Systems, Wiley, 2011.

Reference Books:

1	M. V. Gandhi and B. S. Thompson	Smart Materials and Structures, Springer 1992.

E-Resources:

1	https://nptel.ac.in/courses/112108092

Course Outcomes: After the completion of this course, students will be able to:

CO1. Describe smart materials used in electronic engineering.
CO2. Describe different techniques used for fabrication of devices.
CO3. Design circuits for microsystem and smart systems.
CO4. Identify the characterization tool for a device.
CO5. Integrate sensors with microsystem and smart systems.

COMPOUND SEMICONDUCTOR DEVICES AND APPLICATIONS

Contact Hours/Week	:	3+0+0	Credits	:	3
Total Lecture Hours	:	39	CIE Marks	:	50
Course Code	:	RECE42	SEE Marks	:	50

Course Objectives: This course will enable students to:

1. Understand the properties of III-V compound semiconductors.
2. Know the fabrication technics of GaAs and related semiconductor devices.
3. Learn design techniques of schottky, MESFET and various RF and MW solid state devices.
4. Understand photonic devices and GaN power devices.

UNIT-I

Introduction to GaAs and related materials

Unit1: Properties of III-V compounds-Density of states in 2-, 1- and 0-dimensions, conduction processes, optical processes, recombination, absorption and radiations in semiconductors. **6 Hrs**

UNIT-II

Fabrication heterostructures

Bulk single crystal growth (Bridgeman and LEC)-Wafer fabrication and specification, Epitaxy (MBE and OMVPE) of single crystal layers, heterostructures and dissimilar materials, quantum wells, superlattices, quantum wires and quantum dots, doping techniques, emerging III-V materials (GaN). **7 Hrs**

UNIT – III

Schottky, MESFET and MW devices

Metal (Schottky) and ohmic contact techniques. GaAs metal-semiconductor field effect transistor (GaAs MESFET): introduction, structure, equivalent circuits, current saturation, effect of source and drain resistance, gate resistance and application of GaAs MESFET. Physics, operation and technology of RF and microwave solid state devices- schottky, IMPATT, TRAPATT, PIT, tunnel and GUNN diodes.

8 Hrs

UNIT-IV

HEMT, HBTs and GaN power devices

High electron mobility transistor (HEMT)-structure, energy band line-up, equivalent circuit, HEMPT noise, psedomarphic HEMT and applications, resonant tunneling diodes, heterojunction bipolar transistor (HBTs), GaN power devices. **9 Hrs**

Photonic devices :

light emitting diodes (LEDs), solar cells, photodetectors, lasers. photoelectronic integration of compound semiconductor devices: heterojunction phototransistor (HPT) and light amplifying optical switch (LAOS). Reliability and degradation GaAs and related devices-FETs, HBTs, LEDs and lasers. **9 Hrs**

Text Book:

1	Pallab Bhattacharya	Semiconductor optoelectronic devices, Pearson, 2nd Edition, 2017.
2	V Swaminathan and A. T. Macrander	Material aspects of GaAs and InP based structures, Printice Hall, Englewood Cliffs, NJ, 1991.
3	Joseph Man	GaAs integrated circuits, Macmillan publishing company, Now York (1988).
4	Sitesh Kumar Roy and MonojitMitra	Microwave semiconductor devices, Printice-Hall of India Private Ltd., New Delhi, 2003.

2	S. K. Ghandhi,	VLSI fabrication principals-Silicon and GaAs, John Wiley & Sons, New York, 2008.

E-Resources:

1	https://www.youtube.com/watch?v=o3mpbZ_FRd0

Course Outcomes: After the completion of this course, students will be able to:

CO1. Describe different III-V compound semiconductors, electrical and optical properties.

CO2. Apply fabrication techniques to homo and heterojunction devices.

CO3. Describe the technology used in RF and MW devices.

CO4. Design HEMT, HBTs and GaN power devices.

CO5. Analyse reliability and degradation of GaAs and related devices.

GLOBAL SYSTEM FOR MOBILE COMMUNICATION

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE02	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Study GSM Architecture.
2. Emphasize the conceptual treatment of channel coding, modulation, propagation related to GSM
3. Understand the concepts and applications of the related wireless standards.

Unit -1

GSM Architecture, interfaces and Radio link features: Introduction, GSM frequency bands, GSM PLMN, Objectives of a GSM PLMN, GSM PLMN Services, GSM Subsystems, GSM Subsystems entities, GSM interfaces, The radio interface (MS to BSC), Abits interface (BTS to BSC), A interface (BSC to MSC), Interfaces between other GSM entities, Mapping of GSM layers onto OSI layers. Radio link measurements, Radio link features of GSM, Dynamic power control, Discontinuous transmission (DTX), SFH, Future techniques to reduce interface in GSM, channel borrowing, smart antenna. **8 Hrs**

Unit - 2

GSM logical channels and frame structure: Introduction, GSM logical channels, allowed logical channel combinations, TCH multi frame for TCH/H, CCH multi frame, GSM frame structure, GSM bursts, Normal burst, Synchronization burst, Frequency correction channel burst, Access burst, Data encryption in GSM, Mobility management, Location registration, Mobile identification. **7 Hrs**

Unit - 3

Messages, Data services and Call flows in GSM: GSM messages, MS-BS interface, BS to MSC messages on the A interface, MSC to VLR and HLR, GSM call setup by an MS, Mobile-Terminated call, Call release, Handover. Data services, Introduction, Data interworking, GSM data services, Interconnection for switched data, Group 3 fax, Packet data on the signaling channel, User-to-user signaling, SMS, GSM GPRS. **8 Hrs**

Unit – 4

Privacy and Security in GSM: Introduction, Wireless security requirements, Privacy of communications, Authentication requirements, System lifetime requirements, Physical requirements, SIM cards, Security algorithms for GSM, Token-based authentication, Token-based registration, Token-based challenge. **8 Hrs**

Unit – 5

Planning and design of a GSM wireless network: Introduction, Tele traffic models, Call model, Topology model, Mobility in cellular / PCS networks, Application of a fluid flow model, Planning of a wireless network, Radio design for a cellular / PCS network, Radio link design, Coverage planning, Design of a wireless system, Service requirements, Constraints for hardware implementation, Propagation path loss, System requirements, Spectral efficiency of a wireless system, Receiver sensitivity and link budget, Selection of modulation scheme, Design of TDMA frame, Relationship between delay spread and symbol rate, Design example for a GSM system. **8 Hrs**

TEXT BOOKS :

1	Vijay K. Garg & Joseph E. Wilkes	Principles and applications of GSM, Pearson education/ PHI, 2002

REFERENCE BOOKS :

1	Zvonar Peter Jung & Karl Kammerlander Springer	GSM: Evolution towards 3rd Generation Systems, 1st edition, Kluwer Academic publishers, 1998.
2	Friedhelm Hillebrand	GSM & UMTS: The Creation of Global Mobile Communication, John Wiley & Sons, 2001.

E-Resources:

1	http://www.nitttrc.edu.in/nptel/courses/117102062

Course Outcomes: After the completion of this course, students will be able to:

CO1. Analyse the architecture of different wireless standards

CO2. Differentiate between logical channels and frame structure

CO3. Apply the fundamental concepts for the initialization of call flows in GSM

CO4. Demonstrate the concepts of privacy and security in GSM

CO5. Analyse and design GSM wireless networks

SATELLITE COMMUNICATION

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE04	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Orbital parameters necessary for the satellite to be in orbit and to communicate with earth station.
2. Space and Earth segment and to perform Link budget analysis.
3. Various multiple access techniques used in satellite communication.

Unit 1

OVER VIEW OF SATELLITE SYSTEMS: Introduction, frequency allocation.

ORBITS: Introduction, Kepler laws, definitions, orbital element, apogee and perigee heights, orbit perturbations, inclined orbits, sidereal time, orbital plane. **7 Hrs**

Unit 2

Geostationary orbit: Introduction, antenna, look angles, polar mix antenna, limits of visibility, earth eclipse of satellite, sun transit outage, launching orbits. **7 Hrs**

Unit 3

RADIO WAVE PROPAGATION: Introduction, atmospheric loss, ionospheric effects, rain attenuation, other impairments.

SPACE LINK: Introduction, EIRP, transmission losses, link budget, system noise, CNR, uplink, down link, effects of rain, combined CNR. **7 Hrs**

Unit 4

SPACE SEGMENT: Introduction, power supply units, altitude control, station keeping, thermal control, TT&C, transponders, antenna subsystem.

EARTH SEGEMENT: Introduction, receive only home TV system, outdoor unit, indoor unit, MATV, CATV, Tx – Rx earth station. **9 Hrs**

Unit 5

INTERFERENCE AND SATELLITE ACCESS: Introduction, interference between satellite circuits, satellite access, single access, preassigned FDMA, SCPC (spade system), TDMA: pre-assigned TDMA, demand assigned TDMA, down link analysis, comparison of uplink power requirements for TDMA & FDMA, on board signal processing satellite switched TDMA. **9 Hrs**

TEXT BOOK:

1	Dennis Roddy	Satellite Communications, 4th Edition, McGraw Hill education, 2017

REFERENCE BOOK:

1	Timothy Pratt, Charles Bostian, Jeremy Allnutt	Satellite Communications, John Wiley & Sons, 2nd Edition, 2019
2	W.L. Pitchand, H.L. Suyderhoud, R.A.Nelson	Satellite Communication Systems Engineering, 2nd Ed., Pearson Education., 2007

2	https://www.youtube.com/watch?v=dt4Ce8gQPns&list=PLAnjLC20C-XQnoowCtt-67WmyxoQPu2Fi

Course Outcomes: After the completion of this course, students will be able to:

CO1. Analyze the orbital parameters to identify the position of the satellite in an orbit.
CO2. Formulate Azimuth angle, Elevation angle and limits on visibility of a satellite from an earth station
CO3. Design the link power budget and CNR for the space link of a satellite communication system.
CO4. Apply the knowledge of digital communication to understand space and earth segment architectures.
CO5. Identify the use of multiple access techniques in satellite communication.

RADAR SYSTEMS

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE06	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Principles of operation of various blocks of Radar systems and Radar Range equation in detail.
2. Functions of various blocks of CW Radar, FM-CW Radar, MTI and Pulse Doppler Radars, Tracking radar.
3. Principles and working of phased array
4. Radar receiver in detail

Unit 1

An Introduction to Radar: Basic Radar, The Simple Form of the Radar Equation, Radar Block Diagram, Radar Frequencies, Applications of Radar, The Origins of Radar, The Radar Equation: Introduction, Detection of Signals in Noise, Receiver Noise and the Signal to Noise Ratio, Probabilities of Detection and False Alarm, Radar Cross section of Targets, Transmitter Power, Pulse Repetition Frequency, System Losses. **8 Hrs**

Unit 2

MTI and Pulse Doppler Radar: Introduction to Doppler and MTI Radar, Delay Line Cancellers, Digital MTI Processing, Moving Target Detector, Pulse Doppler Radar, Tracking Radar: Tracking with Radar, Mono-pulse Tracking, Conical Scan and Sequential Lobing, Tracking in Range. **8 Hrs**

Unit 3

Detection of Signals in Noise: Introduction, Matched Filter Receiver, Detection Criteria, Detectors, Automatic Detection Radar Clutter: Introduction to Radar Clutter, Surface Clutter to Radar Equation, Land Clutter, Sea Clutter. **8 Hrs**

Unit 4

The Radar Antenna: Functions of Radar Antenna, Antenna Parameters, Reflector Antennas, Electronically Steered Phased Array Antennas**.** **8 Hrs**

Unit 5

Radar Receiver: The Radar Receiver, Receiver Noise Figure, Super-heterodyne Receiver, Duplexers and Receiver Protectors, Radar Displays. **7 Hrs**

Text Books:

1	Merrill I. Skolnik	Introduction to Radar Systems, Edition 3, TMH, 2017.

Reference Books:

1	Byron Edde	RADAR: Principles, Technology & Applications, Pearson Education, 2009.

E-Resources:

1	https://www.youtube.com/watch?v=-YyfN8vM04g
2	https://www.youtube.com/watch?v=pplYII6j2NI&list=PLVsrfTSlZ_41cjspqG39G0kfUBYJTV_Xv
3	https://www.youtube.com/watch?v=7QwmTi4B86U
4	https://www.youtube.com/watch?v=R70ysC8nWoI

Course Outcomes: After the completion of this course, students will be able to:

CO1. Explain basic terms related to Radar
CO2. Analyze the MTI and Pulse Doppler Radar
CO3. Apply the signal processing knowledge to detect noise in signals
CO4. Identify related antennas to address radar issues
CO5. Explain the radar receiver related topics

ADVANCED WIRELESS COMMUNICATION

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE08	SEE Marks :	50

Course objectives : This course will enable students to :

1. Introduce recent trends in wireless communication.
2. understand challenges in wireless communication and fading in wireless channel.
3. Learn different technologies related to recent trends in wireless communication.

UNIT 1

Introduction Wireless Communications: Fast Fading Wireless Channel Modeling, Rayleigh/Ricean Fading Channels, BER Performance in Fading Channels, Diversity modeling for Wireless Communications, BER Performance Improvement with diversity, Types of Diversity – Frequency, Time, Space. **8 Hrs**

UNIT 2

Spread Spectrum Modulation – Introduction, Application and Advantage, Pseudo noise sequence, Pulse –Noise Jamming, Classifications: Direct Sequence SS, Frequency Hopped SS, Hybrid SS. Fast Hopping Versus Slow Hopping, Time Hopping SS systems. Synchronization of SS systems – Acquisition, Tracking. Jamming Consideration – Broadband, Partial band, Multiple tone, Pulse-repeat band, jamming suppression systems. **8 Hrs**

UNIT 3

OFDM – Introduction, Advantages and drawbacks, Applications and standards. Multi Carrier Spread Spectrum - Principles of various schemes, Advantages and Drawbacks. MC-CDMA and MC-DS-CDMA Signal structure, Uplink and downlink signal, Spreading and detecting techniques. **7 Hrs**

UNIT 4

Multi carrier modulation and demodulation, synchronization, channel estimation, Channel coding and decoding. Signal Constellation, Mapping, De-mapping and equalization, Adaptive technique in multi carrier transmissions, RF Issues. **8 Hrs**

UNIT 5

3G and 4G Wireless Standards: GSM, GPRS, WCDMA, LTE, WiMAX **8 Hrs**

Text Book:

1	David Tse and Pramod Viswanath	Fundamentals of Wireless Communications Publisher: Cambridge University Press, 2005.

Reference Books:

1	K. Fazel, S. Kaiser,	Multi Carrier & Spread Spectrum Systems, Publisher: John Wiley & Sons, Edition II, 2008.
2	Ramjee Prasad	OFDM for Wireless Communications Systems Publisher: Artech House, 2004.

E-Resources:

1	https://nptel.ac.in/courses/117104099

Course Outcomes: After the completion of this course, students will be able to:

CO1. Model the wireless fading channel and evaluate the performance using bit error rate.
CO2. Analyse and demonstrate the spread spectrum modulation application and advantages.
CO3. Demonstrate different wireless technologies along with advantages and drawbacks.
CO4. Design different channel estimation techniques.
CO5. Compare and contrast different wireless standards.

PATTERN RECOGNITION

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE15	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Explain how pattern recognition in human beings differ from pattern recognition by machines (algorithm)
2. Use parametric and nonparameter estimation methods for pattern classification
3. Choose technique for analyzing multidimensional data of various types and scales along with algorithms for projection, dimensionality reduction, clustering and classification of data

Unit 1

Introduction: Applications of pattern recognition, statistical decision theory, image processing and analysis. Probability: Introduction, probability of events, random variables, joint distributions and densities, moments of random variables, estimation of parameters from samples, minimum risk estimators. **8 Hrs**

Unit 2

Statistical Decision Making: Introduction, Bayes' theorem, multiple features, conditionally independent features, decision boundaries, unequal costs of error, estimation of error rates, the leaving-one-out technique, characteristic curves, estimating the composition of populations. **8 Hrs**

Unit 3

Nonparametric Decision Making: Introduction, histograms, kernel and window estimators, nearest neighbor classification techniques, adaptive decision boundaries, adaptive discriminant functions, minimum squared error discriminant functions, choosing a decision making technique. **8 Hrs**

Unit 4

Clustering: Introduction, hierarchical clustering, partitioned clustering Artificial Neural Networks: Introduction, nets without hidden layers, nets with hidden layers, the back propagation algorithm, Hopfield nets, an application. **8 Hrs**

Unit 5

Processing of Waveforms and Images: Introduction, gray level scaling transformations, equalization, geometric image scaling and interpolation, smoothing transformations, edge detection, Laplacian and sharpening operators, line detection and template matching, logarithmic gray level scaling, the statistical significance of image features. **7 Hrs**

Text Book:

1	Earl Gose, Richard Johnsonbaugh and Steve Jost	Pattern Recognition and Image Analysis, Pearson Education India,2015 .

Reference Books :

2	Richard O Duda, Peter E Hart, David G Stock	Pattern Classification, John Wiley and Sons, Authorised reprint by Wiley India, 2007.

E-Resources:

1	https://nptel.ac.in/courses/117105101

Course outcomes: After the completion of this course, students will be able to:

CO1. To understand Probability and random process concepts for pattern recognition
CO2. Use Bayesian decision theory to determine the discriminant function for a two class problem with arbitrary covariance matrix
CO3. Apply nonparametric estimation methods for density estimation
CO4. Use discriminant analysis for pattern classification
CO5. Use unsupervised learning methods in pattern classification application

LOW POWER VLSI DESIGN

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE20	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Learn various techniques for designing low power circuits and systems
2. Describe issues related at architectural, logic, circuit and device levels and some of the techniques to overcome these difficulties

Unit -1

Introduction: Need for Low power VLSI chips, Charging and discharging capacitance, Short circuit currents in CMOS circuit, CMOS leakage current, Static current, Basic Principles of low power design, Sources of dissipation in Digital Integrated circuits, Emerging low power approaches, Dynamic dissipation in CMOS, Effects of V_{dd} and V_t, constraints on V_t reduction, Transistor sizing and optimal gate oxide thickness. **9 Hrs**

Unit- 2

Power estimation, Simulation Power analysis: SPICE circuit simulators, gate level logic simulation, capacitive power estimation, static state power, gate level capacitance estimation, architecture level analysis, data correlation analysis in DSP systems, Monte Carlo simulation. **7 Hrs**

Unit- 3

Low Power Circuit Techniques: Introduction to Power consumption in circuits, Flip flops and latches, logic, High Capacitance nodes. **7 Hrs**

Unit- 4

Logical Level Power Optimization: gate reorganization, local restructuring, signal gating, logic encoding, state machine encoding, pre-computation logic. **7 Hrs**

Unit- 5

Architecture and system: Power and Performance management, Switching activity reduction, Parallel Architecture with voltage reduction, Flow graph Transformation.

Low power Clock Distribution: Power dissipation in clock distribution, single driver Vs distributed buffers, Zero skew Vs tolerable skew. **9 Hrs**

Text Books:

1	Gary K. Yeap	Practical Low Power Digital VLSI Design, Springer Science & Business Media, 2012.
2	Rabaey, Pedram	Low Power Design Methodologies, Springer science, 2012

Reference books:

1	Kaushik Roy, Sharat C. Prasad	Low-Power CMOS VLSI Circuit Design, Wiley publication, 2009

E-Resources:

1	https://www.youtube.com/watch?v=ruClwamT-R0&list=PLB3F0FC99B5D89571&index=1

Course Outcomes: After the completion of this course, students will be able to:

CO1. Demonstrate the technique for computing the power dissipation and power issues in VLSI circuits.

CO2. Analyze various approaches of power dissipation at different levels of abstraction through simulation for power efficient circuit design.

CO3. Explore the power consumption in sequential circuits, design power efficient driver circuit for high capacitive loads.

CO4. Apply reorganization technique to design power efficient circuits

CO5. Provide architectural solution to achieve power efficiency and issues related with clock distribution

CO6. Demonstrate capability of self-learning and communication skills through presentation

ANALOG AND MIXED MODE VLSI DESIGN

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE21	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Learn fundamentals of data converters, along with various ADC & DAC architecture.
2. Describe issue related to non-linear analog circuits.
3. Learn sub-microns CMOS circuit design issues at low & High frequency.

Unit 1

Data converter fundamentals: Analog versus Digital Discrete Time Signals, Converting Analog Signals to Data Signals, Sample and Hold Characteristics, DAC Specifications, ADC Specifications, Mixed-Signal Layout Issues. **7 Hrs**

Unit 2

Data Converters Architectures: DAC Architectures, Digital Input Code, Resistors String, R-2R Ladder Networks, Current Steering, Charge Scaling DACs, Cyclic DAC, Pipeline DAC, ADC Architectures, Flash, 2-Step Flash ADC, Pipeline ADC, Integrating ADC, Successive Approximation ADC. **10 Hrs**

Unit 3

Non-Linear Analog Circuits: Basic CMOS Comparator Design (Excluding Characterization), Analog Multipliers, Multiplying Quad (Excluding Stimulation), Level Shifting (Excluding Input Level shifting For Multiplier). **7 Hrs**

Unit 4

Data Converter SNR: Improving SNR Using Averaging (Excluding Jitter & Averaging onwards), Decimating Filters for ADCs (Excluding Decimating without Averaging onwards), Interpolating Filters for DAC, Band pass and High pass Sync filters. **8 Hrs**

Unit 5

Sub-Microns CMOS circuit design: Process Flow, Capacitors and Resistors, MOSFET Switch (upto Bidirectional Switches), Delay elements, adder Elements, Analog Circuits MOSFET Biasing (upto MOSFET Transition Frequency). **7 Hrs**

TEXT BOOKS:

1.	R. Jacob Baker, Harry W Li, David E Boyce	CMOS Circuit Design, Layout and simulation, John Wiley publication, 1998.
2.	R. Jacob Baker	CMOS- Mixed Signal Circuit Design, (Vol II of CMOS: Circuit Design, Layout and Stimulation), John Wiley India Pvt. Ltd, 2009.

REFERENCE BOOKS:

1.	B Razavi	Design of Analog CMOS Integrated Circuits, First Edition, McGraw Hill, 2005.
2.	P E Allen and D R Holberg	CMOS Analog Circuit Design, 2nd Edition, Oxford University Press, 2002.

E-Resources:

1	https://www.youtube.com/watch?v=ZcTTkCWnQNg&list=PL2135D8A0F7441AE1
2	https://www.youtube.com/watch?v=oia9paQF06k&list=PLG4LDxYH2oQqN5f_eGRCUveQ6xkTPWZd

Course Outcomes: After the completion of this course, students will be able to:

CO1. Analyze the concepts of data conversion.
CO2. Compare different data converter architectures.
CO3. Design comparator, Analog multipliers and level shifters.
CO4. Improve signal to noise ratio of data converters by filtering
CO5. Design circuits by using submicron CMOS devices.

RF INTEGRATED CIRCUITS

Contact Hours/ Week	:	3+0+0	Credits :	3
Total Lecture Hours	:	39	CIE Marks :	50
Sub. Code	:	RECE22	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Understand, analyze and design of RF integrated systems and circuits.
2. Design of key building blocks of RFICs.
3. Modern applications of RFICs.

Unit -1

Introduction to RF design and Wireless Technology: Design and Applications, Complexity and Choice of Technology. Basic concepts in RF design: Nonlinearly and Time Variance, Intersymbol interference, random processes and noise. Sensitivity and dynamic range, conversion of gains and distortion. **8 Hrs**

Unit - 2

RF Modulation: Analog and digital modulation of RF circuits, Comparison of various techniques for power efficiency, Coherent and non-coherent detection, Mobile RF communication and basics of Multiple Access techniques. Receiver and Transmitter architectures, direct conversion and two-step transmitters. **8 Hrs**

Unit - 3

RF Circuits Design: BJT and MOSFET behavior at RF frequencies, Overview of RF Filter design, Active RF components & modeling, Matching and Biasing Networks. Basic blocks in RF systems and their VLSI implementation. **8 Hrs**

Unit - 4

Low noise Amplifier design in various technologies, Design of Mixers at GHz frequency range, various mixers- working and implementation. Oscillators- Basic topologies VCO and definition of phase noise, Noise power and trade off. Resonator VCO designs, Quadrature and single sideband generators. **8 Hrs**

Unit - 5

Radio frequency Synthesizers- PLLS, Various RF synthesizer architectures and frequency dividers, Power Amplifier design, Liberalization techniques, Design issues in integrated RF filters. **7 Hrs**

TEXT BOOKS:

1	Thomas H. Lee	Design of CMOS RF Integrated Circuits, Cambridge University Press 1998.
2	B. Razavi	RF Microelectronics, PHI, 1998

REFERENCE BOOKS:

E-Resources:

1	https://www.youtube.com/watch?v=KUDGGsyh1Hs&list=PLbMVogVj5nJQdGDSx243YPnNeLMBrhNE8&index=1
2	https://www.youtube.com/watch?v=q9k9FPh0iJI&list=PLbMVogVj5nJQdGDSx243YPnNeLMBrhNE8&index=3
3	https://www.youtube.com/watch?v=5BCHKnBT0P8&list=PLbMVogVj5nJQdGDSx243YPnNeLMBrhNE8&index=15
4	https://www.youtube.com/watch?v=CiqLHTTD_aY&list=PLbMVogVj5nJQdGDSx243YPnNeLMBrhNE8&index=27

Course Outcomes: After the completion of this course, students will be able to:

CO1. Analyze RF Design and Wireless Technology
CO2. Comparison of various techniques for power efficiency, Coherent and non-coherent detection
CO3. Explain the topics related to RF circuit design
CO4. Design of RF active circuits such LNA, mixers, and oscillators
CO5. Design of RF Power Amplifier

APPLICATION SPECIFIC IC DESIGN

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE23	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Classify ASICs and describe various design methodologies used implementation of integrated circuits.
2. Estimate logical efforts and logical efficiency of logic cell and compute the design economics in the IC design process
3. Design arithmetic circuits in terms of data path elements
4. Formulate a process involved in VLSI testing and verification.
5. Explore the basic techniques involved in VLSI backend design.

Unit 1

Introduction to ASICS: Full Custom with ASIC, Semi custom ASICS, Standard Cell based ASIC, Gate array based ASIC, Channeled gate array, Channelless gate array, structured gate array, Programmable logic device, FPGA design flow, ASIC cell libraries.

Design methodology: Structure Design, Strategy, Hierarchy, Regularity, Modularity, and Locality. **7 Hrs**

Unit 2

ASIC library Design: Logical effort: practicing delay, logical area and logical efficiency logical Paths, multi stage cells, optimum delay, optimum no. of stages, library cell design.

Design Economics: Nonrecurring and recurring engineering Costs, Fixed Costs, Schedule, Person power, example. **8 Hrs**

Unit 3

Data logic cells: Data Path Elements, Adders, Multiplier, Arithmetic Operator, I/O cell, Cell Compilers

Programmable ASIC: programmable ASIC logic cell, ASIC I/O cell. **7 Hrs**

Unit 4

VLSI System Testing & Verification: Introduction, Logic verification, Basic digital debugging hints, Manufacturing tests, test programs ,logic verification principles ,Test benches and Harnesses, regression testing, silicon debug principles Manufacturing test principles ,fault modules. Observability and controllability, fault coverage, ATPG, Delay Fault Testing, design for testability, adhoc testing, scan design Built in self test. **9 Hrs**

Unit 5

ASIC Construction Floor planning and placement and routing: Physical Design, CAD Tools, System Partitioning, Estimating ASIC size, partitioning methods. Floor planning tools,
I/O and power planning, clock planning, placement algorithms, iterative placement improvement, Time driven placement methods. Physical Design flow global Routing, Local Routing, Detail Routing, Special Routing, Circuit Extraction and DRC**.** **8 Hrs**

TEXT BOOKS:

1.	M.J.S. Smith	Specific Integrated Circuits, Pearson Education, 2016
2.	Neil H.E.Weste, Davir Harris	CMOS VLSI Design: A Circuits and system perspectives, Addison Wesley - Pearson Education, 3rd Edition, 2010

REFERENCE BOOKS:

1.	Jose E.France, Yannis Tsividis	Design of Analog-Digital VLSI Circuits for Telecommunication and signal processing, Prentice Hall, 1994.
2.	S. Y. Kung, H. J. Whilo House, T. Kailath	VLSI and Modern Signal Processing, Prentice Hall, 1985.
3.	Jose E. France, Yannis Tsividis	Design of Analog - Digital VLSI Circuits for Telecommunication and Signal Processing, Prentice Hall, 1994.

E-Resources:

1	https://www.youtube.com/watch?v=oZSv68esbgI
2	https://www.youtube.com/watch?v=4cPkr1VHu7Q

Course Outcomes : After the completion of this course, students will be able to:

CO1. Identify different types of ASICS and explain design techniques used in implementation of integrated circuits.

CO2. Estimate logical efforts, path delays and logical efficiency of logic cell also estimate the design economics involved in ICs Design.

CO3. Analyze arithmetic circuits in terms of data path elements and explain programmable ASIC technologies.

CO4. Analyze process involved in logic verification, chip debug and manufacturing test.

CO5. Investigate different techniques involved in construction of ASICs Using CAD tools.

PARALLEL PROCESSING & DISTRIBUTED SYSTEMS

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE27	SEE Marks :	50

Course Objective: This course will enable students to:

1. Acquire core knowledge of parallel computer architecture and processing techniques, which can be easily, transported to practical design.
2. Demonstrate the basic knowledge of distributed system organization and communication.
3. Articulate the course fundamental principles and concepts.

Part A: Parallel processing

Unit 1

Introduction: Development history, Parallel Architecture, Convergence of Parallel Architectures, Fundamental Design Issues.

Parallel programming & its Performance: The Parallelization Process, Partitioning for Performance Factors from the Processors' Perspective. **8 hrs**

Unit 2

Shared memory multiprocessor: Introduction, Cache Coherence, Memory Consistency, Design Space for Snooping Protocols.

Scalable Multiprocessors: Scalability, Bandwidth Scaling, Realizing Programming models. **8 hrs**

Unit 3

Interconnection Network Design: Introduction, Organizational Structure, Interconnection Topologies.

Latency Tolerance: Introduction, Overview of Latency Tolerance, Latency Tolerance in a Shared Address Space, Block Data Transfer in a Shared Address Space. **8 hrs**

Part B: Distributed systems

Unit 4

Introduction: Characterization, System models, Networking & Internetworking introduction, Types of networks.

Interprocess communication: Client server communication, group communication, communication between distributed objects (Excluding Java examples). **7 hrs**

Unit 5

Distributed File structure, File service architecture, name services, clock events and process state, global states

Coordination: Distributed mutual exclusion, Election, Replication introduction, Fault tolerant services. **8 hrs**

TEXT BOOKS:

1	D. Culler, J.P. Singh, and A. Gupta;	Parallel computer architecture: A hardware/software approach. Elesvier 2000.
2	G. Coulouris, J. Dollimore, and T. Kindberg,	Distributed Systems: Concepts and Designs, Fourth Edition, Pearson Education Ltd., 2005.

REFERENCE BOOKS:

1	Hesham El-Rewini	Advanced computer architecture and parallel processing. John Wiley & Sons, 2005.
2	Sukumar Ghosh	Distributed Systems: An Algorithmic Approach, CRC Press, 2006.

E-Resources:

1	https://onlinecourses.nptel.ac.in/noc21_cs39/preview

Course Outcomes: After the completion of this course, students will be able to:

CO1. Understand the parallel computer architecture and processing techniques.
CO2. Realize shared memory and scalable multiprocessors
CO3. Design interconnection of the topologies network
CO4. Develop and apply knowledge of distributed system organization and communication.
CO5. Understand the file structure and its coordination

REAL TIME SYSTEMS

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE36	SEE Marks :	50

Course Objective: This course will enable students to:

1. To understand fundamental concepts of real time systems and its architectural requirements.
2. To learn the various RTS development methodologies and real time operating system.
3. To articulate the practical constraints of real-time system design for various applications.

Unit-1

Introduction to real-time systems: RTS Definition, Classification of Real-time Systems, Time constraints, Classification of Programs
Computer control concepts: Sequence Control, Loop control, Supervisory control, Centralised computer control, Distributed system, Human-computer interface, Benefits of computer control systems. **8 Hrs**

Unit-2

Computer hardware requirements: Introduction, Single chip microcontroller, Specialized processors, Process-related Interfaces, Communications Languages for real time applications: Introduction to the languages for RTS, Syntax layout and readability, Modularity and Variables, Control Structure, Exception Handling, Overview of real-time languages. **8 Hrs**

Unit-3

Design of RTSs: Introduction, Specification documentation, Preliminary design, Single-program approach, Foreground/ background, Multi-tasking approach, Mutual exclusion.

7 Hrs

Unit-4

RTS development methodologies: Introduction, Yourdon Methodology, Requirement definition for Drying Oven, Hatley and Pirbhai Method
Fault tolerance techniques: Introduction, Definitions, what causes Failures, Fault types, Detection and Containment, Redundancy, Integrated Failure Handling. **8 Hrs**

Unit-5

Real time operating systems: Introduction, Real-time multi-tasking OS, Scheduling strategies, Priority Structures, Task management, Scheduler and real-time clock interrupt handles, Memory

Management, Code sharing, Resource control, Task co-operation and communication, Mutual exclusion, Data transfer, Liveness, Minimum OS kernel. **8 Hrs**

TEXT BOOKS

1	Stuart Bennet	Real - Time Computer Control- An Introduction, 2nd Edn. Pearson Education. 2005.
2.	C. M. Krishna, Kang. G. Shin	Real Time Systems, Mc Graw Hill, India, 1997.

REFERENCE BOOKS

1.	Phillip. A. Laplante	Real-Time Systems Design and Analysis, second edition, PHI, 2005.
2.	Raj Kamal,	Embedded Systems, Tata Mc Graw Hill, India, 2008.

E-Resources:

1	https://onlinecourses.nptel.ac.in/noc21_cs98/preview

Course Outcomes: After the completion of this course, students will be able to:

CO1. Understand the basics of real time systems and its architecture.
CO2. Analyse the computer hardware requirement and communication languages for real time application.
CO3. Design different approaches of Real Time System.
CO4. Develop various methods of Real Time System and analyse fault tolerance techniques
CO5. Understand the elements of RTOS.

OPTICAL NETWORKS

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE28	SEE Marks:	50

Course Objectives: This course will enable students to:

1. Understand the concepts of optical network.
2. Analyse the issues like transmission aspects of Second generation fiber optic Networks and networking aspects such as architecture, control and Management.

Unit 1

Introduction to Optical Networks: Telecommunication network Architecture, services, circuit switching and packet switching, optical Networks, optical layer, transparency and all optical networks, optical packet switching, transmission basics, network evolution. **7 Hrs**

Unit 2

Components: Optical amplifiers. Transmitters, Detectors, Switches, Wavelength converters. **8 Hrs**

Unit 3

Transmission System Engineering: System model, Power penalty, Transmitter, receiver, optical amplifiers, Crosstalk, Dispersion, Fiber nonlinearities, overall design considerations. **8 Hrs**

Unit 4

Client layers of optical network: SONET/SDH, optical transport network, generic framing procedure, Ethernet, IP, Multiprotocol label switching. **8 Hrs**

Unit 5

WDM Network Elements: Optical line terminals, optical line amplifiers, optical add/drop multiplexers, optical cross connects.

Control and Management: Network Management Functions, optical layer services and interfacing, Layers within the optical layer.

8 Hrs

TEXT BOOK :

1	Kumar Sivarajan and Rajiv Ramaswamy	Optical Networks: A practical perspective, Morgan Kauffman, 3rd edition, 2009.

REFERENCE BOOKS

1	Biswajit Mukherjee	Optical Communication Networks, TMH, 1998.
2	Ulysees Black	Optical Networks,Pearson education, 2007.

E-Resources:

1	https://www.youtube.com/watch?v=4W7hieXDAmc
2	https://www.youtube.com/watch?v=bC11e6QgrqA&list=PLHj96QRJ0kOhH8xoXXrOgkMf9ZOvjhqYl&index=3
3	https://www.youtube.com/watch?v=KIPFP8wke9M&list=PLHj96QRJ0kOhH8xoXXrOgkMf9ZOvjhqYl&index=11
4	https://www.youtube.com/watch?v=KIPFP8wke9M&list=PLHj96QRJ0kOhH8xoXXrOgkMf9ZOvjhqYl&index=11

Course Outcomes: After the completion of this course, students will be able to:

CO1. Explain basic terms related to Optical Networks

CO2. Analyze the Optical Components

CO3. Charactering the optical transmission systems

CO4. Compare different layers of optical networks

CO5. Explain WDM networks

ADHOC WIRELESS NETWORKS

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE29	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Understand the fundamental principles of Adhoc Wireless Networks.
2. Discuss a comprehensive understanding of adhoc network MAC protocols.
3. Outline the current and emerging trends adhoc routing protocols.
4. Analyze energy management and security techniques in adhoc wireless networks.

Unit 1

AD HOC NETWORKS: Introduction, Issues in Ad hoc wireless networks, Ad hoc wireless internet. **6 Hrs**

Unit 2

MAC PROTOCOLS FOR ADHOC WIRELESS NETWORKS: Introduction, Issues in designing a MAC protocol for Ad hoc wireless Networks, Design goals of a MAC protocol for Ad hoc wireless Networks, Classification of MAC protocols. Contention - based MAC protocols with scheduling mechanism, MAC protocols that use directional antennas, Other MAC protocols. **12 Hrs**

Unit 3

ROUTING PROTOCOLS FOR ADHOC WIRELESS NETWORKS-1: Introduction, Issues in designing a routing protocol for Ad hoc wireless Networks, Classification of routing protocols, Table drive routing protocol, On-demand routing protocol. **7 Hrs**
(Chapter 7: sec 7.1 to 7.5)

Unit 4

ROUTING PROTOCOLS FOR ADHOC WIRELESS NETWORKS-2: Hybrid routing protocol, Routing protocols with effective flooding mechanisms, Hierarchical routing protocols, Power aware routing protocols. **6 Hrs**

Unit 5

TRANSPORT LAYER PROTOCOLS FOR ADHOC WIRELESS NETWORKS: Introduction, Issues in designing a transport layer protocol for Ad hoc wireless Networks, Design goals of a transport layer protocol for Ad hoc wireless Networks.

SECURITY: Security in wireless Ad hoc wireless Networks, Network security requirements, Issues & challenges in security provisioning.

8 Hrs

TEXT BOOK :

1	C. Siva Ram Murthy, B.S.Manoj	Ad hoc wireless Networks, Pearson Education, 2nd Edition, reprint 2005.

REFERENCE BOOKS:

1	Ozan K. Tonguz, Gianguigi Ferrari	Ad hoc wireless networks: a communication-theoretic perspective, Hoboken: Wiley, 2009.
2	Xiuzhen Cheng, Xiao Hung, Ding- Zhu Du	Ad hoc wireless Networking, Springer publishers, 2011.

E-Resources:

1	https://www.digimat.in/nptel/courses/video/106105160/L01.html

Course Outcomes: After the completion of this course, students will be able to:

CO1. Describe the fundamental concepts and issues in Adhoc Wireless Networks.
CO2. Analyse the MAC protocols of Adhoc Wireless Networks.
CO3. Classify Routing protocols of Adhoc Wireless Networks.
CO4. Analyze Routing protocols and transport layer protocols of Adhoc Wireless Networks.
CO5. Analyze transport layer protocols of Adhoc Wireless Networks.

MODELING AND DATA NETWORKS

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE30	SEE Marks :	50

Course Objective: This course will enable students to:

1. Acquire core knowledge of data network design aspects.
2. Understand queuing theory and probability, which is the basis for the design of network.
3. Demonstrate descriptive and analytic treatment of various network design aspects.

Unit 1

DELAY MODELS IN DATA NETWORKS: Queuing Models, M/M/1, M/M/m, M/M/_, M/M/m/m and other Markov System, M/G/1 System, infinite server systems, open and closed queuing networks, Jackson's theorem, Little's law Networks of Transmission Lines, Time Reversibility, Networks of Queues. **9 hrs**

Unit 2

Performance analysis of networks: Discrete and continuous time Markov chains, birth-death processes, time reversibility, traffic management - models, classes, scheduling.

Basics of Probability: Probability concepts, Network performance estimates. **9 hrs**

Unit 3

Design & analysis of network nodes: Transmission links, node design, node architecture and analysis, node processor, node memory

Topological Design: Selection, Multipoint connection between a Terminal, Link and link capacity assignment, Disjoint Route topology. **8 hrs**

Unit 4

Flow control: Network congestion, Flow control, Various Flow control techniques, Comparison, deadlocks, Protocol dead locks, Buffer dead locks. **6 hrs**

Unit 5

ROUTING IN DATA NETWORKS: Introduction, Deterministic routing, Reliability in deterministic routing, disjoint deterministic routes, Adaptive routing strategies, centralized adaptive routing, Random routing, Hierarchical adaptive routing, and other adaptive routing schemes. **7 hrs**

TEXT BOOKS

1	Dimitri Bertsekas and Robert Gallager,	Data Networks, 2nd edition, Prentice Hall of India, 2003.
2	Vijay Ahuja	Design and analysis of computer communication networks, McGraw Hill computer science series, 1982.

REFERENCE BOOKS

1	S. Keshav,	An Engineering Approach to Computer Networking, Pearson Education, 1997.
2	I. Mitrani,	Modeling of Computer and Communication Systems, Cambridge, 1987.

E-Resources:

1	https://nptel.ac.in/courses/106101238

Course Outcomes : After the completion of this course, students will be able to:

CO1. To apply the fundamentals of mathematics and probability to understand the delay models on data networks.
CO2. Analyse the performance of data networks using various network parameters.
CO3. Design and analyse the topological model of the network node with respect to node parameters.
CO4. Analyse and compare the flow control techniques in data network.
CO5. Analyse the routing models used in data networks.

CRYPTOGRAPHY AND NETWORK SECURITY

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE31	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Acquire fundamentals of the principles of cryptographic algorithms.
2. Emphasize on different cryptographic techniques
3. Articulate some of the known security problems in computer networks
4. Demonstrate awareness of protection mechanisms in computer networks

UNIT – 1

Introduction: Services, Mechanisms and attacks, OSI security architecture- a model for network security. Introduction to finite fields, Modular arithmetic, Euclid's algorithm.

Symmetric ciphers: Symmetric cipher model, substitution techniques, transposition techniques. **09 hrs**

UNIT – 2

Block ciphers and the DES standard: Simplified DES, Data encryption standard, Block cipher design principles.

Advanced encryption standard: Evaluation criteria for AES, AES cipher. **09 Hrs**

UNIT – 3

Introduction to Number Theory: Prime numbers, Fermat's and Euler's theorem.

Public key cryptography and RSA: Principles of public key cryptosystems, RSA algorithm.

Key management: Key management, Diffie-Hellman key exchange,

Message Authentication and Hash functions: Authentication requirements, authentication functions, message authentication code, hash functions. **09 Hrs**

UNIT – 4

Digital Signatures: Digital signatures, authentication protocols, Digital signature standard. Web Security: Web security considerations, Introduction to bit coin and block chain techniques. **06 Hrs**

UNIT – 5

Intruders: Intrusion detection, password management, Malicious software: Viruses and related threats, virus countermeasures. Firewalls: Types and configurations, trusted systems. **06 Hrs**

Text Book:

1	William Stallings	Cryptography and Network Security, Pearson Education, 6th edition, 2013.

Reference Book :

1	Behrouz A Forouzan	Cryptography and Network Security, TMH, 2nd Edition, 2010.

E-Resources:

1	https://onlinecourses.nptel.ac.in/noc21_cs16/preview

Course outcomes: After the completion of this course, students will be able to:

CO1. Apply the knowledge of modular arithmetic to solve problems on substitution and transposition ciphers.

CO2. Identify and analyze the principles of block ciphers.

CO3. Apply the knowledge of engineering to solve problems on public key cryptographic techniques and identify the different authentication requirements.

CO4. Analyze the authentication protocols used in public key cryptography.

CO5. Identify the malicious software and analyze the threats on a secure network system.

WIRELESS SENSOR NETWORKS

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE32	SEE Marks :	50

Course Objective: This course will enable students to:

1. To introduce the challenges in deployment of WSN and issues in IOT.
2. Acquire the knowledge of various sensor network standards and protocols for WSN.
3. Emphasis on the practical implementation of sensor network scenarios.

UNIT 1

Introduction, Challenges for WSNs, Development of WSN, Hardware components, Energy consumption of sensor nodes, Operating systems and execution environments, Examples of sensor nodes-'MICA MOTE' family, EYES node, BTnodes. **08 Hrs**

UNIT 2

Sensor network scenarios-Sources and Sinks, single hop vs. multihop, optimization goals and figures of merit, Design principles for WSNs, Physical layer and transceiver design considerations in WSNs.

07 Hrs

UNIT 3

Practical implementation issues-Partitioning decision, Transducer interfaces, Time based accuracy and average power consumption, Power management, Antennas and RF performance definitions.

08 Hrs

UNIT 4

MAC protocols for WSN, Low duty cycle protocols and wakeup concepts (STEM, SMAC), Contention based protocols, schedule based Protocols. Energy efficient unicast, Routing for mobile nodes- mobile sinks, mobile data collectors. **08 Hrs**

UNIT 5

Wireless sensor network standards-IEEE 802.15.4 Low rate WPAN standard, The ZIGBEE alliance etc. Future trends in wireless sensor networks: Wireless Multimedia Sensor Networks, Sensor Network Applications in Challenging Environments. **08 Hrs**

TEXT BOOKS:

1	Edgar H. Callaway Jr.	Wireless Sensor Networks - Architectures and Protocols, AUERBACH Publications, CRC Press, 2004

REFERENCE BOOKS:

1	J. Zheng and A. Jamalipour,	Wireless Sensor Networks: A Networking Perspective, John Wiley & Sons, 2009.
2	Holger Karl, Andreas Willig	Protocols and Architectures for Wireless Sensor Networks, John Wiley, 2006.

E-Resources:

1	https://www.digimat.in/nptel/courses/video/106105160/L01.html

Course outcomes: After the completion of this course, students will be able to:

CO1. Apply the knowledge of network technology to understand the challenges of WSN.
CO2. Analyse the network scenario of sensor network and its design principles.
CO3. Demonstrate the practical implementation issue of WSN.
CO4. Analyse the MAC protocols used in WSN implementation.
CO5. Analyse the WSN IEEE standards and design the application.

ARM PROCESSOR

Contact Hours/ Week	: 3	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE34	SEE Marks :	50

Couse Objective: This course will enable students to:

1. Explore the Typical hardware and software technologies that surround an ARM processor.
2. Learn the programmer's model of the ARM processor.
3. Program the ARM processor to interface peripherals
4. Understand the concepts of MMU and MPU

Unit I

ARM Embedded Systems: RISC design philosophy, ARM design philosophy, embedded system hardware, embedded system software. [Text:1]

ARM7TDMI processor block diagram, ARM7TDMI main processor block diagram. [Ref:1] **7 Hrs**

Unit II

ARM Processor Fundamentals: Processor Operating States, Memory formats, Data types, Operating Modes, Registers – ARM state register set and Thumb state register set, the relationship between ARM state and Thumb state registers, Program Status Registers, Exceptions, Interrupt latencies, Reset, Pipeline. [Text:1 & Ref:1] **8 Hrs**

Unit III

LPC 2129 ARM-based microcontroller: Features of LPC2129, LPC 2129 block diagram –Features, register description and C-programming of GPIO-LCD; ADC; UART [Ref:2,3]. **8 Hrs**

Unit IV

Caches: The Memory Hierarchy and Cache Memory, Cache Architecture, Cache Policy, concepts of Flushing and Cleaning Cache Memory, concepts of Cache Lockdown.

Memory Protection Units: Protected Regions, concept of access permission. [Text:1]. **8 Hrs**

Unit V

Memory Management Units: Working principle of Virtual Memory, Details of the ARM MMU, Page Tables, The Translation Look aside Buffer, Domains and Memory Access Permission, The Caches and Write Buffer. [Text:1]. **8 Hrs**

Text Books:

1.	Andrew N. Sloss, Dominic Symes and Chris Wright	ARM System Developer's Guide – Designing and Optimizing System Software, Elsevier 2004.

Reference Books :

1	ARM7TDMI	Technical Reference Manual.
2	Philips Semiconductors	LPC2119/2129/2194/2292/2294 user manual
3	ARM7TDMI	Instruction Set Reference Manual.

E-Resources:

1	https://www.digimat.in/nptel/courses/video/106105193/L01.html
2	https://www.youtube.com/watch?v=7LqPJGnBPMM

Course outcomes: After the completion of this course, students will be able to:

CO1. Apply the knowledge of engineering fundamentals to describe typical hardware and software technologies that surround an ARM processor.
CO2. Analyse the programmer's model of the ARM processor.
CO3. Analyse System control block, ADC, GPIO, UART of ARM based microcontroller-LPC 2129 and develop the assembly level programming.
CO4. Justify the memory hierarchy and demonstrate the function of a cache memory in ARM processor.
CO5. Analyse the basics of ARM memory management units.

ADVANCED MULTIMEDIA

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE03	SEE Marks :	50

Couse Objective: This course will enable students to:

1. Provide basic concepts and techniques of multimedia systems
2. Understand and compare various compression algorithms

Unit 1

Introduction to Data compression: why compression? The data compression problem. **Lossless compression Algorithms:** Introduction, Measuring information, Information channel, Coding Redundancy, Run-Length Coding, Variable –Length Coding- Shannon-Fano Algorithm, Huffman coding, Adaptive Huffman coding, Dictionary –Based Coding, Arithmetic Coding, Lossless Image Compression – Differential Coding of Images, Lossless JPEG. **9 Hrs**

Unit 2

Lossy compression Algorithms: Distortion measures, The rate distortion theory, Quantization – Uniform Scalar and Nonuniform Quantization, Transform Coding – discrete Cosine Transform(DCT), Karhunen- Loeve Transform, Wavelet-Based Coding, Embedded Zerotree of Wavelet Coefficients, Set Partitioning in Hierarchical Trees. **8 Hrs**

Unit 3

Image Compression Standards: The JPEG Standard, The JPEG2000 Standard –Region of Interest Coding, The JPEG-LS Standard-Prediction, context determination, Residual Coding, Bilevel Image Compression Standards- JBIG Standard. **7 Hrs**

Unit 4

Basic Video compression Techniques: Introduction, Video Compression based on Motion Compensation, Search for Motion Vectors – Sequential Search, 2D Logarithmic Search, Hierarchical Search, H.261 – Intra-Frame Coding, Inter-frame Coding, Quantization, Encoder and Decoder,H.261 Video Bitstream, H.263-Motion Compensation. **8 Hrs**

Unit 5

MPEG Video Coding: MPEG-1 – Motion Compensation, Differences from H.261, Video Bitstream, MPEG-2 – Interlaced Video, Scalabilities, Differences from MPEG-1, Overview of MPEG-4, object based Visual coding in MPEG-4 – VOP-based vs Frame-based Coding, Motion Compensation, Texture coding, Shape coding, Synthetic

Object coding in MPEG-4, MPEG-4 Object types, profiles and levels, H.264 – Core features. . **7 Hrs**

TEXT BOOKS :

1	Khalid Sayood	Introduction to Data Compression, Fifth Edition, Morgan Kaufmann Publishers, 2017.
2	Ze-Nian Li and Mark S. Drew	Fundamentals of Multimedia, Pearson Edu. 2004

REFERENCE BOOKS :

1	Jerry D. Gibson, Toby Berger, Tom LOOKABAUGH, Dave Lindbergh and Richard L. Baker	Digital Compression for Multimedia, Morgan Kaufmann Publishers, 2006.
2	Ralf Steinmetz & Klara Nahrstedt	Multimedia: Computing, Communications & Applications Pearson Education, 2004.

E-Resources:

1	https://nptel.ac.in/courses/117105083

Course Outcomes: After the completion of this course, students will be able to:

CO1. Apply lossless entropy coding for given data.
CO2. Apply lossy compression using different transform techniques.
CO3. Describe image compression technique used in different image compression standards.
CO4. Analyze and compare different search mechanisms for motion vector.
CO5. Describe and compare video compression standards.

VLSI TESTING AND VERIFICATION

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE24	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Learn various fault detection and fault modeling techniques in digital circuits
2. Discuss different algorithms for fault detection in memories, combinational and sequential circuits
3. Understand various verification tools and simulators

UNIT 1

Introduction to Testing: Testing Philosophy, Role of Testing, Digital and Analog VLSI Testing, VLSI Technology Trends Affecting Testing.
Faults: Faults in logic circuits, Breaks and Transistors Stuck-Open and Stuck-On or Stuck-Open Faults in CMOS, Basic concepts of fault detection,
Fault modeling: Fault equivalence, Fault collapsing and fault dominance. **7 Hrs**

UNIT 2

Test Generation for Combinational Logic Circuits: Test Generation Techniques for Combinational Circuits: Truth table method, Fault matrix method, Path sensitization method, D-Roth algorithm, PODEM and FAN. **8 Hrs**

UNIT 3

Design of Testable Sequential Circuits: Ad Hoc Design Rules for Improving Testability, Design of Diagnosable Sequential Circuits, The Scan-Path Technique for Testable Sequential Circuit Design, Level-Sensitive Scan Design, Random Access Scan Technique, Partial Scan, Testable Sequential Circuit Design Using Nonscan Techniques. **8 Hrs**

UNIT 4

Built-In Self Test: Test Pattern Generation for BIST, Output Response Analysis, Circular BIST, BIST Architectures-BILBO

Memory Testing: Functional RAM testing with March tests, Testing RAM Neighborhood Pattern Sensitive Faults (NPSF), Testing RAM technology and layout related faults. **8 Hrs**

UNIT 5

Importance of Design Verification: The importance of verification, Reconvergence model, Formal verification, Assertion based verification, Equivalence checking, Model checking, Functional verification.

Verification Tools: Linting tools: Limitations of linting tools, linting verilog source code, linting VHDL source code, linting OpenVera and e-source code, code reviews.

Simulators: Stimulus and response, Event based simulation, cycle based simulation, Co-simulators, verification intellectual property: hardware modelers, waveform viewers. **8 Hrs**

Text Books:

1	Parag K. Lala	An Introduction to Logic Circuit Testing, Morgan and Claypool Publishers, 2009
2	M. L. Bushnell and V. D. Agrawal	Essentials of Electronic Testing for Digital, Memory and Mixed-Signal VLSI Circuits, Springer Science & Business Media., 2004
3	Janick Bergeron	Writing test benches: functional verification of HDL models, 2nd Edition, Kluwer Academic Publishers, 2003

Reference Books:

1	M. Abramovici, M.A. Breuer and A.D. Friedman	Digital Systems Testing and Testable Design, John Wiley Publications, 2012.

E-Resources :

1	https://www.youtube.com/watch?v=tP9nh1g14E8&t=1015s
2	https://archive.nptel.ac.in/courses/106/105/106105161/
3	https://nptel.ac.in/courses/117105137
4	https://nptel.ac.in/courses/106103016

Course Outcomes: After completing the course student should be able to:

CO1. Analyze and model faults in logic circuits
CO2. Develop test patterns for combinational logic circuits using various algorithms
CO3. Design testable sequential circuits
CO4. Construct test pattern for BIST and design test algorithms for memory
CO5. Analyze different verification tools and simulators
CO6. Demonstrate capability of self learning, team work and communication skills through presentation

SOFTWARE DEFINED NETWORKING

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE33	SEE Marks:	50

Course Objectives: This course will enable students to:

1. Understand the fundamentals of SDN Network
2. Learn the various Network virtualization frame works
3. Articulate the programming skills of SDN and various use cases

Unit-1

History and Evolution of Software Defined Networking (SDN): Separation of Control Plane and Data Plane, IETF Forces, Active Networking. Control and Data Plane Separation: Concepts, Advantages and Disadvantages, the Open Flow protocol. **7 Hrs.**

Unit-2

Network Virtualization: Concepts, Applications, Existing Network, Virtualization Framework (VMWare and others), Mininet based examples. Control Plane: Overview, Existing SDN Controllers including, Floodlight and Open Daylight projects. **8 Hrs.**

Unit-3

Customization of Control Plane: Switching and Firewall, Implementation using SDN Concepts. Data Plane: Software-based and Hadrware-based; Programmable Network Hardware. **8 Hrs.**

Unit-4

Programming SDNs: Northbound Application Programming Interface, Current Languages and Tools, Composition of SDNs. Network Functions Virtualization (NFV) and Software Defined Networks: Concepts, Implementation and Applications. **7 Hrs.**

Unit-5

Data Center Networks: Packet, Optical and Wireless Architectures, Network Topologies. Use Cases of SDNs: Data Centers, Internet Exchange Points, Backbone Networks, Home Networks, Traffic Engineering. Assignments: Programming Assignments for implementing some of the theoretical concepts listed above. **9 Hrs.**

Text Books :

1	Thomas D. Nadeau, Ken Gray	Software Defined Networks, An Authoritative Review of Network Programmability Technologies, O'Reilly Media Publication, 2013

Reference Books :

1	Paul Goransson and Chuck Black	Software Defined Networks: A Comprehensive Approach, Morgan Kaufmann Publication, 2014.
2	Vivek Tiwari	SDN and OpenFlow for Beginners, MMDD Multimedia LLC Publisher, 2013.

E-Resources:

1	https://youtu.be/I3E-C1j-Sjg

Course Outcomes: After the completion of this course, students will be able to:

CO1. Describe the basic concepts on Software Defined Networking and Separation of Control plane with data plane

CO2. Analyze the existing network virtualization framework (VM Ware and others)

CO3. Illustrate Control Plane and Data plane implementation using SDN concepts.

CO4. Analyze network functions virtualization and programming with SDNs.

CO5. Illustrate the use cases of SDNs, such as Data centers, Backbone networks, etc.

SYSTEM PROGRAMMING & OS

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE25	SEE Marks :	50

Course Objective: This course will enable students to:

1. Understand basics of OS concepts and techniques, which can be easily transported to the newer OS.
2. Articulate the various management systems of OS.

Unit 1

Assemblers, Compilers and Interpreters: Elements of Assembly language programming, a simple assembly scheme, Pass structure for assemblers, Design of Two pass assemblers, A single pass Assembler for IBM PC, Compilers, Aspects of Compilation, Memory Allocation, Compilation of Control Structures, Code Optimization, Interpreters.

8 Hrs

Unit 2

INTRODUCTION AND OVERVIEW OF OPERATING SYSTEMS: Operating system, Goals of an O.S, Operation of an O.S, Resource allocation and related functions, O.S and the computer system, Classes of operating systems, Batch processing system, Multi programming systems, Time sharing systems, Real time operating systems, distributed operating systems. **8 Hrs**

Unit 3

STRUCTURE OF OS: Operating system with monolithic structure, layered design, Virtual machine operating systems, Kernel based operating systems, and Microkernel based operating systems.

PROCESS MANAGEMENT: Process concept, Programmer view of processes, OS view of processes, Interacting processes, Threads.

8 Hrs

Unit 4

MEMORY MANAGEMENT: Memory allocation to programs, Memory allocation preliminaries, Contiguous and noncontiguous allocation to programs,

VIRTUAL MEMORY: Virtual memory basics, Virtual memory using paging, Demand paging, Page replacement, Page replacement policies.

8 Hrs

Unit 5

FILE SYSTEMS: File system and IOCS, Files and directories, Overview of I/O organization, Fundamental file organizations, Interface between file system and IOCS, Allocation of disk space, Implementing file access.

SCHEDULING: Fundamentals of scheduling, Long-term scheduling, Medium and short term scheduling, Real time scheduling. **7 Hrs**

TEXT BOOKS

1	D.M.Dhamdhere,	Systems Programming and Operating Systems, Tata McGraw Hill-Second Revised Edition 2011 (UNIT 1)
2	D.M. Dhamdhare	Operating Systems - A Concept based Approach, TMH, 3rd Ed, 2010.

REFERENCE BOOKS

1	Operating System Concepts	A Sliberschatz and P B Galvin, Addison Wesley 1998
2	Modern operating system	Andrew.S.Tannenbaum Ed 3. PHI. 2008.

E-Resources:

1	https://onlinecourses.nptel.ac.in/noc21_cs44/preview

Course Outcomes: After the completion of this course, students will be able to:

CO1. Apply the knowledge of embedded system to describe basics of language programming.
CO2. Analyse the goals of OS and its variants
CO3. Illustrate the structure of OS and analyse the various systems
CO4. Analyse the virtual memory concepts of memory management
CO5. Describe the fundamentals of scheduling in OS

NUMERICAL METHODS AND APPLICATIONS

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE38	SEE Marks :	50

Course Objective: This course will enable students to:

1. Understand and learn the numerical approaches to solve various mathematical problems of electronics and communication engineering.

Unit-I

Modeling Computers and Error Analysis:

Motivation. A simple mathematical model, Conservation of law and Engineering, Approximation and Round-Off Errors Significant Figures, Accuracy and Precision, Error Definitions Round-Off Errors, Problems .Truncation Errors and the Taylor Series The Taylor Series, Error Propagation, Total Numerical Error, Blunders, Formulation Errors, and Data Uncertainty, Problems. **7 Hrs**

Unit-II

Roots of Equations:

Motivation, Bracketing Methods: Bisection Method, False-Position Method Open Methods: Newton-Raphson Method, Secant Method, Multiple Roots, Muller's Method, Bairstow Method and Problems. Case studies: Roots of Equations - Design of an Electric circuit.

8 Hrs

Unit-III

Linear Algebraic Equations:

Motivation Gauss Elimination, Naïve Gauss Elimination, Pitfalls of Elimination methods Gauss-Jordan, L-U Decomposition, Gauss-Seidel and Jacobi iterative Procedures. Problems

Case studies: Linear Algebraic Equations- Currents and voltages in resistor circuits. **8 Hrs**

Unit-IV

Least squares: Linear Regression, Polynomial Regression, Newton's Divided Difference formula, Langrage's interpolation formula, Spline interpolation. Problems. **8 Hrs**

Unit-V

Solution of ODE and Integration: Euler's method, modified Euler's method, Fourth order Runge-Kutta method, Milne's predictor and corrector method.

Integration: Trapezoidal rule, Simpson's $1/3^{rd}$ and $3/8^{th}$ rules.

8 Hrs

TEXT BOOK

1	S.C. Chapra and R.P. Canale	Numerical Methods for Engineers. Ed 5. Mc-Graw Hill. International Edition- 2010.

REFERENCE BOOKS

1	R.J. Shilling and S.L. Harries	Applied Numerical Methods for Engineers using MatLab and C.
2	R.K. Jain and P.K. Iyengar	Numerical Methods for Scientist and Engineers.

E-Resources:

1	https://onlinecourses.nptel.ac.in/noc21_ma45/preview

Course Outcomes: After the completion of this course, students will be able to:

CO1. Understand the basic elements of numerical methods and error analysis.
CO2. Analyse and apply roots of equations using different methods.
CO3. Apply linear algebraic equations to solve various mathematical problems.
CO4. Understand Least squares solutions.
CO5. Analyse different methods for the solution of differential equations and for integration.

CONSUMER ELECTRONICS

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE39	SEE Marks :	50

Course Objectives: This course will enable students to:

1. Understand the concepts of working principles of consumer electronic goods.
2. Understand the working principles of television, picture generation and receiving of video.
3. Understand various television system technology.

Unit 1

Introduction: Consumer Electronics

Electro acoustical transducers: Microphones, Loud Speakers, Pick-up characteristics, Specifications & Applications.

Sound Recording & Reproduction : Principle & Block schematic of disc recording system, Magnetic recording system, Optical recording system, Compact Disc & Video Recording.

Audio Amplifier & Sub Systems : Audio Mixers, Tone Controls, Graphic Equilizer, Features if Hi-Fi & Stereo Systems, Dolby System, Public Address System. **8 Hrs.**

Unit 2

Elements of Picture Transmission & Reception : Interlaced scanning & Synchronization, HD TV, Sound Transmission, Picture Transmission, Sound Reception, Picture Reception.

Composite Video Signal : Video Signal, H&V Blanking pulses, Sync Pulses, Sync Separator

Signal Transmission Channel Band Width : VSB, Standard Channel, Complete Channel Bandwidth, Channel Bandwidth for color, TV Standards.

Display devices & Camera: Principles of working of LCD, LED, Plasma Screens, Image Orthicon CCD (any other latest).

Color TV Transmitter & Color TV Receiver Block Diagrams : Working of Television Transmitter & Receiver. **8 Hrs.**

Unit 3

Testing & Alignment of Television Receivers : Testing & Alignment of Television Receivers, TV Wobbuloscope Video pattern generator, Television Test Charts, Marker Generator, Color Bar Generator, Vectroscope tuners.

Cable Television: Modern Cable TV System, Cable TV Converter, Cable Systems, Satellite Television, DTH.

Digital Television : Digital TV Systems, Digital TV Signals, Digitised Video Parameters, Transmission of Digital TV Signal, Bit Rate Reduction.

Projection Television : Basic Projection Television Systems, Front & Rear Projection, LCD & Laser Projection System. **8 Hrs.**

Unit 4

Modern Home Appliances with Electronic Control : Microwave Oven, Air Conditioner, Washing Machine, DVD Player, Mp3 Player, Digital Camera, Remote Control, Inverters, Refrigerators, Mobile Hand Set Upgradation.

Working Principle of Photo Copying, Scanner, Fax Machine, Risograph, Solar Water Heater & Solar Cooling.

Maintenance & Safety Measures

Electricity in home : Electric Lighting, Electric Heating, Dangers of Electricity & Safety Precautions. **8 hrs.**

Unit 5

Principles of AM & FM Radio Transmitter and receiver : Diversity reception , AM Transmitter and receiver block diagram. **7 Hrs.**

Text Books:

1	B R Gupta	Consumer Electronics
2	Gulati	Modern Television Engineering
3	Tom Duncan	Electronics for Today & Tomorrow
4	Kennedy Davis	Electronic Communication Systems

Reference Books:

1	Ronald Jurgen	Digital Consumer Electronics Hand Book
2	Triman	Audio Encyclopedia
3	Olson	High Quality Sound Recording
4	Jim Taylor	Everything you ever wanted to know about DVD

E-Resources:

1	https://www.youtube.com/watch?v=ML2CyNGNO1Q

Course Outcomes: After the completion of this course, students will be able to:

CO1. Apply the knowledge of microelectronics to understand the concepts of working principles of consumer electronic goods.
CO2. Analyse the working principle of television, picture generation and receiving of video.
CO3. Analyse the working principle of TV receivers, pattern generators etc.
CO4. Compare various television system technology

DEEP LEARNING

Contact Hours/ Week	: 3+0+0	Credits: 3
Total Lecture Hours	: 39	CIE Marks : 50
Course Code	: RECE49	SEE Marks : 50

Course Objectives: This course will enable students to:

1. To provide the mathematical and computational demands of building neural networks To study the concepts of deep learning
2. To introduce dimensionality reduction techniques
3. To apply deep learning techniques for real time applications

UNIT I

Machine Learning Basics

Learning algorithms: regression - classification - clustering, under fitting and Overfitting, Hyper parameters and validation sets, Estimators, bias and variance, Maximum likelihood estimation, Supervised and Unsupervised learning algorithms, Building a Machine learning algorithm. **8 Hrs**

UNIT II

Foundations of Deep Networks

Neural networks: Perceptron - Multilayered Feedforward Networks - Backpropagation learning, Activation functions: Linear - sigmoid - rectified linear and softmax, Loss functions, regularization, Deep networks: Architecture and design, Pretrained Networks - Deep Belief Networks - Generative Adversarial Networks. **8 Hrs**

UNIT III

Convolutional Neural Networks (Cnns)

Convolutional Operation, Motivation, Pooling layers, Fully connected layers, A complete CNN architecture: AlexNet - VGG - Inception - ResNet, Training a Convnet: weights initialization - batch normalization - hyperparameter optimization, Variants of CNN architecture. **8 Hrs**

UNIT IV

Sequence Modeling Using Recurrent Nets

Recurrent Neural Networks (RNN), Bidirectional RNNs, Deep RNNs, Recursive NN, Challenge of long term dependencies, Long Short-Term Memory (LSTM) and other Gated RNNs. **8 Hrs**

UNIT V

Applications Of Deep Learning

Case studies (one in each) in Computer Vision, Speech Processing, Natural Language Processing **7 Hrs**

TEXT BOOKS :

1	Ian Goodfellow, YoshuaBengio, Aaron Courville	Deep Learning, MIT Press, 2016
2	Josh Patterson, Adam Gibson	Deep Learning: A Practitioner's Approach, O'Reilly Media, 2017.

REFERENCE BOOKS :

1	Tom Mitchell	Machine Learning, McGraw Hill, 3rd Edition, 1997
2	Charu C. Aggarwal	Data Classification Algorithms and Applications, CRC Press, 2014.
3	Sandro Skansi	Introduction to Deep Learning: From Logical Calculus to Artificial Intelligence, Springer, 2018.
4	Tommaso Teofili	Deep Learning for Search, Manning Publications Company, 2018.

E-Resources :

1	https://www.youtube.com/watch?v=aPfkYu_qiF4&list=PLyqSpQzTE6M9gCgajvQbc68Hk_JKGBAYT&index=1

Course Outcomes

After the completion of this course, students will be able to:

CO1. To understand the fundamentals principles, theory and approaches for learning with deep neural networks

CO2. To design and implement the main variants of deep learning (such as convolutional and recurrent architectures), and their typical applications

SENSORS FOR BIOMEDICAL APPLICATIONS

Contact Hours/ Week	: 3+0+0	Credits :	3
Total Lecture Hours	: 39	CIE Marks :	50
Sub. Code	: RECE50	SEE Marks:	50

Course objectives: This course will enable students to:

1. To provide the basic understanding of measurement, insight of resistive sensors and its applications in real life.
2. To familiarize the characteristics, working principle and application of smart sensors.
3. To provide the basic understanding of bioelectrical signals and its measurement.
4. To impart the importance of smart sensors, sensor interface standards for wearable device applications and to provide a brief overview of the wearable technology and its impact on social life.
5. To familiarize the concepts of wearable antennas.

Unit -1

Introduction to sensors: Functional Elements of a Measurement System and Instruments, Applications and Classification of Instruments, General concepts and terminology of Sensor systems, Transducers classification-sensors and actuators, General input-output configurations, Static and dynamic characteristics of measurement system, Sensors and their characteristics, sensor technologies, Resistive sensors- strain gages , light dependent resistor (LDR), resistive gas sensors, capacitive sensors- variable capacitor, differential capacitor. **7 Hrs**

Unit -2

Smart sensors: Accelerometers: Characteristics and working principle, Types- Capacitive, Piezoresistive, piezoelectric; Diaphragm Pressure Sensor –resistive & capacitive type (micro press sensor). Integrated and Smart sensors, Overview of various smart sensors: Digital temperature sensor (DS1621, TMP36GZ), Humidity sensor (DHT11, DHT22, and FC28), IR sensor (FC51), Gas sensor (MQ2, MQ8), Pressure sensors (BMP180), Accelerometers (ADXL335), Structural health monitoring sensors, Introduction to MEMS and Flexible sensors. **8 Hrs**

Unit -3

Bio-electric signals and sensors: ECG signal origin, parameters and Characteristics, EMG signal and recording, measurement of heart rate, pulse rate, blood pressure, blood oxygen sensing, blood flow,

blood glucose, Plethysmography, sensors for ECG, EMG, EEG and optical sensor for blood flow measurement, strain sensor for monitoring physiological signals, body movement, motion sensors for fall detection and PD(Parkinson's disease) patients. **8 Hrs**

Unit-4

Introduction to wearable technology: Introduction to world of wearable (WOW), Role of wearable, The Ecosystem enabling Digital Life, Ethics and standards, Attributes of wearables, Taxonomy for wearables, Challenges and opportunities, future and research roadmap, Textiles and Clothing, Wearable applications, Wearable Bio and Chemical Sensors: Introduction, System Design, Micro needle Technology, Types of Sensors, Challenges in Chemical Biochemical Sensing: Sensor Stability, Interface with the Body, Textile Integration, Power Requirements, Applications: Personal Health, Sports Performance, Safety and Security. **8 Hrs**

Unit-5

Wearable antennas for communication systems: Introduction, Background of textile antennas, Design rules for embroidered antennas, Characterizations of embroidered conductive, textiles at radio frequencies, Applications of embroidered antennas, wideband wearable printed dipole antennas, Wearable loop antenna with ground plane, wearable antennas in vicinity of human body, wearable antenna arrays. **8 Hrs**

Text Books:

3	http://digimat.in/nptel/courses/video/108108147/L01.html

Course outcomes: After the completion of this course, students will be able to:

CO1. Apply the knowledge of measurements to identify the sensor characteristics which can be employed for real life applications.
CO2. Classify the special purpose sensors required for the development of smart sensors.
CO3. Analyze bioelectrical signals and measure physiological parameters.
CO4. Describe the taxonomy of the wearable devices and its design constraints for measuring physical and biological signals
CO5. Realize the concepts of wearable antennas for communication systems.

SCHEME & SYLLABUS
OF

III & IV SEMESTERS
B.E. CHEMICAL ENGINEERING
2022 – 2023
[for 2021 batch, 160 credit course]

Department Chemical Engineering
SIT, Tumakuru-572103

About Institute:
Siddaganga Institute of Technology (SIT) was established in the year 1963 by Siddaganga Education Society, as a private self-financing institution with the following vision and mission.

Vision of the Institute:
To develop young minds in a learning environment of high academic ambience by synergizing spiritual values and technological competence.

Mission of the Institute:
To continuously strive for the total growth of students by educating them in state-of-the art technologies and helping them imbibe professional ethics and societal commitment so that they emerge as competent professionals to meet the global challenges.

Quality Policy:
Siddaganga Institute of Technology is committed to:

- Impart quality education by establishing effective learning-teaching – learning processes to produce competent engineers with high professional ethics and social responsibility.
- Create congenial environment and provide state-of-the-art infrastructure.
- Continually improve the effectiveness of the quality management system.
- Satisfy all applicable requirements.

Vision of the Department:
To be an internationally renowned department for chemical engineering education and research meeting the aspirations of society.

Mission of the Department:
M1. To impart quality education in chemical engineering at all levels.
M2. To foster cutting edge research and development in chemical engineering.
M3. To produce responsible and ethical engineers to serve society.

Program Educational Objectives (PEOs)
The Program Educational Objectives of the program are:
The graduates shall possess
1. a sound knowledge of chemical engineering to pursue a successful professional career.
2. a spirit of inquiry and urge to pursue research in chemical engineering and thrust areas.
3. high ethical values and be socially responsible in discharging their duties.
4. knowledge of the latest developments in their field of activity and commit themselves to life-long learning.

Program Specific Outcomes (PSOs):
The following are the PSOs defined by the Chemical Engineering department:
PSO-1: Graduates will be able to apply the knowledge of science and transport

process for production and separation of chemicals in chemical and allied industries

PSO-2: Graduates will be able to analyze processes/equipment taking into consideration, process safety, project engineering, economics and environmental aspects.

PSO-3: Graduates will be able to analyze processes using process control, process optimization and integration using modelling/simulation tools for process development

PSO-4: Graduates will be able to design chemical equipment for a given process.

Program Outcomes:

The following are the Program Outcomes:

1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

The above POs are achieved through curriculum that offers courses under mathematics and basic sciences, basic engineering courses, professional core, professional electives, laboratory courses, open electives, humanity courses, projects, technical seminar and the industrial training and mandatory courses. Each course under these course components have COs that are mapped to the POs. The attainment of POs is achieved through attaining the COs.

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institute affiliated to Visvesvaraya Technological University, Belagavi, Approved by AICTE, New Delhi)

DEPARTMENT OF CHEMICAL ENGINEERING

SCHEME OF TEACHING AND EXAMINATION (160 Credits Scheme, A. Y. 2022-23, 2021 admitted batch)

III Semester , B.E. – Chemical Engineering

Sl. No.	Course and Course Code		Course Title	Teaching / Paper setting Dept.	Teaching hrs/week				Examination				Credits
					Lecture	Tutorial	Practical/ Drawing	Self-Study Component	Duration in hrs.	CIE Marks	SEE Marks	Total Marks	
					L	T	P	S					
1.	BSC	N3MATD	Engineering Mathematics III	Maths	3	-	-		3	50	50	100	3
2.	IPCC	N3CHI01	Momentum Transfer	Chem Engg.	2	2	2		3	50	50	100	4
3.	IPCC	N3CHI02	Mechanical Operations	Chem Engg.	2	2	2		3	50	50	100	4
4.	PCC	N3CH01	Process Calculations	Chem Engg.	3	0	0		3	50	50	100	3
5.	PCC	N3CHL01	Computer Aided Machine Drawing	Chem Engg.	0	0	2		3	50	50	100	1
6.	UHV	NSH04	Universal Human Values, Social Connect and Responsibility	Chem Engg.	1	0	0		2	50	50	100	1
7.	HSMC	NSH01	Balake Kannada		1	0	0		2	50	50	100	1
		NSH02	Samskrutika Kannada										
		OR											
		NSH03	Constitution of India and Professional Ethics										
8.	AEC	N3CHAXX	Ability Enhancement Course III		If offered as Theory Course				3	50	50	100	2
					2	0	0						
					If offered as Integrated Course								
					1	0	2						
			Total		13	4	8		22	400	400	800	19
9	NCMC	NMC01	National Service Scheme (NSS)	NSS	All students have to register for any one of the courses namely National Service Scheme, Physical Education (PE) (Sports and Athletics) and Yoga with the concerned coordinator of the course during the first week of III semester. The activities shall be carried out from III semester to VIII semester (for 5 semesters). **SEE for the courses shall be conducted during VIII semester examinations** and the accumulated CIE marks shall be added to the SEE marks. Successful completion of the registered course is mandatory for award of the degree. The events shall be appropriately scheduled by Dean Academic and the same shall be reflected in the calendar prepared for the NSS, PE and Yoga activities.									
		NMC02	Physical Education (PE) (Sports and Athletics)	PE									
		NMC03	Yoga	Yoga									
		NMC04	NCC	NCC									
Course prescribed to Lateral Entry Diploma holders admitted to III semester B.E. programs													
1	NCMC	N3MATDP	Foundation of Engineering Mathematics - I	Maths	2	2	0		-	100	-	100	0

		AAP	AICTE Activity Points (Applicable for both Regular and Lateral Entrystudents)	40 hours community service to be documented and produced for the examination		

Note: **BSC**: Basic Science Course, **IPCC**: Integrated Professional Core Course; **PCC**: Professional Core Course,
HSMC: Humanity and Social Science & Management Courses, **AEC** –Ability Enhancement Courses. **UHV**- Universal Human Value Courses
L –Lecture, **T** – Tutorial, **P**- Practical/ Drawing, **S** – Self-Study Component, **CIE**: Continuous Internal Evaluation, **SEE**: Semester End Examination

NHS01 Balake Kannada is for students who can't speak, read and write Kannada.

NHS02 Samskrutika Kannada is for students who can speak, read and write Kannada.

Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with Practicals of the same course. Credit for IPCC can be 04 and its Teaching – Learning hours (L : T : P) can be considered as (3: 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from practical part of IPCC shall be included in the SEE question paper.

INT1 - Inter/Intra Institutional Internship: All the students admitted to engineering programs under the **lateral entry category** shall have to undergo mandatory INT1 Inter/Intra Institutional Internship of 03 weeks during the **intervening period of III and IV semesters**. The internship shall be slated for CIE only and will not have SEE. The letter grade earned through CIE shall be included in the IV semester grade card. The internship shall be considered for vertical progression and for the award of degree. Those, who do not take up / complete the internship shall be declared fail and shall have to complete subsequently after satisfying the internship requirements. The faculty coordinator or mentor shall monitor the students' internship progress and interact with them for the successful completion of the internship.

Non-Credit Mandatory Course (NCMC):

(A) Foundation of Engineering Mathematics - I & II

(1) These courses are prescribed for III and IV semesters respectively to **lateral entry Diploma holders** admitted to III semester of B.E. programs. They shall attend the classes during the respective semesters to complete all the formalities of the course and appear for the Continuous Internal Evaluation (CIE). In case, any student fails to register for the said course/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have secured an F grade. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks. **These courses are slated for CIE only and have no SEE.**

(2) Foundation of Engineering Mathematics I and II shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.

(3) Successful completion of the courses Foundation of Engineering Mathematics I and II shall be indicated as PP in the grade card. Non-completion of the courses Foundation ofEngineering Mathematics I and II shall be indicated as NP.

(B) National Service Scheme/Physical Education (Sport and Athletics)/Yoga:

(1) Securing 40 % or more in CIE, 35 % or more marks in SEE and 40 % or more in the sum total of CIE + SEE leads to successful completion of the registered course.

(2) In case, students fail to secure 35 % marks in SEE, they have to appear for SEE during the subsequent examinations conducted by the Institute.

(3) In case, any student fails to register for NSS, PE or Yoga/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have not completed therequirements of the course. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks.

(4) Successful completion of the course shall be indicated as PP in the grade card. Non-completion of the course shall be indicated as NP.

(5) These courses shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for theaward of degree.

Ability Enhancement Course – III (Offered by the Department)

N3CHA01	Advanced MS Excel for Chemical Engineers	N3CHA02	Basic Laboratory Practices and Data Analysis

8.	AEC	ATT	Advanced Technical Training Lab in Python		0	0	2		2	50	50	100	1
9.	Internship	INT1	INTERNSHIP –1 (3 weeks)							100	--	100	2
			Total		14	2	8		21	500	400	900	21
Course prescribed to Lateral Entry Diploma holders admitted to III semester B.E. programs													
1	NCMC	N4MATDP	Foundation of Engineering Mathematics - II	Maths	2	2	0		-	100	-	100	0

		AAP	AICTE Activity Points (Applicable for both Regular and Lateral Entry students)	40 hours community service to be documented and produced for the examination		

Note: BSC: Basic Science Course, IPCC: Integrated Professional Core Course; PCC: Professional Core Course,
HSMC: Humanity and Social Science & Management Courses, AEC –Ability Enhancement Courses. AAP- AICTE Activity Points

L –Lecture, T – Tutorial, P- Practical/ Drawing, S – Self-Study Component, CIE: Continuous Internal Evaluation, SEE: Semester End Examination

NH501 Balake Kannada is for students who can't speak, read and write Kannada.
NH502 Samskrutika Kannada is for students who can speak, read and write Kannada.

Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with Practicals of the same course. Credit for IPCC can be 04 and its Teaching – Learning hours (L : T : P) can be considered as (3: 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from practical part of IPCC shall be included in the SEE question paper.

Internship of 04 weeks during the intervening period of IV and V semesters; INT2 Innovation/ Entrepreneurship/ Societal based Internship.

(1) All the students shall have to undergo a mandatory internship of 04 weeks during the intervening period of IV and V semesters. **The internship shall be slated for CIE only andwill not have SEE.** The letter grade earned through CIE shall be included in the VI semester grade card. The internship shall be considered as a head of passing and shall be considered for vertical progression and for the award of degree. Those, who do not take up / complete the internship shall be considered under F (fail) grade and shall have to complete subsequently after satisfying the internship requirements.

(2) **Innovation / Entrepreneurship Internship** shall be carried out at industry, State and Central Government / Non-government organizations (NGOs), micro, small, and medium enterprise (MSMEs), Innovation centres or Incubation centres. Innovation need not be a single major breakthrough; it can also be a series of small or incremental changes. Innovation of any kind can also happen outside of the business world. Entrepreneurship internships offers a chance to gain hands on experience in the world of entrepreneurship and helps to learn what it takes to run a small entrepreneurial business by performing intern duties with an established company. This experience can then be applied to future business endeavours. Start-ups and small companies are a preferred place to learn the business tactics for future entrepreneurs as learning how a small business operates will serve the intern well when he/she manages his/her own company. Entrepreneurship acts as a catalyst to open the minds to creativity and innovation. Entrepreneurship internship can be from several sectors, including technology, small and medium-sized, and the service sector.

(3) **Societal or social internship**. Urbanization is increasing on a global scale; and yet, half the world's population still resides in rural areas and is devoid of many things that urban population enjoy. Rural internship is a work-based activity in which students will have a chance to solve/reduce the problems of the rural place for better living. **As proposed under the AICTE rural internship programme, activities under Societal or social internship, particularly in rural areas, shall be considered for 40 points under AICTE activity point programme.**

Course name	Engineering Mathematics III	Course credits	3.0
Course code	N3MATD	L+T+P	3+0+0
Total No. of contact Hours	Theory : 39 hrs		

Prerequisites: Engineering Mathematics-I and Engineering Mathematics-II.

Course objectives:

This course will enable students to:

1. To introduce the concept of analytic function, transformation for mapping.
2. To introduce the concept of complex variables to evaluate the integrals
3. To introduce the concept of partial differential equations, use separation of variable method to solve wave, heat and Laplace equations.
4. To Solve the system of equation analytically and numerically.
5. To make the student to apply the numerical methods to solve algebraic and transcendental equations.

UNIT-I

Complex Variables: Functions of complex variable, Definition of Limit, Continuity, Differentiability. Analytic functions, Cauchy's-Reimann equation in Cartesian and polar forms (Statement only), Properties of analytic functions (Statement only). Geometrical representation of $f(z)=w$, Conformal transformation: $w=e^z$, $w=z+\frac{1}{z}$, $w=z^2$. **8 Hrs**

UNIT-II

Complex Integration: Bilinear transformation, Properties, Complex integration, Cauchy's theorem (with proof), Converse of Cauchy's theorem, Cauchy's integral formula (with proof), residues, residues theorem, calculation of residues.

8 Hrs

UNIT – III

Partial differential equations (P.D.E.): Formation of Partial Differential Equation, Solution of Langrange's Linear P.D.E. of the type Pp+Qq=R. Method of Separation of Variables.

Applications of P.D.E.: Classification of PDE, solution of one dimensional heat wave and two dimensional Laplace's equation by the method of separation of variables. **8 Hrs**

UNIT – IV

System of linear algebraic equations: Rank of a matrix by echelon form, Consistency of a system of linear equations, Gauss elimination method, Gauss-Jordan method. Iterative methods - Jacobi, Gauss-Seidel iterative methods.

8 Hrs

UNIT – V

Roots of equation: Introduction, Bracketing methods – Bisection & Regula-falsi

methods. Open methods – Secant method, Muller's method , .Eigen values and Eigen vectors-Rayleigh's Power Method. **7 Hrs**

TextBooks:

2 B.S.Grewal Numerical Methods, 43rd edition, Khanna Publications, 2014. ISBN:81-7409038-X

Reference Books:

1 Erwin Kreyszig Advanced Engineering Mathematics , 10th edition, Wiley Publications, 2015. ISBN:978-81-7409-195-5.

2 C. Ray Wylie and Louis C. Barrett Advanced Engineering Mathematics, 6th edition, Tata-McGraw Hill 2015.ISBN:978-0070582378

3 Louis A. Pipes and Lawrence R. Harvill Applied Mathematics for Engineers and Physicists, 3rd edition, McGraw Hill, 2014, ISBN:978-0486779515

Course Outcomes:

After the completion of this course, students will be able to:

1. Determine continuity/differentiability/analyticity of a function and find the derivative of a function. Identify the transformation
2. Evaluate a contour integral using Cauchy's integral formula. Compute singularities and also the residues
3. Formulate and solve partial differential equations. Apply separation of variable method to solve wave, heat and Laplace equations
4. Solve the system of equation analytically and numerically
5. Compute the roots of an algebraic and transcendental equations

Course name	Momentum Transfer	**Course credits**	**4.0**
Course code	N3CHI01	**L+T+P**	**2+2+2**
Total No. of Contact Hours	Theory: 26 hrs Tutorials: 26 hrs Lab classes: 26 hrs		

Course Objectives:

This course will enable students to:

1. Acquire the knowledge of the basic concepts of fluid flow under laminar and turbulent conditions.
2. Solve flow system problems based on continuity and Bernoulli's equations.
3. To acquire the knowledge about fluid flow through closed conduits and solve related problems.
4. Demonstrate the knowledge of fluid transportation and flow measurement

devices.

5. Understand the principles of dimensional analysis and similitude and their application to the solution of chemical engineering problems.

Unit- I

Introduction to concept of unit operations, Concept of Momentum Transfer

Fluid and its properties: Fluid, its applications, properties of Fluids, Newtonian and Non-Newtonian Fluids, Effect of temperature on viscosity of fluids and their prediction.

Fluid Statics: Concept of Pressure – Laws governing static fluids viz., Pascal's law, hydrostatic law and barometric equations

Measurement of fluid Pressure: Principles and working of simple and differential type of manometer, principle and working of pressure gauge, and pressure transducer. **6+6 Hrs**

Unit-II

Flow Behaviour of fluids: Concept of Average, velocity, mass velocity, Types of flow in a closed conduit, Significance of Reynolds number

Laws governing Flow: Continuity equation, Euler's, Bernoulli's equation, Modification of Bernoulli's equation for real fluids. Significance of Navier-Stoke's equation

Flow of compressible fluids: Concept of Mach number and its application. **6+6 Hrs**

Unit-III

Flow of incompressible fluids in Conduit (Laminar): Flow behaviour, Shear and Velocity Distribution for laminar flow through circular conduit, Derivation of Hagen-Poisullie's equation and application of Darcy Wesibach Equation. Characteristics of Turbulent flow – Averge velocity and estimation of velocity by $1/7^{th}$ rule. **Concept of friction:** Friction factor, Moody's diagram, Types of friction, Correlation for estimation of friction factors for laminar and turbulent flow.

Boundary Layer flow: Concept Boundary layer, Regimes, Boundary layer flow over a flat plate, entry length region and its significance for a circular conduit. **6+6 Hrs**

Unit – IV

Transportation of Fluids: Pipes, Fittings and Valves, and their applications, significance of codes in design of piping systems, minor losses prediction methods

Devices for transportation: Pumps, Classification of pumps Construction and working of Centrifugal, Reciprocating, and Gear type of pumps. Operation of pumps: Characteristic curves of centrifugal pumps – Concept of NPSH, Water hammering, Cavitation and Priming. **5+3 Hrs**

Unit – V

Flow measurement: Classification of Devices, Principles, Construction and working venturimeter, orificemeter and pitot tube, principle, construction working of Rotameter, Time to empty tank, principle, Construction and working of Magnetic flow meter and Coriolis flow meter

Dimensional Analysis: Concept of dimensional homogeneity, Rayleigh's method and Buckingham π- method, Dimensional numbers and their significance Introduction to principles of similitude and its significance in equipmentdesign. **3+5 Hrs**

TEXTBOOKS:

1	Cengel Y. A., & Cimbala J. A	Fluid Mechanics – Fundamentals and Applications, Mc Graw Hill, 2e, 2013, ISBN: 0-07-247236-7
2	Pati, S	Text Book of Fluid Mechanics and Hydraulic Machines, Mc Graw Hill Education, 1e, 2017, ISBN: 978-1259006234

REFERENCE BOOKS:

1	Coulson J R and Richardson J F	Chemical Engineering Vol. I, Asian Books, New Delhi, 6e, 2006, ISBN:978-81847368
2	Badger W I and Banchero J T	Introduction to Chemical Engineering, Tata McGraw Hil, Singapore, 1e, 2017, ISBN: 978-0074630501

Course Outcomes:

After the completion of this course, students will be able to:

1. Apply the basic concepts of the fluid along with its flow properties to static, flow conditions.
2. Apply the Continuity, Bernoulli's equations for of flow fluids through circular conduits
3. Determine the pump work, pressure drop and velocities of fluids under different flow conditions for flow through a circular conduits.
4. Demonstrate the knowledge about piping systems for transportation of fluids, construction and working of pumps and solutions to operational problems.
5. Demonstrate the knowledge about the classification of flow measuring devices and their working and operational details, along with selection of appropriate flow meter for a given application.

Momentum Transfer Laboratory: 2 Hrs/week
Total No. of classes: 13

The experiments are based on the following topics.

1) To study the variation of friction factor with Reynolds number and to plot the universal resistance graph
2) To find the hydraulic Coefficient of orifice, Coefficient of contraction and Coefficient of velocity
3) To calibrate the given Orifice meter and to find out its coefficient of discharge
4) To calibrate the given venturi meter and to find out its coefficient of discharge
5) To determine the notch constants for a given triangular notch
6) To compare the pressure drop in a helical coil with that in a straight pipe of same length, inside diameter and surface roughness
7) To study the flow distribution in a pipe and estimate the ratio of average velocity to maximum velocity at the centre of pipe for different flow rate using

a pitot tube
8) To verify the relationship between the velocity of the fluid and pressure drop per unit length of packing in a packed bed
9) To determine pressure drop per unit bed length in fluidized bed
10) To study the characteristics of a centrifugal pump
11) Calibration of positive displacement meter
12) Determination of viscosity of the fluid using capillary viscometer
13) Analysis of venturimeter by virtual experiment
14) Determination of density of an unknown sample

Minimum of 10 experiments are to be conducted from the above list

NOTE: Evaluation marks at the end of each experiment are to be displayed in the notice board

Course Outcomes:

On successful completion of the course, the student will be able to

1.Conduct experiments on piping systems, flow devices, packed and fluidized bed.
2. Analyse and interpret the data on friction factor, discharge coefficient and pressure drop.
3. Write technical report effectively with proper conclusions.
4.Demonstrate the knowledge of momentum transfer and its applications.

Course name	Mechanical Operations	**Course credits**	**4.0**
Course code	N3CHI02	**L+T+P**	**2+2+2**
Total No. of Contact Hours	Theory: 26 hrs Tutorials: 26 hrs Lab classes: 26 hrs		

Course Objectives:

This course will enable students to:

1. To acquire knowledge about size measurement techniques for particles and screening techniques.
2. Explain types of size reduction laws and the working of size reduction equipment.
3. To understand principles and process of filtration, fluidization and types industrial filters.
4. Explain the flow of fluids and the concept of sedimentation.
5. Describe the concepts of agitation, mixing, and conveying of solids.

Unit – I

Particle Technology: Particle shape, particle size, different ways of expression of particle size, shape factor, sphericity, mixed particle size analysis. screens – ideal and actual screens, Differential and cumulative size analysis, Effectiveness of screen, Specific surface of mixture of particles, Number of particles in a mixture, standard screens industrial screening equipment - Grizzly, Gyratory screen, Vibrating screen, Trommels, **Sub sieve analysis** – Introduction for Air permeability method, Sedimentation and elutriation methods **6+6 Hrs**

Unit – II

Size reduction: Introduction – Types of forces used for comminution, Criteria for comminution, characteristics of comminuted products, Laws of size reduction, Work Index, Energy utilization, Methods of operating crushers – Free crushing, Choke feeding, Open circuit grinding, Closed circuit grinding, **Equipment for size reduction** – Blake jaw crusher, Gyratory crusher, Hammer mill, Attrition mill, Ball mill, Critical speed of ball mill, Ultra-fine grinders, Fluid energy mil. **6+6 Hrs**

Unit – III

Flow of fluid past immersed bodies: Drag, Drag coefficient, Pressure drop – Ergun equation, Kozeny-Carman equation, Blake-Plummer equation. Motion of particles through fluids: Mechanics of particle motion, equation for one dimensional motion of particles through a fluid in gravitational and centrifugal field, Terminal velocity, Motion of spherical particles in Stokes region, Newton's region, and Intermediate region, Criterion for settling regime, Hindered settling.

Sedimentation: Batch settling test, application of batch settling test to design of a continuous thickener, Kynch theory, determination of thickener area. **6+6 Hrs**

Unit – IV

Filtration: Introduction, Classification of filtration, Cake filtration, Principles of cake filtration, Modification of Kozeny – Carman equation for filtration. Constant rate filtration and cake filtration, characteristics of filter media, Filter aid, Application of filter aids, industrial filters - Filter press, leaf filter, Rotary drum filter, Horizontal belt filter. Centrifugal filtration – Suspended batch centrifuge.

Fluidization – Conditions for fluidization, Minimum fluidization velocity, Types of fluidization, Applications of fluidization. **5+3 Hrs**

Unit – V

Agitation and Mixing: Types of impellers. Flow patterns in agitated vessels, Prevention of swirling, Power correlation and calculation. **Mixers:** Muller mixer, Ribbon blender, internal screw mixer, tumbling mixer. Conveying of solids - Belt conveyors, chain conveyors and bucket elevators. **3+5 Hrs**

TEXTBOOKS:

Mechanical Operations Laboratory:2Hrs/week
Total No. of classes: 13

The experiments are based on the following topics:

1. To determine the specific surface area of a given sample power using Air Permeability setup.
2. To find the new surface area created for a given sample using Ball Mill and to find its critical speed.
3. To carry out batch sedimentation test and design the area required to handle for given slurry.
4. To find the particle size distribution and the average size of sub-sieve particle by beaker decantation method.
5. To find the drag co-efficient exerted on a given spiracle particle and verify the laws of settling.
6. To determine the crushing law constants and work index for crushing a known sample using drop weight crusher.
7. To determine the crushing law constants and work index for crushing a known sample using jaw crusher.
8. To determine specific cake resistance and filter medium resistance during filtration for a given sample using leaf filter.
9. To determine specific cake resistance and filter medium resistance during filtration for a given sample using plate and frame filter press.
10. To determine the screen effectiveness and the ratio of over flow/feed and under/flow/feed for a given sample.
11. To determine pressure drop per unit bed length in fluidized bed
12. To verify the relationship between the velocity of the fluid and pressure drop per unit length of packing in a packed bed.

Minimum of 10 experiments are to be conducted from the above list.

NOTE: Evaluation marks at the end of each experiment are to be displayed in the notice board Course outcomes:

Course Outcomes:

On successful completion of the course, the student will be able to

1. Conduct experiments to acquire data for size reduction, screening, separation, filtration and drag.
2. Analyse and interpret the experimental data to obtain the power law constants, screen effectiveness, settling velocities, specific cake resistance and drag coefficient.
3. Write technical report effectively with proper conclusions
4. Demonstrate the knowledge of mechanical operations and its applications

Course name	Process Calculations	Course credits	3.0
Course code	N3CH01	L+T+P	3+0+0
Total No. of Contact Hours	Theory: 39 hrs		

Course Objectives:

This course will enable students to:

1. Introduce the principles and calculation techniques in chemical engineering.
2. Acquaint students with material and energy balance calculations.
3. Teach basic calculation techniques in processes involving chemical reactions.
4. Illustrate the significance of bypass, recycle, and purging operations in process engineering and introduce relevant calculations.
5. Introduce the concept of unsteady-state material and energy balance in process engineering and relevant calculations.

Unit - I

Units and dimensions: Fundamental and derived units; conversion of units

Basic chemical calculations: Concepts of mole, mole fraction; compositions of mixtures of solids, liquids and gases; concepts of normality, molarity, molality, ppm; use of semi-log, log-log and triangular graphs. **8 Hrs**

Unit - II

Material balance without reaction: General material balance equation for steady state operations. Typical steady state material balances in distillation, absorption, extraction, crystallization, drying, mixing and evaporation. **8 Hrs**

Unit - III

Material balance with reaction: Principles of Stoichiometry, concepts of limiting, excess reactants, fractional and percentage conversion, fractional yield and percentage yield, selectivity. Steady state material balance for inorganic, organic and biochemical reactions, Calculations involving burning of solid, liquid and gaseous fuels, excess air, Air-fuel ratio calculations. **8 Hrs**

Unit - IV

Bypass, recycle and purge: Material balance for processes (with and without reactions) involving bypass, recycle and purging.

Unsteady state material balance: Solving unsteady-state material balance to obtain equations for system parameters as a function of time using differential equations & boundary conditions. **8 Hrs**

Unit - V

Energy Balance: General steady state energy balance equation, Thermophysics; Thermochemistry and laws. Concepts of heat capacity, enthalpy, heat of formation, heat of reaction, heat of combustion and calorific values, heat of solution, heat of mixing, heat of crystallization. Determination of ΔH_F at standard and elevated temperatures, theoretical flame temperature and adiabatic flame temperature.

Unsteady state energy balance: Solving unsteady-state material balance to obtain equations for system parameters as a function of time using differential equations & boundary conditions. **7 Hrs**

TEXTBOOKS:

1. Narayanan, K.V., Lakshmikutty, B — Stoichiometry and Process Calculations, PHI Learning Pvt. Ltd., Connaught Circus, New Delhi, 2 e, 2016, ISBN: 978-8120352896
2. Himmelblau, D.M., and Riggs, J.B — Basic Principles and Calculations in Chemical Engineering, PHI Learning Pvt. Ltd., Connaught Circus, New Delhi, 8e, ISBN: 978-81-325-4962-3
3. B I Bhatt, S B Thokore — Stoichiometry, McGraw Hill, 5e, ISBN:978-0-07-068114-9

REFERENCE BOOKS:

1. Ghasem, N., and Henda, R — Principles of Chemical Engineering Processes, CRC Press, Boca Raton, Florida, 2 e, year, ISBN: 978-1-4822-2228-9
2. Felder, R.M., and Rousseau, R.W — Elementary Principles of Chemical Processes, Wiley India (P.) Ltd., Ansari Road, New Delhi, 3 e , year, ISBN: 978-81-265-1582-0

Course Outcomes:

After the completion of this course, students will be able to:

1. Demonstrate the knowledge of calculations in chemistry, physics, and mathematics and apply them to solve basic chemical engineering unit operations and processes.
2. Analyze problems related to process calculations and provide conclusions using the first principles of gas laws, phase equilibria, material and energy balance.
3. Develop solutions to basic and complex process calculations problems.
4. Communicate the solutions to process calculations problems effectively in both oral and written form.
5. Demonstrate the ability of identify, analyze and solve process calculation problems individually and in team.

Course name	Computer Aided Machine Drawing	Course credits	1.0
Course code	N3CHL01	L+T+P	0+0+2
Total No. of labs / semester	Lab classes: 26 hrs		

Course Objectives:

This course will enable students to:

1. Provide the fundamental concepts of Engineering Graphics and its interface with computer.
2. Learn the conventions and rules to be followed by engineers for making precise drawings and representing the same systematically.
3. Representing and Understanding sectional views and selection of reference plane of simple/schematic process equipment and piping symbols.
4. Help the student in the visualization of assembly and sub-assembly of various assembly elements.

5: Train the students in the preparation of assembled drawings.

Part- A

Introduction and Proportionate Drawing

Introduction: Review of graphic interface of the software. Review of Basic sketching commands and navigational commands. Starting a new drawing sheet, sheet size. Naming a drawing. Drawing modules grid and snap.

Proportionate Drawings: equipment symbols important equipment symbols, piping symbol and pipe joints, proportionate drawings of some parts of equipments. proportionate drawings of some common equipments

Part- B

Assembly Drawings

Joints: Socket and Spigot joint, Cotter joint with sleeve, Stuffing box and Expansion joint (Any Two of the above)

Valves: Stop valve, Gate valve, Rams Bottom safety valve, Non-return valve. (Any one of the above)

TEXTBOOKS:

1 K R Gopal Krishna, Machine Drawing, Subhas Stores, Bangalore, 9e, 1995.

2 Bhatt, N.D, Machine Drawing, Charotar Publishing House, Anand, 50e, 2014, ISBN: 978-9385039232

REFERENCE BOOKS:

1 Walas, S.M Chemical Process Equipment, Butterworth Heinemann Pub, 4e, 2012, ISBN: 978-0123868800

Course Outcomes:

After completion of this course, the students will be able to

1. Understand engineering graphics and use computer to draw the same.
2. Draw the precise Engineering drawings and represent the same systematically.
3. Develop views of simple/schematic process equipment and piping symbols
4. Develop 3D models of the simple and minute parts of the various components of process equipment and to understand the impact of precision needed.
5. Develop an assembled 3D model of equipment to enable easier comprehension and effective communication.

Course name	**Universal Human Values, Social Connect and Responsibility**	**Course credits**	**1.0**
Course code	NSH04	**L+T+P**	**1+0+0**
Total No. of Contact Hours	Theory: 13 hrs		

Pre-requisites: Universal Human Values (conducted during induction programme)

Course objectives:

This course will enable students to:

1. Explore about themselves (human beings), family, society and nature/existence.
2. Appreciate the harmony in the human being, family, society and nature/existence
3. Strengthen holistic perception of co-existence and mutual fulfilment among the four orders of nature.

Unit I

Understanding Harmony in the Human Being - Harmony in self: Understanding human being as a co-existence of the sentient 'I' and the material 'Body'; Understanding the needs of Self ('I') and 'Body' - happiness and physical facility; Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer); Understanding the characteristics and activities of 'I' and harmony in 'I'; Understanding the harmony of 'I' with the Body: Sanyam and Health, correct appraisal of Physical needs, meaning of Prosperity in detail, Include discussions to differentiate between i) Prosperity and accumulation. ii) Ensuring health vs dealing with disease **5 Hrs**

Unit II

Understanding Harmony in the Family and Society - Harmony in Human-Human Relationship: Understanding values in human - human relationship, meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness, Trust and Respect as the foundational values of relationship; Understanding the meaning of Trust, Difference between intention and competence; Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship; Understanding the harmony in the society (society being an

extension of family)- Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals. **4 Hrs**

Unit III

Understanding Harmony in the Nature and Existence - Whole-existence as Co-existence: Understanding the harmony in the Nature; Interconnectedness and mutual fulfilment among the four orders of nature-recyclability and self-regulation in nature; Understanding Existence as Co-existence of mutually interacting units in all-pervasive space; Holistic perception of harmony at all levels of existence. Include discussions on-human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc. **4 Hrs**

TEXTBOOK:

1 Gaur, R.R. & Sangal R — 'Foundation Course in Human Values and Professional Ethics; Presenting a universal approach to value education through self-exploration', Excel Books, Bangalore, 2016, ISBN: 978-8-174-46781-2

REFERENCE BOOK:

1 Tripathi A.N. — 'Human Values', New Age International Publisher, 2003, ISBN: 81-224-1426-5

Course Outcomes:

On successful completion of the course, the students will be able to

1. Become more aware of themselves, and their surroundings (family, society, nature)
2. Become more responsible in life, and value human relationships and human society
3. Have better critical ability in handling problems and in finding sustainable solutions

Evaluation Pattern:

Two Tests of 25 marks each and 45 minutes duration SEE for 50 marks and examination duration is 90 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	45	25 marks	25 marks
Test-2	14th Week	45	25 marks	25 marks
CIE			50 marks	50 marks
SEE		90	50 marks	50 marks
Total			**100 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern may be hybrid type with MCQs and descriptive questions.*

- *10 Marks MCQs*
- *3 descriptive questions of 5 marks each*
- *All the questions are compulsory*

SEE: *SEE pattern may also be hybrid type with MCQs and descriptive questions.*

- *20 Marks MCQs*
- *1 descriptive question of 10 marks from each of the units (total 3 questions) or*

2 questions of 5 marks from each of the units (total 6 questions)

- *All the questions are compulsory*

Course name	**Constitution of India and Professional Ethics**	**Course credits**	**1.0**
Course code	NSH03	**L+T+P**	**0+2+0**
Total No. of Contact Hours	Tutorial classes: 26 hrs		

Course Objectives:

This course will enable students to:

1. Introduce the students to the basic structure, fundamental rights and duties enshrined in the constitution of India.
2. Introduce to the system of governance at the centre and the states.
3. Enlighten the students about the method of amendment to the constitution and special provisions of constitution.
4. Enable the students to imbibe ethical practices and moral values.
5. Learn from the life story of leaders such as Sir M Visvesvaraya.

Part I: Constitution of India

Unit I

Introduction to Constitution of India: Salient Features of Indian Constitution, Preamble to the Indian Constitution, Different kinds of fundamental rights, Directive Principles of State Policy, Categorical study of Directive Principles, Relationship between DPSP and Fundamental Rights, Fundamental Duties. Meaning and kinds of human rights and safeguards. **6 Hrs**

Unit II

Union and State Governments: Union and State Legislature: Composition and powers of Loksabha, Rajyasabha, Legislative Assembly and Legislative Council. Union and State Executive: The appointment and powers of President, Vice-president, Prime-Minister, Union Council of Ministers, Governor of State, Chief Minister of State and State Council of Ministers. Union and State Judiciary: The Composition and powers of Supreme Court and High Court. **7 Hrs**

Unit III

Other Provisions of Constitution: Method of amendment of constitution of

India, 42nd and 44th amendment act. Special provisions relating to SC / ST, Women and Children and other backward classes. Electoral process related to the Election Commission of India: Composition, functioning and removal of the Election Commissioner(s).

Human Rights: Meaning, Kinds and Safeguard of Human Rights, State Human Rights Commission and National Human Rights Commission. **5 Hrs**

Part II -Professional Ethics

Unit IV

Professional Ethics and Human Values: Introduction, What is Ethics? Scope of Professional Ethics, Values and Characteristics, Types of values: Negative and positive values, Ethical values for Professional success.

***Case Studies*:** Ethical practices of the reputed Indian Companies: TATA Group, Wipro Technologies. **4 Hrs**

Unit V

Professional Code of Conduct: Introduction, Professional Code, Legal System, Ethical and Unethical practices, Making the Professional Code successful. Ethical values of Sir M. Visvesvaraya, Mahatma Gandhi and Swami Vivekananda. **4 Hrs**

TEXTBOOKS:

1	M Rajaram	V.T.U Constitution of India and Professional Ethics', New Age International Publishers, 3e, 2015, ISBN:978-8122438284

3	D.D. Basu	Commentary on the Indian Constitution' (Vol. 10), i.e, 2016, Butter worth's, Wadhwa Nagar, Nagpur, 2016, ISBN: 978-9350356661.
4	OC Fcrrell, John Paul Fraedrich, Linda Ferrell	Business Ethics: Ethical Decision Making and Cases', Biztantra, New Delhi, 2014, ISBN: 978: 1285423715.
5	Swami Vivekananda	My India: The India Eternal" – Ramakrishna Mission Institute of Culture, Kolkata, 1993, ISBN: 978-8185843513

Course Outcomes:

On successful completion of the course, the student will be able to :

1. Orient students on the salient features of the Indian Constitution with special emphasis on fundamental rights and duties.

2. Provide an overview of the Union and State legislature, executive and judiciary.
3. Explain the importance of electoral process and help students appreciate the ethical practices in elections.
4. Facilitate the students to have a clear perspective of the Ethical values and their relevance in the present context of globalization.
5. Enable the students familiarize themselves with the ethical values proposed and practiced by the great leaders / eminent personalities with particular reference to Sir M. Visvesvaraya.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

Course name	**Advanced MS-Excel for Chemical Engineers**	Course credits	2.0
Course code	N3CHA01	L+T+P	1+0+2
Total No. of Contact Hours	Theory: 13 hrs Lab classes: 26 hrs		

Course objectives:

This course will enable students to:

1. All the tools necessary to create and use basic spread sheets.
2. Overview of the interface and learn the various methods for entering and editing data.
3. Will learn the various ways to write simple formulas.
4. Apply spread sheet tools to solve chemical engineering

Unit – I

Introducing Visual Basic for Applications

The Visual Basic Editor, Visual Basic Procedures, Entering VBA Code

Fundamentals of Programming with VBA
Components of Visual Basic Statements, Program Control, VBA Data Type, VBA Code for Command Macros, Making a Reference to a Cell or a Range, Interacting with the User, Visual Basic Arrays, Custom Functions, Arrays in Function Procedures, Creating Add-In Function Macros, Testing and Debugging. **7 hrs**

Practical Excercises on:
1. Running a Sub Procedure, Using a Function Macro
2. Using Worksheet Functions with VBA
3. Program control
4. VBA Code for Command Macros
5. MsgBox, lnputBox
6. Visual Basic Arrays
7. Custom Function, Arrays in Function Procedures

Unit – II

Advanced topics:
Interpolation: Obtaining Values from a Table; Differentiation. Derivatives of a Worksheet Formula.
Integration: Integrating a Function Defined by a Worksheet Formula by Means of a VBA Function Procedure. **Roots of Equations:** methods of finding roots of the equation: Systems of Simultaneous Equations: solution to simultaneous equation. **4 hrs**

Practical Excercises on:
1. Application of interpolation to obtain some of the physical properties of chemicals.
2. Application of Integration for chemical Engineering problem.
3. Using the Newton-Raphson Method to Find the Point of Intersection of Two Curves.
4. Solving Systems of Simultaneous Equations of chemical Engineering Problem.

Unit – III

Linear Regression and Curve Fitting: Least-Squares Fit to a Straight Line Using the Worksheet Functions SLOPE, INTERCEPT and RSQ, Least-Squares Fit to a Straight Line Using LINEST. **2 Hrs**

Practical Excercises on:
1. Application of Linear Regression in solving Chemical Engineering Problems
2. Application of LINEST in solving Chemical Engineering Problems

TEXTBOOK

1	E. Joseph Billo	Excel for Scientists and Engineers: Numerical Methods. Wiley-Interscience; 1st edition (4 May 2007) , ISBN : 978-0471387343
2	*Hector Guerrero*	Excel Data Analysis: Modeling and Simulation. Springer, 2019, ISBN: 3030012786

Course outcomes:

At the end of the course the student will be able to :

1. Be comfortable navigating the Excel user interface, entering, manipulating and formatting data.
2. Use formulas and functions to perform calculations on data. Automate choices and data lookups using functions.
3. Application mathematical tools in solving chemical engineering problem
4. Using numerical technique to obtain solution for chemical engineering problem.

BASIC LABORATORY PRACTICES AND DATA ANALYSIS

Course name	**Basic Laboratory Practices and Data Analysis**	**Course credits**	2.0
Course code	N3CHA02	**L+T+P**	1+0+2
Total No. of Contact Hours	Theory: 13 hrs Lab classes: 26 hrs		

Course Objectives:

The objectives of this course are:

1. To introduce the importance and basics of data, errors in data and data analysis.
2. To acquaint students with various mathematical procedures for data analysis and engineering calculations.
3. To train and allow practice of MS Excel, MS Power point and MS Word for engineering calculations and reporting.
4. To illustrate and allow practice of basic laboratory skills, laboratory safety and good laboratory practices.

Unit I

Errors in data and calculations: Significant figures, absolute and relative uncertainty, propagation of errors, types of errors, statistical analysis. Presentation of experimental data. General procedures for plotting data. **Introduction to good laboratory practices**: Lab safety, MSDS, handling particulates/liquids/gases, Handling lab instruments. **7 Hrs**

Experiments and Practical Excericies:

1. Measurement of mass, pH, volume (2 h)
2. Measurement of density, specific gravity (1 h)
3. Measurement of viscosity (1 h)
4. Measurement of absorbance, concentration (using standard curve) (3 h)
5. Preparation of solutions of varying normality/molarity and buffers (3 h)
6. MS Excel introduction and practice (2 h)
7. Presentation of experimental data using MS Excel (2 h)

Unit II

Data analysis - Trends, testing mathematical models, Least-squares analysis, linear/nonlinear models. **4 Hrs**

Practical Excericies::

1. Curve fitting using linear regression analysis (analytical) (2 h)
2. Curve fitting using non-linear regression analysis (analytical) (2 h)
3. Curve fitting using linear regression analysis using MS Excel (2 h)
4. Curve fitting using non-linear regression analysis using MS Excel (2 h)

Unit III

Mathematical procedures: Trial-and-error method, graphical method, graphical integration, log-log plots, semi-log plots, triangular plots. **2 Hrs**

Practical Excericies:

1. Practice problems on trial-and-error, graphical integration (2 hrs)
2. Practice problems on, log-log, semi-log, triangular plots (2 hrs)

TEXTBOOKS

1	Pauline M. Doran	Bioprocess Engineering Principles, Second Edition, 2013, ISBN: 978-0-12-220851-5
2	Student Practices in the Laboratory	Handling and Management of Chemical Hazards, Updated Version, 2011. Washington, DC: The National Academies Press. ISBN: 978-0-309-13864-2

Course Outcomes:

Upon completion of this course the student will be able to:

1. Classify basic science and engineering data and related errors and apply them to solve basic engineering calculations and problems.
2. Analyze basic science and engineering data and provide conclusions.
3. Apply computational techniques (MS Excel) for data analysis and to solve complex mathematical functions.
4. Communicate basic science and engineering data using MS Office in oral and written forms.
5. Demonstrate basic chemical laboratory skills with an emphasis on safety and good laboratory practices.

Course name	Foundation of Engineering Mathematics - I	**Course credits**	**0.0**
Course code	N3MATDP	**L+T+P**	**2+2+0**
Total No. of Contact Hours	Theory: 26 hrs Tutorials: 26 hrs		

Prerequisites: Basics in differential calculus, Integral calculus and vectors.

Course Objectives:

The objective of the course is to master the basic tools of differential and vector calculus, Taylors series, Indeterminate forms (L' Hospital Rule) and differential equations and become skilled for solving problems in **s**cience and engineering.

This course will enable students to:

1. Known the behavior of the polar curve and its application.
2. Learn the notation of partial differentiation and determine the value of the Jacobians.

3. Learn how a function of single variable can be expanded as a Taylor's series and Maclaurin series and Handle the indeterminate form.
4. Learn how the vectors govern the physical models.
5. Known how the real word problems governed by the first order differential equations.

UNIT-I

Differential Calculus-I:

Polar curves: angle between the radius vector and tangent, angle of intersection of polar curves. Pedal equation for polar curves. Curvature and radius of curvature in pedal form. (Without proof). **5+5 Hrs**

UNIT – II

Differential Calculus –II:

Partial differentiation: Partial derivatives, Total derivatives, differentiation of composite functions. Jacobians. **6+6 Hrs**

UNIT – III

Differential Calculus –III:

Taylor's and Maclaurin's series expansions for one variable (statement only). Indeterminate forms L' Hospital Rule (without proof) (Only $\frac{0}{0}, \frac{\infty}{\infty}, 0 \times \infty \; and \; \infty - \infty \; form)$ **5+5 Hrs**

UNIT-IV

Vector Calculus:

Vector Differentiation: scalar and vector fields, Gradient, directional derivative, divergence, curl-physical interpretation; solenoidal and irrotational vector fields-illustrative problems. **5+5 Hrs**

UNIT-V

Differential Equations-I:

Solution of first order and first degree differential equations: Variable Separable, Linear differential equations and Exact differential equations. **5+5 Hrs**

TEXTBOOKS:

5 Peter V.O 'Neil — Advanced Engineering Mathematics, 7th edition, CENGAGE Learning India Pvt. Ltd. Publishers, 2012. ISBN; 978- 81-315-0310-2.

Course outcomes:

After the completion of this course, students will be able to:

1. Apply the knowledge of calculus to solve problems related to polar curves and its applications in determining the amount of bending of the curve.
2. Learn the notation of partial differentiation to calculate rates of change of multivariate functions and solve problems related to composite functions.
3. Illustrate the applications of multivariate calculus to understand the characteristics of vector field.
4. Understand how a function of single variable can be expanded as a Taylor's series and handle the indeterminate form.
5. Apply the analytical methods to solve first order and first degree differential equations and solve some Engineering problems

Course name	**Probability and Statistics**	**Course credits**	**3.0**
Course code	**N4MATA**	**L+T+P**	**3+0+0**
Total No. of Contact Hours	Theory: 39 hrs		

Prerequisites: Engineering Mathematics-III

Course objectives:

This course will enable students to:

1. Develop and conduct appropriate experimentation ,analyze and interpret data and use engineering judgment to draw conclusion.
2. Introduce the basic concepts and applications of probability in engineering .
3. Acquaint with the knowledge about the random variable, random process and how to model the random processes in engineering.
4. Deal with multiple random variables and introduction of the most important types of stochastic processes.
5. Investigate the variability in sample statistics from sample to sample, measure of central tendency & dispersion of sample statistics and pattern of variability of sample.

UNIT-I

Statistics: Introduction, Definitions, Curve Fitting: Straight line, parabola and exponential curves. Correlation and regression, formula for correlation coefficient, regression lines and angle between the regression lines. **7 Hrs**

UNIT-II

Probability: Basic terminology, Definition of probability, Probability and set notations, Addition law of probability, independent events, conditional probability, multiplication law of probability, Baye's theorem. **8 Hrs**

UNIT-III

Random Variable: Discrete Probability distribution, Continuous Probability distribution, expectation, Variance, Binomial distribution, Poisson distribution, Normal distribution and Exponential distributions. **8 Hrs**

UNIT-IV

Joint Probability: Joint probability distribution, Discrete and independent random variables, Expectation, Covariance, Correlation coefficient. Probability vectors, stochastic matrices, fixed point matrices, Regular stochastic matrices, Markov chains, Higher transition-probabilities, stationary distribution of regular Markov chains and absorbing states. **8 Hrs**

UNIT-V

Sampling Distribution: Introduction, Objectives, sampling distribution, testing of hypothesis, level of significance, confidence limits, simple sampling of attributes, test of significance of large samples, comparison of large samples, sampling of variables, central limit theorem, confidence limits for unknown mean, test of significance for means of two large samples, Sampling of variables – small samples , Student's t-distribution. **8 Hrs**

TEXTBOOKS:

1	B.S.Grewal	Higher Engineering Mathematics, 43rd edition, Khanna Publications, 2015. ISBN:978-81-7409-195-5.
2	Ramana .B.V	Higher Engineering Mathematics**,** latest edition, Tata-McGraw Hill, 2016. ISBN:0-07-053516-7.

REFERENCE BOOKS:

1	Erwin Kreyszig	Advanced Engineering Mathematics , 10th edition, Wiley Publications, 2015. ISBN:978-81-7409-195-5.
2	C. Ray Wylie and Louis C. Barrett	Advanced Engineering Mathematics, 6th Edition, Tata-McGraw Hill 2015, ISBN: 978-0070582378
3	Louis A. Pipes and Lawrence R. Harvill	Applied Mathematics for Engineers and Physicists, 3rd Edition, McGraw Hill, 2014, ISBN:978-0486779515

Course Outcomes:

Upon completion of this course the student will be able to:

1. Apply least square method to fit a curve for the given data and evaluate the correlation coefficient and regression lines for the data
2. Analyse the nature of the events and hence determine the appropriate probabilities of the events
3. Classify the random variables to determine the appropriate probability distributions.

4. Determine the joint probability distribution, its mean, variance and covariance. Calculate the transition matrix and fixed probability vector for a given Markov chain
5. Estimate the parameter of a population, important role of normal distribution as a sampling distribution

Course name	**Process Heat Transfer**	**Course credits**	**4.0**
Course code	N4CHI01	**L+T+P**	**2+2+2**
Total No. of Contact Hours	Theory: 26 hrs Tutorials: 26 hrs Lab classes: 26 hrs		

Course Objectives:

This course will enable students to:

1. Acquire the knowledge of the basic concepts of conduction, convection, and radiation.
2. Calculate the amount of heat transferred in different geometries and to design insulation and fins for effective heat transfer.
3. Understand the equations for conduction and convection and apply them to solve problems involving phase change.
4. Determine radiation heat transfer involving different geometries using the appropriate laws.
5. Design heat exchangers and evaporators and evaluate their performance.

Unit – I

Introduction: Various modes of heat transfer Viz. Conduction, Convection and Radiation.

Conduction: Fourier's law, Steady state unidirectional heat flow through single and multiple layer slabs, cylinders and spheres with constant and variable thermal conductivities. **6+6 Hrs**

Unit – II

Insulation: Properties of insulation materials, Types of insulation, Critical radius and Optimum thickness of insulation.

Extended surfaces: Fins – Types of fins, fin efficiency and fin effectiveness. Analysis of rectangular fin of uniform cross section, infinitely long fin, fin with insulated end. **5+6Hrs**

Unit – III

Convection: Individual and overall heat transfer coefficient, LMTD, LMTD correction factor. Dimensional numbers - Dimensional analysis, Empirical correlation for forced and natural convection. Analogy between momentum and heat transfer – Reynolds, Colburn and Prandtl analogies.

Heat transfer with phase change: Boiling phenomena, Nucleate boiling and film boiling. Condensation – Film and Drop wise condensation, Nusselt's equations. **6 +5Hrs**

Unit – IV

Heat Transfer Equipments: Double pipe heat exchanger. Shell and tube heat

exchangers, Condensers, Construction details.

Evaporators: Classification of evaporators, Capacity, Economy, boiling point elevation, heat transfer area of evaporator, Methods of feeding, Vapor recompression evaporators **5 +6 Hrs**

Unit – V

Radiation: Properties and definitions-Absorptivity-Reflectivity-Emissivity-Emissive power Black body and intensity of radiation - Kirchoff's law, Stefan-Boltzmann law, Weins displacement law, Planck's law. Radiation between surfaces. **4 + 3 Hrs**

TEXTBOOKS:

1	Frank P. Incropera, David P. Dewitt.	Fundamentals of Heat and Mass Transfer, Wiley India Pvt Ltd, New Delhi, 6e, 2010, ISBN: 978-8126527649
2	Rajput R.K.	Heat and Mass Transfer", S. Chand & Company, New Delhi, 1e, 2008, ISBN: 978-8121926171

REFERENCE BOOKS:

1	McCabe and Smith W.L	Unit Operations of Chemical Engineering, McGraw Hill, NewYork,7e, 2007,ISBN: 978-007118173

4	Rao Y.V.C	Heat Transfer, Universities Press (India) Ltd., New Delhi, 1e, 2010, ISBN:9780072848236

Course Outcomes:

On successful completion of the course, the student will be able to

1. Apply the concepts of conduction to determine steady-state unidirectional rate of heat transfer through different geometries.
2. Design insulation and fins for effective heat transfer.
3. Develop equations for convection and apply them to solve problems.
4. Design heat transfer equipments and evaporators and evaluate their performance.
5. Solve problems on radiation using the laws of radiation.

Process Heat Transfer Laboratory:2 Hrs/week
Total No. of classes:13

The experiment are based on the following topics.

1. Estimation of overall heat transfer coefficient and air side heat transfer coefficient in a bare tube heat exchanger
2. Estimation of overall heat transfer coefficient and air side heat transfer coefficient in a finned tube heat exchanger
3. Estimation of individual and overall heat transfer coefficient in a double pipe heat exchanger
4. Estimation of individual and overall heat transfer coefficient in spiral plate heat exchanger
5. Estimation of overall heat transfer coefficient in packed bed heat transfer and verification of correlations
6. Estimation of overall heat transfer coefficient and draw Wilson plot for a vertical condenser
7. Estimate individual and overall heat transfer coefficient in a shell and tube condenser
8. To determine the overall heat transfer coefficient and critical radius of insulation
9. Thermal conductivity of insulating powder
10. Overall heat transfer coefficient of a plate heat exchanger.

Course Outcomes:

After the completion of the course, the student will be able to:

1. Conduct the experiments on various heat transfer equipment.
2. Analyse and interpret the experimental data on conductivity, heat transfer coefficient (for natural and forced convection), rate of evaporation and emissivity
3. Write technical report effectively with proper conclusions
4. Demonstrate the knowledge of heat transfer and its applications

Course name	**Technical Chemistry**	**Course credits**	**4.0**
Course code	N4CHI02	**L+T+P**	**3+0+2**
Total No. of Contact Hours	Theory: 26 hrs Tutorials: 26 hrs Lab classes: 26 hrs		

Course Objectives:

This course will enable students to:

1. To understand the basic principles of electronic spectroscopic techniques and explain the terminology of UV/Vis spectroscopy. To examine UV spectra based on the knowledge of different electron transitions.
2. To know the theory of IR absorption, types of vibrations, factors affecting the group frequencies and sample handling techniques. To analyze IR spectra based on knowledge of characteristic functional group frequencies.
3. To demonstrate the knowledge of the chemical shifts and coupling constants in NMR to study ^{1}H NMR spectra and propose structures for compounds.
4. To explain the different kinds of reactive intermediates, attacking reagents and various Electronic displacement effects. To gain awareness on various types of reactions.
5. To know the green chemistry and photochemistry concepts and extend these ideas to environmental care and sustainability.

UNIT – I

General Introduction to Spectroscopy: Introduction, Types of spectroscopy - atomic and molecular spectroscopy, nature and interaction of electromagnetic radiations with matter, energies corresponding to various kinds of radiations, spectral band width – definition and factors contributing spectral width, factors influencing positions and intensity of spectral lines. **4 Hrs**

Electronic Spectroscopy: Principles of electronic spectroscopy - Types of electronic transitions in organic molecules. Chromophores and auxochromes. Bathochromic shift or Red shift, hypsochromic shift or blue shift. Hyperchromic effect and hypochromic effect. Effect of solvent and extent of conjugation on λ_{max} and on the energies of n $-\pi^*$ and $\pi - \pi^*$ transitions. Instrumentation, qualitative and quantitative analysis. **4 Hrs**

UNIT – II

Infrared Spectroscopy: Principles of IR spectroscopy. Requirements for IR absorption. Types of vibrations - Stretching vibrations and bending vibrations. Fundamental modes of vibrations for linear and non linear molecules. Characteristic group frequencies for infrared absorption of organic molecules. Factors affecting the group frequencies – coupled interactions (Fermi resonance, aldehyde) electronic effects (carbonyl compounds) and hydrogen bonding (alcohols, carboxylic acids). Numerical problems on vibrational frequencies. Instrumentation - FTIR instrument and its advantages. Sample handling techniques – Nujol mull and KBr pellet. **8 Hrs**

UNIT – III

Nuclear Magnetic Resonance Spectroscopy: Principle of NMR spectroscopy. Energy levels for a nucleus with spin quantum number I = ½ and I = $^3/_2$. Theory of population of nuclear spin levels and chemical shift – definition, causes, measurement. TMS as a reference compound and its advantages, factors affecting chemical shift, shielding and deshielding mechanisms, correlation of chemical shifts with chemical environment – aliphatic, alkenic, alkynic, aldehydic, ketonic, aromatic, alcoholic, phenolic, carboxylic, amino protons, spin – spin coupling, spin – spin splitting, intensity ratio of multiplet- Pascal's triangle method, chemical exchange, effect of deuteration, first order spectra, low and high resolution spectra, determination of peak areas, coupling constants-short and long range couplings, Instrumentation – FT NMR. Applications of electronic spectroscopy, IR and NMR to structural elucidation of simple organic molecules. **8 Hrs**

UNIT – IV

Fundamentals Of Organic Chemistry: i) Bond cleavage: Homolytic and heterolytic bond cleavage. Attacking reagents – electrophiles and nucleophiles. Reactive intermediates - carbocations, carbanions and free radicals, their types, structure, formation, and stability.

ii) Nucleophilic aliphatic substitution reactions: Meaning of S_N1 and S_N2 reaction. Mechanism of hydrolysis of alkyl halides of S_N1 and S_N2 reactions, S_N2 versus S_N1 reactions. Effect of nature of alkyl groups, leaving groups, nucleophiles and solvents on S_N1 and S_N2 mechanisms.

iii) Elimination reactions: Meaning of E_1 and E_2 reactions. Mechanism of dehydrohalogenation of alkyl halides of E_1 and E_2 reactions. E_1 versus E_2 mechanism.

iv) Nucleophilic and electrophilic aromatic substitution reactions:
Electrophilic aromatic substitution reactions. Meaning and reactions of electrophilic aromatic substitution. Nitration, sulphonation, halogenation, Friedel-Craft alkyl and acylation reactions of benzene.

v) Nucleophilic addition and rearrangement reactions: Condensation Reactions: Reaction of Aldol and Claisen condensation.

vi) Rearrangement Reactions: Reaction of Reimer-Tiemann and Pinacol-pinacolone rearrangement. **8 Hrs**

UNIT – V

Green Chemistry: Introduction: Principles of green Chemistry and concept of atom economy with numerical problems. Use of alternative feedstock: Renewable energy sources- Biomass as renewable source - Synthesis and advantages of bioethanol, biodiesel and power alcohol as fuel. Use of alternative solvents, Design of safe chemicals and alternative reaction methodology.

Photochemistry: Introduction, Significancy of photochemistry, Laws Governing light absorption, Laws of photochemistry, Electronic excitation, Jablonski Diagram, photophysical process, supramolecular chemistry, supramolecular photochemistry and introduction to Optical Sensors. **7 Hrs**

10	Shikha Agarwal	Engineering Chemistry Fundamental and Applications, Cambridge Univercity Press, UK, 2e, 2019, ISBN:978-1108579209

Course Outcomes :
On successful completion of this course, the graduate will be able to:

1. Know electronic, IR, and NMR spectroscopy in detail.
2. Interpret experimental IR and NMR spectra for the identification of unknown organic molecules.
3. Explain the different kinds of reactive intermediates, reagents, various electronic displacement effects and their importance.
4. Gain awareness on various types of reactions and their mechanisms.
5. Know about the green chemistry and photochemistry concepts and extend these ideas to environmental care and sustainability.

Technical Chemistry Laboratory:2 Hrs/week
Total No. of classes:13

Identification and Estimation of physical parameters:

1. Estimation of alcohol by acetylation.
2. Estimation of phenol by bromination.
3. Estimation of carboxylic acid by iodometric titration.
4. Estimation of esters by hydrolysis.
5. Colorimetry - Determination of nitrate in the given water sample using colorimeter.
6. Viscometry - Determination of percentage composition of binary mixture using Ostwald's viscometer.
7. Conductometry – Determination of HCl and CH3COOH in the given acid mixture using sodium hydroxide solution and potassium hydrogen phthalate crystals.
8. Partition coefficient - Determination of partition coefficient of iodine between water and Carbon tetrachloride.
9. Reaction Kinetics- Study of kinetics of the reaction between K2S2O8 and KI.
10. Determination of transition temperature of the given salt hydrate.

11. Determination of iron as ferric oxide gravimetrically (after separating Barium) in the given Barium Ferrite ore solution.
12. Fourier transform infrared spectroscopy (FTIR) - Detection of functional groups in the given Sample (Demonstration of the experiment)
13. X-ray diffraction (XRD) technique for materials characterization – (Demonstration of the experiment).

REFERENCE BOOK:

Arthur I. Vogel, Quantitative Inorganic Analysis and Elementary Instrumental Analysis, ELBS, Longmann Group, 5e, 1989 ISBN: 0-582-44693-7.

Course Outcomes:

On successful completion of this course, the student will be able to:

1. Estimate alcohol by acetylation, phenol by bromination, carboxylic acid by iodometric titration and esters by hydrolysis.
2. Determine partition coefficient of iodine between water and carbon tetrachloride and study of kinetics of the reaction between K2S2O8 and KI.
3. Use Viscometer for the determination of percentage composition of binary mixture.
4. Find the transition temperature of the given salt hydrate.
5. Develop the use of knowledge in gravimetric analysis for the estimation of iron as ferric oxide gravimetrically in the given Barium Ferrite ore solution.

Course name	Chemical Engineering Thermodynamics	**Course credits**	**3.0**
Course code	N4CH01	**L+T+P**	**3+0+0**
Total No. of Contact Hours	Theory: 39 hrs		

Course Objectives:

This course will enable students to:

1. Understand the role of thermodynamics in the chemical process industry.
2. Understand the P-V-T behaviour of systems, learn the equations of state, and define compressibility coefficient.
3. Understand the significance of thermodynamic properties estimation in process design. 4: Understand the importance of phase equilibrium in the design of process equipment.

Unit – I

P-V-T behavior: P-V-T behavior of pure fluids, Equations of state and ideal gas law, Processes involving ideal gas law: Constant volume, constant pressure, constant temperature, adiabatic and polytropic processes. Equations of state for real gases: van der Waals equation, Redlich – Kwong equation, Peng – Robinson equation, Virial equation. **7 Hrs**

Unit – II

Thermodynamic properties of pure fluids: Reference Properties, Energy Properties, Derived Properties, Work function, Gibbs free energy, Relationships among thermodynamic properties: Gibbs- Helmholtz equation.

Fugacity: Fugacity, Fugacity coefficient, Effect of temperature and pressure on fugacity, Determination of fugacity of pure gases, Fugacities of solids and liquids, Activity: Effect of temperature and pressure on activity. **8 Hrs**

Unit – III

Properties of solutions: Partial molar properties, Chemical potential, Fugacity in solutions, Lewis Randall rule, Henry's law, Activity in solutions, Activity coefficient, Gibbs – Duhem equation, Property changes of mixing, excess properties. **6 Hrs**

Unit – IV

Phase equilibria: Criteria of phase equilibria, Criterion of stability, Duhem's theorem, Vapour – Liquid Equilibria, VLE in ideal solutions, Non-Ideal solutions, VLE at low pressures, VLE at high pressures, Consistency test for VLE data, Calculation of Activity coefficients using Gibbs – Duhem equation, Activity coefficient equations, Liquid-Liquid equilibrium diagrams. **8 Hrs**

Unit – V

Chemical reaction equilibrium: Reaction Stoichiometry, Criteria of chemical reaction equilibrium, Equilibrium constant and standard free energy change, Effect of temperature, pressure on equilibrium constants and other factors affecting equilibrium conversion, Liquid phase reactions. **9 Hrs**

TEXTBOOKS:

3 Yunus A. Cengel, Michael A. Boles — Thermodynamics an Engg. Approach, Tata McGraw – Hill, New Delhi, 8e, 2017, ISBN: 978-9339221652

Course Outcomes:

After the completion of the course, the student will be able:

1. Select an appropriate equation of state for representing the P-V-T behavior of gases
2. Calculate changes in U, H, and S for ideal gases, and also for non-ideal gases through the use of residual properties.
3. Estimate a given partial molar property in solution
4. Identify the various ways (P-T, P-x-y, T-x-y and x-y) for representing phase equilibrium behavior of mixtures.
5. Calculate the yield of any reaction under operating conditions

Course name	**Biology for Engineers**	**Course credits**	**3.0**
Course code	BE	**L+T+P**	**2+0+0**
Total No. of Contact Hours	Theory: 26 hrs		

Course objectives:

This course will enable students to:

1. Familiarize the students with the basic biological concepts and their engineering applications.
2. understanding of bio-design principles to create novel devices and structures.
3. Appreciation of how biological systems can be re-designed as substitute products for natural systems.
4. Develop the interdisciplinary vision of biological engineering.

UNIT - I

Biomolecules snd Their Applications (Qualitative): Carbohydrates (cellulose-based water filters, PHA and PLA as bioplastics), Nucleic acids (DNA Vaccine for Rabies and RNA vaccines for Covid19, Forensics – DNA fingerprinting), Proteins (Proteins as food – whey protein and meat analogs, Plant based proteins), lipids (biodiesel, cleaning agents/detergents), Enzymes (glucose-oxidase in biosensors, lignolytic enzyme in bio-bleaching). **5 Hrs**

UNIT - II

Human Organ Systems and Bio Designs - 1 (Qualitative): Brain as a CPU system (architecture, CNS and Peripheral Nervous System, signal transmission, EEG, Robotic arms for prosthetics. Engineering solutions for Parkinson's disease).Eye as a Camera system (architecture of rod and cone cells, optical corrections, cataract, lens materials, bionic eye).Heart as a pump system (architecture, electrical signalling - ECG monitoring and heart related

issues, reasons for blockages of blood vessels, design of stents, pace makers, defibrillators). **5 Hrs**

UNIT - III

Human Organ Systems and Bio-Designs - 2 (Qualitative): Lungs as purification system (architecture, gas exchange mechanisms, spirometry, abnormal lung physiology - COPD, Ventilators, Heart-lung machine).Kidney as a filtration system (architecture, mechanism of filtration, CKD, dialysis systems). Muscular and Skeletal Systems as scaffolds (architecture, mechanisms, bioengineering solutions for muscular dystrophy and osteoporosis). **5 Hrs**

UNIT - IV

Nature-Bioinspired Materials and Mechanisms (Qualitative): Echolocation (ultrasonography, sonars), Photosynthesis (photovoltaic cells, bionic leaf). Bird flying (GPS and aircrafts), Lotus leaf effect (Super hydrophobic and self-cleaning surfaces), Plant burrs (Velcro), Shark skin (Friction reducing swim suits), Kingfisher beak (Bullet train). Human Blood substitutes - hemoglobin-based oxygen carriers (HBOCs) and perflourocarbons (PFCs). **5 Hrs**

UNIT - V

Trends in Bioengineering (Qualitative): Bioprinting techniques and materials, 3D printing of ear, bone and skin. 3D printed foods. Electrical tongue and electrical nose in food science, DNA origami and Biocomputing, Bioimaging and Artificial Intelligence for disease diagnosis. Self-healing Bioconcrete (based on bacillus spores, calcium lactate nutrients and biomineralization processes) and Bioremediation and Biomining via microbial surface adsorption (removal of heavy metals like Lead, Cadmium, Mercury, Arsenic). **6 Hrs**

Course outcomes:

At the end of the course the student will be able to:

1. Elucidate the basic biological concepts via relevant industrial applications and case studies.
2. Evaluate the principles of design and development, for exploring novel bioengineering projects.
3. Corroborate the concepts of biomimetics for specific requirements.
4. Think critically towards exploring innovative biobased solutions for socially relevant problems.

Course name	Computational Tools for Chemical Engineering	**Course credits**	**1.0**
Course code	N4CHL01	**L+T+P**	**0+0+2**
Total No. of Lab Hours / semester	Lab classes: 26 hrs		

Course Objectives:

The course will enable the students to:

1. Familiarize MATLAB as simulation tool
2. Use MATLAB to solve engineering problems
3. Provide an overview to program curve fitting & solve Linear and Nonlinear Equations.
4. Understand the concept and importance of Data Analysis and Statistics

List of practical excercises to be solved through MATLAB software:

1. Interactive computation: Arrays, Vectors, and matrices; Indexing and modifying the arrays. Exercise:
   - ✓ Create a big matrix G, perform the following operations on matrix G
     - Delete the last row and last column of the matrix.
     - Extract the first 4 x 4 submatrix from G.
     - Replace G(5,5) with 4.
     - What do you get if you type G (1 3) and hit return? Explain how MATLAB got that answer?
     - What happens if you type G (1 2 , 1) = 1 and hit return?
2. Programming in MATLAB: Creating, saving, and execution of scripts and

Function files using built-in functions.

Exercise:

- ✓ Function to convert temperature from °C to °F

3. Graphics with MATLAB (Visualizing data in 2D and 3D): Basic 2D plots, Style options, Label, title, Legend and axis control, Subplots.
   Exercise:
   - ✓ For $f(x) = 6x^5 - 41x^4 + 97x^3 - 97x^2 + 41x - 6$, compute f(2), roots of f(x) and plot for $0 \le x \le 20$
4. Linear Algebra with MATLAB Exercise:
   - ✓ Solving a set of linear algebraic equations of given matrix. $x + 2y + 3z = 1$; $3x + 2y + 4z = 1$; $2x + 3y + 3z = 2$.
5. Nonlinear equations with MATLAB: Root finding, finding a root using Bisection method and Newton- Raphson method, MATLAB root finding functions: *fzero* function. System of nonlinear functions: *fsolve* function.
   - ✓ Solve the following transcendental equation: $\sin x = e^x - 5$.
6. Ordinary Differential Equations (ODE's) with MATLAB: What is ODE's, using MATLAB ODE solver, writing ODE functions, solving system of ODE's numerically, and solving Higher-Order ODEs numerically.
   - ✓ Solve the first-order linear differential equation $\frac{dx}{dt} = x + t$ with the initial condition x(0) = 0 .
7. Curve fitting and Interpolation: Linear fit, quadratic fit, and polynomial fit. Least square curve fitting. Interpolation of the data using MATLAB built in functions.
   - ✓ Fit a curve, $P(t) = P_0\, e^{-t/\tau}$, through the data and determine the unknown constants P_0 and τ .
8. Data Analysis and Statistics: using built-in functions of MATLAB.
   - ✓ Consider two arguments - a row vector x and a matrix A; perform the following statistical functions: mean, median, std, max, min, sum, cumsum, prod, cumprod, sort, diff, trapz, cumtrapz.
9. Numerical Integration.
   - ✓ Compute the following integral $\int_{1/2}^{3/2} e^{-x^2}\, dx$
10. Course Project: A course project comprises of Chemical Engineering problem to gauge the understanding of the students.

TEXTBOOKS:

1	Rudra Pratap	Getting Started With MATLAB- A Quick Introduction for Scientists and Engineers, Oxford University Press, 2010, ISBN:978-0198169195
2	Santosh K. Gupta	Numerical Methods for Engineers - New Age International, 4e, 2019, ISBN:978-9387788794.

Web Reference:

1. http://www.tutorialspoint.com/matlab/

Course Outcomes:

At the end of the course, the students will be able to:

1. Identify MATLAB as a simulating tool to solve engineering problems
2. Program curve fitting, numerical differentiation and integration, solution of linear equations in MATLAB and solve engineering problems.
3. Able to understand implementation of ODE using ode 45 and execute Solutions of nonlinear equations.

Course name	Foundation of Engineering Mathematics - II	Course credits	0.0
Course code	N4MATDP	L+T+P	2+2+0
Total No. of Lab Hours / semester	Theory: 26 hrs Tutorials: 26 hrs		

Prerequisites: Basics in differential calculus, Integral calculus and vectors.

Course objectives:

This cource will facilitate the students with concrete foundation of ordinary differential equations, Laplace transforms, integral calculus and numerical methods enabling them to acquire the knowledge of this mathemetical tools.

This course will enable students to:

1. Solve second and higher order differential equations.
2. Find the Laplace transform of the function f(t).
3. Find the Inverse Laplace transform of the function F(s).
4. Apply the knowledge of numerical methods in the models of various physical and engineering phenomena
5. Solve the integral by using standard integrals (Beta and Gamma) and multiple integrals

UNIT-I

Linear Differential Equations: Solution of second and higher order equations with constant coefficients by inverse differential operator method, method of variation of parameters. **6+6 Hrs**

UNIT – II

Laplace Transform: Definition, Transforms of elementary functions, properties of Laplace Transform, Laplace Transform of $e^{at} f(t)$, $t^n f(t)$, $\frac{f(t)}{t}$, derivatives and Laplace Transform of Periodic functions'. **5+5 Hrs**

UNIT-III

Inverse Laplace Transform: Inverse Laplace Transform, Convolution theorem (without proof) and problems Applications –Solution of Linear differential equations using Laplace Transform. **5+5 Hrs**

UNIT-IV

Elementary Numerical Methods: Finite differences. Interpolation / extrapolation using Newton's forward and backward difference formulae, Newton's divided difference and Lagrange's formulae (All formulae without proof). Solution of polynomial and transcendental equations - Newton-Raphson method (only formula) – Illustrative examples. **5+5 Hrs**

UNIT-V

Integral Calculus: Multiple integrals –Evaluation of double and triple Integrals, **Beta and Gamma functions**: Definition, relation between Beta and Gamma functions and simple problems. **5+5 Hrs**

Course outcomes:

After the completion of this course, students will be able to:

1. Explain various physical models through higher order differential equations and solve such linear ordinary differential equations. (L1& L2)
2. Understand the concept of Laplace transform and obtain Laplace transform of periodic functions and unit step functions. (L1& L2)
3. Apply the concept of Laplace transform in solving Linear Differential equations. (L1& L2)
4. Apply the Numerical methods to solve Algebraic and transcendental equations and find the polynomials by finite difference method. (L1& L2)
5. Apply the concept of to evaluate multiple integrals and Beta and Gamma functions **(**L1& L2)

Course name	**ಬಳಕೆ ಕನ್ನಡ** **Balake Kannada (Kannada for Usage)**	**Course credits**	**1.0**
Course code	NSH01	**L+T+P**	**0+2+0**
Total No. of Contact Hours	Tutorial Classes: 26 hrs		

Course Objectives:

This course will enable students to:

1. Create the awareness regarding the necessity of learning local language for comfortable and healthy life.
2. Enable learners to Listen and understand the Kannada language properly.
3. Speak, read and write Kannada language as per requirement.
4. Train the learners for correct and polite conservation.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. ಬಳಕೆ ಕನ್ನಡವನ್ನು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಬೋಧಿಸಲು ವಿಟಿಯು ಸೂಚಿಸಿರುವ ಪಠ್ಯಪುಸ್ತಕಗಳನ್ನು ಉಪಯೋಗಿಸಬೇಕು.
2. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಉತ್ತೇಜಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.
3. ಪ್ರತಿ ವಿದ್ಯಾರ್ಥಿ ಪುಸ್ತಕವನ್ನು ತರಗತಿಯಲ್ಲಿ ಬಳಸುವಂತೆ ನೋಡಿಕೊಳ್ಳುವುದು ಮತ್ತು ಪ್ರತಿ ಪಾಠ ಮತ್ತು ಪ್ರವಚನಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟಂತೆ ಪೂರಕ ಚಟುವಟಿಕೆಗಳಿಗೆ ತೊಡಗಿಸತಕ್ಕದ್ದು.
4. ಡಿಜಿಟಲ್ ತಂತ್ರಜ್ಞಾನದ ಮುಖಾಂತರ ಇತ್ತೀಚೆಗೆ ಡಿಜಿಟಲೀಕರಣಗೊಂಡಿರುವ ಭಾಷೆ ಕಲಿಕೆಯ ವಿಧಾನಗಳನ್ನು ಪಿಪಿಟಿ ಮತ್ತು ದೃಶ್ಯ ಮಾಧ್ಯಮದ ಮುಖಾಂತರ ಚರ್ಚಿಸಲು ಕ್ರಮ ಕೈಗೊಳ್ಳುವುದು. ಇದರಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ತರಗತಿಯಲ್ಲಿ ಹೆಚ್ಚು ಏಕಾಗ್ರತೆಯಿಂದ ಪಾಠ ಕೇಳಲು ಮತ್ತು ಅಧ್ಯಯನದಲ್ಲಿ ತೊಡಗಲು ಅನುಕೂಲವಾಗುತ್ತದೆ.
5. ಭಾಷಾ ಕಲಿಕೆಯ ಪ್ರಯೋಗಾಲಯದ ಮುಖಾಂತರ ಬಹುಬೇಗ ಕನ್ನಡ ಭಾಷೆಯನ್ನು ಕಲಿಯಲು ಅನುಕೂಲವಾಗುವಂತೆ ಕಾರ್ಯಚಟುವಟಿಕೆಗಳನ್ನು ಮತ್ತು ಕ್ರಿಯಾ ಯೋಜನೆಗಳನ್ನು ರೂಪಿಸುವುದು.

Unit I

1. Introduction, Necessity of learning a local language. Methods to learn the Kannada language.
2. Easy learning of a Kannada Language: A few tips. Hints for correct and polite conservation, Listening and Speaking Activities
3. Key to Transcription.
4. ವೈಯಕ್ತಿಕ ಸ್ವಾಮ್ಯಸೂಚಕ/ಸಂಬಂಧಿತ ಸರ್ವನಾಮಗಳು ಮತ್ತು ಪ್ರಶ್ನಾರ್ಥಕ ಪದಗಳು - Personal Pronouns, Possessive Forms, Interrogative words

Unit II

1. ನಾಮಪದಗಳ ಸಂಬಂಧಾರ್ಥಕ ರೂಪಗಳು, ಸಂದೇಹಾಸ್ಪದ ಪ್ರಶ್ನೆಗಳು ಮತ್ತು ಸಂಬಂಧವಾಚಕ ನಾಮಪದಗಳು - Possessive forms of nouns, dubitive question and Relative nouns.
2. ಗುಣ, ಪರಿಮಾಣ ಮತ್ತು ವರ್ಣಬಣ್ಣ ವಿಶೇಷಣಗಳು, ಸಂಖ್ಯಾವಾಚಕಗಳು Qualitative, Quantitative and Colour Adjectives, Numerals

3. ಕಾರಕ ರೂಪಗಳು ಮತ್ತು ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು - ಸಪ್ತಮಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯ - (ಆ, ಅದು, ಅವು, ಅಲ್ಲಿ) Predictive Forms, Locative Case

Unit III

1. ಚತುರ್ಥಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯದ ಬಳಕೆ ಮತ್ತು ಸಂಖ್ಯಾವಾಚಕಗಳು - Dative Cases, and Numerals
2. ಸಂಖ್ಯಾಗುಣವಾಚಕಗಳು ಮತ್ತು ಬಹುವಚನ ನಾಮರೂಪಗಳು - Ordinal numerals and Plural markers
3. ನ್ಯೂನ/ನಿಷೇಧಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು ಮತ್ತು ವರ್ಣ ಗುಣವಾಚಕಗಳು - Defective / Negative Verbs and Colour Adjectives

Unit IV

1. ಅಪ್ಪಣೆ/ಒಪ್ಪಿಗೆ, ನಿರ್ದೇಶನ, ಪ್ರೋತ್ಸಾಹ ಮತ್ತು ಒತ್ತಾಯ ಅರ್ಥರೂಪ ಪದಗಳು ಮತ್ತು ವಾಕ್ಯಗಳು Permission, Commands, encouraging and Urging words (Imperative words and sentences)
2. ಸಾಮಾನ್ಯ ಸಂಭಾಷಣೆಗಳಲ್ಲಿ ದ್ವಿತೀಯ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ಸಂಭವನೀಯ ಪ್ರಕಾರಗಳು Accusative Cases and Potential Forms used in General Communication
3. 'ಇರು ಮತ್ತು ಇರಲ್ಲ' ಸಹಾಯಕ ಕ್ರಿಯಾಪದಗಳು, ಸಂಭಾವ್ಯಸೂಚಕ ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು - Helping Verbs; "iru and iralla", Corresponding Future and Negation Verbs
4. ಹೋಲಿಕೆ (ತರ-ತಮ), ಸಂಬಂಧ ಸೂಚಕ ಮತ್ತು ವಸ್ತು ಸೂಚಕ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಪದಗಳ ಬಳಕೆ - Comparative, Relationship, Identification and Negation Words

Unit V

1. ಕಾಲ ಮತ್ತು ಸಮಯದ ಹಾಗೂ ಕ್ರಿಯಾಪದಗಳ ವಿವಿಧ ಪ್ರಕಾರಗಳು – Different types of forms of Tense, Time and Verbs
2. -ದ್, -ತ್, -ತು, -ಇತು, -ಆಗಿ, -ಅಲ್ಲ, -ಗ್, -ಕ್, ಇದೆ, ಕ್ರಿಯಾ ಪ್ರತ್ಯಯಗಳೊಂದಿಗೆ ಭೂತ, ಭವಿಷ್ಯತ್ ಮತ್ತು ವರ್ತಮಾನ ಕಾಲ ವಾಕ್ಯ ರಚನೆ. Formation of Past, Future and Present Tense Sentences with Verb Forms
3. Kannada Vocabulary List: ಸಂಭಾಷಣೆಯಲ್ಲಿ ದಿನೋಪಯೋಗಿ ಕನ್ನಡ ಪದಗಳು - Kannada Words in Conversation.

ಬಳಕೆ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಅನುಕೂಲಗಳು ಮತ್ತು ಫಲಿತಾಂಶಗಳು:

TEXTBOOKS:

ಬಳಕೆ ಕನ್ನಡ - ಲೇಖಕರು: ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

Course Outcomes:

At the end of the Course the Students will be able to

1. Understand the necessity of learning of local language for comfortable life.
2. Listen and understand the Kannada language properly.
3. Speak, read and write Kannada language as per requirement.
4. Communicate (converse) in Kannada language in their daily life with Kannada speakers.
5. Speak in polite conservation.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

Course name	**ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ**	**Course credits**	**1.0**
Course code	NSH02	L+T+P	0+2+0
Total No. of Contact Hours	Tutorial Classes:26 hrs		

Course Objectives:

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯ ಉದ್ದೇಶಗಳು:

1. ವೃತ್ತಿಪರ ಪದವಿ ವಿದ್ಯಾರ್ಥಿಗಳಾಗಿರುವುದರಿಂದ ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.
2. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಪ್ರಧಾನ ಭಾಗವಾದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳನ್ನು ಸಾಂಕೇತಿಕವಾಗಿ ಪರಿಚಯಿಸಿ ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ ಸಾಹಿತ್ಯ ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಅರಿವು ಹಾಗೂ ಆಸಕ್ತಿಯನ್ನು ಮೂಡಿಸುವುದು.
3. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವನ್ನು ಹಾಗೂ ಅವರುಗಳು ಸಾಧಿಸಿದ ವಿಷಯಗಳನ್ನು ಪರಿಚಯಿಸುವುದು.
4. ಕನ್ನಡ ಶಬ್ದ ಸಂಪತ್ತಿನ ಪರಿಚಯ ಮತ್ತು ಕನ್ನಡ ಭಾಷೆಯ ಬಳಕೆ ಹಾಗೂ ಕನ್ನಡದಲ್ಲಿ ಪತ್ರ ವ್ಯವಹಾರವನ್ನು ತಿಳಿಸಿಕೊಡುವುದು.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡವನ್ನು ಬೋಧಿಸಲು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಪ್ರಸ್ತುತ ಪುಸ್ತಕ ಆಧರಿಸಿ ಬ್ಲಾಕ್ ಬೋರ್ಡ್ ವಿಧಾನವನ್ನು ಅನುಸರಿಸುವುದು. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು

ಪ್ರೇರೇಪಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.

2. ಇತ್ತೀಚಿನ ತಂತ್ರಜ್ಞಾನದ ಅನುಕೂಲಗಳನ್ನು ಬಳಸಿಕೊಳ್ಳುವುದು – ಅಂದರೆ ಕವಿ-ಕಾವ್ಯ ಪರಿಚಯದಲ್ಲಿ ಕವಿಗಳ ಚಿತ್ರಣ ಮತ್ತು ಲೇಖನಗಳು ಮತ್ತು ಕಥೆಕಾವ್ಯಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟ ಧ್ವನಿ ಚಿತ್ರಗಳು, ಸಂಭಾಷಣೆಗಳು, ಈಗಾಗಲೇ ಇತರ ವಿಮರ್ಶಕರು ಬರೆದಿರುವ ವಿಮರ್ಶಾತ್ಮಕ ವಿಷಯಗಳನ್ನು ಪಿಪಿಟಿ, ಡಿಜಿಟಲ್ ಮಾಧ್ಯಮಗಳ ಮುಖಾಂತರ ವಿಶ್ಲೇಷಿಸುವುದು.

3. ನವೀನ ಮಾದರಿಯ ಸಾಹಿತ್ಯ ಬೋಧನೆಗೆ ಸಂಬಂಧಪಟ್ಟ ವಿಧಾನಗಳನ್ನು ಶಿಕ್ಷಕರು ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಅನುಕೂಲವಾಗುವ ರೀತಿಯಲ್ಲಿ ಅಳವಡಿಸಿಕೊಳ್ಳಬಹುದು.

ಘಟಕ ೧: ಲೇಖನಗಳು **6 Hrs**

೧. ಕರ್ನಾಟಕ ಸಂಸ್ಕೃತಿ – ಹಂ.ಪ. ನಾಗರಾಜಯ್ಯ

೨. ಕರ್ನಾಟಕ ಏಕೀಕರಣ : ಒಂದು ಅಪೂವ ಚರಿತ್ರೆ – ಜಿ. ವೆಂಕಟಸುಬ್ಬಯ್ಯ

೩. ಆಡಳಿತ ಭಾಷೆಯಾಗಿ ಕನ್ನಡ – ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ ಮತ್ತು ಪ್ರೊ. ವಿ. ಕೇಶವಮೂರ್ತಿ

ಘಟಕ 2: ಆಧುನಿಕ ಪೂರ್ವದ ಕಾವ್ಯ ಭಾಗ **5 Hrs**

೧. ವಚನಗಳು: ಬಸವಣ್ಣ, ಅಕ್ಕಮಹಾದೇವಿ, ಅಲ್ಲಮಪ್ರಭು, ಆಯ್ದಕ್ಕಿ ಮಾರಯ್ಯ, ಜೇಡರದಾಸಿಮಯ್ಯ, ಆಯ್ದಕ್ಕಿ ಲಕ್ಕಮ್ಮ

೨. ಕೀರ್ತನೆಗಳು: ಅದರಿಂದೇನೂ ಫಲ ಇದರಿಂದೇನು ಫಲ – ಪುರಂದರದಾಸರು
ತಲ್ಲಣಿಸದಿರು ಕಂಡ್ಯ ತಾಳು ಮನವೇ - ಕನಕದಾಸರು

೩. ತತ್ವಪದಗಳು: ಸಾವಿರ ಕೊಡಗಳ ಸುಟ್ಟು - ಶಿಶುನಾಳ ಶರೀಫ

ಘಟಕ 3: ಆಧುನಿಕ ಕಾವ್ಯ ಭಾಗ **6 Hrs**

1. ಡಿ.ವಿ.ಜಿ. ರವರ ಮಂಕುತಿಮ್ಮನ ಕಗ್ಗದಿಂದ ಆಯ್ದ ಕೆಲವು ಭಾಗಗಳು

2. ಕುರುಡು ಕಾಂಚಾಣ: ದ.ರಾ. ಬೇಂದ್ರೆ

3. ಹೊಸಬಾಳಿನ ಗೀತೆ: ಕುವೆಂಪು

ಘಟಕ 4: ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯ **5 Hrs**

1. ಡಾ. ಸರ್ ಎಂ. ವಿಶ್ವೇಶ್ವರಯ್ಯ : ವ್ಯಕ್ತಿ ಮತ್ತು ಐತಿಹ್ಯ - ಎ.ಎನ್. ಮೂರ್ತಿರಾವ್

2. ಕರಕುಶಲ ಕಲೆಗಳು ಮತ್ತು ಪರಂಪರೆಯ ವಿಜ್ಞಾನ : ಕರೀಗೌಡ ಬೀಚನಹಳ್ಳಿ

ಘಟಕ 5: ಕಥೆ ಮತ್ತು ಪ್ರವಾಸ ಕಥನ **4 Hrs**

1. ಯುಗಾದಿ : ವಸುಧೇಂದ್ರ

2. ಮೆಗಾನೆ ಎಂಬ ಗಿರಿಜನ ಪರ್ವತ : ಹಿ.ಚಿ. ಬೋರಲಿಂಗಯ್ಯ

TEXTBOOKS:

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ - ಡಾ. ಹಿ.ಚಿ. ಬೋರಲಿಂಗಯ್ಯ ಮತ್ತು ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ, ಪ್ರಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

Course Outcomes:

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಪರಿಣಾಮಗಳು

1. ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯವಾಗುತ್ತದೆ.
2. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳು ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಆಸಕ್ತಿಯು ಮೂಡುತ್ತದೆ.
3. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.
4. ಕನ್ನಡ ಭಾಷಾಭ್ಯಾಸ, ಸಾಮಾನ್ಯ ಕನ್ನಡ ಹಾಗೂ ಆಡಳಿತ ಕನ್ನಡದ ಪದಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

Course name	**Advanced Technical Training Lab in Python**	**Course credits**	**1.0**
Course code	**ATT**	**L+T+P**	**0+0+3**
Total No. of Lab Hours / semester	**Practical Hours: 36**		

Course objectives:

At the end of the course the student should be able to:

1. Build the logic for a given problem statement by using algorithms using fundamental concepts of the Programming Language Python such as conditional statements, looping constructs, division, mod operations and string manipulation.
2. Implement the Data Structures such as Arrays, Dictionary, Queues, Lists, and Tuples using Python Programming language.
3. Implement File operations such as opening, reading, writing and

closing.

4. Understanding the OOPS concepts such as classes, Objects, Inheritance & Polymorphism

#	*Modules Covered*	*Duration in hrs.*
1	Fundamentals of Python Programming, IO & Operators	04
2	Control Statements, Decision Making, Iterations	06
3	String & String Manipulations	02
4	Data Structures	14
5	Functions	02
6	Fie Operations	02
7	Python OOPs Concepts	06
	Total Course Duration	16 Hours of Lecture 20 Hours of Practise

Topics Covered

1. **Introduction to Programming:** History, Features, Setting up Path, Compilation, Data types, Variables
2. **Working with IO & Operators:** Declaration, Input – Output, Arithmetic Operator, Relational Operators, Assignment Operators, Logical Operators, Membership Operators, Identity Operators, Bitwise Operators, Multi- line Statements, Comment Line
3. **Decision Making:** Need of Decision Making and Syntax, If, If-else, Nested if, If-else if.
4. **Iterations:** For Loop, While Loop, Nested Loops
5. **Control Statements:** Break, Continue, Pass
6. **String:** Creating a String, Memory Allocation, Built Functions in String
7. **List:** Creating List, Accessing Elements in List, Negative Accessing Elements in List, Slicing in List, Built Functions in List
8. **Tuple:** Creating Tuples, Immutable, Accessing values in Tuple, Slicing in Tuple, Built Functions in List
9. **Dictionary:** Creating a Dictionary with Integer Key, Mixed Key, dict(), Pair element, nested Dictionary, Adding Element to Dictionary, Accessing Element in Dictionary, Built Functions in Dictionary
10. **Set:** Creating a Set and Built Functions in Set
12. **Function:** Syntax of Function, With Argument With return type, With Argument without return type, Without Argument with return type, Without Argument without return type, Predefined, User defined, Anonymous Functions, Scope of variables.
13. **File Operations:** Open & Close File, Read & Write operations
14. **Python OOPS Concepts:** Classes & Objects, Inheritance, Encapsulation, Polymorphism (i.Method Overloading, ii.Method Over Riding), Data Abstraction, Methods

Course Outcomes:

Upon successful completion of this course, the student should be able to:

1. Designanddevelop solutions for particularprogramming problems using the fundamental concepts of Python Programming.
2. Implement different data structures like Arrays, Dictionary, Queues, Lists and Tuples.
3. Implement File operation like Open, close reading & writing the file
4. Understand the Object Oriented Concepts like Classes, Objects, Inheritance and Polymorphism

Evaluation Pattern:

CIE: 50 Marks

- Students are accessed every week for 35 marks.
- Evaluation includes Problem Analysis, Program Writingand Executing Programs in the Lab (10 + 15+ 10).
- Two tests are conducted for 15 marks each.
- Marks distribution (50 Marks) = Average of weekly assessments (35 Marks) + Average of two tests (15 Marks)

SEE: 50 Marks

- There are 20 programs in the list divided into two parts A & B, students have to pick one program each from the Part A & Part B
- Both the parts carry equal weightage.
- The evaluation includes Program Write-up + Analysis + Program Execution + Viva (10 + 10 + 20 + 10 = 50 Marks)
- Change of the experiment is allowed only once in the first half an hour of the exam and in such cases the evaluation will be done for 80% of the Marks

SCHEME & SYLLABUS

OF

V & VI SEMESTERS

B.E. CHEMICAL ENGINEERING
2022 – 2023
[for 2020 batch, 175 credit course]

Department Chemical Engineering
SIT, Tumakuru-572103

About Institute:
Siddaganga Institute of Technology (SIT) was established in the year 1963 by Siddaganga Education Society, as a private self-financing institution with the following vision and mission.

Vision of the Institute:
To develop young minds in a learning environment of high academic ambience by synergizing spiritual values and technological competence.

Mission of the Institute:
To continuously strive for the total growth of students by educating them in state-of-the art technologies and helping them imbibe professional ethics and societal commitment so that they emerge as competent professionals to meet the global challenges.

Quality Policy:
Siddaganga Institute of Technology is committed to:

- Impart quality education by establishing effective learning-teaching – learning processes to produce competent engineers with high professional ethics and social responsibility.
- Create congenial environment and provide state-of-the-art infrastructure.
- Continually improve the effectiveness of the quality management system.
- Satisfy all applicable requirements.

Vision of the Department:
To be an internationally renowned department for chemical engineering education and research meeting the aspirations of society.

Mission of the Department:
M1. To impart quality education in chemical engineering at all levels.
M2. To foster cutting edge research and development in chemical engineering.
M3. To produce responsible and ethical engineers to serve society.

Program Educational Objectives (PEOs)
The Program Educational Objectives of the program are:
The graduates shall possess
1. a sound knowledge of chemical engineering to pursue a successful professional career.
2. a spirit of inquiry and urge to pursue research in chemical engineering and thrust areas.
3. high ethical values and be socially responsible in discharging their duties.
4. knowledge of the latest developments in their field of activity and commit themselves to life-long learning.

Program Specific Outcomes (PSOs):

The following are the PSOs defined by the Chemical Engineering department:

PSO-1: Graduates will be able to apply the knowledge of science and transport process for production and separation of chemicals in chemical and allied industries

PSO-2: Graduates will be able to analyze processes/equipment taking into consideration, process safety, project engineering, economics and environmental aspects.

PSO-3: Graduates will be able to analyze processes using process control, process optimization and integration using modelling/simulation tools for process development

PSO-4: Graduates will be able to design chemical equipment for a given process.

Program Outcomes:

The following are the Program Outcomes:

1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

The above POs are achieved through curriculum that offers courses under mathematics and basic sciences, basic engineering courses, professional core, professional electives, laboratory courses, open electives, humanity courses, projects, technical seminar and the industrial training and mandatory courses. Each course under these course components have COs that are mapped to the POs. The attainment of POs is achieved through attaining the COs.

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institute affiliated to Visvesvaraya Technological University, Belagavi, Approved by AICTE, New Delhi)

Department of Chemical Engineering, SIT, Tumakuru - 3

5th & 6th Semester , B.E. – Chemical Engineering

Professional Electives

	Elective - 1 [2020 batch - V sem]		Elective - 2 [2020 batch – VI SEM]
5RCHE11	Petroleum Refining Technology	6RCHE21	Petrochemical Chemical Engineering
5RCHE12	Applied Mathematics in Chemical Engineering	6RCHE22	Process Modelling and Simulation
5RCHE13	Energy Technology	6RCHE23	Heterogeneous Reaction Systems
5RCHE14	Risk Management in Process Industries	6RCHE24	Food Engineering

V SEMESTER

MANAGEMENT AND ENTREPRENEURSHIP

Contact Hours/Week	:	3+0+0 (L+T+P)	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	HSS06			

Course Objectives:

This course will enable students to:

1. Understand the principles and functions of management.
2. Analyze the importance of planning, organizing, staffing, leading and controlling organization.
3. Understand and manage engineering design and quality
4. Inculcate entrepreneurial qualities and understand the need of rural entrepreneurship
5. Acquire knowledge about funding agencies, understand procedure in applying for funds and analyze the cases of successful entrepreneurs

Unit-I

Introduction to Management: Definition of management, management skills, productivity and effectiveness, efficiency, functions and principles of management.

Planning: Nature of planning, types of plans- purpose of vision, mission, goals, objectives strategies, policies; steps in planning, MBO, Strategic planning

Organizing: Formal and informal organization, span of management, the structure and Process of organizing, Organizational structure: line and staff organization, Functional organization, matrix organization **8 Hrs**

Unit-II

Staffing: Definition, systems approach to HRM, factors affecting staffing, recruitment and selection, job design, skill and characteristics of a manager, selection process and techniques.

Leading: Human factors in managing, motivation, Theory X and Y, the hierarchy of needs theory, leadership behaviour and styles.

Controlling: Basic control process, critical control points and standards, Benchmarking requirements for effective control. **9 Hrs**

Unit - III

Managing Engineering Design and Development: Product and Technology Life Cycles, Nature of Research and Development, Research Strategy and organization, Nature of Engineering Design, Systems Engineering / New Product Development.

Managing Production/Operations: Types of production processes, Forecasting, Work measurement, Maintenance and Facilities (Plant) Engineering, Total Quality Management, Lean Manufacturing

Engineers in Marketing and service activities: Marketing and the Engineer, Engineers in Service organizations. **8 Hrs**

Unit – IV

Entrepreneur & Entrepreneurship: Introduction, concept of Entrepreneur, characteristics of an entrepreneur, and qualities of an entrepreneur, functions of an entrepreneur, characteristics of entrepreneurship, factors affecting entrepreneurial growth. Entrepreneurship and economic development-rural, woman and social entrepreneurship

Financing and Institutional Support for Entrepreneurship: Startups, business plans, venture capitalists, angel investors, funding agencies - commercial banks, development banks, NBFCS and incubation centres. Innovations and project trends. **8 Hrs**

Unit – V

Taxation benefits: Depreciation allowances, rehabilitation allowance, investment allowance and other tax concession benefits to an entrepreneur.

Case Studies from Stay Hungry and Stay Foolish – Rashmi Bansal, IIM Ahmedabad:

1) Success story of naukri.com by Sanjeev Bikhchandani
2) Success story of Make My Trip by Deep Kalra **6 Hrs**

TEXT BOOKS:

1.	Harold Koontz, Heinz Weihrich	Essentials of Management, McGraw Hill Education, 10th Edition, 2015, ISBN: 978-9339222864
2.	Lucy C. Morse	Managing Engineering and Technology, Pearson Education, 6th Edition, 2015, ISBN : 978-9332550124
3.	S.S. Khanka	Entrepreneurial Development, S. Chand Publishing, 4th Edition, Reprint 2020. ISBN 978-81-219-1801-5

REFERENCE BOOKS:

1.	James A.F. Stoner, R. Edward Freeman, Daniel R. Gilbert	Management, Pearson Education, 6th Edition, 2018, ASIN : B07DFHYYSZ
2.	Rashmi Bansal	Stay Hungry Stay Foolish, IIM Ahmedabad, 1st Edition, 2008, ISBN: 978-8190453011
3.	Rashmi Bansal	Connect the Dots, Bushfire Publishers, 1st Edition, 2019, ISBN: 978-8193182178

Course Outcomes:

After the completion of this course, students will be able to:

1. Explain various functions of management.
2. Apply the knowledge of management principles and strategies in various functional areas.

3. Manage engineering design and product development.
4. Describe entrepreneurship, its characteristics, and benefits and identify various funding sources for starting a business venture.
5. Explain various taxation benefits enjoyed by an entrepreneur and analyze the characteristics and strategies adopted by successful entrepreneurs.

CHEMICAL REACTION ENGINEERING

Contact Hours/ Week	: 4+1+0 (L+T+P)	Credits :	4.5
Total Lecture Hours	: 52	CIE Marks :	50
Total Tutorial Hours	:13	SEE Marks :	50
Sub. Code	: 5RCH01		

Course Objectives:
This course will enable students to:
1. Understand the different types of reactions and formulation of their reaction rate.
2. Development of kinetic model for homogeneous reactions giving emphasis on various types of reactions.
3. Development of design strategy for homogeneous reactions considering different types of reactors.
4. Understand the effect of temperature on reactor performance for adiabatic and non adiabatic operation.

Unit – I

Kinetics of Homogeneous Reactions: Concentration-dependent term of a rate equation: (Single and Multiple reactions, Elementary and Nonelementary Reactions, Molecularity and order of reaction, Rate Constant, Representation of elementary reaction, Representation of Nonelementary reactions, Kinetic Models of Nonelementary Reactions, Testing Kinetic Models)
Temperature-dependent term of a rate equation: Temp. Dependency from Arrhenius law, Collision theory, Transition state theory, Thermodynamic approach, Activation Energy **10 + 3 Hrs**

Unit – II

Interpretation of Batch Reactor Data: Constant-Volume batch Reactor: Analysis of Total pressure data, Integral Method of Analysis of Data(Irreversible I order Reactions, II order, nth order, Zero-order, Overall order of Irreversible reactions from the half-life, Irreversible Reactions in parallel, Homogeneous catalyzed reactions, Auto catalytic reactions, Irreversible Reactions in series, First order reversible reactions, Reactions of shifting order) Differential method of analysis of data.
Varying-Volume batch Reactor: Application for Zero order, First order, Second order Reactions. **11 + 3 Hrs**

Unit – III

Ideal Reactors for a Single Reaction: Ideal Batch Reactor, Space-Time and Space-Velocity, Mixed flow reactor, Plug flow Reactor, Holding time and space time for flow reactors. General features of reactors.

Design for Single Reactions: Size comparison of single reactors, Multiple-Reactor systems (PFR in series and/or in parallel, Equal size MFR in series, Reactors of different types in series), Recycle Reactor. **10 + 3 Hrs**

Unit – IV

Multiple Reactions: Design for Parallel Reactions Qualitative Discussion about product distribution, Contacting patterns for reactions in parallel, Operating conditions for parallel reactions.

Design for Series Reactions: First order irreversible reactions in series, Qualitative discussion about product distribution, Quantitative treatment, Plug flow or batch reactor, Quantitative treatment, mixed flow reactor.

Design for Series-Parallel Reactions: Two-step irreversible series-parallel reactions, Quantitative treatment, plug flow or batch reactor, Quantitative treatment, mixed flow. **10 + 2 Hrs**

Unit – V

Temperature and Pressure effects: Single reactions- heats of reaction from thermodynamics, heats of reaction and temperature, equilibrium constants from thermodynamics, equilibrium conversion, general graphical design procedure, optimum temperature progression, heat effects, adiabatic operations, non adiabatic operations, comments and extensions.

Basics of Non-ideal flow: Introduction, Importance and interpretation of RTD curve, E, F and C curves, Statistical Interpretation, Dispersion model, Tanks in series model, Conversion in non-ideal flow reactors for simple systems. Problems, Diagnosing reactors ills (qualitative discussion only).

Heterogenous Reactions: Introduction, Rate Equation for heterogeneous reactions, concept of rate controlling steps, Contacting Patterns for two phase systems. Derivations and problems. **11+ 2 Hrs**

TEXTBOOKS:

1	Octave Levenspiel	Chemical Reaction Engineering, Wiley Publishers, 3e, 2006, ISBN: 978-8126510009
2	Himadri Roy Ghatak	Reaction Engineering Principles, CRC Press, 1e, 2016,ISBN:978-1-4987-5858-1

REFERENCE BOOKS:

1	Fogler H Scott	Elements of Chemical Reaction Engineering, Pearson Education India, 4e, 2015, ISBN: 978-9332549326.
2	J.M. Smith	Chemical Engineering Kinetics, McGraw Hill, 3e, 2014, ISBN: 978-9332902633.

Course Outcomes:

After the completion of this course, students will be able to:

1. Formulate stoichiometric relations and kinetic rate expression for elementary and non-elementary reactions considering thermodynamic consistency.

2. Solve chemical reaction engineering problems applying material and energy balance equations to batch, semi-batch and continuous type reactors for different reaction systems.
3. Calculate operating parameters (size, flow rates, conversion, etc.) for designing ideal type of reactors under isothermal and non-isothermal conditions.
4. Analyse and select reactor type to achieve a desired reactant conversion/ selectivity/ yield.

MASS TRANSFER – II

Contact Hours/ Week	: 4+1+0 (L+T+P)	Credits :	4.5
Total Lecture Hours	: 52	CIE Marks :	50
Total Tutorial Hours	: 13	SEE Marks :	50
Sub. Code	: 5RCH02		

Course Objectives:

This course will enable students to:

1. Understand the various chemical engineering separation processes.
2. Design of equilibrium-based multistage separations such as absorption, extraction
3. Design of distillation column using McCabe-Thiele and Ponchon-Savarit methods.
4. Principles and applications of Fluid–Fluid and Fluid–Solid separation processes
5. Principles and applications of various novel separation techniques

Unit – I

Gas Liquid Contacting Systems: Types, construction and working equipment – Distillation, Absorption, Humidification & Drying.

Absorption: Packed tower absorption, diffusion coefficients, HETP, HTU, liquid phase hold up and pressure drop in absorption towers, design of absorption towers, multi component absorption, absorption with chemical reaction. **10 + 3 Hrs**

Unit – II

Distillation I: Methods of distillation – batch, continuous, flash, vacuum, molecular, azeotropic, extractive and multi component distillation, steam distillation. **10 + 3 Hrs**

Unit – III

Distillation II: Distillation with and without reflux, multistage rectification of binary mixtures, McCabe Thiele Method, calculations by enthalpy concentration diagrams, efficiency – overall, local and Murphree plate efficiency

10 + 3 Hrs

Unit – IV

Extraction: Introduction to extraction, Liiquid-Liquid equilibria, Ternary diagram, solvent selection, stage wise contact: single stage and multistage cross-current and counter-current extraction, number of equilibrium stage

by graphical method, minimum solvent rate, extraction equipment.

7 + 2 Hrs

Unit – V

Crystallization: Theory of crystallization, supresaturation and calculation of yields, Material and energy balance. Classification and the use of various crystallization equipment. Caking of crystals and its prevention.

7 + 2 Hrs

Novel Separation Processes: Concepts, operation and applications of membrane separation processes – reverse osmosis and electro dialysis.
Miscellaneous Separation Processes: Pervaporation, foam separation, etc.

8 Hrs

TEXTBOOKS:

1	Robert. E. Treybal	Mass Transfer Operation, Mc Graw Hill, NY, 3e, 2012, ISBN: 9781259029158
2	Binay K. Dutta	Principles of Mass Transfer and Separation processes Prentice Hall of India, New Delhi,

REFERENCE BOOKS:

1	Coulson and Richardson	Heat and Mass Transfer: Fundamentals and Applications, Vol I-B, 7e, 2017, ISBN: 9780081025505
2	J.D. Seader & Henley E. J.	Separation Process Principles Wiley India Pvt. Ltd, 2e, 2006, ISBN: 978- 8126509270
3	Geankoplis, C.J.	Transport Processes and Unit Operations, Prentice Hall (I), 3e, 2003, ISBN: 978- 8120311343
4	Mc Cabe and J M Smith	Unit operations in Chemical Engineering, MC Graw Hill India Pvt. Ltd., 7e, 2017
5	A.S. Foust, L A Wenzel	Principles of Unit Operations, John Wiley and Sons, New York, 3e, 2008

Course Outcomes:

After the completion of the course, the student will be able to:

1. Apply the concepts of vapor-liquid, liquid-liquid and solid-liquid operations to identify and formulate appropriate criteria for selecting among alternative separation technologies. Understand the construction and working of different types of gas and liquid dispersed equipment
2. Analyze problems related to absorption, distillation, extraction and membrane separation and apply mass transfer concepts to calculate mass transfer rate.
3. Solve problems of mass transfer absorption, distillation, extraction and membrane separation & analyze data.
4. Utilize mass transfer concepts to design equipment including absorption column, distillation column, extractor and membrane separation equipment.
5. Demonstrate the knowledge and need for sustainable absorption, distillation, extraction, crystallization and membrane separation techniques in the context of environment and economics

CHEMICAL TECHNOLOGY

Contact Hours/ Week	:3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 5RCH03		

Course Objectives:
This course will enable students to:
1. Understand the chemical processes along with emphasis on recent technological developments.
2. Understand the process technologies, availability of raw materials, production trends, preparation of flow sheets, engineering and environmental problems of various chemical industries.

Unit-I

Carbohydrate and fermentation industries: Manufacture of Sucrose, starch and Starch derivatives. Manufacture of Ethyl Alcohol, Citric Acid, Acetic acid and beer by fermentation. **8 Hrs**

Unit-II

Edible and essential Oils, soaps and detergents: Production and extraction of vegetable oils, Hydrogenation of oils, refining of oils, production of fatty acids, glycerin and soap, Production of detergents.
Pulp and paper industries: Methods of pulping, Production of pulp, Production of paper. **8 Hrs**

Unit- III

Chlor - Alkali Industries: Manufacture of soda ash, Caustic soda and Chlorine and Hydrochloric acid Industrial gases: Manufacture of Carbon dioxide, Hydrogen, Oxygen and Nitrogen, Water gas, Producer gas.
Cement Industries: Manufacture of cement. **8 Hrs**

Unit-IV

Sulfur, Sulfuric acid and fertilizer industry: Elemental Sulphur mining and Manufacture of Sulphur. Manufacture of sulphuric acid. Manufacture of Ammonia, Urea, Nitric acid, Phosphoric Acid, Calcium Phosphates and Ammonium Phosphates.

8 Hrs

Unit – V

Polymer and Rubber industries: Polyethylene, Polypropylene, PVC and Phenol-Formaldehyde resin, Urea-Formaldehyde resin, SBR, Viscose rayon, Nylon, Rubber Vulcanization.

7 Hrs

Note: Unit Process and Unit operations involved, main / side reactions, raw materials / utility required and ratios flow sheet, major unit operations and equipment, engineering problems end uses and examples of such industries

in India and reasons for their locations of the above industries are to be discussed.

TEXTBOOK:

1	M Gopal Rao	Dryden: Outlines of Chemical Technology, for 21st Century, EWP, 3e, 2010, ISBN: 9788185938790

REFERENCE BOOKS:

1	George T. Austin.,	Shreve's Chemical Process Industries, McGraw Hill Education, 5e, 2017, ISBN: 978-1259029455.
2	G.N. Pandey	A Textbook of Chemical Technology Volume–II, 2e, 2018, Sangam Books Ltd, ISBN: 978-0706986877

Course Outcomes:

After the completion of the course, the student will be able to:

1. Demonstrate the knowledge of the manufacture of various inorganic and organic chemicals by various processes.
2. Interpret the process flow diagram, unit operations and unit processes.
3. Identify major engineering problems in the given process.

PROFESSIONAL ELECTIVE -1: PETROLEUM REFINING TECHNOLOGY

Contact Hours/ Week	: 3+0+0 (L+T+P))	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 5RCHE11		

Course Objectives:

This course will enable students to:

1. Impart introductory knowledge of petroleum origin and its characteristics.
2. Acquire knowledge of pre-treatment techniques of crude oil.
3. Provide basic knowledge of selected products and its characterization.
4. Describe the catalytic and non-catalytic processes for the production of petroleum products.
5. Introduce the concept of reforming.

Unit – I

Composition of Crude: Origin and theory of formation of petroleum reserves and deposits of world . Overview of upstream and downstream operations. Composition of crude and classification of crude oil., Evaluation of petroleum, Over view of UOP-k factor, TBP analysis, EFV analysis, Average boiling point, ASTM in detail. Thermal properties of petroleum fractions. **7 Hrs**

Unit – II

Crude Pre-treatment: Pumping of crude oils: Dehydration of crude by (1) Chemical, (2) Gravity, (3) Centrifugal and (4) Electrical Desalter and comparison of each.

Treatment Techniques: Types of impurities present, Sweetening operations for gases: Ethanolamine Treatment, Stretford Operation; Catalytic desulphurization; and Liquid SO2 extraction of aromatics. **8 Hrs**

Unit – III

Products - Properties And Test Methods: Crude Distillation, Products from crude; Gasoline: ASTM Distillation, Reid Vapor Pressure Analysis, Octane Number, Oxidation stability, Additives; Kerosene: Flash point, Fire point, Smoke Point, Burning Quality; Diesel Fuels: Classification, Pour Point, Aniline Point, Viscosity, Additives for diesel; Lube Oils: Categories, Carbon Residue: Conradson Residue, Rams bottom Method and Bitumen: Softening Point, Penetration Index. **8 Hrs**

Unit – IV

Thermal Processes: Thermal cracking: Chemistry, theory, properties of cracked materials and factors influencing the properties of cracked materials, Visbreaking, Dubb's two coil cracking. Coking: Types of coking processes, Dubb's two coil coking, delayed coking, fluid coking. **7 Hrs**

Unit – V

Catalytic Cracking: Catalytic cracking: Carbonium ion chemistry, catalysts, reaction variables; Fluid catalytic cracking - Texaco, ESSO, Kellog; Naphtha cracking; and Hydrocracking: Chemistry, catalysts, reaction conditions.
Catalytic Reforming: Chemistry, Reaction variables, catalysts, feedstock requirements. **9 Hrs**

TEXTBOOKS:

1	B K Bhaskara Rao	Modern Petroleum Refining processes, 5e, 2008, ISBN: 978-8120417151.
2	Ram Prasad	Petroleum Refining Technology, Khanna, 2002, ISBN: 978-8174090645

REFERENCE BOOKS:

1	William Lyons, Gary J Plisga BS, Michael Lorenz, Eds	Standard Handbook of Petroleum and Natural Gas Engineering", Gulf Professional Publishing, 3e, 2015, ISBN: 978-0123838469
2	O. P. Gupta	Elements of Petroleum Refinery Engineering", Khanna Publishers, 1e, 2015, ISBN: 978-9382609728
3	Nelson WL	Petroleum Refinery Engineering", Mc. Graw Hill, 4e, 1958, ISBN: 978-0070462687

Course Outcomes:
After the completion of the course, the student will be able to:
1. Discuss the origin and various characteristics of the crude
2. Describe crude various pretreatment techniques for crude.
3. Describe the characteristics and properties of selected products and its

characterization

4. Demonstrate the knowledge of catalytic and non-catalytic processes for the production of petroleum products
5. Demonstrate the knowledge of reforming.

PROFESSIONAL ELECTIVE -1: APPLIED MATHEMATICS IN CHEMICAL ENGINEERING

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 5RCHE12		

Course Objectives:

This course will enable students to:

1. Formulate mathematical model for simple Chemical engineering systems such as solvent extraction unit, radial heat transfer etc.
2. Understand and apply the computational requirements to solve the developed mathematical models.
3. Analyze the model performance by tailoring the modelling equations.
4. Develop packages to solve differential equations and design of heat exchanger and reactor.

Unit – I

Introduction: Application of mathematical methods to solve chemical engineering problems. Treatment of experimental data and interpretation of results. Use of different types of graph papers, curve fitting methods and empirical laws. Models in chemical engineering, Linear and non-linear equation and examples. **9 Hrs**

Unit – II

Mathematical Treatment of the Problem: Introduction, presentation of the problem, simple problems formulation on solvent extraction in single and multiple stages. Radial heat transfer through a cylindrical conduction. Salt accumulation in stirred tank. **8 Hrs**

Unit – III

Application to Chemical Engineering: Numerical solutions of ordinary differential equation, homogeneous – non – homogeneous ordinary differential equation. Numerical solutions of partial differential equation. Matrices and their applications, Fourier series and transforms. **8 Hrs**

Unit – IV

Rectangular Cartesian Co-ordinate, Cylindrical and Spherical Co- ordinates: Application of computers in solving chemical engineering problems, generalized flow sheet programs. **7 Hrs**

Unit – V

Software Packages: Development of software packages for solving differential equations, heat exchanger and reactor design. **7 Hrs**

TEXTBOOKS:

1	Mickley H.S., Sherwood T. K. and Reed C.E	Applied Mathematics in Chemical Engineering, 3e, Tata McGraw Hill, 1999, ISBN: 978-0070994515
2	Jenson V.G. & Jeggreys G.V	Mathematical Methods in Chemical Engineering, 2e, Elsevier, 2012, ISBN: 978-9381269541
3	Pushpavanam S	Mathematical methods in Chemical Engineering, Eastenno Economy Edition, Prentice Hall India Learning Private Limited, 1998, ISBN: 978-8120312623

REFERENCE BOOK:

1	Rose L.M	Applications of Mathematical Modeling to Process Development and Design, Applied Science Publishers Ltd., London.

Course Outcomes:

After the completion of the course, the student will be able to:

1. Analyze experimental data and differentiate linear and nonlinear equations.
2. Develop mathematical models for chemical engineering systems.
3. Apply mathematical techniques to solve process models of chemical engineering systems
4. Solutions to chemical engineering process models using MATLAB
5. Develop software packages to simple chemical engineering systems.

PROFESSIONAL ELECTIVE -1: ENERGY TECHNOLOGY

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 5RCHE13		

Course Objectives:

This course will enable students to:

1. Elaborate the different fossil fuels and their importance.
2. Realize the importance of nuclear energy, nuclear reactors, and associated problems.
3. Describe the different technologies for harnessing solar energy.
4. Acquire overall knowledge of the important renewable energy sources.
5. Describe the importance of energy conservation and storage.

Unit – I

Fossil Fuels: Oil, refining, natural gas, coal, enhanced oil recovery, shale oil, tar sands and extra heavy oil, coal liquefaction and gasification. **8 Hrs**

Unit – II

Nuclear Energy: Energy from nuclear fission – The fission of uranium, nuclear reactor design, fission reactor control, types of thermal neutron

reactors, nuclear safety, risk assessment, waste disposal, advanced reactor design, fast breeder reactors. **8 Hrs**

Unit – III

Direct use of Solar Energy: Introduction, solar collectors, heat storage, passive solar heating.

Electricity from Solar Energy: Solar electric generation, photovoltaic devices, application of photovoltaic devices. **7 Hrs**

Unit – IV

Biomass Energy: Wood, ethanol production, biodiesel, municipal solid waste. Biogas: Biogas generation, factors affecting biodigestion, classification of biogas plants, floating drum biogas plant, fixed dome biogas plant. KVIC and Janata biogas plants, site selection for biogas plants.

Hydrogen: Hydrogen – present and future, hydrogen production methods – electrolysis, thermal decomposition of water, and chemical reactions; storage and transportation of hydrogen, fuel cells. **8 Hrs**

Unit – V

Energy Conservation: Approaches to energy conservation – the Indian scenario, cogeneration, smart grid, LED streetlights, home heating and cooling, residential lighting, transportation – fuel economy, hybrid vehicles.

Energy Storage: Pumped hydroelectric power, compressed air energy storage, flywheels, superconducting magnetic energy storage. **8 Hrs**

TEXTBOOK:

1	Dunlap, R. A.	Sustainable Energy, SI Edition, Cengage Learning India Private Limited, Delhi, 2015. ISBN: 978-8-13-152049-9.

REFERENCE BOOKS:

1	Kothari, D. P., Singal, K. C. and Ranjan, R	Renewable Energy Sources and Emerging Technologies, PHI Learning Private Limited, Delhi, 2e, 2013. ISBN: 978-8-12-034470-9
2	Sukhatme, S.P and Nayak, J.K, "Solar Energy	Solar Energy, Tata McGraw-Hill Publishing Company Limited, New Delhi, 4e, 2017. ISBN: 978-9-35-260711-2.
3	Khan, B.H.,	Non-Conventional Energy Resources, Tata McGraw-Hill Publishing Company Limited, New Delhi, 3e, 2017.ISBN:978-9-35-260188-2.

Course Outcomes:

After the completion of the course, the student will be able to:

1. Explain the various options for petroleum production.
2. Describe the principles behind nuclear reactors.
3. Outline the technologies that are used to harness the power of solar energy.
4. Demonstrate an overview of the main sources of renewable energy.
5. Discuss the importance of energy conservation and storage.

PROFESSIONAL ELECTIVE-1: RISK MANAGEMENT IN PROCESS INDUSTRIES

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39+0+0	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 5RCHE14		

Course Objectives:

This course will enable students to:

1. Understand the fundamentals of risk management in process industries
2. Get a basic theoretical knowledge on Process Safety Management in highly hazardous industries

Unit – I

Risk Management Overview: Terminologies, Key differences between Risk, Consequence, Hazards, Personal Safety, Occupational Safety and Process Safety. Project Safety Lifecycle Concept (Concept, Front End Engineering, Design, Construction, Commissioning, Operations and Decommissioning) Governing standards for risk management (ISO 31000, Safety Management Systems - Energy Institute, Operations Integrity Management Systems (OIMS – ExxonMobil), BP SMS, Oil and Gas Producers SMS, CCPS RBPS) Learning from industrial incidents – Key Incidents that shaped the world of Process Safety (Bhopal, Piper Alpha, Pasadena, Seveso, Flixborough, Valdez, BP Texas, Chernobyl, Fukushima and BP Mocondo) Regulatory requirements (OSHA CFR 1910, Indian Factories Act, UN C 124 – Major Accident Prevention Policy, RIDDOR, UK, Norwegian PSA, Safety Case Approach, etc.) Key Industry Standards and Codes (NFPA, ISO, IEEE, ISA, EEMUA, API – Key standards used in process industries) **10 Hrs**

Unit – II

Hazard Identification and Risk Analysis Techniques (Process Hazard and Risk Analysis Methodologies): Introduction to Qualitative, Semi-Quantitative and Quantitative What-If, Checklist, Hazard and Operability (HAZOP), Failure Modes and Effects Analysis, Fault Tree Analysis, Event Tree Analysis, Layer of Protection Analysis, Dow Fire and Chemical Index, Dow Chemical Exposure Index, Quantitative Risk Assessment (including Markov Analysis), Human Reliability Analysis. **6 Hrs**

Unit– III

Consequence estimation: Consequence types (Fire, Explosion and Toxic), The fire triangle, distinction between fires and explosions, definitions, flammability characteristics of liquids and vapours. Limiting oxygen concentration and inerting, flammability diagram, ignition energy, auto-ignition, auto-oxidation, adiabatic compression, ignition sources, sprays and mists, explosions. Consequence end

points (Heat radiation levels, Explosion Over pressure levels and Toxic end points). Occupational Exposure Levels (Chemical Exposure Levels, Electrical Radiation level, Cariogenic exposures, Noise levels and other Occupational hazards associated in industries). Emergency Exposure Levels (IDLH, ERPG and other thresholds for Pre-Incident Planning and Emergency Responses) **4 Hrs**

Unit – IV

Likelihood analysis: Concepts of equipment, reliability and process safety implications, Reliability, Availability and Maintainability, Equipment reliability (Failure frequency and failure data for equipment), Concepts of Safety Integrity Levels, Human Reliability (High Reliability Organization) **6 Hrs**

Unit – V

Industrial concepts of Safeguards and Independent Layer of Protection (Process Safety in Design): Process Safety Information, Facility Siting, Pressure relief devices, Control System Design, Safe systems of plant shutdown (Interlock systems), Automation, Artificial Intelligence, and Big Data Analytics, Industry 4 and growth areas, Pre-Incident Planning, Emergency Preparedness, Risk Matrix, Risk Acceptance Criteria, Risk As Low As Reasonably Practicable (ALARP) – decision making process, Leading and Lagging Performance Indicators, Human Factors (Skillsets and mindsets for risk professionals) **13 Hrs**

TEXTBOOKS:

1	Crowl, D. A.and Louvar, J. F.,	Chemical Process Safety: Fundamentals with Applications, Prentice Hall, Upper Saddle River, NJ, 2e, 2001, ISBN: 0132440555, 9780132440554
2	American Institute of Chemical Engineers	"Guidelines for Risk Based Process Safety" CCPS (Center for Chemical Process Safety) ISBN: 978-1-118-20963-9

REFERENCE BOOKS:

1	Sam Mannan	Lee's Loss Prevention in the Process Industries, Third Edition, ISBN: 0-7506-7555-1

Course outcomes:

On successful completion of the course, the student will be able to;

CO1: Define the concepts of process safety and describe the benefits of process safety to an organisation and to society.

CO2: Describe risk assessment and hazards and define concepts related to process safety risk assessment including g protection layers, threats, consequences , etc.

CO3: Define the main concepts of common process hazard analysis. Compare qualitative and quantitative risk assessment techniques, their uses, benefits and limitations. Perform hazard identification/ risk assessment for a process safety case study.

CO4: Apply the Knowledge of regulations, standards, risk assessment techniques, inherent safety techniques and risk-based decisions during design projects.

HEAT TRANSFER LAB

Contact Hours/ Week	: 0+0+3 (L+T+P)	Credits :	1.5
Sub. Code	: 5RCHL1	CIE Marks :	50
		SEE Marks :	50

Course Objectives:

This course will enable students to:

1. Experimentally verify the Heat Exchanger concepts studied in theory.
2. Carry out experiment and make observations for various heat transfer equipment.
3. Study the effect of U, hi and ho in design of equipment.
4. Evaluate the performance characteristic for different heat transfer cases.

The experiments are based on the following topics.

1. Estimation of overall heat transfer coefficient and air side heat transfer coefficient in a bare tube heat exchanger
2. Estimation of overall heat transfer coefficient and air side heat transfer coefficient in a finned tube heat exchanger
3. Estimation of individual and overall heat transfer coefficient in a double pipe heat exchanger
4. Estimation of individual and overall heat transfer coefficient in spiral plate heat exchanger
5. Estimater of overall heat transfer coefficient in packed bed heat transfer and verification of correlations
6. Estimation of overall heat transfer coefficient and draw Wilson plot for a vertical condenser
7. Estimate individual and overall heat transfer coefficient in a shell and tube condenser
8. To determine the overall heat transfer coefficient and critical radius of insulation
9. Thermal conductivity of insulating powder
10. Overall heat transfer coefficient of a plate heat exchanger.

NOTE: Evaluation marks displayed at the end of each experiment should be displayed in the notice board

Course Outcomes:

After the completion of the course, the student will be able to:

1. Conduct the experiments on various heat transfer equipment.
2. Analyse and interpret the experimental data on conductivity, heat transfer coefficient (for natural and forced convection), rate of evaporation and emissivity
3. Write technical report effectively with proper conclusions
4. Demonstrate the knowledge of heat transfer and its applications

CHEMICAL REACTION ENGINEERING LAB

Contact Hours/ Week	: 0+0+3 (L+T+P)	Credits :	1.5
Sub. Code	: 5RCHL2	CIE Marks :	50
		SEE Marks :	50

Course Objectives:

This course will enable students to:

1. Demonstrate knowledge of reaction engineering fundamentals.
2. Carry out experiments to obtain kinetic and RTD data.
3. Analyze and interpret experimental data and determine order of reaction and specific rate constant.
4. Write effective technical reports drawing appropriate conclusions.

The experiments are based on the following topics.

1. To estimate order and rate constant for a reaction in a batch reactor-I (equi-molar) and non-equimolar)
2. To estimate order and rate constant for a reaction in a batch reactor-II (non-equimolar)
3. To estimate the rate constant of a reaction at different temperatures in a batch reactor
4. To estimate order and rate constant for a reaction in a CSTR
5. To determine order and rate constant for a reaction in a PFR
6. Effect of addition of reactant on conversion in a Semi-batch reactor
7. Estimation of rate constant of a saponification reaction in a packed bed reactor
8. RTD studies in a CSTR
9. RTD studies in a PFR-I (pulse input)
10. RTD studies in a PFR-II (step input)
11. Determine rate constant and order in a combined flow reactor (PFR + MFR)

Minimum of 10 experiments are to be conducted from the above list

NOTE: Evaluation marks displayed at the end of each experiment should be displayed in the notice board

Course Outcomes:

After the completion of the course, the student will be able to:

1. Conduct the experiments to acquire the kinetics and RTD data.
2. Analyse and interpret the experimental data to obtain the reaction rate expression (order of reaction and specific rate constant)
3. Write technical report effectively with proper conclusions.
4. Demonstrate the knowledge of Chemical Reaction Engineering and its applications.

SOFT SKILLS

Contact Hours/ semester	: 36+0+0 (L+T+P)	Credits :	0.0
Total Lecture Hours	: 36	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50
Sub. Code	: HSS08		

Course Objectives:

This course will enable students:

1. To make the students aware of the importance of soft skills in the present-day business world and work environment
2. To Learn the science behind picking up any skill quickly
3. To help students realize as well as develop key soft skills interviewers look for – such as change management, professionalism, inter- and intra-personal skills, adaptability etc.
4. To develop effective resumes (paper-based as well as video)
5. To understand the importance of and create an effective digital footprint
6. To provide simulated Group Discussion and Personal Interview experience based on the models adopted by reputed companies.
7. To understand professional etiquette to be displayed in workplaces.
8. To learn to introspect over one's strengths and weaknesses, and apply them effectively for career growth

Methodology:

Interactive instructor led session with audio-visual aids / case studies

Day	#	Topic	Sub-topics covered	Duration (Hrs)
1	1	How to pick up skills faster?	i) Knowledge v/s. skill ii) Skill introspection iii) Skill acquisition iv) "The 10,000 hours rule" and the converse	2
	2	Interpersonal and Intrapersonal skill building	Social Interaction i) Interpersonal Communication ii) Peer Communication iii) Bonding iv) Types of social interaction	2

			Emotional Management Responsibility i) Types of responsibilities ii) Moral and personal responsibilities	
	3	Professional etiquette	Workplace etiquette - meeting room, pantry, cubicle Dining etiquette; Telephone etiquette; Email and Business correspondence etiquette	2
2	4	Change Management	i) Who moved my Cheese? ii) Tolerance of change and uncertainty iii) Joining the bandwagon iv) Adapting change for growth – overcoming inhibition v) Adapt to changes (tolerance of change and uncertainty) vi) Adaptability Curve vii) Survivor syndrome	2
	5	Creating a digital footprint	i) How what you post online / information online can affect people's and recruiter's perception about you ? ii) Usage of LinkedIn to further one's career prospects iii) Managing content that one posts on platforms like Twitter, Facebook, Instagram etc. to create positive footprint about oneself iv) Why is it important to leave a digital footprint?	2
	6	Time Management	i) Prioritization - Time Busters ii) Procrastination iii) Scheduling iv) Multitasking v) Monitoring vi) Working under pressure and adhering to deadlines	2
3	7	Group Discussion - Basics	i) Importance of GD round ii) Skills assessed in a GD iii) How to ace a GD? iv) Do's and Don'ts in a GD v) Idea generation techniques vi) One mock GD involving 12 volunteers, facilitated by the trainer	2
	8	Personal Interview - Basics	i) Self-introduction practice. ii) Body language especially grooming for personal interview. iii) Personal interview – FAQs discussion.	2
	9	Building a resume from scratch	i) How to write a good and impressive Resume? ii) Important aspects of an impressive resume.	2

			iii) Sample template and formatting ideas.	
4	10	Group Discussion - Advanced	i) GD sample Video with analysis and discussion. ii) GD Do's and Don'ts – Worksheet practice. iii) Role plays for Do's and Don'ts. iv) Idea generation – worksheet practice.	3
	11	Personal Interview - Advanced	i) Extensive discussion on PI FAQs. ii) Interview questions from based on resume – discussion iii) PI Videos - discussion and analysis. iv) Highlighting successful answers for PI-questions. v) Body language during a personal interview. vi) Unconventional types of interviews (Stress panel, MR, Guesstimation)	3
5	12	Resume Writing - Workshop (Drafting a paper-based as well as a video resume)	i) Resume writing – Worksheet practice. ii) 3 stage Resume drafting iii) Rough draft-1. iv) Rough draft -2. v) Fair draft. vi) Discussion on specific aspects of an impressive Resume. vii) Creating a video resume	3
	13	Setting and achieving targets	i) Ambition, goal, passion and career objective –difference ii) SMART goals and Action plans iii) Obstacles -Failure management (case studies)	1.5
	14	Introspection	i) Identify your USP - Unique Selling Proposition ii) Recognize your strengths and weakness (SWOT) iii) Nurture strengths iv) Fixing weakness v) Overcoming your complex vi) Confidence building	1.5
6	15	Group Discussion - Mock	i) Mock Group Discussions featuring groups of 10 people, with each GD lasting for 15 minutes. ii) Detailed feedback for each participant iii) Introspection by the audience to add value to the GD	3
	16	Personal Interview - Mock	i) Mock personal interview for a sample set of candidates ii) Simulate the real personal interview experience. iii) Individual feedback and areas of improvements are shared.	3

ASSESSMENTS PROVIDED

The following assessments are integrated into the training programme to best judge a student's proficiency on soft skills.

1. Team building tasks (Inside training hours)
2. Participation in group activities (Inside training hours)
3. Psychometric test
4. Creating a resume
5. Creating an effective LinkedIn profile
6. Mock Group Discussion (Inside training hours)

REFERENCE MATERIAL

1. 'Who moved my Cheese?' by Spencer Johnson
2. 'Outliers' by Malcolm Gladwell
3. 'Emotional Intelligence' by Daniel Goleman
4. 'Road Less Travelled' by Scott Peck M.
5. 'How to win friends and influence people' by Dale Carnegie

COURSE OUTCOMES

On successful completion of this course, students will be able to:

1. Display key soft skills expected by recruiters
2. Be able to apply scientific methods to learn any skill quickly
3. Participate in Group Discussions and Personal Interviews effectively
4. Create effective resumes that impress interviewers (paper-based as well as video)
5. Apply professional etiquette to be displayed in various workplace scenarios
6. Set and achieve targets – work-place based as well as personal

MINI PROJECT

Contact Hours/ Week	: 0+0+2 (L+T+P)	Credits :	0.0
Sub. Code	: 5RCHMP1	CIE Marks :	0.0
		SEE Marks :	0.0

Course Objectives:

This course will enable students to:

1. Educate the students to identify unmet societal needs and train them to apply basic sciences and chemical engineering principles to solve them.
2: Guide the students to use latest research methods and modern engineering and design tools to provide valid conclusions.
3: Create awareness about importance of professional ethics and implications of the proposed solution.
4: Guide the students to function effectively as an individual or in a team to solve a problem.
5: Educate the students to effectively communicate the unmet need and their proposed solution.
6: Introduce the need for further knowledge and continuous development of competencies including innovation and entrepreneurship.

Guidelines for Mini Project

The project can be taken by group of 4 students and mini project can be carried out in the dept. under a guide or outside the department/institute/ company under a guide from the dept. and co guide from the outside department/institute/ company.

Mini project is evaluated over 2 semesters (V & VI) and is evaluated at the end of each semester. With no credit in the V sem., mini project is evaluated for 100 marks at the end of VI semester (50% CIE & 50% SEE)

Evaluation procedure: (CIE)

1	**Report**	Abstract, Introduction, Literature survey, And parameters planned to study	**05 marks**
2	**PPT Presentation**	Evaluation by the DPEC	**10 marks**

Course Outcomes:

On successful completion of the course, the student will be able to:

1. Identify the issues prevailing in areas where chemical engineering is applied.
2. Demonstrate sound technical knowledge of the selected project topic and apply the knowledge of basic sciences and chemical engineering to meet the unmet needs.
3. Use of research methods including design of experiments and data analysis to provide valid conclusions after conducting investigations.
4. Develop process engineering solutions and/or design process equipment to the selected problem.
5. Demonstrate knowledge about implications of the proposed solution with respect to finance, environment and sustainability and society.
6. Demonstrate the ability to apply modern engineering tools including process modelling, simulation and optimization to the selected topic with an understanding of the constraints.
7. Display ethical behavior in the context of conduction of experiments, data analysis and reporting.
8. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings to solve problems within the area of expertise.
9. Evaluate and critically assess one's own and others' results and be able to document and present one's own work for a given target group, with requirements on structure, format, and language usage.
10. Demonstrate the need for further knowledge and continuously develop competencies including innovation and entrepreneurship.

VI SEMESTER

PROJECT MANAGEMENT

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Course Code	: HSS07E		

Course Objectives:

This course will enable students to:

1. Manage the scope, cost, timing, and quality of the project, at all times focused on project success as defined by project stakeholders.
2. Apply project management practices to the launch of new programs, initiatives, products, services, and events relative to the needs of stakeholders
3. Identify project goals, constraints, deliverables, performance criteria, control needs, and resource requirements in consultation with stakeholders.
4. Implement project management knowledge, processes, lifecycle and the embodied concepts, tools and techniques in order to achieve project success.
5. Interact with team and stakeholders in a professional manner, respecting differences, to ensure a collaborative project environment. Manage & monitor communication.

Unit I

Introduction: Project, Program, and portfolio, Operations management, Product life cycle, Project life cycle, Project management life cycle, Ten Knowledge areas, Role of project manager and PMO, Ten Project Knowledge areas with their associated processes.

Project Integration Management: Develop project charter, Develop project management plan, Direct & manage project work, Monitor control project, Perform integrated change control, Close project / phase. **7 Hrs**

Unit II

Project scope management: Plan scope management, Collect requirements, Define scope, Create WBS, Validate Scope, Control scope.

Project Schedule management: Plan schedule management, Define activities, Sequence activities, Estimate activity durations, Develop schedule, and Control schedule. **8 Hrs**

Unit III

Project cost management: Plan cost management, Estimate cost, Determine budget, and Control costs.

Project quality management: Plan quality management, Manage quality and Control quality.

Project resource management: Plan resource management, Estimate activity resources, Acquire resources, Develop team, Manage team and Control resources. **8 Hrs**

Unit IV

Project communication management: Plan communication management plan, Manage communications and Monitor communications.

Project risk management: Plan risk management, Identify risks, Perform qualitative risk analysis, Perform quantitative risk analysis, Plan risk responses, Implement risk responses and Monitor risks.

Project Procurement management: Plan procurement management, Conduct procurement, Control procurements. **8 Hrs**

Unit V

Project stake holder management: Identify stake holders, Plan stake holder management, Manage stake holder engagement, and Monitor stake holder engagement.

A case study relevant to the domain knowledge of the department is taken up to explain the principles of the project management as brought out above. **8 Hrs**

TEXTBOOKS:

1	Project Management Institute, USA	Project Management Book of Knowledge (PMBOK), 6e, 2017, ISBN: 9781628253825
2	Ghattas, R.G. & Mc Kee, S.L.	Practical Project Management, Pearson Education Asia, 2008, ISBN: 978-8131707418
3	Pinto, P.K.	"Project Management", Pearson Education, 3e, 2012 ISBN: 9780273767428

REFERENCE BOOKS:

1	Prasanna Chandra.	Project Planning: Analysis, Selection, Implementation and Review, MC- Graw Hill Education, 8e, 2017, ISBN: 9789332902572.

Course Outcomes:

After the completion of the course, the student will be able to:

1. Manage the scope, cost, timing, and quality of the project, at all times focused on project success as defined by project stakeholders.
2. Identify project goals, constraints, deliverables, performance criteria, control needs, and resource requirements in consultation with stakeholders.
3. Implement project management knowledge, processes, lifecycle and the embodied concepts, tools and techniques in order to achieve project success.
4. Interact with team and stakeholders in a professional manner, respecting differences, to ensure a collaborative project environment.
5. Apply project management practices to the launch of new programs, initiatives, products, services, and events relative to the needs of stakeholders.

PROCESS DYNAMICS AND CONTROL

Contact Hours/ Week	: 4+1+0 (L+T+P)	Credits :	4.5
Total Lecture Hours	: 52	CIE Marks :	50
Total Tutorial Hours	: 13	SEE Marks :	50
Sub. Code	: 6RCH01		

Course Objectives:

This course will enable students to:

1. Describe the response of dynamic systems to step, pulse, and sinusoidal inputs.
2. Describe the single-loop feedback control of processes.
3. Elaborate the concept of stability of control systems.
4. Acquire knowledge of advanced control techniques.

Unit – I

First-order systems: Transfer function, transient response, forcing functions, step response, impulse response, ramp response, sinusoidal response.

Examples of first-order systems: Liquid level, liquid-level process with constant-flow outlet, mixing process, heating process; Linearization. **12 +2 Hrs**

Unit – II

First-order systems in series: Non-interacting system, several non-interacting systems in series**;** interacting system.

Second-order systems: Transfer function, step response, terms used to describe an under-damped system, impulse response, sinusoidal response; Transportation lag. **10 +3 Hrs**

Unit – III

The control system: Components of a control system, development of block diagram.

Controllers and final control elements: Control valve and controllermechanisms, ideal transfer function of control valve, Proportional control, on/off control, PI, PD, and PID control actions. **10 +3 Hrs**

Unit – IV

Closed-loop transfer functions: Overall transfer function for single-loop and multi-loop control systems.

Transient response of simple control systems: Proportional control for set point and load changes, PI control for load and set point changes, Proportional control of system with measurement lag. **10 +3 Hrs**

Unit – V

Stability: Concept, criterion, and characteristic equation; Routh test for stability.

Frequency response: Substitution rule, Bode diagrams, Root locus.

Advanced control techniques: Cascade, feed-forward and ratio controls.

Controller tuning techniques: Ziegler-Nicholas method and Cohen-Coon method. **10 +2 Hrs**

TEXTBOOK:

1	Coughanowr, D. R. and LeBlanc, S. E	Process Systems Analysis and Control, McGraw Hill, New York, 3e, 2009. ISBN: 978-0-07-339789-4.

REFERENCE BOOKS:

1	Seborg, D. E., Edgar, T. F., Mellichamp, D. A. and Doyle, F. J	Process Dynamics and Control", Wiley India Pvt Ltd, New Delhi, 3e, 2011. ISBN: 978-8-12-654126-3
2	Svrcek, W. Y., Mahoney, D. P. and Young, B. R	A Real-Time Approach to Process Control, John Wiley & Sons Ltd, Chichester, 3e, 2014. ISBN: 978-1-11-999388-9.

Course Outcomes:

After the completion of the course, the student will be able to:

1. Explain how dynamic systems respond to pulse, step, and sinusoidal inputs.
2. Describe single-loop feedback control of processes - concepts, terminology, methods, and performance.
3. Estimate the stability limits for a system, with or without control.
4. Calculate and use the frequency response of a system.

CHEMICAL EQUIPMENT DESIGN

Contact Hours/ Week	: 4+1+0 (L+T+P)	Credits :	4.5
Total Lecture Hours	: 52	CIE Marks :	50
Total Practice Hours	: 13	SEE Marks :	50
Sub. Code	: 6RCH02		

Course Objectives:

This course will enable students to:

1. Apply the standard design methodology for the design of double pipe heat exchangers, shell and tube heat exchanger, condenser and evaporator with mechanical design of flanges, supports and enclosures for different heat load conditions
2. Apply the standard design methodology for the design of mass transfer equipment such as bubble column distillation, packed bed absorption and rotary dryer.

Unit-I

Detailed process and mechanical design of the following heat transfer equipment: Double-pipe heat exchanger, Shell and tube heat exchanger, Horizontal/Vertical condenser, and Single-effect evaporator. **24+6 hours**

Unit-II

Detailed process and mechanical design of the following mass transfer equipment: Bubble cap distillation column, Packed bed absorption column, and Rotary dryer. **28+7 hours**

Note for Semester End Examination:
The question paper shall contain two full design problems (100 Marks each) from each unit and the student is required to answer any one.
Perry's Chemical Engineers' Handbook and the relevant IS Codes shall be allowed in the examination as reference. The answer shall include detailed process design steps using the data given in the problem and mechanical design of the components

TEXTBOOKS:

1	V.V. Mahajani & S.B. Umarji	Joshi's Process Equipment Design, Laxmi Publications, 5e, 2016, ISBN: 978-9351380191
2	S. D. Dawande	Process Design of Equipment – Vol 1, Central Techno Publications, 6e, 2012, ISBN: 978-8189904425

2	Maloney, I.O	Perry's Chemical Engineers Handbook, McGraw Hill, Companies, Inc., 8e, 2008, ISBN: 978-0071542086.

Course Outcomes:
After the completion of the course, the student will be able to:
1. Demonstrate skills for the design of double pipe heat exchangers, shell and tube heat exchanger, condenser and evaporator with mechanical design of flanges, supports and enclosures for different heat load conditions using standard design criteria and procedure

2. Demonstrate skills for design of mass transfer equipment such as bubble column distillation column, packed bed absorption and rotary dryer using standard design criteria and procedure.

PROFESSIONAL ELECTIVE 2: PETROCHEMICAL ENGINEERING

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 6RCHE21		

Course Objectives:
This course will enable students to:
1. Illustrate the importance of petrochemicals, history of petrochemical industries.
2. Explain the production process of important petrochemicals.
3. Describe the material balance for unit process of petrochemical plants
4. Elaborate the applications of important polymers.

5. Explain the corrosion problems and solutions for them in unit processes of petrochemical industries.

Unit – I

Overview of Petrochemical Industries: Definition of etro-chemicals, history of developments in petrochemical industries, present scenario, feed stocks for petrochemicals(Natural gas-Pre-reatment, Natural gas liquids, Coal, oil shale, tar sand and gas hydrates, Synthesis gas),Major unit processes (Catalytic reforming, steam reforming, Aromatic conversion process, Oxo Process), advances in Catalytic Conversion of Syngas to Ethanol and Higher Alcohols, Advances in Catalytic Technologies for Selective Oxidation of Lower Alkanes. **8 Hrs**

Unit – II

Manufacturing process of certain petrochemicals: Manufacturing process of petrochemicals with description of **Flow sheet, major engineering problems:** Methanol, Formaldehyde, Ethylene, Vinyl Chloride, Acetone, Isopropyl benzene, Butadiene, Benzene, Phenol(by Cumene peroxidation), styrene, phallic anhydride. **8 Hrs**

Unit – III

Petrochemical complex: Material and energy balances for refinery, reactor design calculations, Instrumentation and control in refinery, offsite facilities, power and plant utilities, instrumentation and control in refinery, sustainable process integration in petrochemical industries, Process modeling and simulation of a process (Example: Water gas shift reactor), current status of membrane separation processes in petrochemical industries. **8 Hrs**

Unit – IV

Downstream units and products of petrochemical complex: Processing of plastic rubber, and fibres (moulding, rubber compounding),synthetic petroleum based polymers-Polyethylene, Polypropyelene, PVC, Polystryrene, Nylon resins, Polycarbonates, polyether sulfones, polyurethanes, epoxy resins, phenol formaldehyde resins, amino resins, Synthetic Rubber, Butadiene Polymers and Copolymers , Nitrile Rubber ,Polyisoprene , Polychloroprene , Butyl Rubber , Ethylene Propylene Rubber , Thermoplastic Elastomers, Synthetic Fibers,Polyester Fibers , Polyamides , Acrylic and Modacrylic Fibers , Carbon Fibers , Polypropylene Fibers. **6 Hrs**

Unit – V

Corrosion problems and solutions at refineries and petrochemicals: Physicochemical basis for corrosion at refineries (low and high temperature corrosion), corrosion by : sulphur compounds, naphthenic acid, hydrogen damages, studies and amine solutions, corrosion at units (vacuum distillation units, hydrodesulfurizer, Visbreaker, overheads of benzene column, aromatic column), corrosion of pipes in Visbreaker, CCR unit, boilers, fire sighting pipes, Corrosion control at petrochemicals (Titanium alloys, use of corrosion inhibitors, diminishing the concentration of corrosive substances) Corrosion

monitoring – Thermodynamic possibility, kinetics of corrosion , risk based inspection. **8 Hrs**

TEXTBOOKS:

1	B. K. Bhaskararao	A Text on Petrochemicals, 2004, Khanna Publishers, ISBN: 978-81-7409-044-4.
2	Dryden and Gopal Rao	Outlines of chemical technology, East-West Press (Pvt.) Ltd., 3e, ISBN: 9788185938790.
3	Uttam Ray Chaudhurai	Fundamentals of petroleumand petrochemical engineering, CRS Press, 1e, ISBN : 978-1- 4398-5160-9
4	Alec Groysman	Corrosion problems and solutions in oil refining and petrochemical industry, Springer, 1e, ISBN : 978-3-319-45254-8

REFERENCE BOOKS:

1	Austin G .T	Shreve's Chemical Process Industries, 2015, ISBN: 9781259029455
2	Sarkar G. N	Advanced Petrochemicals, Khanna Publishers, 1e, 2002, ISBN: 978-8174090966
3	Donald L.Burdick and William L .Leffler	Petrochemicals, in nontechnical language",4e, 2010,Pennwell corporation, ISBN : 978-1-59370-216-8

Course Outcomes:

After the completion of the course, the student will be able to:

1. Explain the importance of petrochemicals, history, feedstocks and major unit processes involved
2. Describe the production process of certain petrochemicals(through flowsheet), applications and major engineering problems
3. Conduct material and energy balances for reactors in petrochemical industries, perform design calculations and elaborate the instrumentation and process control of certain unit processes
4. Describe properties, applications of certain polymers
5. Explain the corrosion problems in certain equipments of petrochemicals plant and solutions to them

PROFESSIONAL ELECTIVE 2: PROCESS MODELLING AND SIMULATION

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 6RCHE22		

Course Objectives:

This course will enable students to:

1. Develop modelling equations using fundamental laws to understand physical systems.
2. Solve the developed modelling equations using mathematical principles
3. Demonstrate the mathematical responses using computation tools like MATLAB, SCILAB etc.
4. Understand and use the software packages like ASPEN to simulate the chemical engineering systems.

Unit - I

Introduction: Model formulation principles, major activities in model building, classification, and uses.

Fundamental laws: Continuity equation, energy equation, Equation of motion, transport equation, equation of state, Equilibrium, and chemical kinetics. **8 Hrs**

Unit - II

Models in Fluid flow and Heat transfer operations: The continuity equation, flow through a packed bed column, and annular flow with inner cylinder moving axially; steady-state heat conduction through a hollow cylindrical pipe, unsteady-sate heat transfer through a tubular gas preheater, and unsteady-state heat transfer by conduction. **8 Hrs**

Unit – III

Models in mass transfer operations: Steady-state two-stage solvent extraction, Steady-state two-stage cross current solvent extraction, unsteady-state mass balance in a mixing tank, steady-state N-stage counter-current solvent extraction, multistage gas absorption, and multistage distillation. **8 Hrs**

Unit – IV

Models in reaction engineering: plug flow reactor, mixed flow reactors connected in series, chemical reaction with diffusion in a tubular reactor, chemical reaction with heat transfer in a packed bed reactor, gas absorption accompanied by chemical reaction. **8 Hrs**

Unit – V

Introduction to MATLAB: Basics of MATLAB programming, scripts and functions, and plotting. Simulation of cooling tank, one-dimensional heat flow by conduction, one-dimensional mass flow, and isothermal batch reactor. **7 Hrs**

4	Kamal I.M, Al-Malah	MATLAB: Numerical methods with chemical engineering applications, Mc.Graw Hill, 2013, ISBN: 9780071831284

Course Outcomes:

After the completion of the course, the student will be able to:

1. Demonstrate the importance of modelling in chemical process industries
2. Apply and analyze the fundamental laws to construct a mathematical model
3. Apply the various optimization techniques to optimize the process model
4. Construct, simulate and optimize a model in ASPEN

PROFESSIONAL ELECTIVE 2: HETEROGENEOUS REACTION SYSTEMS

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 6RCHE23		

Course Objectives:

This course will enable students to:

1. Apply rate laws to heterogeneous reactions and demonstrate knowledge of the nature and mechanism of catalytic reactions and catalyst properties.
2. Describe the characteristics of solid-catalyzed reactions.
3. Elaborate the kinetics of fluid-fluid reactions and fluid-particle reactions.

Unit – I

Heterogeneous Reactions: Introduction, Rate Equation for heterogeneous reactions, concept of rate controlling steps, Contacting Patterns for two

phase systems. Derivations and problems,

Catalysis: Introduction, Mechanism Types, Properties of Catalyst(Interfacial area, Physical Adsorption), Preparation, Promoters and Inhibitors, Poisoning of Catalysts, Surface area measurement, Measurement of void volume and solid density. Problems. **8 Hrs**

Unit – II

Deactivation catalyst: Types, Mechanism, Rate equation for main reaction and deactivation. Problems. Determining the Rate for ndependent Deactivation, Batch-Solids+Batch-Fluid. Batch-Solids+ Mixed Constant Flow of Fluid, Batch-Solids+ Mixed Changing Flow of Fluid (to keep CA fixed). Batch- Solids+ Plug Constant Flow of Fluid, Batch-Solids+ Plug Changing Flow of Fluid (to keep CA fixed). **8 Hrs**

Unit – III

Solid Catalysed Reactions: Characteristics of catalysed reaction, Mechanism, Pore diffusion resistance combined with surface kinetics, Single cylindrical pore +first order reaction, Effectiveness factor, Porous catalyst particles, Heat effects during reaction, Performance equation for reactors containing porous catalyst particles, Experimental methods for finding rates Problems. **7 Hrs**

Unit – IV

Kinetics of Fluid-Fluid Reactions: Rate equation for straight mass transfer, Rate for mass transfer and reaction, liquid film enhancement factor, Instantaneous reaction with low CB, special case of negligible gas phase resistance, Instantaneous reaction with high CB and its rate, Fast reaction with low CB and its rate, Fast reaction with highCB and its rate, Intermediate with respect to mass transfer, Slow reaction wrt mass transfer and its rate, Infinitely slow reaction and its rate, Hatta no., Use of solubility data to determine kinetic regime Problems. **8 Hrs**

Unit – V

Kinetics of Fluid-Particle Reactions: Selection of kinetic model, Progressive conversion model, Shrinking core model (SCM), SCM for spherical.

Particles of unchanging sizes: Diffusion through gas film controls, Diffusion through ash layer controls, Chemical reaction controls, Rate of reaction for shrinking spherical particles: Chemical reaction controls, Diffusion through gas film controls, Combination of resistances. Problems. **8 Hrs**

TEXTBOOKS:

1	Octave Levenspiel	Chemical Reaction Engineering, Wiley Publisher, 3e, 2006, ISBN-10: 8126510005.
2	J.M. Smith	Chemical Engineering Kinetics, McGraw Hill, 3e, 2013, ISBN: 978-9332902633
3	G. F. Froment & K. B Bischoff	Chemical Reactor Analysis and Design, McGraw Hill, 3e, 1981, ISBN: 978-0070665743

REFERENCE BOOKS:

2	S. Suresh, S. Sundaramoorthy	Green Chemical Engineering: An Introduction to Catalysis, Kinetics, and Chemical Processes, CRC Press, 1e, 2015, ISBN- 13:978-1-4665-5885-1

Course Outcomes:

After the completion of the course, the student will be able to:

1. Analyse and apply rate laws of heterogeneous reactions to demonstrate the knowledge of the nature and mechanism of catalytic reactions and properties of catalyst.
2. Apply the concept of non ideal reactor design to predict conversion using residence time distributions and appropriate mixing models
3. Solve problems of mass transfer with reaction in solid catalyzed reactions
4. Identify and analyse the best kinetic regimes for mass transfer and reaction for a given fluid-fluid system and predict the rate equation.
5. Predict the rate controlling step to solve problems on fluid-particle reactions.

PROFESSIONAL ELECTIVE 2: FOOD ENGINEERING

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 6RCHE24		

Course Objectives:

This course will enable students to:

1. Basic aspects of food industry and utilities needed.
2. Food processing, contamination and adulteration
3. Thermal preservation technique
4. Addictives used in food industry
5. Packing's used in food industry

Unit-I

NTRODUCTION TO FOOD ENGINEERING: Introduction: general aspects of food, industry, world food demand and Indian scenario, Physical properties of food materials: Rheological models, Water activity, Fluid Flow in Food Processing: Liquid Transport Systems, Pipes for Processing Plants, Pumps for food plants; Numerical on fluid flow in food processing. **6 Hrs**

Unit-II

FOOD PROCESSING AND PRESERVATION: Food deterioration – Causes, Aims and objectives of preservation and processing.
FOOD CONTAMINATION AND ADULTERATION: Types of adulterants and contaminants, Intentional adulterants, Metallic contamination, Incidental adulterants, Nature and effects, food laws and standards, Hazard analysis

and critical control points or HACCP, Food Safety and Standards Authority of India (FSSAI) **7 Hrs**

Unit-III

HIGH-TEMPERATURE PRESERVATION: Introduction to Thermal Processing; Pasteurisation; Commercial Sterilization Kinetics of Microbial Death; Thermal Death Time; Heat Transfer in Thermal Processing; Integrated F Value; Numericals; Batch & continuous Retorts for Thermal processing.

NON THERMAL PRESERVATION: Cold sterilization: Gamma irradiation; Microwave & Ohmic heating, Pulsed Electric Field, High Pressure Processing.

LOW-TEMPERATURE PRESERVATION: principles of low temperature preservation; freezing rate & freezing point; physical properties of frozen food; food quality during frozen storage; freezing equipment, plate freezer, blast freezer, fluidised bed freezer, scraped surface freezer; cryogenic and immersion freezing; prediction of freezing time using Plank's equation & Nagaoka's equation. **10 Hrs**

Unit-IV

FOOD ADDITIVES: Introduction and need for food additives, Types of additives –antioxidants, chelating agents, colouring agents, curing agents, emulsions, flavors and flavor enhancers, flavor improvers, humectants and anti-caking agents, leavening agents, nutrient supplements, non-nutritive sweeteners, pH control agents. Preservatives: types and applications, Stabilizers and thickeners, other additives, Additives and food safety. **6 Hrs**

Unit-V

EXTRUSION PROCESSES: Introduction to Extrusion, Basic Principles, Extrusion Systems, Cold Extrusion, Extrusion Cooking, Single Screw Extruders, Twin-Screw Extruders.

PACKAGING CONCEPTS: Introduction to packaging, food protection, product containment, commutation, convenience, mass transfer in packaging materials, and permeability of packaging material to fixed gases, innovations in food packaging, passive packaging, active packaging, intelligent packaging, food packaging and product shelf-life. Advances in aseptic processing and packaging, nutrition labelling. **10 Hrs**

TEXTBOOKS:

1	R.Paul Singh and Dennis R	Introduction to Food Engineering, Elsevier Science & Technology, 5th Edition, ISBN: 9780123985309, 2013.

REFERENCE BOOKS:

1	P.G. Smith	Introduction to Food Process Engineering Second Edition, Springer Press, ISBN 978-1-4419-7661-1, 2009.
2	Subbulakshmi G. and Shobha A. Udupi	Food Processing and Preservation, NewAge International Pvt. Ltd., ISBN: 8122412831, 2001.

Course Outcomes:

After the completion of the course, the student will be able to:

1. Suggest suitable process and utilities for food processing operation.
2. Identify sources of contaminants and adulterants to ensure the safe food processing.
3. Recommend suitable solutions for thermal preservation of food
4. Comment on the need of food additives and its safety aspects
5. Appreciate the engineering solutions and packaging improvements for sustainable development of food industry.

MASS TRANSFER LAB

Contact Hours/ Week	: 0+0+3 (L+T+P)	Credits :	1.5
Sub. Code	: 6RCHL1	CIE Marks :	50
		SEE Marks :	50

Course Objectives:

This course will enable students to:

1. Demonstrate practical knowledge of the various mass transfer operations.
2. Carry out experiments on the different mass transfer operations like distillation, extraction, leaching, adsorption, and drying.
3. Analyze and interpret experimental data.
4. Write effective technical reports drawing appropriate conclusions.

The experiments are based on the following topics.

1. Determine the diffusivity co-efficient of a given liquid to air.
2. Verify application of Rayleigh's equation for simple distillation.
3. Estimate the HETP using Fenskey's equation and McCabe-Thiele method under total reflux conditions.
4. Estimate the vaporization efficiency and thermal efficiency for steam distillation.
5. Determine the Himus constants k and n for the given liquid under evaporation.
6. Determine the constants k and n of the Freundlich equation at
7. Determine the percentage recovery of solute from a solution and compare with theoretical relation.
8. Determine the percentage recovery of solute from a solution using a solvent in each stage of multistage cross current extraction.
9. Determine the percentage recovery of solute by leaching for a given feed under single stage operation.
10. Determine the percentage recovery by leaching for a given feed under each stage under multi stage operation.
11. Determine the percentage recovery by leaching for a given feed using counter current leaching by shank system.
12. Estimate the critical moisture content and equilibrium moisture

room temperature, adsorption of acetic acid on activated carbon	for the content by drawing the rate of drying curve for a given sample.

Minimum of 10 experiments are to be conducted from the above list

NOTE: Evaluation marks displayed at the end of each experiment should be displayed in the notice board

Course Outcomes:

After the completion of the course, the student will be able to:

1. Conduct experiments on various mass transfer processes.
2. Analyse and interpret the data on diffusion coefficient, mass transfer coefficient, drying rate curve, adsorption isotherms and kinetics, cooling rates, HTU and NTU.
3. Write technical report effectively with proper conclusions.
4. Demonstrate the knowledge of mass transfer and its applications.

PROCESS CONTROL LAB

Contact Hours/ Week	: 0+0+3 (L+T+P)	Credits :	1.5
Sub. Code	:6RCHL2	CIE Marks :	50
		SEE Marks :	50

Course Objectives:

This course will enable students to:

1. Experimentally verify the principles and working of instruments studied in theory.
2. Carry out experiment and make observations for various parameters.
3. Study and use of various first order system and controllers.
4. Evaluate the data and compare with reported literature.

The experiments are based on the following topics.

1. Estimation of Time constant of a thermometer
2. Study the Dynamics of two tanks non-interacting system
3. Study the Dynamics of two interacting tanks in series system
4. Study of Dynamic behavior of second order system: Manometer
5. Study of Performance of temperature transducer
6. Study of Dynamics of single tank system
7. Study the effect of ON-OFF, P, PD, PI, PID controllers on Flow control system
8. Study the effect of ON-OFF, P, PD, PI,PID controller on Pressure control system
9. Study the effect of ON-OFF, P, PD, PI,PID controller on PH control system
10. Study the characteristics of thermocouple
11. Characteristics of AD 590
12. Characteristics of thermistors

NOTE : Minimum of 10 experiments from the above are to be conducted.

NOTE: Evaluation marks displayed at the end of each experiment should be displayed in the notice board.

Course Outcomes:

After the completion of the course, the student will be able to:

1. Conduct experiments to study the characteristics of first and second order systems, and calibrate thermocouple, RTD, AD 590 and thermistors
2. Analyze and interpret the performance of On/Off, P, PI and PID controllers to control pressure and flow rate in a vessel
3. Write technical report effectively with proper conclusions
4. Demonstrate the knowledge of process control and its applications

MINI PROJECT

Contact Hours/ Week	: 0+0+6 (L+T+P)	Credits :	2.0
Sub. Code	: 6RCHMP1	CIE Marks :	50
		SEE Marks :	50

Course Objectives:

This course will enable students to:

1. Educate the students to identify unmet societal needs and train them to apply basic sciences and chemical engineering principles to solve them.
2: Guide the students to use latest research methods and modern engineering and design tools to provide valid conclusions.
3: Create awareness about importance of professional ethics and implications of the proposed solution.
4: Guide the students to function effectively as an individual or in a team to solve a problem.
5: Educate the students to effectively communicate the unmet need and their proposed solution.
6: Introduce the need for further knowledge and continuous development of competencies including innovation and entrepreneurship.

The project can be taken by group of 4 students and mini project can be carried out in the dept. under a guide or out side the department in institute/ company with a guide from the dept. and co guide from the institute/ company.

Mini project is evaluated over 2 semesters (V & VI) and at the end of each semester. With no credit in the V sem., mini project is evaluated for 100 marks (50% CIE & 50% SEE). Semester End Examination is conducted by the internal and external examiners

Evaluation procedure: CIE and SEE

VI sem CIE		15 marks
VI sem CIE	Based on report evaluation by committee (relevance of topic, report) and PPT presentation	15 marks

	Evaluation by guide	20 marks
Total		**50 marks**
SEE with external examiner		
VI sem SEE	Project, report, presentation, demonstration, and quality of work	30marks
	Viva - voce	20 marks
Total		**50 marks**

Course Outcomes:

On successful completion of the course, the student will be able to

1. Identify the issues prevailing in areas where chemical engineering is applied.
2. Demonstrate sound technical knowledge of the selected project topic and apply the knowledge of basic sciences and chemical engineering to meet the unmet needs.
3. Use of research methods including design of experiments and data analysis to provide valid conclusions after conducting investigations.
4. Develop process engineering solutions and/or design process equipment to the selected problem.
5. Demonstrate knowledge about implications of the proposed solution with respect to finance, environment and sustainability and society.
6. Demonstrate the ability to apply modern engineering tools including process modelling, simulation and optimization to the selected topic with an understanding of the constraints.
7. Display ethical behavior in the context of conduction of experiments, data analysis and reporting.
8. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings to solve problems within the area of expertise.
9. Evaluate and critically assess one's own and others' results and be able to document and present one's own work for a given target group, with requirements on structure, format, and language usage.
10. Demonstrate the need for further knowledge and continuously develop competencies including innovation and entrepreneurship.

APTITUDE RELATED ANALYTICAL SKILLS

Contact Hours/ semester	: 36+0+0 (L+T+P)	Credit :	1.0
Total Lecture Hours	: 36	CIE Marks :	50
Sub. Code	: ARAS	SEE Marks :	50

MODULES COVERED:

Sl. No.	Module covered	Duration (in hrs.)
1	Quantitative Aptitude	16
2	Verbal Reasoning	08
3	Logical Reasoning	08
4	Test taking strategies to crack recruiter tests	02
5	Post-Training Assessment along with a debrief	02
	Total Course	**36**

Methodology : Instructor led – Concepts with guided question solving, assignments and homework assessments

Detailed syllabus:

1.Quantitative Aptitude (with focus on questions from top recruiters) 16 hrs

a) Number System
- Classification of numbers
- Divisibility tests
- Power cycles and remainders
- Factors and multiples
- Applications of HCF and LCM

b) Profit and Loss, Partnerships and Averages
- Basic terminology in Profit and Loss
- Partnerships
- Averages and weighted averages
- Mixtures and alligations

c) Time and Work
- Working with different efficiencies
- Pipes and cisterns
- Work equivalence
- Division of wages

d) Time, Speed and Distance
- Basics of Time Speed and Distance
- Relative Speed
- Problems based on trains
- Problems based on boats and streams
- Problems based on Races

e) Percentages, Simple and Compound Interest
- Percentages as fractions and decimals
- Percentage increase / decrease
- Simple interest and compound interest
- Relationship between simple and compound interest

f) Permutation, Combination and Probability
- Fundamental counting principle
- Basics of permutation and combination
- Computation of permutation
- Circular permutation
- Computation of combination
- Probability

g) Logarithms, Progressions, Geometry and Quadratic Equations
- Logarithms
- Progressions – Arithmetic, Geometric and Harmonic
- Geometry
- Mensuration
- Quadratic equations

2.Verbal Reasoning (with focus on questions from top recruiters) – 8 hrs

a) Reading Comprehension –
- Eyespan
- Speed reading techniques
- Types of questions
- Comprehension strategies

b) Sentence Correction –
- Subject-Verb Agreement
- Parallelism
- Modifiers
- Pronoun Antecedent Agreement
- Verb Time Sequence
- Comparison
- Determiners
- Prepositions

c) Vocabulary –
- Etymology of words
- Prefix and suffix
- Memory techniques to remember words
- Synonyms and antonyms
- Analogy

d) Sentence Completion and Para Jumbles –
- Sentence completion – single blank and double blank questions
- Parajumbles – Moving and anchored jumbles

3.Logical Reasoning (with focus on questions from top recruiters)- 8hrs

a) Coding and Decoding, Series, Analogy, Odd Man Out and Visual Reasoning
- Coding and decoding
- Number and alphabet series

- Analogy
- Odd man out
- Visual Reasoning

b) Data Arrangements and Blood Relations
   - Linear, circular and distribution arrangements
   - Blood Relations

c) Data interpretation and Data Sufficiency
   - Tables
   - Pie Charts
   - Bar Graphs
   - Data Sufficiency

d) Clocks, Calendars, Direction sense and Cubes
   - Clocks
   - Calendars (Conventional and shortcut methods to find day of a date)
   - Cubes
   - Direction Sense

4.Test taking strategies – 2 hrs

This module will focus on:

- Understanding patterns of tests (Adaptive, non adaptive, navigation – intra sectional, inter sectional)
- Best strategies to maximize scores and clear cut-offs
- Shortcut strategies on Quantitative Aptitude, Logical Reasoning as well as Verbal Ability to ace sections

5.Post Training Assessment with debrief – 2 hrs

An assessment that tests a student on all three sections of Aptitude, followed a detailed student-wise analysis based on:

- Cut-off
- Percentile w.r.t the batch
- Percentile w.r.t. the college
- Corrective measures to be taken to improve the score

In class, there will be a debrief on how the test should have been taken by an ideal test taker to navigate through the difficulties and ace the cut-off.

6.Tests outside training schedule

An ideal aptitude training course is a mix of classroom learning / guided question solving, followed by self-practice. The 'training duration' focuses mainly on laying strong foundations on concepts and ability to solve questions on major aptitude topics. Significant amount of practice is also provided to students through online tests in the form of:

1. Pre-Assessment test
2. Full-length practice tests
3. Company specific tests (patterns and question types of major recruiters should be given exposure to)

SCHEME & SYLLABUS

OF

VII & VIII SEMESTERS

B.E. CHEMICAL ENGINEERING

2022 – 2023

[for 2019 admitted batch, 175 credit course]

Department of Chemical Engineering
SIT, Tumakuru-572103

About Institute:
Siddaganga Institute of Technology (SIT) was established in the year 1963 by Siddaganga Education Society, as a private self-financing institution with the following vision and mission.

Vision of the Institute:
To develop young minds in a learning environment of high academic ambience by synergizing spiritual values and technological competence.

Mission of the Institute:
To continuously strive for the total growth of students by educating them in state-of-the art technologies and helping them imbibe professional ethics and societal commitment so that they emerge as competent professionals to meet the global challenges.

Quality Policy:
Siddaganga Institute of Technology is committed to:

- Impart quality education by establishing effective learning-teaching – learning processes to produce competent engineers with high professional ethics and social responsibility.
- Create congenial environment and provide state-of-the-art infrastructure.
- Continually improve the effectiveness of the quality management system.
- Satisfy all applicable requirements.

Vision of the Department:
To be an internationally renowned department for chemical engineering education and research meeting the aspirations of society.

Mission of the Department:
M1. To impart quality education in chemical engineering at all levels.
M2. To foster cutting edge research and development in chemical engineering.
M3. To produce responsible and ethical engineers to serve society.

Program Educational Objectives (PEOs)
The Program Educational Objectives of the program are:
The graduates shall possess
1. a sound knowledge of chemical engineering to pursue a successful professional career.
2. a spirit of inquiry and urge to pursue research in chemical engineering and thrust areas.
3. high ethical values and be socially responsible in discharging their duties.
4. knowledge of the latest developments in their field of activity and commit themselves to life-long learning.

Program Specific Outcomes (PSOs):
The following are the PSOs defined by the Chemical Engineering department:

PSO-1: Graduates will be able to apply the knowledge of science and transport process for production and separation of chemicals in chemical and allied industries

PSO-2: Graduates will be able to analyze processes/equipment taking into consideration, process safety, project engineering, economics and environmental aspects.

PSO-3: Graduates will be able to analyze processes using process control, process optimization and integration using modelling/simulation tools for process development

PSO-4: Graduates will be able to design chemical equipment for a given process.

Program Outcomes:

The following are the Program Outcomes:

1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

The above POs are achieved through curriculum that offers courses under mathematics and basic sciences, basic engineering courses, professional core, professional electives, laboratory courses, open electives, humanity courses, projects, technical seminar and the industrial training and mandatory courses. Each course under these course components have COs that are mapped to the POs. The attainment of POs is achieved through attaining the COs.

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institute affiliated to Visvesvaraya Technological University, Belagavi, Approved by AICTE, New Delhi)

SCHEME OF TEACHING AND EXAMINATION [for 2019 batch, A. Y. 2022-2023]

7th Semester

DEPARTMENT OF CHEMICAL ENGINEERING

7th & 8th Semester , B.E. – Chemical Engineering

Professional Electives

Elective - 3 [2019 batch - VII sem]

7RCHE31 Biochemical Engineering
7RCHE32 Project Engineering and Financial Management
7RCHE33 Design of Process Equipment

Elective - 4 [2019 batch - VIII sem]

8RCHE41 Optimization of Chemical Processes
8RCHE42 Surface and Interfacial Engineering
8RCHE43 Polymer Technology

Elective - 5 [2019 batch – VIII SEM]

8RCHE51 Pilot plant and Scale up Methods
8RCHE52 Nanomaterials
8RCHE53 Waste Water Treatment Methods

Elective - 6 [2019 batch – VIII SEM]

8RCHE61 Petrochemicals
8RCHE62 Green Chemical Engineering
8RCHE63 Solid Waste Management

2018 batch	
SEM	CREDIT
I	21.0
II	19.0
III	24.0
IV	24.0
V	24.0
VI	24.0
VII	21.0
VIII	18.0
Total	**175.0**

SUMMARY OF CREDITS DISTRIBUTION		CIE EVALUATION SCHEME	
SEMESTER	**CREDITS**	**Evaluation**	**Marks Distribution**
I	21.00	Test 1/ Test 2 (50 Marks Each)	16x2= 32
II	19.00	Assignment 1/ Assignment 2 (15 Marks each)	03x2=06
III	24.00	Quiz 1 (20 Marks)	02x1=02
IV	24.00	**Total**	**40**
V	24.00	**Assignments:** Should be group assignments **(Max10 Students)** on Complex Engineering Problems addressing minimum 3 Graduate Attributes.	
VI	24.00	**Quiz:** After the Test 2. MCQ Type	
VII	21.00		
VIII	18.00		
Total	**175.00**		

VII SEMESTER

TRANSPORT PHENOMENA

Contact Hours/ Week	: 4+1+0 (L+T+P)	Credits :	4.5
Total Lecture Hours	: 52	CIE Marks :	50
Total Tutorial Hours	: 13	SEE Marks :	50
Sub. Code	: 7RCH01		

Course Objectives:

This course will enable students to:

1. To understand steps in model building.
2. To develop first principles, empirical models for systems.
3. To develop mathematical models for engineering processes.
4. To understand and draw analogies between heat, momentum and mass transfer.
5. To understand and develop equation of continuity and equation of motion.

Unit - I

Viscosity and the mechanism of Momentum Transport: Newton's law of viscosity (NLV), newtonian and non - newtonian fluids, effect of temperature and pressure on viscosity of fluids. Numerical problems on the application of Newton's law of viscosity.

Velocity distribution in Laminar Flow: Steady state shell momentum balance, general boundary conditions applicable to momentum transport problems of Chemical Engineering. The flow situations for a) flow over a flat inclined plate, b) flow through a circular tube, c) flow through annulus, d) flow between parallel plate and through a slit for laminar flow are required. Simple numerical problems using the equations derived in the above fluid flow situations. **12 + 2 Hrs**

Unit - II

Thermal Conductivity and mechanism of Energy Transport: Fourier law of heat conduction. Temperature and pressure dependence on thermal conductivity of solids and fluids. Numerical problems on the application of fourier's law of heat conduction.

Temperature Distribution in solids and in Laminar Flow: Steady state shell energy balances. General boundary conditions applicable to the heat conduction problems of Chemical Engineering for, a) heat conduction with internal generation by electrical, nuclear, viscous b) heat conduction through compound walls, overall heat transfer coefficient, c) heat conduction in a cooling fin : Forced and Free conduction heat transfer problems (only derivations) **12 + 3 Hrs**

Unit - III

Diffusivity and mechanism of Mass Transport: Fick's law of diffusion, Effect of temperature and pressure on diffusivity in liquid and gases.

Concentration Distributions in solids and in Laminar Flow: Steady state shell mass balance, General boundary conditions applicable to the mass transport problems of chemical engineering, on a) Diffusion through stagnant gas and liquid film b) Equimolar counter diffusion c) Diffusion with homogeneous and heterogeneous reaction d) Diffusion into falling film-

forced convection mass transfer. **Note:** In all above one-dimensional problems only to be considered) **12 + 3 Hrs**

Unit - IV

Analogies between Momentum, Heat and Mass Transport: Numerical problems using analogies. a) Reynolds analogy b) Prandtl's analogy c) Chilton and Colburn analogy & d) Martinnelli's analogy. **8 + 3 Hrs**

Unit - V

Equations of Change: Equation of continuity, equation of motion and Navier-Stokes equation, Application of this equation in solving simple steady problems previously solved. **8 + 2 Hrs**

TEXTBOOKS:

Bird, Stewart and Lightfoot	Transport Phenomena,. John Wiley, 2e , 2006, ISBN: 978-8126508082.
Wilke, Wikcs and Watson	Fundamentals of Momentum, Heat and Mass Transfer, John Wiley, 5e , 2010, ISBN: 978-8126528387

REFERENCE BOOKS:

Robert S. Brodkey and Harry C. Hershey	Transport Phenomena Unified Approach, Brodkey Publishing 2003, ISBN: 978-0070079632
Raj B	Introduction to Transport Phenomena: Momentum, Heat and Mass, Prentice Hall India Learning Private Limited, 1e, 2012, ISBN: 978-8120345188

Course Outcomes:

After the completion of the course, the student will be able to:

1. Apply the fundamental knowledge of science and engineering to formulate transport processes and solve those equation using first principles..
2. Analyse steady and unsteady-state transport processes and obtain mathematical solutions.
3. Interpret the data and draw analogies between heat, momentum and mass transfer.
4. Analyse the outcomes of mathematical solution related to various transport processes.
5. Formulate continuity equations for real life transport problems related to chemical and biological systems.

COMPUTER APPLICATIONS AND MODELLING IN CHEMICAL ENGINEERING

Contact Hours/ Week	: 4 +0+0(L+T+P)	Credits :	4.0
Total Lecture Hours	: 52	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 7RCH02		

Course Objectives:

This course will enable students to:

1. Adopt appropriate numerical methods to solve non-linear algebraic and transcendental equations, ordinary differential equation and calculate a definite integral; develop C-program to perform the numerical solution to a chemical engineering problem.
2. Apply C program to determine the bubble point and dew point temperature using Antoine equations; calculate the volume of reactors and time required for given conversion; and to evaluate adiabatic flame temperature using Newton Raphson method.
3. Use C program to design heat exchangers and distillation column.
4. Formulate a chemical engineering problem as a mathematical model, and select an appropriate solution method.
5. Formulate and solve process design problems, based on fundamental analysis and using mathematical models of chemical processes.

Unit - I

Numerical Techniques: (Algorithm and C program)
Simultaneous linear algebraic equation- Gauss Jordan (material balance for distillation and mixing), Non-linear algebraic equation-Newton Raphson (Specific volume of binary mixture using real gas equations) Ordinary Differential Equation- R-K Method ($dC_A/dt = K C_a^2$)
Numerical Integration-Simpson's $1/3^{rd}$ Rule (Batch Reactor to find time) Curve Fitting- Least Square (Arrhenius). **8 Hrs**

Unit - II

Applications: (Algorithm and C program) P – X,Y and T – X, Y evaluation Calculation of Bubble Point and Dew Point for Ideal multi-component system. Flash Vaporization for multi-component system Design of Adiabatic Batch Reactor, PFR, CSTR Adiabatic Flame Temperature. **14 Hrs**

Unit - III

Design: (Algorithm and C Program) Double pipe Heat Exchanger (Area, Length and Pressure drop) Shell Tube Heat Exchanger (Area, Number of tubes, Pressure drop) Distillation Column (Bubble cap- Stage wise calculation for binary mixture). **8 Hrs**

Unit - IV

Modelling: Models and model building, principles of model formulations, precautions in model building, Fundamental laws: Review of shell balance approach, continuity equation, energy equation, equation of motion, transport equation of state equilibrium and Kinetics, classification of mathematical models. **8 Hrs**

Unit - V

Mathematical modeling and solution to Process Engineering Operations: Basic tank model -level v/s time, multi component flash drum, Batch distillation - Vapor composition with time, Batch reactor, Heat exchanger (co-current and counter current) - Steady state energy balance. **14 Hrs**

TEXTBOOKS:

2	Raul Raymond A. Kapuno	Programming for Chemical Engineers Using C, C++ and MATLAB, 2010, 1e, ISBN: 978-9380298207
3	William. L. Luyben	Process Modeling Simulation and Control for Chemical Engineers, McGraw Hill, 2e, 1990 ISBN: 9780071007931
4	Kotur P. B.	Computer Concepts & C Programming, 23rd edition, 2013, ISBN: 9788128001109

REFERENCE BOOKS:

1	H. Scott Fogler	Elements of Chemical Reaction Engineering, Prentice Hall, 5e, 2015, ISBN: 9780133887518.
2	Smith J.M and H. C. Vanness	Introduction to Chemical Engg. Thermodynamics, McGraw Hill, 8e, 2017, ISBN: 9781259696527.
3	Amiya K. Jana	Chemical Process Modelling and Computer Simulation, PHI Learning Private Limited, 1e, 2017, ISBN-13: 978-9387472075

Course Outcomes:

After the completion of the course, the student will be able to:

1. Apply numerical methods and computer programming for solving chemical engineering problems.
2. Develop an algorithm and program to evaluate bubble and dew point values.
3. Develop an algorithm and program design various equipment for unit operations.
4. Apply the principles of modelling and build models for process operations.
5. Develop mathematical models for process systems using modelling concept and physical laws.

PROFESSIONAL ELECTIVE-3 : BIOCHEMICAL ENGINEERING

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 7RCHE31		

Course Objectives: The objectives of the course are to:

1. Disseminate knowledge of microbiology, biochemistry, and chemical engineering concepts for industrial biotechnology applications.
2. Introduce the concepts of enzyme kinetics and cell growth kinetics in the context of Bioprocessing.
3. Describe the various downstream Bioprocessing methods and be able to choose the appropriate product recovery techniques.
4. Educate students about the latest and emerging bioprocess technologies relative to healthcare, agriculture, food, and energy.

Unit - I

Introduction to Biochemical Engineering: Role of chemical engineering in Bioprocessing.

Microbiology: Introduction to Prokaryotic and Eukaryotic cells, cellular machinery, nutritional requirements, microbial taxonomy. Industrially important organisms - Bacteria, Yeasts, Molds, Algae and Protozoa. **6 Hrs**

Unit– II

Biochemistry: Chemicals of life – Lipids, sugars and polysaccharides; amino acids, proteins and enzymes; vitamins, biopolymers, nucleic acids (RNA, DNA) and their derivatives. **7 Hrs**

Unit - III

Enzyme Catalyzed Reactions: Enzyme nomenclature, mechanism and kinetics using various models, evaluation of kinetic parameters, factors affecting enzyme activity: Effect of inhibitors, temperature, pH etc. Determination of kinetic parameters for various types of inhibitions. Batch and continuous enzyme reactor kinetics. Multi-substrate enzyme kinetics. Enzyme immobilization: Types, reaction kinetics and applications. **9 Hrs**

Unit - IV

Microbial Biomass and Product Formation: Cellular metabolism, quantification of cell concentration, growth cycle, cell growth kinetics in batch cultures, product formation, death kinetics, effect of pH, dissolved oxygen and temperature. Monod cell growth kinetics, substrate inhibition, kinetic models with growth inhibitors. Cell growth in continuous reactors - Chemostat for measurement of cell growth & product formation kinetics. **8 Hrs**

Unit - V

Fermentation Technology: Ideal fermenters, medium formulation, operation and maintenance of typical aseptic aerobic fermentation processes, alternate bioreactor configurations, design of sterilization Equipment, introduction to Single-use technology for upstream Bioprocessing.

Downstream Processing: Steps involved in product recovery operations, typical operations involved – filtration, centrifugation, sedimentation, chromatography and emerging technologies including single-use systems, tangential-flow filtration, membrane chromatography. **9 Hrs**

TEXTBOOK:

Shuler, M.L., Kargi, F., and DeLisa M.P	Bioprocess Engineering – Basic Concepts, Prentice-Hall Inc., Upper Saddle River, NJ, 3e,2017, ISBN: 978-0-13-706270-6

REFERENCE BOOKS:

Wei-Shou Hu	Engineering Principles in Biotechnology, John Wiley & Sons, Inc., Hoboken, NJ, USA,1e, 2018, ISBN: 978-1-11-915904-9
Rao, D.G	Introduction to Biochemical Engineering, Tata McGraw-Hill Education Pvt Ltd, New Delhi., 2e, 2010, ISBN: 0-07-015138-5
RegineEibl, Dieter Eibl	Eds. Single-Use Technology in Biopharmaceutical Manufacture, John Wiley & Sons, Inc., Hoboken, NJ, USA, 2e, 2019, ISBN: 9781119477839

Course Outcomes:

After the completion of the course, the student will be able to:

1. Demonstrate the knowledge of biology, biochemistry, and chemical engineering to formulate appropriate criteria for selecting bioprocess technologies.
2. Apply the concepts of enzyme and cell growth kinetics to analyze and derive rate equations for enzyme-based bioprocesses, fermentation and sterilization.
3. Analyze data including enzyme and cell growth kinetics and solve problems of upstream bio processing.
4. Demonstrate the knowledge of animal and plant cell biology to formulate appropriate criteria for selecting relevant bioprocess technologies and identify applications.
5. Demonstrate life-long learning of bioprocess technologies as emerging tools in the context of healthcare, agriculture, food and energy.

PROFESSIONAL ELECTIVE – 3: PROJECT ENGINEERING AND FINANCIAL MANAGEMENT

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 7RCHE32		

Course objectives:

This course will enable students to:

1. Acquire the knowledge to select the best site location for the process plant.
2. Understand the importance of cost estimation, cost index and different methods of cost estimation.
3. Acquire basics of Project risk analysis.
4. Understand the time value of money and different types of taxes.
5. Understand the different methods of evaluation of profitability, replacement.

Unit – I

Projects and Project Management: The function of project management, Projects – management, initiation, risks, objectives, and success.

Project Site Considerations: Plant location and site selection, Site layout, Plant layout, Utilities, Environmental considerations. **7 Hrs**

Unit – II

Analysis of Cost Estimation:

Cash flow for industrial operations, Factors affecting investment and production costs, Capital investment, Estimation of capital investment, Cost indexes, Cost components in capital investment, Methods for estimating capital investment, Estimation of revenue, Estimation of total production cost, Gross profit, Net profit, and Cash flow, Contingencies. **8 Hrs**

Unit – III

Project risk analysis: Sources, majors and prospective on risk, sensitivity analysis, scenario analysis, break-even analysis, simulation analysis,

decision tree analysis, managing risk, project selection under risk, risk analysis in practice. **8 Hrs**

Unit – IV

Interest, Time Value of Money, Taxes, and Fixed Charges: Interest, Cost of capital, Time value of money, Cash flow patterns, Compounding and discounting factors, Income taxes, Fixed charges.

Analysis of Financial Statements: Financial ratios, DuPont analysis, standardized financial statements, Applications of financial statement analysis. **8 Hrs**

Unit – V

Profitability, Alternative Investments, and Replacements: Profitability standards, Methods for calculating profitability, Alternative investments, Replacements, Practical factors in alternative investment and replacement analysis. **8 Hrs**

TEXTBOOKS:

1	Ghattas, R.G. & Mc Kee, S.L.	Practical Project Management, Pearson Education Asia, 1e, 2008, ISBN: 978-8131707418
2	Pinto, P.K.	Project Management, Pearson Education, 3e, 2012 ISBN: 9780273767428

REFERENCE BOOKS:

1	Prasanna Chandra.	Project Planning: Analysis, Selection, Implementation and Review, MC- Graw Hill Education, 8e, 2017, ISBN: 9789332902572.

Course outcomes:

After the completion of course, student will be able to:

1. Identify the best location for the process plant
2. Understand the capital investment , cost index and cash flow
3. Identifying the different risk analysis
4. Analyze financial ratios and application of financial statement analysis
5. Understand the profitability standards and methods of calculating the profitability and alternative investments and replacements

PROFESSIONAL ELECTIVE-3: DESIGN OF PROCESS EQUIPMENT

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Practice Hours	: 0	SEE Marks :	50
Sub. Code	: 7RCHE33		

Course Objectives:

This course will enable students to:

Understand the various principles and methods in design of Chemical equipment and its accessories.

General Guidelines for the course:

1. Detailed Chemical Engineering Process Design of the following equipment needs to taught in the class.

2. Necessary aspects studied in "Chemical Equipment Design" are to be applied for mechanical design of system components.
3. Use of standard code books to be taught.

Unit -I	
Design of Storage vessel	**8 Hrs**
Unit –II	
Design of agitated reaction vessel	**8 Hrs**
Unit –III	
Design of cooling tower	**7 Hrs**
Unit –IV	
Design of adsorption column	**8 Hrs**
Unit – V	
Design of tall vertical vessel	**8 Hrs**

Note for Semester End Examination:
The question paper to contain **Two** full design problems (100 Marks each) for the equipment from the above list and student to answer anyone.

Perry's Chemical Engineer's Handbook shall be allowed in the examination as reference.
IS Code books shall be permitted in the examination hall.

The answer shall include detailed process design steps using the data given in the problem, mechanical design for components

TEXTBOOKS:

5	Bhattacharyya	Introduction to Chemical Equipment Design: Mechanical Aspects, CBS Publishers, 1e, 2017, ISBN-13: 978-8123909455

Course Outcomes:
After the completion of the course, the student will be able to:
1. Design of storage vessel using Standard code books and validation
2. Design solutions for components of reaction vessel

3. Design of adsorption tower and its validations by applying the code books.
4. Design of cooling tower for various capacities at various load conditions
5. Design solutions for tall vertical vessel

COMPUTER APPLICATIONS AND SIMULATION LAB

Lab Hours/ Week	: 0+0+3 (L+T+P)	Credits :	1.5
Sub. Code	: 7RCHL1	CIE Marks :	50
		SEE Marks :	50

Course Objectives:

This course will enable students to:

1. Identify applications of numerical techniques in solving chemical engineering problems.
2. Develop algorithm and write program for Bubble point, Dew point, Flash drum and Adiabatic flame temperature.
3. Develop algorithm and write program for elementary design of heat exchangers, distillation column.
4. Comprehend utilization of simulation software for determination of thermo-physical properties of pure components & generation of VLE data of binary component system.
5. Simulate heat exchanger, distillation column and flash drum using simulation software.

PART A: C Program **30 marks**

1. Application of Newton Raphson method for determining Specific volume of binary mixture.
2. Application of Runge-Kutta Method to find the concentration profile in a reactor.
3. Application of Simpson's 1/3rd for determining the time required for the given reaction in a Batch Reactor.
4. Estimation of Curve fitting by least square method (Nre V/s f).
5. Application of Newton Raphson method to find Bubble Point and Dew Point for Ideal multi-component system.
6. Application of Newton Raphson method to determine Flash Vaporization for multi-component system.
7. Application of Newton Raphson method to Design of Adiabatic Batch Reactor, PFR.
8. Application of Newton Raphson method to evaluate the Adiabatic Flame Temperature.
9. Design of Double pipe Heat Exchanger (Area, Length and Pressure drop).
10. Design of Distillation Column (Bubble cap).

Part B: MATLAB **20 Marks**

1. Determination of specific volume using Equation of state.
2. Estimation of the rate constants in a series reaction A → B → C, each of first order kinetics.
3. Determination of heat to be removed in a crystallizer.
4. Solution to the system of linear equations using matrix inversion and matrix left division.

Simulation software

5. Introduction to suggested software available (flow sheeting)
6. Simulation Studies of flash drum, Distillation Column, CSTR, PFR
7. Process simulation study involving mixing, reactor, Distillation, Heat Exchanger for any of the following process:
   a. Ethylene Glycol from Ethylene oxide
   b. Atmospheric distillation of crude oil

NOTE:

- One question from PART – A Excluding Numerical Techniques – 30 marks
- One question from PART – B (Simulation of any above process) – 20 marks

SOFTWARE'S SUGGESTED:

1) DESIGN-II
2) DWSIM
3) MATLAB
4) PROSIM

4	Kamal I. M. Al-Malah	MATLAB Numerical Methods with Chemical Engineering Applications, McGraw-Hill Education, 2013, ISBN: 9780071831291

Course Outcomes:
After the completion of the course, the student will be able to:
1: Apply numerical methods, computer programming and MATLAB for solving chemical engineering problems.
2: Develop an algorithm and program to design various equipment for unit operations.
3: Understand the functioning and use of simulation software.

PROJECT WORK PHASE-I

Lab Hours/ Week:4	Credits :	2.0
Subject Code: 7RCHMP1	CIE Marks :	100
	SEE Marks :	0

Course Objectives:
This course will enable students to:

1. Train the students to identify societal and industrial unmet needs needing chemical engineering solutions.
2. Introduce research methods including design of experiments and data analysis to provide valid conclusions after conducting investigations.
3. Guide students to develop process engineering solutions or design process equipment to the selected problem/unmet need.
4. Acquaint students to societal, health, safety, finance and legal issues in addition to responsibility to the professional engineering practice.
5. Teach modern engineering tools including process modelling, simulation and optimization to solve the selected problem.
6. Exemplify ethical behavior in the context of conduction of experiments, data analysis and reporting.
7. Train to function effectively as an individual, and as a member or leader in a team, and in multidisciplinary settings to solve problems within the area of expertise.
8. Give directions to students to evaluate and critically assess results and be able to document and present one's own work.
9. Illustrate the need for life-long learning including innovation and entrepreneurship.

Course Outline:
Students must identify an industrially or societally relevant problem and solve using chemical engineering principles and economics. This must be done in consultation with faculty of the department or a practicing chemical engineer from the industry. The students are advised to take up projects that can be performed using the facilities and infrastructure of the department and the institute. However, students are encouraged to think "out of the box" and take up challenging projects. If the projects are innovative and potentially has high impact, then the department would consider approving on a case by case basis. The department also encourages students to take up projects towards developing a "technology" or a

"product". SIT's technology incubation centre will facilitate any subsequent commercialization. The major project can be performed by a team of 3 to 4 students. One or more faculty of the department can advise the project and can be performed within the department or in an Industry or a Research Institute. A co-guide from the Industry or Research Institute is also allowed.

The major project is evaluated over two semesters (VII and VIII). It carries 2 credits in the VII semester and is evaluated for 100 marks (100% CIE only). In the VIII semester, it carries 13 credits and evaluated for 100 marks [50% CIE & 50% SEE].

The project can be taken by group of 4 students and major project can be carried out in the dept. under a guide or out side the department in institute/ company with a guide from the dept. and co guide from the institute/ company.

Relevance of topic	10 marks
Report	20 marks
Evaluation by guide	25 marks
Presentation	30 marks
Viva	15 marks
TOTAL	100 marks

Evaluation Procedure:

Continuous Internal Examination (CIE) marks breakup	
Project presentation (seminar) highlighting literature review, problem statement, hypothesis, objectives and feasibility of the project (Phase 1)	10 Marks
Project report (hard copy of the presentation slides)	20 Marks
Assessment of the project by the guide and co-guide (if any)	25 Marks
Project presentation (seminar) highlighting objectives and progress of the project (Phase 2)	30 Marks
Viva Voce – by Internal Examiners	15 Marks
Grand Total	**100 Marks**

REFERENCE BOOKS:

Course Outcomes:

On successful completion of the course, the student will be able to

1. Identify the issues prevailing in areas where chemical engineering is applied.
2. Demonstrate sound technical knowledge of the selected project topic and apply the knowledge of basic sciences and chemical engineering to meet the unmet needs.
3. Use of research methods including design of experiments and data analysis to provide valid conclusions after conducting investigations.
4. Develop process engineering solutions and/or design process equipment to the selected problem.
5. Demonstrate knowledge about implications of the proposed solution with respect to finance, environment and sustainability and society.
6. Demonstrate the ability to apply modern engineering tools including process modelling, simulation and optimization to the selected topic with an understanding of the constraints.
7. Display ethical behavior in the context of conduction of experiments, data analysis and reporting.
8. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings to solve problems within the area of expertise.
9. Evaluate and critically assess one's own and others' results and be able to document and present one's own work for a given target group, with requirements on structure, format, and language usage.
10. Demonstrate the need for further knowledge and continuously develop competencies including innovation and entrepreneurship.

INTERNSHIP

Lab Hours/ Week	: --	Credits :	2.0
Sub. Code	: 7RCHIT1	CIE Marks :	0
		SEE Marks :	0

Course Objectives:

This course will enable students to:

1. Explain the process and the technical details about process in the industry.
2. Educate students about the process flow diagram and its interpretation.
3. Understand the concepts of material and energy balances to a given process.
4. Prepare a technical report and presentation about the given industrial process.

Guidelines:

Students have to undergo for a period of 4 weeks minimum during the vacation between even and odd semesters of II or III year. Those students who are unable to complete during these period will have to undergo

training after VIII semester and the VIII semester results will be announced only after the successful completion of Industrial Training.

Scheme of Evaluation:
Evaluation by DSEC is for 100 marks. This is a mandatory subject and carries ZERO credit. Student has to get a minimum of 40 % marks for a pass. If a student fails, then the training has to be repeated in its entirety.

Evaluation by the supervisor of the industry	**25 marks**
Evaluation by DSEC	
1.Relevance of training programme	10 marks
2.Report	25 marks
Evaluation of training by DSEC	40 marks
TOTAL	100 marks

Course Outcomes:
After the completion of the course, the student will be able to:

1. Demonstrate the knowledge of the given process learnt in the industry.
2. Demonstrate the knowledge of process flow diagram and its interpretation.
3. Apply the concepts of material and energy balances to a given process.
4. Prepare a technical report and presentation about the given industrial process.

TECHNICAL SEMINAR

Lab Hours/ Week	: 0+0+2 (L+T+P)	Credits :	1.0
Sub. Code	: 7RCHTS1	CIE Marks:	50
		SEE Marks :	0

Course Objectives:
This course will enable students to:

1. Develop skills in searching technical literature, analyzing and evaluating it to compare the various approaches.
2. Prepare a written report based on the literature review and analysis.
3. Oral presentation based on the written report.

Seminar marks break-up	
Relevance of the topic	5 marks
Report	10 marks
presentation	25 marks
Viva	10 marks
TOTAL	**50 marks**

Course Outcomes:
After the completion of the course, the student will be able to:
1. Identify relevant topics and current trends in technology.
2. Survey the literature for the selected topic.
3. Develop good communication skills and knowledge on the selected topic.
4. Summarize and present the report.

RESEARCH WORK (OPTIONAL)

Lab Hours/ Week	: 0+0+2 (L+T+P)	Credits :	6.0
Sub. Code	: 7RCHRW	CIE Marks:	50
		SEE Marks :	0

Course Objectives:
This course will enable students to:

1. Identify societal and industrial unmet needs requiring chemical engineering solutions.
2. Demonstrate research techniques such as literature reviews and the evaluation of previous work in the area.
3. Learn research methods including design of experiments and data analysis to provide valid conclusions after conducting investigations.
4. Understand process engineering solutions or design process equipment to the selected problem/unmet need.
5. Acquaint to the societal, health, safety, finance and legal issues in addition to responsibility to the professional engineering practice.
6. Use modern engineering tools including process modelling, simulation and optimization to solve the selected problem.
7. Exemplify ethical behavior in the context of conduction of experiments, data analysis and reporting.
8. Demonstrate the ability to work individually, and as a member or leader in a team and in multidisciplinary settings, on a significant open ended problem.
9. Illustrate the need for life-long learning including innovation and entrepreneurship.

Course Outline:
Totally six credits are prescribed for UG research. Research work can be taken up individually or a group of two students from the same or different departments. Students who pursue UG research and complete successfully are exempted from studying professional elective I (PE-1) in V semester and professional elective II (PE-2) in VI semester.
Students are required to develop a research proposal after discussions with the supervisor and consulting relevant literature on the topic of the research. They must identify an industrially or societally relevant problem and solve using chemical engineering principles and economics. This must be done in consultation with faculty of the department or a practicing chemical engineer from the industry. If the projects are innovative and potentially has high impact, then the department would consider approving on a case by case basis. The department also encourages students to take up projects towards developing a “technology” or a “product”. SIT’s technology incubation centre will facilitate any subsequent commercialization. The UG research can be performed individually or a group of two students from the same or different departments. One or more faculty of same or different departments can advise the project.

The students are required to identify the guide, propose the research topic and submit the application in the format available in the department, to the HoD at the beginning of V semester. If the work is interdisciplinary, one guide will be allotted from each of the participating departments. Students who have opted UG research shall carry out an extensive literature survey to decide abstract, introduction, motivation, objectives and methodology. Further, they shall work on the research to complete the project with a publication of paper in refereed journal/conference of repute.

CIE shall be from the start to completion of the UG Research. The final CIE marks shall be the average of all the CIEs marks reduced to maximum 50 marks. In case, the students complete the UG research before the end of VI semester, they can appear for VI semester SEE viva-voce examination. The prescribed 06 credits shall be included with the credits of the VI semester. In case, UG research is incomplete, students are permitted to continue with the same during the subsequent year/s of the programme. SEE shall be conducted at VII or VIII semester examinations depending on the semester during which the students complete the research. The credits of UG research shall be added to the corresponding semester to the students appear for the SEE.

The students can opt to discontinue the UG research at any time of the programme. However, they have to complete professional electives I (PE-1) and II (PE-2) to become eligible for the award of degree. In case, UG research is incomplete even after the completion of VIII semester and students wish to continue the UG research, they shall be permitted to do so till they complete it within the maximum period of the programme. However, the appearance to SEE shall be considered as first attempt and credits shall be included with VIII semester grade card, indicating the year in which the students have appeared for the SEE.

Break-up of CIE marks for Research Component

Sl. No.	**Evaluation Component**	**Marks**
1	Evaluation by the Supervisor of the research work (Guide)	15
2	Evaluation by a panel of 3 faculty members, including Guide as one of the member, constituted by BoS.	
	i) Report writing (Report should consist of Abstract, Introduction, Literature review, Research Objectives, Methodology (Experiments), Data Collection Analysis, Results, Conclusions and Scope for future work.)	10 15
	ii) Presentation and Demonstration	10
	iii) Publication of work in National/International Journals/ Conferences	
	Total	**50**

Break-up of SEE marks for Research Component

Examiners panel consists of One internal examiner (Guide) + One external examiner (to be selected by Controller from the panel of three examiners suggested by guide and recommended by BoS)

Sl. No.	Evaluation Component	Marks
1	Project presentation and demonstration	30
2	Viva-voce	20
	Total	**50**

Such of the UG students who have opted for Research Work have to submit their research findings in the form of a report in line with Major Project report. Two copies of the report are to be prepared (one for the department and one for the student)

Course Outcomes:

On successful completion of the course, the student will be able to

1. Identify a research problem or design related to chemical engineering or allied areas.
2. Apply basic principles and knowledge found in the literature related to the selected research topic
3. Use innovative research methodologies including design of experiments and data analysis to provide valid conclusions after conducting investigations.
4. Develop process engineering solutions and/or design process equipment to the selected problem.
5. Demonstrate knowledge about implications of the proposed solution with respect to finance, environment, sustainability and society.
6. Demonstrate the ability to apply modern engineering tools including process modelling, simulation and optimization to the selected topic with an understanding of the constraints.
7. Collaborate effectively and ethically, while conducting experiments, data analysis and reporting.

8. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings to solve problems within the area of expertise.
9. Collect, interpret, and critique data to resolve a research question or evaluate a design and communicate research findings.
10. Develop and satisfy intellectual curiosity, the need for further knowledge and continuously develop competencies including innovation and entrepreneurship.

VIII SEMESTER

PROFESSIONAL ELECTIVE-4 : OPTIMIZATION OF CHEMICAL PROCESS

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 8RCHE41		

Course Objectives:

This course will enable students to:

1. Identify the different types of optimization problems encountered in chemical engineering.
2. Understand the different optimization techniques for single variable problems.
3. Understanding of optimization tools for linear programming problems.

Unit – I

Introduction to Optimization – Definition, Benefits, Scope for optimization, Statement of an optimization problem, Classification of optimization problems, applications of optimization in engineering. (Review of linear algebra)

Optimization Problem Formulation – Process models for optimization, classification of process models, degree of freedom analysis, and Optimization problem formulation. **8 Hrs**

Unit – II

Basic Concepts of Optimization: Continuity of functions, Unimodal and multimodal functions, and multivariate functions. (Review of Matrix, Gradient Vector, and Hessian Matrix). Convex and concave functions, Monotonic functions, Global and local minimum (or maximum), Saddle point – Necessary and sufficient conditions. **8 Hrs**

Unit – III

Concepts of Optimization: Unconstrained and constrained problems, Optimality criteria for unconstrained single variable functions, Optimality criteria for unconstrained multivariable functions, Equality constrained problems – Variable elimination method and method of Lagrange Multipliers. Inequality constrained problems – method of Lagrange Multipliers and Karush-Kuhn-Tucker (KKT) conditions. **8 Hrs**

Unit – IV

Unconstrained Single Variable Optimization: Numerical precision, Scaling, Error and Convergence criteria, Direct Search method [Bracketing methods (Exhaustive search method and Bounding phase method) and Region elimination methods (Dichotomous search method, Interval Halving method, Fibonacci search method, Golden Section search method)], Methods requiring derivatives (Gradient based methods): Newton-Raphson method, Bisection method, Secant method. **8 Hrs**

Unit – V

Linear Programming Problem (LPP) – Introduction, applications, Formulation of linear programming models, Graphical solution of LPP, Linear programs in standard form. Solving system of linear equations. The Simplex Method – Simplex method, Use of artificial variables, Two phase method.

7 Hrs

TEXTBOOKS:

1	T. F. Edgar, D. M.Himmelblau and L. S. Lasdon	Optimization of Chemical Processes, 2nd Edition, McGraw Hill, 2001. ISBN: 9780070393592
2	A. Ravindran, K. M. Ragsdell, G. V. Reklaitis	Engineering Optimization: Methods and Applications, 2nd Edition, Wiley India, 2006. ISBN: 9780471558149

REFERENCE BOOKS:

1	S. S. Rao	Engineering Optimization: Theory and Practice, 4th Edition, John Wiley & Sons, Inc, 2009. ISBN: 9780470183526
2	Ranjan Ganguli	Engineering Optimization – A modern approach, Universities Press, 2011. ISBN: 9788173717390

Course Outcomes:

On successful completion of the course, the student will be able to

1. Apply concepts of optimization for problem formulation.
2. Apply and analyze different optimization technique.
3. Develop solutions for single variable optimization problems.
4. Develop solutions for Linear optimization problems.

PROFESSIONAL ELECTIVE – 4: SURFACE AND INTERFACIAL ENGINEERING

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 8RCHE42		

Course Objectives:

This course will enable students to:

1. Describe the significant forces involved in colloidal systems.
2. Elaborate the formation of emulsions and foams.
3. Describe the various phenomena related to fluid-fluid and fluid-solid interfaces.
4. Elaborate the properties of surfactants and choose the right type of surfactant for an application.
5. Acquire knowledge of interfacial forces at biointerfaces.

Unit – I

Introduction to engineering of interfaces: Definition and examples of interfaces, industrial applications of interfacial phenomena. Colloidal materials: Properties and characterization of colloidal systems Surface and interfacial tension: Theoretical methods for the calculation of surface and interfacial tension; Experimental techniques for the determination of equilibrium and dynamic tension; Shape of the surfaces: curvature and radius of curvature; Young-Laplace equation; Kelvin equation; Pendant and sessile drops; Adams-Bashforth equation. **8 Hrs**

Unit – II

Characterization of fluid-solid interfaces: Contact angle and wetting phenomena, Young-Dupré equation; Measurement of equilibrium and dynamic contact angles. Deposition of thin films: Mechanism of film nucleation-Chemical vapor deposition, molecular beam epitaxy, sputtering and atomic layer deposition techniques; Applications of interfaces in crystallization, ceramics, catalysts, electronic products and nanomaterials. Introduction to intermolecular and surface forces: van der Waals forces, Electrostatic double layer force, Disjoining pressure, DLVO theory, Non-DLVO forces. **8 Hrs**

Unit – III

Adsorption at fluid-fluid and fluid-solid interfaces: Adsorption of surfactants; Gibbs and Langmuir monolayers, Gibbs adsorption equation, Surface equation of state, Surface pressure isotherm. Langmuir-Blodgett films and their applications, radiotracer and neutron reflection techniques for studying adsorption at fluid-fluid interfaces. Adsorption isotherms, Adsorption hysteresis, Characterization of adsorption at fluid-solid interfaces by vacuum and non-vacuum techniques. Interfacial rheology and transport processes: Surface shear viscosity, Surface dilatational viscosity, Boussinesq number, Interfacial tension gradient and Marangoni effect, Gibbs and Marangoni elasticity, Boussinesq-Scriven model, Interfacial turbulence, Motion of drops in a liquid. Thin liquid films: Disjoining pressure and body-force models, Stability of thin liquid film, Black films. **8 Hrs**

Unit – IV

Emulsions: Preparation, characterization and applications, Ostwald ripening, Flocculation and coalescence, Microemulsions: characterization and properties, Stability of microemulsions. Foams: preparation, characterization and stability, Structure of foams. Interfacial reactions: Reactions at fluid-solid interfaces, Langmuir-Hinshelwood model. External and internal transport processes: Interfacial polycondensation reactions, Fast and instantaneous reactions at fluid-fluid interfaces, Reactions at biointerfaces, Micellar catalysis, Phase transfer catalysis. **9 Hrs**

Unit – V

Biological interfaces: Adsorption of proteins at interfaces, Biomembranes, Interfacial forces at biointerfaces, Adhesion and fusion phenomena, Biomaterials. Nanomaterials: Classification and preparation, Self-assembly, Nanoparticles, Nanowires, nanorods and nanotubes. Microporous and mesoporous materials: Lithographic techniques, Toxic effects of nanomaterials. **6 Hrs**

TEXTBOOKS:

1	Hiemenz, P. C. and Rajagopalan, R.	Principles of Colloid and Surface Chemistry, Third Edition, CRC Press, Boca Raton, FL, 1997. ISBN-13: 978-0-82-479397-5.
2	Ghosh P.	Colloid and Interface Science, PHI Learning Private Limited, Delhi, 2009. ISBN-13: 978-8-12-033857-9.

REFERENCE BOOKS:

1	Stokes, R. J. and Evans, D. F	Fundamentals of Interfacial Engineering, Wiley-VCH, Weinheim, Germany, 1996. ISBN-13: 978-0-47-118647-2.
2	Hunter R. J	Foundations of Colloid Science, 2e, OUP Oxford, 2000, ISBN-13: 978-0198505020

Course Outcomes:

On successful completion of the course, the student will be able to

1. Outline the significant forces between colloidal systems, how they can be calculated approximately and exactly, and how they can be measured.
2. Describe how to form emulsions and foams and the physical properties required for stable foams and emulsions to form.
3. Manipulate the wettability of surfaces.
4. Explain why surfactants are active at interfaces and be able to choose which type/class of surfactant would be best to use in certain situations.
5. Describe the interfacial forces at biointerfaces.

PROFESSIONAL ELECTIVE – 4: POLYMER TECHNOLOGY

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 8RCHE43		

Course Objectives:

This course will enable students to:

1. Understand the structure and classification of polymers.
2. Familiarize with polymer synthesis methods characterization techniques for polymers.
3. Identify the appropriate material for the engineering applications.
4. Suggest suitable technique for the polymer degradation.

Unit-I

Introduction and classification: Classification of polymers: Thermoplastics and thermosets, classification based on mechanism of polymerization and polymer structure. Polymer structure: Copolymers, Tacticity, Geometric Isomerism, and Nomenclature. Molecular weight: Molecular weight distribution and molecular weight averages. Application of polymers. **8 Hrs**

Unit-II

Synthesis of polymers: Step growth polymerization**:** Molecular-weight in step-growth polymerization, Step growth polymerization kinetics. Chain-Growth polymerization: Free-Radical Polymerization and Copolymerization, Ionic Polymerization and Copolymerization, Coordination Polymerization, Controlled Radical Polymerizations. Chemical structure determination: Vibrational Spectroscopy, Nuclear Magnetic Resonance Spectroscopy.

8 Hrs

Unit-III

Conformation, Solution, and Molecular Weight: Polymer Conformation and Chain Dimensions. Polymer solutions: The Flory–Huggins Theory, Equation-of-State Theories, Phase equilibria, Determination of interaction

parameter, and prediction of solubilities. Measurement of Molecular Weight: Osmometry, Light-Scattering Methods, Intrinsic Viscosity Measurements, and Gel-Permeation Chromatography. **8 Hrs**

Unit-IV

Polymer for advanced technologies: Membrane Science and Technology: Barrier Polymers, Membrane Separations, Mechanisms of Transport, Membrane Preparation. Biomedical Engineering and Drug Delivery: Controlled Drug Delivery, Gene therapy, and Antimicrobial Polymers. Applications in Electronics and Energy: Electrically Conductive Polymers, Polymeric Batteries, and Organic Photovoltaic Polymers. Photonic Polymers: Nonlinear Optical Polymers and Light-Emitting Diodes. Sensor applications. **8 Hrs**

Unit-V

Polymer degradation and environment: Polymer Degradation and Stability: Thermal Degradation, Mechanodegradation, Oxidative and UV Stability, Chemical and Hydrolytic Stability**.** Management of Plastics in the Environment: Recycling, Incineration, and Biodegradation. **7 Hrs**

TEXTBOOKS:

1	Fried, Joel	Polymer Science and Technology, (3rd edition), Prentice Hall of India Pvt. Ltd., New Delhi, Eastern Economy Edition, 2000. ISBN-13: 978-0-13-703955-5

3	R. Sinha	Outlines of Polymer Technology: Manufacture of Polymers ,1e, Prentice Hall of India Pvt. Ltd., New Delhi, 2002. ISBN: 8120317289

REFERENCE BOOKS:

1	F.W.Bill Meyer	Text book of polymer science, (3rd ed.) John Wiley & sons 1984. ISBN: 9788126511105
2	John Scheirs	Polymer Recycling Science Technology and Applications, 1e, Wiley 2001, ISBN: 9780471970545.

Course Outcomes:

On successful completion of the course, the student will be able to

1. Understand the various types of polymers their characteristics and applications.
2. Able to synthesis different types of polymers for various applications.
3. Identify the appropriate polymeric material for wide variety of applications.
4. Identify suitable methods to degrade the polymers with various techniques.

PROFESSIONAL ELECTIVE – 5: PILOT PLANT AND SCALE UP METHODS

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 8RCHE51		

Course Objectives:

This course will enable students to:

1. Demonstrate the concept of pilot plant, model, prototype and similarity.
2. Demonstrate the importance of dimensional analysis and differential equations in scaling up of processes.
3. Demonstrate the similarity criterion for the principal types of regimes in chemical engineering.
4. Demonstrate the scaling up of distillation, evaporation, extraction and absorption processes.
5. Demonstrate the scaling up of mixing and chemical reactors.

Unit – I

Introduction: pilot plant, prototypes and models.

Principles of Similarity: static, dynamics, kinematics, thermal, and chemical similarities criteria and examples. **8 Hrs**

Unit – II

Dimensional Analysis: differential equation, Regime concept. **8 Hrs**

Unit – III

Scale (up / down) equation, extrapolation, boundary effects. **8 Hrs**

Unit - IV

Scale up problem on transfer operation, momentum, heat and mass transfer. **8 Hrs**

Unit – V

Scale up problems on mixing, agitated vessels and chemical reactors. **7 Hrs**

TEXTBOOKS:

1	Johnstone and Thring.	Pilot plants Models and scale up method in Chemical Engineering, McGraw-Hill Inc.,US, 1957, ISBN- 978-0070326934

REFERENCE BOOKS:

1	Horker and Backhurst	Process plant design, Elsevier, 1973, ISBN-9781483162386

Course Outcome:

By the end of this course student will be able to:

1. Differentiate pilot plant and model
2. Demonstrate the advantages of differential equations in scale up compared to dimensional analysis
3. Demonstrate the similarity criterion in static and dynamic regimes of chemical engineering processes.
4. Demonstrate the Scale up mass transfer equipments.
5. Demonstrate the Scale up mixing and chemical reactors.

PROFESSIONAL ELECTIVE – 5: NANO MATERIALS

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 8RCHE52		

Course Objectives:

This course will enable students to:

1. Understand the fundamentals of Nanomaterials and its impact on environment.
2. Understand methods for synthesis and fabrication of desired Nanomaterials by physical and chemical methods.
3. Synthesis of fullerene, Graphene oxide and carbon Nano tubes.
4. Understand large scale synthesis and characterization of Nanomaterials.
5. Familiarize with synthesis of Nano-composites and its applications.

Unit-I

General introduction, basic idea of nanomaterials, types of Nanomaterials: 0D, 1D, 2D and special Nanomaterials. Nano-scale size effect, surface area to volume ratio, properties of Nanomaterials (magnetic, electrical, mechanical and optical). Applications of Nanomaterials.

Nanotechnology – Health, environment and society: Health impact: Medical applications to cure diseases and the health hazards. **Environmental impact:** Nanopollution, Environmental benefits of nanotechnology, e.g. energy water filtration and remediation. *Societal impact:* Implications of nanotechnology on society, issues with nanotechnology, nanopolicies and institutions, nanotech and war, public perception and public involvement in the nano discourse. **8 Hrs**

Unit-II

Synthesis of Nanomaterials: Top down and bottom up approaches with the examples. **Physical methods:** Ball milling, Inert gas condensation Arc discharge, Ion sputtering, Laser ablation, spray pyrolysis, flame pyrolysis, thermal evaporation, pulsed laser deposition, molecular beam epitaxy.

Chemical methods: Metal nano-crystals by reduction, solvo-thermal synthesis, photochemical synthesis, electrochemical synthesis, micelles and micro-emulsions, chemical vapor deposition (CVD), sol-gel process.

Lithographic techniques: Photolithography, electron beam and focused ion beam lithography. **8 Hrs**

Unit-III

Carbon nanomaterials: Introduction: Allotropes of carbon and their structures. Fullerenes: synthesis (combustion flame synthesis, arc discharge) and applications (super-capacitors, adsorbents, catalysts, synthetic diamonds). Graphene and Graphene oxide (Synthesis and applications).

Carbon Nanotubes (CNT): Types of carbon Nanotubes and their structure, production of CNT by arc discharge method, laser ablation method and chemical vapor deposition (CVD) method (principle, raw material, mechanism, yield, and quality in each method).

Properties of CNTs (electrical, magnetic, mechanical and vibrational properties); Applications of CNTs (field emission, hydrogen storage, fuel cells, sensors, super capacitor). **8 Hrs**

Unit-IV

Manufacturing nanomaterials: from research to industry (sol-gel, solvo-thermal, milling, CNT, metals).

Characterization methods: General classification of characterization methods, Microscopy techniques, atomic force microscopy (AFM), BET surface area, Diffusion Reflectance Spectroscopy (DRS) and X-ray Photoelectron Spectroscopy (XPS). **8 Hrs**

Unit-V

Nanocomposites: An Introduction: Metal - Metal Nanocomposites, Polymer-Metal Nanocomposites.

Ceramic Nanocomposites: Core - Shell structured Nanocomposites,

Superhard Nanocomposite: applications.

Nano Semiconductors: Nanocomposites for biomedical devices, sensors, energy storage and automobiles. **7 Hrs**

TEXTBOOK:

1	Frank J. Owens and Charles P. Poole Jr	The Physics and Chemistry of Nano Solids, Wiley-Inter science, 2008, ISBN: 978-0-470-06740-6.

REFERENCE BOOKS:

1	G. Ozin and A. Arsenault	Nanochemistry: A Chemical Approach to Nanomaterials, RSC Publishing, 2005, 1e, ISBN-978-1-84755-895-4,
2	Edward L. Wolf	Nanophysics and Nanotechnology: An Introduction to Modern Concepts in Nanoscience, Wiley-VCH, 2005,1e, ISBN: 978-3-527-61898-9.
3	P.M. Ajayan, L.S. Schadler, P.V. Braun	Nanocomposite science and technology, Wiley, New York, 2015, 1e, ISBN: 9783527303595

Course outcomes:

At the end of this course students will be able to

1. Explain the fundamental of Nanomaterials and its environmental impact
2. Synthesize Nanomaterials by different methods
3. Fabricate fullerenes, Graphene oxide and carbon Nano tubes

4. Synthesize Nanomaterials in large scale and characterize the Nanomaterials
5. Produce various Nano-composites

PROFESSIONAL ELECTIVE – 5: WASTE WATER TREATMENT METHODS

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 8RCHE53		

Course Objectives:

This course will enable students to:

1. Understand the characteristics of water and wastewater.
2. Understand the physical, chemical and biological methods to treat wastewater.
3. Understand the various sludge treatment and disposal methods.

Unit-I

Wastewater management: Introduction, legislation, regulations, and government agencies.

Wastewater Characteristics: Physical characteristics: colour, odour, temperature, turbidity, total solids.

Chemical characteristics: inorganic and organic characteristics and their determination.

Biological Characteristics: Classification of microorganisms, pathogenic organisms, Toxicity, Estimation of BOD, COD. **8 Hrs**

Unit-II

Pretreatment: Equalization, Neutralization, Grease and Oil Removal, Toxic Substances.

Primary Treatment: Screens, Grit Chambers, Comminutors, Gravity Sedimentation, coagulation and flocculation: types of coagulants, coagulant aids, coagulation theory, optimum dose of coagulant. **8 Hrs**

Unit-III

Secondary Treatment: Biological process for wastewater treatment. Suspended and attached growth processes - Aerobic and Anaerobic. Activated Sludge Process, Trickling filters, Rotating Biological Contactors; Lagoons.

Physical-Chemical Treatment: Adsorption, Ion Exchange, Advanced Oxidation Processes, Membrane Bioreactors (MBRs). **8 Hrs**

Unit-IV

Sludge Processing: Objectives, Concentration: Thickening and Flotation, Stabilization (Anaerobic Digestion, Aerobic Digestion, High Lime Treatment), Sludge Dewatering: Centrifugation, Vacuum Filtration, Pressure Filtration, Belt-Press Filters, Sand Beds,

Sludge Disposal: Incineration, Sanitary Landfills, Beneficial Reuse of Biosolids. **8 Hrs**

Unit-V

Wastewater Treatment in specific industries: Sugar, Dairy, Distillery, Textile, Pharmaceutical and Petrochemical industries. **7 Hrs**

TEXTBOOKS:

1	Mark J. Hammer, Mark J. Hammer, Jr.,	Water and Wastewater Technology, 7th Edition, PHI Learning Private Ltd., New Delhi, 2012. ISBN: 9780135114049
2	Patwardhan, A.D	Industrial Waste Water Treatment, 2nd Edition, PHI learning, 2017, ISBN: 978-81-203-3350-5

REFERENCE BOOKS:

1	Metcalf & Eddy	Wastewater Engineering Treatment and Reuse, McGraw Hill Education Private Ltd. New York, 2014, 5e, ISBN: 7-302-05857-1.
2	Eckenfelder, W.W	Industrial Water Pollution Control, McGraw-Hill, 2001, 1e, ISBN: 9780070393646.
3	Don W. Green; Robert H. Perry	Perry's Chemical Engineers' Handbook, McGraw-Hill education, New York, 2008, 8e, ISBN: 9780071422949.

Course Outcomes:

After the completion of the course, the student will be able to:

1. Understand the water quality standards and basic characteristics of wastewater.
2. Apply the physical, chemical and biological principles to treat wastewater.
3. Understand the working principle of various sludge treatment and disposal methods.
4. Apply the wastewater treatment methods for different industries.

PROFESSIONAL ELECTIVE 6: PETROCHEMICALS

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 8RCHE61		

Course Objectives:

This course will enable students to:

1. Illustrate the history, developments and importance of petrochemical industries along with major unit processes involved
2. Demonstrate the manufacturing process and applications of certain Important petrochemicals produced from C1, C2, C3, C4 compounds and BTX compounds (Benzene, Toluene and Xylene)
3. Explain the merits and demerits of manufacturing process of few petrochemicals
4. Elaborate the major engineering problems encountered during the production of petrochemicals

Unit – I

Overview of petrochemical industries: Definition of petrochemicals, overall view of petrochemicals, History of petrochemical industries, Feed stocks for petrochemical industries (Natural gas, Crude oil, Coal, oil shale, Tar sand and gas hydrates, synthesis gas),Production of hydrocarbon intermediates: Fluidized bed catalytic cracking, catalytic reforming, steam cracking, hydrocracking, hydrodealkylation. **8 Hrs**

Unit – II

Petrochemicals from Methane, Synthesis gas and Ethylene: Chemicals based on direct reactions of methane: Carbon Disulfide, Hydrogen Cyanide , Chloromethanes (reactions involved and uses), Chemicals based on reaction of synthesis gas: Ammonia , Methyl alcohol (The ICI low-pressure process), Formaldehyde (The HaldorTopsoe and Nippon Kasei process), Oxo Aldehydes and Alcohols , Ethylene Glycols (reactions involved, and uses) **8 Hrs**

Unit – III

Chemicals based on Ethylene : Oxidation of Ethylene (The Scientific Design Co. Ethylene Oxide process), Derivatives of Ethylene Oxide (Ethylene glycols and Ethanol amines -reactions and uses) , Chlorination of Ethylene , Vinyl Chloride(The European Vinyls Corporation process), Perchloro- and Trichloroethylene , Acetaldehyde, Hydration of Ethylene , Oligomerization of Ethylene, Alpha Olefins Production , Linear Alcohols , Butene-I (reactions and uses). **8 Hrs**

Unit – IV

Petrochemicals from C_4 Olefins: Chemicals from n-butane: Oxidation and isomerization of butane, The Monsanto process for producing maleic anhydride from butane, Isomerization, naphtha-basedchemicals

Chemicals from n-Butenes: Oxidation of Butenes,hydration of Butenes, Oligomerization of Butenes (reactions and uses)

Chemicals from Isobutylene: Oxidation of Isobutylene, Epoxidation of Isobutylene , Addition of Alcohols to Isobutylene , Hydration of Isobutylene, Carbonylation of Isobutylene, Dimerization of Isobutylene (reactions and uses)

Chemicals from Butadiene: Adiponitrile , Hexamethylenediamine, Adipic Acid , Butanediol , Chloroprene , Cyclic Oligomers of Butadiene(reactions and uses). **7 Hrs**

Unit – V

Chemicals Based on Benzene, Toluene, and Xylenes: Review of technologies available for production of Benzene, Toluene, Xylene and Cumene UOP's EB*one* process manufacturing of Ethylbenzene, UOP QMax™ process for Cumene production, Production of Linear Alkyl Benzene Sulfonate for Detergents.

Reactions and Chemicals of Benzene : Alkylation of Benzene, Chlorination of Benzene , Nitration of Benzene , Oxidation of Benzene, Hydrogenation of Benzene.

Reactions and Chemicals of Toluene: Dealkylation of Toluene, Disproportionation of Toluene, Oxidation of Toluene , Chlorination of Toluene , Nitration of Toluene, Carbonylation of Toluene (reactions and uses) Chemicals from Xylenes, Terephthalic Acid , Phthalic Anhydride , Isophthalic Acid. **8 Hrs**

TEXTBOOKS:

3	Uttam Ray Chaudhurai	Fundamentals of petroleum and petrochemical engineering, 2011, CRC Press, 1e, ISBN : 9781439851609.

Course Outcomes:

After the completion of the course, the student will be able to:

1. Demonstrate the knowledge of history of petrochemical industries, sources for petrochemical production and unit processes for petrochemical production.
2. Describe the production process and applications of various chemicals produced from Methane, synthesis gas and ethylene.
3. Explain the production process and applications of various chemicals produced from propane and propylene.
4. Describe the production process and applications of various chemicals produced from butane, isobutylene and butadiene.
5. Explain the production process and applications of various chemicals produced from Benzene, Toluene and Xylenes.

PROFESSIONAL ELECTIVE 6: GREEN CHEMIAL ENGINEERING

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 8RCHE62		

Course Objectives:

This course will enable students to:

1. Acquire a fundamental understanding of basic chemistry/technology principles with the frame work of Green Chemistry.
2. Get acquainted with the development of latest technologies and methodologies for reduction of waste and its prevention.

3. Identify the tools of green technology involved in process synthesis and unit operations and assessment of environmental implications of a process.
4. Acquire principles of Life Cycle Assessment tools and methods.

Unit – I

Principles of Green Chemistry and Green Engineering: Introduction to Green Chemistry: Definition, Principles of Green Chemistry and Examples; Green Engineering, Definition and Principles of Green Engineering, Sustainability - Atom Economy, Atom Un-economic Reactions, Reducing toxicity. **8 Hrs**

Unit – II

Waste: Production, Problems and Prevention: Introduction, Some problems caused by Waste, Sources of Waste from the Chemical Industry, Cost of Waste, Waste minimization techniques, On-site treatment- Physical, Chemical and Bio treatment Plant, Design for Degradation – Surfactants, DDT, Polymers and rules for degradation; Polymer Recycling: Separation and Sorting, Incineration, Mechanical Recycling, Chemical Recycling to Monomers. **8 Hrs**

Unit – III

Evaluating Environmental Performance during process synthesis: Introduction: Tier 1 Environmental performance tools- Economic Criteria, Environmental Criteria, TLV, PEL, and REL, Toxicity Weighing, Evaluating, Alternative Synthetic pathway, Tier2-Environmental Performance Tools, Environmental Release Assessment – Release Quantification Methods, Modeled Release Estimate: Storage Tan Working and Breathing Losses. **8 Hrs**

Unit – IV

Unit Operations and Pollution Prevention: Introduction, Pollution Prevention in material selection for Unit Operations, Prevention for Chemical Reactors - Material use and selection for reactors, reaction type and reactor choice, Reactor Operation, Pollution prevention for separation devices – Choice of Mass separating agent, process design and operation Heuristics for separation technologies,, Pollution prevention examples for separations, Pollution prevention in storage tank and fugitive sources. **8 Hrs**

Unit – V

Life Cycle Assessment: Introduction to Product Life Cycle concepts, Life Cycle Assessment Terminologies, Methodology, Inventories, Life Cycle Impact assessment- Classification, Characterization, Valuation, Interpretation of Life cycle data and practical limits of Life cycle assessments, Uses of Life cycle studies. **8 Hrs**

TEXTBOOKS:

1	M. Lancaster	Green Chemistry – An Introductory Text, 2nd Ed., RSC Publishing, Cambridge, UK, 2010, ISBN: 978-1847558732

Course Outcomes:

After the completion of the course, the student will be able to:

1. Understand the principles of green chemistry and engineering.
2. Identify nature of waste, its treatment and prevention and application of right tools to minimize the hazard.
3. Application of evaluation tools to operations in process synthesis stage.
4. Design products that are safe and hazard free.
5. Application of principles and tools of Life cycle assessment for a product.

PROFESSIONAL ELECTIVE 6: SOLID WASTE MANAGEMENT

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: 8RCHE63		

Course Objectives:

This course will enable students to:

1. To characterize the waste and apply the knowledge of laws for municipal solid waste management, for handling of biomedical wastes and for handling of plastic wastes.
2. To apply the knowledge of mathematics, science, and engineering for effective solid waste collection systems, for waste collection route optimization and for processing of solid waste.
3. To design composting systems, maintain and operate the aerobic and anaerobic composting process for effective organic waste recycling.
4. To manage construction and operations of landfill facilities, energy recovery systems and management of leachate systems.

Unit – I

Introduction: Functional Elements Municipal Solid Waste *(Management & Handling)* Rules, 2000 and *e-waste (Management) Rules, 2016.*

Generation of Solid Wastes: Types of Solid Waste, Hazardous Wastes, Sources of Industrial Wastes, Properties of Solid Wastes, Quantities of Solid Wastes. **8 Hrs**

Unit – II

On-Site Handling, Storage, and Processing: On-Site Handling, On-Site Storage, On-Site Processing of Solid Wastes, Processing Techniques for Solid Waste, Processing of Hazardous Wastes. **8 Hrs**

Unit – III

Biological and Thermal Processes: Recovery of Biological Conversion Products – Composting, Anaerobic Digestion, Thermal Processes - Incineration with Heat Recovery, Combustion, Gasification, Waste-to-Energy Systems, Efficiency Factors, Incineration process, factors affecting incineration process, and air pollution prevention in incinerators. **8 Hrs**

Unit – IV

Ultimate Disposal: Landfilling of Solid Waste, Landfilling Methods and Operations, Important Factors in Preliminary Selection of Landfill Sites, Occurrence of Gases and Leachate in Landfills, Gas and Leachate Movement and Control. **8 Hrs**

Unit – V

Reuse, Recycling, and Recovery, Short- and Long-Term Actions for Effective Industrial Solid-Waste management, *e-waste* management, Biomedical Waste, Biomedical Waste Handling Rules and its Impact on Human Health. **7 Hrs**

TEXTBOOKS:

1	George Tchobanuglour	Integrated Solid Waste Management, 1e, McGraw-Hill Education, 1993, ISBN: 9780071128650
2	Iqbal Khan & Naved Ahsan	Textbook of Solid Wastes Management PB, 1e, CBS, 2007, ISBN: 9788123909448.
3	Sasikumar K & Sanoop Gopi Krishana P	Solid Waste Management, 3e, PHI learning Pvt. Ltd, 2009, ISBN: 9788120338692.

REFERENCE BOOKS:

1	Frank Krieth	Handbook of Solid waste, Tata McGraw-Education, 1994, ISBN: 9780070358768.

3	Frank Kreith & George Tchobanoglous	Handbook of Solid Waste Management, 2e, McGraw-Hill Education, 2002, ISBN: 978-0071356237.

Course Outcomes:

After the completion of the course, the student will be able to:

1. Describe the components of solid waste management and the legal legislation governing it.
2. Discuss the solid waste collection systems, route optimization techniques and processing of solid wastes.
3. Outline the design, operation, and maintenance of different methods of treatment.
4. Explain the operation, and maintenance of Incineration and sanitary landfill.
5. Discuss the Reuse, Recycling, and Recovery methods of Industrial Solid-Waste management, *e-waste* management, Biomedical Waste.

PROJECT PHASE-II

Lab Hours/ Week:16	Credits	: 9.0
Subject Code: 8RCHMP1	CIE Marks	: 50
	SEE Marks	: 50

Course Objectives:

This course will enable students to:

1. Train the students to identify societal and industrial unmet needs needing chemical engineering solutions.
2. Introduce research methods including design of experiments and data analysis to provide valid conclusions after conducting investigations.
3. Guide students to develop process engineering solutions or design process equipment to the selected problem/unmet need.
4. Acquaint students to societal, health, safety, finance and legal issues in addition to responsibility to the professional engineering practice.
5. Teach modern engineering tools including process modelling, simulation and optimization to solve the selected problem.
6. Exemplify ethical behavior in the context of conduction of experiments, data analysis and reporting.
7. Train to function effectively as an individual, and as a member or leader in a team, and in multidisciplinary settings to solve problems within the area of expertise.
8. Give directions to students to evaluate and critically assess results and be able to document and present one's own work.
9. Illustrate the need for life-long learning including innovation and entrepreneurship.

Course Outline:

Students must identify an industrially or societally relevant problem and solve using chemical engineering principles and economics. This must be done in consultation with faculty of the department or a practising chemical engineer from the industry. The students are advised to take up projects that can be performed using the facilities and infrastructure of the department and the institute. However, students are encouraged to think "out of the box" and take up challenging projects. If the projects are innovative and potentially has high impact, then the department would consider approving on a case by case basis. The department also encourages students to take up projects towards developing a "technology" or a "product". SIT's technology incubation centre will facilitate any subsequent commercialization. The major project can be performed by a team of 3 to 4 students. One or more faculty of the department can advise the project and can be performed within the department or in an Industry or a Research Institute. A co-guide from the Industry or Research Institute is also allowed.

The project can be taken by group of 4 students and major project can be carried out in the dept. under a guide or outside the department in

institute/ company with a guide from the dept. and co guide from the institute/ company.

The major project is evaluated over two semesters (VII and VIII). It carries 2 credits in the VII semester and is evaluated for 100 marks (100% CIE only). In the VIII semester, it carries 13 credits and evaluated for 100 marks [50% CIE & 50% SEE].

CIE marks breakup

Seminar on project and demonstration	20 marks
Report	10 marks
Evaluation by guide	15 marks
Co-curricular activities	5 marks
TOTAL	50 marks

Semester End Examination (SEE) marks breakup	
Presentation (seminar) and demonstration (Final Phase)	30 Marks
Viva Voce Examination	20 Marks
Grand Total	**50 Marks**

REFERENCE BOOKS:

1	Lazic, Z.R	Design of Experiments in Chemical Engineering: A Practical Guide, WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim, Germany, 2004, ISBN: 3-527-31142-4
2	Piemonte, V., De Falco, M., Basile, A.,	Sustainable Development in Chemical Engineering: Innovative Technologies, Wiley, West Sussex, United Kingdom, 2013, ISBN: 978-1-119-95352-4
3	Kakava, N.,	Technopreneurship: Conceptualized. Lap Lambert Academic Publishing GmbH KG, Germany, 2012, ISBN: 978-3-659-24027-0

Course Outcomes:

On successful completion of the course, the student will be able to

1. Identify the issues prevailing in areas where chemical engineering is applied.
2. Demonstrate sound technical knowledge of the selected project topic and apply the knowledge of basic sciences and chemical engineering to meet the unmet needs.
3. Use of research methods including design of experiments and data analysis to provide valid conclusions after conducting investigations.
4. Develop process engineering solutions and/or design process equipment to the selected problem.
5. Demonstrate knowledge about implications of the proposed solution with respect to finance, environment and sustainability and society.

6. Demonstrate the ability to apply modern engineering tools including process modelling, simulation and optimization to the selected topic with an understanding of the constraints.
7. Display ethical behavior in the context of conduction of experiments, data analysis and reporting.
8. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings to solve problems within the area of expertise.
9. Evaluate and critically assess one's own and others' results and be able to document and present one's own work for a given target group, with requirements on structure, format, and language usage.
10. Demonstrate the need for further knowledge and continuously develop competencies including innovation and entrepreneurship.

SCHEME & SYLLABUS

OF

III & IV SEMESTER B.E.

ELECTRONICS AND INSTRUMENTATION ENGINEERING

2022-23

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institution affiliated to VTU, Belagavi, Approved by AICTE, New Delhi, Accredited by NAAC with 'A' grade & ISO 9001:2015 Certified)

B.E. in Electronics and Instrumentation Engineering

SCHEME OF TEACHING AND EXAMINATION (160 Credits Scheme)

		AAP	AICTE Activity Points (Applicable for both Regular and Lateral Entry students)	40 hours community service to be documented and produced for the examination									

Note: **BSC**: Basic Science Course, **IPCC**: Integrated Professional Core Course; **PCC**: Professional Core Course,
HSMC: Humanity and Social Science & Management Courses, **AEC** –Ability Enhancement Courses. **UHV**- Universal Human Value Courses
L –Lecture, **T** – Tutorial, **P**- Practical/ Drawing, **S** – Self-Study Component, **CIE**: Continuous Internal Evaluation, **SEE**: Semester End Examination

NHS01 Balake Kannada is for students who can't speak, read and write Kannada.
NHS02 Samskrutika Kannada is for students who can speak, read and write Kannada.

Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with Practicals of the same course. Credit for IPCC can be 04 and its Teaching – Learning hours (L : T : P) can be considered as (3: 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from practical part of IPCC shall be included in the SEE question paper.

INT1 - Inter/Intra Institutional Internship: All the students admitted to engineering programs under the **lateral entry category** shall have to undergo mandatory INT1 Inter/Intra Institutional Internship of 03 weeks during the **intervening period of III and IV semesters**. The internship shall be slated for CIE only and will not have SEE. The letter grade earned through CIE shall be included in the IV semester grade card. The internship shall be considered for vertical progression and for the award of degree. Those, who do not take up / complete the internship shall be declared fail and shall have to complete subsequently after satisfying the internship requirements. The faculty coordinator or mentor shall monitor the students' internship progress and interact with them for the successful completion of the internship.

Non-Credit Mandatory Course (NCMC):

(A) Foundation of Engineering Mathematics - I & II

(1) These courses are prescribed for III and IV semesters respectively to **lateral entry Diploma holders** admitted to III semester of B.E. programs. They shall attend the classes during the respective semesters to complete all the formalities of the course and appear for the Continuous Internal Evaluation (CIE). In case, any student fails to register for the said course/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have secured an F grade. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks. **These courses are slated for CIE only and have no SEE.**

(2) Foundation of Engineering Mathematics I and II shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.

(3) Successful completion of the courses Foundation of Engineering Mathematics I and II shall be indicated as PP in the grade card. Non-completion of the courses Foundation of Engineering Mathematics I and II shall be indicated as NP.

(B) National Service Scheme/Physical Education (Sport and Athletics)/Yoga:

(1) Securing 40 % or more in CIE, 35 % or more marks in SEE and 40 % or more in the sum total of CIE + SEE leads to successful completion of the registered course.

(2) In case, students fail to secure 35 % marks in SEE, they have to appear for SEE during the subsequent examinations conducted by the Institute.

(3) In case, any student fails to register for NSS, PE or Yoga/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have not completed the requirements of the course. In such a case, the student has to fulfill the course requirements during subsequent semester/s to earn the qualifying CIE marks.

(4) Successful completion of the course shall be indicated as PP in the grade card. Non-completion of the course shall be indicated as NP.

(5) These courses shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the courses shall be mandatory for the award of degree.

Ability Enhancement Course – III (Offered by the Department)

AECEI31	**PCB Design**		

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

NHS01 Balake Kannada is for students who can't speak, read and write Kannada.
NHS02 Samskrutika Kannada is for students who can speak, read and write Kannada.

Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with Practicals of the same course. Credit for IPCC can be 04 and its Teaching – Learning hours (L : T : P) can be considered as (3: 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from practical part of IPCC shall be included in the SEE question paper.

Internship of 04 weeks during the intervening period of IV and V semesters; INT2 Innovation/ Entrepreneurship/ Societal based Internship.

(1) All the students shall have to undergo a mandatory internship of 04 weeks during the intervening period of IV and V semesters. **The internship shall be slated for CIE only and will not have SEE.** The letter grade earned through CIE shall be included in the VI semester grade card. The internship shall be considered as a head of passing and shall be considered for vertical progression and for the award of degree. Those, who do not take up / complete the internship shall be considered under F (fail) grade and shall have to complete subsequently after satisfying the internship requirements.

(2) **Innovation / Entrepreneurship Internship** shall be carried out at industry, State and Central Government / Non-government organizations (NGOs), micro, small, and medium enterprise (MSMEs), Innovation centres or Incubation centres. Innovation need not be a single major breakthrough; it can also be a series of small or incremental changes. Innovation of any kind can also happen outside of the business world. Entrepreneurship internships offers a chance to gain hands on experience in the world of entrepreneurship and helps to learn what it takes to run a small entrepreneurial business by performing intern duties with an established company. This experience can then be applied to future business endeavours. Start-ups and small companies are a preferred place to learn the business tactics for future entrepreneurs as learning how a small business operates will serve the intern well when he/she manages his/her own company. Entrepreneurship acts as a catalyst to open the minds to creativity and innovation. Entrepreneurship internship can be from several sectors, including technology, small and medium-sized, and the service sector.

(3) **Societal or social internship**. Urbanization is increasing on a global scale; and yet, half the world's population still resides in rural areas and is devoid of many things that urban population enjoy. Rural internship is a work-based activity in which students will have a chance to solve/reduce the problems of the rural place for better living. **As proposed under the AICTE rural internship programme, activities under Societal or social internship, particularly in rural areas, shall be considered for 40 points under AICTE activity point programme.**

III Semester

ENGINEERING MATHEMATICS– III (EC, TC, EE, IT)

Contact Hours/ Week	3 (L)	**Credits**	**3**
Total Lecture Hours	**39**	**CIE Marks**	**50**
Total Tutorial Hours	**00**	**SEE Marks**	**50**
Sub Code	NMAT3A	**Semester**	**III**

Prerequisites: Engineering Mathematics-I and Engineering Mathematics-II.

Course objective:

1. To introduce the concept of analytic function, transformation for mapping.
2. The concept of complex variables to evaluate the integrals.
3. Introduce partial differential equations, use separation of variable method to solve wave, heat and Laplace equations.
4. To develop and conduct appropriate experimentation, analyze and interpret data and use engineering judgment to draw conclusion.
5. Introduction of Finite difference approximation to derivatives to partial differential equations.

UNIT-I :

Complex Variables: Functions of complex variable, Definition of Limit, Continuity, Differentiability. Analytic functions, Cauchy's-Reimann equation in Cartesian and polar forms (Statement only), Properties of analytic functions (Statement only). Geometrical representation of $f(z)=w$, Conformal transformation: $w=e^z$, $w=z+\frac{1}{z}$, $w=z^2$. **8 Hours**

UNIT-II:

Complex Integration: Bilinear transformation, Properties, Complex integration, Cauchy's theorem (with proof), Converse of Cauchy's theorem, Cauchy's integral formula (with proof), residues, residues theorem, calculation of residues. **8 Hours**

UNIT – III :

Partial differential equations (P.D.E.): Formation of Partial Differential Equation, Solution of Langrange's Linear P.D.E. of the type Pp+Qq=R. Method of Separation of Variables. **Applications of P.D.E.:** Classification of PDE, Solution of one dimensional heat, wave and two dimensional Laplace's equations by the method of separation of variables. **8 Hours**

UNIT-IV

Statistics: Introduction, Definitions, Curve Fitting, equation of Straight line, parabola and exponential, correlation and regression, formula for correlation coefficient, regression lines and angle between the regression lines. **7 Hours**

UNIT – V

Numerical Solutions to the Partial differential equations

Introduction, Finite difference approximation to derivatives, Elliptic equations, Solution of Laplace's equations, Parabolic equations, Solution of heat equation, Hyperbolic equations, Solution of wave equation. **8 Hours**

Text Book:

1	B.S.Grewal	"Higher Engineering Mathematics", 43rd edition, Khanna Publications, 2015.ISBN;978-81-7409-195-5.

4	Louis A. Pipes and Lawrence R. Harvill	"Applied Mathematics for Engineers and Physicists", 3rd edition, McGraw Hill,2014.

Course Outcomes:

Upon completion of this course the student will be able to:

1. Determine continuity/differentiability/analyticity of a function and find the derivative of a function. Identify the transformation (L3,L1)
2. Evaluate a contour integral using Cauchy's integral formula. Compute singularities and also the residues(L3).
3. Formulate and solve partial differential equations. Apply separation of variable method to solve wave, heat and Laplace equations (L4).
4. Apply least square method to fit a curve for the given data and evaluate the correlation coefficient and regression lines for the data (L3)
5. Compute the numerical solution of partial differential equations (L4).

DIGITAL ELECTRONIC CIRCUITS

Contact Hours/ Week :	3+0+2 (L+T+P)	Credits : 4.0
Total Lecture Hours :	39	CIE Marks : 50
Total Tutorial Hours :	00	SEE Marks : 50
Total Practical Hours :	26	
Sub. Code :	NCES31	

Course Objectives: To study

1. The properties of basic gates and simplifications of Boolean expressions using K Maps.
2. The fundamentals of combinational & sequential circuits with design examples.
3. The functionality of various memory devices.
4. Verilog data types with operators and to develop Verilog codes for digital blocks in different modeling.

Unit I

Properties of Logic Gates: Noise Margin, Fan-out, Propagation Delay, Power Dissipation. Voltage and current parameters.

Simplification of Boolean Expressions: Canonical forms, Karnaugh maps (3 and 4 variable)

Introduction to Verilog HDL: HDL basic concepts: Syntax & semantics, Data types, Operators, HDL modeling types, Developing HDL code for Logic Circuits using HDL program **08 Hours**

Unit II

Combinational Logic Circuits: Binary adders and subtracters, Carry look-ahead adder, Decimal adders, Comparators- one bit and two bit, Decoders, Encoder, Multiplexer, Logic design using decoders and multiplexers. Modelling combinational logic circuits using dataflow, gate level and behavioral Verilog HDL program.

Self-study component: Decoder with 7-segment display, Parallel to serial conversion using MUX **08 Hours**

Unit III

Sequential Circuits: Basic bi-stable element, Latches- SR Latch using NAND gates, D Latch, Gated D Latch, Flip-flops – SR, D, JK and T, Characteristic equations, Flip flop conversions Registers: shift register- SISO, SIPO, PISO, Universal shift register, Counters: asynchronous and MOD counter, ring Counter and Johnson counter, Modeling sequential circuits using behavioral Verilog HDL program

Self-study component: Tasks in Verilog HDL **08 Hours**

Unit IV

Sequential Design: Introduction, Synchronous counter design, Mealy and Moore Models, Sequential circuit design using Mealy Model, Synchronous Sequential Circuit Analysis.

Self-study component: Develop Verilog code for sequence detector using Mealy model. **08 Hours**

Unit V

Memory Devices: Memory types and terminology- Memory organization and operation, Memory reading and writing, RAMs, ROMs and PROMs. Read Only Memory-ROM organization, Rom timing, types of ROMs, Applications of ROMs, Semiconductor RAMs-Static RAMs, Dynamic RAMs, ROMs, Read-Write cycle of ROM and RAM.

Self-study component: Programmable logic Devices- PAL, PLA, PROM.

07Hours

TEXT BOOKS

1	Donald D. Givone	Digital Principles and Design, TATA McGraw-hill Edition 2017
2	A.Anand Kumar	Fundamentals of Digital circuits, PHI; 4th edition 2016
3	Samir Palnitkar	"Verilog HDL A guide to Digital Design and Synthesis" Second Edition, Pearson Education ,2003

REFERENCE BOOKS

1	Ronald J Tocci, Neal S Widmer and Regory L Moss.	Digital Systems Principles and Applications, 12th Edition, Pearson, 2017.
2	Charles H. Roth. Jr.	Digital Systems Design using Verilog, Thomson Learning, Inc, 1st edition 2015.
3	R D Sudhakar Samuel	Logic Design, Sanguine technical Publishers,2004

Course Outcomes: At the end of the course Student will be able to:

CO1: Apply the knowledge of K Maps for simplification of Boolean expressions and describe Verilog data types & operators
CO2: Design combinational circuits and develop dataflow, gate level and behavioral Verilog code.
CO3: Identify flip flops and analyze shift registers and asynchronous counters and develop behavioral Verilog code.
CO4: Analyze and design synchronous sequential circuits and develop behavioral Verilog code.
CO5: Analyze different memories and design of logic circuits using programmable logic devices.
CO6: Design and implement Digital circuit using MSI components along with Verilog HDL.

Pedagogy:	Chalk and talk and PPT
WEB Links & Video Lectures Video Links (e-resources)	https://nptel.ac.in/courses/108106177 Online tool & Open source software: Multisim, GHDL https://nptel.ac.in/courses/108105132 https://nptel.ac.in/courses/117106086

DIGITAL ELECTRONIC CIRCUITS LAB (Only for CIE)

List of experiments

Part-A Hardware Experiments:

1. Realization of Parallel Adder/ Subtractor
2. Multiplexer: Adder and Subtractor using MUX
3. Use of Decoder Chip To Drive Led Display
4. Realization of One Bit Magnitude Comparator
5. Design 3-bit up-counter using T-FF

Part-B Verilog Experiments

1. Write Verilog code for full adder using
   (i) Dataflow description
   (ii) Gate-level description
2. Write Verilog code for 4:1 MUX using
   (i) Dataflow description
   (ii) Gate-level description
   (iii) Behavioral Description
3. Write Verilog code for 2:4 decoder using
   (i) Dataflow description
   (ii) Gate-level description
   (iii) Behavioral Description
4. Write Verilog code for D FF, JK FF, T FF using Behavioral description
5. Write Verilog code for up/down counter

NETWORK ANALYSIS

Contact Hours/ Week :	2+2+2 (L+T+P)	Credits : 4.0
Total Lecture Hours :	26	CIE Marks : 50
Total Tutorial Hours :	26	SEE Marks : 50
Total Practical Hours :	26	
Sub. Code :	NEI32	

Course Objectives: To study

1. Various methods of analyzing and simulating the electrical circuits with DC, AC and application of various theorems.
2. Transient analysis and simulation of RLC circuits.
3. Analysis and simulation of series & Parallel resonance circuits.
4. Solution for networks using Laplace transforms & analysis and simulation of two port networks.

Unit-I

Analysis of DC circuits: Source transformations, star–delta transformations, Loop and node analysis with linearly dependent and independent sources. **05+05 Hours**

Unit-II

Analysis of AC circuits: Introduction, R, L and C circuits with sinusoidal excitation, Loop and node analysis of AC Networks.

Network Theorems for DC and AC circuits: Super position theorem, Thevenin's theorem, Norton's theorem, Maximum power transfer theorem. **06+06 Hours**

Unit-III

Network Topology: Graph of a network, Concept of tree and co-tree, incidence matrix, tie-set and cut-set schedules, Principle of duality**.**

Resonance: Series resonance, Quality factor – Q and Bandwidth. Parallel resonance (qualitative analysis only) **05+05 Hours**

Self-study: Parallel resonance (qualitative analysis only)

Unit-IV

Transient Response and Initial Conditions: Behavior of circuit elements under switching conditions and their representations. Evaluation of initial and final conditions in RL, RC and RLC circuits for DC excitation **05+05 Hours**

Self-study: Evaluation of initial and final conditions in RLC circuits for DC excitation

Unit-V

Laplace Transform and its applications

Introduction, Definition, properties, initial & final value theorem, step, ramp and impulse functions, waveform synthesis, Laplace transforms of periodic functions, solution of a network using Laplace transform.

Two port network: Two port networks (z, y only) parameters, interrelationship between z and y parameters, conditions for symmetry and reciprocity (no derivation). **05+05 Hours**

TEXT BOOKS:

1	W.H. Hayt , J E Kemmerly and S M. Durbin.	Engineering Circuit Analysis 9th Edition.TMH. 2019.
2	Allan H. Robbins and Wilhelm C. Miller	Circuit Analysis Theory and Practice 5th Edition CENGAGE Learning 2013

REFERENCE BOOKS:

1	Carlson A. Bruce.	Circuits. Thomson learning, 2008.
2	M E Van Valkenburg	Network Analysis. 3rd Edition. PHI. 2015.

Course Outcomes: Students will be able to:

CO1: Analyze and simulate DC networks.

CO2: Analyze and simulate AC networks, Apply network theorems in analyzing electrical networks under DC and AC excitation.

CO3: Analyze and simulate Series and parallel resonance circuits and apply basics of graph theory to solve the electrical networks.

CO4: Analyze and simulate the transient analysis in RL, RC and RLC circuits and analysis of two port networks

CO5: Apply Laplace method to analyze electric circuits and periodic functions and analyze and simulate two port networks.

NETWORK ANALYSIS SIMULATION LAB (Only for CIE)

1. Apply Mesh and Node Analysis Techniques for Solving Electrical Circuits.
2. Verification of Superposition Theorem
3. Verification of Thevenin's Theorem
4. Verification of Norton's Theorem
5. Verification of Maximum Power Transfer Theorem
6. Design A Series RLC Circuit. Plot Frequency Response and Find Resonance Frequency, Bandwidth, Q-factor.
7. Design a Parallel RLC Circuit. Plot Frequency Response and Find Resonance Frequency, Bandwidth, Q-Factor.
8. Study of first order and second order time Response of R-L-C Network
9. Design and analyze Z, Y parameters of two-port network.

Pedagogy:	Think Pair Share, Flipped class room
ICT Tool:	Moodle/Edmodo

ANALOG ELECTRONIC CIRCUITS

Contact Hours/ Week	:	3+0+0 (L+T+P)	Credits : 3.0
Total Lecture Hours	:	39	CIE Marks : 50
Total Tutorial Hours	:	00	SEE Marks : 50
Total Practical Hours	:	00	
Sub. Code	:	NCES32	

Course Objectives:

1. Introduction of MOSFET device and design of fundamental MOSFET analog circuits
2. Discuss the concept of Opamp as a black-box and design of basic Opamp based circuits.
3. Introduction to Linear ICs and design of 555 timer, Data converters and PLL based circuits.
4. Discuss and analyze various applications of Diode and introduce the concept of Power amplifiers

Unit I

Working Principle of MOS capacitor and MOSFET, I-V characteristics of MOSFET, Small signal models, Biasing of MOSFET amplifiers, Design of Common Source amplifier, high frequency model, Miller's Theorem, frequency response of CS amplifier. **07 Hours**

Unit II

CG and CD and Cascode amplifiers, Current mirrors, amplifiers with active loads. The MOS differential pair and their small signal operation Differential amplifiers with active load. **08 Hours**

Unit III

OPAMP: Opamp as a black box, various applications of op-amps like inverting and non-inverting amplifiers, voltage follower, summing amplifier, Integrators, differentiators, Instrumentation amplifier, Square wave generator, Schmitt trigger, Precision rectifier. **08 Hours**

Unit IV

Linear ICs: 555 timer IC and its application Astable, Mono stable MV. PLL 565 IC, **DAC:** basics, binary weighted R-DAC and R-2R DAC, **ADC:** DAC based ADC, Successive approximation ADC, Flash ADC. **08 Hours**

Unit V

Diode and its applications: Rectifier and power supply design, Clipping and clamping circuits. Power amplifiers: Classification, Class A, B, AB and class C power amplifiers. **08 Hours**

Text Books:

1.	Behzad Razavi	"Fundamentals of Microelectronics", 2nd Edition,2017,Wiley
2.	Adel S. Sedra, Kenneth Carless Smith,	"Microelectronic Circuits", Oxford University. 6th Edition. 2014
3.	Sergio Franco	Design with Operational amplifiers and Analog Integrated circuits, 3rd Edition, Mc Graw Hill.2017

Course outcomes: Students will be

CO1: Able to understand the MOSFET structure, its working, small signal model

CO2: Able to design and analyze CS, CG, CD and Differential amplifiers

CO3: Able to understand the need of Power amplifiers and design Class A, Class B power amplifiers.

CO4: Able to design power supply and understand wave shaping circuits using diodes.

CO5: Able to design Opamp based amplifies, Schmitt triggers, generators, and rectifiers.

CO6: Able to design of circuits using Timer, PLL, ADC and DAC ICs.

ANALOG ELECTRONIC CIRCUITS LAB

Contact Hours/ Week	:	0+0+2 (L+T+P)	Credits : 1.0
Total Lecture Hours	:	00	CIE Marks : 50
Total Tutorial Hours	:	00	SEE Marks : 50
Total Practical Hours	:	26	
Sub. Code	:	NEIL31	

Course Objectives: Analyze to design, and test various electronic circuits based on semiconductor devices.

List of Experiments

1. Basic op-amp circuits.
2. Basic Op-amp applications: Instrumentation amplifier, Integrator and Differentiator.
3. Power supply– Full wave rectifier, Design with C filters for specific load voltage & current and ripple factor.
4. Clipping and clamping circuits.
5. RC coupled single stage MOSFET amplifier– frequency response, determination of voltage gain, input and output impedances.
6. Precision rectifiers.
7. 555 Timer – Astable and Monostable multivibrator.
8. DAC & ADC.
9. Sinusoidal waveform generator (Wein Bridge)/ (RC Phase shift).
10. RC coupled single stage CE amplifier– frequency response, determination of voltage gain, input and output impedances.
11. Class B Push-pull amplifier- determination of conversion efficiency.
12. LM 723 Voltage Regulators (High and Low voltage)

Experiment 1 is only for CIE.
Experiments 2 to 10 are for both CIE and SEE.
Experiments 11 and 12 are Open ended experiments.

Course Outcomes: Student will be able to:

CO1: Design a regulated power supply for the given specifications.
CO2: Test and analyze clipping & clamping circuits.
CO3: Design and test Instrumentation amplifier.
CO4: Rigup & test precision rectifiers.
CO5: Design and test multi-vibrators using 555 timer.
CO6: Design and test data converter circuits.

UNIVERSAL HUMAN VALUES, SOCIAL CONNECT AND RESPONSIBILITY

Contact Hours/ Week	:	1+0+0 (L+T+P)	Credits : 1.0
Total Lecture Hours	:	13	CIE Marks : 50
Total Tutorial Hours	:	00	SEE Marks : 50
Total Practical Hours	:	00	
Sub. Code	:	NHS04	

Pre-requisites: Universal Human Values (conducted during induction programme)

Learning objectives:

1. Explore about themselves (human beings), family, society and nature/existence.
2. Appreciate the harmony in the human being, family, society and nature/existence
3. Strengthen holistic perception of co-existence and mutual fulfilment among the four orders of nature.

Unit I

Understanding Harmony in the Human Being - Harmony in self

Understanding human being as a co-existence of the sentient 'I' and the material 'Body'; Understanding the needs of Self ('I') and 'Body' - happiness and physical facility; Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer); Understanding the characteristics and activities of 'I' and harmony in 'I'; Understanding the harmony of 'I' with the Body: Sanyam and Health, correct appraisal of Physical needs, meaning of Prosperity in detail, Include discussions to differentiate between i)Prosperity and accumulation. ii) Ensuring health vs dealing with disease **5 Hours**

Unit II

Understanding Harmony in the Family and Society - Harmony in Human-Human Relationship

Understanding values in human - human relationship, meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness, Trust and Respect as the foundational values of relationship; Understanding the meaning of Trust, Difference between intention and competence; Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship; Understanding the harmony in the society (society being an extension of family)- Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals. **4 Hours**

Unit III

Understanding Harmony in the Nature and Existence - Whole-existence as Co-existence

Understanding the harmony in the Nature; Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self-regulation in nature; Understanding Existence as Co-existence of mutually interacting units in all-pervasive space; Holistic perception of harmony at all levels of

existence. Include discussions on-human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc. **4 Hours**

Course Outcomes:

On successful completion of the course, the students will be able to

CO1: Become more aware of themselves, and their surroundings (family, society, nature)

CO2: Become more responsible in life, and value human relationships and human society

CO3: Have better critical ability in handling problems and in finding sustainable solutions

Text Book:

1	Gaur R.R. & Sangal R	'Foundation Course in Human Values and Professional Ethics; Presenting a universal approach to value education through self-exploration', Excel Books, Bangalore, 2016, ISBN: 978-8-174-46781-2

Reference Book:

1	Tripathi A.N	'Human Values', New Age International Publisher, 2003, ISBN: 81-224-1426-5

Evaluation Pattern:

Two Tests of 25 marks each and 45 minutes duration SEE for 50 marks and examination duration is 90 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	45	25 marks	25 marks
Test-2	14th Week	45	25 marks	25 marks
CIE			50 marks	50 marks
SEE		90	50 marks	50 marks
Total			**100 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern may be hybrid type with MCQs and descriptive questions.*

- *10 Marks MCQs*
- *3 descriptive questions of 5 marks each*
- *All the questions are compulsory*

SEE: *SEE pattern may also be hybrid type with MCQs and descriptive questions.*

- *20 Marks MCQs*
- *1 descriptive question of 10 marks from each of the units (total 3 questions) or*
  2 questions of 5 marks from each of the units (total 6 questions)
- *All the questions are compulsory*

ಬಳಕೆ ಕನ್ನಡ

baLake Kannada (Kannada for Usage)

Contact Hours/ Week	: 0(L) + 2(T) + 0 (P)	Credits	: 1.0
Total Lecture Hours	: 0	CIE Marks	: 50
Total Tutorial Hours	: 26	SEE Marks	: 50
Sub. Code	: **NHS01**		

Course Learning Objectives:

- To create the awareness regarding the necessity of learning local language for comfortable and healthy life.
- To enable learners to Listen and understand the Kannada language properly.
- To speak, read and write Kannada language as per requirement.
- To train the learners for correct and polite conservation.

Teaching-Learning Process - General Instructions
These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

1. ಬಳಕೆ ಕನ್ನಡವನ್ನು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಬೋಧಿಸಲು ವಿಕಾಂವಿ ಸೂಚಿಸಿರುವ ಪಠ್ಯಪುಸ್ತಕಗಳನ್ನು ಉಪಯೋಗಿಸಬೇಕು.
2. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಉತ್ತೇಜಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅವುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.
3. ಪ್ರತಿ ವಿದ್ಯಾರ್ಥಿ ಪುಸ್ತಕವನ್ನು ತರಗತಿಯಲ್ಲಿ ಬಳಸುವಂತೆ ನೋಡಿಕೊಳ್ಳುವುದು ಮತ್ತು ಪ್ರತಿ ಪಾಠ ಮತ್ತು ಪ್ರಶ್ನೆಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟಂತೆ ಪೂರಕ ಚಟುವಟಿಕೆಗಳಿಗೆ ತೊಡಗಿಸಬಹುದು.
4. ಡಿಜಿಟಲ್ ತಂತ್ರಜ್ಞಾನದ ಮುಖಾಂತರ ಇತ್ತೀಚೆಗೆ ಡಿಜಿಟಲೀಕರಣಗೊಂಡಿರುವ ಭಾಷೆ ಕಲಿಕೆಯ ವಿಧಾನಗಳನ್ನು ಪಿಪಿಟಿ ಮತ್ತು ದೃಶ್ಯ ಮಾಧ್ಯಮದ ಮುಖಾಂತರ ಚರ್ಚಿಸಲು ಕ್ರಮ ಕೈಗೊಳ್ಳುವುದು. ಇದರಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ತರಗತಿಯಲ್ಲಿ ಹೆಚ್ಚು ಏಕಾಗ್ರತೆಯಿಂದ ಪಾಠ ಕೇಳಲು ಮತ್ತು ಅಧ್ಯಯನದಲ್ಲಿ ತೊಡಗಲು ಅನುಕೂಲವಾಗುತ್ತದೆ.
5. ಭಾಷಾ ಕಲಿಕೆಯ ಪ್ರಯೋಗಾಲಯದ ಮುಖಾಂತರ ಬಹುಬೇಗ ಕನ್ನಡ ಭಾಷೆಯನ್ನು ಕಲಿಯಲು ಅನುಕೂಲವಾಗುವಂತೆ ಕಾರ್ಯಚಟುವಟಿಕೆಗಳನ್ನು ಮತ್ತು ಕ್ರಿಯಾ ಯೋಜನೆಗಳನ್ನು ರೂಪಿಸುವುದು.

Unit 1

1. Introduction, Necessity of learning a local language. Methods to learn the Kannada language.
2. Easy learning of a Kannada Language: A few tips. Hints for correct and polite conservation, Listening and Speaking Activities
3. Key to Transcription.

4. ವೈಯಕ್ತಿಕ ಸ್ವಾಮ್ಯಸೂಚಕ/ಸಂಬಂಧಿತ ಸರ್ವನಾಮಗಳು ಮತ್ತು ಪ್ರಶ್ನಾರ್ಥಕ ಪದಗಳು - Personal Pronouns, Possessive Forms, Interrogative words 5 ಗಂಟೆಗಳು

Unit 2

1. ನಾಮಪದಗಳ ಸಂಬಂಧಾರ್ಥಕ ರೂಪಗಳು, ಸಂದೇಹಾಸ್ಪದ ಪ್ರಶ್ನೆಗಳು ಮತ್ತು ಸಂಬಂಧವಾಚಕ ನಾಮಪದಗಳು - Possessive forms of nouns, dubitive question and Relative nouns.
2. ಗುಣ, ಪರಿಮಾಣ ಮತ್ತು ವರ್ಣಬಣ್ಣ ವಿಶೇಷಣಗಳು, ಸಂಖ್ಯಾವಾಚಕಗಳು Qualitative, Quantitative and Colour Adjectives, Numerals
3. ಕಾರಕ ರೂಪಗಳು ಮತ್ತು ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು - ಸಪ್ತಮಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯ - (ಅ, ಆದು, ಅವು, ಅಲ್ಲಿ) Predictive Forms, Locative Case 4 ಗಂಟೆಗಳು

Unit 3

1. ಚತುರ್ಥಿ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯದ ಬಳಕೆ ಮತ್ತು ಸಂಖ್ಯಾವಾಚಕಗಳು - Dative Cases, and Numerals
2. ಸಂಖ್ಯಾಗುಣವಾಚಕಗಳು ಮತ್ತು ಬಹುವಚನ ನಾಮರೂಪಗಳು - Ordinal numerals and Plural markers
3. ನ್ಯೂನ/ನಿಷೇಧಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು ಮತ್ತು ವರ್ಣ ಗುಣವಾಚಕಗಳು - Defective / Negative Verbs and Colour Adjectives 5 ಗಂಟೆಗಳು

Unit 4

1. ಅಪ್ಪಣೆ/ಒಪ್ಪಿಗೆ, ನಿರ್ದೇಶನ, ಪ್ರೋತ್ಸಾಹ ಮತ್ತು ಒತ್ತಾಯ ಅರ್ಥರೂಪ ಪದಗಳು ಮತ್ತು ವಾಕ್ಯಗಳು Permission, Commands, encouraging and Urging words (Imperative words and sentences)
2. ಸಾಮಾನ್ಯ ಸಂಭಾಷಣೆಗಳಲ್ಲಿ ದ್ವಿತೀಯ ವಿಭಕ್ತಿ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ಸಂಭಾವನೀಯ ವ್ಯಕಾರಗಳು Accusative Cases and Potential Forms used in General Communication
3. 'ಇರು ಮತ್ತು ಇರಲ್ಲ' ಸಹಾಯಕ ಕ್ರಿಯಾಪದಗಳು, ಸಂಭಾವ್ಯಸೂಚಕ ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಕ್ರಿಯಾಪದಗಳು - Helping Verbs; "iru and iralla", Corresponding Future and Negation Verbs
4. ಹೋಲಿಕೆ (ತರ-ತಮ), ಸಂಬಂಧ ಸೂಚಕ ಮತ್ತು ಮತ್ತು ಸೂಚಕ ಪ್ರತ್ಯಯಗಳು ಮತ್ತು ನಿಷೇದಾರ್ಥಕ ಪದಗಳ ಬಳಕೆ - Comparative, Relationship, Identification and Negation Words 6 ಗಂಟೆಗಳು

Unit 5

1. ಕಾಲ ಮತ್ತು ಸಮಯದ ಹಾಗೂ ಕ್ರಿಯಾಪದಗಳ ವಿವಿಧ ವ್ಯಕಾರಗಳು – Different types of forms of Tense, Time and Verbs
2. -ದ್, -ತ್, -ತು, -ಇತು, -ಆಗಿ, -ಅಲ್ಲ, -ಗ್, -ಕ್, ಇದೆ, ಕ್ರಿಯಾ ಪ್ರತ್ಯಯಗಳೊಂದಿಗೆ ಭೂತ, ಭವಿಷ್ಯತ್ ಮತ್ತು ವರ್ತಮಾನ ಕಾಲ ವಾಕ್ಯ ರಚನೆ. Formation of Past, Future and Present Tense Sentences with Verb Forms
3. Kannada Vocabulary List: ಸಂಭಾಷಣೆಯಲ್ಲಿ ದಿನೋಪಯೋಗಿ ಕನ್ನಡ ಪದಗಳು - Kannada Words in Conversation. 6 ಗಂಟೆಗಳು

ಬಳಕೆ ಕನ್ನಡ ಪಠ್ಯದ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಅನುಕೂಲಗಳು ಮತ್ತು ಫಲಿತಾಂಶಗಳು:

Course Outcomes

At the end of the Course, The Students will be able to

CO1: Understand the necessity of learning of local language for comfortable life.
CO2: Listen and understand the Kannada language properly.
CO3: Speak, read and write Kannada language as per requirement.
CO4: Communicate (converse) in Kannada language in their daily life with Kannada speakers.
CO5: Speak in polite conservation.

TEXT BOOKS:

ಬಳಕೆ ಕನ್ನಡ - ಲೇಖಕರು: ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ, ವ್ಯಸಾರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration.
SEE for 60 marks and examination duration is 120 minutes.

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

***CIE**: CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

***SEE**: Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ

Contact Hours/ Week	: 0(L) + 2(T) + 0 (P)	Credits	: 1.0
Total Lecture Hours	: 0	CIE Marks	: 50
Total Tutorial Hours	: 26	SEE Marks	: 50
Sub. Code	: NHS02		

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ವಿಷಯದ ಕಲಿಕೆಯ ಉದ್ದೇಶಗಳು:

೧. ವೃತ್ತಿಪರ ಪದವಿ ವಿದ್ಯಾರ್ಥಿಗಳಾಗಿರುವುದರಿಂದ ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯ ಮಾಡಿಕೊಡುವುದು.

೨. ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಪ್ರಧಾನ ಭಾಗವಾದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾವ್ಯಗಳನ್ನು ಸಾಂಕೇತಿಕವಾಗಿ ಪರಿಚಯಿಸಿ ವಿದ್ಯಾರ್ಥಿಗಳಲ್ಲಿ ಸಾಹಿತ್ಯ ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಅರಿವು ಹಾಗೂ ಆಸಕ್ತಿಯನ್ನು ಮೂಡಿಸುವುದು.

೩. ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವನ್ನು ಹಾಗೂ ಅವರುಗಳು ಸಾಧಿಸಿದ ವಿಷಯಗಳನ್ನು ಪರಿಚಯಿಸುವುದು.

೪. ಕನ್ನಡ ಶಬ್ದ ಸಂಪತ್ತಿನ ಪರಿಚಯ ಮತ್ತು ಕನ್ನಡ ಭಾಷೆಯ ಬಳಕೆ ಹಾಗೂ ಕನ್ನಡದಲ್ಲಿ ಪತ್ರ ವ್ಯವಹಾರವನ್ನು ತಿಳಿಸಿಕೊಡುವುದು.

Teaching-Learning Process - General Instructions

These are sample strategies, which teacher can use to accelerate the attainment of the various course outcomes.

೧. ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡವನ್ನು ಬೋಧಿಸಲು ತರಗತಿಯಲ್ಲಿ ಶಿಕ್ಷಕರು ಪ್ರಸ್ತುತ ಪುಸ್ತಕ ಆಧರಿಸಿ ಬ್ಲಾಕ್ ಬೋರ್ಡ್ ವಿಧಾನವನ್ನು ಅನುಸರಿಸುವುದು. ಪ್ರಮುಖ ಅಂಶಗಳ ಚಾರ್ಟ್‌ಗಳನ್ನು ತಯಾರಿಸಲು ವಿದ್ಯಾರ್ಥಿಗಳನ್ನು ಪ್ರೇರೇಪಿಸುವುದು ಮತ್ತು ತರಗತಿಯಲ್ಲಿ ಅದುಗಳನ್ನು ಚರ್ಚಿಸಲು ಅವಕಾಶ ಮಾಡಿಕೊಡುವುದು.

೨. ಇತ್ತೀಚಿನ ತಂತ್ರಜ್ಞಾನದ ಅನುಕೂಲಗಳನ್ನು ಬಳಸಿಕೊಳ್ಳುವುದು – ಅಂದರೆ ಕವಿ-ಕಾವ್ಯ ಪರಿಚಯಿಸಲಿಕ್ಕೆ ಕವಿಗಳ ಚಿತ್ರದ ಮತ್ತು ಲೇಖನಗಳು ಮತ್ತು ಕಥೆಕಾವ್ಯಗಳ ಮೂಲ ಅಂಶಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟ ಧ್ವನಿ ಚಿತ್ರಗಳು, ಸಂಭಾಷಣೆಗಳು, ಈಗಾಗಲೇ ಇತರ ವಿಮರ್ಶಕರು ಬರೆದಿರುವ ವಿಮರ್ಶಾತ್ಮಕ ವಿಷಯಗಳನ್ನು ಪಿಪಿಟಿ, ಡಿಜಿಟಲ್ ಮಾಧ್ಯಮಗಳ ಮುಖಾಂತರ ವಿಶ್ಲೇಷಿಸುವುದು.

೩. ನವೀನ ಮಾದರಿಯ ಸಾಹಿತ್ಯ ಬೋಧನೆಗೆ ಸಂಬಂಧಪಟ್ಟ ವಿಧಾನಗಳನ್ನು ಶಿಕ್ಷಕರು ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಅನುಕೂಲವಾಗುವ ರೀತಿಯಲ್ಲಿ ಅಳವಡಿಸಿಕೊಳ್ಳಬಹುದು.

ಘಟಕ ೧: ಲೇಖನಗಳು

೧. ಕನಾಟಕ ಸಂಸ್ಕೃತಿ – ಪಂ.ಪಿ. ನಾಗರಾಜಯ್ಯ

೨. ಕನಾಟಕ ಏಕೀಕರಣ : ಒಂದು ಅಪೂರ್ವ ಚರಿತ್ರೆ – ಪಿ. ವೆಂಕಟಸುಬ್ಬಯ್ಯ

೩. ಅಡಳಿತ ಭಾಷೆಯಾಗಿ ಕನ್ನಡ – ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ ಮತ್ತು ಪ್ರೊ. ವಿ. ಈಶ್ವರಮೂರ್ತಿ — ೬ ಗಂಟೆಗಳು

ಘಟಕ ೨: ಆಧುನಿಕ ಪೂರ್ವದ ಕಾವ್ಯ ಭಾಗ

೧. ಪದಗಳು: ಬಸವಣ್ಣ, ಅಕ್ಕಮಹಾದೇವಿ, ಅಲ್ಲಮಪ್ರಭು, ಅಯ್ಯಕ್ಕಿ ಮಾರಯ್ಯ, ಆಯ್ದಕ್ಕಿ ಲಕ್ಕಮ್ಮ

೨. ಕೀರ್ತನೆಗಳು: ಅವರಿಂದೇನೂ ಫಲ ಇವರಿಂದೇನು ಫಲ – ಪುರಂದರದಾಸರು
ತಳ್ಳಾಡೆನವಿರು ಕಂಡ್ಯ ತಾಳು ಮನವೇ – ಕನಕದಾಸರು

೩. ತತ್ವಪದಗಳು: ಸಾವಿರ ಕೊಂಡಗಳ ಸುಳ್ಳು – ತಿಕುವಾಳ ಚರಿತ್ರ — ೬ ಗಂಟೆಗಳು

ಘಟಕ ೩: ಆಧುನಿಕ ಕಾವ್ಯ ಭಾಗ

೧. ಕಿ.ವೆಂ. ರಮೆರ ಮಂಕುತಿಮ್ಮನ ಕಗ್ಗದಿಂದ ಆಯ್ದ ಕೆಲವು ಭಾಗಗಳು

೨. ಈರುಳ ಕಾಂಕಾಣಿ ಮ.ರಾ. ಬೇಂದ್ರೆ

೩. ಹೊಂಬಾಳೆಯ ಗಿಡಕೆ: ಕುವೆಂಪು 6 ಗಂಟೆಗಳು

ಘಟಕ ೪: ಸಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯ

೧. ಡಾ. ಸರ್ ಎಂ. ವಿಶ್ವೇಶ್ವರಯ್ಯ : ಕ್ಷಕ್ತಿ ಮತ್ತು ವಿಶ್ವ – ಎ.ಎಸ್. ಮೂರ್ತಿರಾವ್

೨. ಕರಕುಶಲ ಕಲೆಗಳು ಮತ್ತು ಪರಂಪರೆಯ ವಿಜ್ಞಾನ : ಕರಿಲಾಂಡ ಬೀಚನಪಳ್ಳಿ 5 ಗಂಟೆಗಳು

ಘಟಕ ೫: ಕಥೆ ಮತ್ತು ಪ್ರವಾಸ ಕಥನ

೧. ಯುಗಾದಿ : ಪಸುಳೀಂದ್ರ

೨. ಮೊಗವೆ ಎಂಬ ಗಿರಿಜನ ಪದಗತ : ಹಿ.ಚಿ. ಬೋದಲಿಂಗಯ್ಯ 4 ಗಂಟೆಗಳು

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ ಕಲಿಕೆಯಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳಿಗೆ ಆಗುವ ಪರಿಣಾಮಗಳು (Course Outcomes):

CO1: ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ ಮತ್ತು ಕನ್ನಡದ ಸಂಸ್ಕೃತಿಯ ಪರಿಚಯವಾಗುತ್ತದೆ.

CO2: ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಆಧುನಿಕ ಪೂರ್ವ ಮತ್ತು ಆಧುನಿಕ ಕಾಮ್ಯಗಳು ಮತ್ತು ಸಂಸ್ಕೃತಿಯ ಬಗ್ಗೆ ಆಸಕ್ತಿಯು ಮೂಡುತ್ತದೆ.

CO3: ತಾಂತ್ರಿಕ ವ್ಯಕ್ತಿಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

CO4: ಕನ್ನಡ ಭಾಷಾಭ್ಯಾಸ, ಸಾಮಾನ್ಯ ಕನ್ನಡ ಹಾಗೂ ಆಡಳಿತ ಕನ್ನಡದ ಪದಗಳ ಪರಿಚಯವಾಗುತ್ತದೆ.

TEXT BOOKS:

ಸಾಂಸ್ಕೃತಿಕ ಕನ್ನಡ - ಡಾ. ಹಿ.ಚಿ. ಬೋದಲಿಂಗಯ್ಯ ಮತ್ತು ಡಾ. ಎಲ್. ತಿಮ್ಮೇಶ, ಮೈಸೂರಾಂಗ, ವಿಶ್ವೇಶ್ವರಯ್ಯ ತಾಂತ್ರಿಕ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಬೆಳಗಾವಿ.

Evaluation Pattern:

Two Tests of 50 marks each and 90 minutes duration

SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.

SEE: Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)

CONSTITUTION OF INDIA AND PROFESSIONAL ETHICS

Contact Hours/ Week	:	0+2+0 (L+T+P)	Credits : 1.0
Total Lecture Hours	:	13	CIE Marks : 50
Total Tutorial Hours	:	00	SEE Marks : 50
Total Practical Hours	:	26	
Sub. Code	:	NHS03	

Course Objectives:

- To introduce the students to the basic structure, fundamental rights and duties enshrined in the constitution of India.
- To introduce to the system of governance at the centre and the states.
- To enlighten the students about the method of amendment to the constitution and special provisions of constitution.
- To enable the students to imbibe ethical practices and moral values.
- To learn from the life story of leaders such as Sir M Visvesvaraya.

Part I: Constitution of India

Unit I

Introduction to Constitution of India: Salient Features of Indian Constitution, Preamble to the Indian Constitution, Different kinds of fundamental rights, Directive Principles of State Policy, Categorical study of Directive Principles, Relationship between DPSP and Fundamental Rights, Fundamental Duties. Meaning and kinds of human rights and safeguards.

06 Hours.

Unit II

Union and State Governments: Union and State Legislature: Composition and powers of Loksabha, Rajyasabha, Legislative Assembly and Legislative Council. Union and State Executive: The appointment and powers of President, Vice-president, Prime-Minister, Union Council of Ministers, Governor of State, Chief Minister of State and State Council of Ministers. Union and State Judiciary: The Composition and powers of Supreme Court and High Court. **07 Hours.**

Unit III

Other Provisions of Constitution: Method of amendment of constitution of India, 42nd and 44th amendment act. Special provisions relating to SC / ST, Women and Children and other backward classes. Electoral process related to the Election Commission of India: Composition, functioning and removal of the Election Commissioner(s).

Human Rights: Meaning, Kinds and Safeguard of Human Rights, State Human Rights Commission and National Human Rights Commission.

05 Hours.

Part II -Professional Ethics

Unit IV

Professional Ethics and Human Values: Introduction, What is Ethics? Scope of Professional Ethics, Values and Characteristics, Types of values: Negative and positive values, Ethical values for Professional success. ***Case Studies*:** Ethical practices of the reputed Indian Companies: TATA Group, Wipro Technologies.

04 Hours.

Unit V

Professional Code of Conduct: Introduction, Professional Code, Legal System, Ethical and Unethical practices, Making the Professional Code successful. Ethical values of Sir M. Visvesvaraya, Mahatma Gandhi and Swami Vivekananda. **04 Hours**

Course Outcomes: On successful completion of the course, the student will be able:

CO1: To orient students on the salient features of the Indian Constitution with special emphasis on fundamental rights and duties.

CO2: To provide an overview of the Union and State legislature, executive and judiciary.

CO3: To explain the importance of electoral process and help students appreciate the ethical practices in elections.

CO4: To facilitate the students to have a clear perspective of the Ethical values and their relevance in the present context of globalization.

CO5: To enable the students familiarize themselves with the ethical values proposed and practiced by the great leaders / eminent personalities with particular reference to Sir M. Visvesvaraya.

PCB DESIGN

Contact Hours/ Week	:	1+0+2 (L+T+P)	Credits : 2.0
Total Lecture Hours	:	13	CIE Marks : 50
Total Tutorial Hours	:	00	SEE Marks : 50
Total Practical Hours	:	26	
Sub. Code	:	AECEI31	

Course Objectives:

1. Understand the basics of PCB designing.
2. Develop the knowledge of Schematic design and simulation using EDA tools.
3. Develop the knowledge of Layout design and creating the manufacturing data for PCB Design.
4. Develop the skillset for soldering and DE soldering the through hole and SMD components.

Unit I

Introduction to Printed circuit board: fundamentals of electronic components, basic electronic circuits, Basics of printed circuit board designing: Layout planning, general rules and parameters, ground conductor considerations, thermal issues, check and inspection of artwork. **03 Hours**

Unit II

Design rules for PCB: Design rules for Digital circuit PCBs, Analog circuit PCBs. Introduction to Electronic design automation (EDA) tools for PCB designing: Brief Introduction of various simulators, SPICE and PSPICE Environment, Selecting the Components Footprints as per design. **03 Hours**

Unit III

Making New Footprints, Assigning Footprint to components, Net listing, PCB Layout Designing, Auto routing and manual routing. Assigning specific text (silkscreen) to design, Creating report of design, creating manufacturing data (GERBER) for design. **03 Hours**

Unit IV

Solders alloys, fluxes, soldering techniques, Multilayer PCBs, Flexible PCBs, Surface mount PCBs, Reflow soldering, Electronic discharge protection. **04 Hours**

List of Experiments:

1. Design a PCB for the given power supply circuit.
2. Design the PCB for the given instrumentation Amplifier circuit.
3. Design the PCB for the given display interface circuits (7Segment Display, LCD).
4. Design the PCB for the given motor driver circuit.

Text Books

1.	R. S. Khandpur,	Printed circuit board design, fabrication assembly and testing, Tata McGraw Hill, 2006
2.	Clyde F. Coombs, Jr, Happy T. Holden	Printed Circuits Handbook, Sixth Edition McGraw-Hill Education 2016

Course outcomes: At the end of this course, students will be able to

CO1: Explain the basic requirement of PCB design.

CO2: Design the Schematic and simulate for the given analog and digital circuits and simulate analog and digital circuits in spice environment.

CO3: Design layout for the given analog and digital circuits.

CO4: Solder and De-solder the Electronic components.

FOUNDATIONS OF ENGINEERING MATHEMATICS-I
(For Lateral Entry students)

Contact Hours/ Week	**2(L)+2(T)**	**Credits**	**0**
Total Lecture Hours	**26**	**CIE Marks**	**100**
Total Tutorial Hours	**26**	**SEE Marks**	**00**
Sub Code	**NMATDIP3**	**Semester**	**III**

Prerequisites: Basics in differential calculus, Integral calculus and vectors.
Course Learning Objectives: This course will enable students to master the basic tools of differential and vector calculus, Taylors series, Indeterminate forms (L' Hospital Rule) and differential equations and become skilled for solving problems in **s**cience and engineering.

Course objectives: This course will enable students to:

1. Known the behavior of the polar curve and its application.
2. Learn the notation of partial differentiation and determine the value of the Jacobians.
3. Learn how a function of single variable can be expanded as a Taylor's series and Maclaurin series and Handle the indeterminate form.
4. Learn how the vectors govern the physical models.
5. Known how the real word problems governed by the first order differential equations.

UNIT I

Differential Calculus-I: Polar curves: angle between the radius vector and tangent, angle of intersection of polar curves. Pedal equation for polar curves. Curvature and radius of curvature in pedal form. (Without proof)
(5+5) Hours

UNIT II

Differential Calculus –II Partial differentiation: Partial derivatives, Total derivatives, differentiation of composite functions. Jacobians. **(6+6) Hours**

UNIT III

Differential Calculus –III: Taylor's and Maclaurin's series expansions for one variable **(statement only).** Indeterminate forms L' Hospital Rule (without proof) (Only $\frac{0}{0}, \frac{\infty}{\infty}, 0 \times \infty \; and \; \infty - \infty \; form$) **(5+5) Hours**

UNIT-IV:

Vector Calculus: Vector Differentiation: scalar and vector fields, Gradient, directional derivative, divergence, curl-physical interpretation; solenoidal and irrotational vector fields-illustrative problems. **(5+5) Hours**

UNIT-V:

Differential Equations-I: Solution of first order and first degree differential equations: Variable Separable, Linear differential equations and Exact differential equations. **(5+5) Hours**

Text Books:

5	Peter V.O 'Neil	"Advanced Engineering Mathematics", 7th edition, CENGAGE Learning India Pvt. Ltd. Publishers, 2012. ISBN; 978- 81-315-0310-2.

Course outcomes: After the completion of this course, students will be able to:

1. Apply the knowledge of calculus to solve problems related to polar curves and its applications in determining the amount of bending of the curve. **(L1& L2)**
2. Learn the notation of partial differentiation to calculate rates of change of multivariate functions and solve problems related to composite functions. **(L1& L2)**
3. Illustrate the applications of multivariate calculus to understand the characteristics of vector field. 4.
4. Understand how a function of single variable can be expanded as a Taylor's series and Handle the indeterminate form **(L1& L2)**
5. Apply the analytical methods to solve first order and first degree differential equations and solve some Engineering problems. **(L1& L2)**

IV Semester

CONTROL SYSTEMS

Contact Hours/ Week	:	3+0+2 (L+T+P)	Credits : 4.0
Total Lecture Hours	:	39	CIE Marks : 50
Total Tutorial Hours	:	00	SEE Marks : 50
Total Practical Hours	:	26	
Sub. Code	:	NCES41	

Course Objectives: This course will enable students to:

1. Understand concepts of the mathematical modeling, Definitions, Classification, Relative merits and demerits of open and closed loop systems, Linear and non-linear systems, Transfer function, Block diagrams reduction techniques and signal flow graphs applicable to electrical network.
2. Steady-state errors and error constants, Concepts and applications of P, PD, PI and PID types of control.
3. Feedback control and stability analysis in Time and Frequency domains: Definition, Routh-Hurwitz criterion and Root locus techniques
4. Stability analysis in Time and Frequency domains: Nyquist criterion, Bode plots, Relative stability, Gain margin and phase margins.
5. Compensation: Lead, Lag and lag-lead compensators, Design of compensating networks for specified control system performance. State Space Analysis: State models, State space equations, Transfer function, Transfer model, State space representation of dynamic systems.

Unit I

Modeling of linear-time-invariant Systems: Introduction to control system, Open loop and Closed loop systems. Mathematical models of physical systems–mechanical systems, Electrical systems.

- Translational and rotational systems
- Transfer function of Electrical networks, Relevant examples

Block diagrams and signal flow graphs: Block diagram algebra/ signal Flow graph, Mason's gain formula applicable to electrical systems.

07 Hours

Unit II

Time Response Analysis: Unit step response of first and second order linear-time-invariant systems, time domain specifications, transient response of second order linear-time-invariant systems, steady state error analysis.

Feedback Controllers: Design of feedback controllers based on time response applicable to electrical systems. Relevant examples. **08 Hours**

Unit III

Concept of Stability: **Frequency Response Analysis:** Routh-Hurwitz Criteria, Relative Stability analysis. **Root–Locus Techniques**: The root locus concepts, Construction of Root-loci, effect of addition of poles and zeros to the linear time invariant systems and its applications to electrical systems. Relevant examples and applications. **08 Hours**

Unit IV

Frequency-response analysis: Frequency domain specifications, Correlation between time and frequency response, Polar plots, Bode plots, Closed-loop frequency response(Transfer function) from Bode Plot, Nyquist stability, Relative stability using Nyquist Stability criterion-Gain and phase margin, Stability analysis in Electrical systems. Relevant examples and applications **08 Hours**

Unit V

System Compensation: Design of Lead compensator, Lag compensator, Lag-Lead compensation as applicable to electrical systems. Suitable examples and applications.

State variable analysis: Concepts of state, state space, state variable, state model of electrical systems, State equation, solution of state equation, state transition matrix. **08 Hours**

TEXT BOOKS:

1.	Richard C. Dorf and Robert H. Bishop	Modern Control Systems, Ed 13, Pearson Education, 2013, ISBN-10 : 0134407628 ISBN-13 : 978-0134407623
2.	Nagrath and Gopal M.	Control Systems Engineering. Ed 4, New Age International (P) Limited. 2005. ISBN 10: 8122422845ISBN 13: 9788122422849.

REFERENCE BOOKS:

1.	Ogata K.	Modern Control Engineering. Ed 4. Pearson Education Asia/PHI. 2002.
2.	Kuo C. Benjamin	Automatic Control Systems, Wiley; 9th edition, 2014 Language: English, ISBN 10: 9788126552337 ISBN-13: 978-8126552337

Course Outcomes: After the completion of this course, students will be able to:

CO1: Formulate the mathematical model for linear-time-invariant systems and **obtain** the transfer functions using block diagram reduction technique and signal flow graphs.

CO2: Analyze transient and steady state responses for first order and second order linear-time-invariant systems with standard signals. **Design and analyze** the performance of feedback controllers to improve the stability of linear-time-invariant systems.

CO3: Analyze and interpret the stability of linear-time invariant systems by applying RH criteria and root locus techniques.

CO4: Analyze and interpret the stability of linear-time-invariant systems in frequency domain analysis by Nyquist plot and Bode plot techniques.

CO5: Design of Lead, lag and lead-Lag compensators for improving the stability of linear-time-invariant systems and **develop** the state models for the linear-time-invariant systems.

CONTROL SYSTEMS LAB: (Only for CIE)

1. Using MATLAB/ SCILAB/Any tool:
   (a) Simulation of a second order system and determination of step response and evaluation of time domain specifications for any given electrical system.
   (b) Evaluation of the effect of additional poles and zeroes on time response of a given second order system.
   (c) Evaluation of effect of pole location on stability.
   (d) Effect of loop gain of a negative feedback system on stability of a given electrical system.
2. To study step response transient and steady state response of a second order system series RLC electrical circuit for $\xi < 1$, $\xi = 1$, and $\xi > 1$.
3. To study the effect of P, PI, PD and PID controller on step response of a feedback control system using hardware setup.
4. To design a phase lead compensating network for the given specifications, and determine maximum phase lead and the frequency obtain its frequency response.
   (a) Experiment to draw the frequency response characteristic of a given lead compensating network.
   (b) To determine the transfer function from obtained frequency response characteristics.
5. To design phase lag compensating network for the given specifications and determine the maximum phase lag and the frequency and obtain its frequency response.
   (a) Experiment to draw the frequency response characteristic of a given lag compensating network.
   (b) To determine the transfer function from obtained frequency response characteristics.
6. Experiment to draw the frequency response characteristic of a given lag-lead compensating network.
7. Using MATLAB/SCILAB:
   (a) To examine the relationships between open-loop frequency response and stability, open loop frequency and closed loop transient response
   (b) To study the effect of addition closed loop poles and zeroes on closed loop transient response.
8. Using MATLAB/SCILAB
   (a) Effect of open loop and zeroes on root locus contour
   (b) To estimate effect of open loop gain on the transient response of closed loop system by using Root locus
   (c) Comparative study of Bode, Nyquist and Root locus with respect to Stability of a system.
   10. Design a P, PI, PID controller using trial and error method and study its transient and steady state behaviour for each types of inputs.

EMBEDDED SYSTEMS

Contact Hours/ Week	:	3+0+2 (L+T+P)	Credits : 4.0
Total Lecture Hours	:	39	CIE Marks : 50
Total Tutorial Hours	:	00	SEE Marks : 50
Total Practical Hours	:	26	
Sub. Code	:	NCES42	

Course Objectives: This course will enable students to:

1. Understand hardware and software design requirements of embedded systems.
2. Develop application software using 8051 microcontroller
3. Describe the role of embedded system in IoT

Unit-I

Introduction to Embedded systems: Introduction, Embedded system Vs General purpose computing system, classification of embedded system, typical embedded system, core of embedded system, sensors and actuators, Embedded RTOS. (Text-1) Introduction to Microcontroller family, 8051 block diagram. (Text- 3)

Introduction to Internet of Things (IoT): Definition, vision, conceptual framework, Major components of IoT system. (Text-2) **07 Hours**

Unit-II

Introduction to Microcontroller: Features, architecture, programming model, pin description of the 8051, memory organization, register banks, stack, PSW, addressing modes and External memory interfacing (Program and Data Memory). (Text-3) **08 Hours**

Unit-III

Instruction set of 8051: Data transfer instructions, Arithmetic Instructions, Logical Instructions, Branch control instructions, Bit oriented instructions.

Application Programs: Incrementing, Decrementing, Addition, Subtraction, Multiplication and Division, Decimal Arithmetic, sorting programs. (Text-3) **08 Hours**

Unit-IV

8051 Peripherals: I/O Ports: Input /output port structures of 8051, Programming of ports. **Timer/Counter:** Programming 8051 Timers, Counter Programming (Programming using Assembly language)

Serial Communication: Basics of Serial Communication, 8051 Connections to RS-232, and 8051 Serial port Programming. (Programming using Assembly language) (Text-3) **08 Hours**

Unit-V

Interrupts: 8051 Interrupts, Programming Timer Interrupts, Programming External Hardware Interrupts, Programming the Serial Communication Interrupts, Interrupt Priority in the 8051. (Programming using Assembly language)

Interfacing with peripheral: Interfacing 8051 to LCD, DAC, ADC 0804 and keyboard. (Text-3) (Programming using Assembly language)

08 Hours

TEXT BOOKS:

1.	Shibu K V	Introduction to Embedded Systems, 2nd edition, Tata Mc Graw Hill Education Pvt. Ltd., 2017
2.	Raj Kamal	Internet of Things: Architecture And Design Principles, 1st edition, Mc Graw Hill Education Pvt. Ltd., 2017.
3.	Muhammad Ali Mazidi and Janice Gillespie Mazidi and Rollin D. McKinlay	The 8051 Microcontroller and Embedded Systems using assembly and C, II Edition Pearson, 2009.

REFERENCE BOOKS:

1.	Kenneth J. Ayala	The 8051 Microcontroller, Ed III, Thomson Delmar Learning, 2005

EMBEDDED SYSTEM LAB: (Only for CIE)

Course Objectives: This course will enable students to:

1. Develop and debug 8051 ALP to solve complex problems
2. Program Embedded system for IoT applications

Part A: 8051 Assembly Language Programming using Keil

1. Assembly Language Programs on addition, subtraction, multiplication, division of numbers.
2. Assembly Language Programs for searching and sorting of numbers, averaging of numbers.
3. Assembly Language Programs to find GCD, LCM, Counters.
4. ALP on Timers and serial communication

Part B: 8051 C programming Using Keil software (interfacing programs)

1. Interfacing programs using C: i) DAC ii) Keyboard and LCD
iii) Elevator iv) DC motor/stepper motor v) ADC

Part C: IoT for sensor data acquisition using IoT Evaluation board

Familiarization with arduino board and perform necessary software installation.

1. To interface LED/Buzzer with arduino and to write a program to turn on LED for 1sec after every 2 sec.
2. To interface push button/digital sensor (IR/LDR) with arduino and write a program to turn on LED when push button is pressed. Integrating temperature sensor and humidity sensor with IoT to read environmental readings.
3. To demonstrate the role of RTOS in handling data-shared problems

Part D: open- ended experiments:

1. Design a home automation through integrating the required sensors using IoT.
2. Develop a calculator to perform arithmetic operations.
3. Generate different wave patterns using the DAC interface.

Course Outcomes: After the completion of this course, students will be able to:

CO1: Apply the knowledge of engineering fundamentals to describe embedded systems and analyze the IoT conceptual framework.

CO2: Analyse the architectural features of 8051 and design memory interfacing.

CO3: Analyze the 8051 instruction set and develop the arithmetic and logical programs using the instructions in various addressing modes.

CO4: Analyse and develop the programming applications using timer/counter, I/O ports and serial communication.

CO5: Illustrates the interrupt concept in 8051 and develop ALP to interface the microcontroller with peripherals.

TRANSDUCERS AND MEASUREMENTS

Contact Hours/ Week :	3+0+0 (L+T+P)	Credits : 3.0
Total Lecture Hours :	39	CIE Marks : 50
Total Tutorial Hours :	00	SEE Marks : 50
Total Practical Hours :	00	
Sub. Code :	NEI43	

Course Objective: To impart knowledge of classification and Functional Elements of Instrument/measurement system and construction, operation, application of various transducers and display devices.

Unit I

Functional elements of an instrument: Transducer and classification: Primary & Secondary, active & passive transducers; analog & digital modes of operation; null & deflection methods; I/O configuration of measuring instruments & instrument system – methods of correction for interfering & modifying inputs.

Static characteristics; Meaning of static calibration, accuracy, precision & bias. Combination of component errors in overall system-accuracy calculation. Static sensitivity, linearity, threshold, resolution, hysteresis and dead space. **08 Hours**

Unit II

Physical Sensors: Displacement, Temperature & Pressure: Capacitive transducer – various arrangements, Inductive transducer, LVDT, RTD temperature characteristics, thermistor characteristics, Active type: Thermocouple – characteristics. Optical and Radiation Pyrometers: Fundamentals, Radiation detectors **(Self-study)** Strain gauges-types, Gauge factor, configuration. Pressure sensor types: Elastic and gravitational. **08 Hours**

Unit III

Flow, Level, Speed and Torque measurement: Mechanical Flow meters: Principle of Obstruction flow meters, Orifice, Venturi, Nozzle and Pitot static tube, Electro Magnetic, Turbine, Ultrasonic flow meter. Level measurement: Capacitance probe, conductivity probe, Ultrasonic level detector. Speed measurement: AC tachometer and DC tachometer. Torque measurement: Mechanical and Electrical method of torque measurement. **08 Hours**

Unit IV

Miscellaneous measurements: Humidity, Moisture, PH, Density measurements, Proximity sensor, RFID, Peizo-Electric sensor, Blood – glucose analysers, Oximeter, Hall-effect sensors. **07 Hours**

Unit V

Measuring Instruments: DC & AC bridges- wheatstone bridge, Maxwell, Schering and Wien bridges, Four probe method of measuring electrical properties, Electronic Instruments for Measuring Basic Parameters: Electronic multi-meter, Digital voltmeter, Vector Voltmeter, Cathode Ray Tube, Special Oscilloscopes – Storage Oscilloscope, Sampling Oscilloscope, LCD, LED & Touch screen display. **08 Hours**

TEXTBOOKS

1	Kalsi H.S.	Electronic Instrumentation, 3rd Edition, TMH-2018
2	Ernest O. Doebelin	Measurement systems application and design, 6th Edition. McGRAW HILL, 1990
3	A.K.Sawhney	Electrical and electronic measurements and Instrumentation**,** 18th Edition. Dhanpat Rai and sons. 2021

REFERENCE BOOKS

1	Patranabis D	Instrumentation and control, 1st Edition, PHI Publications,2011
2	Nakra and Chaudhary.	Instrumentation Measurement and Analysis McGRAW HILL. 4th Edition,2016
3	Gupta J.B.	Electrical and electronic measurements and Instrumentation**,** 10th Edition. Kataria, 2013.

Course outcomes (Cos): The student will be able to:

CO1: Explain the functional elements of an instrument and static characteristic of instruments.

CO2: Explain the operation of Displacement, Temperature & Pressure sensors.

CO3: Explain the operation of Flow, Level, Speed and Torque measuring devices.

CO4: Select a suitable transducer for specific measurement.

CO5: Explain the operation of various measuring instruments and special oscilloscopes.

Pedagogy:	Chalk and talk, Power point presentation, Group discussion.
WEB Links & Video Lectures Video Links (e-resources)	NPTEL Videos

TRANSDUCERS AND MEASUREMENTS LAB

Contact Hours/ Week	:	0+0+2 (L+T+P)	Credits : 1.5
Total Lecture Hours	:	00	CIE Marks : 50
Total Tutorial Hours	:	00	SEE Marks : 50
Total Practical Hours	:	26	
Sub. Code	:	NEIL41	

Course Objectives: To design signal conditioning circuits to measure the physical quantities such as temperature, load, strain and displacement.

List of Experiments:

1. Design of signal conditioning circuit to measure temperature using RTD.
2. Design of signal conditioning circuit to measure temperature using LM335
3. Design of signal conditioning circuit to measure temperature using thermocouple
4. Design of signal conditioning circuit to measure load using load cell
5. Design of signal conditioning circuit to measure strain using quarter, half and full bridge strain gauges
6. Design of signal conditioning circuit to measure Displacement using LVDT.
7. Design of signal conditioning circuit to measure Displacement using capacitive transducers
8. Design of signal conditioning circuit to measure displacement using Hall effect transducers

Open ended Experiments (only for CIE)

1. Design a Temperature control system by interfacing sensor with signal conditioning circuit to a microcontroller which can control the heater/cooler.
2. Design a load measurement system which can display the load in Kgs on LEDs interfaced to microcontroller.

Course outcomes: The student will be able to

CO1: Analyze and design signal conditioning circuits for temperature measurement.

CO2: Analyze and design Load measurement circuits using Load cell, and strain gauge bridges.

CO3: Analyze and design displacement measurement circuits using LVDT, capacitive transducers and Hall Effect transducer.

MATHEMATICAL TOOLS FOR SIGNAL PROCESSING

Contact Hours/ Week	:	2+2+0 (L+T+P)	Credits : 3.0
Total Lecture Hours	:	26	CIE Marks : 50
Total Tutorial Hours	:	26	SEE Marks : 50
Total Practical Hours	:	00	
Sub. Code	:	NEIL44	

Course objective:

To prepare students with fundamental mathematical knowledge/tools required to represent and analyze the signals and systems in time and frequency domain with basic concepts of vector spaces and linear transformations.

Unit-I

Vector Spaces: Vector spaces and Null subspaces, Rank and Row reduced form, Independence, Basis and dimension, Dimensions of the four subspaces, Rank-Nullity Theorem, Linear Transformations

Orthogonality: Orthogonal Vectors and Subspaces. **05+05 Hours**

Unit-II

Mathematical representation Signals and Systems: Definition of signals and systems, Mathematical Representation, Classification of signals, Operation on signals, Elementary signals, Systems viewed as interconnection of operations, Properties of systems. **06+06 Hours**

Unit-III

Time Domain Representation of LTI Systems: Introduction, sampling, reconstruction of continuous time signals. Impulse response representation of Discrete LTI systems, Properties of impulse response representation, difference equation representation of LTI systems. **05+05 Hours**

Self-Study Component: Properties of impulse response representation

Unit-IV

Fourier representations for signals: Introduction: Orthogonality of complex sinusoids, Introduction to Fourier Series (FS), Fourier Transform (FT) and Discrete Time Fourier Series (DTFS). DTFT

Discrete Time non periodic signals: DTFT representation, Properties of DTFT.

Continuous Time non periodic signals: FT representation, Properties of FT.

Self-Study Component: Fourier series representation **05+05 Hours**

Unit-V

Z-Transform: Introduction, Properties of ROC, Properties of Z-transform, inversion of Z-transform, Transform analysis of LTI systems, stability & causality, Unilateral Z-transform and its application. **05+05 Hours**

TEXT BOOKS:

1	Gilbert Strang	"Linear Algebra and its Applications", Cengage Learning, 4th Edition, 2005, ISBN 97809802327
2	Simon Haykin and Barry Van Veen	"Signals and Systems", 2nd Edition, 2021, Wiley India. ISBN9971-51- 239-4.

REFERENCE BOOKS:

1	Alan V Oppenheim, Alan S WilIsky and S Hamid Nawab	"Signals and Systems" Pearson Education Asia / PHI, 2nd edition, 2015. Indian Reprint 2002.
2	Ganesh Rao and Satish Tunga	"Signals and Systems", Pearson/Sanguine. 2017, Cengage India Publisher. 1st edition

Course Outcomes: Student will be able to:

CO1: Apply the knowledge of vector spaces and linear transformations for representing signals and their transformations.
CO2: Apply the knowledge of Mathematics to represent, Classify and perform operations on signals and characterize systems.
CO3: Able to find the sampling frequency to reconstruct the signals without aliasing and analyze discrete LTI systems in Time domain using convolution and solve linear constant co-efficient difference equation.
CO4: Apply the knowledge of Mathematics (Fourier analysis tools like FT and DTFT) to Represent and Analyze CT and DT non-periodic signals in the Frequency domain.
CO5: Apply Z- transform to analyze discrete-time signals and systems.

Pedagogy:	Chalk and talk

BIOLOGY FOR ENGINEERS

Contact Hours/ Week	:	2+0+0 (L+T+P)	Credits : 2.0
Total Lecture Hours	:	26	CIE Marks : 50
Total Tutorial Hours	:	00	SEE Marks : 50
Total Practical Hours	:	00	
Sub. Code	:	BE	

Course objectives:

- To familiarize the students with the basic biological concepts and their engineering applications.
- To enable the students with an understanding of bio-design principles to create novel devices and structures.
- To provide the students an appreciation of how biological systems can be re-designed as substitute products for natural systems.
- To motivate the students develop the interdisciplinary vision of biological engineering.

Unit I

BIOMOLECULES AND THEIR APPLICATIONS: Carbohydrates (cellulose-based water filters, PHA and PLA as bioplastics), Nucleic acids (DNA Vaccine for Rabies and RNA vaccines for Covid19, Forensics – DNA fingerprinting), Proteins (Proteins as food – whey protein and meat analogs, Plant based proteins), lipids (biodiesel, cleaning agents/detergents), Enzymes (glucose-oxidase in biosensors, ligninolytic enzyme in bio-bleaching). **5 Hours**

Unit II

HUMAN ORGAN SYSTEMS AND BIO DESIGNS – 1: Brain as a CPU system (architecture, CNS and Peripheral Nervous System, signal transmission, EEG, Robotic arms for prosthetics. Engineering solutions for Parkinson's disease). Eye as a Camera system (architecture of rod and cone cells, optical corrections, cataract, lens materials, bionic eye).Heart as a pump system (architecture, electrical signaling - ECG monitoring and heart related issues, reasons for blockages of blood vessels, design of stents, pace makers, defibrillators). **5 Hours**

Unit III

HUMAN ORGAN SYSTEMS AND BIO-DESIGNS – 2: Lungs as purification system (architecture, gas exchange mechanisms, spirometry, abnormal lung physiology - COPD, Ventilators, Heart-lung machine).Kidney as a filtration system (architecture, mechanism of filtration, CKD, dialysis systems). Muscular and Skeletal Systems as scaffolds (architecture, mechanisms, bioengineering solutions for muscular dystrophy and osteoporosis). **5 Hours**

Unit IV

NATURE-BIOINSPIRED MATERIALS AND MECHANISMS: Echolocation (ultrasonography, sonars), Photosynthesis (photovoltaic cells, bionic leaf). Bird flying (GPS and aircrafts), Lotus leaf effect (Super hydrophobic and self-cleaning surfaces), Plant burrs (Velcro), Shark skin (Friction reducing swim suits), Kingfisher beak (Bullet train). Human Blood substitutes -

hemoglobin-based oxygen carriers (HBOCs) and perfluorocarbons (PFCs).

5 Hours

Unit 5:

TRENDS IN BIOENGINEERING: Bio-printing techniques and materials, 3D printing of ear, bone and skin. 3D printed foods. Electrical tongue and electrical nose in food science, DNA origami and Biocomputing, Bio-imaging and Artificial Intelligence for disease diagnosis. Self- healing Bio-concrete (based on bacillus spores, calcium lactate nutrients and bio-mineralization processes) and Bio-remediation and Bio-mining via microbial surface adsorption (removal of heavy metals like Lead, Cadmium, Mercury, Arsenic).

Course Outcomes

At the end of the course the student will be able to:

CO1: Elucidate the basic biological concepts via relevant industrial applications and case studies.

CO2: Evaluate the principles of design and development, for exploring novel bioengineering projects.

CO3: Corroborate the concepts of bio-mimetics for specific requirements.

CO4: Explore innovative bio-based solutions for socially relevant problems.

Evaluation Pattern

Two Tests of 50 marks each and 90 minutes duration

SEE for 60 marks and examination duration is 120 minutes

Description	*Schedule*	*Duration (min)*	*Conducted for*	*Reduced to*
Test-1	7th Week	90	50 marks	20 marks
Test-2	14th Week	90	50 marks	20 marks
Activity 1	6th Week		10 marks	5 marks
Activity 2	12th Week		10 marks	5 marks
CIE			120 marks	50 marks
SEE		120	60 marks	50 marks
Total			**180 marks**	**100 marks**

Question Paper Pattern

CIE: *CIE pattern is 3 questions with a maximum 4 subdivisions and all questions are compulsory.*

SEE: *Questions from each of the 5 units for 12 marks with a maximum 3 subdivisions and any two questions can have internal choice. (Total seven questions)*

General Instructions for Teaching-Learning

These are sample Strategies, which teacher can use to accelerate the attainment of the various course outcomes.

- Explanation via real life problem, situation modelling, and deliberation of solutions, hands-on sessions, reflective and questioning /inquiry-based teaching.
- Instructions with interactions in classroom lectures (physical/hybrid).
- Use of ICT tools, including YouTube videos, related MOOCs, AR/VR/MR tools.
- Flipped classroom sessions (~10% of the classes).
- Industrial visits, Guests talks and competitions for learning beyond the syllabus.
- Students' participation through audio-video based content creation for the syllabus (as assignments).
- Use of gamification tools (in both physical/hybrid classes) for creative learning outcomes.
- Students' seminars (in solo or group) /oral presentations.

Suggested Learning Resources:

- Human Physiology, Stuart Fox, Krista Rompolski, McGraw-Hill eBook. 16th Edition, 2022
- Biology for Engineers, Thyagarajan S., Selvamurugan N., Rajesh M.P., Nazeer R.A., Thilagaraj W., Barathi S., and Jaganthan M.K., Tata McGraw-Hill, New Delhi, 2012.
- Biology for Engineers, Arthur T. Johnson, CRC Press, Taylor and Francis, 2011
- Biomedical Instrumentation, Leslie Cromwell, Prentice Hall 2011.
- Biology for Engineers, Sohini Singh and Tanu Allen, Vayu Education of India, New Delhi, 2014.
- Biomimetics: Nature-Based Innovation, Yoseph Bar-Cohen, 1st edition, 2012, CRC Press.
- Bio-Inspired Artificial Intelligence: Theories, Methods and Technologies, D. Floreano and C. Mattiussi, MIT Press, 2008.
- Bioremediation of heavy metals: bacterial participation, by C R Sunilkumar, N Geetha A C Udayashankar Lambert Academic Publishing, 2019.
- 3D Bioprinting: Fundamentals, Principles and Applications by Ibrahim Ozbolat, Academic Press, 2016.
- Electronic Noses and Tongues in Food Science, Maria Rodriguez Mende, Academic Press, 2016
- Blood Substitutes, Robert Winslow, Elsevier, 2005

Activity Based Learning (Suggested Activities in Class)/ Practical Based learning

- Group Discussion of Case studies
- Model Making and seminar/poster presentations
- Design of novel device/equipment like Cellulose-based water filters, Filtration system mimicking the kidney, Bioremediation unit for E-waste management, AI and ML based Bio-imaging.

ADVANCED TECHNICAL TRAINING LAB IN C, DATA STRUCTURE, C++

Contact Hours/ Week	: 0+0+3(L+T+P)	Credits :	1.0
Sub. Code	: **N4CESL1**	CIE Marks :	50
Total Practical Hours	: 36	SEE Marks :	50

Course learning objectives (CLOs):

1. Build the logic for a given problem statement by using algorithms using fundamental concepts of the Programming Language C such as conditional statements, looping constructs, division, mod operations and string manipulation.
2. Implement the Data Structures such as Stacks, Queues, Lists, and Trees using C Programming language.
3. Implement the fundamental concepts of Object Oriented Programming Concepts, such as Classes, Objects, Abstraction, Encapsulation, Polymorphism, Constructors, Over Loading and Over Riding.

1. Structure of a 'C' Program
   a. Main Function
   b. Input & Output
   c. C Tokens
2. Keyword and Identifiers
3. Operators
4. Variables
5. Control Statements
   a. Conditional Statements
      - If
      - If-else
      - Simple
      - Nested
      - Multiple
      - switch
   b. Looping Statements
      - while
      - do-while
      - for
6. Arrays
      - Single Dimensional
      - Two Dimensional
      - String as Character Arrays
7. Functions and Recursive Functions
8. Pointers
9. Structures and Unions
10. Enumerations

11. Files
12. Introduction to Data Structures
    - Space Complexity
    - Time Complexity
13. Classification of data structures
    - Linear Data structures
    - Non-Linear Data Structures
14. Array Versus Linked List
15. Linked List
    - Single Linked List
    - Double Linked List
    - Circular Linked List
16. Stack
    - Push
    - Pop
    - Queue
    - Enqueue
    - Dequeue
17. Searching Techniques
    - Linear Search
    - Binary Search
18. Sorting Techniques
    - Bubble Sort
19. Insertion Sort

Course Outcomes:

CO1: Design and develop solutions for particular programming problems using the fundamental concepts of C Programming.

CO2: Implement different data structures like Stacks and Queues using static and dynamic memory allocation techniques.

CO3: Design & Implement Object oriented concepts of C++ programming such as Classes, Objects, Inheritance, polymorphism for a given problem statement.

#	***Modules Covered***	***Duration in hrs.***	
1	C Programming	15	
2	Data Structures	15	
3	C++ Programming	06	
	Total Course Duration	16 Hrs.Lecture	20 Hrs Practice
CIE: 50 Marks			
• Students are accessed every class for 35 marks. • Evaluation includes Problem Analysis, Program Writing and Executing Programs in the Lab (10 + 15+ 10). • Two tests are conducted for 15 marks each. • Marks distribution (50 Marks) = Average of class assessments (35 Marks) + Average of two tests (15 Marks)			

SEE: 50 Marks
• There are 20 programs in the list divided into two parts A & B, students have to pick one program each from the Part A & Part B • Both the parts carry equal weightage. • Evaluation includes Program Write-up + Analysis + Program Execution + Viva (10 + 10 + 20 + 10 = 50 Marks) • Change of Experiment is allowed once in a first half an hour and in such cases evaluation is done for 80% of the Marks

FOUNDATIONS OF ENGINEERING MATHEMATICS-II
(For Lateral Entry students)

Contact Hours/ Week	**2(L)+2(T)**	**Credits**	**0**
Total Lecture Hours	**26**	**CIE Marks**	**100**
Total Tutorial Hours	**26**	**SEE Marks**	**00**
Sub Code	**NMATDIP4**	**Semester**	**IV**

Prerequisites: Basics in differential calculus, Integral calculus and vectors.

Course Learning Objectives: This course will facilitate the students with concrete foundation of ordinary differential equations, Laplace transforms, Integral calculus and numerical methods enabling them to acquire the knowledge of these mathematical tools.

Course objectives: This course will enable students to:

1. Solve second and higher order differential equations.
2. Find the Laplace transform of the function f(t).
3. Find the Inverse Laplace transform of the function F(s).
4. Apply the knowledge of numerical methods in the models of various physical and engineering phenomena.
5. Solve the integral by using standard integrals (Beta and Gamma) and multiple integrals

Course outcomes: After the completion of this course, students will be able to:

1. Explain various physical models through higher order differential equations and solve such linear ordinary differential equations. **(L1& L2)**
2. Understand the concept of Laplace transform and obtain Laplace transform of periodic functions and unit step functions. **(L1& L2)**
3. Apply the concept of Laplace transform in solving Linear Differential equations. **(L1& L2)**
4. Apply the Numerical methods to solve Algebraic and transcendental equations and find the polynomials by finite difference method. **(L1& L2)**
5. Apply the concept of to evaluate multiple integrals and Beta and Gamma functions **(L1& L2)**

UNIT-I

Linear Differential Equations: Solution of second and higher order equations with constant coefficients by inverse differential operator method, method of variation of parameters. **(6+6) Hours**

UNIT-II

Laplace Transform: Definition, Transforms of elementary functions, properties of Laplace Transform, Laplace Transform of $e^{at} f(t)$, $t^n f(t)$ **,** $\frac{f(t)}{t}$ **,** derivatives and Laplace Transform of Periodic functions' **(5+5) Hours**

UNIT-III

Inverse Laplace Transform: Inverse Laplace Transform, Convolution theorem (without proof) and problems Applications –Solution of Linear differential equations using Laplace Transform. **(5+5) Hours**

UNIT-IV

Elementary Numerical Methods Finite differences. Interpolation/extrapolation using Newton's forward and backward difference formulae, Newton's divided difference and Lagrange's formulae (All formulae without proof). Solution of polynomial and transcendental equations - Newton-Raphson method (only formula) – Illustrative examples.

(5+5) Hours

UNIT-V

Integral Calculus: Multiple integrals –Evaluation of double and triple Integrals, **Beta and Gamma functions**: Definition, relation between Beta and Gamma functions and simple problems. **(5+5) Hours**

Siddaganga Institute of Technology, Tumkur-572103

Department of Electronics & Instrumentation Engineering

Vision of the Institute

To develop young minds in a learning environment of high academic ambience by synergizing spiritual values and technological competence.

Mission of the Institute

To continuously strive for the total development of students by educating them in state of the art technologies helping them imbibe professional ethics and societal commitments so that they emerge as competent professionals to meet the global challenges.

The department of Instrumentation Technology (UG Programme) was established in the year 1979 with an intake of 40 students to provide the technical work force for the process automation, medical instrumentation and electronic industries. The intake for UG programme increased to 60 in the year 1989. The department is renamed as Electronics and Instrumentation Engineering since 2014. The PG programme in VLSI Design and Embedded Systems was started in the year 2015 with an intake of 18.

Vision of the Department

To become a premier Department offering excellent education in the field of Electronics, Instrumentation and advanced technologies to the students, to pursue higher studies in the thrust areas and to offer professional service with ethical values to the society.

Mission of the Department

The department is committed to develop competent professionals by offering need based curriculum in Electronics and Instrumentation Engineering areas, promoting research and innovation to prepare the students for higher study, life-long learning and societal responsibility. The department is bound to provide good learning environment to develop professional ethics and skills in students to offer engineering service to the society.

Program Educational Objectives (PEOs)

Within three to five years after graduation, the Electronics and Instrumentation Engineering graduates will be able to

PEO 1: Succeed in industry and higher education by applying knowledge of Mathematics, Science and Engineering principles.

PEO 2: Analyze real life problems, suggest solutions and design complex Engineering systems that are technically advanced, economically feasible and socially acceptable.

PEO 3: Demonstrate soft skills, professional and ethical values to work in multi disciplinary allied areas useful to the society.

Programme Outcomes (PO):

1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineeringfundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis**: Identify, formulate, review research literature, and analyze complexengineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. **Design/development of solutions**: Design solutions for complex engineering problems anddesign system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems**: Use research-based knowledge and researchmethods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modernengineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assesssocietal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability**: Understand the impact of the professional engineering solutionsin societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms ofthe engineering practice.
9. **Individual and team work**: Function effectively as an individual, and as a member or leader indiverse teams, and in multidisciplinary settings.
10. **Communication**: Communicate effectively on complex engineering activities with the engineeringcommunity and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance**: Demonstrate knowledge and understanding of theengineer**ing and management principles and apply these to one's own work, as a member and** leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage inindependent and life-long learning in the broadest context of technological change.

Programme specific Outcomes (PSO):

Student will be able to

PSO1: Demonstrate technical knowledge in the fields of Measurement& Instrumentation, Sensors, Industrial Process Control and Thin Film Process Technology using state-of-the-art knowledge and technical skills.

PSO2: Design of Analog & Digital Electronic Circuits and Embedded Systems for real time control applications

PSO3: Apply technical knowledge in the fields of Signal Processing, Communication and Bio-Medical Instrumentation to design and analyze systems related to industries

MANAGEMENT AND ENTREPRENEURSHIP

Contact Hours/Week	:	3+0+0	Credits	:	3.0
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	00	SEE Marks	:	50
Course Code	:	HSS06			

Course Objectives: This course will enable students to:

1. Understand the principles and functions of management.
2. Analyze the importance of planning, organizing, staffing, leading and controlling organization.
3. Understand and manage engineering design and quality
4. Inculcate entrepreneurial qualities and understand the need of rural entrepreneurship
5. Acquire knowledge about funding agencies, understand procedure in applying for funds and analyze the cases of successful entrepreneurs

Unit I

Introduction to Management: Definition of management, management skills, productivity and effectiveness, efficiency, functions and principles of management.

Planning: Nature of planning, types of plans- purpose of vision, mission, goals, objectives strategies, policies; steps in planning, MBO, Strategic planning

Organizing: Formal and informal organization, span of management, the structure and Process of organizing, Organizational structure: line and staff organization, Functional organization, matrix organization.**8 Hours**

Unit II

Staffing: Definition, systems approach to HRM, factors affecting staffing, recruitment and selection, job design, skill and characteristics of a manager, selection process and techniques.

Leading: Human factors in managing, motivation, Theory X and Y, the hierarchy of needs theory, leadership behaviour and styles.

Controlling: Basic control process, critical control points and standards, Benchmarking requirements for effective control. **9 Hours**

UNIT - III

Managing Engineering Design and Development: Product and Technology Life Cycles, Nature of Research and Development, Research Strategy and organization, Nature of Engineering Design, Systems Engineering / New Product Development.

Managing Production/Operations: Types of production processes, Forecasting, Work measurement, Maintenance and Facilities (Plant) Engineering, Total Quality Management, Lean Manufacturing

Engineers in Marketing and service activities: Marketing and the Engineer, Engineers in Service organizations. **8 Hours**

UNIT – IV

Entrepreneur & Entrepreneurship: Introduction, concept of Entrepreneur, characteristics of an entrepreneur, and qualities of an entrepreneur, functions of an entrepreneur, characteristics of entrepreneurship, factors affecting entrepreneurial growth.

Entrepreneurship and economic development-rural, woman and social entrepreneurship

Financing and Institutional Support for Entrepreneurship: Startups, business plans, venture capitalists, angel investors, funding agencies - commercial banks, development banks, NBFCS and incubation centres. Innovations and project trends. **8 Hours**

UNIT – V

Taxation benefits: Depreciation allowances, rehabilitation allowance, investment allowance and other tax concession benefits to an entrepreneur.

2 Case Studies from Stay Hungry and Stay Foolish – Rashmi Bansal, IIM Ahmedabad:

1) Success story of naukri.com by Sanjeev Bikhchandani
2) Success story of Make My Trip by Deep Kalra. **6 Hours**

TEXT BOOKS:

1.	Harold Koontz, Heinz Weihrich	Essentials of Management, McGraw Hill Education, 10th Edition, 2015
2.	Lucy C. Morse	Managing Engineering and Technology, Pearson Education, 6th Edition, 2015.
3.	S.S. Khanka	Entrepreneurial Development, S. Chand Publishing, 4th Edition, Reprint 2020. ISBN 978-81-219-1801-5

REFERENCE BOOKS:

1.	James A.F. Stoner, R. Edward Freeman, Daniel R. Gilbert	Management, Pearson Education, 6th Edition, 2018.
2.	Rashmi Bansal	Stay Hungry Stay Foolish, IIM Ahmedabad, 1st Edition, 2008.
3.	Rashmi Bansal	Connect the Dots, Bushfire Publishers, 1st Edition, 2019.

Course Outcomes: After the completion of this course, students will be able to:

CO1: Explain various functions of management (L2).

CO2: Apply the knowledge of management principles and strategies in various functional areas. (L3).

CO3: Manage engineering design and product development (L3).

CO4: Describe entrepreneurship, its characteristics, and benefits and identify various funding sources for starting a business venture (L3).

CO5: Explain various taxation benefits enjoyed by an entrepreneur and analyze the characteristics and strategies adopted by successful entrepreneurs. (L2 & L3)

DIGITAL SIGNAL PROCESSING

Contact Hours/ Week	: 4+1+0 (L+T+P)	Credits:	4.5
Total Lecture Hours	: 52	CIE Marks:	50
Total Tutorial Hours	: 13	SEE Marks:	50
Sub. Code	: 5REI01		

Course Objectives: This course will enable students to:

1. To study DFT and its properties and learn computation of convolution
2. To learn and apply FFT algorithms
3. To study and learn Design of FIR and IIR Filters
4. To learn FILTER realization techniques

Unit-I

Introduction to Digital Signal Processing: Basic elements of Digital Signal Processing system, advantages of digital over analog signal processing, A/D and D/A conversion.

Discrete Fourier transform: Introduction, DFT properties of DFT, Linear convolution using DFT, Convolution of long sequences: Overlap Save method and Overlap ADD method, Computation of Circular convolution, relationship of DFT to other transforms. **12+2 Hours**

Unit-II

Computation of DFT: Decimation-in-time and decimation-in-frequency radix-2 FFT and IFFT algorithms, FFT of a composite number .**10+3 Hours**

Unit-III

Filter design techniques: Ideal filter characteristics, low-pass, high-pass and band-pass filters;

Design of FIR filters: Issues in filter design, importance of linear phase, frequency response of linear phase FIR filters, locations of zeros of FIR filters, Design techniques of FIR filters, windowing (rectangular window, Hamming Window). **10+3 Hours**

Unit-IV

Design of IIR filters: Introduction to IIR filters, Design of Butterworth analog filter. frequency transformations in analog domain, Introduction to Chebyshev filters,

Design of digital filters from analog filters, impulse invariant transformation and bilinear transformation methods, comparison of FIR and IIR filters. **10+3 Hours**

Unit-V

Implementation of discrete-time systems: Basic structures for FIR systems: Direct, Cascade, Linear Phase, Structures for IIR systems: Direct, Cascade and Parallel,

Applications: Dual Tone Multi Frequency signal detection, Spectral analysis using DFT, Musical sound processing. **10+2 Hours**

TEXT BOOK:

1	J.G. Proakis and D. G. Manolakis	Digital Signal Processing: Principles, Algorithms and Applications, 1997, PHI.
2	V. Udayashankara	Modern Digital Signal Processing PHI Learning Pvt.Ltd, Second Edition 2012

REFERENCE BOOKS:

1	S. K. Mitra	Digital Signal Processing: A computer-Based Approach, 2nd Edition, 2001, TMH.
2	Lonnie C. Ludeman	Fundamentals of Digital Signal Processing, 1st Edition, 1986, John Wiley & sons.
3	A. V. Oppenheim and R. W. Shafer	Discrete-Time Signal Processing, 2nd Edition, PHI 2000

Course Outcomes: After the completion of this course, Students will be able to:

CO1: Represent the discrete-time signals in time and frequency domain. Compute the DFT and Convolution of sequences

CO2: Apply FFT algorithms to compute the DFT of discrete time sequences

CO3: Design FIR filters to meet given specifications.

CO4: Design IIR filters to meet given specifications.

CO5: Develop the structures to realize the FIR and IIR filters.

POWER ELECTRONICS

Contact Hours/ Week	: 3+1+0(L+T+P)	Credits :	3.5
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 13	SEE Marks :	50
Sub. Code	: 5REI02		

Course Objectives: This course will enable students to:

1. To Study the construction and operation of various power devices.
2. To Impart the knowledge in design of various converter topology for industrial applications

Unit-I

THYRISTORS: Introduction to thyristor family, structure of SCR and modes of operation, SCR turn-on and turn-off characteristics, snubber circuit, Triggering circuits (R and RC), Commutation circuits for SCR (natural and complimentary commutation), thyristor types (construction and operation of TRIAC and DIAC only). **8+2 Hours**

Unit-II

SINGLE PHASE AC-DC CONVERTER : Introduction, principle of phasecontrolled converter operation, single phase half wave, semi converter and fully controlled converters with R-L loads and freewheeling diodes, problems. **9+3 Hours**

Unit –III

DC TO DC CONVERTER: Step-down and step-up chopper, chopper classifications, analysis of Buck, Boost regulator and impulse commutated chopper, problems, IC based motor control. **7+3 Hours**

Unit-IV

INVERTERS: Introduction, principle of operation, single phase bridge inverters, voltage control of single phase inverters: Sinusoidal PWM modified sinusoidal PWM, current source inverter. **8+3 Hours**

Unit-V

AC TO AC CONVERTERS: Introduction, principle of On-off control, principle of phase control, Single phase AC voltage controllers with resistive load, problems, introduction to single phase cycloconverters.

7+2 Hours

TEXT BOOK:

1	M. H. Rashid	**Power Electronics**, 3rd edition, PHI / Pearson publisher, 2004, 3rd Edition.

REFERENCE BOOKS:

1	P.C. Sen	**Modern Power Electronics,** S.Chand, 2000, 2nd Edition.
2	NedMohan, T.M Undeland & W.P Robbin,	**Power Electronics: Converters, Application and Design**, 2006, John Wiley and sons, Wiley India edition.

Course Outcomes: After the completion of this course, Students will be able to:

CO1: Identify and select a suitable thyristor for industrial applications.

CO2: Analyze and Design various controlled rectifier topology for industrial applications.

CO3: Analyze and Design various DC to DC converter topologies for traction motor control applications.

CO4: Analyze and Design various inverter topologies for industrial applications.

CO5: Analyze and Design various AC voltage controller topologies for industrial applications.

ADVANCED MICROCONTROLLER

Contact Hours/ Week :	3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours :	39	CIE Marks :	50
Total Tutorial Hours :	0	SEE Marks :	50
Course Code:	5REI03		

Course objectives: This course will enable students to study the architecture, Instruction Set and on-chip peripherals of 8051 and ARM based microcontrollers.

Unit-I

Introduction: Introduction to Microprocessors and Microcontrollers, Von Neumann and Harvard architecture,

8051 micro-controller: Architecture, register bank, Flag bits, Memory organization. Operation and addressing modes of data transfer and data processing instructions, Instruction execution cycle, Assembly level programming. **8 Hours**

Unit-II

Control transfer instructions: Operation and addressing modes of control transfer instructions in 8051, Assembly level program using 8051 instruction set. Machine level instruction decoding. Stack operation in 8051 micro-controller.

Peripherals in 8051: I/O ports, Timer and UART. **7 Hours**

Unit-III

ARM7TDMI Processor fundamentals: ARM7TDMI programmers model, Pipelining, Memory formats, Instruction length, modes and exception, interrupt and vector table, ARM processor families.

ARM Instruction Set: Addressing Modes, Data Processing Instructions, Data Transfer Instructions, Branch Instructions, Software Interrupt Instructions, Program Status Instructions, Conditional Execution, Stack operation, Assembly language programming. **8 Hours**

Unit-IV

Interrupts and Exception Handling: Exceptions Handling Interrupts.

THUMB Instruction Set: Thumb registers Usage, ARM-Thumb Interworking, Branch Instructions, Data Processing Instructions, Stack Instructions, Single and Multiple Load/Store Instructions. **8 Hours**

Unit-V

AT89C51ED2 and LPC2388 peripherals: GPIO, ADC, DAC, Timer, UART. **I/O devices:** LED, Switches, 7-Segment display, MxN matrix keypad, Relay, LCD. **Assembly level programming**: To interface I/O devices with AT89C51ED2 and LPC2388 microcontrollers. **8 Hours**

Text Book:

1	Muhammad Ali Mazidi	The 8051 Microcontroller and Embedded Systems Using Assembly and C
2	Steve Furber	ARM System On Chip Architecture. 2nd Edition

Reference Book:

1	Andrew N Sloss	ARM System Developers Guide, Elsevier, 2008
2	William Hohl	ARM Assembly Language-Fundamentals and Techniques, CRC Press, 2009.
3	J R Gibson	ARM Assembly Language An Introduction, CENGAGE Learning, 2010.
3	ARM Architecture reference manual - ARM DDI0100E	
4	ARM Technical reference manual Revision : r4p1	
5	LPC2388 User manual - UM10237	
6	AT89C51RD2/ED2 Data sheet	

Course outcomes: After the completion of this course, Students will be able to:

CO1: Explain the architectural features of 8051 microcontroller.

CO2: Develop assembly level -program for specific applications using 8051 microcontroller.

CO3: Explain the architectural features and ARM state instructions of ARM7TDMI processor.

CO4: Explain the Exceptions and Thumb instruction features of ARM7TDMI processor.

CO5: Develop assembly level Program to interact with on chip peripherals of 8051 based AT89C51 and ARM7TDMI based LPC2388 microcontrollers.

DIGITAL SIGNAL PROCESSING LAB

Contact Hours/ Week :	0+0+3 (L+T+P)	Credits :	1.5
Sub. Code :	5REIL1	CIE Marks :	50
		SEE Marks :	50

Course objectives: This course will enable students to:

1. To study and implement digital signal processing algorithms.
2. To Learn to design, implement & verify IIR & FIR filters.

List of Experiments

1. Sampling Theorem verification
2. Computation of Convolution in time domain
3. Computation of Circular convolution in time domain
4. Computation of Convolution in frequency domain
5. Spectrum of a signal
6. IIR Butterworth Filter
7. FIR Filter using Hamming window
8. DTMF signal generation and detection

Open Ended Experiment: Power Spectrum of ECG

Additional Learning Experiment: Power Spectrum of Speech Signal

Course outcomes: After the completion of this course, Students will be able to:

CO1: Learn to represent analog signals in digital format and understand frequency-domain representation of the signals.

CO2: Write and implement program to perform convolution of discrete signals.

CO3: Write and implement program to determine the spectrum of a signal.

CO4: Design and verify FIR and IIR filters.

CO5: Write and implement program for generation and detection of DTMF signals

Note:

1. All the experiments are to be conducted using SCI LAB / MATLAB.
2. Experiments 2,3,5,6,7 are to be conducted using DSP Processor.
3. Experiments 5 is only for CIE.

MICROCONTROLLER LAB

Contact Hours/ Week	: 0+0+3(L+T+P)	Credits :	1.5
Sub. Code	: 5REIL2	CIE Marks :	50
		SEE Marks :	50

Course Objectives: This course will enable students to develop assembly level program for 8051 micro-controller in order to interface input output devices by configuring on chip peripherals.

List of Experiments - Simulation: (For practice)

1. Programming using Data transfer, Data processing and Control transfer instructions of 8051 microcontroller.

List of Experiments – With AT89C51ED2 evaluation board:
(For practice)

1. Interface LEDs.
2. Interface switches.

(For both CIE* and SEE)**

1. Interface 7-segment display
2. Interface Relay to switch on/off the electric lamp.
3. Interface light emitting diode (LED) and switches to Implement 8/16 – bit arithmetic and logic unit (ALU).
4. Interface liquid crystal display (LCD).
5. Interface Stepper motor.
6. Interface MXN matrix Keypad.
7. Interface analog to digital converter (ADC).
8. Interface digital to analog converter (DAC).

Open ended Experiments:

1. Design a real time clock using Timer module of AT89C51ED2/LPC2388.

Additional Learning Experiment:

1. ON/OFF temperature controller using AT89C51ED2/LPC2388.

Course outcomes: After the completion of this course, Students will be able to:

CO1: Develop and debug assembly level – Program to interface *external device*s like LED, switches, 7-segement display, mxn Keypad, Relay, LCD and Stepper motor to AT89C51ED2 microcontroller.

CO2: Develop and debug assembly level -program to implement the arithmetic and logic unit.

CO3: Develop and debug assembly level Program to configure *On-chip* ADC and DAC of AT89C51ED2 Microcontroller to convert the given data.

CO4: Develop and debug assembly level program to configure on chip timer and to implement real time clock.

ADVANCED TECHNICAL TRAINING LABORATORY

Lab Hours/ Week	: 2	Credits :	1
Sub. Code	: 5CESL1	CIE Marks :	50
		SEE Marks :	50

Note:

50% of total marks for PART-A question.50% of total marks for PART-B.

The student has to pick one question in PART - A from lots and has to pick onequestion in PART - B from lots.

PART – A

1. Yaswanth's number is a number whose sum of the factorial of digits is equal to the number itself. Given a number N as input. Write a program to check whether this number is Yaswanth's number or not.

Input	First line of input contains a single integer T which denotes the number of test cases. Then T test cases follow. First line of each test case contains a single integer N.
Output	For each test case print "YES" without quotes if N is a Yaswanth's Number otherwise print "NO
Constraint	1 <= T <= 100 1 <= N <= 105

	Input	Output
Example	a. 2 b. 145 c. 235	YES NO

Exercises

Test Cases

	Input	Output
Problem 1	a. 2 b. 145 c. 235	YES NO
Problem 2	a. 7894 b. 1592 c. 1369	a. Four Nine Eight Seven b. Two Nine Five One c. Nine Six Three One

2. Yaswanth and Sweety are off to the wedding of a close relative. This time they have to travel without their guardians. Yaswanth got very interested in the arrangement of seats inside the train coach. The entire coach could be viewed as an arrangement of consecutive blocks of size 8.

Berth Number	Compartment
1 - 8	1

9 - 16 2
17 - 24 3
... and so on
Each of these size-8 blocks are further arranged as:
1LB, 2MB, 3UB, 4LB, 5MB, 6UB, 7SL, 8SU
9LB, 10MB, ...
...
Here LB denotes lower berth, MB middle berth and UB upper berth.
The following berths are called Train-Partners:

3UB | 6UB

2MB | 5MB
1LB | 4LB
7SL | 8SU
And the pattern is repeated for every set of 8 berths. Yaswanth and Sweety are playing this game of finding the train partner of each berth. Can you write a program to do the same?

	Input	Output
Example	a. 1 b. 5 c. 3	a. 4LB b. 2MB c. 6UB

Exercises

Test Cases

	Input	Output
Problem 1	a. 10,25,9	a. 25, 9
	b. 11,98,105	b. 105, 11
Description	Print the Higher and lower number from given three numbers.	
	Input	Output
Problem 2	a. 145 b. 120 c. 1889	a. 20 b. 0 c. 576
Description	Print the multiplication of digits in a given number. For example, test case1, 145 if you multiply 1*4*5 you will get the output as 20.	

3. The program must accept an integer array of size N containing only 0's and 1's as the input. The program must bring all the zeros to the front and all the ones to the end of the array. Then the program must print the modified array as the output.

Boundary Condition(s):	1 <= N <= 1000 0 <= Array Element Value <= 1	
	Input	Output
Example	a. 0 1 1 0 1 0 0 b. 1 1 1 0	a. 0 0 0 0 1 1 1 b. 0 1 1 1
Explanation	There are 4 zeros and 3 ones in the input. So print all the zeros at the beginning and all the ones at the end. Hence the output is 0 0 0 0 1 1 1	

Exercises

	Input	Output
Problem 1	a. {1,2,4,6,5}	a. 1 4 12 20 5 21
	b. {2,4,5,6,7}	b. 2 10 24 35 7
Description	You need to print the first and last index numbers as it is because first number does not previous number and last number does not next number so print them as it and middle numbers have previous and next number then multiply and print the output.	
	Input	Output
Problem 2	a. {19,1,24,79,88}	a. 1 1 0 1 0
	b. {11,22,44,33,66}	b. 1 0 1 0 1
Description	You need to print 1 in place of Odd item and print 0 in the place of Even item from the given list.	

4. The program must accept an integer N as the input. The program must print the square root of each digit in N with the precision up to 2 decimal places as the output.

Boundary Condition(s): 1 <= N <= 10^7

	Input	**Output**
Example	a. 23578 b. 149	a. 1.41 1.73 2.24 2.65 2.83 b. 1.00 2.00 3.00
Explanation	• The square root of the digit 2 is 1.41 • The square root of the digit 3 is 1.73 • The square root of the digit 5 is 2.24 • The square root of the digit 7 is 2.65 • The square root of the digit 8 is 2.83 • Hence the output is 1.41 1.73 2.24 2.65 2.83	

Exercises

	Input	**Output**
Problem 1	a. {10 20 12 18 90} b. {10 20 12 18 19}	a. Yes b. No
Description	You need to print Yes or No according to the given test case. For example, test case 1, 20 12 18 - all three are greater than 10 and lesser than 90. Hence YES is printed. For second test case, 20 is not lesser than 19. Hence NO is printed.	

5. Your program need to accept the series of integer numbers as an array and it has to print the output in the following order.

	Input	Output
Example 1	{1,2,3,4,2,2,3}, Target Number 2	!! !!!!! !!!!!!

Explanation	Your program needs to search for the key in the given array and when it is found the in the list it needs to print the position. According to the position we need to print the output with ! Sign.

6. Your program need to accept a string (alphanumeric) includes white spaces also.

	Input	Output
Example 1	application Testing sit Test app H e be o n	TESTING TEST E
Explanation	Your program needs to print the second word in upper case format from the given input. For the test case 1, find first white space and print the next to it and stop it when the next white space occurs. By using ASCII values, if the range is between 65 to 90 then print the character same, if the character ASCII between the range of 97 to 122 then convert that into upper case and print the character.	

Exercises

	Input	Output
Problem 1	Appl18ication89 Woring147	1889 147
Description	Given string is alphanumeric; You need to extract the digits from the given string. For test case 1, Appl18ication89 having the digits as 1889 so you need to print that as output.	
	Input	Output
Problem 2	application testing	5 2
Description	Given string is lower case string, You need to find the vowels count from the given string. For the test case 1 there are 5 vowels (a,e,i,o,u) are present so the output is 5.	

7. The program must accept an integer N as the input. The program must print the Fibonacci series in the reverse order as the output.

Boundary Condition(s): 5 <= N <= 85

	Input	Output
Example	5 12	3 2 2 1 0 89 55 34 21 13 8 5 3 2 1 1 0

8. The program must accept an integer N as the input. The program must print count of prime number.

1 <= N <= 10^5

Test Cases

	Input	Output
Problem 1	10,30 10,100	6- [11,13,17,19,23,29] 21- [11,13,17,19,23,29 ….]
Description	You need to print the count of prime number count between two limits and Prime numbers.	

PART – B

1. Write a C program to implement STACK to perform the PUSH, POP and DISPLAY operations. [Implement the 10 size]

2. Write a C program to implement ordinary QUEUE to perform the insertion, deletion and display operations. [Operations with Array size of 12].

3. Your Program need to accept the alphanumeric string and you have print the output in the following manner Hebeon Tech -- V: 4 C: 6 W: 1

	Input	Output
Example 1	mango tes mt	ae ns g* o*
Example 2	run working rw	uo nr *k *i *n *g
Example 3	Application Target: 4	Applicanoit
Explanation	You need reverse the k characters in the reverse order from the right side of the given array. For the given test last four characters are tion when they reversed noit. So you need print those characters in reverse order and first characters will be same.	

4. Mr Jack has created a rectangle box with some rows(r) and columns(c). He has placed different numbers on the rectangle box in each cell. Now Jack wants to find out all the numbers that are not placed in the edges and further Jack wants to add those numbers to

get a single result as output i.e. Jack wants the numbers that have a number above, a number below to it, the number on the left and a number on the right.

	Input	Output
Example 1	18 5 5 21 23 24 1 25 8 5 15 17 23 4 29 2	45
Explanation	The elements which are not present along the border are 24 1 5 15. Hence the output is 24+1+5+15 = 45.	

	Input	Output
Example 2	5 6 93 60 84 26 22 95 99 96 86 90 34 0 0 83 63 10 74 75 36 35 98 4 22 18 20 8 27 94 64 30	695

Exercises

	Input	Output
Problem 1	1 2 3 4 5 6 7 8 9	15
Description	You need to identify the diagonal elements from the given multi-dimensional array and print the sum of them. For the given test you need add the diagonal elements 1 + 5 + 9 -- 15.	

	Input	Output
Problem 2	1 2 3 41 5 6 7 87 9	3 41 87
Description	You need to identify the large number from each row in the given input. For the given test case in the first row the large number is 3, second row large number is 41 and third row the large number is 87 so that output will be 3 41 87.	

5. Write a C++ program to compute the area of circle, rectangle and triangle (given with 3sides) by overloading the area ( ) function.

Write a C++ program to add i) two integer numbers ii) two float numbers iii) One integer and one float numbers by using function overloading concept.

6. The program must accept a string S as the input. The program must toggle the case ofvowels in the string S. Then the program must print the modified string as the output.

Boundary conditions	1 <= Length of S <= 100	
Example 1	Input EquilIbriUm	Output eqUIlibrIum
Explanation	The vowels in the string "EquilIbriUm" are 'E', 'u', 'i', 'I', 'i' and 'U'. So toggle the case of all the vowels in the string "EquilIbriUm". Hence the output is eqUIlibrIum	
Example 2	Input JUNKVIRUS	Output JuNKViRuS

Exercises

Problem 1	Input orange working	Output puboif apuojoi
Description	You need to print the next vowel in the alphabet list if the current character is consonant and you need to print the consonant for the vowel in the alphabet list.	

7. Write a C program to print the following pattern

```
1                       A
2 3                     B C
4 5 6                   D E F
7 8 9 10                G H I J
11 12 13 14 15          K L M N O
```

8. The program must accept an integer N as the input. The program must print the square root of each digit in N with the precision up to 2 decimal places as the output.

	Input	**Output**
Problem	a. 14689025 b. 1357935	a. 1695 b. 1
Description	▪ For input a, The adjacent digit of 1 is 4 (even number). So 1 is printed. The adjacent digits of 4 are 1 and 6 (only 6 is even). So 4 is not printed. The adjacent digits of 6 are 4 and 8 (both are even numbers). So 6 is	

printed.
The adjacent digits of 8 are 6 and 9 (only 6 is even). So 8 is notprinted.
The adjacent digits of 9 are 8 and 0 (both are even numbers). So 9 isprinted.
The adjacent digits of 0 are 9 and 2 (only 2 is even). So 0 is notprinted.
The adjacent digits of 2 are 0 and 5 (only 0 is even). So 2 is notprinted.
The adjacent digit of 5 is 2 (even number).
So 5 is printed.Hence the output is 1695.

- For test input b, then you need to print -1.

SOFT SKILLS

Contact Hours/ Week	: -	Credits :	0.0
Total Lecture Hours	: 36	CIE Marks :	50
Total Tutorial Hours	: 00	SEE Marks :	50
Sub. Code	: HSS08		

COURSE OBJECTIVES

- To make the students aware of the importance of soft skills in the present-day business world and work environment
- To learn the science behind picking up any skill quickly
- To help students realize as well as develop key soft skills interviewers look for – such as change management, professionalism, inter- and intra-personal skills, adaptability etc.
- To develop effective resumes (paper-based as well as video)
- To understand the importance of and create an effective digital footprint
- To provide simulated Group Discussion and Personal Interview experience based on the models adopted by reputed companies.
- To understand professional etiquette to be displayed in workplaces.
- To learn to introspect over one's strengths and weaknesses, and apply them effectively for career growth

METHODOLOGY

Interactive instructor led session with audio-visual aids / case studies

Day	#	Topic	Sub-topics covered	Duration (Hrs)
1	1	How to pick up skills faster?	i) Knowledge v/s. skill ii) Skill introspection iii) Skill acquisition iv) "The 10,000 hours rule" and the converse	2
	2	Interpersonal	Social Interaction	2

		and Intrapersonal skill building	i) Interpersonal Communication ii) Peer Communication iii) Bonding iv) Types of social interaction Emotional Management Responsibility i) Types of responsibilities ii) Moral and personal responsibilities	
	3	Professional etiquette	Workplace etiquette - meeting room, pantry, cubicle Dining etiquette; Telephone etiquette; Email and Business correspondence etiquette	2
2	4	Change Management	i) Who moved my Cheese? ii) Tolerance of change and uncertainty iii) Joining the bandwagon iv) Adapting change for growth – overcoming inhibition v) Adapt to changes (tolerance of change and uncertainty) vi) Adaptability Curve vii) Survivor syndrome	2
	5	Creating a digital footprint	i) How what you post online / information online can affect people's and recruiter's perception about you ii) Usage of LinkedIn to further one's career prospects iii) Managing content that one posts on platforms like Twitter, Facebook, Instagram etc. to create positive footprint about oneself iv) Why is it important to leave a digital footprint?	2
	6	Time Management	i) Prioritization - Time Busters ii) Procrastination iii) Scheduling iv) Multitasking v) Monitoring vi) Working under pressure and adhering to deadlines	2
3	7	Group Discussion - Basics	i) Importance of GD round ii) Skills assessed in a GD iii) How to ace a GD iv) Do's and Don'ts in a GD v) Idea generation techniques vi) One mock GD involving 12 volunteers, facilitated by the trainer	2
	8	Personal Interview -	i) Self-introduction practice. ii) Body language	2

		Basics	– especially grooming - for personal interview. iii) Personal interview – FAQs discussion.	
	9	Building a resume from scratch	i) How to write a good and impressive Resume. ii) Important aspects of an impressive resume. iii) Sample template and formatting ideas.	2
4	10	Group Discussion - Advanced	i) GD sample Video with analysis and discussion. ii) GD Do's and Don'ts – Worksheet practice. iii) Role plays for Do's and Don'ts. iv) Idea generation – worksheet practice.	3
	11	Personal Interview - Advanced	i) Extensive discussion on PI FAQs. ii) Interview questions from based on resume – discussion iii) PI Videos - discussion and analysis. iv) Highlighting successful answers for PI-questions. v) Body language during a personal interview. vi) Unconventional types of interviews (Stress panel, MR, Guesstimation)	3
5	12	Resume Writing - Workshop (Drafting a paper-based as well as a video resume)	i) Resume writing – Worksheet practice. ii) 3 stage Resume drafting iii) Rough draft-1. iv) Rough draft -2. v) Fair draft. vi) Discussion on specific aspects of an impressive Resume. vii) Creating a video resume	3
	13	Setting and achieving targets	i) Ambition, goal, passion and career objective –difference ii) SMART goals and Action plans iii) Obstacles -Failure management (case studies)	1.5
	14	Introspection	i) Identify your USP - Unique Selling Proposition ii) Recognize your strengths and weakness (SWOT) iii) Nurture strengths iv) Fixing weakness v) Overcoming your complex vi) Confidence building	1.5
6	15	Group Discussion - Mock	i) Mock Group Discussions featuring groups of 10 people, with each GD lasting for 15 minutes. ii) Detailed feedback for each participant	3

			iii) Introspection by the audience to add value to the GD	
	16	Personal Interview - Mock	i) Mock personal interview for a sample set of candidates ii) Simulate the real personal interview experience. iii) Individual feedback and areas of improvements are shared.	3

ASSESSMENTS PROVIDED

The following assessments are integrated into the training programme to best judge a student's proficiency on soft skills.

1. Team building tasks (Inside training hours)
2. Participation in group activities (Inside training hours)
3. Psychometric test
4. Creating a resume
5. Creating an effective LinkedIn profile
6. Mock Group Discussion (Inside training hours)

REFERENCE MATERIAL

1. 'Who moved my Cheese?' by Spencer Johnson
2. 'Outliers' by Malcolm Gladwell
3. 'Emotional Intelligence' by Daniel Goleman
4. 'Road Less Travelled' by Scott Peck M.
5. 'How to win friends and influence people' by Dale Carnegie

COURSE OUTCOMES

On successful completion of this course, students will be able to:

- Display key soft skills expected by recruiters
- Be able to apply scientific methods to learn any skill quickly
- Participate in Group Discussions and Personal Interviews effectively
- Create effective resumes that impress interviewers (paper-based as well as video)
- Apply professional etiquette to be displayed in various workplace scenarios
- Set and achieve targets – work-place based as well as personal

PROJECT MANAGEMENT

Contact Hours/ Week :	3+0+0	Credits :	3.0
Total Lecture Hours :	39	CIE Marks :	50
Total Tutorial Hours :	0	SEE Marks :	50
Sub. Code :	HSS07B		

Course Objectives: This course will enable students to:

This course will enable students to:

1. To understand the scope, timing and quality of the project, at all-time focused on project success as defined by stake holders.
2. To Identify and analysis the project goals, constraints, deliverables, performance criteria, control needs and resource requirement in consultation with stake holders.
3. To implement the process of project management, life cycle and the embodied concepts, tools and techniques in order to achieve project success.
4. To understand the team efforts and stakeholders in professional manner, respecting differences, to ensure a collaborative project environment
5. To apply project management practices to be launch of new Programs, initiatives, products, services and events relative to the needs of stakeholders.

Unit I

Introduction: Project, Program, and portfolio, Operations management, Product life cycle, Project life cycle, Project management life cycle, Ten Knowledge areas, Role of project manager and PMO, Ten Project Knowledge areas with their associated processes

Project Integration Management: Develop project charter, Develop project management plan, Direct & manage project work, Monitor control project, Perform integrated change control, Close project / phase. **7 Hours**

Unit II

Project scope management: Plan scope management, Collect requirements, Define scope, Create WBS, Validate Scope, Control scope

Project Schedule management: Plan schedule management, Define activities, Sequence activities, Estimate activity durations, Develop schedule, and Control schedule. **8 Hours**

Unit III

Project cost management: Plan cost management, Estimate cost, Determine budget, and Control costs.

Project quality management: Plan quality management, Manage quality and Control quality

Project resource management: Plan resource management, Estimate activity resources, Acquire resources, Develop team, Manage team and Control resources **8 Hours**

Unit IV

Project communication management: Plan communication management plan, Manage communications and Monitor communications

Project risk management: Plan risk management, Identify risks, Perform qualitative risk analysis, Perform quantitative risk analysis, Plan risk responses, Implement risk responses and Monitor risks.

Project Procurement management: Plan procurement management, Conduct procurement, Control procurements. **8 Hours**

Unit V

Project stake holder management: Identify stake holders, Plan stake holder management, Manage stake holder engagement, and Monitor stake holder engagement

A case study relevant to the domain knowledge of the department is taken up to explain the principles of the project management as brought out above. **8 Hours**

TEXT BOOK:

1	PMBOK	Project Management Book of Knowledge 6th Edition, PMI, USA

REFERENCE BOOK:

1	Prasanna Chandra	Project Planning: Analysis, Selection, Implementation and Review, MC- Graw Hill Education, 8th Edition, 2017.

Course Outcomes: After the completion of this course, student will be able to:

CO1: Outline the procedure for analyzing a project
CO2: Define the rational of work break structure.
CO3: Illustrate the use of network techniques for successful project implementation.
CO4: Design the procedure for overall financial analysis of the project alongside the resources requirement and ideal quality.
CO5: Identify the sources and process for communication, risk management and procurement
CO6: Build a comprehensive plan for the stakeholder management.

PROCESS CONTROL SYSTEMS

Contact Hours/ Week	: 4+1+0(L+T+P)	Credits :	4.5
Total Lecture Hours	: 52	CIE Marks :	50
Total Tutorial Hours	: 13	SEE Marks :	50
Sub. Code	: 6REI01		

Course Objectives: This course will enable students to:

1 Understand the evaluation of process control system and different types of controller modes.
2 Analyze analog controller design
3 Differentiate control loops and tuning methods
4 Understand operation of final control elements
5 Understand the overview of P&ID symbols

Unit-I

Controller Principles: Introduction, Objectives, Control system Evaluation Process-Control Block Diagram, Process Characteristics, Process Equation, Process Load, Process Lag, Self-Regulation. Control System Parameters: Error, Variable Range, Control Range, Control Lag, Dead Time, Cycling.

Controller Modes: Discontinuous Controller Modes: Two-Position (ON/OFF) Mode, Multi-position Mode, Floating Control Mode. Continuous Controller Modes: Proportional Control Mode, Integral Control Mode, Derivative Control Mode, Composite Control Modes, Proportional-Integral (PI) Control Mode, Proportional-Derivative (PD) Control Mode, Proportional- Integral- Derivative (PID) Control Mode/ Three Mode Controller. **12+3 Hours**

Unit-II

Analog Controllers: Introduction, General features, Electronic controllers: Error Detector, On/Off controller, Proportional controller, Integral controller, derivative controller, PI controller, PD controller, PID controller. Design considerations, Pneumatic controllers.

10+3 Hours

Unit-III

Control loop Characteristics: Introduction, Control system configurations, feed forward, single, multivariable, Ratio and cascade control system. Control system quality, stability, Process loop tuning: Open-Loop Transient Response Method and Ziegler-Nichols Method.

10+2 Hours

Unit-IV

Final Control: Final control operation. Converters-I/P,P/I. Actuators – pneumatic, Hydraulic and electric actuators, control valve- Valve types, characteristics, capacity of a control valve, valve sizing and selection, Materials, Determining pressure drop across the valve, Concerns: Noise, cavitations, choking, flashing, Upstream Pressure Increase and

Hysteresis. valve rangebality, selection factors, sequencing control valves, viscosity corrections. Valve and Actuator Selection Example.

10+2 Hours

Unit-V

Process and Instrumentation Drawing Symbols &Diagrams: P&I Diagram objectives, Characteristics Line Symbols , Identification Letters , Valve Symbols , General Instrument or Function Symbols , Transmitter Symbols , Miscellaneous Symbols Interlock logic symbols. Graphic symbols. **10+3 Hours**

TEXT BOOKS

1	Curtis D. Johnson	Process Control Instrumentation Technology, PHI, 7th Edition, 2003
2	S K Singh	Computer Aided Process Control, PHI ,2004
3	Stephano Poulos G	Chemical Process Control: An Introduction to Theory and Practice, PHI. 1998

REFERENCE BOOKS

1	N.A. Anderson	Instrumentation for Process measurement and control, CRC Press. 2001
2	Bela G. Liptak	Instrument Engineers Handbook, Process Measurement volume1; Process Control volume2, Chilton Book Company/ Radnor, 3rd Edition, Pennsylyania,1969.

Course Outcomes: After the completion of this course, students will be able to:

CO1: Identify and select different types of control mode for process applications.

CO2: Analyse and design Analog controller for a given process to be controlled.

CO3: Identify different types of control systems and apply various controller tuning methods to tune them.

CO4: Identify, select various control valves that are required for process industries.

CO5: Apply the knowledge of P &ID symbols to represent any process.

ADVANCED CONTROL SYSTEMS

Contact Hours/ Week	: 4+1+0(L+T+P)	Credits :	4.5
Total Lecture Hours	: 52	CIE Marks :	50
Total Tutorial Hours	: 13	SEE Marks :	50
Sub. Code	: 6REI02		

Course Objectives: This course will enable students to:

1. Impart the knowledge in design of compensator in frequency-based approach.
2. Apply the knowledge of Z-Transform to study the stability of linear time-invariant discrete time system
3. To study the behavior of linear time invariant control system and develop an optimal control solution for a given control system.
4. Study the various non- linear functions presents in control systems

Unit-I

Compensation techniques: Introduction, Compensating networks (lead, lag, lead lag network), and design of compensator using Bode and Root Locus Techniques.Design of Proportional (P), Integral (I), Derivative (D), PI, PD, PID controllers. **11+3 Hours**

Unit-II

Discrete- time systems & the z- transform method: Introduction to discrete systems, Review of Z- Transforms, solution of difference equation, Pulse Transfer Function, time response analysis of discrete time systems, mapping between the S-plane and the Z-plane, Stability analysis in the Z- plane (Jury's and bilinear transformation).

10+2 Hours

Unit –III

State space analysis of system: Introduction, state space model of linear system from differential equations, state space model for physical systems, state space model from transfer function and vice versa, state space technique to continuous and discrete time system, state transition matrix, discrete time state space equations, discrete data transfer function, discretization of continuous time state space equations. **13+3 Hours**

Unit-IV

Optimal and adaptive control systems: Controllability, observability for continuous system and discrete system, control system design via pole placement by state feedback, state observer **8+3 Hours**

Unit-V

Describing function analysis of non-linear control systems: Introduction to non-linear control systems, characteristics of non linear systems, classification of nonlinearities, Describing function analysis and Stability of Non-linear control systems: ideal relay, dead zone, relay with dead zone, saturation, relay with hysteresis and dead zone. **10+2 Hours**

TEXT BOOKS:

1	K.Ogata	Modern Control Engineering, PHI, 1996, 2nd Edition.
2	K.Ogata	Discrete Time Control Systems, PHI, 1996, 2nd Edition.
3	K P Mohan das	Modern control engineering, Sanguine technical publishers, 2006, 3rd Edition.

REFERENCE BOOKS:

1	Madan Gopal	Digital control and state variables methods, PHI, 1997, 3rd Edition.
2	Nagoor Kani	Advanced Control Theory, RBA Publications, 2009, 2nd Edition.

Course Outcomes: After the completion of this course, students will be able to:

CO1: Identify and select the appropriate compensator for the design of linear time-invariant control system by frequency & time domain approach.

CO2: Analyse the stability of linear time-invariant discrete time system using Z transform.

CO3: Formulate and analyse state models for linear systems to study the behaviour of linear time invariant control system and solve problems.

CO4: Develop an optimal control solution for a given control problem, to transfer of any initial state of the system to any other desired state. Determine the system state by measuring the output for finite length of time and solve problems.

CO5: Identify and analyse the various nonlinear control systems using describing functions

CONTROL SYSTEM LAB

Lab Hours/ Week	: 0+0+3(L+T+P)	Credits :	1.5
Sub. Code	: 6REIL1	CIE Marks :	50
		SEE Marks :	50

Course objectives: This course will enable students to:

1. Analyse, Design and implement various controller and compensator.

List of the Experiment

1. Design of 2nd order system using RLC circuit
2. Design of P, PI, PID controller in frequency domain
3. Design of Lead, Lag and Lead-lag compensator networks.
4. Design of compensator transfer function in frequency domain for given system transfer function and specifications.
5. Design of compensator transfer function in time domain for given system transfer function and specifications.
6. Design and study the responses of P and PI controller using op-amp
7. Design a controllability and observability of a given system
8. Realization of nonlinear functions using OPAMPS
9. Characteristics of Synchros

Experiments 1 to 8 are for both Continuous Internal Evaluation (CIE) and Semester End Examination (SEE). Experiments 9 is for Continuous Internal Evaluation (CIE) only.

Open Ended Experiments:

1. Determine the transfer function of armature-controlled DC motor

Additional learning Experiments:

1. Design of dead beat and Dahlin Controller verify the result using MATLAB.

Course outcomes: After the completion of this course, students will be able to:

CO1: Design and test controller circuits.

CO2: Design and analyze compensation networks and conduct stability analysis of linear control system using graphical method (Bode plot and Root locus technique)

CO3: Function effectively as an individual, and as a member or leader in a team

PROCESS INSTRUMENTATION LAB

Contact Hours/ Week	: 0+0+3(L+T+P)	Credits :	1.5
Sub. Code	: 6REIL2	CIE Marks :	50
		SEE Marks :	50

Course Objective: This course will enable students to
Design and test the signal conditioning circuits to convert physical variables into an electrical signal.

List of Experiments:

1. Thermocouple Signal conditioning circuit for measurement of temperature
2. Strain Gauge Signal conditioning circuit for measurement of strain
3. Load cell Signal conditioning circuit for measurement of Load
4. LVDT Signal conditioning circuit for measurement of linear displacement
5. AD 590 Signal conditioning circuit for measurement of temperature.
6. Signal conditioning circuit of pressure sensor for measurement of pressure
7. Signal conditioning circuit of capacitive transducers for measurement of capacitance.
8. Signal conditioning circuit of piezoelectric sensor for measurement of force.

Additional learning Experiments:

1. To design signal conditioning circuit for an Hall Effect sensor

Open ended experiments:

1. Measurement of Altitude and temperature using BMP sensor.
2. PIR sensor for motion detection and interfaced to IoT.

Course Outcomes: After completion of the course, students will be able to

CO1: Design and test signal conditioning circuits for temperature, Strain, displacement and Load sensor
CO2: Design and test signal conditioning circuit for measurement of pressure
CO3: Design and test signal conditioning circuit for measurement of capacitance

APTITUDE RELATED ANALYTICAL SKILLS

Contact Hours/ Week	: -	Credit :	1.0
Total Lecture Hours	: 36	CIE Marks :	50
Sub. Code	: ARAS	SEE Marks :	50

MODULES COVERED:

Sl. No.	Module covered	Duration (in hrs.)
1	Quantitative Aptitude	16
2	Verbal Reasoning	08
3	Logical Reasoning	08
4	Test taking strategies to crack recruiter tests	02
5	Post-Training Assessment along with a	02
	Total Course	**36**

Methodology : Instructor led – Concepts with guided question solving, assignments and homework assessments

Detailed syllabus:

1. Quantitative Aptitude (with focus on questions from top recruiters)

– 16 hrs

a) Number System
- Classification of numbers
- Divisibility tests
- Power cycles and remainders
- Factors and multiples
- Applications of HCF and LCM

b) Profit and Loss, Partnerships and Averages
- Basic terminology in Profit and Loss
- Partnerships
- Averages and weighted averages
- Mixtures and alligations

c) Time and Work
- Working with different efficiencies
- Pipes and cisterns
- Work equivalence
- Division of wages

d) Time, Speed and Distance
- Basics of Time Speed and Distance
- Relative Speed
- Problems based on trains
- Problems based on boats and streams
- Problems based on Races

e) Percentages, Simple and Compound Interest

- Percentages as fractions and decimals
- Percentage increase / decrease
- Simple interest and compound interest
- Relationship between simple and compound interest

f) Permutation, Combination and Probability
- Fundamental counting principle
- Basics of permutation and combination
- Computation of permutation
- Circular permutation
- Computation of combination
- Probability

g) Logarithms, Progressions, Geometry and Quadratic Equations
- Logarithms
- Progressions – Arithmetic, Geometric and Harmonic
- Geometry
- Mensuration
- Quadratic equations

2.Verbal Reasoning (with focus on questions from top recruiters)–8 hrs

a) Reading Comprehension –
- Eyespan
- Speed reading techniques
- Types of questions
- Comprehension strategies

b) Sentence Correction –
- Subject-Verb Agreement
- Parallelism
- Modifiers
- Pronoun Antecedent Agreement
- Verb Time Sequence
- Comparison
- Determiners
- Prepositions

c) Vocabulary –
- Etymology of words
- Prefix and suffix
- Memory techniques to remember words
- Synonyms and antonyms
- Analogy

d) Sentence Completion and Para Jumbles –
- Sentence completion – single blank and double blank questions
- Parajumbles – Moving and anchored jumbles

3.Logical Reasoning (with focus on questions from top recruiters)-8hrs

a) Coding and Decoding, Series, Analogy, Odd Man Out and Visual Reasoning
    - Coding and decoding
    - Number and alphabet series
    - Analogy
    - Odd man out
    - Visual Reasoning

b) Data Arrangements and Blood Relations
    - Linear, circular and distribution arrangements
    - Blood Relations

c) Data interpretation and Data Sufficiency
    - Tables
    - Pie Charts
    - Bar Graphs
    - Data Sufficiency

d) Clocks, Calendars, Direction sense and Cubes
    - Clocks
    - Calendars (Conventional and shortcut methods to find day of a date)
    - Cubes
    - Direction Sense

4.Test taking strategies – 2 hrs

This module will focus on:

- Understanding patterns of tests (Adaptive, non adaptive, navigation – intra sectional, inter sectional)
- Best strategies to maximize scores and clear cut-offs
- Shortcut strategies on Quantitative Aptitude, Logical Reasoning as well as Verbal Ability to ace sections

5.Post Training Assessment with debrief – 2 hrs

An assessment that tests a student on all three sections of Aptitude, followed a detailed student-wise analysis based on:

- Cut-off
- Percentile w.r.t the batch
- Percentile w.r.t. the college
- Corrective measures to be taken to improve the score

In class, there will be a debrief on how the test should have been taken by an ideal test taker to navigate through the difficulties and ace the cut-off.

6.Tests outside training schedule

An ideal aptitude training course is a mix of classroom learning / guided question solving, followed by self-practice. The 'training duration' focuses mainly on laying strong foundations on concepts and ability to solve questions on major aptitude topics. Significant

amount of practice is also provided to students through online tests in the form of:

1. Pre-Assessment test
2. Full-length practice tests
3. Company specific tests (patterns and question types of major recruiters should be given exposure to)

2. 'Quantitative Aptitude for Competitive Examinations' by R S Agarwal
3. 'The Pearson Guide to Verbal Ability' by Nisht K Sinha

PROFESSIONAL ELECTIVES

THIN FILM INSTRUMENTATION

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE02		

Course objectives: To study the basics of vacuum technology, thin film deposition techniques and characterization techniques of thin films.

Unit-I

Kinetic Theory of gases and Vacuum Terminology: Ideal gas equations, Mean free path, Conduction of gas flow, Molecular flow, molecular velocity or speeds, Gas impingement on surfaces, Gas flow Regimes, adsorption, out gasing & throughput. **7 Hours**

Unit -II

Rotary, Roots and sorption Pumps: Introduction, Rotary Vacuum pumps, Roots Pumps & Sorption pumps

High Vacuum Pumps: Principles, Selection of backing Pumps, Selection of vapour fluid, Diffusion pump fluids, Magnifications to the Diffusion pumps, Turbo molecular pumps, cryopumps, sputter ion pump & integrated vapor pumps. **8 Hours**

Unit -III

Measurement of Vacuum: Introduction, Different types of Vacuum gauges: Hydrostatic gauges, Thermal conductivity gauges, Ionization gauges, capacitance gauge and Spinning rotor gauge.

Leak Detection Techniques: Introduction, Leak rate & units, Rate Rise measurement, Leak Detector: Tesla Coil, Halogen leak Detector, Thermal Conductivity gauge, Helium leak detector. **8 Hours**

Unit -IV

Thin Film Deposition Techniques : Introduction, Different techniques of deposition Physical vapor Deposition (PVD): Introduction, Resistive Evaporation, flash Evaporation, E-beam Evaporation, Sputter deposition- DC diode bias, Triode, Magnetron, RF sputtering, Chemical Deposition Methods: Introduction, overview and history-Electro deposition (Electrolytic, Electro less, Anodization), Chemical Vapor deposition: Plasma CVD, PE CVD and LP CVD.**8Hours**

Unit -V

Thin film Characterization: Overview of thin film characterization, **Imaging** techniques: Scanning electron microscopy (SEM), AFM, **Structural** properties: X-ray diffraction (XRD), **Electrical** properties: Resistance/resistivity – four point probe, Vander Pauw, **Mechanical** properties: Stress-curvature measurements. **8 Hours**

TEXT BOOKS:

1	John A. Venables	Introduction to Surface and Thin Films Processes, Cambridge University Press, 2000.
2	M. Ohring	Materials Science of Thin Films: Deposition and Structure, 2nd Edition, Academic Press, 2002.
3	Leon I. Maissel and Reinhard Glang.	Handbook of Thin Film Technology, McGraw-Hill Publishing Company, New Delhi (1970)

Course outcomes: The Student will be able to:

CO1: Apply the knowledge of thin film coating techniques to prepare thin film of various materials (metals, semiconductor and insulators).

CO2: Understand the physical/electrical and structural properties of semiconductor materials and various defects generated by deposition methods.

CO3: Apply the characterization techniques in analyzing the material properties

CO4: Develop thin film sensors.

OPTICAL INSTRUMENTATION

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE03		

Course objectives: To study the basics of various types of optical fibers, manufacturing methods, properties and signal transmission techniques.

Unit-I

Overview of Optical Fiber Communications: Historical perspective, Motivations for Light wave Communications, Optical Spectral Bands, The basic Communications system, measurement of information and capacity of a communication channel, advantages of optical fiber communications, Ray theory & applications, Total Internal Reflection, Acceptance angle, Numerical Aperture, Skew rays, Applications of Fiber optic Communications, communication super highway architecture. **7 Hours**

Unit-II

Optic Fiber Waveguides: Step Index Fiber, Graded–Index Fiber, Modes and fields in Step Index and graded index Fibers, Fiber materials — Glass, Halide, Active glass, Chalgenide glass, Plastic optical fibers,

Photonic crystal fibers, Fiber manufacturing techniques, Fiber optic cables. **8 Hours**

Unit-III

Signal degradation in optical fibers: Attenuation, Absorption losses, Scattering losses, Bending Losses, Core and Cladding losses, Signal Distortion in Optical Wave guides-Information Capacity determination – Group Delay-Material Dispersion, Wave guide Dispersion, Signal distortion in SM fibers-Polarization Mode dispersion, Inter modal dispersion, Pulse Broadening in GI fibers-Mode Coupling–Design Optimization of SM fibers-RI profile and cut-off wavelength.

8 Hours

Unit-IV

Optical sources: Direct and indirect Band gap materials, Light Emitting Diodes, LED operating characteristics, Laser principles, Laser Diode, Laser Diode operating characteristics, Narrow spectral width and tunable laser diodes, Optical amplifiers.

Couplers and connectors: Connector Principles, Fiber-End preparation, Splices, Connectors, Source Coupling. **8 Hours**

Unit-V

Optical Detectors: PIN and APD diodes: Photo detector noise, SNR, Detector Response time, Avalanche Multiplication Noise, Structures for InGaAs APDs, Temperature Effect on Avalanche Gain, Comparison of Photo detectors, Fundamental Receiver Operation, preamplifiers, Error Sources Receiver Configuration Probability of Error Quantum limit.

8 Hours

TEXT BOOKS:

1	Gerd Keiser	Optical Fiber Communication, McGraw –Hill International, Singapore, 3rded., 2000
2	Joseph C. Palais, 4th Edition,	Fibre Optic Communications, Pearson Education, 5th Edition, 2004.

Course outcomes: The students will be able to:

CO1: Analyze optical communication system.

CO2: Understand the various properties and losses of optical fibers.

CO3: Understand and select optical detectors and sources for various applications.

SMART SENSORS

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	:39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE04		

Course objectives: To study various smart sensing techniques, packaging and testing methods of smart sensors.

Unit I

BASICS OF SMART SENSORS & MICROMACHINING: Introduction, Mechanical-Electronic transitions in sensing, nature of sensors, overview of smart sensing and control systems, integration of micromachining and microelectronics, introduction to micromachining, bulk micromachining, wafer bonding, surface micromachining, LIGA process, laser micromaching, miocromilling, Dry etching process:- plasma and reactive ion etching. **8 Hours**

Unit II

MCUS AND DSPS TO INCREASE SENSOR IQ: Introduction, amplification and signal conditioning, separate versus integrated signal conditioning, digital conversion, MCU control, MCUs for sensor interface, DSP control, Techniques and Systems Considerations, sensor integration. **8 Hours**

Unit III

COMMUNICATIONS FOR SMART SENSORS: Introduction: Definitions and Background, Sources (Organizations) and Standards, Automotive Protocols, Industrial Networks, Office/Building Automation, Home Automation, Protocols in Silicon, Other Aspects of Network Communications. **7 Hours**

Unit IV

SENSOR COMMUNICATION & MEMS: Introduction, Wireless zone sensing, RF sensing: Surface Acoustical Wave Devices, Radar, Global Positioning System, Remote Emissions Sensing, Remote Keyless Entry, intelligent transportation system, RF-ID, Micromachined Actuators:- Microvalves, Micropumps, Micronozzles, Microoptics, microgrippers, microprobes, micromirrors, FEDs. **8 Hours**

Unit V

PACKAGING, TESTING AND RELIABILITY OF SMART SENSORS: Introduction, Semiconductor packaging applied to sensors, hybrid packaging, packaging for monolithic sensors, reliability implications, testing,

Unit Standards for Smart Sensors: Introduction, setting the standards for smart sensors and systems, IEEE 1451.1, IEEE 1451.2, IEEE P1451.3, IEEE 1451.4, extending the systems to network**8 Hours**

TEXT BOOK:

1	Randy Frank	Understanding Smart Sensors, 2nd Edition. Artech House Publications, 2000.

REFERENCE BOOK:

1	Paul W. Chapman	Smart Sensors**,** ISA Press.

Course outcomes: Student will be able to:

CO1: Explain the process of smart sensor development.

CO2: Understand the method of improvement of sensor IQ using microcontroller and DSP.

CO3: Analyse different communication protocols for smart sensors. Understand the operation of micro machined devices.

AIR CRAFT INSTRUMENTATION

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE05		

Course objectives: To study different measuring instruments and indicators used in aircrafts.

Unit I

Aircraft instruments: Introduction, instruments grouping, instruments display, quantitative and qualitative displays, director displays, cockpit layout, standard atmosphere, basic air data system, pitot static probe, heating circuit arrangements. **8 Hours**

Unit II

Air data instruments: Air speed indicator, square law characteristics, match/air speed indicator, altimeters, effects of atmospheric temperatures, vertical air speed indicators, air temperature indicator, air data alternating system, match warning system, altitude alert system **8 Hours**

Unit III

Gyroscopic flight instruments: The gyroscope and its properties, determining direction of precession, limitations of gyroscopes, operating gyroscopic instruments, gyro horizons, erection systems for

gyro horizons, errors due to acceleration and turning, direction indicator, turn and bank indicator. **8 Hours**

Unit IV

Fuel quantity indicating systems: capacitance type system, indicating system, affects of fuel temperature changes, measurement of fuel quantity by weight, construction of probes, and location of probes. **7 Hours**

Unit V

Engine power and control instruments: RPM measurement, generator and indicating system, tacho probe and indicator system, torque monitoring, exhaust gas temperature, engine pressure ratio measurement, fuel flow measurement, integrated flow meter system. **8 Hours**

TEXT BOOK:

1	EHJ Pallet Longman.	Aircraft instruments and integrated systems, Scientific & Technical, 1992

REFERENCE BOOKS:

1	WH Coulthard.	Air craft Instrument Design, Pitman & sons, 1981.
2	C A Williams.	Aircraft Instruments, Golgotia Publications, New Delhi.

Course outcomes: The student will be able to:

CO1: Understand the necessity of various parameters to be analysed in aircraft.

CO1: Understand the principle of operation of air speed indicator.

CO1: Explain the operation of gyroscope and its application in aircraft.

CO1: Understand the technique of measuring fuel quantity and its indication

INDUSTRIAL INSTRUMENTATION

Contact Hours/ Week	: 3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	: 39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE06		

Course objectives: To study the principle of operation, construction and working of different automatic process control systems and nuclear reactor instrumentation.

Unit-I

Definition, Classification of Variables & Measurement: Classification of variables, Classification by measurement signals, measurement signals for variables, Types of measurement, Definition & Sources of Error, Classification of errors, Evaluation of Data. **7 Hours**

Unit-II

Measuring & Transmission methods: True Significance of the Measurement, Significance of the measurement on the Process, Factors to be accomplished as a result of Measurement, Factors involved in obtaining this measurement, Measuring methods, Transmission (Telemetering) methods, Hydraulic & Magnetic types, Pneumatic types, Electric & Electronic types. **8 Hours**

Unit-III

Steam power plant instrumentation: Instrument selection, primary and secondary plant measurement, Automatic Control systems: Feed water Control of all types, Steam –temperature control , Auxiliary System Controls, Control room trends, Data logging and computing equipment. **8 Hours**

Unit-IV

Food industry instrumentation: Instrumentation in Brewing, Canning industry, Baking industry, Dairy industries. **8 Hours**

Unit-V

Paper and Pulp Instrumentation: Different types of pulping, Pulp bleaching, Pulp blending, wet end and drier instrumentation.

Nuclear Reactor Instrumentation: Nuclear reactor dynamics, reactor instrumentation, reliability aspects of protective systems. **8 Hours**

TEXT BOOK:

1	Considine and Ross	Hand book of applied instrumentation, McGraw-Hill.

REFERENCE BOOKS:

1	Donald P. Eckman	Industrial Instrumentation, Wiley.
2	K.Krishna Murthy, S.Vijayachitra	Industrial Instruments, New Age International Publisher.
3	J.S.Smith	Food processing principles & Applications, University press (US)2004.
4	Nancy jean Sell	Process control Fundamentals for the Pulpe-Paper Industry, Tappi (June 1997)

Course outcomes: The student will be able to:

CO1: Understand the various process signals to be measured.

CO1: Explain the various techniques of transmission of signals.

CO1: Identify the various parameters to be considered for proper operation of power plant, food industry and nuclear reactors.

DIGITAL VLSI DESIGN

Contact Hours/ Week	: 3 +0 (L+T)	Credits	: 3.0
Total Lecture Hours	: 39	CIE Marks	: 50
Total Tutorial Hours	: 0	SEE Marks	: 50
Sub. Code	: REIE07		

Course objectives: The course will enable students to:

1. Design Digital ICs and analysis at different levels of abstraction.
2. Design combinational and sequential circuits using various techniques.
3. Design semiconductor memories.

Unit-I

Introduction: Introduction, Abstraction levels in Digital IC Design, VLSI Design Flow: FPGA and ASIC Design Flow, VLSI Design Styles: Full Custom Design, Standard cell based design and FPGA based design, Fabrication process flow, CMOS n-well process, Layout Design rules.

MOS Transistor: Metal Oxide Semiconductor Structure, MOS System under external bias, Structure and Operation of MOSFET. **8 Hours**

Unit-II

MOS Transistor: MOSFET Current – Voltage Characteristics, MOSFET Capacitances, Scaling the MOSFET.

MOS Inverters: Introduction, Resistive load inverter, Inverter with n-type MOSFET Load, Static CMOS Inverter an Intuitive perspective, Static Characteristics of CMOS inverter: Switching threshold, Noise Margin, Device variations, Dynamic Characteristics of CMOS inverter: Propagation delay from a design perspective, BiCMOS Inverters, Latch-up in CMOS circuits. **7 Hours**

Unit-III

Designing Combinational Logic gates in CMOS: Introduction, Static CMOS Design style: Complementary CMOS, Ratioed logic, Pass Transistor Logic, Dynamic CMOS Design Style: Dynamic Logic Basic Principles, Speed and power dissipation of Dynamic Logic, Issues in Dynamic Design, Cascading Dynamic Gates.

Designing Sequential Logic Circuits: Introduction: Timing metrics for sequential circuits, Classification of Memory elements, Static Latches and Registers: The Bistability principle, SR Flip-Flops, Multiplexer based latches, Master slave edge triggered registers. **8 Hours**

Unit-IV

Designing Sequential Logic Circuits: Dynamic Latches and Registers: Dynamic Transmission gate edge triggered registers, Clock skew and its effect on registers, C^2MOS – A Clock skew insensitive approach, Pipelining: An approach to optimize sequential circuits.

Designing Arithmetic Building Blocks: Adder: Binary Adder, *Full Adder Circuit Design Consideration:* Static Full Adder Circuit, Mirror Adder, Transmission gate based full adder, Manchester Carry chain. **8 Hours**

Unit-V

Semiconductor Memories: Introduction, Memory Classification, Memory Architecture and Building Blocks, Dynamic Random Access Memory (DRAM), Static Random Access Memory (SRAM), Read only Memories, Non Volatile Read write Memories, Memory Peripheral Circuitry: Address Decoders, Sense Amplifiers. **8 Hours**

TEXT BOOK:

1	Jan M Rabaey, Anantha Chandrakasan, Borivoje Nikolic	Digital Integrated Circuit A Design Perspective, 2nd Edition PHI.

REFERENCE BOOK:

1	Sung-Mo Kang and Yusuf Leblebici	CMOS Digital Integrated Circuits Analysis and Design, 3rd Edition, TMH publications
2	Sedra and Smith	Microelectronics, 5th Edition, Oxford University Press.
3	Douglas A Pucknell and Kamran Eshraghian.	Basic VLSI Design

Course outcomes: After the completion of this course, student will be able to:

CO1: Explain fabrication process of MOS Devices.
CO2: Analyze terminal characteristics of Metal Oxide Semiconductor Field Effect Transistors (MOSFETs).
CO3: Design and analyze digital circuits and systems at different levels of abstraction.
CO4: Design layouts for digital circuits.
CO5: Use EDA tools to design and analyze digital circuits at different levels of abstraction.
CO6: Design ROM, RAM and read write memory devices at transistor level.

MEDICAL IMAGING INSTRUMENTS

Contact Hours/ Week	:	3+0+0 (L+T+P)	Credits :	3.0
Total Lecture Hours	:	39	CIE Marks :	50
Total Tutorial Hours	:	0	SEE Marks :	50
Sub. Code	:	REIE08		

Course objectives: To study the principle and operation of various biomedical imaging instruments.

Unit-I

Introduction: Imaging Modalities-X Ray, Ultrasound and MRI.

X-RAYS: Interaction between X-Rays and matter, Intensity of an X-Ray, Attenuation, X-Ray Generators, Beam Restrictors and Grids, Intensifying screens, fluorescent screens and Image intensifiers. X-Ray detectors. **7 Hours**

Unit-II

X-RAY DIGNOSTIC METHODS: Conventional X-Ray radiography, Digital radiography, Dynamic spatial re-constructor, X-Ray image characteristics, biological effects of ionizing radiation. **8 Hours**

Unit-III

X-RAY COMPUTED TOMOGRAPHY: Basic Principle, components.

THERMAL IMAGING: Medical thermography, Infrared detectors, thermographic equipment. **8 Hours**

Unit-IV

ULTRASOUND IMAGING: Attenuation, Absorption and Scattering Generation and Detection of Ultrasound Ultrasonic transducers, Arrays, Pulse Echo systems: A mode, B mode, M mode scanners, Tissue characterization, Color Doppler flow imaging. **8 Hours**

Unit-V

RADIONUCLIDE IMAGING: Interaction of nuclear particles and matter, nuclear sources, Radionuclide generators, nuclear radiation detectors, rectilinear scanner, scintillation camera, SPECT, PET scanning technique. **8 Hours**

TEXT BOOKS:

1	Kirk shung	Principles of Medical Imaging, Academic Press.
2	Khandpur	Handbook of Biomedical Instrumentation, TMH, 2nd Edition.

Course outcomes: The student will be able to:

CO1: Understand the various methods acquiring medical images.

CO2: Understand the principle, operation and various components of X-ray, thermal, ultrasound and radionuclide imaging equipments.

BIO MEDICAL DIGITAL SIGNAL PROCESSING

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits :	3.0
Total Lecture Hours	:39	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Sub. Code	: REIE09		

Course objectives: To study the origin, characteristics and process techniques of different bio-medical signals.

Unit-I

INTRODUCTION TO BIOMEDICAL SIGNALS : The nature of biomedical signals, the action potential, origin of ECG, EEG, EMG, EOG and their characteristics, objectives of biomedical signal analysis, Difficulties in biomedical signal analysis, computer aided diagnosis, Introduction to Real Time Signal Processing, ECG and EEG Signal Processing Techniques. Computer aided diagnosis. **7 Hours**

Unit-II

LINEAR PREDICTION THEORY: The Autoregressive (AR) method, Recursive estimation of AR parameters, Spectral error measure, Adaptive segmentation, Transient detection and elimination. **8 Hours**

Unit-III

ECG SIGNAL PROCESSING: ECG data acquisition, ECG lead system, ECG parameters and their estimation: ECG QRS detection techniques, estimation of RR interval: Finite first difference method, the use of multi-scale analysis for parameter estimation of ECG waveforms, Arrhythmia analysis monitoring, long term continuous ECG recording. **8 Hours**

Unit-IV

ECG DATA REDUCTION TECHNIQUES: Direct data compression techniques, Direct ECG data compression techniques: Turing point algorithm, AZTEC algorithm, CORTES and FAN algorithm, other data compression techniques: data compression by DPCM, Data compression method comparison. **8 Hours**

Unit-V

ADAPTIVE INTERFERENCE/NOISE CANCELLATION : A review of Wiener filtering problem, Principle of an Adaptive filter, The steepest descent algorithm, the Widrow-Hoff least mean square adaptive algorithm, Adaptive noise canceller, Cancellation of 50Hz interference in ECG, Canceling Donor-heart interference in Heart-transplant electrocardiography, Cancellation of ECG signal from the electrical activity of the chest muscles, canceling of maternal ECG in fetal ECG, Cancellation of High frequency noise in Electro-surgery**.** **8 Hours**

TEXT BOOKS:

1	D C Reddy	Biomedical Signal Processing Principles and Techniques, Tata McGraw-Hill publications.
2	Rangaraj M. Rangayyan	Biomedical Signal Analysis a case study approaches, John Wiley publications.

REFERENCE BOOK:

1	Willis J.Tompkins	Biomedical Digital Signal Processing, The Prentice Hall of India publications

Course outcomes: The student will be able to

CO1: Understand the origin of bio-medical signals and their characteristics.
