   - Blood Relations

c) Data interpretation and Data Sufficiency
   - Tables
   - Pie Charts
   - Bar Graphs
   - Data Sufficiency

d) Clocks, Calendars, Direction sense and Cubes
   - Clocks
   - Calendars (Conventional and shortcut methods to find day of a date)
   - Cubes
   - Direction Sense

Module-4

Test taking strategies – 2 hrs

This module will focus on:

- Understanding patterns of tests (Adaptive, non adaptive, navigation – intra sectional, inter sectional).
- Best strategies to maximize scores and clear cut-offs.
- Shortcut strategies on Quantitative Aptitude, Logical Reasoning as well as Verbal Ability to ace sections.

Module-5

Post Training Assessment with debrief

An assessment that tests a student on all three sections of Aptitude, followed a detailed student-wise analysis based on:

- Cut-off
- Percentile w.r.t the batch
- Percentile w.r.t. the college
- Corrective measures to be taken to improve the score

In class, there will be a debrief on how the test should have been taken by an ideal test taker to navigate through the difficulties and ace the cut-off..

Module-6

Tests outside training schedule

An ideal aptitude training course is a mix of classroom learning / guided question solving, followed by self-practice. The 'training duration' focuses mainly on laying strong foundations on concepts and ability to solve questions on major aptitude topics. Significant amount of practice is also provided to students through online tests in the form of:

1. Pre-Assessment test
2. Full-length practice tests
3. Company specific tests (patterns and question types of major recruiters should be given exposure to)

Reference material –

2. 'Quantitative Aptitude for Competitive Examinations' by R S Agarwal
3. 'The Pearson Guide to Verbal Ability' by Nisht K Sinha

B.E ARTIFICIAL INTELLIGENCE & DATA SCIENCE

SEMESTER - VI

CLOUD COMPUTING

Course Code	20ADPE261	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. The fundamental ideas behind Cloud Computing, its applicability; benefits, as well as current and future challenges.
2. Cloud computing stack and communication protocols.
3. Suitable architecture to incorporate in cloud computing models.
4. How virtualization helps to improve efficiency of cloud services.
   Various security issues of cloud computing.

Module-1 **07 Hrs**

Defining Cloud Computing: Cloud Types, The NIST model, The Cloud Cube Model, Deployment models, Service models, Examining the Characteristics of Cloud Computing, Paradigm shift, Benefits of cloud computing, Disadvantages of cloud computing; Assessing the value proposition: Early adopters and new applications, the laws of cloud economics, cloud computing obstacles, behavioural factors relating to cloud adoption, measuring cloud computing costs, specifying SLAs.

Module-2 **09 Hrs**

Understanding Cloud Architecture: Exploring the Cloud Computing Stack, Composability, Infrastructure, Platforms, Virtual Appliances, Communication Protocols; Understanding Services and Applications by Type: Defining IaaS, Defining PaaS, Defining SaaS, Defining, IDaaS.

Module-3 **08 Hrs**

Understanding Abstraction and Virtualization: Using Virtualization Technologies, Load balancing and Virtualization, Understanding Hypervisors; Capacity Planning: Defining Baseline and Metrics, Baseline measurements, System metrics, Load testing, Resource ceilings, Server and instance types, Network Capacity, Scaling.

Module-4 **08 Hrs**

Understanding Amazon Web Services , Amazon Web Service Components and Services, Working with the Elastic Compute Cloud (EC2), Amazon Machine Images , Pricing models, System images and software, Creating an account and instance on EC2, Working with Amazon Storage Systems, Amazon Simple Storage System (S3) , Amazon Elastic Block Store (EBS) , CloudFront.

Module-5 **07 Hrs**

Understanding Cloud Security: Securing the Cloud, The security boundary, Security service boundary, Security mapping, Securing Data, Brokered cloud storage access, Storage location and `tenancy, Encryption, Auditing and compliance, Establishing Identity and Presence, Identity protocol standards, Windows Azure identity standards.

Course outcomes:

On successful completion of this course, students will be able to:

CO1: Explain the core concepts of the cloud computing paradigm: how and why this paradigm shift came about, the characteristics, advantages, challenges and associated cost.

CO2: Describe various models, platforms, virtual appliances and services in cloud computing.

CO3: Discuss abstraction and storage virtualization and outline their role in enabling the cloud computing system model.

CO4: Explain Amazon Web Service Components and Services

CO4: Explain security concerns with respect to cloud computing.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

SEMESTER - VI

HIGH PERFORMANCE COMPUTING

Course Code	20ADPE262	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. Differentiate between cluster computing and grid computing.
2. Discuss various cluster programming environment and related tools.
3. List the principles for designing parallel algorithms.
4. Illustrate send and receive operations in a MPI paradigm.
5. Design a parallel program using CUDA.

Module-1

Introduction to Parallel Computing: Motivating Parallelism, Scope of Parallel Computing.

Introduction to HPC: Parallel Programming Platforms: Implicit Parallelism: Trends in Microprocessor Architectures, Limitations of Memory System Performance, Dichotomy of Parallel Computing Platforms, Physical Organization of Parallel Platforms, Communication Costs in Parallel Machines.

Module-2

Principles of Parallel Algorithm Design: Preliminaries, Decomposition Techniques, Characteristics of Tasks and Interactions, Mapping Techniques for Load Balancing, Methods for Containing Interaction Overheads, Parallel Algorithm Models.

Basic communication operations: One-to-All broadcast and All-to-one Reduction.

Analytical Modeling of Parallel Programs: Sources of Overhead in Parallel Programs, Performance Metrics for Parallel Systems, the Effect of Granularity on Performance.

Module-3

Programming using the Message-Passing Paradigm: Principles of Message-Passing Programming, The Building Blocks: Send and Receive Operations, MPI: the Message Passing Interface, Topologies and Embedding, Overlapping Communication with Computation, Collective Communication and Computation Operations, Groups and Communicators.

Module-4

Why CUDA? Why Now?: The Age of Parallel Processing, Central Processing Units, The Rise of GPU Computing, A brief history of GPUs, Early GPU computing, CUDA, What is CUDA architecture, using the CUDA architecture, Applications of CUDA, Medical Imaging, Computational Fluid Dynamics, Environmental Science, Introduction to CUDA C: A First Program, Hello world, A kernel call, Passing parameters, Querying devices, using device properties, Parallel Programming in CUDA C:CUDA parallel programming, Summing vectors, A fun example.

Module-5

Programming Shared Address Space Platforms: Thread Basics, Why Threads? The POSIX Thread API,Thread Creation and Termination, Synchronization Primitives in Pthreads,Controlling Thread and Synchronization Attributes, Thread Cancellation, Composite Synchronization Constructs, Tips for Designing Asynchronous Programs,OpenMP: a Standard for Directive Based Parallel Programming.

Course outcomes:

On successful completion of this course, students will be able to:

1. Select and analyse the characteristics of various parallel computing platforms.
2. Choose a suitable platform for parallel computing.
3. Analyse simple parallel algorithm models.
4. Apply the principles of message-passing programming construct to solve engineering problems.
5. Design and develop parallel programs using Open Mp programming interface. CUDA, and POSIX threads.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

SEMESTER - VI

MOBILE COMPUTING AND ITS APPLICATIONS

Course Code	20ADPE263	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. To understand the basic concepts of mobile computing.
2. To learn the basics of mobile telecommunication system .
3. To be familiar with the network layer protocols and Ad-Hoc networks.
4. To know the basis of transport and application layer protocols.
5. To gain knowledge about different mobile platforms and application development.

Module-1

Introduction: Mobility of Bits and Bytes, Wireless- The Beginning, Mobile Computing, Dialogue Control, Networks, Middleware and Gateways, Application and Services (Contents), Developing Mobile Computing Applications, Security in Mobile Computing.

Mobile Computing Architecture: History of Computers, History of Internet, Internet-The Ubiquitous Network, Architecture for Mobile Computing, Three-Tier Architecture, Design Considerations for Mobile Computing, Mobile Computing through Internet.

Module-2

Global System for Mobile Communications (GSM): Global System for Mobile Communications, GSM Architecture, GSM Entities, Call Routing in GSM, PLMN Interfaces, GSM Addresses and Identifiers.

General Packet Radio Service (GPRS): Introduction, GPRS and Packet Data Network, GPRS Network Architecture, GPRS Network Operations, Data Services in GPRS, Applications for GPRS.

Module-3

Wireless Application Protocol (WAP), CDMA AND 3G: Introduction, WAP, MMS, GPRS Applications, Spread-Spectrum Technology, Is-95, CDMA versus GSM, Wireless Data.

Module-4

Mobile IP Network Layer: IP and Mobile IP Network Layers Packet Delivery and Handover Management, Registration, Tunneling and Encapsulation.

Mobile Transport Layer: Indirect TCP, Snooping TCP, Mobile TCP, Other Methods of TCP – layer Transmission for Mobile Networks.

Module-5

Security Issues in Mobile Computing: Introduction, Information Security, Security Techniques and Algorithms, Security Protocols, Public Key Infrastructure, Trust.

Mobile Application languages: Introduction, XML, JAVA, Java 2 Micro Edition (J2ME), JavaCard.

Mobile Operating Systems: Operating System, PalmOS, Windows CE, Symbian OS, Linux for Mobile Devices.

Course outcomes:

On successful completion of this course, students will be able to:

1. Explain the basics of mobile telecommunication systems.
2. Illustrate the generations of telecommunication systems in wireless networks.
3. Determine the functionality of MAC, network layer and Identify a routing protocol for a given Ad hoc network.
4. Explain the functionality of Transport and Application layers.
5. Develop a mobile application using android/blackberry/ios/Windows SDK.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

SEMESTER - VI

QUANTUM COMPUTING

Course Code	20ADPE264	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. To acquire the basics of Mathematics and Physics for Quantum Computing.
2. To understand the concepts behind building a Programmable Quantum Computer.
3. To analyse the mechanism of quantum data processing and the cryptographic techniques involved.
4. To compare classical solutions and quantum solutions for certain defined problems.
5. To understand the codes used in quantum error detection.

Module-1

Mathematics for Quantum Computing: Introduction ,Polynomials, Logical Symbols, Trigonometry Review, Logs, Complex Numbers, Matrices, Vectors and Vector Spaces, Fourier Transforms.

Quantum Mechanics: History, Classical Physics, Important Concepts, Statistical Mechanics, Important Experiments , The Photoelectric Effect, Bright Line Spectra, Proto Quantum Mechanics, The New Theory of Quantum Mechanics, Important Principles for Quantum Computing, Linear Algebra, Superposition, Dirac Notation Ill, Representing Information, Uncertainty, Entanglement.

Module-2

Quantum Computing: Elements of Quantum Computing, Introduction, History, Bits and Qubits, Entangled States, Quantum Circuits, Important Properties of Quantum Circuits, Common Circuits, The Reality of Building Circuits, Building a Programmable Quantum Computer, The Four Postulates of Quantum Mechanics, Postulate One, Postulate Two, Postulate Three, Postulate Four.

Module-3

Quantum information theory: Distinguishing quantum states and the accessible information: The Holevo bound , Example applications of the Holevo bound.

Data compression: Shannon's noiseless channel coding theorem, Schumacher's quantum noiseless channel coding theorem .

Classical information over noisy quantum channels : Communication over noisy classical channels, Communication over noisy quantum channels.

Quantum information over noisy quantum channels: Entropy exchange and the quantum Fano inequality, The quantum data processing inequality, Quantum Singleton bound, Quantum error-correction, refrigeration and Maxwell's demon.

Entanglement as a physical resource: Transforming bi-partite pure state entanglement, Entanglement distillation and dilution, Entanglement distillation and quantum error-correction.

Quantum cryptography: Private key cryptography, Privacy amplification and information reconciliation, Quantum key distribution, Privacy and coherent information, The security of quantum key distribution.

Module-4

Quantum Algorithms : Introduction , Deutsch's Algorithm : The Problem Defined, The Classical Solution, The Quantum Solution Physical Implementations.

The Deutsch-Josza Algorithm : The Problem Defined, The Quantum Solution.

Shor's Algorithm: The Quantum Fourier Transform , Fast Factorisation, Order Finding .

Grover's Algorithm: The Travelling Salesman Problem, Quantum Searching.

Module-5

Quantum error-correction: Introduction: The three qubit bit flip code, Three qubit phase flip code, The Shor code.

Theory of quantum error-correction: Discretization of the errors, Independent error models, Degenerate codes, The quantum Hamming bound.

Constructing quantum codes: Classical linear codes, Calderbank–Shor–Steane codes .
Stabilizer codes: The stabilizer formalism, Unitary gates and the stabilizer formalism, Measurement in the stabilizer formalism, The Gottesman–Knill theorem, Stabilizer code constructions, Examples , Standard form for a stabilizer code, Quantum circuits for encoding, decoding, and correction.
Fault-tolerant quantum computation: Fault-tolerance: the big picture, Fault-tolerant quantum logic, Fault-tolerant measurement, Elements of resilient quantum computation.

Course outcomes:

On successful completion of this course, students will be able to:

1. Explain the concepts of Quantum Computing with necessary Mathematics and Physics principles.
2. Analyse how a Quantum Computer is built.
3. Illustrate the quantum data processing and cryptographic techniques.
4. Develop both classical and quantum solutions for certain defined problems.
5. Apply suitable quantum codes to perform Fault-tolerant quantum computation.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

SEMESTER – VI

FUNDAMENTALS OF DIGITAL IMAGE PROCESSING

Course Code	20ADOE261	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. Describe the basic concepts of digital image processing.
2. Explain the different techniques of applying intensity transformations and spatial filtering on an image.
3. Explore the knowledge of filtering an image in frequency domain and processing it.
4. Describe the different methods to transform an image.
5. Explain the different methods to perform image restoration and reconstruction.

Module-1

Digital Image Fundamentals: What is Digital Image Processing?, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Elements of Visual Perception, Image Sensing and Acquisition, Image Sampling and Quantization, Some Basic Relationships Between Pixels, An Introduction to Mathematical Tools Used in DIP.

Module-2

Intensity Transformations and Spatial Filtering: Some Basic Intensity Transformation Functions, Histogram Processing, Fundamentals of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters.

Module-3

Filtering in Frequency Domain: Basics of Filtering in Frequency Domain, Image Smoothing Using Frequency Domain Filters, Image Sharpening Using Frequency Domain Filters.

Color Image Processing: Color Fundamentals, Color Models, Pseudocolor Image Processing, Basics of Full-Color Image Processing.

Module-4

Image Transforms: Two-dimensional orthogonal & unitary transforms, Properties of unitary transforms, Two dimensional discrete Fourier transform, Discrete cosine transform, Hadamard transform, Haar transform, KL transform.

Module-5

Image Restoration and Reconstruction: A Model of the Image Degradation/Restoration Process, Noise Models, Restoration in the Presence of Noise Only-Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear, Position-Invariant Degradations, Estimating the Degradation Function, Inverse Filtering, Minimum Mean Square Error (Wiener) Filtering, Geometric Mean Filter.

Course outcomes:

On successful completion of this course, students will be able to:

1. Explain various terminologies related to Digital Image Processing.
2. Analyse images in transform domain and perform various applications like image compression, face detection etc.
3. Develop a suitable model for image degradation and perform restoration using various techniques.
4. Identify redundancy in images and compress the same using coding techniques.
5. Develop image processing algorithms using software tools.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

SEMESTER – VI

PATTERN RECOGNITION AND ARTIFICIAL INTELLIGENCE

Course Code	20ADOE262	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. Describe the basic Concepts of pattern recognition.
2. Explain the pattern can be represented as strings and logical descriptions and also learn how to classify patterns.
3. Discuss the different nearest neighbour algorithm for classification.
4. Discuss the minimum error rate classifier Bayesian belief network.
5. Analyse the different clustering algorithms.

Module-1

Introduction: Definition of PR, Applications, Datasets for PR, Different paradigms for PR, Introduction to probability, events, random variables, Joint distributions and densities, moments.
Estimation minimum risk estimators, problems Between Pixels, An Introduction to Mathematical Tools Used in DIP.

Module-2

Representation: Data structures for PR, Representation of clusters, proximity measures, size of patterns, Abstraction of Data set, Feature extraction, Feature selection, Evaluation.

Module-3

Nearest Neighbor based classifiers & Bayes classifier: Nearest neighbor algorithm, variants of NN algorithms, use of NN for transaction databases, efficient algorithms, Data reduction, prototype selection, Bayes theorem, minimum error rate classifier, estimation of probabilities, estimation of probabilities, comparison with NNC, Naive Bayes classifier, Bayesian belief network.

Module-4

Naive Bayes classifier, Bayesian belief network, Decision Trees: Introduction, DT for PR, Construction of DT, Splitting at the nodes, Over fitting & Pruning ,Examples, Hidden Markovmodels:Markovmodelsforclassification,HiddenMarkovmodelsandclassificationusing HMM.

Module-5

Clustering: Hierarchical (Agglomerative, single/complete/average linkage, wards, Partitional (Forgy's, k-means, Iso data), clustering large data sets, examples, An application: Handwritten Digit recognition.

Course outcomes:

On successful completion of this course, students will be able to:

1. Apply the basic principles of pattern recognition to solve the given application.
2. Design and develop proximity measures for pattern recognition.
3. Design and develop nearest neighbour based classifiers.
4. Design and analyse classification of patterns using naïve Bayes classifiers.
5. Apply different clustering methods to various applications.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E. ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

SEMESTER – VI

ARTIFICIAL INTELLIGENCE AND SPEECH PROCESSING

Course Code	20ADOE263	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. Describe fundamentals of Artificial Intelligence and their applications for problem solving.
2. Understand Logical Agents, Propositional Logic, Predicate Logic and, basics of Knowledge Representation and Reasoning.
3. Acquire knowledge on Generalization and function approximation of various ANN architectures.
4. Develop time and frequency domain techniques for estimating speech parameters.
5. Understand fundamental knowledge required to understand and analyse speech recognition and synthesis systems.

Module-1

Introduction to Artificial Intelligence, Intelligent Agents: What is Artificial Intelligence? History of Artificial Intelligence.

Intelligent Systems: Categorization of Intelligent System, Components of AI Program, Foundations of AI, Sub-areas of AI, Applications of AI, Current trends of AI.

Intelligent Agents: Agents and environment; Rationality; the nature of environment; the structure of agents.

Module-2

Problem solving through Search

Searching for solution: Uninformed search strategies: Breadth First Search (BFS), Depth First Search (DFS).

Informed search strategies: A* search, Heuristic functions.

Local Search Algorithms: Hill climbing search, Logic, First-Order Logic.

Logic: propositional logic; Reasoning patterns in propositional logic; Effective propositional inference; Agents based on propositional logic.

First-Order Logic: Syntax and semantics of first-order logic; Using first-order logic.

Module-3

Learning: Forms of Learning, Inductive Learning, Learning Decision Tree.

Support Vector Machines and Radial Basis Function: Learning from Examples, Statistical Learning Theory, Support Vector Machines, Radial Basis Function Regularization theory, Generalized RBF Networks, Learning in RBFNs.

Self-organization Feature Map: Maximal Eigenvector Filtering, Extracting Principal Components Generalized Learning Laws, Vector Quantization, Self-organization Feature Maps.

Module-4

Time-Domain Methods for Speech Processing: Introduction to Short-Time Analysis of Speech, Short-Time Energy and Short-Time Magnitude, Short-Time Zero-Crossing Rate, The Short-Time Autocorrelation Function.

Frequency Domain Representations: Discrete-Time Fourier Analysis, Short-Time Fourier Analysis, Spectrographic Displays, Overlap Addition (OLA),Method of Synthesis, Filter Bank Summation (FBS) Method of Synthesis, Time-Decimated Filter Banks, Modifications of the STFT.

Module-5

Automatic Speech Recognition: Introduction, Speech recognition vs. Speaker recognition, Signal processing and analysis methods, Pattern comparison techniques, Hidden Markov Models, Artificial Neural Networks.

Speech Enhancement: Spectral subtraction & filtering, Harmonic filtering, parametric re-synthesis, Adaptive noise cancellation.

Course outcomes:

On successful completion of this course, students will be able to:

1. Apply the knowledge of AI techniques on speech processing.
2. Analyse the different intelligent systems and find out their applications.
3. Compare different types of learning techniques related to AI.
4. Describe the representation of speech in different domains and their significances.
5. Choose an appropriate speech model for a given application.
6. Analyse speech recognition, synthesis and speaker identification systems.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

SEMESTER – VI

FUZZY LOGIC

Course Code	20ADOE264	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. Define crisp set and fuzzy set theory.
2. Identify the requirements to make calculation of fuzzy set theory.
3. Describe fuzzy arithmetic principles.
4. Explain fuzzy rules based systems.
5. Apply fuzzy graphical techniques to draw inference over the computing problems.

Module-1

Introduction: Historical perspective, utility of fuzzy systems, limitations of fuzzy systems, statistics and random processes, uncertainty in information, fuzzy sets and membership, chance versus fuzziness, sets as points in Hypercube.

Classical Sets and Fuzzy Sets: classical sets, operations on them, mapping of classical sets to functions, fuzzy sets, fuzzy set operations, properties of fuzzy sets, non-interactive fuzzy sets.

Module-2

Classical Relations and Fuzzy Relations: Cartesian Product, Crisp Relations - Cardinality of Crisp Relations, Operations on Crisp Relations, and Properties of Crisp Relations, Composition. Fuzzy Relations - Cardinality of Fuzzy Relations, Operations on Fuzzy Relations, Properties of Fuzzy Relations, Fuzzy Cartesian Product and Composition, Non-interactive Fuzzy Sets.

Module-3

Membership Functions: Features of the Membership Function, Standard Forms and Boundaries, Fuzzification, defuzzification to crisp sets, Lambda-Cuts for Fuzzy Sets, Lambda-Cuts for Fuzzy Relations, Defuzzification Methods.

Development of membership Functions: Membership value assignments.

Module-4

Fuzzy Arithmetic and the Extension Principle : Crisp Functions, Mapping and Relations, Functions of fuzzy Sets – Extension Principle, Fuzzy Transform (Mapping), Practical Considerations. Fuzzy Numbers Interval Analysis in Arithmetic, Approximate Methods of Extension - Vertex method, DSW Algorithm, Restricted DSW Algorithm, Comparisons. Fuzzy Vectors.

Module-5

Fuzzy Rule Based Systems: Natural Language, Linguistic Hedges, Rule-Based Systems - Canonical Rule Forms, Decomposition of Compound Rules, Likelihood and Truth Qualification, Aggregation of Fuzzy Rules. Graphical Techniques of Inference.

Course outcomes:

On successful completion of this course, students will be able to:

1. Provide basic elements of fuzzy sets.
2. Differentiate between fuzzy set and classical set theory.
3. Apply fuzzy membership functions to solve value assignment problems.
4. Explain approximate methods of fuzzy arithmetic and extension principle.
5. Discuss the applications of fuzzy rule based systems.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

B.E ARTIFICIAL INTELLIGENCE AND DATA SCIENCE
Outcome Based Education (OBE) and Choice Based Credit System (CBCS)
SEMESTER – VIII

INFORMATION RETRIEVAL

Course Code	20ADPE482	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	03	Exam Hours	03

Course objectives:

1. Examine the Information Retrieval problems.
2. Analyse Search structures of dictionaries, Wildcard queries and Index construction done information retrieval.
3. Understand the scoring and ranking in Information retrieval system.
4. Study the various Information Retrieval Evaluation Techniques and processes involved.
5. Understand how web search, web crawling and link analysis is done for information retrieval on the web.

Module-1

Introduction

Boolean retrieval: An example information retrieval problem, A first take at building an inverted index, Processing Boolean queries, The extended Boolean model versus ranked retrieval.

Vocabulary and postings lists: Document delineation and character sequence decoding: Obtaining the character sequence in a document, Choosing a document unit.

Determining the vocabulary of terms: Tokenization, Dropping common terms: stop words, Normalization (equivalence classing of terms), Stemming and lemmatization Faster postings list intersection via skip pointers Positional postings and phrase queries: Bi-word indexes, Positional indexes, Combination schemes.

Module-2

Dictionaries and tolerant retrieval: Search structures for dictionaries, Wildcard queries: General wildcard queries , k-gram indexes for wildcard queries , Spelling correction: Implementing spelling correction, Forms of spelling correction, Edit distance, k-gram indexes for spelling correction, Context sensitive spelling correction, Phonetic correction.

Index construction : Hardware basics, Blocked sort-based indexing, Single-pass in-memory indexing, Distributed indexing, ary as a string, Blocked storage., Postings file compression: Variable byte codes, γ codes.

Module-3

Scoring, term weighting and the vector space model : Parametric and zone indexes : Weighted zone scoring , Learning weights, The optimal weight g, Term frequency and weighting: Inverse document frequency , Tf-idf weighting , The vector space model for scoring: Dot products, Queries as vectors, Computing vector scores, Variant tf-idf functions: Sublinear tf scaling, Maximumtf normalization, Document and query weighting schemes, Pivoted normalized document length.

Computing scores in a complete search system: Efficient scoring and ranking: Inexact top K document retrieval, Index elimination, Champion lists, Static quality scores and ordering, Impact ordering, Cluster pruning.

Components of an information retrieval system: Tiered indexes, Query-term proximity, Designing parsing and scoring functions, Putting it all together Vector space scoring and query operator interaction.

Module-4

Evaluation in information retrieval: Information retrieval system evaluation, Standard test collections, Evaluation of unranked retrieval sets, Evaluation of ranked retrieval results, Assessing relevance : Critiques and justifications of the concept of relevance , A broader perspective-System quality and user utility: System issues, User utility, Refining a deployed system, Results snippets.

XML retrieval: Basic XML concepts , Challenges in XML retrieval, A vector space model for XML retrieval, Evaluation of XML retrieval, Text-centric vs. data-centric XML retrieval.

Language models for information retrieval : Language models: Finite automata and language models, Types of language models, Multinomial distributions over words , The query likelihood model: Using query likelihood language models in IR, Estimating the query generation probability, Ponte and Croft's Experiments**,** Language modelling versus other approaches in IR, Extended language modelling approaches.

Module-5

Web search basics : Background and history

Web characteristics: The web graph, Spam, Advertising as the economic model, The search user experience: User query needs, Index size and estimation, Near-duplicates and shingling.

Web crawling and indexes: Overview: Features a crawler must provide, Features a crawler should provide, Crawling: Crawler architecture: DNS resolution, The URL frontier, Distributing indexes, Connectivity servers.

Link analysis: The Web as a graph: Anchor text and the web graph, PageRank: Markov chain, The PageRank computation, Topic-specific PageRank , Hubs and Authorities: Choosing the subset of the Web.

Course outcomes:

On successful completion of this course, students will be able to:

1. Analyse the Information Retrieval problems.
2. Apply Search structures of dictionaries, Wildcard queries and Index construction for information retrieval.
3. Perform scoring and ranking on a search system.
4. Apply Information Retrieval Evaluation Techniques.
5. Perform web search, web crawling and link analysis for information retrieval on the web.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

N1CSEE11	Design of substructures
N1CSEE12	Construction management
N1CSEE13	Advanced Concrete Technology
N1CSEE14	Analysis and design of Plates and Shells

Note: **BSC**-Basic Science Courses, **IPCC**-Integrated Professional Core Courses, **PCC**: Professional Core Course, **PEC:** Professional Elective Course,
MCC- Mandatory Credit Course, **PCCL**-Professional Core Course Lab, **NCMC**-Non Credit Mandatory Course
AUD/AEC –Audit Course / Ability Enhancement Course(A pass in AUD/AEC is mandatory for the award of the degree)
L-Lecture, **P**-Practical, **T/SDA**-Tutorial / Skill Development Activities (Hours are for Interaction between faculty and students)

Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with practical of the same course. The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from the practical part of IPCC shall be included in the SEE question paper.

Audit Courses /Ability Enhancement Courses suggested by BoS (ONLINE courses):
Audit Courses are prerequisite courses suggested by the concerned Board of Studies.
Ability Enhancement Courses will be suggested by the BoS if prerequisite courses are not required for the programs.

- These courses are prescribed to help students to enhance their skills connected to the field of specialization as well allied fields that leads to employable skills. Involving in learning such courses are impetus to lifelong learning.
- The courses under this category are online courses published in advance and approved by the concerned Board of Studies.
- Registration to Audit /Ability Enhancement Course shall be done in consultation with the mentor and is compulsory during the concerned semester.
- In case a candidate fails to appear for the proctored examination or fails to pass the selected online course, he/she can register and appear for the same course if offered during the next session or register for a new course offered during that session, in consultation with the mentor.

The Audit / Ability Enhancement Course carries no credit and is not counted for vertical progression. However, a pass in such a course is mandatory for the award of the degree.

Skill development activities: in a concerned course, the students should

- Interact with industry (small, medium, and large).
- Involve in research/testing/projects to understand their problems and help creative and innovative methods to solve the problem.
- Involve in case studies and field visits/ fieldwork.
- Accustom to the use of standards/codes etc., to narrow the gap between academia and industry.
- Handle advanced instruments to enhance technical talent.
- Gain confidence in modelling of systems and algorithms for transient and steady-state operations, thermal study, etc.
- Work on different software to simulate, analyze and authenticate the output to interpret and conclude.

All activities should enhance student's abilities to employment and/or self-employment opportunities, management skills, Statistical analysis, fiscal expertise, etc. Students and the course instructor/s to involve either individually or in groups to interact together to enhance the learning and application skills of the study they have undertaken. The students with the help of the course teacher can take up relevant technical –activities which will enhance their skill. The prepared report shall be evaluated for CIE marks.

1. **Mini Project with Seminar:** This may be hands-on practice, survey report, data collection and analysis, coding, mobile app development, field visit and report preparation, modelling of system, simulation, analysing and authenticating, case studies, etc.

   CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide, if any, and a senior faculty of the department. Students can present the seminar based on the completed mini-project. Participation in the seminar by all postgraduate students of the program shall be mandatory.

   The CIE marks awarded for Mini-Project work and Seminar, shall be based on the evaluation of Mini Project work and Report, Presentation skill and performance in Question and Answer session in the ratio 50:25:25. Mini-Project with Seminar shall be considered as a head of passing and shall be considered for vertical progression as well as for the award of degree. Those, who do not take-up/complete the Mini Project and Seminar shall be declared as fail in that course and have to complete the same during the subsequent semester. **There is no SEE for this course.**

2. **Internship:** All the students shall have to undergo a mandatory internship of **06 weeks** during the vacation of II and III semesters. A University examination shall be conducted during III semester and the prescribed internship credit shall be counted in the same semester. The internship shall be considered as a head of passing and shall be considered for vertical progression as well as for the award of degree. Those, who do not take-up/complete the internship shall be declared as fail in the internship course and have to complete the same during the subsequent University examination after satisfying the internship requirements.

Note: **PROJ**-Project Work Phase-1, **SP** –Societal Project, **INT**-Internship
L-Lecture, **P**-Practical, **T/SDA**-Tutorial / Skill Development Activities (Hours are for Interaction between faculty and students)

1. **Project Work Phase-1:** The project work shall be carried out individually. However, in case a disciplinary or interdisciplinary project requires more participants, then a group consisting of not more than three shall be permitted.
   Students in consultation with the guide/co-guide (if any) in disciplinary project or guides/co-guides (if any) of all departments in case of multidisciplinary projects, shall pursue a literature survey and complete the preliminary requirements of the selected Project work. Each student shall prepare a relevant introductory project document, and present a seminar.
   CIE marks shall be awarded by a committee comprising of HoD as Chairman, all Guide/s and co-guide/s (if any) and a senior faculty of the concerned departments. The CIE marks awarded for project work phase -1, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25. **There is no SEE for this course**.
2. **Societal Project:** Students in consultation with the internal guide as well as with external guide (much preferable) shall involve in applying technology to workout/proposing viable solutions for societal problems.
   CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide if any, and a senior faculty of the department. The CIE marks awarded, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.
   Those, who have not pursued /completed the Societal Project, shall be declared as fail in the course and have to complete the same during subsequent semester/s after satisfying the Societal Project requirements. **There is no SEE for this course**.
3. **Internship:** Those, who have not pursued /completed the internship, shall be declared as fail in the internship course and have to complete the same during subsequent University examinations after satisfying the internship requirements. Internship SEE (University examination) shall be as per the University norms.
   CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide if any, and a senior faculty of the department. The CIE marks awarded for project work phase -1, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.

1. **Project Work Phase-2:** Students in consultation with the guide/co-guide (if any) in disciplinary project or guides/co-guides (if any) of all departments in case of multidisciplinary projects, shall continue to work of Project Work phase -1to complete the Project work. Each student / batch of students shall prepare project document, and present a seminar.

   CIE marks shall be awarded by a committee comprising of HoD as Chairman, all Guide/s and co-guide/s (if any) and a senior faculty of the concerned departments. The CIE marks awarded for project work phase -2, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.

   SEE shall be at the end of IV semester. Project work evaluation and Viva-Voce examination (SEE), after satisfying the plagiarism check, shall be as per the Institute norms.

STATISTICS, PROBABILITY AND OPTIMIZATION

Contact Hours/Week	: 3+0+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: 00	SEE Marks:	50
Course code	: N1PGMAT	SEE Duration (Hours):	3.0

Objectives of the course: The objective of the course are:

- To understand the basic principles of probability.
- To determine parameters pertaining to descriptive statistics of the given data.
- To understand probability distributions of discrete variables in general and binomial distribution.
- To develop linear regression line for the given data and to establish coefficient of correlation between dependent and independent variables.
- To understand the concepts of genetic algorithm and to find the parameters of the algorithm for the given practical problem.
- To implement the learning to develop statistical models for data pertaining to Structural engineering using spreadsheet.

Unit 1. **8 hours**

Descriptive statistics, central tendency of data, spread measures, quartiles, deciles, percentiles, and quantiles, using spreadsheet to compute summary of data. Grouped frequencies and graphical descriptions, stem and leaf plots, box plots, histograms, and cumulative frequency distribution curves. Solving problem examples from structural engineering domain.

Unit 2. **7 hours**

Basics of probability, basic rules combining probabilities, addition rule, multiplication rule, permutations and combinations, complex problems, Bayes rule. Problem examples from structural engineering domain.

Unit 3. **8 hours**

Probability distributions of discrete variables, probability functions, cumulative distribution functions, expectation of a random variable, variance of a discrete random variable, binomial distribution, shape of binomial distribution, applications of binomial distribution, nested binomial distribution, multinomial distributions. Solving problem examples from structural engineering domain.

Unit 4. **8 hours**

Regression and correlation, simple linear regression, assumptions and graphical checks, statistical inferences, other forms of single input regressor, correlation, introduction to multiple linear regression, rank correlation and covariance. Developing repressor for data from structural engineering using Spreadsheet.

Unit 5. **8 hours**

Introduction to optimization unconstrained and constrained optimization problems, modern methods of optimization, genetic algorithms, representation of design variables, representation of objective function and constraints, genetic operators, flow chart of the algorithm. Applying the steps of structural engineering. Problem and preparing the flow chart.

Textbooks

1. W.J. Decoursey, Statistics and Probability for Engineering Applications with Microsoft Excel, Elsevier Publications, 2003. ISBN: 0-7506-7618-3
2. Singiresu S. Rao, Engineering Optimization: Theory and Practice, 4th edition, John Wiley & Sons, 2009, ISBN 978-0-470-18352-6

References

1. S.N. Shivanadam, S.N. Deepa, Introduction to Genetic Algorithms, Springer Publications, 2008, ISBN 978-3-540-73189-4
2. Sheldon Ross, Introduction to Probability and Statistics to Engineers and Scientists, Elsevier Publications, 4th edition, 2009, ISBN 13: 978-0-12-370483-2

Course outcomes: After completing this course, a student will be able to,

CO1: Apply basics of descriptive statistics, on the data pertaining to structural engineering, review, manipulate, summarize the same and to draw intuitive inferences. Develop cumulative frequency distributions using standard tools (Spreadsheet, R) and draw inferences.

CO2: Compute probabilities and be able to apply conditional probability on the given uncertain data drawn from structural engineering applications.

CO3: Develop the binomial distribution, and multinomial distribution on the given data and draw useful inferences on problems related to structural engineering.

CO4: Develop optimal regression for the given data, establish correlation among parameters, and construct covariance matrix for different parameters for the data drawn from structural engineering domain.

CO5: Apply the working principles of genetic algorithm, map the parameters into chromosomes, use standard tool (MATLAB/R) and arrive at optimized solutions to given structural optimization problem.

Assignment component: Students have to download data pertaining to structural engineering and perform statistical analysis or implement optimization using standard tools such as spreadsheet/MATLAB and have to submit a small report. This component will be evaluated for 7 marks.

ADVANCED DESIGN OF RC STRUCTURES

Contact Hours/Week	: 3+0+2 (L+T+P)	Credits:	4.0
Total Lecture Hours	: 39	CIE Marks:	50
Total Practical Hours	: 26	SEE Marks:	50
Course code	: N1CSE01	SEE Duration (Hours):	3.0

Course objectives:

- Design of continuous beams using IS coefficients method and moment redistribution method.
- Design of slabs using yield line method and grid floors.
- Design of flat slabs and columns.
- Design of deep beam and corbels.
- Design of substructures.

Unit 1. Design of statically indeterminate RC beams **8+6 hours**

A brief review of limit state design of RC member subjected to axial load, bending, shear & torsion. Application to analysis of continuous beams using IS coefficients method or any other methods and design of critical sections including flexure, shear and torsion. Check for serviceability limit states- crack width and deflection.

Development of theoretical load-deflection diagram and moment-curvature diagrams, moment redistribution in RC structures, Advantages and disadvantages of redistribution illustrated through numerical problems.

Unit 2. Design of floor systems **7+5 hours**

Introduction, assumption, yield line patterns, moment capacity across yield line, analysis by virtual work method, yield line analysis by equilibrium method, Design of slabs using yield line theory.
Design of ribbed slabs and grid floors by approximate methods and check for ultimate capacity and serviceability.

Unit 3. Flat slabs and columns **8+5 hours**

Application of IS code method of analysis and design of flat slabs and flat plates for bending and shear - one way and two-way, shear due to unbalanced moment, flexural and shear reinforcement design and detailing. Moments in columns and design for vertical loads and moments.

Unit 4. Design of RC deep beams and corbels **6+5 hours**

Introduction, minimum thickness, design by IS 456 method, determination of reinforcement and detailing. Design of corbels.

Unit 5. Design of substructures **10+5 hours**

Analysis and design of underground water tanks - circular and rectangular, Isolated and combined footing.

LAB COMPONENT

Term Project – 1:

Preparation of spreadsheet/MATLAB codes for design of RC beams, column sections under bending and axial load, eccentric load, shear and torsion and application to specific numerical problems.

Term Project – 2:

Analysis and Design of Typical RC Buildings involving one-way and two-way (simple/continuous slabs), columns with axial load and moment and footings with complete drawings showing reinforcement detailing and bar bending schedule.

Term Project – 3:

Applications of general-purpose design software for analysis and design of multistoried buildings.

6. SP 24: Explanatory Handbook to IS:456-1978, BIS, New Delhi.
7. SP:34 Handbook on Concrete Reinforcement and Detailing, BIS, New Delhi

Course outcomes: After completing this course, the students will be able to,

CO1: Apply the basic knowledge of limit state design of RC and structural analysis to analyze and design continuous beams considering loading patterns for critical moments and shears and design rectangular, T-beam, and L-beam sections under the action of bending, shear and torsion. Student will determine crack widths and deflections for serviceability and make creative advances and apply lateral thinking to consider the effect of redistribution of moments. Students will compute load-deflection curves and ductility using IS method and prepare reinforcement details as per IS:456 and SP 34. Student will also be able to analyze continuous beams using IS coefficient method.

CO2: Analyze and design of simple slabs using Yield line theory and continuous ribbed floors and waffle slabs

CO3: To design flat slab systems with/without column drops, with/without capitals and prepare reinforcement details, evaluate resistance to beam shear and punching shear by IS code method and design columns.

CO4: To think laterally and originally and provide solutions to the complex problems of simple and continuous deep beams and corbels using IS method and provide reinforcement details.

CO5: Design of underground water tanks, isolated and combined footing using IS code.

STRUCTURAL DYNAMICS

Contact Hours/Week	: 3+2+0 (L+T+P)	Credits:	4.0
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N1CSE02	SEE Duration (Hours):	3.0

Course objectives:
The course introduces the students to the basic concepts of structural dynamics including free and forced vibration response of single degree damped and undamped systems, response under harmonic loading, rotational imbalance, support motion, seismic instruments, response to general system of loading, DLF, free and forced vibration response of two and three degrees of freedom systems, shear building.

Unit 1. Dynamics of single-degree-of-freedom systems	**10+6 hours**
Concept of degrees of freedom, Vector representation of simple harmonic motion, equations of motion for SDOF, mathematical model of SDOF system, free vibration response of undamped system, viscous damping, free vibration of damped systems (overdamped, underdamped and critically damped systems), logarithmic decrement.	
Unit 2. Harmonic loading and seismic instruments	**8+5 hours**
Response to harmonic loading of undamped and damped systems, half power method for determination of damping, energy dissipation, response to support motion, vibration transmissibility and isolation, principle of vibration measuring instruments – seismometer and accelerometer.	
Unit 3. Response to arbitrary loading	**7+5 hours**
Response to periodic forces, Duhamel's integral and direct integration methods, response of SDOF for various loading cases (constant force, rectangular pulse, triangular, linearly varying load), numerical methods applied to dynamic analysis of SDOF.	
Unit 4. Free vibration of multi-degree freedom systems	**8+5 hours**
Free vibration of shear buildings, natural frequencies and normal modes, orthogonality of normal modes, modal superposition-method, stiffness concept, concepts of lumped and consistent mass.	
Unit 5. Forced vibration of MDOF systems and dynamics of continuous systems	**6+5 hours**
Forced vibration analysis of MDOF systems-problems, Introduction to free longitudinal vibration of bars, flexural vibration of beams with different end conditions.	

SELF-STUDY

Term Project – 1:

a. Determination of natural frequency, damping ratio and logarithmic decrement from dynamic measurements
b. Numerical methods to solve problems of SDOF systems subjected to various types of dynamic loadings using spreadsheet/MATLAB.

Term Project – 2:

a. Dynamic analysis of shear building systems using MATLAB and other standard software.

b. Use of general-purpose software for dynamic analysis of Multistoried Building frames.

6. Patric Paultre, Dynamics of Structures, Wiley, 1st edition, 2010
7. P Srinivasalu, C Vaidyanathan, Handbook of machine foundations, McGraw Hill Education, (2017).

Course outcomes: After completing this course, the students will be able to,

CO1: Recognize physical phenomena in the context of structural vibration and to identify key concepts related to dynamics.
CO2: Convert structure into SDOF system and find response of free and forced vibration (Harmonic and Periodic).
CO3: Ascertain response of structures subjected to arbitrary loadings.
CO4: Determine natural frequency and mode shapes of MDOF system.
CO5: Analyze continuous systems subjected to dynamic loads and solve engineering problems in the context of structural dynamics using standard software.

COMPUTATIONAL STRUCTURAL MECHANICS

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N1CSE03	SEE Duration (Hours):	3.0

Course objectives:
This course has the objective to enable the students to analyze the continuous beams, frames, trusses and grids using stiffness matrix method and flexibility matrix method.

Unit 1. Introduction to structural mechanics	**6+4 hours**
Classical Vs matrix methods of Structural analysis, Classification and idealization of structural systems, Actions and Reactions, support conditions, Stability Conditions, static and Kinematic Indeterminacies, Degrees of freedom, Force-displacement relationship, Concepts of stiffness and flexibility.	
Unit 2. Introduction to stiffness methods (System approach)	**5+5 hours**
Development of element stiffness coefficients for standard cases of truss, beam, and frames. Application to analysis of trusses, continuous beams, frames utilizing stiffness concept (having not more than 3 unknowns).	
Unit 3. Introduction to flexibility (System approach):	**5+6 hours**
Development of flexibility and element stiffness coefficients for standard cases of truss, beam, and frames. Application to analysis of trusses, continuous beams, frames utilizing flexibility concepts (having not more than 3 unknowns).	
Unit 4. Stiffness Method (Element approach)	**5+6 hours**
Element Stiffness matrix continuous beams, plane trusses, Development of global stiffness and Force Matrices, reduced stiffness matrix formation, solution for displacements and forces, Application to analysis of continuous beams, plane trusses, Rigid plane frames (having not more than 3 unknowns).	
Unit 5. Direct stiffness method	**5+5 hours**
Element stiffness Matrix in global coordinates for Beams, trusses and frames, Assemblage of Global stiffness matrix and force vector, Analysis of continuous beams, trusses and frames using direct stiffness method (not more than three unknowns).

6. Aslam Kassimali, Matrix Analysis of Structures, 2nd (SI) Edition, Cengage Learning, Stamford, USA, 2012

Course outcomes: After completing this course, the students will be able to,

CO1: Synthesize his existing knowledge of basic structural mechanics with advanced knowledge of statics, kinematic indeterminacies, and stability checks to evaluate the different types of indeterminacies of various structural configurations, apply critical thinking and original judgment to analyse and evaluate their DOFs and geometric stability.

CO2: Apply the concept of flexibility and stiffness coefficients and analyse and evaluate forces and displacements in continuous beams, trusses and frames by system approach to flexibility/stiffness methods.

CO3: Formulate element flexibility matrix, force and displacement transformation matrix for truss, continuous beams, frame elements. Using his critical thinking and judgment, he will be able to analyze problems of 2D trusses, plane frames and continuous beams by assembling global flexibility matrix.

CO4: Use the knowledge derived to develop stiffness matrices for simple beam, truss, and frame elements, use his critical thinking and judgment to transform element stiffness matrix from local to global coordinates and assemble structural stiffness matrix, analyse different 2-D structural configurations to evaluate forces and displacement.

CO5: Apply direct stiffness method for solution of Continuous beams, trusses, and frames to evaluate forces and displacement.

Assignment component: Application of general-purpose FE software packages for analysis of continuous beam, frames, multistoried frames and trusses.

MECHANICS OF DEFORMABLE BODIES

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N1CSE04	SEE Duration (Hours):	3.0

Course objectives:

The objectives of the course are to impart the basic concepts of stresses, stresses on inclined planes & principal stresses, in rectangular and polar coordinates for 2D and 3D problems, stress-strain relationship, compatibility equations for plane stress and plane strain problems, stress functions for plane stress, plane strain condition, beams subjected to unsymmetrical bending and shear center.

Unit 1. Analysis of Stresses	**5+6 hours**
Introduction, definition of stress, components of stress at a point in Cartesian co-ordinates (2D and 3D), equilibrium equations, stresses on an inclined plane, principal stresses, maximum shear stress, stress invariants, hydrostatic and deviatoric stresses, octahedral stresses, stress boundary conditions, plane stress and plane strain problems, stress components in polar & cylindrical co-ordinates (2D and 3D), differential equations of equilibrium.	
Unit 2. Analysis of strains	**6+5 hours**
Definition of Strain, components of strain at a point in Cartesian co-ordinate system, plane strain problems, strain transformation, principal and octahedral strain, analysis of strain rosettes and their application.	
Unit 3. Stress strain relation and compatibility equations	**5+5 hours**
Generalized Hooke's law, constitutive equations, Lame's constants, compliance matrix, Saint Venant's principle, principle of superposition, compatibility equations for 3 dimensional elements in Cartesian co-ordinates, compatibility equations for plane stress and plane strain problems in terms of stress components.	
Unit 4. Two dimensional problems in Cartesian co-ordinates	**5+5 hours**
Biharmonic equation in Cartesian co-ordinates, Airy's stress functions, polynomials as stress functions, stress functions for plane stress and plane strain problems bending of cantilever and simply supported beams.	
Unit 5. Unsymmetrical bending of beams	**5+5 hours**
Introduction, flexural and shear stresses in straight beams subjected to unsymmetrical bending, definition of shear center, shear center for symmetrical and unsymmetrical sections. Curved beams, Analysis of curved beams.

6. Ansel C. Ugural, Saul K. Fenster, Advanced Mechanics of Materials and Applied Elasticity, 5th Edition, Prentice Hall, 2012.

Course outcomes: After completing this course, the students will be able to,

CO1: Synthesize his/her basic knowledge of mechanics of materials with advanced knowledge of stress distribution in deformable bodies, the student will be able to formulate the expression for differential equations of equilibrium (in Cartesian, polar and cylindrical coordinates), analyze and compute principal stresses, hydrostatic and deviator stresses, octahedral stresses and evaluate stresses on any inclined plane of structural elements using transformation principles.

CO2: Discriminate between plane stress and plane strain problems, apply critical thinking and judgment to analyze and evaluate principal strains, octahedral strains, evaluate strains on arbitrary planes and solve problems on strain rosettes.

CO3: Establish the need for stress-strain and compatibility equations, stress boundary conditions, formulate the generalized Hooke's law and apply critical thinking and independent judgment to reduce it to cases of orthotropy and isotropy, derive compatibility equations in terms of stresses and strains for different coordinate systems express.

CO4: Formulate bi-harmonic equations in different coordinate systems and use original thinking and independent judgment to analyze complex problems of Airy's stress functions, to evaluate stresses, strains and displacements in structural elements and critically compare the stress distribution with simplified solutions based on SOM.

CO5: Synthesize his basic knowledge of stresses in straight beams and apply energy methods, to analyze problems of straight and curved beams subjected to unsymmetrical building and evaluate the flexural and shear stresses and deflections including the determination of shear center of symmetrical and unsymmetrical cross sections making use of critical thinking and independent judgment.

DESIGN OF SUBSTRUCTURES

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N1CSEE11	SEE Duration (Hours):	3.0

Course objectives:
The course introduces the students to different types of raft and deep foundation and their design by different methods considering gravity and lateral loads for different types of soil conditions and design of earth retaining structures under different conditions.

Unit 1. Site investigation and general principles of foundation design **6+5 hours**

Introduction, Site investigation, In-situ testing of soils, Subsoil exploration, Classification of foundations systems, General requirement of foundations, Selection of foundations, Computation of Loads, Design concepts.

Shallow foundations:

Bearing capacity failures, Bearing capacity formulae & factors, Factor of safety, Selection of soil shear strength parameters, Settlement analysis of footings, shallow foundation in clay, shallow foundation in sand and c-ϕ soils, footings on layered soils and sloping ground, Design for Eccentric or moment loads

Unit 2. Raft foundations **5+6 hours**

Types of rafts, bearing capacity & settlements of raft foundation, Rigid methods, Flexible methods (sub-grade reaction method, Winkler method, finite difference method), Combined footings (rectangular & trapezoidal), strap footings & wall footings, Raft – superstructure interaction effects & general concepts of structural design, Basement slabs.

Unit 3. Deep foundations **5+5 hours**

Load Transfer in Deep Foundations, Types of Deep Foundations, Ultimate bearing capacity of different types of piles in different soil conditions, laterally loaded piles, tension piles & batter piles, Pile groups: Bearing capacity, settlement, uplift capacity, load distribution between piles, Proportioning and design concepts of piles.

Unit 4. Earth retaining structures **5+5 hours**

Types of retaining structures, Theory of lateral earth pressure, Stability of RCC concrete cantilever retaining walls, Drainage requirements, Basement walls, counterfort retaining walls, General considerations in concrete retaining wall design.

Unit 5. Well Foundations and Foundations for Tower structures **5+5 hours**

Types of caissons, Analysis of well foundations, Design principles, well construction and sinking.

Foundations for tower structures:

Introduction, Forces on tower foundations, Selection of foundation type, Stability and design consideration.

Course outcomes: After completing this course, the students will be able to,

CO1: Integrate the basic knowledge of foundation engineering and advanced knowledge of foundations to analyze the geotechnical data for the estimation of bearing capacity and settlement of soil under different field conditions.

CO2: Apply original judgment to analyze and design of combined footings subjected to different types of loads and determine the bearing capacity of raft with varying soil profiles, apply lateral thinking to predict uplift, settlement and to evaluate load distribution over the raft.

CO3: Apply original judgment to analyze and determine the bearing capacity of pile with varying soil profiles, apply lateral thinking to predict uplift and settlement, evaluate load distribution in pile, and design of pile and pile groups.

CO4: Analyze the safety and stability of different types of earth retaining structures such as cantilever and counter-fort type RC retaining walls and proportion and design them for various types of loads.

CO5: Apply the design principles of different types of well foundations, tower foundation for stability and design considerations.

CONSTRUCTION MANAGEMENT

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N1CSEE12	SEE Duration (Hours):	3.0

Objectives: This course aims to introduce the applications of project management in construction projects using structured strategies, techniques, and tools for planning construction projects, scheduling the activities using network diagrams. It also addresses the issue of managing the design and construction delivery processes and for controlling key factors to ensure client satisfaction in-line with its expectations.

Unit-1

Project Planning: Introduction, Project categories, Characteristics of a Project, Project life cycle phases, Function of Project Management.

Project Planning: Scope, Planning process and its objective, Types of project plan, Resource planning, Breakdown structures, duration estimation, quantity take-off, activity based costing. **6+5 hours**

Unit-2

Project Scheduling: Introduction, Precedence network analysis (A-O-A network, A-O-N network), Logic diagram, Construction Scheduling techniques like CPM and PERT, LOB technique and linear scheduling. Float and its implication on project schedule. Use of leads and lags in logic diagrams.

Resource allocation, Resource smoothening and resource levelling and related problems. **5+6 hours**

Unit-3

Project Quality Management: Introduction, Elements of quality, Quality Assurance, Quality Control, Quality planning, quality audit, Quality Checklists Total Quality Management: Philosophy (Deming, Juran, Crosby, Taguchi)

TQM Tools: An overview of Flowcharts, Histogram, Pareto diagram, Scatter diagram, Control charts. Introduction to ISO 9000 quality systems, ISO 14001 quality systems. **5+5 hours**

Unit-4

Project Cost Management: Time-cost relationship, Direct and indirect cost, time in contract provisions, time value of money, contract cash disbursement, Contract provision that impact cash flow.

Financial management: Working Capital Management, Compound Interest and Present Value methods, Discounted Cash Flow Techniques, Capital Budgeting. Managerial conomics: Cost Concepts, Break-even analysis, Pricing Techniques. **5+5 hours**

Unit-5

Quantitative Techniques in Management:

Operation Research: Introduction to Operations Research, Linear Programming, Graphical and Simplex Methods, Duality and Post–Optimality Analysis.

Decision Theory: Decision Rules, Decision making under conditions of certainty, risk and uncertainty, Decision trees–Utility Theory, Game theory Applications.

5+5 hours

Term Project

Construction Planning, Resource Allocation and Scheduling of activities, cost management of a typical infrastructure project including optimization and economic analysis.

ADVANCED CONCRETE TECHNOLOGY

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N1CSEE13	SEE Duration (Hours):	3.0

Course objectives:

The objective of the course is to understand the influence of microstructure of concrete, the hydration mechanisms of cement with or without admixtures, the rheological characteristics of concrete, the placement, compaction and curing on the strength development and deformation characteristics of concrete and utilize the knowledge to develop mix designs and draw specifications for various exposure situations and for different types of applications.

Unit 1. Admixtures **6+5 hours**

Mineral Admixtures: Physical and chemical properties of different types of mineral admixtures – fly ash, silica fume, GGBS and metakaolin and their interaction with hydrating cement, effects on fresh concrete, mechanical and durability properties of hardened concrete.

Chemical Admixtures: Classification and applications, mechanisms of action, effect on properties of fresh concrete and hardened concrete of plasticizers, super plasticizers, retarders, set accelerators, shrinkage reducers, and corrosion inhibitors, rheology of concrete and its assessment – Bingham model, rheometers, concept of yield stress and plastic viscosity.

Unit 2. Properties of Hardened Concrete **5+6 hours**

Strength: Mechanisms of Failure, Strength - Porosity Relationship, Factors Affecting Strength, Micro cracking, Relationship between Compressive and Tensile Strength - Other Types of Strength - Behavior of Concrete Under Various Stress States.

Deformation: Stress - Strain Relationship - Types of Elastic Moduli - Factors Affecting Modulus of Elasticity and its evaluation

Shrinkage: Types, Factors Affecting Shrinkage, Mechanism of Shrinkage, Creep, Factors Influencing Creep - Relation Between Creep and Time, Mechanism of Creep - Prediction of Creep.

Unit 3. **5+5 hours**

Transport properties: Capillary absorption, permeability, and diffusion.

Durability: Physical and Chemical deterioration, causes and progression, Effect of exposure to sulphates, acids and gases, chloride and CO2, Sea Water, fire, frost, freeze thaw, resistance to abrasion and erosion.

Unit 4. **5+5 hours**

High Performance Concrete: High strength and high-Performance concrete, Self-Compacting Concrete - principles, production, properties and applications

Special Concretes: Fiber reinforced concretes: Definitions, Fiber-Matrix Bond, Mechanics of Fiber Reinforcement, Fabrication of FRC, Properties & Application of FRC.

Unit 5. **5+5 hours**

Cement-polymer composites: Latex-Modified Concrete, Polymer-Impregnated Concrete, Geopolymer concrete, Self-healing concrete.

Special Concreting Practices: RMC, roller compacted concrete, shotcrete, underwater placement, high and cold weather concrete, Concrete for pavements.

Textbooks

1. A.M. Neville, "Properties of Concrete", Pearson Education India, 5th edition, 2012.
2. M.S. Shetty, Concrete Technology - Theory and Practice, Chand and Co., New Delhi, 2006.

References

3. John Newman, B S Cho, Advanced Concrete Technology- Vol. 1Consttuent Materials, Vol. 2 Concrete Properties, Vol.3 Processes, Vol.4 Testing and Quality, Butterworth Henemann, Elsevier, 2003.

Course outcomes: After completing this course, the students will be able to,

CO1: Acquire knowledge of different types of mineral and chemical admixtures. They will be able to use critical thinking and judgment to determine rheological parameters.

CO2: Will be able to distinguish between different mechanisms of failure and discuss the behavior of concrete under various loading conditions. Apply critical thinking and original judgment to distinguish between different types of time-dependent deformations

CO3: Use critical thinking and judgment to distinguish between the different types of transport properties and to explain the durability properties of concrete.

CO4: Apply critical judgment to distinguish between different types of modern concretes and explain their principles, production, properties and applications.

CO5: Apply critical judgment to distinguish between different types of advanced concretes and concreting practices

Assignment component:

- Visit to a cement plant and study of production including processing of raw feed, calcining, clinkering, grinding and quality control test procedures. Preparation of detailed technical report.
- Visit to an RMC plant, study of batching of cement and aggregates, addition of admixtures, operation of mixture machine, transportation of concrete and quality control test at plant and site. Preparation of detailed technical report.

ANALYSIS AND DESIGN OF PLATES AND SHELLS

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N1CSEE14	SEE Duration (Hours):	3.0

Course objectives:

The objective of the course is to introduce the student to theory of small deflection of laterally loaded thin circular and rectangular plates, analysis of plates for various loading and boundary conditions using Navier's and Levy's methods. Geometry aspects of shells and their classification, membrane theory and its application to analysis of spherical, cylindrical shells and hyperbolic paraboloids, axially symmetric bending of shells, design and detailing of different types of shells and folded plates.

Unit 1.	**5+6 hours**
Introduction to plate theory, Definition of flat plates, thin and thick plates, plates with small and large deflection, governing differential equation for small deflection of laterally loaded thin rectangular plates, Bending of rectangular plates under pure bending, symmetrical and cylindrical bending, Navier's and Levy's solution for simply supported rectangular plates under UDL (wit derivation).	
Unit 2.	**6+5 hours**
Symmetrically loaded circular plates-governing deferential equation, solution for axi-symmetrically loaded circular plates under UDL for different boundary conditions(with derivation), Use of energy methods for rectangular and circular plates with different boundary conditions subjected to symmetric loading, Numerical problems.	
Unit 3.	**5+5 hours**
Principles of Whitney's and Simpson's methods of Analysis, Design and detailing of simple numerical examples of folded plates. Introduction to curved surfaces and classification of shells, Membrane theory of spherical shells, and cylindrical shells.	
Unit 4.	**5+5 hours**
Axially symmetric bending of shells of revolution Closed cylindrical shells, water tanks, Principles of bending theory of spherical shells.	
Unit 5.	**5+5 hours**
Design and detailing of simple shell problems – cylindrical roofs, spherical domes, elements of water tanks, barrel vaults and hyperbolic paraboloid roofs.	

SELF STUDY

Term Project 1:

Problems on flat plates and continuous plates.
Design of stiffened plates.

Term Project 2:

Design of a Spherical RC Dome with skylight
Analysis of cylindrical Shell roof using ETABS or SAP 2000.

Textbooks

8. Maan H Jawad, Theory and Design of Plate and Shell Structures, Springer Science and Business Media, 2012.
9. R. Szilard, Theory and analysis of plates - classical and numerical methods, Prentice Hall, 1994.

Course outcomes: After completing this course, the students will be able to,

CO1: Formulate differential equation for deflection of laterally loaded thin plates, derive expressions for stresses, strains and deflections and evaluate bending moments and shears for special cases of symmetric bending, pure bending and cylindrical bending. Provide solutions to the complex problems of uniformly loaded simply supported rectangular plates by Navier's and Levy's methods and make creative advances to solve the problems of plates under other loading conditions (point load, patch load and uniformly varying load) and different boundary conditions (simple, fixed, free and partially fixed) using available tables and charts and critically interpret the results.

CO2: Derive the differential equations of circular plates, simplify it to the base of symmetrically loaded circular plates and apply original thinking, critical judgment to find solutions to the problems of uniformly loaded circular plates with different boundary conditions. Making use of tables and charts, the student will provide numerical solutions to the complex problems of circular plates under concentrated loads, patch loads and varying loads and evaluate the stresses and displacements.

CO3: Formulate the methodology for analysis of folded plates by Whitney's and Simpson's methods and apply lateral thinking and original judgment to provide solution to the complex problems of design and detailing of folded plates (simple cases only) and explain the behaviour.

CO4: Derive the general equilibrium equation for membrane theory of shells and make creative advances to analyze and evaluate stresses in spherical, open cylindrical shells, hyperbolic parabola shells and closed cylindrical shells.

CO5: Analyze cylindrical/spherical shell roofs and elements of water tanks and make creative advances and apply lateral thinking to design elements of shells detail the reinforcement as per the codal provisions.

STRUCTURAL DESIGN LABORATORY

Contact Hours/Week	: 1+0+2 (L+T+P)	Credits:	2.0
Total Lecture Hours	: 13	CIE Marks:	50
Total Practical Hours	: 26	SEE Marks:	50
Course code	: N1CSEL1	SEE Duration (Hours):	3.0

Assessment & Grading:

- Regular Lab work and writing lab records: (20+15) 35 marks.
- Lab test and Viva-voce at the End of the Sem: (10+5) 15 marks.

Course objectives:

The objective of this laboratory course is to enable the students to analyze and design different types of structural elements including single-storied and multi-storied buildings, trusses and bridges for different loadings.

Design Lab 1
Introduction to modeling of structures, Overview of STAAD Pro., Analysis and design of continuous beams and trusses.
Design Lab 2
3-dimensional modeling, Loads on buildings, Modeling, analysis and design of single-storied structures.
Design Lab 3
Introduction to Wind load and seismic forces, Computation of Wind load and seismic forces, Modeling, analysis and design of RC and steel multi-storied structures for wind loads and seismic forces.
Design Lab 4
Foundation design considerations, Analysis and design of Isolated and combined footings.
Design Lab 5
Analysis and design of bridge decks.

3. Taranath B. S., Structural Analysis and Design of Tall Buildings, McGraw Hill., 1988
4. Bowles, Joseph E. Foundation analysis and design, 2001.

Course outcomes: After completing this course, the students will be able to,

CO1: Model, analysis and design of continuous beams.

CO2: Assess and quantify simple loads on structures and model, analyze & design single-storied structures.
CO3: Understand wind loads and seismic forces on structures and model analyze & design multi-storied RC and steel structures.
CO4: Model, analyze & design isolated and combined footings.
CO5: Analyze and design of bridge decks.

FINITE ELEMENT METHOD AND ANALYSIS

Contact Hours/Week	: 3+0+2 (L+T+P)	Credits:	4.0
Total Lecture Hours	: 39	CIE Marks:	50
Total Practical Hours	: 26	SEE Marks:	50
Course code	: N2CSE01	SEE Duration (Hours):	3.0

Course objectives:

The objective of this course is to make the students conversant with basic procedure of finite element analysis of structural problems by introducing the concept of structural discretization and different types of displacement models, different types of elements, and iso-parametric elements. The application of the technique bar, beam, truss, and frame element will be introduced and utilized for solution of 2Dimensional problems of structural analysis.

Unit 1. Introduction to FEM	**8+6 hours**
Approximate method of structural analysis, Concept of Rayleigh-Ritz method, Advantages and disadvantages of FEM, Basic procedure of FEM for structural problems- Process of Discretization, finite elements for 1-D, 2-D and 3-D problems, Element aspect ratio, mesh refinement Vs higher order elements, numbering of nodes to minimize band width.	
Unit 2. Discretization of Structures and Displacement Models	**7+5 hours**
Nodal displacement parameters, Polynomial displacement functions for standard bar and beam elements triangular elements, and rectangular elements, conditions to be satisfied by displacement functions- invariance, continuity, degree of continuity of displacement functions – C0, C1 and C2 functions, convergence and compatibility, Generalized and natural coordinates.	
Unit 3. Interpolation functions and stiffness matrices	**8+5 hours**
Lagrangian interpolation functions, Shape functions for one, two and 3-dimensional elements, Derivation of element stiffness matrices for Bar, and Beam elements. Linear static analysis of one-dimensional problem using Linear and Quadratic bar elements and beam elements.	
Unit 4. Iso-parametric elements and numerical integration	**8+5 hours**
Concept of Iso-parametric elements, sub and super parametric elements, Convergence requirements for Iso-parametric elements, Condensation of internal nodes, Formulation of Jacobian matrix and strain displacement matrix, and element stiffness matrix, consistent load vector and numerical integration.	
Unit 5. Stiffness matrices for 2-D elements and FE softwares	**8+5 hours**
Two dimensional problems-Derivation of element stiffness matrices and equivalent nodal force vectors for constant strain triangular elements and quadratic elements. Auto mesh generation, Computer Program for FEM – Organization – basic flowcharts, Desired features of Pre and Post Processors.

7. K J Bathe, Finite Element Procedures, 2nd edition, Prentice Hall, Pearson Education Inc., 2014

Course outcomes: After completing this course, the students will be able to,

CO1: Integrate his basic knowledge of structural mechanics and computational structural mechanics with advanced knowledge of FE concepts, energy methods to find solution to the problems of beams with various loading and boundary conditions.

CO2: Apply critical thinking and original judgment to formulate displacement functions and shape functions for simple bar, beam and triangular and rectangular element using polynomial and interpolation functions in Cartesian and natural coordinates. He will be able to make creative advanced and apply lateral thinking to check for invariance, degree of continuity, convergence and compatibility requirements of shape functions, and provide solution to simple problems of trusses and frames

CO3: Distinguish between iso-parametric, sub- and super-parametric elements with examples, check convergence criteria for displacement functions of iso-parametric elements, explain the concept of condensation of internal nodes, and formulate of Jacobian matrix, strain displacement matrix, and element stiffness matrix, consistent load vector for quadrilateral elements and apply numerical integration

CO4: Think laterally, conceptualize and formulate and solve simple two-dimensional problems using triangular/four noded quadrilateral elements.

CO5: Apply critical thinking and independent judgment to explain the behaviour of different types of plate and shell elements and explain their conformity, convergence and compatibility. He will be able to formulate the procedure for deriving element stiffness matrix and force vectors for four noded plate elements and specify the procedure for assemblage into global stiffness matrix, applying boundary conditions and finding solution for displacements, rotations and moments.

Lab component: Use of FE software for solution of simple problems of beams, frames, trusses, plane stress and plane strain problems, foundation modeling, Axisymmetric problems.

DESIGN OF EARTHQUAKE-RESISTANT STRUCTURES

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N2CSE02	SEE Duration (Hours):	3.0

Course objectives:

This course introduces the students to the elements of seismology and seismic waves, structural response under gravity and seismic loads, lateral load resisting structural systems, requirements of efficient earthquake resistant structural systems, damping devices and base isolation. The strong motion characteristics, response history, tripartite response spectrum and its utility for earthquake resistance design of simple and multistoried frame structures are introduced. The effect of structural configuration and design provisions of IS1893, effect of infills, ductility and energy absorption and capacity-based design, seismic retrofitting are also introduced.

Unit 1. Introduction to engineering seismology	**6+5 hours**
Plate tectonics and seismic waves, characteristics of earthquake and its quantification–Magnitude and Intensity scales, ground motion parameters, seismic instruments, Earthquake Hazards, Prediction of PHA, Risk evaluation and Mitigation.	
Unit 2.	**5+6 hours**
Response history and strong motion characteristics, Response Spectrum – elastic and elastoplastic spectra, tripartite plot, design spectrum, Structural Response under gravity and seismic loads, lateral load resisting structural systems. Structural configuration for earthquake resistant design, concept of plan irregularities and vertical irregularities, soft storey, location of centre of mass and centre of rigidity, torsion in buildings.	
Unit 3.	**5+5 hours**
Computation of seismic forces in multistory buildings using equivalent lateral force method and dynamic analysis. Requirements of efficient earthquake resistant structural systems, damping devices and base isolation.	
Unit 4.	**5+5 hours**
Design of RC buildings for earthquake resistance, load combinations, ductility and energy absorption in buildings, confinement of concrete for ductility, design of columns and beams for ductility, ductile detailing as per IS:13920, design provisions as per IS:1893 for frames, shear walls and dual systems, structural behavior, design and ductile detailing of shear walls.	
Unit 5.	**5+5 hours**
Effect of infill masonry walls on frames, modeling concepts of masonry infills, behavior of masonry buildings during earthquakes, failure patterns and strength of masonry infills in shear and flexure, slenderness concepts of masonry walls, concepts of earthquake resistant design of masonry buildings, codal provisions.	

SELF-STUDY:

Term Project – 1:

Plotting response spectrum plots using Seismo-signal

Term Project – 2:

Seismic design of an RC MS framed building with and without infill and with and without irregularities.

8. T Paulay and M J N Priestley, Seismic Design of Reinforced Concrete and Masonry Buildings, John Wiley and Sons, 1992.

Course outcomes: After completing this course, the students will be able to,

CO1: Synthesize his basic knowledge of engineering geology and structural dynamics to distinguish between different types of seismic waves and their characteristics and quantify earthquakes. He will be able to delineate the hazards and risks associated with earthquakes and discuss the significance and procedures of disaster mitigation. He will distinguish between the structural response under gravity and seismic loads and discriminate on the role of lateral load resisting structural systems.

CO2: Apply his knowledge of structural dynamics, to explain the procedure for construction of earthquake spectra including tripartite diagrams. Student will be able to quantify irregularities, identify soft stories and associated effects on building performance. He will be able to identify the effect of irregularities in structural configuration. He will apply original thinking and critical judgement in computing the centre of mass and centre of rigidity of framed buildings and compute torsional moments.

CO3: Model MS RC framed buildings and compute seismic forces by using equivalent lateral force method as per IS 1893 provisions and carry out dynamic analysis to determine the modal frequencies and earthquake forces.

CO4: Design RC elements of framed building system for the forces obtained from dynamic analysis due to various load combinations as per IS 456 and provide ductile detailing as per 13920.

CO5:	Explain the failure pattern of masonry building, modeling of infills in buildings and compute the compressive, flexural and shear strength of masonry walls taking due account of slenderness. He will be able to formulate procedure for seismic strengthening of masonry buildings

DESIGN OF INDUSTRIAL STRUCTURES

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N2CSE03	SEE Duration (Hours):	3.0

Course objectives:

- Design of industrial building structural members including gantry girders.
- Design of light gauge cold-formed steel structural members.
- Design of hot rolled steel members.
- Analysis and Design of steel frames for various loading conditions.
- Design of steel composite floors and beams.

Unit 1. **5+6 hours**

Analysis of Industrial buildings and mill bents for gravity and wind loads, Analysis and design of framing components namely girders, trusses, gable frames, purlins, girts, bracings including all connections.
Analysis and design of gantry columns and gantry girders in industrial buildings.

Unit 2. **6+5 hours**

Forms of light gauge sections, Effective width computation of compressive strength of unstiffened, stiffened, multiple stiffened compression elements of cold-formed light gauge sections, concept of local buckling of thin elements, Limiting width to thickness ratio, post-buckling strength. Flexural strength of light gauge members.

Unit 3. **5+5 hours**

Concept of pre-engineered buildings, Design of plate girder, Design of flexural members (laterally restrained / laterally unrestrained) with conventional hot rolled steel and cold formed steel.

Unit 4. **5+5 hours**

Steel structural systems for multistory structures, Analysis and behavior, vertical load resisting systems, lateral load resisting systems, rigid frames, braced frames, lateral load response, drift assessment and curtailment, design of basic components.

Unit 5. **5+5 hours**

Design of composite structures- Floor and Roof system Design, Non-composite beam and composite beam, open web steel joist/girder- castellated beams and virendeel girders, serviceability requirements.

Textbooks

3. Mc Cormac J.C., Structural Steel Design- LRFD method, Horper and Row New York, 1981.
4. Clark and Coverman, Structural Steelwork: limit state design, Taylor and Francis, London, 1987.

Course outcomes: After completing this course, the students will be able to,

CO1: Use the knowledge gained in structural analysis, strength of materials and design of steel structures, the student will be able to think laterally and originally to analyze problems of industrial buildings and mill bents, under gravity and wind loads and design components of trusses, purlins, composite columns, gable frames and gantry girders, gantry columns, bracings and connections.

CO2: Apply advanced knowledge of light gauge sections, the student will be able to apply critical thinking and independent judgment to compute effective width of unstiffened, stiffened and multi-stiffened compression elements of cold-formed sections and apply lateral thinking and original judgment to solve complex numerical problems of load carrying capacity of light gauge elements in compression, apply concept of local and global buckling to evaluate post-buckling strength.

CO3: Classify different types of industrial buildings and apply critical thinking and original judgment to analyze and design components of engineered buildings such as tension and compression elements and make creative advances to provide solutions to the complex problems of composite floors.

CO4: Analyze multi-story framed structures under gravity and lateral loads using approximate methods. Students will be able to distinguish between structural responses of rigid/braced frames and compute drift in multi-story frames and design basic components.

CO5: Distinguish between different types of composite floors and design composite floor/roof systems, non-composite beams and composite beams, open web steel girders and make use of provision for curtailment of flanged plates and design tubular sections for limit states of collapse and serviceability.

ADVANCED PRE-STRESSED CONCRETE STRUCTURES

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N2CSEE21	SEE Duration (Hours):	3.0

Course objectives:

- Design of Pre-stressed concrete members for shear and torsional Resistance.
- Determine the Transfer of Pre-stress, Transmission Length, Bond Stresses, End-zone Reinforcement in PSC members.
- Design of anchorage zone Stresses in post-tensioned members by different methods.
- Design of pre-tensioned and post-tensioned member sections for flexure, shear and torsion.
- Design of composite PSC members.

Unit 1. **5+6 hours**

Shear and Tortional Resistance of Pre-stressed concrete members. Shear and Principal Stresses, shear Resistance of cracked and uncracked PSC members. Design of Shear and torsion including detailing.

Unit 2. **6+5 hours**

Transfer of Pre-stress in Pre-tensioned Members. Transmission of Pre-stressing force by bond. Transmission Length. Distribution of Bond Stresses, Transverse Tensile Stresses, End-zone Reinforcement, Flexural Bond Stresses and Code Provisions for bond and Transmission length.

Unit 3. **5+5 hours**

Anchorage Zone Stresses in Post-Tensioned Members. Stress Distribution in End Block, Computation of Anchorage Zone Stresses by Magnel's Method and Guyon's Method. Indian Code Provisions, Determination and detailing of Anchorage Zone Reinforcement.

Unit 4. **5+5 hours**

Philosophy of limit-state Design, design criteria for different Limit State for Prestressed concrete Members - Design Loads, Strength and serviceability limit states, Type -1, 2 and 3 Design, Principles of dimensioning pre-stressed concrete members.

Design of pre-tensioned and post-tensioned member sections for flexure, shear and torsion. Determination of kern zones and cable layout.

Unit 5. **5+5 hours**

Design of composite sections with pre-cast pre-stressed and cast-insitu elements, analysis for flexure, transverse shear and interfacial shear, propped and unpropped construction, problem of differential shrinkage.

Textbooks

5. IS:1343 – 1980 (Reaffirmed1999) Ed. 2.1(1984-10), Indian Standard Code of practice for prestressed concrete

Course outcomes: After completing this course, the students will be able to,

CO1: Synthesize the basic knowledge of RCC and structural mechanics with the advanced knowledge of PSC, the student will be able to analyze PSC structural components to evaluate flexural and shear stresses and principal stresses at different locations, before and after cracking, design and detail PSC member for combined action of shear, torsion and bending including determination of shear / torsional reinforcement and detailing.

CO2: Synthesize the knowledge of distribution of bond stresses in RCC with the advanced knowledge of PSC, the student will apply critical thinking and judgment to analyze the distribution of bars and evaluate the transmission length of pre-tensioned wires and evaluate the conformity with codal provisions, analyze transverse tensile/splitting tensile stresses and determine transverse reinforcement in the transmission zone.

CO3: Apply critical thinking and judgment to analyze the anchorage zone of post-tensioned concrete members and evaluate the stresses and reinforcement by Magnel's, Guyon's and IS-1343 methods.

CO4: Make creative advances and apply lateral thinking to provide solutions to the complex problems of preliminary dimensioning of pre and post-tensioned flexural members, design for limit state of collapse and serviceability in flexure, shear & torsion and detail the tendon profile considering locations of kern points.

CO5: Provide solutions to the complex problems of analysis of composite sections of precast girders and cast-in-situ slabs considering type of constructions (propped/unpropped) and evaluate of flexural and shear stresses and interfacial shear stresses.

REPAIR, REHABILITATION AND HEALTH MONITORING OF STRUCTURES

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N2CSEE22	SEE Duration (Hours):	3.0

Course objectives:
The objective of the course is to enable the student to identify cause of deterioration of concrete structures and use appropriate diagnostics methods and destructive & non-destructive tests. The course intends to enable the students to analyze data, estimate the extent of damage, identify suitable maintenance and repair strategies, materials for repair and formulate repair/retrofitting techniques as appropriate.

Unit 1. Introduction **5+6 hours**

Review of Basic terminology: Distress, deterioration, damage, repair, maintenance, reconstruction, rehabilitation, retrofit, strengthening, hazard, risk, vulnerability, durability, serviceability, performance, forensic analysis – definition, distinction between various terms with examples

Philosophical overview: Repair process- distress identification and location, testing and quantification, condition survey and condition assessment-repair strategies and management- Structural health monitoring and management.

Unit 2. Deterioration/damage of concrete **6+5 hours**

Mechanisms: Physical mechanisms- Cyclic Freezing and Thawing, thermal shock, .abrasion and erosion, effects of creep, shrinkage and relaxation; Chemical attack-sulphates, chlorides, organic and inorganic acids, ammonium and magnesium compounds, caustic soda, demineralized and distilled water, seawater, alkali-aggregate reaction; reinforcement corrosion– Cl or CO2 induced, Damage due to construction defects- Effects of cover thickness, cracking, w/c, reinforcement placement and spacing; structural overloads natural and man-made calamities-fire, earthquake, floods, cyclone.

Deterioration Models: RCPT and RMT, environment and its role-soil, air, water, exposure classes and significance, prescriptive measures against deterioration.

Unit 3. Testing and health monitoring **5+5 hours**

Utility of various destructive techniques and non-destructive tests planning and interpretation of in-situ tests, principles, methodology and application of UPV and rebound hammer techniques Pull off, and penetration techniques, concrete core tests, load testing and monitoring, durability tests- HCP, resistivity, corrosion rate monitoring using LPR, advanced techniques-GPR, Infrared tomography, sonography, acoustic emission, X-ray. Chemical tests.

Structural Health Monitoring: Need, local and global damage, vibration-based techniques-need, advantages and limitations, methodology- sensors used-electrical resistance and capacitance based sensors, smart sensors- fiber optic and piezoelectric sensors, active and passive control application to bridges, buildings, model-based damage assessment, damage localization and quantification.

Unit 4. Repair/rehabilitation materials: 5+5 hours

Portland cement mortar/concrete with chemical admixtures, polymers-polyester, epoxy, polymer modifiers, acrylics and mineral additions-FA, micro silica and GGBS, High alumina cement, GI, SS, non-ferrous metals and FRP reinforcement, Dry pack, sealants-insitu and preformed, reactive resins-epoxy, polyurethane, silicone, preplaced aggregate concrete, Shotcrete, bonding coats, coatings and toppings, Silica Fume Concrete, treatment of live crack, honeycombed concrete-grouting.

Unit 5. Repair, rehabilitation and retrofitting techniques 5+5 hours

Repair: Non-structural repair- preparation for remedial work and execution, application of bonding agents and grouts, cementitious or polymeric mortars preparation, mixing, laying and finishing and curing, repair of cracks by injection, grout or mortar, repair of live cracks, repair of honeycombed concrete, repair of dampness in walls and efflorescence in buildings, repair of rainwater leakage, weatherproofing of roofs, leakage in basements and toilets in multistory buildings.
Structural Repair: Repair of structural cracks by injection, blanketing, stitching, patch repairs, repair of carbonation and chloride induced corrosion, repair of concrete damaged by sulphate attack, repair of old and new RC slabs with spalling of concrete at bottom face, repair of RC beams and columns damaged by reinforcement corrosion.
Strengthening and Retrofitting: of foundations of walls and column footings by underpinning, soil stabilization, section enlargement, strengthening of RC slabs and beams - jacketing, shotcreting, plate bonding, FRP wrapping or sheet bonding, external prestressing, stress reduction, breaking the span and changing structural configuration.

Term Projects

1. Visit to selected buildings and conduct of non-destructive and semi-destructive tests, analysis and interpretation and submission of report.
2. Visit to a site involving major restoration and preparation of QA/QC report.

11. J.H Bungey and S.G Millard, Testing of concrete in structure, Blackie academic and professional, An imprint of Chapman and Hall, London, 3rd edition, 2010.

Course outcomes: After completing this course, the students will be able to,

CO1: Synthesize his basic knowledge of advanced concrete technology and repair, retrofit and health monitoring of structures to distinguish between different technical terms and provide and outline of basic philosophy of repair technology

CO2: Apply critical thinking and original judgment to explain the role of physical, chemical and other mechanisms of deterioration of concrete structures, diagnose the mechanisms from symptoms, inspection and investigations. With his understanding of advanced knowledge of transport mechanics and models, he can apply lateral thinking and independent judgment to evaluate water permeability, chloride permeability, diffusion coefficient and estimate the time required for carbonation and chloride penetration.

CO3: Applies critical thinking and original judgment to select the appropriate tests to be undertaken based on preliminary inspection and diagnosis, specify the procedures to be followed and will apply lateral thinking and independent judgment to analyze and interpret the test data and arrive at feasible solutions for remedial action. He will be able to explain the need for health monitoring of important structures, explain damage detection techniques and dynamic methods of assessment and principles of advanced instrumentation techniques.

CO4: Think originally and decide on the extent of maintenance/repair of structural elements and structures, select appropriate materials based on kind of distress and extent of damage citing sufficient justification for the different cases considering cost, skill, tools and resource constraints.

CO5: Apply critical judgment formulate repair, strengthening and retrofitting strategies for structures and elements and make creative advances to design the members to be retrofitted, specify the procedures for the repair/retrofit operations and la y down the quality control measures as appropriate.

DESIGN OF STORAGE AND STACK-LIKE STRUCTURES

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N2CSEE23	SEE Duration (Hours):	3.0

Course objectives:

The objective of this course is to introduce the students to design principles of storage structures for different types of materials including silos, bunkers and water tanks as well as stack structures like reinforced concrete, steel chimneys.

Unit 1.	**6+5 hours**
Structures for storage of solids- flow properties of solids, functional design of silos and bins. Design of Bunkers and silos- Introduction, Janssen's theory, Airy's theory. Design of chimneys– Concrete and steel chimneys, Resistance to DL, IL, WL and seismic loads, design of walls and foundations, guyed stacks–design principles.	
Unit 2.	**5+6 hours**
Design of water tanks resting on ground-Design of circular and rectangular tanks with different kinds of bases.	
Unit 3.	**5+5 hours**
Design of underground water tanks- Introduction, Earth pressure on tank walls, uplift pressure on the floor of the tank, design of rectangular tanks with different L/B as per IS:3370-2009.	
Unit 4.	**5+5 hours**
Design of cylindrical Overhead tanks with flat and spherical bases and top, design of Intze tanks.	
Unit 5.	**5+5 hours**
Design of staging – Circular, hexagonal and other shapes, effect of wind load and seismic load, design of foundation – independent footings, complete raft and annular raft.	

Textbooks

1. P.C. Varghese, Advanced reinforced concrete design, Prentice Hall India Learning Private Limited; 2 edition (2005).
2. Krishna Raju, Advanced Reinforced Concrete Design (IS : 456-2000), 3 ed., CBS Publishers & Distributors, 2008.

References

2. Vazirani and Ratwani, Reinforced Cement Concrete, Khanna, Sixteenth edition (1977).
3. G. M. Pinfold, Design of Chimneys and towers, Taylor & Francis Ltd , 2nd Revised edition, 1985.

Course outcomes: After completing this course, the students will be able to,

CO1: Design bunkers, silos considering flow properties of solids and using Janssen's and Airy's theory. Student will be able to design reinforced concrete circular chimneys under the action of dead load, imposed load, wind load, and seismic loads.

CO2: Design water tanks resting on grounds with different types of bases.

CO3: Design Underground water tanks considering earth pressure, uplift pressure of the flow and different geometry as per IS3370.

CO4: Design different elements of overhead tanks with flat and spherical bases and design of Intze tanks.

CO5: Design of staging – Circular, hexagonal and other shapes, effect of wind load and seismic load, design of foundation – independent footings, complete raft and annular raft

ADVANCED DESIGN OF STEEL STRUCTURES

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N2CSEE24	SEE Duration (Hours):	3.0

Course objectives:

The objective of this course is to

1. Understand the background to the design provisions for hot-rolled and cold-formed steel structures, including the main differences between them.
2. Proficiency in applying the provisions for design of columns, beams, beam-columns
3. Design structural sections for adequate fire resistance

Unit 1. Laterally unrestrained beams **6+5 hours**

Lateral Buckling of Beams, Factors affecting lateral stability, IS 800 code provisions, Design Approach. Lateral buckling strength of Cantilever beams, continuous beams, beams with continuous and discrete lateral restraints, Mono-symmetric and non- uniform beams – Design Examples. Concepts of -Shear Center, Warping, Uniform and Non-Uniform torsion.

Unit 2. Beam-column frames **5+6 hours**

Behaviour of Short and Long Beam - Columns, Effects of Slenderness Ratio and Axial Force on Modes of Failure, Biaxial bending, Strength of Beam Columns, Sway and Non-Sway Frames, Strength and Stability of rigid jointed frames, Effective Length of Columns-, Methods in IS 800 - Examples

Unit 3. Steel beams with Web Openings **5+5 hours**

Shape of the web openings, practical guide lines, and Force distribution and failure patterns, Analysis of beams with perforated thin and thick webs, Design of laterally restrained castellated beams for given sectional properties, Vierendeel girders (design for given analysis results)

Unit 4. Cold formed steel sections **5+5 hours**

Techniques and properties, Advantages, Typical profiles, Stiffened and unstiffened elements, Local buckling effects, effective section properties, IS 801& 811 code provisions- numerical examples, beam design, column design.

Unit 5. Fire resistance **5+5 hours**

Fire resistance level, period of structural adequacy, properties of steel with temperature, Limiting Steel temperature, Protected and unprotected members, Methods of fire protection, Fire resistance ratings- Numerical Examples.

Textbooks

1. N. Subramanian, Design of Steel Structures, Oxford, IBH Publishers.
2. Duggal S.K, Limit State Design of Steel Structures, 3 ed., Kindle Edition.

References

1. Wei-Wen Yu, Roger A LaBoube, Helen Chen, Cold-Formed Steel Design, 5 ed., Wiley.

Course outcomes: After completing this course, the students will be able to,

CO1:	Apply the principles of stability to analyze and design continuous beams and other kind subjected to lateral loading.
CO2:	Use the knowledge on beam-column joint mechanisms and be able to assess strength and stability of rigid jointed frames.
CO3:	Analyze the mechanisms of force distribution and failure patterns , and be able to design web openings, perforated thin and thick webs,, and castellated beams.
CO4:	Design and analyze formed steel sections complying IS 801 & IS 811 code provisions.
CO5:	Disseminate the knowledge on fire resistance , fire protection, and fire resistance ratings of steel structures.

DESIGN OF BRIDGE STRUCTURES

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N2CSEE31	SEE Duration (Hours):	3.0

Course Objectives: The objective of the course is to introduce the students to different types of bridges, their components, design principles, selection of bridge site, loads coming on bridges, design of slab bridges, reinforced concrete T-beam bridges, PSC bridges and bridge bearings.

Unit-1

Introduction: Components of a bridge, classification of bridges, Historical development, Types of bridge superstructures- Design principles (No problems), selection of bridge site.

Loads on Bridges: Dead loads, Vehicle live load, Impact effect, Wind loading, longitudinal forces, centrifugal forces, Buoyancy, water current forces, Thermal forces, seismic forces. **5+5 hours**

Unit-2

Design of Slab Bridges: Introduction to slab bridges, Effective length of dispersion, effective width of dispersion, Analysis and design of deck slab bridges for different IRC AA (Tracked vehicle), IRC class A vehicle and IRC class 70R loading using limi t state method. **5+6 hours**

Unit-3

Design of T-beam Reinforced Concrete Bridges: : Introduction to T-beam bridges, Analysis using Courbon's method, Design of T-beam interior panel using pegaud's method and girders for different IRC AA (Tracked vehicle), IRC class A vehicle and IRC class 70R loading using limit state method. **5+5 hrs.**

Unit-4

Design of Prestressed Concrete Bridges: Introduction to Prestressed concrete bridge decks, principles of prestressing, design on post tensioned prestressed concrete deck slab Bridges. **5+5 hours**

Unit-5

Design of Bridge bearings: Introduction to bridge bearing, types of bearings, analysis of load transfer to bearings, Design principles of steel rocker and roller bearings, Design of reinforced concrete rocker bearing, design of elastomeric pad bearing. design of elastomeric pot bearings. **6+5 hours**

Term Project:

1) Finite Element Analysis and design of RC Slab bridges, RC T-beam concrete bridges.

2) Finite Element Analysis and design of Prestressed concrete deck slab bridges and T-beam bridge.

TEXT BOOKS:

IRC 21 – 2000 Standard Specifications and Code Of Practice For Road Bridges Section III Cement Concrete (Plain and reinforced) The Indian Road Congress New Delhi.	
IRC-18-2000, Design Criteria for Prestressed Concrete Road Bridges (Post-Tensioned concrete), Indian Standard specification and code of Practice for PSC Bridges	

IRC 83 Standard specifications and code of practice for Road bridges Section IX Bearings

Part I Metallic Bearings Part II Elastomeric Bearings

Course Outcomes (Cos) After the completion of the course, the students will be able to,

CO1: Apply critical thinking and original judgment to describe the design principles of critical components (no numerical problems), select ideal bridge site based on requirements, distinguish different types of loadings acting on bridges and explain the principles of load dispersion.

CO2: Think originally and apply critical judgement to compute dispersion of vehicular loads on slab bridges. He will be able to design typical slab bridges for different classes of vehicular loads – IRC class AA tracked vehicle and 70 R loading using Pigeuad's charts.

CO3: Use Pigeuad's charts for design of deck slab and Courbon's method to design and detail RC T beam bridge girders for IRC tracked vehicle and class 70R loading.

CO4: Apply critical thinking and independent judgment to solve complex problems of PSC deck slabs and post tensioned concrete T beam bridge girders.

CO5: Apply critical thinking to identify different types of bridge bearings, applications of different types of bearings and distinguish their general features and think laterally and originally to design reinforced concrete rocker bearings, elastomeric pad and pot bearings.

DESIGN OF MASONRY STRUCTURES

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N2CSEE32	SEE Duration (Hours):	3.0

Course objectives:

- To learn performance of masonry structures.
- To design the masonry structures for earthquake resistance.
- To evaluate the strength and stability of the masonry structures.

Unit 1. Introduction, Masonry units, materials, and types 6+5 hours

History of masonry Characteristics of Brick, stone, clay block, concrete block, stabilized mud block masonry units – strength, modulus of elasticity and water absorption. Masonry materials – Classification and properties of mortars, selection of mortars. Masonry arches, domes, and vaults: Components and classification of masonry arches, domes and vaults, historical buildings, construction procedure.

Unit 2. Strength of masonry in compression 5+6 hours

Behavior of masonry under compression, strength and elastic properties, influence of masonry unit and mortar characteristics, effect of masonry unit height on compressive strength, influence of masonry bonding patterns on strength, prediction of strength of masonry in Indian context, Failure theories of masonry under compression. Effects of slenderness and eccentricity, effect of rate of absorption, effect of curing, effect of aging, workmanship on compressive strength.

Unit 3. Flexural and shear bond, flexural strength and shear strength 5+5 hours

Bond between masonry unit and mortar, tests for determining flexural and shear bond strengths, factors affecting bond strength, effect of bond strength on compressive strength, orthotropic strength properties of masonry in flexure, shear strength of masonry, test procedures for evaluating flexural and shear strength.

Unit 4. Design of load bearing masonry buildings 5+5 hours

Permissible compressive stress, stress reduction and shape reduction factors, increase in permissible stresses for eccentric vertical and lateral loads, permissible tensile and shear stresses, Effective height of walls and columns, opening in walls, effective length, effective thickness, slenderness ratio, eccentricity, load dispersion, arching action, lintels; Wall carrying axial load, eccentric load with different eccentricity ratios, wall with openings, freestanding wall; Design of load-bearing masonry for buildings up to 3 to 8 storeys using BIS codal provisions.

Unit 5. Earthquake resistant masonry buildings 5+5 hours

Behavior of masonry during earthquakes, concepts and design procedure for earthquake resistant masonry, BIS codal provisions.

Textbooks

1. Hendry A.W., “Structural masonry”- Macmillan Education Ltd., 2nd Ed.
2. Sinha B.P & Davis S.R., “Design of Masonry structures”- E & FN Spon.

6. IS 1905, BIS, New Delhi.
7. SP20(S&T), New Delhi

Course outcomes: After completing this course, the students will be able to,

CO1: Disseminate the knowledge on masonry characteristics such as strength , modulus of elasticity, and water absorption of brick, stone, masonry blocks,

CO2: Analyze the strength properties of masonry , bonding patterns of masonry and predict the failure patterns.

CO3: Determine the flexural, shear and bond strength of masonry units using standard procedures.

CO4: Design masonry wall with and without openings carrying axial , eccentric and lateral loads.

CO5: Evaluate the strength and stability of the masonry structures subjected to earthquake as per BIS provisions.

DESIGN OF TALL STRUCTURES

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N2CSEE15	SEE Duration (Hours):	3.0

Course objectives:

The objective of the course is to introduce the design philosophy of tall structures, various types of loading and load combinations, factors affecting behavior of various forms of tall structures – rigid frames, braced frames, shear walls, coupled shear walls, wall frames, tubular and core structures, analysis and design of various tall structural systems considering different sectional shapes, deflection, cracking, pre stressing and shear flow, creep temperature, shrinkage and stability.

Unit 1. Design Criteria	**6+5 hours**
Design philosophy, loading, sequential loading, and materials–high-performance ty, fiber reinforced concrete, lightweight concrete, design mixes. Gravity loading: Dead and live load, methods of live load reduction, Impact, Gravity loading, Construction loads Wind loading: static and dynamic approach, Analytical and wind tunnel experimentation method. Earthquake loading: Equivalent lateral force, model analysis, combinations of loading, Limit state design.	
Unit 2. Behaviour of various structural systems	**5+6 hours**
Factors affecting growth, Height and structural form; High rise behavior, Rigid frames, braced frames, in-filled frames, shear walls, coupled shear walls, wall-frames, tubular, cores, Futigger – braced and hybrid mega system.	
Unit 3. Analysis	**5+5 hours**
Modeling for approximate analysis, accurate analysis and reduction techniques, analysis of building as total structural system considering overall integrity and major subsystem interaction, analysis for member forces; drift and twist, computerized general three-dimensional analysis. Structural elements: sectional shapes, properties and resisting capacities.	
Unit 4. Design	**5+5 hours**
Design, deflection, cracking, pre-stressing, shear flow. Design for differential movement, creep and shrinkage effects, temperature effects and fire.	
Unit 5. Stability of tall buildings	**5+5 hours**
Effects of gravity of loading, P-Delta analysis, simultaneous first order and P-Delta analysis, Transnational, Torsional instability, out of plumb effects, stiffness of member in stability, effect of foundation rotation.	

Textbooks

1. Taranath B. S., Structural Analysis and Design of Tall Buildings, McGraw Hill., 1988

References

1. Wolfgang Schueller, High rise building structures, John Wiley & Sons Inc 1977.
2. Bryan Stafford, Tall building structures, Analysis and Design, Wiley India Pvt Ltd, 2011.

4. Lynn S. Beedle, Advances in Tall Buildings, CBS Publishers and Distributors. Van Nostrand Reinhold, 1986.

Course outcomes: After completing this course, the students will be able to,

CO1: Explain the design philosophy of tall structures including gravity load, construction load, sequential load, wind loads, impact loads. Students will be able to explain static and analysis, wind tunnel method for the analysis of tall structure including stress, limit state and plastic design methodology. Students will apply concept of special concrete and their design mixes.

CO2: Elaborate on the high raise behavior of structural systems such as rigid frames, frames infill frames, shear walls, tubular and cores etc.

CO3: Explain the analysis of structural system for overall integrity and subsystem interaction, computerized 3D analysis and selection of structural elements.

CO4: Find deflection, cracking, prestressing shear flow for tall structures, for differential movement creep and shrinkage effects, temperature effects and fire.

CO5: Evaluate the stability of tall buildings using approximate methods second order effects of gravity loading, P-Delta analysis, simultaneous first and P-Delta analysis Transnational, Torsional instability, out of plum effects, stiffness of member in stability, effect of foundation rotation.

DESIGN OF OFFSHORE STRUCTURES

Contact Hours/Week	: 2+2+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course code	: N2CSEE34	SEE Duration (Hours):	3.0

Course objectives:

- To understand on the types of offshore structures and their conceptual development.
- To understand the behavior under static and dynamic load, their design method and codal provisions.
- To understand the tubular member and joint design Objective
- To understand the behavior of offshore structure to environment al loads, accidental loads, and corrosion

Unit 1. **6+5 hours**

Introduction to offshore structures, Types of offshore structures and their conceptual development- Fixed, Compliant, Floating-Analytical models for offshore structures- Behaviour under static and dynamic loads- Materials and construction of jacket and gravity platforms- Statutory regulations- Allowable stresses- Design methods and Code Provisions- Design specification as per Classification Societies.

Unit 2. **5+6 hours**

Introduction to tubular members- Slenderness effect- Principles of WSD and LRFD; Allowable stresses and Partial Safety Factors; Tubular Members, Slenderness effects; Column Buckling, Design for Hydrostatic pressure; Design for combined axial and bending stresses (API RP 2A guidelines). Simple tubular joints, design using allowable loads; stress concentration factors; S-N curves and fatigue damage calculations - Design of tubular joints as per API Code.

Unit 3. **5+5 hours**

Environmental loads- Wind, wave, current and ice loads- Calculation based on maximum base shear and overturning moments- Design wave height and spectral definition- Morison's Equation-Maximum wave force on offshore structure.

Unit 4. **5+5 hours**

Design against accidental loads- Fire, Blast and Collision - Behaviour of steel at elevated temperature-Fire rating for Hydrocarbon fire- Design of structures for high temperature- Blast mitigation -Blast walls- Collision of boats and energy absorption.

Unit 5. **5+5 hours**

Corrosion- Corrosion mechanism- Types of corrosion- Offshore structure corrosion zones- Biological corrosion- Preventive measures of corrosion- Principles of cathode protection systems- Sacrificial anode method and impressed current method- Online corrosion monitoring- Corrosion fatigue.

2. API RP 2A. Planning, Designing and Constructing Fixed Offshore Platforms, API. 2000.
3. Handbook of Offshore Engineering by S.K. Chakrabarti, Elsevier's, 2005.

Course outcomes: After completing this course, the students will be able to,

CO1: Acquire knowledge and skills to carry out basic tasks regarding dimensioning and structural design of offshore structures.
CO2: Acquire training in the design of jacket platforms, tubular joints, and concrete gravity platforms.
CO3: Estimate the maximum forces on an offshore structure due to environmental loads
CO4: Estimate the resistance of offshore platforms against accidental loads, elevated temperature, blast and collision.
CO5: Attain knowledge in the physics of corrosion and methods to monitor and prevent corrosion.

Assignment component: To design an offshore platform as per codal provisions, estimate the forces due to environmental, accidental and corrosion actions. They have to submit a design report. This component will be evaluated for (7 marks

STRUCTURAL DYNAMICS LABORATORY

Contact Hours/Week	: 1+0+2 (L+T+P)	Credits:	2.0
Total Lecture Hours	: 13	CIE Marks:	50
Total Practical Hours	: 26	SEE Marks:	50
Course code	: N2CSEL1	SEE Duration (Hours):	3.0

Assessment & Grading:

- Regular Lab work and writing lab records: (20+15) 35 marks.
- Lab test and Viva-voce at the End of the Sem: (10+5) 15 marks.

Prerequisites: Structural dynamics

Course objectives:

The objective of this laboratory course is to enable the students to determine the natural frequencies, logarithmic decrement and damping ratio of different types of structural components including one-storied and two-storied steel frames and one-span and two-span beams subjected to harmonic excitation and induced base motion.

Experiments Set 1
Experimental investigation one and two-span beam model subjected to periodic motion to determine variation of vibration amplitude, natural frequency, logarithmic decrement and damping.
Experiments Set 2
Experimental investigation one-storied building frame model subjected to periodic base motion to determine variation of vibration amplitude, natural frequency, logarithmic decrement and damping.
Experiments Set 3
Experimental investigation of two and three storied building frame models subjected to harmonic base motion to determine modal frequencies, damping, modal amplitudes.
Experiments Set 4
Experimental investigation of a four storied building frame model with and without an open ground floor subjected to harmonic base motion to determine modal frequencies, damping, modal amplitudes.
Experiments Set 5
Experimental study on vibration absorber.

2. Paolo Gatti and Vittorio Ferrarri, Applied structural and mechanical vibrations- Theory, methods and measuring instrumentation, E and FN Spon, Imprint of Taylor and Francis, London, 1999.

Course outcomes: After completing this course, the students will be able to,

CO1: Conduct experiments on one and two-span model beams, analyze results and determine the dynamic response vibration amplitude, natural frequency, logarithmic decrement and damping.

CO2: Conduct experiments on one storey model frame and determine dynamic response and analyze the results to determine vibration amplitude, natural frequency, logarithmic decrement and damping.

CO3: Conduct experiments on two and three storey model frames and determine dynamic response including modal frequencies and amplitudes.

CO4: Conduct experiments on four storey model frames with and without open ground floor and determine dynamic response including modal frequencies and amplitudes.

CO5: Conduct study on vibration amplitude reduction using dampers.

FUZZY LOGIC AND ENGINEERING APPLICATIONS

Contact Hours/Week	: 3+0+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: 00	SEE Marks:	50
Course code	: N2OE01	SEE Duration (Hours):	3.0

Course objectives: The objectives of the course are;

- To understand uncertainty of non-statistical kind.
- To learn the ways to develop membership functions
- To understand defuzzification methods.
- To learn extension principle and to perform fuzzy arithmetic and fuzzy calculus.

Unit 1.	**7 hours**
Introduction to fuzzy notions, uncertainty, uncertainty in information. Utility of fuzzy systems and limitations. Fuzzy sets and membership functions. Examples of engineering interest. Classical sets and fuzzy sets. Fuzzy set operations and properties of fuzzy sets.	
Unit 2.	**9 hours**
Membership functions, properties, various forms and their algorithms, fuzzyfication. Defuzzification- various methods, applications related to engineering	
Unit 3.	**8hours**
Developing membership functions, method of inference, intuition and rank ordering. Example problems of engineering interest.	
Unit 4.	**8 hours**
Decision making with uncertain or fuzzy information. Fuzzy synthetic evaluation, fuzzy ordering, preference and consensus.	
Unit 5.	**8 hours**
Fuzzy extension principle, fuzzy arithmetic with discrete variables and continuous Variables, interval analysis, vertex method and other methods.	

Textbook

1. George Bojadzive, Maria Bojadzive, Fuzzy sets, fuzzy logic and Applicaions,World Scientific Publications, 1995.
2. Massavo Mukaidono, Fuzzy Logic for Beginners, World Scintific Publications, 2001.

Course outcomes: After completing this course, the students will be able to,

CO1: Develop membership functions and perform various fuzzy set operations.
CO2: Decide on the nature of fuzzy membership functions and to develop algorithms for the same. Apply various methods of defuzzification and to determine scalar output.

CO3: Apply methods such as intuition, inference, and rank ordering to develop membership function for the given engineering problem having uncertain variables.

CO4: Apply principles of fuzzy synthetic evaluation, fuzzy ordering and preference and be able to take decisions in uncertain environments.

CO5: Develop fuzzy membership function in the consequent space using discrete as well as continuous antecedent variables.

Assignment component: Students have to submit a small project report consisting of an application of fuzzy logic concepts using MatLab in their domain of study(7marks).

FUNDAMENTALS OF DATA ANLYTICS

Contact Hours/Week	: 3+0+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: 00	SEE Marks:	50
Course code	: N2OE02	SEE Duration (Hours):	3.0

Objectives: The objectives of the course are to;

- Get an overall view of data analysis based on CRISP-DM process model.
- Study data quality assessment and visualization techniques for data involving two attributes and for higher dimensional data.
- Understand principles of modeling by going through various data modeling techniques.
- Get a detailed account of data preparation phase.
- Study statistical concepts related to data analysis.
- Enable students to independently perform data analytic procedures on given data pertaining to civil engineering using Excel.

UNIT1:	**7 hours**
Data and knowledge, criteria to assess the knowledge, descriptive statistics of the data, inferential statistics, exploratory data analysis, knowledge discovery in data bases, data analysis processes, SEMMA, CRISP-DM, methods, tasks and tools.	
UNIT2:	**8 hours**
Attribute understanding, kinds of attributes (nominal, interval, ratio types). Characteristics of one dimensional data, location measures, dispersion measures, and shape measures. Characteristic measures of multidimensional data, data quality, visual analytics of one dimensional data, density plots, box plots, scatter plots. Correlation and covariance. Methods for multidimensional data (just briefing). Analysis of data pertaining to specialization.	
UNIT3:	**8 hours**
The four steps of modelling, model classes, black-box models, fitting criteria and score functions, error functions for classification problems, measure of interestingness, closed form algorithm for model fitting. Types of errors. Model validation (briefing on methods). Modelling on the data specific to specialization.	
UNIT4:	**8hours**
Selection of data, feature selection, selecting top ranked subset of data, cross product, wrapper approach, and correlation based filter. Cleaning data, improving data quality, dealing with missing values, construct data, providing operability, assuring impartiality and maximize efficiency. Complex data types. Implementation of methods on data specific to specilization	
UNIT5:	**8 hours**
Clustering – methods. Hierarchical clustering. Dissimilarity measures, Minkowisci, Euclidian, Manhattan, Chebyshev, and cosine. Deviation measures.	

Association rules. Brief introduction to self organizing maps. Implementation of methods on data specific to branch of specialization.

INTRODUCTION TO AI AND ITS APPLICATIONS

Contact Hours/Week	: 3+0+0 (L+T+P)	Credits:	3.0
Total Lecture Hours	: 39	CIE Marks:	50
Total Tutorial Hours	: 00	SEE Marks:	50
Course code	: N2OE03	SEE Duration (Hours):	3.0

Objectives of the Course:

The primary objective of this course is to introduce the basic principles, techniques, and applications of Artificial Intelligence specifically to students of non-IT branches. Emphasis will be placed on the teaching of these fundamentals, not on providing a mastery of specific software tools or programming environments. Specific objectives are to:

- Gain a historical perspective of AI and its foundations.
- Become familiar with basic principles of AI toward problem solving, inference, perception, knowledge representation, and learning.
- Investigate applications of AI techniques in artificial neural networks and other machine learning models.
- Explore the current scope, potential, limitations, and implications of intelligent systems.

Unit 1	**7 hours**
Introduction, a brief history of AI, strong methods and weak methods, uses and limitations, AI in future, knowledge representation, the need for good representation, semantic nets, inheritance and frames. General applications of AI in various engineering domains.	
Unit 2	**8 Hours**
Search methodologies, problem solving as search, data driven /goal driven search, depth first search, breadth first search, problem solving as search, properties of such methods, why humans use depth first search, illustrative examples (traversing a Maze , searching for gift), informed and uninformed methods of searching. Illustrative real world problems of engineering interest.	
Unit 3	**8 Hours**
Introduction to Machine Learning, Concept learning, general-to-specific ordering, version spaces, inductive bias, general to specific ordering, version spaces, supervised learning, unsupervised learning, reinforcement learning. Illustrative real world examples of machine learning of engineering interest.	
Unit 4	**8 Hours**
Artificial Neural networks, introduction, neurons, perceptrons, the capabilities of a single perceptron, multilayer neural networks, capabilities of multilayer neural networks, back propagation, unsupervised learning networks, kohonen maps. Illustrative real world examples on applications of neural networks in various engineering domains.	
Unit 5	**8 Hours**
Learning under uncertainty and ambiguity, fuzzy logic, linguistic variables, fuzzy sets, membership functions, fuzzy set operations, fuzzy expert systems, fuzzification, defuzzification, fuzzy rules, fuzzy inferences. Illustrative examples of engineering applications of fuzzy logic.	

Text Books:

1. ***Stuart Russell and Peter Norvig***, Artificial Intelligence a Modren Approach, Third edition, Pearson Education, III edition, 2010.
2. ***Ben Coppin***, Artificial Intelligence Illuminated, Narosa Publications, 2014.

1. ***David. L.Poole , Alan K. Mackworth***, Artificial Intelligence – Foundations of Computational Agents, II edition, Cambridge University Press, 2010.
2. ***Kevin Warwick***, Artificial Intelligence-The Basics, Routledge Publications, USA,2012

Course Outcomes:

Upon successful completion of this course, the student shall be able to:

CO1: Demonstrate fundamental understanding of the history of artificial intelligence (AI) and its foundations.

CO2: Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning.

CO3: Demonstrate awareness and a fundamental understanding of various applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models.

CO4: Identify candidate problems exclusive to a particular engineering discipline that can be addressed under the ambit of AI.

CO5: Demonstrate an ability to share in discussions of AI, its current scope and limitations, and societal implications.

N1CTME12	Road Safety and Management
N1CTME13	Airport Planning and Design
N1CTME14	Transportation System Management

Note: **BSC**-Basic Science Courses, **IPCC**-Integrated Professional Core Courses, **PCC**: Professional Core Course, **PEC:** Professional Elective Course,
MCC- Mandatory Credit Course, **PCCL**-Professional Core Course Lab, **NCMC**-Non Credit Mandatory Course
AUD/AEC –Audit Course / Ability Enhancement Course(A pass in AUD/AEC is mandatory for the award of the degree)
L-Lecture, **P**-Practical, **T/SDA**-Tutorial / Skill Development Activities (Hours are for Interaction between faculty and students)

Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with practical of the same course. The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from the practical part of IPCC shall be included in the SEE question paper.

Audit Courses /Ability Enhancement Courses suggested by BoS (ONLINE courses):
Audit Courses are prerequisite courses suggested by the concerned Board of Studies.
Ability Enhancement Courses will be suggested by the BoS if prerequisite courses are not required for the programs.

- These courses are prescribed to help students to enhance their skills connected to the field of specialization as well allied fields that leads to employable skills. Involving in learning such courses are impetus to lifelong learning.
- The courses under this category are online courses published in advance and approved by the concerned Board of Studies.
- Registration to Audit /Ability Enhancement Course shall be done in consultation with the mentor and is compulsory during the concerned semester.
- In case a candidate fails to appear for the proctored examination or fails to pass the selected online course, he/she can register and appear for the same course if offered during the next session or register for a new course offered during that session, in consultation with the mentor.

The Audit / Ability Enhancement Course carries no credit and is not counted for vertical progression. However, a pass in such a course is mandatory for the award of the degree.

Skill development activities: in a concerned course, the students should

- Interact with industry (small, medium, and large).
- Involve in research/testing/projects to understand their problems and help creative and innovative methods to solve the problem.
- Involve in case studies and field visits/ fieldwork.
- Accustom to the use of standards/codes etc., to narrow the gap between academia and industry.
- Handle advanced instruments to enhance technical talent.
- Gain confidence in modelling of systems and algorithms for transient and steady-state operations, thermal study, etc.
- Work on different software to simulate, analyze and authenticate the output to interpret and conclude.

All activities should enhance student's abilities to employment and/or self-employment opportunities, management skills, Statistical analysis, fiscal expertise, etc. Students and the course instructor/s to involve either individually or in groups to interact together to enhance the learning and application skills of the study they have undertaken. The students with the help of the course teacher can take up relevant technical –activities which will enhance their skill. The prepared report shall be evaluated for CIE marks.

1. **Mini Project with Seminar:** This may be hands-on practice, survey report, data collection and analysis, coding, mobile app development, field visit and report preparation, modelling of system, simulation, analysing and authenticating, case studies, etc.

   CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide, if any, and a senior faculty of the department. Students can present the seminar based on the completed mini-project. Participation in the seminar by all postgraduate students of the program shall be mandatory.

   The CIE marks awarded for Mini-Project work and Seminar, shall be based on the evaluation of Mini Project work and Report, Presentation skill and performance in Question and Answer session in the ratio 50:25:25. Mini-Project with Seminar shall be considered as a head of passing and shall be considered for vertical progression as well as for the award of degree. Those, who do not take-up/complete the Mini Project and Seminar shall be declared as fail in that course and have to complete the same during the subsequent semester. **There is no SEE for this course.**

2. **Internship:** All the students shall have to undergo a mandatory internship of **06 weeks** during the vacation of II and III semesters. A University examination shall be conducted during III semester and the prescribed internship credit shall be counted in the same semester. The internship shall be considered as a head of passing and shall be considered for vertical progression as well as for the award of degree. Those, who do not take-up/complete the internship shall be declared as fail in the internship course and have to complete the same during the subsequent University examination after satisfying the internship requirements.

L-Lecture, **P**-Practical, **T/SDA**-Tutorial / Skill Development Activities (Hours are for Interaction between faculty and students)

1. **Project Work Phase-1:** The project work shall be carried out individually. However, in case a disciplinary or interdisciplinary project requires more participants, then a group consisting of not more than three shall be permitted.
   Students in consultation with the guide/co-guide (if any) in disciplinary project or guides/co-guides (if any) of all departments in case of multidisciplinary projects, shall pursue a literature survey and complete the preliminary requirements of the selected Project work. Each student shall prepare a relevant introductory project document, and present a seminar.
   CIE marks shall be awarded by a committee comprising of HoD as Chairman, all Guide/s and co-guide/s (if any) and a senior faculty of the concerned departments. The CIE marks awarded for project work phase -1, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25. **There is no SEE for this course**.
2. **Societal Project:** Students in consultation with the internal guide as well as with external guide (much preferable) shall involve in applying technology to workout/proposing viable solutions for societal problems.
   CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide if any, and a senior faculty of the department. The CIE marks awarded, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.
   Those, who have not pursued /completed the Societal Project, shall be declared as fail in the course and have to complete the same during subsequent semester/s after satisfying the Societal Project requirements. **There is no SEE for this course**.
3. **Internship:** Those, who have not pursued /completed the internship, shall be declared as fail in the internship course and have to complete the same during subsequent University examinations after satisfying the internship requirements. Internship SEE (University examination) shall be as per the University norms.
   CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide if any, and a senior faculty of the department. The CIE marks awarded for project work phase -1, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.

Each student / batch of students shall prepare project document, and present a seminar.

   CIE marks shall be awarded by a committee comprising of HoD as Chairman, all Guide/s and co-guide/s (if any) and a senior faculty of the concerned departments. The CIE marks awarded for project work phase -2, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.

   SEE shall be at the end of IV semester. Project work evaluation and Viva-Voce examination (SEE), after satisfying the plagiarism check, shall be as per the Institute norms.

SYLLABUS FOR

I semester

M. Tech.

(TRANSPORTATION ENGG. &

MANAGEMENT)

Sub. Code	**N1CTMMAT**								
Course Title	**Applied Statistics for Transportation Engineering**								
Course Type	**BSC**								
	L	T	LA	PR	SE	PROJ	SS	Credits	3
Contact Hrs./Week	3	0	0	0	0	0	0	CIE Marks	50
Contact Hrs./Sem.	39	0	0	0	0	0	0	SEE Marks	50
Credits	3								
Total Contact Hrs.	**39**							Total Marks	100

Course Objective: The objective of this course is to introduce the concepts and applications of probability and statistics in transportation engineering systems. The focus will be on applications and concepts, with less emphasis on proofs and theory.

Course Outcomes (COs): At the end of this course, the student will be able to:	
CO1	Adopt suitable sampling method and evaluate descriptive statistics.
CO2	Conceptualize and identify real word events as a function of discrete/continuous distributions.
CO3	Study relationships between various factors using regression and analysis of variance.
CO4	Evaluate multi-variate data using principal component analysis and time series analysis.
CO5	Evaluate sample data using different sampling distributions.
CO6	Formulate transportation related optimization problems and solve it using different optimization techniques.

Unit-1

Introduction and Sampling Techniques: Role of statistical thinking, data collection, Numerical and graphical summary of data, Frequency distribution; Measure of Central tendency and dispersion – Mean and Standard deviation; Standard error, Skewness; Kurtosis; Graphical summary using different plots; Definitions - Simple random sampling; Stratified sampling; Systematic sampling; Applications in Traffic and Pavement Engineering. **8 Hrs.**

Unit-2

Probability: Laws of Probability; Conditional probability and Independent events; Distributions: Binomial, Poisson, Exponential, Gamma and Normal distributions; Fitting of distributions; Chi-square test for goodness-of-fit; Applications in Transportation Engineering. **8 Hrs.**

Unit-3

Regression and Correlation: Linear regression and correlation; Multiple regression analysis, correlation; Central value; Standard error of estimate; Analysis of Variance; Multi-Variate Data Analysis: Types of data. **7 Hrs.**

Unit-4

Simple estimate of Standard deviation, Dispersion, Variance and covariance; Correlation matrices; Principal component analysis; Time series analysis - Introduction, Moving average. Applications in Transportation and Pavement Engineering. **8 Hrs.**

Unit-5

Exact Sampling Distributions: Chi-square distribution; Student's T-distribution; Snedector's F-distribution. Types of T tests: One sample T test, Independent two sample T test and Paired T test; Applications in Traffic and Pavement Engineering problems. **4 Hrs.**

Optimization Techniques: Formulation, Solutions - Simplex method, Big-M method, Two Phase Simplex method; Applications in Transportation Engineering. **4 Hrs.**

Contact Hrs./Week	3	0	2	0	0	0	0	CIE Marks	50
Contact Hrs./Sem.	39	0	26	0	0	0	0	SEE Marks	50
Credits	3		1						
Total Contact Hrs.	**65**							Total Marks	100

Course Objective: The objective of this course is to introduce the student to different materials used in pavement construction, designing of bituminous and cement concrete mixes and the need & use of alternate/marginal materials in pavement construction.

Course Outcomes (COs): At the end of this course, the student will be ableto	
CO1	Assess the suitability of various conventional and modified construction materials for pavement application.
CO2	Design, characterize and analyze the bituminous mixes by Marshall method.
CO3	Design the bituminous mixes by Superpave method.
CO4	Design the cement concrete mix for CC pavement and assess its strength requirement.
CO5	Describe the need and use of various alternate/sustainable materials for pavement construction.

Unit-1

Aggregates: Requirements, properties and tests on road aggregates for unbound and bound granular sub-base and base, design gradation for unbound and bound pavement layers.

Bituminous binders: Conventional and modified binders, criterion for selection of different binders

Bituminous Emulsions and Cutbacks: Application in pavements. **8 Hrs.**

Unit-2

Bituminous Mixes: Mechanical properties: Resilient modulus, dynamic modulus and fatigue characteristics of bituminous mixes. Dense and open textured mixes, flexibility and brittleness, common mechanical tests, bituminous mix design methods and specifications. Characterization of bituminous mixes for pavement design

Weathering and Durability of Bituminous Materials and Mixes: Tests in weathered bituminous materials, Adhesion, failure, mechanism of stripping, tests and methods of improving adhesion. **8 Hrs.**

Unit-3

Performance based Bitumen Specifications: Superpave physical test using rotational viscometer, dynamic rheometer, binder beam rheometer, direct tension tester for asphalt binders, superpave asphalt binders specifications based on permanent deformation, fatigue cracking, low temperature cracking, selection of superpave binder grades.

Superpave mix design method: selection of aggregate blend, Superpave gyratory compaction, compaction of samples, selection of optimum asphalt content, superpave mix design example problems **9 Hrs.**

Unit-4

Cement Concrete for Pavement Construction: Materials, requirements, and design of mix for CC pavement, IRC and IS specifications and tests, joint filler and sealer materials. **7 Hrs.**

Unit-5

Alternate/Sustainable Pavement Materials: Need, Scope for use of alternate/sustainable materials in pavement construction, various alternate/sustainable pavement materials and their requirement for road application. **7 Hrs.**

Lab Component:

1. Basic characterization of soil for subgrade application 8 Hrs.
2. Basic characterization of aggregates for granular and wearing courses 8 Hrs.
3. Basic characterization of bitumen 6 Hrs.
4. Basic characterization of cement 4 Hrs.

Sub. Code	**N1CTM02**								
Course Title	**Traffic Engineering and Geometric Design**								
Course Type	**PCC**								
	L	T	LA	PR	SE	PROJ	SS	Credits	4
Contact Hrs./Week	3	2	0	0	0	0	0	CIE Marks	50
Contact Hrs./Sem.	39	26	0	0	0	0	0	SEE Marks	50
Credits	3	1							
Total Contact Hrs.	**65**							Total Marks	100

Course Objective: The objective of this course is to introduce the geometric design aspects of urban and rural highways along with expressways; different aspects of traffic engineering including various traffic studies, analysis, improvement measures, regulations and management techniques. Also, the student will acquire on-site experience of collecting traffic data.

Course Outcomes (COs): At the end of this course, the student will be ableto:	
CO1	Design the geometric design features of highways as per IRC guidelines.
CO2	Design of geometric elements of intersections as per IRC guidelines.
CO3	Describe traffic stream characteristics.
CO4	Describe the studies related to parking, origin and destination, accident and toll operation.
CO5	Describe various traffic regulatory measures and traffic management techniques.

Unit-1

Geometric Design: Introduction, functional classification of highways, cross sectional elements, locational design, design controls and criteria, elements of design, geometrics of site distance, stopping and passing site distance, intersection site distance, widening section design, Horizontal alignment, Vertical alignment, Numerical examples.

Intersections: Categories of intersections - uncontrolled, signalized and rotary intersections, characteristics, intersection and signal control, types of intersection controls, critical aspects of operation, conflict areas of intersections. **12 Hrs.**

Unit-2

Design considerations and objectives, two - way stop controlled intersection, all-way stop controlled intersection, signalized intersection, capacity of rotary intersection, numerical examples. Channelization, unchannelized and channelized intersections. At-grade intersections, grade separated intersections, types of interchanges, ramps – characteristics.

13 Hrs.

Unit-3

Introduction to Traffic Engineering: Traffic characteristics - Road user and vehicular characteristics; Traffic measurement procedures - Volume measurement, data analysis, concepts of ADT and AADT, prediction of traffic growth, design hourly volume and its significance; Concept of PCU, capacity and Level of Service (LOS); Speed measurements: Speed distribution, 15^{th}, 85^{th} and 98^{th} percentile speeds; Speed and delay analysis - Moving car observer method - Estimating the travel time, Running and Journey speeds, Numerical examples.

Traffic Flow Characteristics: Fundamental parameters and relations of traffic flow, speed and density; space mean speed, time mean speed, time head way, space head way; Relationship between variables, Fundamental diagram of traffic flow, Traffic stream models – Linear relationship between speed and concentration - Greenshield's model.

Skill Development Activities / Field Studies: Traffic volume data collection at mid-block and at a junction; Spot Speed studies at mid-block; Moving car observer method – Delay, Running speed, Journey speed. **14 Hrs.**

Unit-4

Specialized Traffic Studies: Parking studies - Inventory, Characteristics, Types of parking survey, On and Off street parking; Origin and Destination studies - Objectives, Survey methods, Presentation of the data; Accident studies - Factors affecting accidents, Data collection, Remedial measures, Numerical examples; Toll operation studies – Types of toll collection, Methods, Terminologies, Optimum number of toll booths, Numerical examples; Pedestrian studies – Terminologies, Factors affecting pedestrian demand, Data collection methods.

Skill Development Activities / Field Studies: On-street and Off-street Parking studies; Pedestrian studies; Analysis of accident data.

14 Hrs.

Unit-5

Traffic Regulation and Management: Principles of Regulation - Regulation on vehicles, drivers, parking; Traffic signs - Regulatory, Warning and Informatory signs; Principles of traffic signal - Cycle length, Green phase, Red phase, Lost time, Fixed and Traffic actuated signals, Design of Cycle length of fixed time signal by Webster's method and IRC method, Numerical examples; Travel demand management; Traffic management techniques - Restrictions on turning movements, One way streets, Tidal flows, Exclusive bus lanes, Closing side streets. **12 Hrs.**

Self-Study: Students should study road alignment drawings and analyze the geometric design features in detail. They should make site visits to different intersections to know practical traffic stream characteristics. Student should witness various traffic regulatory measures and management techniques adopted in urban and rural roads.

Contact Hrs./Sem.	26	26	0	0	0	0	0	SEE Marks	50
Credits	2	1	0						
Total Contact Hrs.	**52**							Total Marks	100

Course Objective:

- To introduce the concepts of various equipment, their working mechanism, functions and applications. Further, selection of equipment based on total owning cost will be understood.
- To introduce the concept of mass-haul concept related to earthwork and how economically the earthwork can be achieved using the mass-haul concept. The importance of type of equipment in achieving the earth work during road construction will be enumerated.
- To introduce the methodology adopted in the construction of base and sub-base layers with major focus on most widely used granular sub-base and wet-mix macadam layers of pavements confirming to the relevant Indian code of practices.
- To introduce state-of-the-art of asphalt paving, including plant operations, transportation of materials, surface preparation, laydown, and compaction
- To present current recommendations and guidelines on design and construction details for concrete pavements.

Course Outcomes (COs): At the end of this course, the student will be ableto	
CO1	Independently carry out investigation to solve practical problem.
CO2	Communicate and write technical documents.
CO3	Showcase a degree of mastery of the subject.
CO4	Think and solve pavement related problems and arrive at feasible/optimal solutions.
CO5	Apply modern engineering tools, equipment to evaluate and predict complex pavement engineering problems.
CO4	Think and solve pavement related problems and arrive at feasible/optimal solutions.
CO5	Apply modern engineering tools, equipment to evaluate and predict complex pavement engineering problems.

UNIT-1

Equipment Management: Selection of equipment for construction of different layers of pavements; Equipment economics – salvage value, owning cost, and operating cost.

Equipment for Earthwork: Equipment type: Hauling, Dozers, Excavators, Loaders, Hauling units, and Graders; Equipment for different layers of road construction: production capacity, factors effecting the production.
Specifications mentioning the choice of equipment for different activities of road construction [MoRT&H, IRC, IS]. **10 Hrs.**

UNIT-2

Subgrade construction: Mass-haul concept; construction of embankments and cuts for roads; preparation of subgrade and the corresponding quality control tests.
Construction of granular layers: Specifications and steps involved in the construction of GSB, WMM, and the corresponding quality control tests. **10 Hrs.**

UNIT-3

Hot-mix asphalt (HMA) facilities: Typical layout – Drum mix and Batch mix facilities; Drum mixers- Aggregate feed, Drum, Burners, Drying and Heating process; Asphalt cement injection and fines feeder system; Air quality control system - Primary collectors, wet collectors, and fabric filters .
HMA Transportation: Transportation vehicles – End dump vehicles, bottom dump vehicles; Truck loading procedures; protection during haul; Factors affecting truck cycle. **12 Hrs.**

UNIT-4

Pavers: Principles of asphalt pavers; Mix placement – Tractor unit; Screed unit; Automatic screed controls.
HMA Compaction: Compaction equipment – Steel-wheeled rollers, Pneumatic tired rollers, Vibratory steel-wheeled rollers; Rolling patterns. **10 Hrs**.

UNIT-V

Construction of Cement Concrete Pavements: Ready mix concrete – Materials feeding; Concrete pavement type selection; construction considerations - Subgrade, Base preparation, Joints, Paving, Concrete placing and spreading, consolidation, post paving, finishing, texturing, curing and opening to traffic, Joint sawing and sealing, smoothness. **10 Hrs.**

Credits	2	1							
Total Contact Hrs.	**52**							Total Marks	100

Course Objective: The objective of this course is to introduce the student to the fundamental aspects of soil mechanics, soil exploration, compaction, stresses in soils, shear strength, permeability stability analysis of slopes with the background of transportation structures.

Course Outcomes (COs): At the end of this course, the student will be able to	
CO1	Describe the various basic properties of soil including classification and compaction necessary for pavement engineering along with the relevant guidelines.
CO2	Evaluate the stresses induced in soils by Boussinesq's, Westergaard's and Burmister's analysis.
CO3	Evaluate the shear strength of soil and analyze the stability of slopes under different soil conditions.
CO4	Evaluate permeability characteristics of soil for pavement application.
CO5	Describe the sub-soil exploration techniques and prepare the investigation report.
CO6	Describe the methodology adopted in the excavation and construction works for embankments and roads.
CO7	Describe the scenario demanding special attention for subgrade and design drainage system.

Unit-1

Introduction: Soil Mechanics applications to Highway / Infrastructure Engineering. Soil formations, Types, Regional Soil deposits of India, Index properties, their determination, importance, various soil classification systems, HRB classification, problems on these.

Soil Compaction: Introduction, Lab Tests, Factors affecting, Structure & Engineering behavior of compacted cohesive soil, Field compaction specifications, Field compaction control, Different types of Equipment used for compaction, their choice. **10 Hrs.**

Unit-2

Elements of elasticity, equations of equilibrium (rectangular & polar) in 2D & 3D, stress function, Boussinesq's and Westergaard's stress analysis, Isobars, Stresses for line, strip, circular, rectangular, triangular and embankment loading, Burmister's analysis for stress in two- layered soils.

Shear strength of Soil: Introduction, Importance, Measurements, shear strength of clay, Sand, Elastic properties of soil – Tangent, Secant modulus, Stress – Strain curves, Poisson's ratio, Shear Modulus.

12 Hrs.

Unit-3

Stability of slopes: Introduction, Types, Different methods of analysis of slopes for Øu = 0 & C-Ø soil, Location of most critical circle, Earth dam slopes stability, Taylor's stability number. Effect of Earthquake Force, problems on above.

Permeability of Soil: Darcy's Law, Validity, Soil-water system, Types, Determination of permeability, problems. **10 Hrs.**

Unit-4

Site Investigation: Introduction, Planning exploration programmes, Methods, Samplers, SPT, Subsoil investigation Report, Geophysical methods.

Excavation for Roadway and Drains: Scope, Classification of Excavated material, Construction Operations, Plying of Construction Traffic, Preservation of Property, Preparation of Cut Formation, Finishing Operations, Measurements for Payment, Rates.

Embankment Construction: Scope, Materials and General Requirements, Construction Operations, Construction of Embankment and Subgrade under Special Conditions.

10 Hrs.

Unit-5

Special attention for subgrade condition: Problematic soils, compressible &collapsible soils, swelling, subsurface water, frost-susceptible soils.

Surface drainage, Sub-surface drainage, methods, Design of subsurface drainage system. Base layer requirement-erodibility of bases, bound bases, modified or treated bases, base reinforcement **10 Hrs.**

Course Objective: The objective of this course is to introduce the student to application of project management in construction projects using structured strategies, tactics and tools for planning construction projects, scheduling the activities using network diagrams. It also addresses various types of contracts and associated tasks used in construction projects, safety, risk and quality management aspects in reference to construction projects.

Course Outcomes (COs): At the end of this course, the student will be able to	
CO1	Describe the elements of a project and the phases of project life cycle and applying project management principles to develop WBS for various projects.
CO2	Develop schedules with the help of different scheduling techniques and network diagrams considering uncertainty in a project.
CO3	Allocate resources to a construction project considering the importance of smoothening and levelling.
CO4	Select materials, vendors and participants according to contractual terms and often set the project timeline and also to help develop the client proposal and identify breaches of contract.
CO5	Highlight the scope of risk and safety management on site and analyze the statistical quality control process of a construction project

Unit-1

Project: Introduction, Project categories, Characteristics of a Project, Project life cycle phases, Function of Project Management

Project Planning: Scope, Planning process and its objective, Types of project plan, Resource planning, Breakdown structures, duration estimation, quantity take-off, activity based costing. **10 Hrs.**

Unit-2

Project Scheduling: Introduction, Precedence network analysis (A-O-A network, A-O-N network), Logic diagram, Construction Scheduling techniques like CPM and PERT, LOB technique and linear scheduling. Float and its implication on project schedule. Use of leads and lags in logic diagrams. Resource allocation, Resource smoothening and resource leveling and related problems. **12 Hrs.**

Unit-3

Contract Management: Definition, Types of contracts: Classification Based on – Tendering Process, Economic Consideration, Tasks Involved; Main and Sub Contracts, Features, Merits, Demerits, Applicability of the various types of contracts, FIDIC and KTPP guidelines on contract management.

Breach of contract: Definition and Classification, Common Breaches by – Principal, Contractor, Damage Assessment, Claims for Damages, Quantum Meruit, Force Majeure or Frustration.

Dispute resolution: General, Methods for dispute resolution – Negotiations, Mediation, Conciliation, Dispute Resolution Boards, Arbitration, Litigation/Adjudication by courts. **10 Hrs.**

Unit-4

Safety Management: Construction Safety Engineering and Management: meaning and scope, Technological aspects, Organizational aspects, Behavioral aspects, Safety rules in Construction, Safety remedies for common hazards, Safety in Use of Construction equipment, ISI Standards for safety for building and Civil Engineering Projects.

Risk Management: Introduction, Risk Management in Construction Industry, key terms and definitions, Risk Identification, Risk Analysis and Evaluation, Risk Response and Monitoring, Risk Management misconceptions. **10 Hrs.**

Unit-5

Project Quality Management: Introduction, Elements of quality, Quality Assurance, Quality Control, Quality planning, quality audit, Quality Checklists, Total Quality Management: Philosophy (Deming, Juran, Crosby, Taguchi), TQM Tools: An overview of Flowcharts, Histogram, Pareto diagram, Scatter diagram, Control charts, Introduction to ISO 9000 quality systems, ISO 14001 quality systems. **10 Hrs.**

Course Objective: The objective of this course is to introduce the student to aspects of road safety, statistical analysis of accident data, road safety audit, crash reconstruction and mitigation measures.

Course Outcomes (COs): At the end of this course, the student will be able to	
CO1	Describe the concept of road safety and safety management system.
CO2	Perform statistical analysis of crash data and arrive at proper inferences.
CO3	Describe the key components of road safety audit.
CO4	Evaluate crash influencing parameters and arrive at proper reconstruction methodologies.
CO5	Describe the various mitigation measures for prevention of crashes.

Unit–1

Introduction to Safety: Road crashes, Trends, causes, Collision and Condition diagrams, Highway safety, Human factors, Vehicular factors.

Road Safety Management System: Multi-causal dynamic systems approach to safety, crash vs accident, road safety improvement strategies, elements of a road safety plan, Safety Data Needs. **10 Hrs.**

Unit–2

Interpretation and Analysis of Crash Data: Crash data, analysis, , Advanced statistical methods, Before-aftermethods of analysis, Black Spot Identification and Investigations, Crash data modeling - Case Studies.

10 Hrs.

Unit–3

Road Safety Audits: Key elements of a road safety audit, stages of audit, work zone, vulnerable zone, school zone, methods for identifying other hazardous road locations, road reconstruction safety audit, crush risk assessment programs, case studies.

10 Hrs.

Unit–4

Crash Reconstruction: Basic physics related to crash reconstruction,speed for various skid, friction, drag and acceleration scenarios, variables involved in jump and flip crashes, variables involved in pedestrian crashes.

Mitigation measures: Safety measures related to Engineering – Visual guidance to driver, road reconstruction, channelization, road signs; Safety measures related to enforcement – speed control, training and supervision, medical check; **Safety measures related to** education – Safety drive, education to road users, emerging traffic management measures

12 Hrs.

Unit–5

Crash prevention by better planning, and design of roads, Crash counter measures, Highway operation and crash control measures, Highway Safety measures during construction, Highway geometry and safety, Geometric Design Consistency and Safety measures. **10 Hrs.**

Course Objective: The objective of this course is to introduce the student to the various aspects of airport planning, design of airport infrastructure including terminals, runways, taxiways, airfield pavement and drainage, various navigational aids, safety measures and environmental impact of airports.

Course Outcomes (COs): At the end of this course, the student will be ableto	
CO1	Describe the various aspects of airport planning.
CO2	Design the various components of an airport including terminals, runways and taxiways.
CO3	Design the airfield pavement structure and overlay and describe the standard method for airfield pavement evaluation.
CO4	Describe the various aids used in airport for uninterrupted service and perform drainage design and analysis.
CO5	Describe the various aspects in connection with airport safety including

Unit-1

Airport Planning

Structure and Organization of airport: Introduction, Types of airports, Aviation organizations: functions and responsibilities, Layout of airport, Different elements in the airport: terminal building, land side, air side.

Aircraft characteristics: Physical, operational and performance characteristics, Relation between aircraft characteristics and elements of airport, Classification of airports as per ICAO and FAA.

Air traffic management: Air traffic control, Airspace, Air traffic separation rules, Navigational aids, Signals and ground communication.

Airport planning studies: Site selection, Planning surveys, System plan, Master plan and Project plans, Level of data requirement for various phase of planning.

Forecasting aviation demand: Forecasting levels, Methods adopted in forecasting demand, Forecasting for various phases of planning.

12 hrs.

Unit-2

Design of Airports

Introduction: Terminal design, Geometric Design, Structural and functional design of pavements.

Terminal design: Function and requirements of terminal, Design considerations, Level of service, Distribution Concepts, Terminal configurations, Vertical distribution, Passenger Queuing analysis, Apron gate system, Aircraft parking configuration, Apron layout and utilities.

Geometric Design: Introduction to design standards, Design considerations,

Runways: Width, Configuration, Orientation, Capacity, Length, Geometric specifications for runways, Runway approach classification, Transverse and Longitudinal profile, Cross-sections, Runway safety zones, Obstacle limiting surface, Runway Strip, Runway end safety area, Obstacle free zones,

Taxiways: Width, Length, Separation requirements, Rapid exit taxiways: design and spacing, Transverse and longitudinal profile, Aprons, Isolation Bays, Design examples and problems.

12 hrs.

Unit-3

Structural Design of Airfield Pavements: Design standards, Design Considerations, Types of airfield pavements and their composition, Factors affecting pavement design, Design methodology, Joints in airfield pavements, Airfield pavement evaluation, Overloading, Design of overlays for airfield pavements, Standard Test Method for Airport Pavement Condition Index Surveys, Design examples and problems. **10 hrs.**

Unit-4

Airport Drainage: Importance of drainage, Design methodology, Estimation of runoff, Surface and subsurface drainage, Typical layout of drains, Drainage design and analysis.

Visual and Navigational Aids: Runway and taxiway marking, Runway and taxiway lighting, Requirements of marking and lighting, Approach guidance, Glideslope, Localizers, VASI, PAPI. **10 hrs.**

Unit-5

Airport Safety: Security requirements and planning, Aircraft accidents, Classification of aircraft accidents, Causes and remedial measures, Case studies.

Environmental Impact: Air pollution, Noise pollution, Flora and fauna, Land development and use, Standards for environmental impact assessment for airports. **8 hrs.**

Course Objective: The objective of this course is to introduce the student to concept of transportation management system (TSM) and its impact, actions involved in TSM, highway occupancy vehicle (HOV) treatments, demand and parking management and measures required to improve traffic operations.

Course Outcomes (COs): At the end of this course, the student will be able to	
CO1	Describe the concept of transportation system management and analyze its impact.
CO2	Describe the actions involved in traffic system management and perform impact analysis.
CO3	Describe the methods of promoting public transportation and highway occupancy vehicles treatment.
CO4	Describe various methods demand and parking management to meet the requirements.
CO5	Describe the various measures of improving traffic operations.

UNIT-I

Methodology & Data Collection: Methodological frame work, objectives and problems, conflicts resolution, strategic categories and action elements. Impact of TSM: Travel behaviour impact and response time, TSM actions combinations and interactions, impact assessment and evaluation, monitoring and surveillance **10 Hrs.**

UNIT-II

Area wide data collection methodology, corridor data collection methodology. **TSM Actions:** Study of following TSM actions with respect to problems addressed, conditions for applications, potential implementation problems, evaluation & impact analysis **10 Hrs.**

UNIT-III

Public transportation & HOV treatment: Toll discounts for car pools during peak periods, park and ride, car-pooling, exclusive lanes. Priority at ramp terminals, bus transfer stations, limited and skip-stop bus services, shared ride **10 Hrs.**

UNIT-IV

Demand Management: Staggered work hours, flexible work hours, high peak period tolls, shuttle services, circulation services, extended routes

Traffic Operations Improvement: On-street parking ban, freeway ramp control & closure, travel on shoulders, one-way streets, reversible lanes, Traffic calming, Right turn phase, right turn lanes, reroute turning traffic.

12 Hrs.

UNIT-V

Parking Management: Short term reserved parking, increased parking rates, time duration limits, expanded off-street parking, Non-Motorized Transport-pedestrian only streets, Dial a ride for elderly & handicapped. **10 Hrs.**

Course Learning Objectives (CLOs)

- Identify the area of research and set the Objectives.
- Define the research problem and carryout literature
- Develop Research design and framework for experimentation
- Interpret Sampling design, Measurement and scaling techniques in RM
- Develop data collection and hypothesis testing procedure
- Interpret and write research and technical report.

Course Outcomes (COs): At the end of this course, the student will beable to	
CO1	Identify research categories and develop research plan.
CO2	Conduct and investigate the research problem and carryout literature review.
CO3	Investigate and Develop Research design and framework for experimentation.
CO4	Analyse and Develop Measurement and scaling techniques in their research & hypothesis testing procedure
CO5	Develop data collection and hypothesis testing procedure
CO6	Plan and develop systematically the research and technical report.

Unit - 1

Meaning, Objectives and Characteristics of research - Research methods Vs Methodology -Types of research - Descriptive Vs. Analytical, Applied Vs. Fundamental, Quantitative Vs. Qualitative, Conceptual Vs. Empirical - Research process - Criteria of good research -Developing a research plan.

8 Hrs.

Unit - 2

Defining the research problem - Selecting the problem - Necessity of defining the problem -Techniques involved in defining the problem - Importance of literature review in defining a problem- Survey of literature - Primary and secondary sources Identifying gap areas from literature review.

7 Hrs.

Unit - 3

Research design and methods – Research design – Basic Principles- Need of research design –– Features of good design – Important concepts relating to research design –- Developing a research plan - Exploration, Description, Diagnosis, and Experimentation - Determining experimental and sample designs.

8 Hrs.

Unit - 4

Sampling design - Steps in sampling design - Characteristics of a good sample design - Types of sample designs - Measurement and scaling techniques - Measurement in Research, Measurement Scales, Sources Of Error In Measurement, Tests Of Sound Measurement, Technique Of Developing Measurement Tools

Methods of data collection – Collection of primary data - Data collection instruments Testing of hypotheses - Basic concepts - Procedure for hypotheses testing flow diagram for hypotheses.

8 Hrs.

Unit - 5

Interpretation and report writing - Different steps in the preparation - Layout, structure and language of the report - Illustrations and tables - Types of report - Technical reports and thesis.

IPRs- Invention and Creativity- Intellectual Property-Importance and Protection of Intellectual Property Rights (IPRs) - A brief summary of Patents, Copyrights, Trademarks, Industrial Designs.

8 Hrs.

Course Objective: The objective of this course is to provide hands-on training on the determination of strength and performance of subgrade soil and binder materials used in pavement construction and assess their performance when used in pavement construction. Also, the student is exposed to design of various types of bituminous and concrete mixes followed by their characterization, for its strength evaluation.

Course Outcomes (COs): At the end of this course, the student will be ableto	
CO1	Assess the strength of subgrade soil for pavement design.
CO2	Assess the performance of bitumen through its rheological characteristics.
CO3	Design various types of bituminous mixes and characterize them.
CO4	Design concrete mix for CC pavement and assess its strength.

1. Resilient modulus on subgrade soil. **06Hrs.**

2. Rheology of bitumen (VG 30grade). **06Hrs.**

3. Bituminous mix design by Marshall method. **18Hrs.**

- HMA mix design
- SMA mix design
- WMA mix design
- CMA Mix Design

4. Indirect tensile strength (ITS) test on bituminous mix **03Hrs.**

5. Concrete mix design **06Hrs.**

SYLLABUS FOR

II semester

M. Tech.

(TRANSPORTATION ENGG. &

MANAGEMENT)

Sub. Code	**N2CTM01**								
Course Title	**Pavement Analysis and Design**								
Course Type	**IPCC**								
	L	T	LA	PR	SE	PROJ	SS	Credits	4
Contact Hrs./Week	3	2	0	0	0	0	0	CIE Marks	50
Contact Hrs./Sem.	39	26	0	0	0	0	0	SEE Marks	50
Credits	3	1							
Total Contact Hrs.	**65**							Total Marks	100

Course Objective: The objective of this course is to introduce the student to the components of pavement structure, analysis of stresses in both flexible and rigid pavements, design of flexible and rigid pavements as per the relevant codes of practice.

Course Outcomes (COs): At the end of this course, the student will be ableto	
CO1	Describe the various components of pavements and their functions.
CO2	Analyze and evaluate the stresses in both flexible and rigid pavements
CO3	Design the flexible and rigid pavement structure as per the relevant codes of practice.
CO4	Design the pavement section using various alternate/sustainable materials and geosynthetics.

Unit-1

Pavements and pavement layers - types, functions, choice. Factors affecting design and performance of flexible and rigid pavements – Pavement design factors, loads – axle load distribution, ESWL, EWL, VDF due to varying loads and CSA, Subgrade support - CBR and plate bearing tests, Resilient Modulus, fatigue tests.

Concept of ESWL: ESWL for single and two-layer system in flexible pavement. Equivalent load factors. Applications to complex problems in pavement design using relevant software. **8 Hrs.**

Unit-2

Stresses and Deflection / strain in flexible pavements: Application of elastic theory, stresses, deflections / strains in single, two and three-layer system, multilayer theory.

Stresses in rigid pavements: General principle, stresses in rigid pavements, types of stresses, factors influencing the stresses, computation of stresses due to wheel loads and temperature variations, frictional stresses, stresses under worst conditions. **8 Hrs.**

Unit-3

Flexible pavement design: Empirical, semi empirical and theoretical design approaches, principle, advantages and applications. Design of flexible pavement as per IRC, AASHTO and Asphalt Institute methods using relevant software for specific highway projects for high volume roads and low volume roads. **8 Hrs.**

Unit-4

Design of rigid pavements: Types of joints in cement concrete pavements and their functioning, joint spacing; design of joint details for longitudinal joints, contraction joints and expansion joints. IRC method of design for high and low volume roads. Design of continuously reinforced concrete pavements, whitetopping. **7 Hrs.**

Unit-5

Designing with Geosynthetics: Property requirements and selection criteria of geosynthetics based on function, Design of reinforced unbound pavement layers, Design of asphalt reinforcement, Designing for separation, filtration and drainage applications.

Designing with alternate/sustainable materials: Requirements of various layers while designing with alternate/sustainable materials, Design of pavement sections with alternate/sustainable materials.

8 Hrs.

Lab Component:

- Analysis of flexible pavement – KENPAVE, IITPAVE **9 Hrs.**
- Analysis of rigid pavement – KENSLAB **5 Hrs.**
- Analysis of airfield pavement – FAARFIELD, COMFAA **12 Hrs.**

Course Objective: The objective of this course is to introduce the student to the elements of urban transportation planning process, travel demand estimation, trip generation, trip distribution, mode choice, route assignment analysis and Land use Transportation Models.

Course Outcomes (COs): At the end of this course, the student will be ableto	
CO1	Explain planning process for an effective transportation system.
CO2	Explain the travel demand estimation, model the trip production and attraction
CO3	Evaluate the zonal trip generation and attraction for inter-zonal trip distribution.
CO4	Evaluate the modal split and transport system for assigning travel trips to various routes.
CO5	Describe the land use transportation models.

Unit-1

Urban Transportation Planning Process & Concepts: Role of Transportation and Changing Concerns of Society in Transportation Planning; Transportation Problems and Problem Domain; Objectives and Constraints; Flow Chart for Transportation Planning Process- Inventory, Model Building, Forecasting and Evaluation Stages, Planning in System Engineering Framework. **12 Hrs.**

Unit-2

Methods of Travel Demand Estimation: Travel Demand Forecasting methods - Introduction to Transportation Planning Practices; Definition of Study Area, Zoning.

Trip Generation Analysis: Trip Generation Models- Zonal Models, Category analysis, Household Models, Problems on Trip generation models.

12 Hrs.

Unit-3

Trip Distribution Analysis: Trip Distribution Models - Factors governing trip generation and attraction, Growth Factor Models, Gravity Models, Opportunity Models and their calibration; Application of the Gravity Model.

12 Hrs.

Unit-4

Mode Split and Route assignment analysis: Mode Split Analysis- Mode Choice Behaviour, Competing Modes, Mode Split Curves, Probabilistic Models and Two Stage Mode Split Analysis; Route Split Analysis- Elements of Transportation Networks, Diversion Curves, All-or-Nothing Assignment, Capacity Restrained Assignment, Multipath Assignment. **13 Hrs.**

Unit-5

Land use Transportation Models: Location models - Opportunity Models, Lowry based Land use Transportation Models – Allocation Function, Constraints, Travel Demand Estimation – Iterative Solutions, Matrix Formulation; Urban Forms & Urban Structures. **12 Hrs.**

Course Objective: The objective of this course is to introduce the student to the various types of pavement distresses, causes, enabling him/her to evaluate the present serviceability index, planning the maintenance program through repairs, rehabilitation and overlay, programming the prioritization by different models for flexible and rigid pavements and bridge structures. Also, the student will be able to understand various field tests for pavement evaluation.

Course Outcomes (COs): At the end of this course, the student will be able to	
CO1	Independently carry out investigation of the present serviceability index for pavements by considering different types of distresses and propose overlay design to enhance the structural stability of the pavement.
CO2	Communicate and write technical documents related to pavement management systems.
CO3	Showcase a degree of mastery in pavement management systems area.
CO4	Think and solve pavement related problems and arrive at feasible/optimal solutions
CO5	Apply modern engineering tools, equipment to evaluate and predict complex pavement engineering problems.
CO6	Understand engineering and management principles related to the road infrastructure.

Unit-1

Introduction to Pavement Management: Pavement Management Components Levels and functions; Definition-Components of Pavement Management Systems; network level versus project level PMS functions; Ideal PMS Network and Project levels of PMS; **8 Hrs.**

Unit–2

Highway Condition Surveys and Serviceability Evaluation: Pavement distress- types, identification, measurement and reporting of pavement distress data, Pavement condition index (PCI), functional condition deterioration models; Unevenness prediction models Roughness-roughness components, Equipment, Present serviceability index (PSI); Riding qualities by using Bump Integrator; International roughness index (IRI).

Structural Evaluation of Highway Pavements: Destructive structural analysis; Overlay design - Benkelman Beam deflection (BBD), Falling Weight Deflectometer equipment (FWD) - back calculation: rigid and flexible pavements; non-destructive testing. **16 Hrs.**

Unit–3

Highway Maintenance: Introduction, Preventive maintenance activities, Alternative maintenance treatments – Rehabilitation, Routine, Major **8 Hrs.**

Unit–4

Pavement Performance Prediction: Modelling techniques - structural condition deterioration models, mechanistic and empirical models, HDM and other models, comparison of different deterioration models. and other models, comparison case studies, Problems. **12 Hrs.**

Unit–5

Pavement Design Selection and Alternatives: Design objectives and constraints; basic structural response models; physical design inputs, Alternate pavement design strategies and economic evaluation, Expert systems approaches to identifying feasible alternatives – case study, life cycle costing (LCC) analysis. **8 Hrs.**

Total Contact Hrs.	**52**							Total Marks	100

Course Objective: The objective of this course is to introduce the student to intelligent transport system, user services, advanced traveller information systems, sensor technologies in ITS, functional areas of ITS and applications of ITS.

Course Outcomes (COs): At the end of this course, the student will be ableto	
CO1	Describe the various ITS user services and traveller information services.
CO2	Describe the various sensor technologies and data requirements of ITS.
CO3	Describe the various functional areas and applications of ITS.
CO4	Describe the ITS models and evaluation methods and ITS planning.

UNIT-1

History of ITS, ITS – Need, Standards and policy, System architecture, ITS Developments - Worldwide and Indian scenario, Metropolitan and Rural ITS.

ITS User Services: Traffic Management centers - Types and functions, Travel and traffic management, Public transportation operations, Commercial vehicle operations

Advanced Traveller Information Systems: Pre trip and Enroute information, Data collection techniques, Route Guidance Systems, Infrastructure based systems and its applications, Variable message signs, Vehicle to Center and Vehicle to Road side communication. **12 Hrs.**

UNIT-2

Sensor Technologies and Data requirements of ITS: Importance of telecommunications in the ITS system, Information Management, Traffic Management Centres (TMC). Application of sensors to Traffic management; Traffic flow sensor technologies; Transponders and Communication systems; Data fusion at traffic management centres; Sensor plan and specification requirements; Elements of Vehicle Location and Route Navigation and Guidance concepts; ITS Data collection techniques – Detectors, Automatic Vehicle Location (AVL), Automatic Vehicle Identification (AVI), GIS, video data collection **10 Hrs.**

UNIT-3

ITS Functional Areas: Advanced Traffic Management systems (ATMS), Advanced Traveler Information systems (ATIS), Commercial Vehicle Operations (CVO), Advanced Vehicle Control systems (AVCS), Advanced Public Transportation systems (APTS), Advanced Rural Transportation systems (ARTS). ITS User Needs and Services – Travel and Traffic management, Public Transportation Management, Electronic Payment, Commercial Vehicle Operations, Emergency Management, Advanced Vehicle safety systems, Information Management. **10 Hrs.**

UNIT-4

ITS Architecture: Regional and Project ITS architecture; Concept of operations; ITS Models and Evaluation Methods; Planning and human factor issues for ITS, Case studies on deployment planning and system design and operation; ITS and safety, ITS and security, ITS as a technology deployment program, research, development and business models, ITS planning

10 Hrs.

UNIT-5

ITS Applications: Traffic and incident management systems; ITS and sustainable mobility, travel demand management, electronic toll collection, ITS and road-pricing.; Transportation network operations; commercial vehicle operations and intermodal freight; public transportation applications; ITS and regional strategic transportation planning, including regional architectures: ITS and changing transportation institutions Automated Highway Systems-Vehicles in Platoons – Integration of Automated Highway Systems. ITS Programs in the World – Overview of ITS implementations in developed countries, ITS in developing countries **10 Hrs.**

Course Objective: The objective of this course is to introduce the student to different modes of urban transport, designing transport facilities for pedestrians, use of different transportation modes, feasibility study on different alternative modes including rapid transit, transportation system management and transit system evaluation, quantification of performance, planning and management of city traffic and perspectives of future transportation.

Course Outcomes (COs): At the end of this course, the student will be ableto	
CO1	Describe the need for different modes of transportation and para transit and ride sharing, designing for pedestrians, trends in transit rider ship.
CO2	Compare costs and carryout comparative analysis of operational and technological characteristics of different modes of rapid transit.
CO3	Describe the limitations of conventional transportation system and perspectives of future transport.
CO4	Describe planning of transportation system including service, financing, management and marketing.
CO5	Describe quantitative performance attributes of transit system.

Unit-1

System and Technologies: Urban passenger transportation modes, transit classifications and definitions, theory of urban passenger transport modes, rail transit, bus transit, Para transit and ride sharing, designing for pedestrians, trends in transit rider ship and use of different modes. **10 Hrs.**

Unit-2

Comparative Evaluation of Alternatives: Comparing costs, comparative analysis, operational and technological characteristics of different rapid transit modes,evaluating rapid transit. **10 Hrs.**

Unit-3

Urban traffic: Classification of transportation systems, conventional transportation systems, unconventional transportation systems, prototypes and tomorrow's solutions, Analysis and interpretation of information on transportation systems, perspectives of future transportation. **12 Hrs.**

Unit-4

Planning: Transportation system management, system and service planning, financing public transportation, management of public transportation, public transportation marketing. **10 Hrs.**

Unit-5

Transit System Evaluation: Definition of quantitative performance attributes, transit lane capacity, way capacity, station capacity, theoretical and practical capacities of major transit modes, quantification of performance. **10 Hrs.**

Course Objective: The objective of this course is to introduce the student to problems of sustainability, planning for sustainability, related policies, technology, and appropriate mitigation actions with respect to transportation.

Course Outcomes (COs): At the end of this course, the student will be ableto	
CO1	Describe the problem of sustainability in transport.
CO2	Describe the pricing and taxation of transportation and plan sustainability for transportation.
CO3	Describe the sustainability related policies for transportation.
CO4	Describe the various technology associated with sustainable transportation.
CO5	Describe necessary mitigation actions required for enabling sustainable transportation.

Unit-1

Problem of Sustainability in Transport: Energy use in transport sector; Transport and climate change; Greenhouse gas emissions, Urban air quality, Congestion and sustainability. **10 Hrs.**

Unit-2

Pricing Transportation: Full cost of transportation, pricing and taxation.

Planning for Sustainability: Urban form, Indicator based planning, Land use transportation integration. **10 Hrs.**

Unit-3

Sustainable Policies: Continuum of Policies, speed and speed limit policies, national policies, sustainable travel demand management; Public awareness of policies. **10 Hrs.**

Unit-4

Sustainable Technology: Telecommuting, Information and Communication technologies, E-commerce, Alternative Cleaner Fuels, Fuel cells and other Vehicular technologies, Intelligent Transport System. **12 Hrs.**

Unit-5

Urban Transport and Sustainability – Multimodal transportation (MMT) environment, level of service, design of multimodal transfer facilities, park and ride facility planning. **10 Hrs.**

Course Objective: The objective of this course is to introduce the student to traffic stream characteristics and models, toll operations, queuing theory, pedestrian related studies and simulation models.

Course Outcomes (COs): At the end of this course, the student will be ableto	
CO1	Describe the traffic stream characteristics.
CO2	Apply traffic stream models to analyze the traffic conditions.
CO3	Apply queuing theory to facilities such as toll booths and parking garages to maximize the service.
CO4	Analyze the pedestrian problems and its influence on the traffic flow.
CO5	Describe the basic concepts of traffic simulation modelling.

UNIT-1

Traffic Stream Description: Traffic Stream Characteristics; Microscopic and Macroscopic Study of Traffic Stream Characteristics - Flow, Speed and Concentration; Gaps and Lags, Gap acceptance in a traffic stream; Time-space diagram; Measurement of Traffic Stream Characteristics; Distributions for describing Vehicle Arrivals, Headways, Speeds; Fitting of Distributions; Goodness of Fit Tests. **10 Hrs.**

UNIT-2

Traffic Stream Models: Fundamental Equation of Traffic Flow, Speed-Flow-Concentration Relationships, Hydrodynamic and Kinematic Modeling, Bottleneck situations and shockwaves; Shock Wave Theory – Use of Flow Density diagram in Shockwave analysis; Numerical examples on application of shockwave theory; Car-Following Theory, Linear Car-Following Model and its significance. **12 Hrs.**

UNIT-3

Queuing Theory: Fundamentals of Queuing Theory, Input parameters, Queue discipline describing the vehicles arrival at a service facility, Queuing system performance measures, Queuing Patterns, Queuing Models - Analysis of M/M/1 model; Application of M/M/1 model for parking Garages and Toll Plazas, Numerical Examples; Analysis of D/D/1 system for delay characteristics; Computation of delays and queue dissipation Time, Numerical Examples; Application of M/M/N model, Numerical Examples.

12 Hrs.

UNIT-IV

Pedestrian Studies: Pedestrian problems, Space requirements, Walking speed, Startup time and capacity; Pedestrian flow characteristics; Pedestrian Level of Service; Pedestrian facilities; Critical pedestrian gap; Pedestrian gap acceptance; Concept of Blocks and Anti-blocks, Warrants for Pedestrian Crossing Facilities. **10 Hrs.**

UNIT-V

Simulation Models: Philosophy of Simulation Modelling, Need for Simulation, Applications, Classifications, Methodology of System Simulation, Simulation Languages / System Packages, Formulation of Simulation Model for a Traffic Engineering problem, Model Calibration, Determination of Errors, Generation of Random Numbers, Generation of Inputs – Vehicle Arrivals, Vehicle Characteristics, Road Geometrics, Verification and Validation Techniques, Numerical Examples. **8 Hrs.**

Self-Study: Field visits to understand the traffic stream characteristics in practical scenario, to analyze the application of queuing theory in toll booths, to evaluate pedestrian behavior on roads.

Course Title	**Design of Reinforced Earth Structures**								
Elective/Core	**PEC**								
	L	T	LA	PR	SE	PROJ	SS	Credits	3
Contact Hrs./Week	2	2	0	0	0	0	0	CIE Marks	50
Contact Hrs./Sem.	26	26	0	0	0	0	0	SEE Marks	50
Credits	2	1							
Total Contact Hrs.	**52**							Total Marks	100

Course Objective: The objective of this course is to introduce the student to basic concepts of reinforced earth structures, designing with geosynthetics, reinforced wall design, analysis and design of soil nailing, stability analysis and design of embankments on soft soil with and without reinforcement, use of geosynthetics for filtration and drainage and application of geosynthetics in road pavements. .

Course Outcomes (COs): At the end of this course, the student will be ableto	
CO1	Describe the strength characteristics and strength development in reinforced soil along with the failure modes, theoretical models and stress – strain characteristics.
CO2	Describe the function and mechanisms of geosynthetics test methods for the determination of geotextile properties to formulate design criteria for filtration and drainage applications with due consideration to serviceability and durability criteria.
CO3	Design geosynthetic reinforced roads by Giroud – Noiray approach.
CO4	Analyze the internal stability failure mechanism of a reinforced soil wall system.
CO5	Analyze and design reinforced soil beds for improved bearing capacity.
CO6	Design and analyze the soil nailed slopes and describe the construction practice.

Unit-1

Reinforced Earth Structures

Introduction, basic mechanism of Reinforced earth, Basic components of reinforced soil, Soil or Fill matrix, Reinforcement (Strips, Grids, Sheet Reinforcement), Facing Elements - Metal facing, Concrete Panel facing, Strength characteristics of Reinforced soil - Basic concept of strength development: rupture and sliding failure, Theoretical models: Sigma and Tau models, Stress strain behavior of reinforced sand. **10 Hrs.**

Unit-2

Designing with Geosynthetics

Introduction, materials, Geotextiles Functions and Mechanisms - Separation, Reinforcement, Filtration, Drainage, Contaminant. Geotextiles Properties and Test Methods - Physical properties, Mechanical properties, Hydraulic properties.

Use of Geosynthetics for filtration and drainage

Introduction, Background, Applications, Conventional Granular Filter Design criteria, Geotextile Filter Requirements, Boundary conditions, Drain and filter properties, Design criteria, Soil retention criteria, Geotextile permeability criteria, Anti-clogging criteria, Survivability criteria, Durability criteria.

10 Hrs.

Unit-3

Use of Geosynthetics in Roads

Introduction, Geosynthetics in Roadways, Applications, Temporary and permanent roads, Benefits, Role of sub grade conditions, Design, The Giroud and Noiray Approach, Geotextile Survivability, Application in Paved Roads.

Reinforced Soil Wall

General, Stability analysis - External stability, Internal stability. Effect of vertical and horizontal line loads-External stability, Internal stability, Drainage requirements. **10 Hrs.**

Unit-4

Embankments on soft soil

Introduction, Analysis- Internal stability, Overall stability, Stability in the foundation. Influence of Reinforcement Extensibility, Relationships for design, Deformation in foundation, Settlement analysis, Overall stability with respect to bearing, Safety factors.

Foundations on Reinforced Soil Beds

Introduction, Failure modes, Analysis and design of reinforced soil beds

10 Hrs.

Unit-5

Soil Nailing

General, Applications, Advantages Limitations of the system, Comparison of soil nailing with reinforced soil, Method of soil nailing, Construction sequence, Components of system, Analysis and Design-Assumptions, Geometry of Rupture surface, Forces acting on the wedge, Parametric study, Design, Case Histories.

Design of Reinforced Soil slopes

Introduction, General approach, Jewell's Method, Choice of design values for parameters and use of charts, Soil properties, Properties of reinforcement materials, Interaction parameters, Steps for simplified design, Design examples. **12 Hrs.**

Total Contact Hrs.	**52**							Total Marks	100

Course Objective: The objective of this course is to introduce the student to the basic concepts of economics, evaluation of the benefits associated with improvements and their costs and enable them to perform economic analysis of road projects.

Course Outcomes (COs): At the end of this course, the student will be ableto	
CO1	Describe the fundamental concepts of economics in connection with transportation projects.
CO2	Evaluate various transportation costs and benefits associated with improvements.
CO3	Apply economic theory for different transportation costs.
CO4	Analyze costs of various aspects of transportation such as accidents, public bus transit.
CO5	Apply economic theory to traffic assignment problems.

Unit-1

Introduction: Significance of transport, Demand and supply of transport, Elasticity of demand and supply concepts and principles of highway engineering economy. Costs and Benefits Identification and measurements of transportation costs and benefits, Capital cost, Inflation cost Interest during construction, Maintenance cost, Road user costs, Fixed and operating costs. **10 Hrs.**

Unit-2

Benefits due to transport improvements: Direct benefits- Reduced vehicle operation cost, value of travel time savings, value of increased comfort and convenience, cost of accident reduction, reduction in maintenance cost. Negative impacts due to increased noise and air pollution, Indirect benefits: increased land value, increased development and demand. **10 Hrs.**

Unit-3

Transportation costs: Fixed and variable cost, cost of improvement, maintenance cost and other related cost, cost estimation methods, accounting for inflation, theory of transport supply and road planning. **10 Hrs.**

Unit-4

Accident cost, Methodology for monetary evaluation of passenger's travel time, Value of increased comfort and convenience, Congestion cost and pricing, Consumer's surplus and social surplus criteria, Fare policy for bus transit. **10 Hrs.**

Unit-5

Economic analysis: The generation and screening of project ideas. Different methods of economic analysis – capital budgeting. Case studies.

Application of Economic Theory in Traffic Assignment Problem: User optimal assignment and system optimal assignment. Economic analysis of projects – financing of road projects, methods of financing – PPP, toll collection. Economic variability of Build-Operate-Transfer schemes – Risk analysis. **12 Hrs.**

Course Objective: The objective of this course is to introduce the student to the concept and development of EIA, methodologies, application of EIA in transportation, impact of transportation on water and air environment, impact of noise and socio-economic impacts in EIA studies.

Course Outcomes (COs): At the end of this course, the student will be ableto	
CO1	Describe the concept, development and methodologies of environmental impact assessment.
CO2	Describe the application of environmental impact assessment in transportation.
CO3	Assess the impact of transportation projects on water and air environment including the impact of noise.
CO4	Describe the socio-economic impacts of environmental impact assessment studies.

Unit-1

Introduction to Environmental Impact Assessment (EIA): Objectives and Needs- development of EIA - National Environmental Protection Act 1986 – Key features. Rapid EIA – Comprehensive EIA – Strategic EIA- procedure for EIA in India.

EIA Methodologies: Formulation of EIA team –inter disciplinary approach -Screening – Scoping - checklist, matrix and network methodologies - Identification of Impacts – Collection and documentation of baseline data –Need for Prediction and Mitigation Measures **10 Hrs.**

Unit-2

Application of EIA in Transportation Projects: Public participation in Environmental decision making - techniques for conflict management and dispute resolution in transportation projects. Role of GIS and RS in environmental impact assessment of transportation projects. **10 Hrs.**

Unit-3

Assessment and prediction of Impacts on Water Environment: Basic water quality, sources and effects of water pollution, assessment and prediction of impacts, Streeter Phelps equation and its application in EIA studies. Mathematical modelling for prediction of water pollution on account of transportation projects, mitigation measures, legislations.

10 Hrs.

Unit-4

Assessment and prediction of Impacts on Air Environment: Air quality, sources and effects of air pollution, assessment and prediction of impacts, Gaussian distribution for air pollution for point and line sources, mitigation measures, legislations.

Assessment of Impacts of Noise: Basic information, sources and effects of noise pollution, control measures, legislations

12 Hrs.

Unit-5

Socio-economic impacts in EIA studies: Ecological impacts – Ecological foot-prints– Environmental Indices. Introduction to Environmental Management Systems - Cost Benefit Analysis - Environmental Audit - Life cycle Assessment – Environmental Risk assessment – Case studies from India **10 Hrs.**

Course Objective: The objective of this course is to introduce the student to the behavior of soft/weak/compressible soil deposits, necessity of ground improvement and various conventional and latest stabilization techniques.

Course Outcomes (COs): At the end of this course, the student will be able to	
CO1	Describe the behavior of weak/soft/collapsible soils and highlight the importance of ground improvement.
CO2	Describe the various conventional and latest ground improvement techniques.
CO3	Describe the soil – reinforcement interaction, Design and analyze the reinforced soil slopes.
CO4	Describe the various geosynthetic materials, their functions, design and analyze the improved deposits for bearing capacity and settlement.

Unit-1

Introduction: Engineering properties of soft, weak and compressible deposits, problems associated with weak deposit, Requirements of ground improvements, introduction to engineering ground modification, need and objectives. **10 Hrs.**

Unit-2

Soil Stabilization: Science of soil stabilization – Mechanical modification, Hydraulic modification, Dewatering systems, Chemical modification, Modification by admixtures like lime, cement, bitumen, etc., Grouting, Deep jet mixing methods **10 Hrs.**

Unit-3

Recent Ground Improvement Techniques: Stabilization using industrial waste, modification by inclusion and confinement, soil nailing, stone column, compaction piles, dynamic compaction, prefabricated vertical drains, preloading, electro – osmosis, soil freezing vacuum consolidation, deep explosion, dry powdered polymers, enzymes **12 Hrs.**

Unit-4

Soil reinforcement: Historical background, RCC – Vidalean concept of reinforced earth, mechanisms, types of reinforcements, Soil – Reinforcement interaction studies – Internal & External stability criteria, Design principles of steep reinforced soil slops, embankments on soft soils. **10 Hrs.**

Unit-5

Geo-Synthetics: Geo Synthetic materials, functions, property characterization, testing methods for Geo– synthetics, recent research and developments, control of improvement, field instrumentation, design and analysis for bearing capacity and settlement of improved deposits. **10 Hrs.**

Course objectives: The objective of this course is,

- To understand uncertainty of non-statistical kind.
- To learn the ways to develop membership functions
- To understand defuzzification methods.
- To learn extension principle and to perform fuzzy arithmetic and fuzzy calculus.

Course Outcomes (COs): At the end of this course, the student will be able to	
CO1	Develop membership functions and perform various fuzzy setoperations.
CO2	Decide on the nature of fuzzy membership functions and develop algorithms for the same. Apply various methods of defuzzification and to determine scalar output.
CO3	Apply methods such as intuition, inference, and rank ordering to develop membership function for the given engineering problem having uncertain variables.
CO4	Apply principles of fuzzy synthetic evaluation, fuzzy ordering and preference and be able to take decisions in uncertain environments.
CO5	Develop fuzzy membership function in the consequent space using discrete as well as continuous antecedent variables.

Unit-1

Introduction to fuzzy notions, uncertainty, uncertainty in information. Utility of fuzzy systems and limitations. Fuzzy sets and membership functions. Examples of engineering interest. Classical sets and fuzzy sets. Fuzzy set operations and properties of fuzzy sets. **7 Hrs.**

Unit-2

Membership functions, properties, various forms and their algorithms, fuzzyfication. Defuzzification- various methods, applications related to engineering **9 Hrs.**

Unit-3

Developing membership functions, method of inference, intuition and rank ordering. Example problems of engineering interest. **8 Hrs.**

Unit-4

Decision making with uncertain or fuzzy information. Fuzzy synthetic evaluation, fuzzy ordering, preference and consensus. **8 Hrs.**

Unit-5

Fuzzy extension principle, fuzzy arithmetic with discrete variables and continuous Variables, interval analysis, vertex method and other methods.

Assignment component: Students have to submit a small project report consisting of an application of fuzzy logic concepts using MatLab in their domain of study(7marks). **8 Hrs.**

Course objectives: The objectives of this course are to,

- Get an overall view of data analysis based on CRISP-DM process model.
- Study data quality assessment and visualization techniques for data involving two attributes and for higher dimensional data.
- Understand principles of modeling by going through various data modeling techniques.
- Get a detailed account of data preparation phase.
- Study statistical concepts related to data analysis.
- Enable students to independently perform data analytic procedures on given data pertaining to civil engineering using Excel.

Unit-1

Data and knowledge, criteria to assess the knowledge, descriptive statistics of the data, inferential statistics, exploratory data analysis, knowledge discovery in data bases, data analysis processes, SEMMA, CRISP-DM, methods, tasks and tools.

7 Hrs.

Unit-2

Attribute understanding, kinds of attributes (nominal, interval, ratio types). Characteristics of one-dimensional data, location measures, dispersion measures, and shape measures. Characteristic measures of multidimensional data, data quality, visual analytics of one-dimensional data, density plots, box plots, scatter plots. Correlation and covariance. Methods for multidimensional data (just briefing). Analysis of data pertaining to specialization. **8 Hrs.**

Unit-3

The four steps of modelling, model classes, black-box models, fitting criteria and score functions, error functions for classification problems, measure of interestingness, closed form algorithm for model fitting. Types of errors. Model validation (briefing on methods). Modelling on the data specific to specialization.

8 Hrs.

Unit-4

Selection of data, feature selection, selecting top ranked subset of data, cross product, wrapper approach, and correlation-based filter. Cleaning data, improving data quality, dealing with missing values, construct data, providing operability, assuring impartiality and maximize efficiency. Complex data types. Implementation of methods on data specific to specialization. **8Hrs**.

Unit-5

Clustering – methods. Hierarchical clustering. Dissimilarity measures, Minkowisci, Euclidian, Manhattan, Chebyshev, and cosine. Deviation measures. Association rules. Brief introduction to self-organizing maps. Implementation of methods on data specific to branch of specialization.

8 Hrs.

Total Contact Hrs.	**39**							Total Marks	100

Course objectives: The primary objective of this course is to introduce the basic principles, techniques, and applications of Artificial Intelligence specifically to students of non-IT branches. Emphasis will be placed on the teaching of these fundamentals, not on providing a mastery of specific software tools or programming environments. Specific objectives are to:

- Gain a historical perspective of AI and its foundations.
- Become familiar with basic principles of AI toward problem solving, inference, perception, knowledge representation, and learning.
- Investigate applications of AI techniques in artificial neural networks and other machine learning models.
- Explore the current scope, potential, limitations, and implications of intelligent systems.

Course Outcomes (COs): At the end of this course, the student will be ableto:	
CO1	Demonstrate fundamental understanding of the history of artificial intelligence (AI) and its foundations.
CO2	Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning.
CO3	Demonstrate awareness and a fundamental understanding of various applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models.
CO4	Identify problems exclusive to a particular engineering discipline that can be addressed under the ambit of AI.
CO5	Demonstrate an ability to share in discussions of AI, its current scope and limitations, and societal implications.

Unit-1

Introduction, a brief history of AI, strong methods and weak methods, uses and limitations, AI in future, knowledge representation, the need for good representation, semantic nets, inheritance and frames. General applications of AI in various engineering domains. **7 Hrs.**

Unit-2

Search methodologies, problem solving as search, data driven /goal driven search, depth first search, breadth first search, problem solving as search,

properties of such methods, why humans use depth first search, illustrative examples (traversing a Maze, searching for gift), informed and uninformed methods of searching. Illustrative real-world problems of engineering interest.

8 Hrs.

Unit-3

Introduction to Machine Learning, Concept learning, general-to-specific ordering, version spaces, inductive bias, general to specific ordering, version spaces, supervised learning, unsupervised learning, reinforcement learning. Illustrative real-world examples of machine learning of engineering interest.

Unit-4

Artificial Neural networks, introduction, neurons, perceptrons, the capabilities of a single perceptron, multilayer neural networks, capabilities of multilayer neural networks, back propagation, unsupervised learning networks, kohonen maps. Illustrative real-world examples on applications of neural networks in various engineering domains. **8 Hrs**.

Unit-5

Learning under uncertainty and ambiguity, fuzzy logic, linguistic variables, fuzzy sets, membership functions, fuzzy set operations, fuzzy expert systems, fuzzification, defuzzification, fuzzy rules, fuzzy inferences. Illustrative examples of engineering applications of fuzzy logic. **8 Hrs.**

Course Objective: The objective of this course is to provide hands-on experience for use of modern tools for performing statistical analysis, managing construction projects, design of intersections, highway design, pavement analysis, pavement evaluation, embankment slope stability analysis and town planning.

Course Outcomes (COs): At the end of this course, the student will be ableto	
CO1	Use statistical tools to perform the analysis of the data set.
CO2	Use project management tools for handling construction projects.
CO3	Use modern tool for the design of intersections and traffic simulation.
CO4	Use modern tools for the design, analysis and evaluation of pavements.
CO5	Prepare MS Excel spread sheets for the estimation of quantity and cost of road projects.

1. Statistical software – SPSS, Minitab **6 Hrs.**

2. Project Management software – MS Project, Primavera **6 Hrs.**

3. Traffic related software – VISSIM **4 Hrs.**

4. Geometric design and Highway –Civil 3D **12 Hrs.**

5. Pavement evaluation software – HDM 4 **6 Hrs.**

6. Quantity and Cost estimation of Road projects **–** MS Excel Spread Sheet **5 Hrs.**

REFERENCE BOOKS:

1	Relevant IRC codes of practice and user manuals.

Programme Outcomes

PO1: An ability to independently carry out research /investigation and development work to solve practical problems

PO2: An ability to write and present a substantial technical report/document

PO3: Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

Programme Specific Outcomes

PSO1: Analyze, Design and Develop Power Electronic Systems

PSO2: Analyze and Design modern electric machines, drives, power converters, and control circuits related to industrial and renewable energy applications

I Semester Syllabus

APPLIED MATHEMATICS

Contact Hours/ Week	: 3	Credits:	3
Total Lecture Hours	: 50	CIE Marks:	50
Lab work	: -	SEE Marks:	50
Sub. Code	: N1PGMAT		

UNIT 1

Numerical Methods: Solution of algebraic and transcendental equations iterative methods based on second degree equation – Muller method, (no derivation) Chebyshev method, general iteration method (first order), acceleration of convergence, system of non-linear equations, and complex roots – Newton-Raphson method, polynomial equations – Birge –Vieta method and Bairstow's method. **Interpolation:** Hermite interpolation, spline interpolation, numerical solution of differential equations – Numerov method. **10 hrs**

UNIT 2

Numerical Solution of Partial Differential Equations: Classification of second order equations, parabolic equations- solution of one-dimensional heat equation, explicit method, Crank-Nicolson method and Du Fort-Frankel method, hyperbolic equations- solution of one-dimensional wave equation. **10 hrs**

UNIT 3

System of Linear Algebraic Equations and Eigen Value Problems: Iterative methods - Gauss-Seidal method, SOR method, Eigen value problems – Gerschgorian circle, Eigen values and Eigen vectors of real symmetric matrices -Jacobi method, Givens method. **10 hrs**

UNIT 4

Optimization: **Linear programming-** formulation of the problem, graphical method, general linear programming problem, simplex method, artificial variable technique - M-method. **10 hrs**

UNIT 5

Optimization: Nonlinear programming: single variable optimization-local and global optima, searching techniques, convex functions. Multivariable optimization without constraints-local and global maxima, Gradient vector and Hessian matrix, the method of steepest ascent, Newton-Raphson method, Fletcher-powell method, searching techniques, choice of an initial approximation, concave function. Multivariable optimization with constraints-standard forms, Lagrange multipliers, Newton Raphson method, penalty functions, Kuhn-Tucker conditions, method of feasible directions. **10 hrs**

CONTROLLED RECTIFIERS AND INVERTERS

Contact Hours/ Week	: 3+0+2(L+T+P)	Credits:	4.0
Total Lecture Hours	:40	CIE Marks:	50
Tutorial/ Practical	:26(P)	SEE Marks:	50
Sub. Code	: N1EPE01		

Course Objectives:

1. To expose students to analyse the construction and operation of Power semiconductor devices
2. To expose students to analyse the operation and control techniques of Phase controlled rectifiers
3. To expose students to analyse the operation and control techniques of Inverters
4. To expose students to analyse the operation and features of different multilevel inverter topologies and Matrix converters.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Understand various characteristics of power devices, data sheet for proper selection of power devices for defined application

CO2: Design and analyse single phase line commutated converters and three phase line commutated converters and evaluate the performance of 1-ph converter under the effect of source inductance.

CO3: Design and analyse of switch mode inverters in linear modulation and over modulation. Analysis of harmonic components.

CO4: Analyse different Inverter control methods and Inverter Topologies

UNIT 1

Power Devices: Thyristor, MOSFET and IGBT- V-I characteristics, switching transient- turn-on transient, turn-off transient.

Power Devices Continued: FBSOA and RBSOA curve of MOSFET and IGBT, optocoupler isolated drive circuit for MOSFET and IGBT. **08Hrs.**

UNIT 2

Controlled Rectifier: Operation and analysis of single phase fully controlled converter, effect of source inductance (1-phase converters), and discontinuous current conduction. Dual Converter (1-phase), three phase fully controlled converter, effect of source inductance (3-phase converters) **Power Factor Improvements:** Extinction angle control, symmetric angle control, PWM control. **08 Hrs**.

UNIT 3

Switch-Mode Inverters: Half-Bridge inverter PWM switching scheme-linear modulation, over modulation, square wave operation. Full-bridge inverter-PWM bipolar and unipolar voltage switching. Three-phase inverter PWM switching scheme-linear modulation, over modulation, square wave operation, **Control of Single-Phase Inverters:** Modified SPWM methods, SVPWM. **08 Hrs.**

UNIT 4

Harmonic Reductions. **Current Source Inverter**: ASCI, comparison between VSI & CSI. **Boost Inverter, Matrix Converters**: Single Phase Matrix Converter, Three Phase Matrix Converter, and Commutation Methods in Matrix Converter. **08 Hrs.**

UNIT 5

Multilevel Inverters: Introduction, types, diode clamped multi-level inverters, cascaded H-bridge inverter, flying capacitor clamped inverter & applications, Switching Device Currents, DC-Link Capacitor Voltage Balancing, Features of Multilevel Inverters, Comparisons of Multilevel Converters. **08 Hrs.**

List of Experiments:

1. Design and Simulation of Single phase semi controlled rectifier feeding R and RL load
2. Design and Simulation of Single phase Fully controlled rectifier feeding R and RL load
3. Design and Simulation of Single-phase Dual converter with circulating and noncirculating modes of current
4. Design and Simulation of Three phase Fully controlled rectifier feeding R and RL load
5. Design and Simulation of Three phase Dual converter with circulating and Non circulating modes of current
6. Design and Simulation of Single-phase Half bridge Inverter feeding R and RL load
7. Design and Simulation of Single-phase Full bridge Inverter feeding R and RL load
8. Design and Simulation of Three phase Inverter
9. Conduction and Analysis of Single phase Fully controlled rectifier feeding R and RL load
10. Conduction and Analysis of Three phase Fully controlled rectifier feeding R and RL load
11. Conduction and Analysis of Single-phase Inverter
12. Conduction and Analysis of Three phase Inverter

MODELLING & ANALYSIS OF ELECTRICAL MACHINES

Contact Hours/ Week	: 3+2+0(L+T+P)	Credits:	4.0
Total Lecture Hours	:40	CIE Marks:	50
Tutorial/ Practical	:26(T)	SEE Marks:	50
Sub. Code	: N1EPE02		

Course Objectives:

1. To expose students to the modeling techniques of Electrical Machines.
2. To expose students to the dynamic and steady-state analysis of Electrical Machines.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Understand energy storage and electromechanical energy transfer in electromechanical systems

CO2: Transform circuit variables into an arbitrary reference frame

CO3: Model and Analyse the performance of Induction machines

CO4: Model and Analyse the performance of Synchronous machines

CO5: Model and Analyse the performance of Brushless dc machines

UNIT 1

Basic Principles for Electric machine analysis: Magnetically coupled circuits-leakage flux, linear magnetic system, non-linear magnetic system, electromechanical energy conversion – Energy relationships, Energy in coupling fields, Electromagnetic forces, Machine windings and air-gap MMF, Winding inductances. **(08+05) Hrs.**

UNIT 2

Theory of Direct-current machines: Voltage and torque equations - Mathematical model of separately excited DC motor, transfer function of separately excited DC motor Separately excited DC motor: steady state and transient state analysis (simulation only).

Reference – Frame Theory: Introduction, equations of transformation – change of variables, stationary circuit variables transformed to the arbitrary reference frame, commonly used reference frames, transformation between reference frames. Transformation of a balanced set. Balanced steady state phasor relationships, balanced steady-state voltage equations variables observed from several frames of reference (simulation only)**.** **(08+05) Hrs.**

UNIT 3

Symmetrical Induction Machines: Introduction, voltage equations in machine variables, Torque equation in machine variables, equation of transformation for rotor circuits, voltage equations in

arbitrary reference – frame variables, Torque equation in arbitrary reference – frame variables, commonly used reference frames, per unit system, Steady state analysis, Dynamic performance during sudden changes in load torque and three phase fault at the machine terminals (simulation only) **Industrial visit** **(08+05) Hrs.**

UNIT 4

Theory of Synchronous Machines: Introduction, voltage equations in machine variables, Torque equation in machine variables, stator voltage equations in arbitrary reference – frame variables, voltage equations in rotor reference – frame variables-Park equations, Torque equation in substitute variables, Rotor angle and angle between rotors, per unit system, analysis of steady state operation. Dynamic performance during sudden change in input torque and during a 3-phase/Single Line-to ground/Double Line-to-ground fault at the machine terminals (simulation only). **(08+06) Hrs.**

UNIT 5

Theory of Brushless dc Machines: Introduction, Voltage and Torque equations in machine variables, voltage and torque equations in Rotor-reference frame variables, Analysis of Steady state operation. Dynamic performance (simulation only). **(08+05) Hrs.**

SWITCHED MODE AND RESONANT CONVERTERS

Contact Hours/ Week	:2+2+0(L+T+P)	Credits:	3.0
Total Lecture Hours	:26	CIE Marks:	50
Tutorial/ Practical	:26(T)	SEE Marks:	50
Sub. Code	: N1EPE03		

Course Objectives:

1. To expose students to the analysis and design of DC-DC power converters
2. To expose students to the analysis and design of the resonant converters
3. To expose students to the selection and design of magnetic components of converters

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Analyse and design Buck, Boost and Buck-boost converters

CO2: Analyse and design SEPIC, CUK and derived converter

CO3: Analyse and design forward, push-pull and bridge converters

CO4: Analyse and design resonant converters

CO5: Design magnetic components for DC-DC converters

UNIT 1

DC – DC Converters (Basic Converters): A basic switching converter (SMPC), principle of operation and analysis of buck converter, inductor current ripple and output voltage ripple, capacitor resistance effect, design considerations, buck converter for discontinuous current operation. Principle of operation and analysis of boost converter, inductor current ripple and output voltage ripple, inductor resistance effect, design considerations, boost converter for discontinuous current operation. (**06+06) Hrs.**

UNIT 2

Principle of operation and analysis of buck-boost converter analysis, inductors current ripple and output voltage ripple, design considerations, buck-boost converter for discontinuous current operation. Principle of operation and analysis of CUK converter, inductor current ripple and output voltage ripple, capacitor resistance effect, design considerations, Principle of operation and analysis of SEPIC converter. **(05+05) Hrs.**

UNIT 3

Derived Converters: Introduction, transformer models, principle of operation and analysis of fly back converter-continuous, design considerations. Principle of operation & analysis of forward converter, design considerations, principle of operation & analysis of push-pull converter, design considerations, principle of operation and analysis of full bridge and half-bridge DC-DC converters, design considerations, current fed converters. **(05+05) Hrs.**

UNIT 4

Resonant Converters: Introduction, resonant switch ZCS converter, principle of operation and analysis, resonant switch ZVS converter, principle of operation and analysis, series resonant DC-DC converter, parallel resonant DC-DC converter, Series, Parallel resonant converters comparison. **(05+05) Hrs.**

UNIT 5

Design of magnetic components-design of transformer, Design of Inductor, Selection of filter capacitors, Selection of ratings for devices, input filter design, Thermal design. **(05+05) Hrs.**

ADVANCED CONTROL SYSTEMS

Contact Hours/ Week	: 2+2+0(L+T+P)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Tutorial/Practical	: 26	SEE Marks:	50
Sub. Code	: N1EPE04		

Course objectives:

1. To impart basic knowledge about state-space models, state regulator design, controllable and observable systems.
2. Understand and implement PID controllers and various practical considerations.
3. To expose students to methods of analyzing non-linear control systems.
4. To impart knowledge of sliding mode control
5. To impart knowledge of implementation of PID, state-feedback controller, and sliding mode controller on converters.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Understand the concepts and significance of controllability and observability, design of state feedback control, and observer in the design of feedback control systems.

CO2: Analyze the importance and design of PID controllers.

CO3: Analyze non-linear systems and its stability.

CO4: Understanding fundamentals of sliding mode control, chattering phenomenon and its reduction.

CO5: Implementation of PID, state-feedback, and sliding mode control on converters.

UNIT 1

State-space: Overview of state-space, concepts of controllability and observability, Kalman test to check controllability and observability, design of servo-systems, pole placement by state feedback, design of servo-systems, full order and reduced order observer. **(06+06) Hrs.**

UNIT 2

PID controller: Proportional controllers, PI and PID controllers, Derivative overrun, integral windup, cascaded control, Feed forward control. PID controllers-Ziegler-Nichols tuning method. Modifications in PID control: PID, PI-D, I-PD controller. Two-Degree-of-Freedom Control.

(05+05) Hrs.

UNIT 3

Analysis of Non-Linear Control Systems: Introduction, Common nonlinearities, singular points, stability of nonlinear systems – linearization, phase plane analysis, Lyapunov's stability analysis – examples. **(05+05) Hrs.**

Unit-4

Nonlinear Design tools (Sliding Mode Control): Concept of variable structure control, implementation of switching control laws. Reduction of chattering in sliding mode, Lyapunov's redesign Stabilization – nonlinear damping. **(05+05) Hrs.**

Unit-5

Controller Design: Design of PI, PD, PID controller for buck, boost, and buck-boost converter. State Feedback Controller design for buck, boost, & buck-boost converter. Design of Sliding Mode Controller with PI type sliding surface for buck converter. (Note: select some standard models of converters). **(05+05) Hrs.**

PROFESSIONAL ELECTIVE-I

EMBEDDED SYSTEM DESIGN

Contact Hours/ Week	: 2+0+2(L+P+T/SDA)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Tutorial/ Practical	: 26	SEE Marks:	50
Sub. Code	: N1EPEE11		

Course objectives:

1. To introduce the Building Blocks of Embedded System and various development strategies
2. To Introduce Bus Communication in processors, Input/output interfacing.
3. To impart knowledge in various processor scheduling algorithms.
4. To introduce Basics of Real time operating system and example tutorials to discuss on one real time operating system tool

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Explain design process in embedded system and formulation of system design.

CO2: Acquire knowledge about processor and memory organization in embedded systems design.

CO3: Acquire knowledge about ARM system architecture and high-performance processors.

CO4: Explain real time programming and modelling concepts during single and multi-processor system software development process.

CO5: Describe real time operating systems concepts.

UNIT 1

Introduction to Embedded System: An embedded system, processor, hardware unit, software embedded into a system, example of an embedded system, OS services, I/O, N/W, O/S, real time and embedded OS. Classification of Embedded Systems, Skill required for an Embedded System Designer. **(5+5) Hrs.**

UNIT 2

Processor and Memory Organization: Structural unit in a processor, processor selection for an embedded system, memory devices, memory selection for an embedded system, allocation of memory to program statements and blocks and memory map of a system, direct memory accesses. **(5+5) Hrs.**

UNIT 3

ARM various system architecture, high performance processors - strong ARM processors; addressing modes, instruction set, basic alp programs, interrupts structure. **(5+5) Hrs.**

UNIT 4

Real Time System: Types, real time computing, design issues, sample systems, hardware requirements- processors introduction. **RTOS Based Embedded System:** Operating System Basics, Types of Operating Systems, Tasks, Process and Threads, Multiprocessing and Multitasking, Task Scheduling. Tasks, state transition diagram, task control block. Inter-task communication and synchronization of tasks, building real time applications. **(5+5) Hrs.**

UNIT 5

RTOS programming fundamentals: Tasks and Task states – Semaphores – Shared data – Message queues, Mail boxes and pipes – Memory management – Interrupt routines – Encapsulating semaphore and queues. **(6+6) Hrs.**

ELECTRIC POWER QUALITY

Contact Hours/ Week	: 2+0+2(L+T+P)	Credits:	4.0
Total Lecture Hours	:26	CIE Marks:	50
Tutorial/ Practical	:26	SEE Marks:	50
Sub. Code	: N1EPEE12		

Course objectives:

1. To expose students to power quality disturbances, classification, and relevant standards
2. To expose students to harmonics and to design and analysis of filters for mitigation of harmonics.
3. To expose students to Voltage variations and to design and analysis of compensators for suppression of Voltage variations.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Acquire knowledge about the various power quality disturbance and Power Quality Standards and Monitoring

CO2: understand the various sources of harmonics and design and analysis of Passive filter for mitigation of harmonics.

CO3: design and analysis of Active filter for mitigation of harmonics.

CO4: Acquire knowledge about the Voltage sag and short interruptions and its consequences.

CO5: analysis of different mitigation methods for suppression of Voltage sag and short interruptions.

UNIT 1

Power Quality: Introduction, Classification of Power Quality Problems, Causes of Power Quality Problems, Effects of Power Quality Problems on Users, Classification of Mitigation Techniques for Power Quality Problems. **Power Quality Standards and Monitoring**: Introduction, Power Quality Terminologies, Power Quality Definitions, Power Quality Standards, Power Quality Monitoring, Numerical Examples. **(05+05)Hrs**

UNIT 2

Power Quality Disturbance Sources: Classification of Nonlinear Loads, Power Quality Problems Caused by Nonlinear Loads, Analysis of Nonlinear Loads, **Passive Power Filters** :

Introduction, Classification of Passive Filters , Principle of Operation of Passive Power Filters, Analysis and Design of Passive Power Filters, Limitations of Passive Filters, Parallel Resonance of Passive Filters with the Supply System and Its Mitigation , Numerical Examples.

(06+06) Hrs.

UNIT 3

Active Power Filters: Shunt Active Power Filters: Introduction , Classification of Shunt Active Power Filters, Principle of Operation and Control of Shunt Active Power Filters ,Analysis and Design of Shunt Active Power Filters, **Series Active Power Filters:** Introduction, Classification of Series Active Power Filters, Principle of Operation and Control of Series Active Power Filters, Analysis and Design of Series Active Power Filters, **Hybrid Power Filters :** Introduction, Classification of Hybrid Power Filters, Principle of Operation and Control of Hybrid Power Filters, Analysis and Design of Hybrid Power Filters ,Numerical Examples. **(05+05) Hrs.**

UNIT 4

Short Interruptions: Origin of Short Interruptions, Basic Principle, Fuse Saving, Voltage Magnitude Events due to Reclosing, Voltage During the Interruption, Monitoring of Short Interruptions, Influence on Equipment. **Voltage Sags-Characterization:** Introduction, Voltage Sag Magnitude, Monitoring, Voltage Sag Duration, Fault-Clearing Time, Magnitude-Duration Plots, Measurement of Sag Duration. Load Influence on Voltage Sags, Induction Motors and Three-Phase Faults, Power Electronics Load. **(05+05) Hrs.**

UNIT 5

Mitigation of Interruptions and Voltage Sags: Overview of Mitigation Methods, From Fault to Trip, Reducing the Number of Faults, Reducing the Fault-Clearing Time, Changing the Power System, Installing Mitigation Equipment, Improving Equipment Immunity, The System-Equipment Interface, Voltage-Source Converter, Series Voltage Controllers-DVR, Shunt Voltage Controllers-Stacom. (**05+05)Hrs**.

REFERRENCE BOOKS

Sl. No.	Authors/s	Title, Publisher, Edition, Year, ISBN
1	Bhim Singh, Ambrish Chandra and Kamal Al-Haddad	Power Quality Problems and Mitigation Techniques" John Wiley & Sons ,1st t Edition, 2015. ISBN: 9781118922057

2	Math H. Bollen	Understanding Power Quality Problems", IEEE Press,1st edition, 2000, Online ISBN: 9780470546840, Print ISBN: 9780780347137

SOFT COMPUTING

Contact Hours/ Week	: 2+2+0(L+T+P)	Credits:	3
Total Lecture Hours	: 26	CIE Marks:	50
Tutorial/ Practical	: 26	SEE Marks:	50
Sub. Code	: N1EPEE13		

Course objectives:

1. Understanding the fundamental theory and concepts of computational intelligence methods, in particular neural networks, fuzzy systems, genetic algorithms and their applications in the area of machine intelligence.
2. To understand the concepts of fuzzy sets, knowledge representation using fuzzy rules, approximate reasoning, fuzzy inference systems, and fuzzy logic control and other machine intelligence applications of fuzzy logic.
3. To understand the fundamental theory and concepts of neural networks, neuro-modeling, several neural network paradigms and its applications.
4. To understand the basics of an evolutionary computing paradigm known as genetic algorithms and its application to engineering optimization problems.

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Identify and describe soft computing techniques and their roles in building intelligent machines such as expert system.

CO2: Apply fuzzy logic reasoning algorithms to handle uncertainty and solve simple engineering problems

CO3: Design and effectively Apply the usage of fuzzy logic software tool to solve real world problems. Identify and Apply neural network models and learning tools for simple engineering applications

CO4: Design and Apply neural networks models to practical problems

CO5: Apply genetic algorithms to real world control and probabilistic reasoning problems

UNIT 1

Introduction to soft computing, soft computing Vs. hard computing: introduction to soft computing, various types of soft computing techniques, applications of soft computing techniques, Expert system architecture and applications, Python programming. **(05+05)Hrs**.

UNIT 2

Fuzzy Logic (Introduction) Basic concepts of fuzzy logic, Fuzzy sets and Crisp sets, Fuzzy set theory and operations, Properties of fuzzy sets, Fuzzy and Crisp relations, Fuzzy to Crisp

conversion. (Fuzzy Membership, Rules) Membership functions, interference in fuzzy logic, fuzzy if-then rules. **(06+06)Hrs**.

UNIT 3

Fuzzy implications and Fuzzy algorithms, Fuzzyfication & Defuzzificataion, Fuzzy Controller, Implementation of fuzzy controller using python programming. Introduction to Neural Networks (Introduction & Architecture) Neuron, Nerve structure and synapse, Artificial Neuron and its model, activation functions. **(05+05)Hrs**.

UNIT 4

Neural network architecture: single layer and multilayer feed forward networks, recurrent networks. Various learning techniques; perception and convergence rule. Back propagation Neural Networks: perceptron model, solution, single layer artificial neural network, multilayer perception model; back propagation learning methods, effect of learning rule co-efficient; Radial basis function, implementation of RBF network. Back propagation algorithm, factors affecting backpropagation training. Implementation of BP network algorithm using python programming.

(05+05)Hrs.

UNIT 5

Genetic Algorithm (GA) Basic concepts, working principle, procedures of GA, flow chart of GA, Genetic representations, (encoding) Initialization and selection, Genetic operators, Mutation, Generational Cycle. Implementation of GA using python programming. Hybrid systems, Types and Implementation of Neuro-Fuzzy system. **(05+05)Hrs**.

ADVANCED DIGITAL SIGNAL PROCESSING

Contact Hours/ Week	: 2+2+0(L+T+P)	Credits:	3
Total Lecture Hours	: 26	CIE Marks:	50
Tutorial/ Practical	: 26	SEE Marks:	50
Sub. Code	: N1EPEE14		

Course objectives:

1. Understand the modern digital signal processing algorithms and applications.
2. To have an in-depth knowledge of use of digital systems in real time applications

Course Outcomes: Upon completion of this course the student will be able to

CO1: Differentiate between the time domain and frequency domain representations as well carryout analysis of discrete time signals and systems

CO2: Study the design techniques for IIR and FIR filters and their realization structures.

CO3: Acquire knowledge about the finite word length effects in implementation of digital filters.

CO4: Acquire Knowledge about the various linear signal models and estimation of power spectrum of stationary random signals

CO5: Design optimum FIR and IIR filters

UNIT 1

Discrete time signals, Linear shift invariant systems-Stability and causality, Sampling of continuous time signals, Discrete time Fourier transform, Discrete Fourier series, Discrete Fourier transform, Z-Transform-Properties of different transforms. **(6+6) Hrs.**

UNIT 2

Linear convolution using DFT, Computation of DFT, Design of IIR digital filters from analog filters - Impulse invariance method, Bilinear transformation method (**5+5) Hrs.**

UNIT 3

FIR filter design using window functions, Comparison of IIR and FIR digital filters, Basic IIR and FIR filter realization structures, Signal flow graph representations Quantization process and errors, Coefficient quantization effects in IIR and FIR filters (**5+5) Hrs.**

UNIT 4

A/D conversion noise- Arithmetic round-off errors, Dynamic range scaling, Overflow oscillations and zero Input limit cycles in IIR filters, Linear Signal Models. All pole, All zero and Pole-zero models, Power spectrum estimation- Spectral analysis of deterministic signals, Estimation of power spectrum of stationary random signals. (**5+5) Hrs.**

UNIT 5

Optimum linear filters, Optimum signal estimation, Mean square error estimation, Optimum FIR and IIR Filters (**5+5) Hrs.**

TEXT BOOKS

Sl. No.	Author/s	Title, Publisher, Edition, Year, ISBN

2	Dimitris G. Manolakis, Vinay K Ingle and Stephen M. Kogon	"Statistical and Adaptive Signal Processing", Mc. Grow Hill international editions. -2000, ISBN-13: 978-8131710005

POWER ELECTRONICS LABORATORY – I

Contact Hours/ Week	: 1+2+0(L+T+P)	Credits: 3
Total Lecture Hours	: 13	CIE Marks: 50
Tutorial/ Practical	: 26(P)	SEE Marks: 50
Sub. Code	: N1EPEL01	

Course Objectives:

1. Students must be able to design the circuit for the given problem / system using MATLAB software
2. Students must be able to analyze the characteristic of Semiconductor devices.
3. Students must be able to model the given problem / system using Semikron converter and DSPIC Controller.
4. To observe the difference of the conventional and power electronic control of drives.

Course Outcomes: Upon completion of this course the student will be able to:

CO1: To analyze, design and study DC-DC converters.

CO2: To analyze and study the characteristic of Semiconductor devices

CO3: To analyze and program the DSPIC controller for converter applications.

CO4: To analyze and study different converters using Semikron converter

List of Experiments:

1. Analysis of static and dynamic characteristic of MOSFET and IGBT
2. Performance analysis of two & four quadrant chopper
3. Simulation study of buck, boost and buck- boost, SEPIC converter (basic topologies)and analysis of wave forms for continuous & discontinuous current mode current mode in MATLAB.
4. Basic coding of DSPIC CONTROLLER. (PWM signal with variable frequency and duty cycle)
5. Design of buck converter using DSPIC(TMS320F2790D) controller.
6. Study of Semikron converter operation using DSPIC

7. Study of Diode clamped multilevel inverter simulation in MATLAB.
8. Simulation study of V/F Control of Induction motor.
9. Simulation study of closed loop operation of DC-DC converters.
10. Simulation study of Resonant converters.

II Semester Syllabus

DIGITAL CONTROLLERS FOR POWER ELECTRONIC APPLICATIONS

Contact Hours/ Week	: 3+0+2(L+T+P)	Credits:	4
Total Lecture Hours	: 40	CIE Marks:	50
Practical	: 13(P)	SEE Marks:	50
Sub. Code	: N2EPE01		

Course Objectives:

1. To deal with interfacing of different peripheral devices with Microprocessor
2. To study fundamentals of microcontroller systems with Assembly Language Programming
3. To describe signals mathematically and understand how to perform mathematical
4. operations on signals.
5. To covers the advanced design and analysis of digital circuits with HDL. The primary goal is to provide in depth understanding of system design.

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Learn the concept of digital principles.

CO2: Digital instrumentation setup to control various power electronics-based drives.

CO3: Design the power electronic circuits using Digital logic.

CO4: Analyse the power electronic circuits using Digital logic.

CO5: Design simple filters circuits for particular application.

UNIT 1

MICROCONTROLLERs FOR CONTROL OF POWER ELECTRONIC SYSTEMS: Types, real time computing, design issues, Microcontrollers architecture, addressing modes, instruction set, and few basic assembly language programs Microcomputer control of Power Electronic Systems, Digital vs Analog control, Real time control using Microcomputer, Advanced Microprocessor, power electronic systems, Application examples. **8Hrs.**

UNIT 2

DIGITAL SIGNAL PROCESSORS: Introduction to the TMSLF2407 DSP Controller, Peripherals, Types of Physical Memory, Software Tools, C2xx DSP Core and Code Generation, Components of the C2xx DSP Core, Mapping External Devices to the C2xx Core and the Peripheral Interface, Registers, Memory, Memory Addressing Modes, Programming Using the C2xx DSP Instruction Set. **8Hrs.**

UNIT 3

DIGITAL SIGNAL PROCESSORS INTERFACING: General Purpose Input/Output (GPIO) Functionality, Pin Multiplexing (MUX) and General Purpose I/O Overview, Multiplexing and General Purpose I/O Control Registers, Using the General Purpose I/O Ports, Interrupts on the TMS320LF2407, Interrupt Hierarchy, Initializing and Servicing Interrupts in Software, Interrupt Usage Exercise, The Analog-to-Digital Converter (ADC). **8Hrs.**

UNIT 4

APPLICATION DSP IN POWER ELECTRONICS: The Event Managers (EVA, EVB), Overview of the Event Manager (EV), General Purpose (GP) Timers, PWM Signal Generation, DSP-Based Implementation of DC-DC Buck-Boost Converters, Converter Structure, Continuous Conduction Mode, Discontinuous Conduction Mode, Connecting the DSP to the Buck-Boost Converter, Controlling the Buck-Boost Converter, DSP-Based Control of Stepper Motors. **8 Hrs.**

UNIT 5

FIELD PROGRAMMABLE GATE ARRAYS: RTL Design – simulation and synthesis - Combinational logic – Types – Operators –Packages – Sequential circuit – Sub-programs – Test benches. (Examples: adders, counters, flipflops, FSM, Multiplexers / Demultiplexers). Overview of Field Programmable Gate Arrays – CPLD Vs FPGA – Types of FPGA, Xilinx XC3000 series, Configurable logic Blocks (CLB), Input/Output Block (IOB) , overview of Spartan 3E and Virtex III pro FPGA boards- case study Controlled Rectifier, Switched Mode Power Converters, PWM Inverters, DC motor control, Induction Motor Control using Virtex III pro FPGA boards. **8Hrs.**

TEXT BOOKS

Sl. No.	Author/s	Title, Publisher, Edition, Year, ISBN

2	Wayne Wolf	FPGA based system design", Prentice Hall, 2004. ISBN-13: 978-8131724651

REFERENCE BOOKS

1	Dogan Ibrahim,	Microcontroller Based Applied Digital Control, Released April 2006 Publisher(s): Wiley ISBN: 9780470863350

Integrated lab

1. Programs to generate delay, Programs using serial port and on-chip timer/counters
2. Stepper motor interface
3. DC motor interface for direction and speed control using PWM
4. Interfacing of 8-bit DAC 0800 with 8051 Microcontroller and Waveform generation using DAC

LIST OF EXPERIMENTS USING DSP PROCESSOR

1. Architecture and Instruction Set of DSPCHIP- TMS
2. Introduction to Code Composer Studio
3. Computation of N- Point DFT of a Given Sequence
4. Implementation of FFT of Given Sequence
5. Controlling the Buck-Boost Converter
6. DSP-Based Control of Stepper Motors.

LIST OF EXPERIMENTS USING Virtex III pro FPGA boards

1. DC motor control using Virtex III pro FPGA boards

2. Induction Motor Control using Virtex III pro FPGA boards

ELECTRIC DRIVES

Contact Hours/ Week	: 3+2+0(L+T+P)	Credits:	4.0
Total Lecture Hours	:40	CIE Marks:	50
Tutorial/ Practical	:26(T)	SEE Marks:	50
Sub. Code	: N2EPE02		

Course Objectives:

1. To expose students to the Electric drive requirements of different applications.
2. To expose students to the operation and control of DC and AC drives.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Analyze the Elements of a drive system and characteristics of different Electro Mechanical systems

CO2: Analyze the operation of slip power recovery drives and scalar control of induction motor drives

CO3: Analyze the operation of vector control and DTC of induction motor drives

CO4: Analyze the operation of Permanent magnet synchronous machine drives

CO5: Analyze the operation of wound field synchronous and reluctance machine drives

UNIT 1

Introduction: Elements of a drive system, The mechanical system-components of load torque, load toque characteristics of compressor, centrifugal pump, constant power drive, transportation drive, winch drive, crane hoist, required drive characteristics–speed changes, fundamental torque equation, steady state stability D**C MOTOR DRIVER** 3-ph fully controlled rectifier control of dc separately excited motor, chopper control of separately excited dc motor. **(08+06) Hrs.**

UNIT 2

Induction Motor Slip-Power Recovery Drives: Introduction, Static Kramer drive, Static Scherbius Drive. **Induction Motor Drives:** Induction motor control with small signal model**,** Scalar control – Voltage-fed Inverter control, Scalar control - Current-fed Inverter Control.

(08+05) Hrs.

UNIT 3

Field-oriented control: DC Drive analogy, Principles of vector control, Direct or feedback vector control, Flux vector estimation, Indirect vector control, Stator flux-oriented vector control

Sensorless vector control-slip calculation, direct synthesis from state equation **Direct Torque and Flux Control:** Torque expression with stator and rotor fluxes, control strategy of DTC.

(08+05) Hrs.

UNIT 4

Synchronous machine drives: Sinusoidal SPM machine drives – Open loop Volts/hertz control, self-control model, vector control, Synchronous Reluctance machine drives, Sinusoidal IPM machine drives, Trapezoidal SPM machine drives. **(08+05) Hrs.**

UNIT 5

Wound-Field Synchronous Machine Drives – Brush and Brushless DC Excitation, Load-Commutated Inverter Drive, sensorless control of BLDC motor, Switched reluctance motor drives.

(08+05) Hrs.

MODELING AND CONTROL OF POWER ELECTRONIC SYSTEMS

Contact Hours/ Week	: 2+2+0(L+T+P)	Credits:	3
Total Lecture Hours	: 26	CIE Marks:	50
Tutorial/ Practical	: 26	SEE Marks:	50
Sub. Code	: N2EPE03		

Course objective: The objective of this course is learning the modelling of electrical system and thereby analyzing the operation of different types of power converters, course also emphasizes on analysis of advanced control techniques for control of power modulators.

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Understand the modeling techniques of electrical systems and Analyze the operation of DC/DC (boost, buck and buck boost, cuk, sepic) converter.

CO2: Analyze the Dynamic Performance of DC-DC Converter and Modeling of DC-DC Converter

CO3: Analyze and evaluate the performance of the Closed Loop Control of Power Converter

CO4: Analyze the performance of Current Programmed Control for DC-DC Converter

CO5: Analyze the operation of Soft Switching Converters

UNIT 1

Modeling of Systems: Input-Output relations, differential equations and linearization, state space representation, transfer function representation of a simple RC, RL circuit, DC shunt motor. Review of DC/DC (boost, buck, buck-boost, cuk and SEPIC) converter in continuous and discontinuous mode of operation. **(5+5) Hrs.**

UNIT 2

Dynamic Performance of DC-DC Converter: Introduction, dynamic and output equation of a converter, modeling of non-ideal flyback converter, average model and steady state solution, small signal model, generalized state space model of converter with buck, boost and buck-boost converters as examples. **(6+6) Hrs.**

UNIT 3

Closed Loop Control of Power Converter: Introduction, control requirements, structure and design of compensators, close loop performance function, Effect of input filters on converter performance (audio susceptibility, input admittance, output impedance, control voltage gain, control current gain). **(5+5) Hrs.**

UNIT 4

Current Programmed Control: Introduction, Sub-harmonics instability in current-z programmed control, determination of duty ratio for current programmed control (buck, boost and buck- boost converter), Current programmed control transfer function (buck, boost and buck-boost converter).

(5+5) Hrs.

UNIT 5

Soft Switching Converters: Introduction, Resonant load converter, SMPS using resonant circuit, steady state modeling of SMPS, Approximate design procedure, Buck converter using zero current switching, Boost converter with zero voltage switching. Resonant switching circuit with active clamp (analysis only for buck converter). **(5+5) Hrs.**

PROFESSIONAL ELECTIVE-II

PWM CONVERTERS AND APPLICATIONS

Contact Hours/ Week	:2+2+0 (L+T+P)	Credits:	3
Total Lecture Hours	: 26	CIE Marks:	50
Tutorial/ Practical	: 26	SEE Marks:	50
Sub. Code	: N2EPEE21		

Course Objectives:

1. Understand pulse width modulation techniques for1-phase and 3-phase bridge converters, sine-triangle PWM, bus clamping PWM, space vector based PWM, advanced PWM techniques
2. Understand the calculation of switching and conduction losses; compensation for dead time and DC voltage regulation.
3. Understand the estimation of current ripple and torque ripple in inverter fed drives.
4. Understand over modulation; extension of modulation methods to multilevel inverters.

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Analyze basic concepts of PWM control method.

CO2: Analyze basic and explore advance PWM methods for inverters and converters.

CO3: Evaluate performance parameters like current ripple, torque ripple and losses

CO4: Design a PWM controller for a given application.

UNIT 1

Introduction to pulse width modulation (PWM)- Overview of converters and control methods. Purpose of PWM control of converters, Fourier series, Harmonic voltages and their effects. Basic PWM techniques: Triangle-comparison based PWM: single pulse. Multiple pulse, SPWM, modified SPWM and phase displacement techniques, Third harmonic injection PWM (THIPWM), Bus-clamping PWM. **(05+05) Hrs.**

UNIT 2

Advanced PWM Techniques: Hysteresis band current control PWM, Harmonic Cancellation techniques Concept of space vector, Conventional space vector PWM and bus-clamping PWM, Advanced bus-clamping PWM, Comparison of PWM techniques, Voltage and frequency control of single phase and three-phase inverters. **(06+06) Hrs.**

UNIT 3

Analysis of line current ripple: Transformation from stationary reference frame to synchronously revolving dq reference frame, Volt-second balance and instantaneous error voltage, Calculation of

RMS line current ripple, Space vector-based hybrid PWM for reduced line current ripple. Analysis of dc link current, Average and RMS values of dc link current. Analysis of torque ripple: Calculation of harmonic torques and RMS torque ripple, Hybrid PWM techniques to reduce ripple torque. **(05+05) Hrs.**

UNIT 4

Loss Calculations: Practical devices in converters, calculation of switching and conduction loss, PWM techniques for reduced switching loss compensation for dead time and DC voltage regulation. Effect of inverter dead-time: Effect of dead-time with continuous modulation and discontinuous modulation. **(05+05) Hrs.**

UNIT 5

Over modulation- Per-phase approach to over modulation, Space vector approach to over modulation, A perspective from the synchronously revolving d-q reference frame. PWM for multilevel inverters, Extension of sine-triangle modulation to three-level inverters, Extension of conventional space vector modulation to three-level inverters. **(05+05) Hrs.**

DISTRIBUTED GENERATION AND MICROGRIDS

Contact Hours/ Week	: 2+0+2(L+T+P)	Credits:	4.0
Total Lecture Hours	:26	CIE Marks:	50
Tutorial/ Practical	:26	SEE Marks:	50
Sub. Code	: N2EPEE22		

Course objectives:

1. To illustrate the concept of distributed generation
2. To analyze the impact of grid integration.

3. To study concept of Micro grid and its configuration
4. To find optimal size, placement and control aspects of DGs

Course Outcomes: After the completion of the course, the student will be able to

CO1: Identify the size and optimal placement of DG.

CO2: Analyze the impact of grid integration and control aspects of DGs.

CO3: Model and analyze a micro grid taking into consideration the planning and operational issues of the DGs to be connected in the system.

CO4: Classify the technical impacts of DGs in power systems.

UNIT 1

Need for Distributed generation. Renewable sources in distributed generation and current scenario in Distributed Generation. **(05+05) Hrs**

UNIT 2

Planning of DGs. Sitting and sizing of DGs optimal placement of DG sources in distribution systems. Grid integration of DGs Different types of interfaces, Inverter based DGs and rotating machine-based interfaces. Aggregation of multiple DG units. **(06+06) Hrs**

UNIT 3

Technical impacts of DGs. Transmission systems Distribution Systems Deregulation Impact of DGs upon protective relaying. Impact of DGs upon transient and dynamic stability of existing distribution systems, Steady-state and Dynamic analysis. **(05+05) Hrs**

UNIT 4

Economic and control aspects of DGs Market facts. Issues and challenges, Limitations of DGs, Voltage control techniques. Reactive power control, Harmonics Power quality issues, Reliability of DG based systems**.** **(05+05) Hrs.**

UNIT 5

Introduction to micro-grids. Types of micro-grids: autonomous and non-autonomous grids Sizing of micro-grids. Modeling & analysis of Micro-grids with multiple DGs. Micro-grids with power electronic interfacing units**.** **(05+05)Hrs**.

Text Books:

ELECTROMAGNETIC COMPATIBILITY

Contact Hours/ Week	: 2+0+2(L+P+T/SDA)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Tutorial/ Practical	: 26	SEE Marks:	50
Sub. Code	: N2EPEE23		

Course objective:

1. To familiarize with the problems of EMI and various EMC standards.
2. To design systems complying with EMC guidelines.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Analyse the real-world EMC design constraints and make appropriate trade-offs to achieve the most cost-effective design that meets all requirements.

CO2: Design electronic systems that function without errors or problems related to electromagnetic compatibility.

CO3: Diagnose and solve basic electromagnetic compatibility problems and design the cable routing & connection and understand the interconnection techniques.

UNIT 1

Review of EMI Theory: Introduction to EMI, Noise and Interference, Designing for Electromagnetic Compatibility, EMC Regulations, The Regulatory Process, Typical Noise Path, Methods of Noise Coupling, Conductively Coupled Noise, Common Impedance Coupling, Electric and Magnetic Field Coupling, Miscellaneous Noise Sources, Use of Network Theory.

(05+05) Hrs.

UNIT 2

Cabling: Capacitive coupling, effect of shield on magnetic coupling, mutual inductance calculations, magnetic coupling between shield and inner conductor, shielding to prevent magnetic radiation, shielding a receptor against magnetic fields, shield transfer impedance, example of selective shielding, co-axial cable versus shielded twisted pair braided shields, Grounding of Cable Shields. **(05+05) Hrs.**

UNIT 3

Shielding: Near Fields and Far Fields, Characteristic and Wave Impedances, Shielding Effectiveness, Absorption Loss, Reflection Loss, Reflection Loss to Plane Waves, Reflection Loss in the Near Field, Electric Field Reflection Loss, Magnetic Field Reflection Loss, General Equations for Reflection Loss, Multiple Reflections in Thin Shields**.** **(06+06) Hrs.**

UNIT 4

EMC Requirements for Electronic Systems: Governmental Requirements, Requirements for Commercial Products, Requirements for Military Products Marketed, Measurement of Emissions for Verification of Compliance, A Simple Example to Illustrate the Difficulty in Meeting the Regulatory Limits, Requirements for Commercial Aircraft, Requirements for Commercial Vehicles, Design Constraints for Products, Advantages of EMC Design. **(05+05) Hrs.**

UNIT 5

EMC Applications: Digital Circuit Power Distribution, Power Supply Decoupling, Transient Power Supply Currents, Transient Load Current, Dynamic Internal Current, Total Transient Current, Decoupling Capacitors, Effective Decoupling Strategies, Multiple Decoupling Capacitors, Multiple Capacitors of the Same Value. Target Impedance, Embedded PCB Capacitance, Power Supply Isolation. Power Entry Filters. **(05+05) Hrs.**

DESIGN OF POWER ELECTRONIC CONVERTERS

Contact Hours/ Week	: 2+2+0(L+T+P)	Credits: 3
Total Lecture Hours	: 26	CIE Marks: 50
Tutorial/ Practical	: 26	SEE Marks: 50
Sub. Code	: N2EPEE24	

Course Objectives: This course will enable students to:

1. understand the theory and applications of Power semiconductor devices.
2. understand the switching characteristics of different power electronics switches and different types of gate drive control.
3. understand the design of snubber for power electronics circuits and their applications.
4. understand various losses in power converter circuits.
5. understand the EMI and solutions for EMI.

Course Outcomes:

CO1: Apply the knowledge of Power semiconductor devices to study the switching characteristics

CO2: Understand and design of gate driver circuits

CO3: Identify and analyze the snubbers for different damping conditions

CO4: Analyze different types of losses in Power converters

CO5: Identify the EMI in converter design and design the solution for EMI

UNIT 1

Power semiconductor devices and Analysis of power electronic converters: Introduction, Different types of power diode, Diode characteristics, Choosing Diode based on data sheet, MOSFET, switching characteristics of MOSFET, Choosing MOSFET based on data sheet, IGBT, switching characteristics of IGBT, Choosing IGBT based on data sheet, Analysis of Buck Converter, Choosing L and C, Design Example of Buck Converter, Analysis of H Bridge, Bipolar PWM, Unipolar PWM, Bipolar vs Unipolar PWM. **(06+06)Hrs.**

UNIT 2

Gate drivers: Introduction to Gate Drivers, Gate Driver requirements, Optocouplers based Gate Drivers and it types, Desat Protection, Bootstrapping, Pulse Transformer based Gate Drivers

(05+05) Hrs.

UNIT 3

Snubber design: Introduction to Snubbers, RC Snubber Analysis, RC Snubber Analysis for Underdamped, **overdamped &** Case, RC Snubber Design, RCD Snubber Design. **(05+05) Hrs.**

UNIT 4

Thermal design: Power Loss and it types, Different types of Thermal Modelling, Choosing Heat Sinks. Magnetics Design: Magnetic Losses, Magnetic Materials, Magnetic cores, Inductor Design and Transformer Design. **(05+05) Hrs.**

UNIT 5

Electromagnetic interference in power electronic converters: Introduction to EMI, EMI Measurement, EMI in power electronics, CM & DM Noise, EMI filters, Design solution for EMI**.** **(05+05) Hrs.**

TEXT BOOKS

Sl. No.	**Author/s**	**Title, Publisher, Edition, Year, ISBN**
1	Ned Mohan, Tore M. Undeland, William P. Robbins	"Power Electronics: Converters, Applications, and Design", 3rd Ed. Wiley, 2007.
2	Muhammad H. Rashid	"Power Electronics: Circuits, Devices and Applications", 4th Ed. Pearson Education, 2017

PROFESSIONAL ELECTIVE-III

HVDC AND FACTS

Contact Hours/ Week	: 2+2	Credits:	3
Total Lecture Hours	: 26	CIE Marks:	50
Tutorial/ Practical	: 26	SEE Marks:	50
Sub. Code	: N2EPEE31		

Course Objectives:

1. To comprehend the conversion principles of HVDC Transmission
2. Analysis of 6 pulse converters, rectifier, and inverter operations of HVDC converters
3. To comprehend the fundamentals of FACTS Controllers, Importance of controllable parameters and types of FACTS controllers & their benefits
4. To outline Objectives of Shunt and Series compensation
5. To relate to the Control of STATCOM and SVC and their comparison & the regulation of STATCOM.
6. To explain Functioning and control of GCSC, TSSC and TCSC

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Interpret the basic concepts & analytical knowledge of HVDC convert circuits

CO2: Describe the concept of control & protection aspects of HVDC link

CO3: Interpret the basic concepts of FACTS devises & Design of SVC controller

CO4: Interpret the basics of Thyristor and GTO Controlled Series Capacitor

CO5: Describe the concept of Static Synchronous Compensator (STATCOM)

UNIT 1

Line commutated converters: Introduction, Analysis of LCC, choice of converter configuration, Analysis of HVDC Converters: Effects of source inductance for u<60, equivalent circuits and characteristics of 6 pulse converter. **(06+06) Hrs.**

UNIT 2

Control and Protection Methods: DC link control principles, converter control characteristics, firing angle control, fault development and protection schemes. DC Protection devices, DC reactor and its design Consideration, Review of basics of power transmission networks. **(05+05) Hrs.**

UNIT 3

Introduction to FACTS Devices. Effect of series and shunt compensation at the mid-point of the line on power transfer- types of FACTS controllers. Static Var Compensator: Analysis of SVC - Configuration of SVC- SVC Controller –applications of SVC. **(05+05) Hrs.**

UNIT 4

Thyristor and GTO Controlled Series Capacitor: Introduction – basic concepts of controlled series compensation -operation of TCSC - analysis of TCSC- control of TCSC - Introduction of GTO thyristor-controlled series capacitor (GCSC) - applications of TCSC & GCSC. **(05+05) Hrs.**

UNIT 5

Static Synchronous Compensator (STATCOM): Introduction – principle of operation of STATCOM - a simplified analysis of a three phase six pulse STATCOM - applications of STATCOM. **(05+05) Hrs.**

Hybrid Electric Vehicles

Contact Hours/ Week	: 2+2+0(L+T+P)	Credits:3
Total Lecture Hours	: 26	CIE Marks:50
Tutorial/ Practical	: 26	SEE Marks:50
Sub. Code	: N2EPEE32	

Course objectives: After completing the course, the students will be able to:

1. Understand the fundamental concepts and principles of electric vehicles.
2. Explore the working principle of electric vehicles.
3. understand key roles played by motors as propulsion systems and requirements for battery and it management systems.
4. emphasizes the EV business and the future trends in the development of electric vehicles.

Course outcomes: After completing the course, the students will be able to:

CO1: Apply the basics of electric and hybrid electric vehicles, their architecture, technologies and fundamentals.

CO2: Analyze the use of different power electronics converters and electrical machines in hybrid electric vehicles.

CO3: Able to interpret the working of different configurations of electric vehicles and its components, hybrid vehicle configurations.

CO4: Explain the use of different energy storage systems used for hybrid electric vehicles, their control techniques, and select appropriate energy balancing technology.

CO5: Ability to understand the control and configurations of HEV charging stations.

UNIT 1

Introduction to Electric Vehicle: Introduction, EV Historical Background, Benefits of Using Evs, Overview of types of Evs and its Challenges, Overview of Electric Vehicles in India, EV Motor Drive Technologies, Energy Source Technologies. **(05+05) Hrs.**

UNIT 2

Vehicle Dynamics and system configurations: Vehicle Dynamics intro and tractive effort, Vehicle Dynamics and dynamic equation, EV Subsystems and Configurations, HEV Subsystems and Configurations, HEV modes of operation **(05+05) Hrs.**

UNIT 3

EV Motors and Controllers: Fundamentals and Design. Electric vehicle motors, flow of energy, understanding torque, motor dynamics, electric vehicle controllers, field-oriented control, Thermal design. **(05+05) Hrs.**

UNIT 4

Electric Propulsion Systems: Basic Principles of BLDC Motor Drives, BLDC Machine Construction and Classification, application to Electric Vehicles. Switched Reluctance Motor Drives, Basic Magnetic Structure, Torque Production, SRM Drive Converter, Modes of Operation, Generating Mode of Operation, application to Electric Vehicles. **(05+05) Hrs.**

UNIT 5

Introduction to Energy Storage Requirements: Requirements for Battery Systems in Electric Vehicles, Types of Batteries, Key Battery Management Technologies, Typical Structure of Battery Management Systems. **(06+06) Hrs.**

Text Books:

1. Emadi, A. (Ed.), Miller, J., Ehsani, M., "Vehicular Electric Power Systems" Boca Raton, CRC Press, 2003.

SPECIAL ELECTRICAL MACHINES

Contact Hours/ Week	: 2+0+2	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Tutorial/ Practical	: 26	SEE Marks:	50
Sub. Code	: N2EPEE33		

Course Objectives:

1. To impart knowledge of construction and principle of operation of various special electrical machines.
2. To expose students to the various applications of Special Electrical Machines.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: Analyze the construction, working and applications of permanent magnet synchronous motors

CO2: Analyze the construction, working and applications of permanent magnet DC motors and permanent magnet synchronous motors and Synchronous Reluctance Motor.

CO3: Analyze the construction, working and applications of switched reluctance motor.

CO4: Analyze the control schemes of Stepper Motors.

CO5: Analyze the working of Linear Induction Motor, Hysteresis Motor and Repulsion Motor.

UNIT 1

Permanent Magnet Synchronous Motor (PMSM): Construction, Principle of Operation, EMF Equation, Torque Equation, Phasor Diagram, Circle Diagram, Comparison of Conventional and PMSM, Applications **(05+05) Hrs.**

UNIT 2

Permanent Magnet DC Motor and Brushless Permanent Magnet DC Motor: Permanent Magnet DC (PMDC) motor, Brushless Permanent Magnet DC (BLDC) Motors.

Synchronous Reluctance Motor (SyRM): Construction of SyRM, Working, Phasor Diagram and Torque Equation, Advantages and Applications. **(06+06) Hrs.**

UNIT 3

Switched Reluctance Motor (SRM): Construction, Principle of Working, Basics of SRM Analysis, Constraints on Pole Arc and Tooth Arc, Torque Equation and Characteristics, Power Converter Circuits, Rotor Position Sensors, Current Regulators. **(05+05) Hrs.**

UNIT 4

Stepper Motors: Constructional features –Principle of operation –Types – Torque predictions – Linear Analysis – Characteristics – Drive circuits – Closed loop control – Concept of lead angle - Applications. **(05+05) Hrs.**

UNIT 5

Other Special Machines: Constructional features – Principle of operation and Characteristics of Hysteresis motor-Linear Induction motor-Repulsion motor- Applications. **(05+05) Hrs.**

POWER ELECTRONICS IN SMART GRID

Contact Hours/ Week	:2+2+0(L+T+P)	Credits:	3
Total Lecture Hours	:26	CIE Marks:	50
Tutorial/ Practical	:26	SEE Marks:	50
Sub. Code	: N2EPEE34		

Course Objective:

1. Introduction to Smart Grid and an understanding of the relevance of it in global perspective.
2. To learn the Technology needed and Reforms and restructuring in Indian power sector.

3. To understand the Knowledge about intelligent and Strategic issues related to growth & development of Power Sector.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1: To distinguish the difference between smart grid & conventional grid and identify fundamental problems in conventional grid

CO2: Formulate solutions in the areas of smart substations, distributed generation and wide area measurements

CO3: To understand the planning and operational issues related to Distributed Generation.

UNIT 1

Introduction: Introduction to smart grid, electricity network, local energy networks, electric transportation, low carbon central generation, fundamental problems of electrical power systems, power flow control, distributed generation and energy storage, attributes of the smart grid.

(06+06) Hrs.

UNIT 2

Power Control and Quality Problems: Introduction, general problems and solutions of power control, power quality and EMC, power quality issues, monitoring, legal and organizational regulations, mitigation methods, and EMC related phenomena in smart system, EMC cases in distributed power system. **High frequency AC Power Distribution Platform**: Introduction, high frequency in space applications, automotive and motor drives, micro grids. **(05+05) Hrs.**

UNIT 3

Integration of Distributed Generation with Power System and Active Power Controllers: Distributed generation past and future, interconnection with a hosting grid, integration and interconnection concerns, power injection principle, injection using static compensators and advanced static devices, distributed generation contribution to power quality problems and current challenges. Dynamic static synchronous controllers, D – STATCOM, Dynamic static synchronous series controllers, dynamic voltage restorer, AC/AC voltage regulators. **(05+05) Hrs.**

UNIT 4

Energy Storage Systems: Introduction, structure of power storage devices, pumped – storage hydroelectricity, compressed air energy storage system, battery storage, hydrogen storage, super conducting magnet energy storage, super capacitors, applications of energy storage devices.

(05+05) Hrs.

UNIT 5

COMPUTATIONAL TOOLS FOR SMART GRID DESIGN: Introduction to Computational Tools, Decision Support Tools, Optimization Techniques, Classical Optimization Method, Heuristic Optimization, Evolutionary Computational Techniques, Adaptive Dynamic Programming Techniques, Pareto methods, Hybridizing Optimization Techniques and Applications to the Smart Grid, Computational Challenges. Pathway for Designing Smart Grid: Introduction to Smart Grid Pathway Design, Barriers and Solutions to Smart Grid Development, Solution Pathways for Designing Smart Grid Using Advanced Optimization and Control Techniques for Selection Functions, General Level Automation, Bulk Power Systems Automation of the Smart Grid at Transmission Level, Distribution System Automation Requirement of the Power Grid, End User/Appliance Level of the Smart Grid, Applications for Adaptive Control and Optimization. **(05+05) Hrs.**

POWER ELECTRONICS LABORATORY – II

Contact Hours/ Week	: 1+2+0(L+T+P)	Credits:	1.0
Total Lecture Hours	:13	CIE Marks:	50
Tutorial/ Practical	:13	SEE Marks:	50
Sub. Code	: N2EPEL01		

Course Objectives: student will be able to:

1. Show awareness of the impact of power electronic circuits on motor control
2. Understand hardware and simulation models of PV systems.
3. Familiarize with the battery charging and discharging application.

Course Outcomes:

CO1: To analyze, design and study motor control
CO2: To analyze, design and study PV systems
CO3: To analyze, design and study Wind turbine systems
CO4: To analyze, design converter for battery charging and discharging application

List of Experiments

1. Cycloconverter based AC Induction motor control equipment.
2. Performance study of Li-ion battery characteristics
3. Simulation of bi-directional DC-DC converter for Battery applications.
4. Wind Turbine Modeling and Simulation using Matlab -simulink.
5. Solar Panel Modeling and Simulation using Matlab –simulink.
6. Performance evaluation of solar PV collector for series and parallel connection.
7. Power flow calculations of stand-alone PV system with DC load and battery
8. Power flow calculations of stand-alone PV system with AC load and battery
9. Power flow calculations of stand-alone PV system with DC and AC load and battery
10. Study of charging and discharging characteristics of battery.

NANO SCIENCE AND NANO TECHNOLOGY

Contact Hours/ Week	: 3+0+0(L+T+P)	Credits:	3
Total Lecture Hours	: 40	CIE Marks:	50
Total Tutorial Hours	: -	SEE Marks:	50
Course Code	: N2OE01		

Course Objectives: This course will enable students to:

1. To understand the foundational knowledge of the Nanoscience and related fields.
2. To understand the Nanoscience and Applications.
3. To understand the synthesis of nanomaterials and their application and the impact of nanomaterials on environment.

Course Outcomes: Upon completion of this course the student will be able to:

CO1: Learn basic material science with special, emphasize on nanomaterials
CO2: Explain and comprehend the physio-chemical methods for synthesis of nanoparticles.
CO3: Describe the various characterization techniques of nano materials.
CO4: Understand basic properties of nanoparticles.
CO5: Understand accurate description of optical properties of material at nanoscale.

Unit I

Introduction: Definition of Nano, Scientific Revolution-Atomic Structure & atomic size, emergence & challenges of nanoscience, carbon age-new form of carbon (CNT- Graphene), influence of nano over micro/macro, size effects and crystals, large surface to volume ration, surface effects on the properties. **8 Hrs**

Unit II

PHYSICO-CHEMICAL METHODS OF NANOSTRUCTURED MATERIALS: Solution growth techniques of 1D-2D nano structures:- Synthesis of metallic, semiconducting and oxide nanoparticles – homo- and hetero-nucleation growth methods – template-based synthesis (electrochemical, electrophoretic, Melt and solution, CVD, ALD) – Gas Phase Synthesis of Nanopowders: – Vapor (or solution) – liquid – solid (VLS or SLS) growth – the Need for Gas/vapor State Processing – Main Stages of Gas Phase Synthesis – Applicability of the methods.

8 Hrs

Unit III

CHARACTERIZATION OF NANOPHASE MATERIALS: Fundamentals of the techniques – experimental approaches and data interpretation – applications/limitations of Xray characterization: – X-ray sources – wide angle, extended x-ray absorption technique – Electron microscopy: SEM/TEM – high resolution imaging – defects in nanomaterials – Spectroscopy: – electron energy-loss mechanisms – electron filtered imaging – prospects of scanning probe microscopes – optical spectroscopy of metal/semiconductor nanoparticles **8 Hrs**

Unit IV

NANOSCALE PROPERTIES: Magnetism:- Magnetic Moment in clusters/Nanoparticles – Magnetic Order – coercivity – Magnetocrystalline Anisotropy – thermal activation and Superparamagnetic effects – Electronics and Optoelectronics:- Quantum Confinement of Superlattices and Quantum Wells – Dielectric Constant of Nanoscale Silicon – Doping of a Nanoparticle – Excitonic Binding and Recombination Energies – Capacitance in a Nanoparticle – Diffusion in Nanocrystalline Materials –Diffusion In Grain Boundaries Of Metals. **8 Hrs**

Unit V

Optical Properties, Photoconductivity, Optical absorption & transmission, Photoluminescence, Fluorescence, Phosphorescence, Electroluminescence. Magnetic Materials: Basic Magnetic Phenomena; Diamagnetism, Paramagnetism, Ferromagnetism, Anti-ferromagnetism, Application of Nanomaterial molecular electronics, biological and environmental, membrane-based application, polymer-based applications in electrical engineering **8 Hrs**

N1LVSE12	VLSI Design Automation	N1LVSE14	Nano Electronics

Note: **BSC**-Basic Science Courses, **IPCC**-Integrated Professional Core Courses, **PCC**: Professional Core Course, **PEC:** Professional Elective

Course, **MCC**- Mandatory Credit Course, **PCCL**-Professional Core Course Lab, **NCMC-**Non Credit Mandatory Course
AUD/AEC –Audit Course / Ability Enhancement Course(A pass in AUD/AEC is mandatory for the award of the degree)
L-Lecture, **P**-Practical, **T/SDA**-Tutorial / Skill Development Activities (Hours are for Interaction between faculty and students)

Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with practical of the same course. The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from the practical part of IPCC shall be included in the SEE question paper.

Audit Courses /Ability Enhancement Courses suggested by BoS (ONLINE courses):
Audit Courses are prerequisite courses suggested by the concerned Board of Studies.
Ability Enhancement Courses will be suggested by the BoS if prerequisite courses are not required for the programs.

- These courses are prescribed to help students to enhance their skills connected to the field of specialization as well allied fields that leads to employable skills. Involving in learning such courses are impetus to lifelong learning.
- The courses under this category are online courses published in advance and approved by the concerned Board of Studies.
- Registration to Audit /Ability Enhancement Course shall be done in consultation with the mentor and is compulsory during the concerned semester.
- In case a candidate fails to appear for the proctored examination or fails to pass the selected online course, he/she can register and appear for the same course if offered during the next session or register for a new course offered during that session, in consultation with the mentor.

The Audit / Ability Enhancement Course carries no credit and is not counted for vertical progression. However, a pass in such a course is mandatory for the award of the degree.

Skill development activities: in a concerned course, the students should

- Interact with industry (small, medium, and large).
- Involve in research/testing/projects to understand their problems and help creative and innovative methods to solve the problem.
- Involve in case studies and field visits/ fieldwork.
- Accustom to the use of standards/codes etc., to narrow the gap between academia and industry.
- Handle advanced instruments to enhance technical talent.
- Gain confidence in modelling of systems and algorithms for transient and steady-state operations, thermal study, etc.
- Work on different software to simulate, analyze and authenticate the output to interpret and conclude.

All activities should enhance student's abilities to employment and/or self-employment opportunities, management skills, Statistical analysis, fiscal expertise, etc. Students and the course instructor/s to involve either individually or in groups to interact together to enhance the learning and application skills of the study they have undertaken. The students with the help of the course teacher can take up relevant technical – activities which will enhance their skill. The prepared report shall be evaluated for CIE marks.

1. **Mini Project with Seminar:** This may be hands-on practice, survey report, data collection and analysis, coding, mobile app development, field visit and report preparation, modelling of system, simulation, analysing and authenticating, case studies, etc.
   CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide, if any, and a senior faculty of the department. Students can present the seminar based on the completed mini-project. Participation in the seminar by all postgraduate students of the program shall be mandatory.
   The CIE marks awarded for Mini-Project work and Seminar, shall be based on the evaluation of Mini Project work and Report, Presentation skill and performance in Question and Answer session in the ratio 50:25:25. Mini-Project with Seminar shall be considered as a head of passing and shall be considered for vertical progression as well as for the award of degree. Those, who do not take-up/complete the Mini Project and Seminar shall be declared as fail in that course and have to complete the same during the subsequent semester. **There is no SEE for this course.**

2. Internship: All the students shall have to undergo a mandatory internship of **06 weeks** during the vacation of II and III semesters. A University examination shall be conducted during III semester and the prescribed internship credit shall be counted in the same semester. The internship shall be considered as a head of passing and shall be considered for vertical progression as well as for the award of degree. Those, who do not take-up/complete the internship shall be declared as fail in the internship course and have to complete the same during the subsequent University examination after satisfying the internship requirements.

III SEMESTER M.Tech. VLSI Design and Embedded Systems

Sl. No.	Course Type and Course Code		Course Title	Teaching Hours per Week			Examination				Credits
				Theory	Practical / Seminar	Tutorial / Skill Development Activities	Duration in hrs.	CIE Marks	SEE Marks	Total Marks	
				L	P	T/SDA					
1.	PROJ	N3LVSPR	Project Work Phase – 1	0	6	0	--	100	--	100	3
2.	SP	N3LVSSP	Societal Project	0	6	0	--	100	--	100	3
3.	INT	N3LVSINT	Internship	(06 weeks Internship completed during the intervening vacation of II and III semesters)			3	50	50	100	6
	Total			0	12	0		250	50	300	12

Note: **PROJ**-Project Work Phase-1, **SP** –Societal Project, **INT**-Internship
L-Lecture, **P**-Practical, **T/SDA**-Tutorial / Skill Development Activities (Hours are for Interaction between faculty and students)

1. **Project Work Phase-1:** The project work shall be carried out individually. However, in case a disciplinary or interdisciplinary project requires more participants, then a group consisting of not more than three shall be permitted.
   Students in consultation with the guide/co-guide (if any) in disciplinary project or guides/co-guides (if any) of all departments in case of multidisciplinary projects, shall pursue a literature survey and complete the preliminary requirements of the selected Project work. Each student shall prepare a relevant introductory project document, and present a seminar.
   CIE marks shall be awarded by a committee comprising of HoD as Chairman, all Guide/s and co-guide/s (if any) and a senior faculty of the concerned departments. The CIE marks awarded for project work phase -1, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25. **There is no SEE for this course**.
2. **Societal Project:** Students in consultation with the internal guide as well as with external guide (much preferable) shall involve in applying technology to workout/proposing viable solutions for societal problems.
   CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide if any, and a senior faculty of the department. The CIE marks awarded, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.
   Those, who have not pursued /completed the Societal Project, shall be declared as fail in the course and have to complete the same during subsequent semester/s after satisfying the Societal Project requirements. **There is no SEE for this course**.
3. **Internship:** Those, who have not pursued /completed the internship, shall be declared as fail in the internship course and have to complete the same during subsequent University examinations after satisfying the internship requirements. Internship SEE (University examination) shall be as per the University norms.
   CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide if any, and a senior faculty of the department. The CIE marks awarded for project work phase -1, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous Institute under Visvesvaraya Technological University)

SCHEME OF TEACHING AND EXAMINATION

IV SEMESTER M.Tech. VLSI Design and Embedded Systems

Sl. No.	Course Type and Course Code		Course Title	Teaching Hours per Week			Examination				Credits
				Theory	Practical / Field work	Tutorial / Skill Development Activities	Duration in hrs.	CIE Marks	SEE Marks	Total Marks	
				L	P	T/SDA					
1.	PROJ	N4LVSPR	Project Work Phase – 2	0	36	0	3	100	100	100	18
	Total			0	36	0		**100**	**100**	**100**	**18**

Note: **PROJ**-Project Work Phase-2, **L**-Lecture, **P**-Practical, **T/SDA**-Tutorial / Skill Development Activities (Hours are for Interaction between faculty and students)

1. **Project Work Phase-2:** Students in consultation with the guide/co-guide (if any) in disciplinary project or guides/co-guides (if any) of all departments in case of multidisciplinary projects, shall continue to work of Project Work phase -1to complete the Project work. Each student / batch of students shall prepare project document, and present a seminar.
   CIE marks shall be awarded by a committee comprising of HoD as Chairman, all Guide/s and co-guide/s (if any) and a senior faculty of the concerned departments. The CIE marks awarded for project work phase -2, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.
   SEE shall be at the end of IV semester. Project work evaluation and Viva-Voce examination (SEE), after satisfying the plagiarism check, shall be as per the Institute norms.

Subject	Weeks
Nanotechnology, Science and Applications	8 Weeks
VLSI Interconnects	8 Weeks
Multi-Core Computer Architecture - Storage and Interconnects	8 Weeks
Robotics	8 Weeks
Introduction To Machine Learning - KGP	8 Weeks
Introduction to Industry 4.0 and Industrial Internet of Things	8 Weeks
Introduction to Machine Learning	8 Weeks
Programming, Data Structures and Algorithms Using Python	

ACADEMIC YEAR: 2022-23

APPLIED MATHEMATICS

Contact Hours/ Week	: 4	Credits :	4.0
Total Lecture Hours	: 50	CIE Marks :	50
Lab work	:	SEE Marks :	50
Sub. Code	: N1LVSMAT		

UNIT- I

Numerical Methods: Solution of algebraic and transcendental equations iterative methods based on second degree equation – Muller method,(noderivation)Chebyshev method, general iteration method (first order),acceleration of convergence, system of non-linear equations, and complex roots – Newton-Raphson method, polynomial equations – Birge – Vieta method and Bairstow's method. **Interpolation:** Hermite interpolation, spline interpolation, numerical solution of differential equations – Numerov method. **10 Hrs**

UNIT- II

Numerical Solution of Partial Differential Equations: Classification of second order equations, parabolic equations- solution of one dimensional heat equation, explicit method, Crank-Nicolson method and Du Fort-Frankel method, hyperbolic equations- solution of one dimensional wave equation. **10 Hrs**

UNIT- III

System of Linear Algebraic Equations and Eigen Value Problems:
Iterative methods - Gauss-Seidal method, SOR method, Eigen value problems – Gerschgorian circle, Eigen values and Eigen vectors of real symmetric matrices -Jacobi method, Givens method.

10 Hrs

UNIT- IV

Optimization: **Linear programming**- formulation of the problem, graphical method, general linear programming problem, simplex method, artificial variable technique - M-method.

10 Hrs

UNIT- V

Optimization: Nonlinear programming: single variable optimization-local and global optima, searching techniques, convex functions. Multivariable optimization without constraints-local and global maxima, Gradient vector and Hessian matrix, the method of steepest ascent, Newton-Raphson method, Fletcher-powell method, searching techniques, choice of an initial approximation, concave function. Multivariable optimization with constraints-standard forms, Lagrange multipliers, Newton Raphson method,

penalty functions, Kuhn-Tucker conditions, method of feasible directions. **10 Hrs**

VLSI Design

Contact Hours/ Week	:3+2+0(L+P+T)	Credits :	4.0
Total Lecture Hours	: 40	CIE Marks :	50
Total Lab Hours	: 26	SEE Marks :	50
Course Code	: N1LVSI01		

Course Objective: This course enables the students to analyze and design combinational, sequential, memory and BiCMOS circuits.

UNIT- I

Introduction: MOS Structure, MOS system under External Bias, Structure and operation of the MOSFET, MOSFET Current-Voltage Characteristics, MOSFET Capacitance.

MOS Inverters- Static Characteristics: Introduction, Resistive-Load Inverter. **08 Hrs**

UNIT- II

Combinational Logic Circuits: Static CMOS inverter, Static behaviour, Propagation delay, Power dissipation, Pseudo NMOS inverter, Static CMOS design, Pass gates, CMOS Transmission Gates, Dynamic CMOS design.

08 Hrs

UNIT- III

Sequential Logic Circuits: Timing metrics for sequential circuits, Static latches and Registers: The Bi-stability principle, Multiplexer based Latches, Master slave edge triggered registers, Static SR Flip-Flops. Dynamic Latches

and Registers: Dynamic Transmission gate Edge triggered registers, C^2MOS, True Single Phase Clock Registers (TSPCR).

08 Hrs

UNIT- IV

Arithmetic Building blocks: Adders, Multipliers, Barrel shifter.

Semiconductor Memories: Memory Classification, Non-Volatile Memory devices. Read-Only Memory (ROM) Circuits, **08 Hrs**

UNIT- V

Semiconductor Memories contd.. : Static Read-Write Memory (SRAM) Circuits, Dynamic Read-Write Memory (DRAM) Circuits

BiCMOS Logic Circuits: Introduction, Basic BiCMOS Circuits: Static Behavior, Switching Delay in BiCMOS Logic Circuits, BiCMOS Applications.

Chip Input and Output (I/O) Circuits: Introduction, ESD Protection, Input Circuits, Output Circuits and L (di/dt) Noise, On-Chip Clock Generation and Distribution. **08 Hrs**

Text Books:

1	Jan M Rabaey, Anantha Chandrakasan, Borivoje Nikolic	Digital Integrated Circuit A Design Perspective, 2nd Edition, PHI, 2016.
2	Sung Mo Kang & YosufLeblebici,	CMOS Digital Integrated Circuits: Analysis and Design, 4th Edition, Tata McGraw-Hill, 2019.

Reference Books:

1	Neil Weste and K. Eshragian,	Principles of CMOS VLSI Design: A System Perspective, 2nd Edition, Pearson Education (Asia) Pvt. Ltd. 2000.
2	Adel Sedra and Kenneth C. Smith	Microelectronic Circuits Theory and Applications 7th Edition, Oxford Higher Education, 2017.

Course Outcomes: students will be able to

CO1: Analyze the MOS structure and inverter characteristics

CO2: Analyze and design combinational circuits with different design styles.

CO3: Analyze and design sequential circuits with different design systes.

CO4: Analyze and design arithmetic building blocks and Non-Volatile Memory cells.

CO5: Analyze and design Volatile Memory circuits, BiCMOS circuits &

Chip I/O circuits.

CO6: Design selected circuit for a perticular application using Mentor graphics. Prepare the report.

Practicals for CIE

- **Design and simulate the following circuits using NG-Spice for the given specifications.**

1. Characterization of NMOS transistor.
2. Design the following static CMOS gates
    a. Inverter
    b. 2-input NAND
    c. 2-input NOR
    d. 2-input XOR
    e. 2-input XNOR.

- **Design (Schematic and Layout) and simulate the following circuits using Mentor graphics or Cadence for the given specifications.**

3. Design the following gates using Static CMOS design style, Pass transistor style and Dynamic gates style.
    a. Inverter
    b. 2-input NAND
    c. 2-input NOR
    d. 2-input XOR
    e. 2-input XNOR.
4. Design a Static CMOS D-register.
5. Design a Static CMOS Full Adder.
6. Design 32 bit adder using the specified topology.
7. Design SRAM.

Analog IC Design

Contact Hours/ Week	:3+0+2(L+P+T)	Credits :	4.0
Total Lecture Hours	: 40	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50
Course Code	: N1LVS02		

Course Objective: To impart the knowledge of Analog CMOS IC design for different amplifier topologies.

UNIT – I

Introduction: Introduction to Analog IC design, General concepts - Levels of abstraction, Robustness in Analog design, MOS structure, MOS under external bias, MOSFET: Structure, Threshold voltage, I/V Characteristics, Capacitance. Small signal model.

(**08+05) Hrs**

UNIT – II

Single stage amplifiers: Common source stage – with resistive load, Diode connected load, current source load, Triode load, Source degeneration. Source follower, Common gate stage, Cascode stage.

(**08+05) Hrs**

UNIT – III

Differential amplifiers: Single ended differential operation, Basic differential pair, common mode response, Differential pair with MOS loads, Current mirrors: Basic current mirrors, Cascode current mirrors, Active current mirrors.

(**08+05) Hrs**

UNIT – IV

Frequency response of amplifiers: Miller effect, Association of poles with nodes, CS-stage, Source followers, CG-stage. Feedback: General feedback considerations, Feedback topologies. Two port network models.

(**08+06) Hrs**

UNIT – V

Operational Amplifier: General considerations, one-stage OP Amps, Two-Stage opamps, Common mode feedback, input range limitations, slew rate, power supply rejection. Stability and Frequency Compensation: General considerations, Multipole systems, Phase margin, Frequency compensation, compensation of two stage op-amps.

(**08+05) Hrs**

Text Book:

1	Behzad Razavi	Design of Analog CMOS Integrated Circuits 2nd Edition, McGraw Hill Education Private Limited, 2017.

Reference Books:

1	Adel Sedra and Kenneth C. Smith	Microelectronic Circuits Theory and Applications 7th Edition, Oxford Higher Education, 2017.
2	P.R. Gray; P.J. Hurst; S.H. Lewis; R.G. Meyer	Analysis and Design of Analog Integrated circuits, 5th Edition, Wiley, 2009.

Course Outcomes: students will be able to

CO1: Analyze the MOS structure and explain the operation of MOSFET.

CO2: Analyze and design single stage CMOS amplifiers with different loads.

CO3: Analyze and design differential amplifiers and current mirrors with different loads.

CO4: Analyze frequency response of amplifiers and explain the operation of feedback networks.

CO5: Analyze and design operational amplifiers.

ARM Microcontroller and its Applications

Contact Hours/ Week	: 2+0+2 (L+P+T)	Credits :	3.0
Total Lecture Hours	: 26	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50
Course Code	: N1LVS03		

Course Objective: To impart the knowledge of Cortex M3 and M4 based Microcontroller Architecture, Exception and Interrupt behavior, Programming and configuring on chip peripherals and interfacing of I/O devices.

UNIT- I

Introduction: Microprocessors and Microcontrollers, Von-Neumann and Harvard Architectures, History of ARM family of processors, Architecture and Features of ARM Cortex M3 and M4 processors. Programmer's model: Operation Modes and States, General purpose Registers, Special function Registers, Behavior of APSR. Pipelining, Prefetch unit and Branch target forwarding in ARM cortex M3 and M4 processors. Memory system: Memory map.

(05+05) Hrs

UNIT- II

Memory Format: Memory endianness, data alignment and unaligned data access support, Bit-band operation in ARM Cortex M3 and M4 processors. Embedded Software development-1: Embedded Software Development and compilation flow. Data types in C – programming used for Cortex M4 processors. Introduction to Cortex M3 based Microcontroller: Features, Memory map, basic configuration and programming of GPIO. Interfacing Input output devices to Cortex M3 based Microcontroller-1: LEDs and Switches, C-Programming examples.

(05+05) Hrs

UNIT- III

Instruction set: Operation and addressing modes of MOV instruction, Arithmetic instructions, Logical instructions, Memory access instructions, Program flow control instructions, Shift and rotate instructions, Data conversion instructions, Bit-field processing instructions, compare and test

instructions. Use of suffix in instructions. ARM Assembler directives, Assembly level programming examples. Interfacing Input output devices to Cortex M3 based Microcontroller-2: 7-segment Display, Push button keys, mxn matrix keypad. Programming examples (Both assembly and C).

(05+05) Hrs

UNIT- IV

Embedded Software development-2: Program flow (Software Flow).

Exceptions and Interrupts: Overview of Exceptions and Interrupts, Exception types, Vector table and Reset status, Exception entrance sequence, Exception handler execution, Exception return, Interrupt latency, NVIC registers for interrupt control, Exception handlers in C and assembly level programming, Stack Frames, Exceptions entrance and stacking, Exception return and unstacking. Programming Examples (Both assembly and C). System control blocks of Cortex M3 and M4 based Microcontroller: Reset, Brown-out detection and External interrupt inputs.

Peripherals in Cortex M3 and M4 based Microcontroller: Configuration and programming (both assembly and C) Nested Vectored Interrupt Controller (NVIC) and Timers.

(05+05) Hrs

UNIT-V

Configuration and programming (Only C) PWM unit, Watchdog timer, Analog to Digital Converter (ADC), Digital to Analog Converter (DAC), Universal Asynchronous Receiver Transmitter (UART) , SPI and I2C. Interfacing Input output devices to Cortex M3 and M4 based Microcontroller-3: Stepper Motor, DC motor, Opto-coupler, Relay unit, Programming examples (both assembly and C).

(06+06) Hrs

Text Books:

1	Joseph Yiu	The Definitive guide to ARM Cortex M3 and Cortex M4 processor, Elsevier, 3rd Edition, 2013.
2	Cortex-M Technical Reference Manual. revision r1p1	
3	LPC17xx Reference Manual.	

Reference Book:

1	Ming-Bo Lin	An Introduction to Cortex-M3-Based Embedded Systems: Cortex-M3 Assembly Language Programming, Createspace Independent Publishing Platform, 2019.

Course Outcomes: Students will be able to

CO1: Explain the architecture of ARM cortex M3 and M4 Architecture and differentiate Microcontrollers and Microprocessors.

CO2: Explain the Memory system of ARM Cortex M3 and M4 based Processors and Develop the program for ARM cortex M3 and M4 based microcontrollers in order to Interface Input and output devices such as LED and Switches.

CO3: Explain the operation of the Instruction set of the ARM cortex M3 and M4 based processors and Develop the program for ARM cortex M3 and M4 based microcontrollers in order to Interface Input and output devices such as 7-segment Display, Push button keys, mxn matrix keypad.

CO4: Explain the concept of Exceptions and interrupts and Develop the program to configure peripherals of ARM cortex M3 and M4 based microcontrollers such as External interrupts, NVIC and Timers,

CO5: Develop the program to configure peripherals of ARM cortex M3 and M4 based microcontroller and to develop the program for ARM cortex M3 and M4 based microcontrollers in order to Interface Input and output devices.

Digital System Design Using Verilog

Contact Hours/ Week	: 2+0+2 (L+P+SDA)	Credits :	3.0
Total Lecture Hours	: 26	CIE Marks :	50
Total SDA Hours	: 26		
Course Code	: N1LVS04	SEE Marks :	50

Course Objective: To study and design various digital circuits and systems using Verilog Hardware Description Language (HDL), synthesize and implement on Field Programmable Gate Arrays (FPGAs).

UNIT- I

Introduction to HDL based Digital Design: Design flow and Design styles for digital circuits, Verilog operators, Verilog Primitives, Gate level, Data flow and Behavioural modeling. Delay models, Control statements, Tasks and Functions.

(**05+05) Hrs**

UNIT- II

Programmable Logic Devices: ROM, PAL, PLA, CPLD, FPGA, FPGA Architecture, FPGA- CLBs, switch Matrix and IOB, Configurable Logic Blocks (CLBs) in Xilinx FPGA –XC3000 and Xilinx Spartan-3, FPGA Design Flow.

FPGA architectures and its usage in embedded Systems: Zynq Ultrascale + MPSoC device architecture. Introduction to Ultrascale Architectecture,

System block diagram, High speed serial IO, MIO and EMIO, Functional units and peripherals, Signals interfaces and pins, On chip memory, DMA controller, Reset system, PL peripherals, Vivado design flow, Logic design on Ultrascale + MPSoC FPGA on PL block. Programming and debugging using SDK.

(05+05) Hrs

UNIT- III

Fixed and Floating point Arithmetic: Fixed point number system and floating point number system, Arithmetic operation on Fixed and Floating point numbers.

Combinational circuit design using Verilog:

Ripple Carry adder, Comparators, Combinational Multiplier – Array Multiplier, Unsigned and Signed integer multiplication, Barrel shifter, Tri-State Combinational Circuits.

(05+05) Hrs

UNIT- IV

Sequential Circuit Design using Verilog: Latches, Flip Flops, Shift registers, Counters/ Timers/ Clock Dividers using T Flip Flops, Clock Dividers using D Flip Flops, Synchronous sequential Circuit Design using D and JK Flip Flops.

Finite State Machines (FSM): Finite State Machines and controllers, State diagram, designing FSM using state graph, one-hot-state assignment, controller design. Traffic Light control system.

(05+05) Hrs

UNIT- V

Designing Data path components and Memory units: Serial adder, multiplier using Shift and Add, Fixed point and, Binary Divider, Accumulator, Booth Multiplier, Multiply and Accumulate (MAC) unit, Floating point Multiplier. Memory Design – FIFO, Stack, Circualr Buffer.

(06+06) Hrs

Reference Books:

1	Frank Vahid	Digital Design with RTL Design, VHDL, and Verilog 2nd, Edition John Wiley and SonsPublishers, 2011.
2	Samir Palnitkar	Verilog HDL A guide to Digital Design and Synthesis 2nd Edition, Pearson Education, 2017.
3		Zynq UltraScale+ Device Technical Reference Manual.

Course Outcomes: The students will be able to

CO1: Select appropriate coding style to write Verilog HDL and implement basic combinational circuits to design digital system component.

CO2: Explain the architecture of different FPGAs.

CO3: Design combinational circuits using Verilog HDL and implement on Spartan-3 FPGA.

CO4: Design sequential circuits and State Machine using Verilog HDL and implement on Spartan-3 FPGA.

CO5: Design data path components using Verilog HDL

CO6: Design selected circuit for a particular application using Spartan-3 FPGA. Prepare the report.

Embedded Systems Lab

Lab work Hours/Week	: 1+2+0 (L+P+T)	Credits	: 2.0
Total Lecture Hours	: 13	CIE Marks	: 50
Total Lab Hours	: 26		
Course Code	: N1LVSL1	SEE Marks	: 50

Course Objectives: This course will enable students to develop assembly level and C-program for Cortex M3 based microcontrollers in order to interface input output devices by configuring on chip peripherals.

List of Experiments –evaluation board:

1. Develop a system to implement a calculator which can perform the operations such as addition, subtraction, Logical AND and Logical OR using 4x4 matrix Keypad/Switches and 16x2 LCD/LEDs interfaced to Cortex M3 based microcontroller. (matrix Keypad, LCD/LED)
2. Develop a system to implement a Traffic control system using on-chip timer and LEDs/7-segment Displays interfaced to Cortex M3 based microcontroller. (Timer, LEDs/7-segment Display)
3. Develop a system to implement a Temperature control system using temperature sensor, on-chip ADC and LCD interfaced to Cortex M3 based microcontrollers. (Signal conditioning circuit, ADC, / LCD, Relay)
4. Develop a system to measure/control the rotation speed of DC motor using on-chip timer/PWM module of Cortex M3 based microcontroller. (PWM, DC motor, Switches)
5. Develop a system to control the direction of rotation and speed of rotation of Stepper motor interfaced to Cortex M3 based microcontroller. (Stepper motor, Switches/ Push button keys)

6. Develop a system to measure the frequency of the input signal/rotation speed of a DC motor interfaced to Cortex M3 based microcontroller. (DC motor, Opto coupler, Timer, LCD)
7. Develop a system to control the bottle filling system using Cortex M3 based microcontrollers. (Stepper motor, IR sensors/Proximity, Solenoid valve)
8. Develop a system to control the Elevator system using Cortex M3 based microcontrollers. (Stepper Motor, Proximity sensor, 7segement Display, Push button keys).
9. Develop a weighing machine using Cortex M3 based microcontrollers. (Signal Conditioning circuit, Load cell, ADC, LCD).
10. Develop a Real time clock using Cortex M3 based Microcontroller. (LCD, Timer).

Open ended Experiments:

1. Develop a Washing machine control unit using Cortex M3 based microcontrollers. (LED, Multiplexed 7-segment display, Keypad, Solenoid valve, Motor control (ON/OFF + Speed), Control logic).

Course Outcomes: Students will be able to

CO1: Develop and execute embedded C and Assembly level programs to interface input/output devices to Cortex M3 based microcontroller.

CO2: Develop and execute embedded C and Assembly level program – Program to configure On-chip peripherals of Cortex M3 based microcontroller.

CO3: Develop embedded System applications using Cortex M3 based microcontroller.

Professional Elective-1

ASIC Design

Contact Hours/ Week	: 2 +0+2(L+P+SDA)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total SDA Hours	: 26	SEE Marks:	50
Course Code	: N1LVSE11		

Course Objective: To study and design various ASIC configurations, analyze Programmable ASIC memories and Use CAD tools for ASIC design flow.

UNIT- I

Introduction: Types of ASIC Design, ASIC Design Flow, FPGA design Flow, Programmable logic device, ASIC cell libraries.

(**05+05) Hrs**

UNIT- II

Data Logic Cells: Data Path Elements, Adders, Multiplier, Arithmetic Operator, I/O cell. **ASIC Library Design**: Logical effort: practicing delay, logical area and logical efficiency logical paths, multi stage cells, optimum delay, optimum no. of stages, library cell design.

(**05+05) Hrs**

UNIT- III

Low-Level Design Entry: Schematic Entry, **Programmable ASIC**: Antifuse, Static RAM, EPROM and EEPROM Technology, FPGA, Programmable ASIC logic cells, ASIC I/O cells, Programmable ASIC Interconnects.

(**05+05) Hrs**

UNIT- IV

A Brief Introduction to Low Level Design Language: an introduction to EDIF, PLA Tools, an introduction to CFI designs representation. Half gate ASIC. Introduction to Synthesis and Simulation.

ASIC Construction: Physical Design, CAD Tools, System Partitioning, Estimate ASIC size, FPGA Partitioning and its Methods.

(**05+05) Hrs**

UNIT- V

Floor Planning and Placement and Routing: Physical Design, CAD Tools, System Partitioning, Estimating ASIC size, partitioning methods. Floor planning tools, I/O and power planning, clock planning, placement algorithms. Global Routing, Local Routing, Detail Routing, Special Routing, Circuit Extraction and DRC.

(**06+06) Hrs**

Text Books:

1	M.J.S .Smith	"Application - Specific Integrated Circuits" – Pearson Education, 2003.
2	Jose E.France, YannisTsividis	"Design of Analog-Digital VLSI Circuits for Telecommunication and signal processing", 2nd Edition, Prentice Hall, 1993.

3	MalcolmR.Haskard; Lan. C. May	"Analog VLSI Design – NMOS and CMOS", Prentice Hall, 1998.
4	Mohammed Ismail and Terri Fiez	"Analog VLSI Signal and Information Processing", McGraw Hill, 1994.

Course Outcomes: Students will be able to

CO1: Identify and apply appropriate ASIC configuration for particular application.

CO2: Select and apply appropriate techniques to optimize data path and arithmetic components.

CO3: Identify and use Programmable ASIC memories according to design requirements.

CO4: Use EDIF, PLA tools for synthesis and simulation.

CO5: Use modern CAD tools to design ASICs.

CO6: Design the circuit for a particular application using appropriate tool. Prepare the report.

VLSI Design Automation

Contact Hours/ Week	: 2+0+2 (L+P+SDA)	Credits :	3.0
Total Lecture Hours	: 26	CIE Marks :	50
Total SDA Hours	: 26	SEE Marks :	50
Course Code	: N1LVSE12		

Course Objective: To impart knowledge on implementation of automation methods for VLSI physical design and VLSI interconnects.

UNIT- I

Logic Synthesis & Verification: Introduction to combinational logic synthesis, Binary Decision Diagram, Hardware models for High-level synthesis.

VLSI Automation Algorithms: Partitioning: problem formulation, classification of partitioning algorithms, Group migration algorithms, simulated annealing & evolution, other partitioning algorithms.

(05+05) Hrs

UNIT- II

Placement, Floor Planning & Pin Assignment: problem formulation, simulation base placement algorithms, other placement algorithms, constraint based floor planning, floor planning algorithms for mixed block & cell design. General & channel pin assignment**.**

(05+05) Hrs

UNIT- III

Global Routing: Problem formulation, classification of global routing algorithms, Maze routing algorithm, line probe algorithm, Steiner Tree based algorithms, ILP based approaches.

(05+05) Hrs

UNIT- IV

Detailed Routing: problem formulation, classification of routing algorithms, single layer routing algorithms, two layer channel routing algorithms, three layer channel routing algorithms, and switchbox routing algorithms.

Over The Cell Routing & Via Minimization: two layers over the cell routers, constrained & unconstrained via minimization.

(05+05) Hrs

UNIT- V

Scripting Languages: Overview of Scripting Languages – PERL, CGI, VB Script, Java Script. PERL: Operators, Statements Pattern Matching etc. Data Structures, Modules, Objects, Tied Variables. Inter process Communication Threads, Compilation & Line Interfacing.

(06+06) Hrs

Text Books:

1	NaveedShervani	Algorithms for VLSI physical design Automation, Kluwer Academic Publisher, 3rd Edition, 1998
2	ChristophnMeinel & Thorsten Theobold	Algorithm and Data Structures for VLSI Design, KAP, 2002.
3	Rolf Drechsheler	Evolutionary Algorithm for VLSI, Springer, 2nd Edition, 2013.
4	Trimburger	Introduction to CAD for VLSI, Kluwer Academic publisher, 1st Edition, 2002.
5	Randal L, Schwartz Tom Phoenix	Learning PERL, Oreilly Publications, 3rd Edition, 2000.
6	Larry Wall, Tom Christiansen, John Orwant	Programming PERL, Oreilly Publications, 3rd. Edition, 2000.
7	Tom Christiansen, Nathan Torkington	"PERL Cookbook, Oreilly Publications, 3rd Edition, 2000.

Course Outcomes: Students will be able to,

CO1: Identify and discuss partitioning algorithms used to design VLSI automation and explain the basic concepts of Logical high level synthesis and verification of hardware models

CO2: Discuss the placement and floor planning algorithms.

CO3: Select suitable routing algorithms in VLSI design automation.

CO4: Classify routing algorithms with respect to different layers.

CO5: Discuss script languages for VLSI design automation.

CO6: Design the circuit for a particular application using appropriate tool. Prepare the report.

VLSI for Digital Signal Processing

Contact Hours/ Week	: 2 +0+2(L+P+T)	Credits :	3.0
Total Lecture Hours	: 26	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50
Course Code	: N1LVSE13		

Course Objective: To study the methodologies needed to design custom or semi-custom VLSI circuits for Signal Processing applications

UNIT- I

Iteration Bounds:

Introduction: DSP algorithms: FIR and IIR Filters, Representation of DSP Algorithms.

Iteration Bounds: loop bound and Iteration bound, Algorithms for Computing Iteration Bound, Iteration Bound of multi rate data flow graphs.

(05+05) Hrs

UNIT- II

Pipelining and parallel processing: pipelining of FIR Digital Filters, parallel processing, Pipelining and parallel processing for low power.

Retiming: Definition and Properties, Solving Systems of Inequalities, Retiming Techniques.

(05+05) Hrs

UNIT- III

Unfolding: An Algorithm for Unfolding, Properties of Unfolding, Critical path, Unfolding and Retiming, Applications of Unfolding.

(05+05) Hrs

UNIT- IV

Systolic architecture design: systolic array design Methodology, FIR systolic array, Selection of Scheduling Vector, Matrix-Matrix Multiplication and 2D systolic Array Design.

(05+05) Hrs

UNIT- V

Fast convolution–Cook-Toom Algorithm, Winograd Algorithm, Iterated convolution,

Pipelined and Parallel recursive filter: Pipeline Interleaving in Digital Filter, first order IIR digital Filter, Higher order IIR digital Filter, parallel processing for IIR filter, Combined pipelining and parallel processing for IIR Filter, Low power IIR Filter Design Using Pipelining and parallel processing

(06+06) Hrs

Text Book		
1	KeshabK.Parthi	"VLSI Digital Signal Processing systems, Design and implementation ", Wiley, Inter Science, 1999.
Reference Books:		
1	Mohammed Isamail and Terri Fiez	Analog VLSI Signal and Information Processing, Mc Graw-Hill, 1994.
2	S.Y. Kung, H.J. White House, T. Kailath	VLSI and Modern Signal Processing, Prentice Hall, 1985.
3	Jose E. France, YannisTsividis	Design of Analog - Digital VLSI Circuits for Telecommunication and Signal Processing, Prentice Hall, 1994.

Course Outcomes: The students will be able to

CO1: Explain various DSP algorithms and represent algorithms using block diagrams, signal flow graphs and data flow graphs.

CO2: A. Compute the iteration bound using Longest Path Matrix Algorithm and the Minimum Cycle Mean Algorithm.

B. Calculate critical path computation time and power consumption in filters

CO3: Perform retiming in filters and decide different retiming techniques and algorithm for unfolding.

CO4: Explain Systolic architecture design methodologies

CO5: Apply various algorithms for efficient implementation of convolution Apply pipelining and parallel processing for implementing filters.

Nano Electronics

Contact Hours/ Week	: 2+0+2(L+P+SDA)	Credits :	3.0
Total Lecture Hours	: 26	CIE Marks :	50
Total SDA Hours	: 26	SEE Marks :	50
Course Code	: N1LVSE14		

Course Objective: This course will enable students to understand various advanced concepts in nanoelectronics and the fundamentals on QED, SED, Molecular electronics and spintronics along with computational tools for modelling and simulation of nanoelectronics devices.

UNIT – I

Introduction to Nanoelectronics: Limitations of the conventional MOSFETs at Nanoscales, MOSFET Scaling & implications, Introductory concepts of Ballistic transport and Quantum confinement, Differences in Few Electron Devices (as analog version) and Single Electron Devices (as digital version) of Nanoelectronic devices

Nanostructures and Quantum Electronic Devices: Low-dimensional structures- Quantum wells, Quantum wires and Quantum dots; Density of states in low-dimensional structures; Quantum Interference Devices; Split – Gate Transistor; Electron – Wave Transistor; Resonant tunneling phenomena and its applications in diodes and transistors

(05+05) Hrs

UNIT – II

Molecular Electronic: Overview & Basics; Fabrication of molecular electronics-based transistor devices; Conductivity of organic polymers-Conduction mechanism in organic polymers; Polymer Electronics; Self-Assembling Circuit. **(05+05) Hrs**

UNIT – III

Single Electron Devices: Principle of operation- Single-Electron Effect, Coulomb Blockade Phenomenon; Theoretical Quantum Dot Transistor - Energy of Quantum Dot system, Single-Electron Quantum-Dot Transistor, Single transistors; Conductance Oscillation and Potential Fluctuation; Transport under Finite temperature and Finite Bias; Coulomb Blockade Devices. **(05+05)Hrs**

UNIT – IV

Carbon Nanoelectronics: Carbon nanotubes - SWCNTs and MWCNTs; 1D quantization in nanotubes- van Hove singularities; Fabrication of CNTs; CNT FETs- Device characteristics, CNT-TUBFET, CNT-SET; and NanoWire FETs; Electronic structure of graphene; Graphene FETs- GNRFETs.

(05+05) Hrs

UNIT – V

Spintronics: Fundamentals of spintronics; Spintronic devices- spin diodes and spin transistors

Current Nanoelectronic Devices: Quantum Effects in MOSFETs, Strained Silicon, Fully Depleted SOI-MOSFET, Double-Gate MOSFET, Multi-gate MOSFETs, FIN-FET, Electrically Induced Junctions for EJ-MOSFETs, Ballistic Transport, Conductance Quantization, Quantum Point Contact Devices. **(06+06) Hrs**

Text Books:

1	Shunri Oda, David Ferry	Nanoscale Silicon Devices, CRC Press, Taylor & Francis Group, 2015.
2	K. Goser, P. Glosekotter	Nanoelectronics and Nanosystems, Springer, 2005

Reference Books:

1	Suprio Datta	Lessons from nanoelectronics, World Scientific publisher, 2015
2	Karl Goser, Peter Glosekotter, Jan Dienstuhl	Nanoelectronics and Nanosystems- From Transistors to Molecular and Quantum Devices, Springer-Verlag 2004.
3	C.N.R. Rao and A. Govindaraj	Nanotubes and nanowires, RSC Publishing, 2005.
4	Konstantin K. Likharev	Single Electron Devices and their Applications, IEEE proceedings, vol. 87, no. 4, April 1999.p 606- 632
5	Ziese and M. J. Thornton	Spin Electronics, Springer-Verlag, 2001.
6	Supriyo Datta	Quantum Transport-From Atom to Transistor, Cambridge University press, 2005.

Course Outcomes: Students will be able to

CO1: Gain the concepts of nanoelectronics such as ballistic transport and quantum confinement.
CO2: Understand various nanostructures and its applications towards Quantum Electronic Devices.
CO3: Acquire the fundamentals of Molecular Electronics
CO4: Obtain the knowledge of Single Electron Devices and carbon based nanoelectronic devices.
CO5: Learn the fundamentals of Spintronics.
CO6: Design and simulate various advanced nanoelectronic devices.

II Semester

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU-03

(An autonomous Institute under Visvesvaraya Technological University)

SCHEME OF TEACHING AND EXAMINATION

II SEMESTER M.Tech. VLSI Design and Embedded Systems

Sl. No.	Course Type and Course Code		Course Title	Teaching Hours per Week			Examination				Credits
				Theory	Practical / Seminar	Tutorial / Skill Development Activities	Duration in hrs.	CIE Marks	SEE Marks	Total Marks	
				L	P	T/SDA					
1.	IPCC	N2LVSI01	Real time operating systems	3	2	0	3	50	50	100	4
2.	PCC	N2LVS02	VLSI Process Technology	3	0	2	3	50	50	100	4
3.	PCC	N2LVS03	Design of IoT Systems	2	0	2	3	50	50	100	3
4.	PEC	N2LVSE2x	Professional Elective – 2	2	0	2	3	50	50	100	3
5.	PEC	N2LVSE3x	Professional Elective – 3	2	0	2	3	50	50	100	3
6.	OEC	N2OExx	Open Elective	3	0	0	3	50	50	100	3
7.	MPS	N2LVSMPS	Mini Project with Seminar	0	4	2	--	100	--	100	3
8.	PCCL	N2LVSL1	VLSI DESIGN LAB	1	2	0	3	50	50	100	2
9.	AEC	ARAS	Aptitude Related Analytical Skills	36 Hrs. for the entire semester			2	50	50	100	0
10	AUD/ AEC	N2LVSAUD / N2LVSAEC	BoS Recommended online course	Classes and Evaluation Procedures are as per the policy of the online course providers							0
	Total			**16**	**8**	**10**		**500**	**400**	**900**	**25**

Note: **IPCC**-Integrated Professional Core Courses, **PCC**: Professional Core Course, **PEC:** Professional Elective Course, **OEC**- Open Elective Course, **MPS**- Mini Project with Seminar, **PCCL**-Professional Core Course Lab, **AUD/AEC** –Audit Course / Ability Enhancement Course (A pass in AUD/AEC is mandatory for the award of the degree) **L**-Lecture, **P**-Practical, **T/SDA**-Tutorial / Skill Development Activities (Hours are for Interaction between faculty and students)

Professional Elective 2		**Professional Elective 3**		**Open Elective 1**	
N2LVSE21	CMOS RF Circuit Design	N2LVSE31	System on Chip (SoC) Design	N2OE01	Embedded Systems
N2LVSE22	Mixed Signal Circuit Design	N2LVSE32	System Verilog	N2OE02	CMOS RF Circuit Design
N2LVSE123	VLSI Testing and Verification	N2LVSE33	Low power VLSI Design		
N2LVSE24	Design of CMOS Phase Locked Loops.	N2LVSE34	Wireless sensor network		
N2LVSE25	DSP Architecture	N2LVSE35	Interface and Noise control technique in Electronic System design		

1. **Mini Project with Seminar:** This may be hands-on practice, survey report, data collection and analysis, coding, mobile app development, field visit and report preparation, modelling of system, simulation, analysing and authenticating, case studies, etc.
   CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide, if any, and a senior faculty of the department. Students can present the seminar based on the completed mini-project. Participation in the seminar by all postgraduate students of the program shall be mandatory.
   The CIE marks awarded for Mini-Project work and Seminar, shall be based on the evaluation of Mini Project work and Report, Presentation skill and performance in Question and Answer session in the ratio 50:25:25. Mini-Project with Seminar shall be considered as a head of passing and shall be considered for vertical progression as well as for the award of degree. Those, who do not take-up/complete the Mini Project and Seminar shall be declared as fail in that course and have to complete the same during the subsequent semester. **There is no SEE for this course.**

2. **Internship:** All the students shall have to undergo a mandatory internship of **06 weeks** during the vacation of II and III semesters. A University examination shall be conducted during III semester and the prescribed internship credit shall be counted in the same semester. The internship shall be considered as a head of passing and shall be considered for vertical progression as well as for the award of degree. Those, who do not take-up/complete the internship shall be declared as fail in the internship course and have to complete the same during the subsequent University examination after satisfying the internship requirements.

Real Time Operating Systems

Contact Hours/Week	: 3+2+0 (L+P+T)	Credits :	4.0
Total Lecture Hours	: 40	CIE Marks :	50
Total Lab Hours	: 26	SEE Marks :	50
Course Code	: N2LVSI01		

Course Objectives: To introduce the students with basics of real-time systems , knowledge and skills necessary to design and develop embedded applications by using real-time operating systems.

UNIT- I

Introduction to Real-Time Embedded Systems: Brief history of Real Time Systems, A brief history of Embedded Systems.

System Resources: Resource Analysis, Real-Time Service Utility, Scheduling Classes, The Cyclic Executive, Scheduler Concepts, Preemptive Fixed Priority Scheduling Policies, Real-Time OS, Thread Safe Reentrant Functions.

Processing: Preemptive Fixed-Priority Policy, Feasibility, Rate Monotonic least upper bound, Necessary and Sufficient feasibility. **08 Hrs**

UNIT- II

Processing: Deadline – Monotonic Policy, Dynamic priority policies.

I/O Resources: Worst-case Execution time, Intermediate I/O, Execution efficiency, I/O Architecture.

Memory: Physical hierarchy, Capacity and allocation, Shared Memory, ECC Memory, Flash file systems. **08 Hrs**

UNIT- III

Multi-resource Services: Blocking, Deadlock and livestock, Critical sections to protect shared resources, priority inversion.

Soft Real-Time Services: Missed Deadlines, QOS.

Soft Real-Time Services: Alternatives to rate monotonic policy, mixed hard and soft real-time services.

Embedded System Components: Firmware components, RTOS system software mechanisms, Software application components. **08 Hrs**

UNIT- IV

Firmware Components: The 3 firmware components, RTOS system software mechanisms, Software application components.

Debugging Components: Exceptions, assert, Checking return codes. Single-step debugging, kernel scheduler traces, Test access ports, Trace ports, Power-On self test and diagnostics, External test equipment, Application-level debugging.

Performance Tuning: Basic concepts of drill-down tuning, hardware – supported profiling and tracing, Building performance monitoring into software, Path length, Efficiency Call frequency, Fundamental optimizations. **08 Hrs**

UNIT- V

High availability and Reliability Design: Reliability and Availability, Similarities and differences, Reliability, Reliable software, Available software, Design tradeoffs, Hierarchical applications for Fail-safe design.

Process and Threads: Process and thread creations, Programs related to semaphores, message queue, shared buffer applications involving inter task/thread communication **08 Hrs**

Reference Books:

1	Sam Siewert	"Real-Time Embedded Systems and Components" Cengage Learning India Edition, 2007.
2	Myke Predko	"Programming and Customizing the PIC microcontroller" 3rd Ed, TMH, 2008.
3	Dreamtech Software Team,Jhon Wiley, India Pvt. Ltd.	"Programming for Embedded Systems" 2008.

Course Outcomes: The student will be able to

CO1: Understand the fundamental concepts of real-time operating systems

CO2: Analyze the system resources required to build RTOS.

CO3: Analyze the Multi-service resources required for RTOS

CO4: Analyze various performance tuning techniques

CO5: Analyze avilability and reliability design issuses, Develop programs for multithreaded applications using suitable techniques.

CO6: Write C programs to create multithreads and demonstrate the working

Practicals for CIE

1. Creation of multithreads
2. Assigning different priorities to threads
3. Threads with same priority
4. Priority inheritence
5. Communication between Parent and child thread.
6. Shared recourse and Semaphore to manage shared recourse
7. Communication between a pipe server and a process thread
8. PROSIX based message Queue
9. Real time Camera interfacing.

VLSI Process Technology

Contact Hours/ Week	: 3+0+2 (L+P+SDA)	Credits :	4.0
Total Lecture Hours	: 40	CIE Marks :	50
Total SDA Hours	: 26	SEE Marks :	50
Course Code	: N2LVS02		

Course objective: This course aims at understanding the manufacturing methods and their underlying scientific principles in the context of technologies used in VLSI chip fabrication.

UNIT- I

Introduction: Electronic-Grade Silicon, Czochralski Crystal Growing, Silicon Shaping, Process Considerations. Environment for VLSI technology: clean room and safety requirements, Wafer cleaning process.

Epitaxy: Introduction, Vapour-Phase Epitaxy, Molecular Beam Epitaxy, Epitaxial Evaluation.

Oxidation: kinetics of silicon dioxide growth for thick, thin and ultra-thin films. Oxidation technologies in VLSI and ULSI; Characterization of oxide films; high K and low K dielectrics for VLSI. **08 Hrs**

UNIT- II

Chemical Vapour deposition techniques: CVD techniques for deposition of polysilicon, silicon dioxide, silicon nitride.

Metallization: Metallization Applications, Metallization Choices, Physical Vapor Deposition (evaporation and sputtering techniques). Failure mechanisms in metal interconnect; multilevel Metallization schemes, New Role of Metallization. **08 Hrs**

UNIT- III

Impurity incorporation: Models of **Diffusion** in Solids, Fick's laws for Diffusion, Measurement Techniques, Fast Diffusion in Silicon.

Ion implantation: Introduction, Range Theory, Implantation Equipment, Annealing, Shallow Junctions, High-Energy Implantation, annealing; Characterization of impurity profiles.

Reactive Plasma Etching: Introduction, Plasma Properties, Feature-Size Control and Anisotropic Etch Mechanisms, Other Properties of Etch Processes, Reactive Plasma-Etching Techniques and Equipment, Specific Etch Processes. **08 Hrs**

UNIT- IV

Lithography: Introduction, Optical Lithography, Electron Lithography, X-ray Lithography, Ion Lithography.

Thin film Characterization: Overview of thin film characterization, **Imaging** techniques: Scanning electron microscopy (SEM), AFM, **Structural** properties: X-ray diffraction (XRD), **Electrical** properties: Resistance/resistivity – four point probe, Vander Pauw, **Mechanical** properties: Stress-curvature measurements**.** **08 Hrs**

UNIT- V

VLSI Process Integration: Introduction, Fundamental Considerations for IC Processing, NMOS IC technology, CMOS IC Technology, MOS Memory IC Technology, Bipolar IC Technology, IC Fabrication.

Packaging of VLSI Devices: Introduction, Package Types, Packaging Design Considerations. **08 Hrs**

Text Books:

1	S. M. Sze,	VLSI Technology, McGraw-Hill, 2nd Edition, 1998.
2	S.K. Ghandhi,	VLSI Fabrication Principles, John Wiley Inc., New York, 2nd Edition, 2008.
3	John A. Venables	Introduction to Surface and Thin Films Processes, Cambridge University Press, 2000.
4	Leon I. Maissel and Reinhard Glang.	Handbook of Thin Film Technology, McGraw-Hill Publishing Company, New Delhi (1970)

Course Outcomes: students will be able to

CO1: Identify and describe the various processes present in the crystal growth and wafer preparation for Electron grade Silicon. Select appropriate epitaxial growth techniques employed in IC's fabrications and discuss each process.

CO2: Select and discuss an appropriate chemical vapor deposition method to deposit polySi, SiO_2 and SiN_3 thin films and metallization process for IC's fabrications.

CO3: Identify and select appropriate impurity incorporation,

annealing techniques and reactive plasma etching methods used in IC's fabrications

CO4: Identify, select and discuss the various lithography techniques used in IC's fabrications. Identify, select and discuss the various characterization techniques (the structural, electrical and mechanical properties) used analyzing the material properties of thin films.

CO5: Identify and explain the various IC fabrication process sequence and special considerations. Select an appropriate package type and explain design considerations of VLSI devices.

CO6: Deposit the material in thin film using PVD technique and analyze the properties of the deposited film using various characterization techniques in a team. Prepare the report.

List of Activities for CIE.

1. Silicon wafer Cleaning (RCA1 and RCA2)
2. Glass Substrate cleaning
3. Deposition of insulating material (Al2O3/ SiO2) on Si/glass substrate using E – beam Evaporation.
4. Deposition of metal/ alloys on insulated Si/glass substrate using DC Sputtering.
5. Deposition of semiconductor on insulated Si/glass substrate RF Sputtering
6. Analyse the structural properties of deposited thin film using XRD and AFM/SEM.
7. Determination of sheet resistance of deposited thin film using 4 probe method.

Design of IoT Systems

Contact Hours/ Week	: 2 +0+2 (L+P+SDA)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total SDA Hours	: 26	SEE Marks:	50
Course Code	: N2LVS03		

Course Objective: To impart the knowledge of components, Communication and development of software required for the design of IoT systems.

UNIT- I

Definition and Characteristics of IoT, IoT architectures and Reference Models, A core IoT functional Stack, Data management and Compute stack. Introduction to the IoT Framework: A brief refresher on the Internet,

Communication models and Communication APIs, The IoT Framework, Types of IoT Systems, Challenges of implementing Effective IoT Systems. IoT Levels and Deployment Templates.

(05+05) Hrs

UNIT- II

Basic Python Programming: Python Data types and Data structures, Control flow, Functions, Modules, Packages, File Handling, Data/Time operations, Classes , Python Packages of Interest for IoT.

(05+05) Hrs

UNIT- III

IoT Physical Devices and End points: Introduction to Renesas Synergy kits, Arduino and Raspberry pi boards. Introduction to Sensors, Actuators and Smart objects/sensors, IoT Design methodology.

(05+05) Hrs

UNIT- IV

Connecting smart objects: Communications criteria, Wireless sensor networks and its Technologies, Bluetooth, Wi-Fi, Zigbee, LoRa, RFID, IoT Access Technologies. IP as the IoT Network layer, Advantages of internet Protocol(IP), Adoption and Adaption of the IP, Optimizing IP for IoT.

(05+05) Hrs

UNIT- V

IoT protocols: MQTT, XMPP, DDS, AMQP, COAP, REST. Cloud services for IoT(AWS). IoT Web application development: HTML, CSS, JavaScript, MongDB, Python web application framework: Django. Case studies: case study on IoT System for Weather monitoring, Home Automation, Agriculture, Industry.

(06+06) Hrs

Text Books:

1	Arshdeep Bahga, Vijay Madisetti	Internet of Things , A Hands on Approach 1st Edition, 2015.
2	David Hanes, Gonzalo Salgueiro,Patrick Grossetete, Robert Barton, Jerome Henry	IoT Fundamentals: Networking Technologies, Protocols, and Use Cases for the Internet of Things, Pearson Education (Cisco Press Indian Reprint), (ISBN: 978-9386873743), 1st Edition, 2017.
3	Sammi salama hussen Hajjaj, Kisheen Rao	The Intenet of Mechanical Things: The IoT Framework for Mechanical Engineers., CRC

	Gsangaya	press Taylor and Francis Group, 1st Edition 2022,
4	Srinivasa K Srinivasa K.G., Siddesh G.M., Hanumantha Raju R.	Internet of Things, Cengage learning India 1st Edition, 2018.

Course Outcomes: Students will be able to

CO1: Explain the building blocks of an IoT system.

CO2: Develop Python programmes and use python packages related to IoT.

CO3: Explain the IoT Design methodology and the operation of end point devices such as Renesas Synergy kits, Arduino and Raspberry Pi.

CO4: Explain the concept of Wireless sensor networks and different technologies used for IoT.

CO5: Explain the operation of IoT protocols, develop web applications and prepare case studies for IoT based applications.

CO6: Design the circuit for a particular application using appropriate tool. Prepare the report.

VLSI Design Lab

Lab work Hours/Week	: 1+2+0 (L+P+T)	Credits	: 2.0
Course Code	: N2LVSL1	CIE Marks	: 50
		SEE Marks	: 50

Course Objective: Analyse, Design and simulate digital and analog MOSFET circuits for various applications.

List of Experiments:

1. Design a given logical operation using CMOS design style.

a. Draw the schematic and verify the design parameters with the help of
   i. Transient Analysis to verify the truth table

b. Draw the Layout and verify the DRC.

c. Extract RC and back annotate the same and verify the Design

2. Design a CMOS full adder for given specifications.

a. Draw the schematic and verify the design parameters with the help of
   i. Transient Analysis to verify the truth table

b. Draw the Layout and verify the DRC.

c. Extract RC and back annotate the same and verify the Design

3. Design a Common Source amplifier with resistive load for given specifications.

a. Draw the schematic and verify the design parameters with the help of
   i. DC Analysis (Calculate the theoretical value for Av)
   ii. Transient Analysis (Verify theoretical value of Av with its Practical value).
b. Draw the Layout and verify the DRC, LVS
c. Extract RC and back annotate the same and verify the Design

4. Design a Common Source amplifier with Active load using Current mirror for given specifications.
   Complete the design flow mentioned below:

a. Draw the schematic and verify the design parameters with the help of
   i. DC Analysis (Calculate the theoretical value for Av)
   ii. Transient Analysis (Verify theoretical value of Av with its Practical value).
b. Draw the Layout and verify the DRC, LVS
c. Extract RC and back annotate the same and verify the Design

5. Design a Common drain amplifier with Active load for given specifications.

Complete the design flow mentioned below:

a. Draw the schematic and verify the design parameters with the help of
   i. DC Analysis (Calculate the theoretical value for Av)
   ii. Transient Analysis (Verify theoretical value of Av with its Practical value).
b. Draw the Layout and verify the DRC, LVS
c. Extract RC and back annotate the same and verify the Design

6. Design a Differential Amplifier with Active load using Current mirror for given specifications.

Complete the design flow mentioned below:

a. Draw the schematic and verify the design parameters with the help of
   i. DC Analysis (Calculate the theoretical value for Av)
   ii. Transient Analysis (Verify theoretical value of Av with its Practical value).
b. Draw the Layout and verify the DRC, LVS.
c. Extract RC and back annotate the same and verify the Design.

7. Design a Operational Amplifier with Active load using Current mirror for given specifications.

Complete the design flow mentioned below:

a. Draw the schematic and verify the design parameters with the help of

i. DC Analysis
ii. Transient Analysis

b. Draw the Layout and verify the DRC, LVS
c. Extract RC and back annotate the same and verify the design

8. Design a 4 bit binary weighted DAC / 4-bit R-2R Ladder DAC for given specifications.

Complete the design flow mentioned below:

a. Draw the schematic and verify the design parameters with the help of
i. DC Analysis
ii. Transient Analysis
b. Draw the Layout and verify the DRC, LVS
c. Extract RC and back annotate the same and verify the design

Course Outcomes: Student will be able to

CO1: Analyze and Design analog circuits and also simulate the same using EDA tool and prepare the report.

CO2: Analyze and Design digital circuits and also simulate the same using EDA tool and prepare the report.

Professional Elective- 2

CMOS RF Circuit Design

Contact Hours/ Week	: 2+0+2(L+P+T)	Credits :	3.0
Total Lecture Hours	: 26	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50
Course Code	: N2LVSE21		

Course Objective: To impart the knowledge on designing CMOS RF Circuit.

UNIT- I

Introduction to RF Design and Wireless Technology: Design and Applications, Complexity and Choice of Technology. Basic concepts in RF design: Nonlinearly and Time Variance, Intersymbol interference, random processes and noise, Sensitivity and dynamic range, conversion of gains and distortion, characteristics of passive IC components, resistor, capacitor and inductor. **(05+05) Hrs**

UNIT- II

RF Modulation: Analog Modulation: Amplitude Modulation, Phase and Frequency Modulation, Digital modulation: Basic concepts, Binary Modulation, Quadrature Modulation. Power efficiency of modulation schemes, Coherent and Non-coherent detectors. Mobile RF communication, basics of multiple access techniques and wireless standards. **(05+05) Hrs**

UNIT- III

Transceiver Architectures: Receiver Architecture: Heterodyne, Homo dyne, Image Reject Receiver and Transmitter Architecture.

Distributed Systems: Transmission lines, reflection coefficient, the wave equation, examples, Lossy transmission lines, Smith charts – plotting gamma.

High Frequency Amplifier Design: Bandwidth estimation using open-circuit time constants, Bandwidth estimation using short-circuit time constants, Rise time, delay and bandwidth, Zeros to enhance band width, Shunt-series amplifiers, tuned amplifiers, and Cascaded amplifiers.

(05+05) Hrs

UNIT- IV

Low noise Amplifier design: CS stage: Inductive load, Resistive Feedback, Inductive degeneration. Variants of CS LNA, Noise – Cancelling LNAs, Differential LNAs. Non linearity Calculations in LNAs.

Mixers: Mixer Nose Figures, Port – Port Feed through, Single –balanced and double balanced Mixers, Introduction to Passive and Active Mixers.

(05+05) Hrs

UNIT- V

Oscillators: General Principles: Feedback view, One-Port view, Cross-Coupled Oscillator, Three – Point Oscillators. Voltage Controller Oscillators (VCO): Tuning Limitations, Effect of varactor Q, VCOs with wide tuning Range. Effect of Phase Noise, Low noise VCOs.

Phase Locked Loop (PLL): Type – I PLLs: VCO phase Alignment, Dynamics of Type – 1 PLLs, Frequency Multiplication, Draw backs of Type – 1 PLL. Type-II PLLs: Phase/Frequency Detectors, Charge Pumps, Charge-Pump PLLs, Transient Response.

Integer N Frequency Synthesizer: Basic integer N Frequency Synthesizer, Setting behavior, Spur reduction technique. **(06+06) Hrs**

Text Books:

1	B. Razavi	RF Microelectronics, PHI, 2nd Edition, 2011
2	R. Jacob Baker, H.W. Li, D.E. Boyce	CMOS Circuit Design, layout and Simulation, PHI, 1998.
3	Thomas H. Lee	Design of CMOS RF Integrated Circuits Cambridge University press, 2nd Edition, 2003.
4	Y.P. Tsividis	Mixed Analog and Digital Devices and Technology, TMH, 1996

Course Outcomes: Students will be able to,

CO1: Explain performance parameters to be considered for the design of RF circuits.

CO2: Identify, select and explain the modulations technique and RF communication concepts for RF circuit design.

CO3: Discuss various Transceiver architecture and bandwidth estimation techniques.

CO4: Identify and explain the general considerations of low noise amplifiers and concepts of mixers.

CO5: Discuss the modeling of various devices at RF Frequency and general principles of oscillators and PLL. Design RF modulation modules and various amplifiers using Matlab Simulink. Prepare the report.

Mixed Signal Circuit Design

Contact Hours/ Week	: 2+2+0 (L+P+T)	Credits :	3.0
Total Lecture Hours	: 26	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50
Course Code	: N2LVSE22		

Course objective: This course aims at understanding the various integrated based filters, data converters, integrated circuit of oscillators and PLLs in IC design

UNIT- I

Submicron CMOS Circuit Design

Submicron CMOS: Overview and Models, CMOS process flow, Capacitors and Resistors. Digital circuit design: The MOSFET Switch, Delay Elements, An Adder. Analog Circuit Design: Biasing, Op-Amp Design, Circuit Noise.

(05+05) Hrs

UNIT- II

Integrator Based CMOS Filters

Integrator Building Blocks- low pass filter, Active RC integrators, MOSFET-C Integrators, gm- C integrators, Discrete time integrators. Filtering Topologies: The Bilinear transfer function, The Biquadratic transfer function, Filters using Noise shaping.

(05+05) Hrs

UNIT- III

Data Converter Architectures

DAC Architectures- Resistor string, R-2R ladder Networks, Current Steering, Charge Scaling DACs, Cyclic DAC, and Pipeline DAC. ADC

Architectures- Flash, Two-step flash ADC, Pipeline ADC, Integrating ADC's, Successive Approximation ADC.

(05+05) Hrs

UNIT- IV

Data Converter Modeling and SNR

Sampling and Aliasing: A modeling approach, Impulse sampling, The sample and Hold, Quantization noise. Data converter SNR: An overview, Clock Jitter, Improving SNR using Averaging, Decimating filter for ADCs, Interpolating filter for DACs, Band pass and High pass sinc filters - Using feedback to improve SNR.

(05+05) Hrs

UNIT- V

Oscillators and PLL

LC oscillators, Voltage Controlled Oscillators. Simple PLL, Charge pumps PLLs, Non ideal effects in PLLs, Delay Locked Loops.

(06+06) Hrs

Course Outcomes: students will be able to

CO1: Apply the concepts for mixed signal MOS circuit.
CO2: Analyze the characteristics of IC based CMOS filters.
CO3: Design of various data converter architecture circuits.
CO4: Analyze the signal to noise ratio and modeling of mixed signals.
CO5: Design of oscillators and phase lock loop circuit.

Text Books:

1	R.Jacob Baker	CMOS Mixed Signal Circuit Design, Wiley India, IEEE Press, reprint 2008.
2	R.Jacob Baker	CMOS Circuit Design, Layout and Simulation, Wiley India, IEEE Press, 2nd Edition, reprint 2009.
3	Behzad Razavi	Design of Analog CMOS Integrated Circuits, McGraw Hill, 33rd Re- print, 2016.

VLSI Testing and Verification

Contact Hours/ Week	: 2+0+2 (L+P+SDA)	Credits :	3.0
Total Lecture Hours	: 26	CIE Marks :	50
Total SDA Hours	: 26	SEE Marks :	50
Course Code	: N2LVSE23		

Course Objective: This course introduces methods to fault model and generate tests for digital circuits and discuss various verification tools.

UNIT- I

Introduction to Testing: Testing Philosophy, Role of Testing, Digital and Analog VLSI Testing, VLSI Technology Trends Affecting Testing.**Faults:** Single Stuck at faults, Temporary Faults. Bridging faults, Transient faults.
Fault modeling: Fault equivalence, dominance and collapsing.
Fault Simulation: parallel, concurrent and deductive simulation.

(**05+05) Hrs**

UNIT- II

Test Generation for Combinational Logic Circuits: Test Generation Techniques for Combinational Circuits: Truth table method, Fault matrix method, Boolean difference method, Path sensitization method, D-Roth algorithm, PODEM and FAN. Detection of Multiple Faults in Combinational Logic Circuits.

(**05+05) Hrs**

UNIT- III

Design of Testable Sequential Circuits: Controllability and Observability, Ad Hoc Design Rules for Improving Testability, The Scan-Path Technique for Testable Sequential Circuit Design, Level-Sensitive Scan Design, Random Access Scan Technique, Partial Scan, Testable Sequential Circuit Design Using Nonscan Techniques, Crosscheck, Boundary Scan.

(**05+05) Hrs**

UNIT- IV

Built-In Self Test: Test Pattern Generation for BIST, Output Response Analysis, BIST Architectures-BILBO.
Testable Memory Design: RAM Fault Models, Test Algorithms for RAMs:March algorithm(Row, Column), galloping algorithm, butterfly algorithm,Neighbourhood Pattern Sensitive Faults(NPSF), Detection of Pattern Sensitive Faults, BIST Techniques for Ram Chips, Test Generation and BIST for Embedded RAMs.

(**05+05) Hrs**

UNIT- V

Importance of Design Verification: The importance of verification, Reconvergence model, Formal verification, Assertion based verification, Equivalence checking, Model checking, Functional verification.

Verification Tools: Linting tools: Limitations of linting tools, lintingverilog source code, linting VHDL source code, lintingOpenVera and e-source code, code reviews.

Simulators: Stimulus and response, Event based simulation, cycle based simulation, Co-simulators, verification intellectual property: hardware modelers, waveform viewers.

Verification plan: The role of verification plan: specifying the verification plan, Levels of verification: unit level verification, reusable components verification, ASIC and FPGA verification, system level verification, board level verification. (**06+06)Hrs**

Text Books:

1	P. K. Lala	Digital Circuit Testing and Testability, Academic Press, 1997.
2	M.L. Bushnell and V.D. Agrawal	Essentials of Electronic Testing for Digital, Memory and Mixed-Signal VLSI Circuits, Springer, 1st Corrected Edition 2002, Corr. 2nd printing 2004 edition, 2005.
3	M. Abramovici, M.A. Breuer and A.D. Friedman	Digital Systems and Testable Design, Jaico Publishing House, 1st Edition, 2001.
4	JanickBergeron,	Writing testbenches: functional verification of HDL models, Kluwer Academic Publishers, 2nd Edition , 2003
5	JayaramBhasker, RakeshChadha	Static Timing Analysis for Nanometer Designs: A practical approach, Springer publications, 2009.
6	PrakashRashinkar PeterPaterson, LeenaSingh	System on a Chip Verification, Springer, 2002nd edition, 2000.

Course Outcomes: Students will be able to

CO1: Identify and generate test for the faults in digital circuits.
Identify and apply the appropriate test generation technique for combinational circuits.

CO2: Identify and apply the appropriate Ad Hoc techniques to improve testability of sequential circuits.

CO3: Select appropriate algorithms to test memory elements.

CO4: Discuss verification plan and verification tools.

CO5: Analyze the circuits for static timing verification.
Design software algorithm or hardware circuit to test the ICs.Prepare report on the same.

CO6: Design the circuit for a particular application using appropriate tool. Prepare the report.

Design of CMOS Phase Locked Loops

Contact Hours/ Week	: 2+0+2(L+P+T)	Credits :	3.0
Total Lecture Hours	: 26	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50
Course Code	: N2LVSE24		

Course Objective: To impart the knowledge of designing phase locked loops, Delay locked loops.

UNIT-I

Introduction: Introduction to Phase locked loops (PLLs), Basic operation of PLL and DLL architectures. Steady state analysis of basic PLL architectures.

(05+05) Hrs

UNIT-II

Designing PFD and Charge pump: Phase detectors, Phase frequency detectors, Charge pump, Loop filters, Introduction to Charge pump based PLLs, Design methodology of charge pump based PLLs.

(05+05) Hrs

UNIT-III

Oscillators: Basic principles, Cross coupled oscillators, Voltage controlled oscillators, VCOs with wide tuning range, Basic concepts, of phase noise. Inverter based Ring oscillators, Basic differential ring oscillators.

(05+05) Hrs

UNIT-IV

Frequency synthesis: Introduction to frequency synthesis, Basic Integer N – Synthesizer, Divider design: Pulse swallow divider, Dual modulus divider,

Divider logic styles. Fractional N – Synthesizer: Basic concepts, Fractional divider using Delta sigma modulation technique. **(05+05) Hrs**

UNIT-V

Digital PLL (DPLL): Basic architecture of DPLL, Basic operation of Time to Digital conversion (TDC), Vernier TDC, Digitally controlled oscillator. Basics of Digital filters.

Clock and Data recovery circuits: Basic idea of clock and data recovery circuits, Bang-Bang Phase detector, Alexander phase detector, Hogge Phase detector.

(06+06) Hrs

Text Books:

1	Behzad Razavi	Design of CMOS Phase locked loops, from circuit level to Architecture level, Cambridge university press, 2020.
2	Behzad Razavi	RF microelectronics, 2nd Edition Pearson education 2012

Reference Books:

1	F. Gardner	Phaselock Techniques, John Wiley & Sons, 2005.
2	R. Best	Phase-Locked Loops : Design, Simulation, and Applications, McGraw Hill, 2003.

Course Outcomes: students will be able to

CO1: Analyze PLL architecture.

CO2: Design and Analyze PFDs and Charge pumps

CO3: Design and Analyze VCOs and Ring oscillators.

CO4: Design and Analyze dual modulus, integer -N and fractional dividers. and also design and analyze Charge pump based Integer N and fractional PLLs.

CO5: Understand the basics of Digital PLLs and Clock and data recovery circuits.

DSP Architecture

Contact Hours/ Week	: 2+0+2(L+P+T)	Credits :	3.0
Total Lecture Hours	: 26	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50
Course Code	: N2LVSE25		

Course Objective: To study DSP algorithms, architecture and interfacing of peripheral devices to the DSP processor.

UNIT- I

Introduction to Digital Signal Processing:

Introduction : Review of Digital Signal – Processing System, The Sampling Process, Discrete Time Sequences, Discrete Fourier Transform (DFT) and Fast Fourier Transform (FFT), Linear Time-Invariant Systems, Digital Filters, Decimation and Interpolation. Fixed point and Floating point processors.

Computational Accuracy in DSP Implementations: Number Formats for Signals and Coefficients in DSP Systems, Dynamic Range and Precision, Sources of Error in DSP Implementation.

(05+05) Hrs

UNIT- II

Architectures for Programmable Digital Signal – Processing Devices:

Introduction, Basic Architectural Features, DSP Computational Building Blocks, Bus Architecture and Memory, Data Addressing Capabilities, Address Generation Unit, Programmability and Program Execution, Speed Issues, Features for External Interfacing.

(05+05) Hrs

UNIT- III

Programmable Digital Signal Processors:

Introduction, Commercial Digital Signal-processing Devices, Data Addressing Modes of TMS32OC54XX, Memory Space of TMS32OC54xx Processors, Program Control. Detail Study of TMS320C54X & 54xx Instructions and Programming,

On – Chip Peripherals and Interrupts of TMS32OC54XX Processors,

Pipeline Operation in TMS32OC54xx Processor.

(05+05) Hrs

UNIT- IV

Implementation of Basic DSP Algorithms:

Introduction, The Q – notation, FIR Filters, IIR Filters, Interpolation and Decimation, Filters, PID controller.

Implementation of FFT Algorithms:

Introduction, An FFT Algorithm for DFT Computation, Overflow and Scaling, Bit – Reversed Index Generation & Implementation on the TMS32OC54xx.

(05+05) Hrs

UNIT- V

Interfacing Memory and Parallel I/O Peripherals to Programmable DSP Devices:

Introduction, Memory Space Organization, External Bus Interfacing Signals. Memory Interface, Parallel I/O Interface, Programmed I/O, Interrupts and I/O Direct Memory Access (DMA).

Interfacing and Applications of DSP Processors:

Introduction, Synchronous Serial Interface, A CODEC Interface Circuit, DSP Based Bio-telemetry Receiver, Speech Processing System, Image Processing System.

(06+06) Hrs

Text Book		
1	Avatar Singh and S. Srinivasan	Digital Signal Processing, Thomson Learning, 2004.
Reference Books:		
1	Ifeachor E. C., Jervis B.	Digital Signal Processing: A practical approach, W Pearson-Education, PHI, 2002.
2	B Venkataramani and M Bhaskar	Digital Signal Processors, TMH, 2nd, 2010.
3	Peter Pirsch	Architectures for Digital Signal Processing, John Weily, 2008.

Course Outcomes: The students will be able to

CO1: Apply the knowledge of DSP computational building blocks to develop DSP architecture or processor based applications.

CO2: Apply knowledge of various types of addressing modes, interrupts, peripherals and pipelining structure of TMS320C54xx processor.

CO3: Apply the knowledge of architecture and instruction set of DSP processor to write basic programs.

CO4: Develop algorithms to implement DSP algorithms on DSP processors.

CO5: Design Interfacing of Memory and I/O to DSP Processor.

Professional Elective-3

System on Chip Design

Contact Hours/ Week	:26+0+26(L+P+SDA)	Credits :	3.0
Total Lecture Hours	: 26	CIE Marks :	50
Total SDA Hours	: 26	SEE Marks :	50
Sub. Code	: N2LVSE31		

Course Objective (CO): This course will enable students to learn the System on Chip design with different approaches and understand the concepts of embedded memories and network on chip topologies.

UNIT- I

Motivation for SoC Design - Review of Moore's law, benefits of system-on-chip integration in terms of cost, power, and performance. Typical goals in SoC design – cost reduction, power reduction, design effort reduction, performance maximization. Productivity gap issues and the ways to improve the gap. Comparison on System-on-Board, System-on-Chip, and System-in-Package

System On Chip Design Process: Canonical SoC Design, System Design flow - waterfall design flow, Spiral design flow,Top-down vs Bottom up design flows and **Construct by Correction.**

(05+05) Hrs

UNIT- II

System level design issues

Specification requirement, Types of Specification. The Standard Model: - Soft IP vs Hard IP, The Role of Full-Custom Design in Reuse. Design for Timing Closure: Logic Design Issues. Design for Timing Closure: Physical Design Issues. Design for Verification: Verification Strategy. System Interconnect and On-Chip Buses. Design for Bring-Up and Debug. Design for Low Power. Design for Test: Manufacturing Test Strategies. Prerequisites for Reuse

(05+05) Hrs

UNIT- III

Macro Design Process: Overview of IP Design, Key Features, Planning and Specification, Macro design and Verification. Developing Hard Macros: Overview, Design Issues for Hard Macros, The Hard Macro Design Process, Productization of Hard Macros.

(05+05) Hrs

UNIT- IV

SoC Verification: -Verification technology options, Verification methodology, Verification languages, Verification IP Reuse, approaches. Verification and Device Test, Verification Plans. UVM oveview VLSI Packaging: Introduction, Packaging, Power Distribution, Input/Output, Chip-Package Co-design. **(05+05) Hrs**

UNIT- V

Embedded Memories –cache memories, flash memories, embedded DRAM. Topics related to cache memories. Cache coherence. MESI protocol and Directory-based coherence.

Interconnect architectures for SoC: Bus architecture and its limitations. Network on Chip (NoC) topologies.Mesh-based NoC. Routing in anNoC. Packet switching and wormhole routing.

MPSoCs: Introduction to MPSoCs, Techniques for designing MPSoCs.

(06+06) Hrs

Text Books:

1	Sudeep Pasricha and NikilDutt	On-Chip Communication Architectures: System on Chip Interconnect , Morgan Kaufmann Publishers, 2008
2	Rao R. Tummala, MadhavanSwaminathan	Introduction to system on package sop-Miniaturization of the Entire Syste, McGraw-Hill, 1st Edition, 2008.
3	James K. Peckol	Embedded Systems: A Contemporary Design Tool , Wiley, 1st Edition, 2007.
4	Michael Keating, Pierre Bricaud	Reuse Methodology Manual for System on Chip design s , Kluwer Accademic Publishers, 2nd edition, 2008
5	Sung-Mo Kang, Yusuf Leblebici	CMOS Digital Integrated Circuits , Tata Mcgraw-Hill, 3rd Edition, 2004.

Course Outcomes: Students will be able to

CO1: Describe the benefits and different design process of SoC.

CO2: Understand System-Level Design Issues, Rules and Tools

CO3: Identify and select an appropriate macro design style for SOC design

CO4: Analyze the various methods of SOC verification issues and packaging techniques.

CO5: Analyze cache protocols, NOC topology and describe the design concepts of different types of MPSoCs.

CO6: Carry on design of selected circuit for a particular application using appropriate tool. Prepare the report.

System Verilog

Contact Hours/ Week	: 2+0+2(L+P+SDA)	Credits :	3.0
Total Lecture Hours	: 26	CIE Marks :	50
Total SDA Hours	: 26	SEE Marks :	50
Course Code	: N2LVSE32		

Course Objectives: To impart the knowledge on system Verilog language to design, assertion and verify functionality of the system.

UNIT- I

Basics of Verification: Difference between ASIC verification and ASIC testing, Verification basics, Test benches, Layered Organization of Test benches. Importance of hardware verification languages and methodologies. **System Verilog data types and typedefs:** System Verilog data types, enhanced literal numbers syntax, 4-state and 2-state types, typedefs, enum, struct data type, Type parameters, $unit and $root. Packages, strings, static and dynamic type casting, Random number generation. **(05+05)Hrs**

UNIT- II

System Verilog operators, loops, jumps, functions: loops and jumps in system verilog, introduction to different always blocks, system verilog enhancements to tasks and functions, system verilog priority and unique modifiers for case and if statements, 'time scale, system verilog time unit and time precision.

Structs, Unions, Packed and Unpacked Arrays, Semaphores and Mailboxes: Structs and its assignments, packed and unpacked arrays, array indexing, structs and packed structs, Unions and packed unions, dynamic arrays and methods, for each loop, associative arrays and methods, queues and concatenation operations, queue methods, semaphores and methods, Mail boxes and methods, bounded and unbounded mail boxes. **(05+05)Hrs**

UNIT- III

Class and Randomization: System verilog class basics, class declaration, class members and methods, class handles, class object construction, super and this keywords, object handles, user defined constructors, class extension and inheritance, chaining new() constructors, overriding class methods, extending class methods, local and protected keywords, constrained random variables, directed vs random testing, rand and randc class data types, randomize-randomizing class variables, random case, built-in-randomization methods, random sequence and examples.

(05+05)Hrs

UNIT- IV

Interfaces: Interface overview, generic interfaces, interfaces vs records, how interfaces work, requirements of good interface, interface constructs, interface mode ports.

Program block: Fundamental test bench construction, program blocks, program block interaction with modules, final blocks, Test-bench stimulus/Verification vector timing strategies.

Clocking: Clocking blocks, clocking skews, clocking block scheduling, fork-join processes.

(05+05)Hrs

UNIT- V

Constrained Random variables, Coverage, Methods and interfaces: Randomization constraints, simple and multi-statement constraints, constraint distribution and set membership, constraint distribution operators, external constraints, covergroups, coverpoints, coverpoint bins and labels, cross coverage, covergroup options, coverage capabilities. Virtual class, why to use virtual class, virtual class methods and restrictions, polymorphism using virtual methods, pure virtual methods, pureconstraints, passing type parameters, virtual interfaces.

(06+06)Hrs

Text Books:

1	Christian B Spear	"SystemVerilog for Verification: A guide to learning the Testbench language features", Springer publications, 3 rd edition.
2	VijayaRaghavan	"SystemVerilog Assertions", Springer publications, 2005
3	Sutherland	"Systemverilog for Design", Springer publications

Course Outcomes: Students will be able to

CO1: Identify and use appropriate data types for system Verilog programming.

CO2: Select and apply appropriate program constructs for System design.

CO3: Select and apply appropriate methods to write test benches.

CO4: Identify, select and apply different clocking schemes for optimization of designs.

CO5: Explain Constrained Random variables, Coverage, Methods and interfaces

CO6: Carry on design of selected circuit for a particular application using appropriate tool. Prepare the report.

Low Power VLSI Design

Contact Hours/ Week	: 2+0+2(L+P+T)	Credits:	3.0
Total Lecture Hours	: 26	CIE Marks:	50
Total Tutorial Hours	: 26	SEE Marks:	50
Course Code	: N2LVSE33		

Course Objective: To analyze and estimate power at different abstraction levels of CMOS VLSI.

UNIT- I

Introduction: Need for low power VLSI chips, Sources of power dissipation on Digital Integrated circuits. Emerging Low power approaches, Physics of power dissipation in CMOS devices. **Device & Technology Impact on Low Power:** Dynamic dissipation in CMOS, Transistor sizing & gate oxide thickness, Impact of technology Scaling, Technology & Device innovation.

(05+05) Hrs

UNIT- II

Power estimation, Simulation Power analysis: SPICE circuit simulators, gate level logic simulation, capacitive power estimation, static state power, gate level capacitance estimation, architecture level analysis, data correlation analysis in DSP systems, Monte Carlo simulation.

(05+05) Hrs

UNIT- III

Probabilistic power analysis: Random logic signals, probability & frequency, probabilistic power analysis techniques, signal entropy.

Low Power Design Circuit level: Power consumption in circuits. Flip Flops & Latches design, high capacitance nodes, low power digital cells library.

(05+05) Hrs

UNIT- IV

Logic level: Gate reorganization, signal gating, logic encoding, state machine encoding, pre-computation logic. **Low power Architecture & Systems:** Power & performance management, switching activity reduction, parallel architecture with voltage reduction, flow graph transformation, low power arithmetic components, low power memory design.

(05+05) Hrs

UNIT- V

Low power Clock Distribution, **Algorithm & Architectural Level Methodologies:** Introduction, design flow, Algorithmic level analysis & optimization, Architectural level estimation & synthesis.

(06+06) Hrs

Text Books:

1	Kaushik Roy, Sharat Prasad	"Low-Power CMOS VLSI Circuit Design" Wiley, 2000
2	Gary K. Yeap	"Practical Low Power Digital VLSI Design", KAP, 2002.
3	Rabaey, Pedram	"Low Power Design Methodologies" Kluwer Academic, 1997.

Course Outcomes: Students will be able to

CO1: Analyze the impact of low power in VLSI circuits

CO2: Recognize Role of simulation possible at various levels of design

CO3: Explain Relationship of probability while calculating power dissipation of circuits

CO4: Apply Power reduction techniques at circuit and architectural level.

CO5: Discuss different clock distribution techniques in low power VLSI design.

Wireless Sensor Network

Contact Hours/ Week	: 2+0+2(L+P+SDA)	Credits :	3.0
Total Lecture Hours	: 26	CIE Marks :	50
Total SDA Hours	: 26	SEE Marks :	50
Course Code	: N2LVSE34		

Course Objectives: This course will enable students to learn about WSN technology that emphasis on standardization of basic sensor systems, medium access protocols and address network layer issues.

UNIT- I

Introduction and overview of Wireless Sensor Network(WSN), commercial and scientific applications of WSN, Category of Applications of WSN, Challenges for WSN, Enabling Technologies for WSN.

(05+05) Hrs

UNIT- II

Single node Architecture: Hardware Components, Energy consumptions of Sensor nodes, Operating Systems and Execution Environments, Examples

of Sensor nodes, Network Architecture : WSN Scenarios, Optimization Goals and figure of Merits, Design principles for WSNs, Service Interface for WSNs, Gateway Concepts.

(05+05) Hrs

UNIT- III

Physical Layer: Wireless Channel and Communication Fundamentals, Physical Layer & Transceiver Design Considerations in WSN, MAC Protocols: Fundamentals, MAC Protocol for WSNs, IEEE802.15.4 MAC Protocol, and Routing Protocols: Gossip and agent based unicast protocols, Energy Efficient Unicast, Broadcast and Multicast, Geographic Routing, Transport Control Protocols: Traditional Protocol, Design issues.

(05+05) Hrs

UNIT- IV

Sensor tasking and Control: Introduction –Based Sensor Tasking, Joint Routing Information Aggregation, Sensor Network databases: Challenges Query Interfaces, In-Network Aggregation, Data Centre Storage.

(05+05) Hrs

UNIT- V

Operating System for Sensor Networks: Introduction, Design Issues, Examples of Operating Systems, Node Level Simulators, Performance and Traffic Management Issues: WSN Design Issues, Performance modelling of WSNs, Emerging Applications.

(06+06) Hrs

Text Books:

1.	Kazem Sohraby,Daniel Minoli,Taieb Znati	"Wireless Sensor Networks: Technology, Protocol and Applications" John wiley & sons.
2.	Holger Karl, Andreas Wiling	"Protocols and architectures for wireless sensor networks" John wiley & sons

Reference Books:

1.	Feng Zaho, Leonidas Guibas	,"Wireless sensor Networks; An Information Processing Approach",Elsevier
2.	C.S. Raghavendra, Krishna, M,Shivalingam, Taieb Znati	"Wireless sensor networks", Springer Verlag.

3.	H.Edgar,Jr.Callaway	"Wireless sensor networks, architecture and Protocols ", CRC Press.

Course Outcomes: Student will be able to

CO1: Familiarize about WSN, architecture, and technologies.

CO2: Explain Wireless sensor platforms: Hardware and Software

CO3: Understand Communication architecture and protocols for WSN (MAC, Link, Routing)

CO4: Explain Energy management

CO5: Understand sensor data acquisition, processing and handling.

CO6: Design the circuit for a particular application using appropriate tool. Prepare the report.

Interference and noise control techniques in ESD

Contact Hours/ Week	: 2+0+2(L+P+T)	Credits :	3.0
Total Lecture Hours	: 26	CIE Marks :	50
Total Tutorial Hours	: 26	SEE Marks :	50
Course Code	: N2LVSE35		

Course Objectives: This course aims at understanding the fundamentals of Interference and Noise Control Techniques in Electronic Design.

UNIT- I

Basic Concept of Instrumentation Design: Needs Analysis :with respect to systems deployed in; Medical, Industrial, Test and Measurement, Home Appliances, Military Functional requirements & Specifications, Impact on the design due to adverse Electrical, Thermal and Mechanical Operational Environments.

Noise Sources: Electrical, Magnetic, RF, Static, Ground Loops, Shielding, near and far field, shielding effectiveness, absorption and reflection loss, shielding with magnetic material, contact protection, glow and arc discharges, loads with high inrush current, Inductive and resistive load contact protection networks for inductive loads, intrinsic noise sources

Transient EMI, Time domain Vs Frequency domain EMI, Units of measurement parameters, Emission and immunity concepts, ESD.

(05+05) Hrs

UNIT- II

EMI / EMC STANDARDS: ESD, inductive charging human body model, ESD protection in equipment design, Preventing ESD entry, Transient Hardened software Design, Hardening Sensitive Circuits, input filters, clamping suppressors

Civilian standards: FCC, CISPR, IEC, EN, Military standards - MIL STD 461D/462, EMI Test Instrument /Systems, EMI Shielded Chamber, Open Area Test Site, TEM Cell, Sensors/Injectors/Couplers, Test beds for ESD and EFT. **(05+05) Hrs**

UNIT- III

Electronic design guidelines: Noise in electronic circuits**.** Capacitive and inductive coupling and effect of shield, shielding to prevent magnetic radiation, co-axial and twisted pair cable, grounding, safety ground, signal ground, single and multi point ground, Hybrid ground, grounding of cables shields, Ground loops and low frequency and high frequency analysis of common mode signals, guard shields Bonding, Isolation Transformer, Transient Suppressors, Cable Routing, Signal Control, Component Selection and Mounting. **(05+05) Hrs**

UNIT- IV

PCB Design Guidelines. NEMA, DIN, BSI, ANSI standards Index protection (IP), cable design guidelines; Printed circuit board design guideline, layout scheme, grid systems, PCB size, Design rules for digital circuits, and Design rules for analog circuits, single and multilayer PCB, CE / Underwrites Laboratories (UL) Compliance.

PCB Traces Cross Talk, Impedance Control, Power Distribution Decoupling, Zoning, Motherboard Designs and Propagation Delay Performance Models.

(05+05) Hrs

UNIT- V

Failure Mechanism and Faulty Tolerance Reliability of electronic components, component types and failure mechanisms, Electronic system reliability prediction, Reliability in electronic system design; software errors, software structure and modularity, fault tolerance, software reliability, prediction and measurement, hardware/software interfaces.

Test for Reliability: Test environments, testing for reliability and durability, failure reporting, Pareto analysis, Accelerated test data analysis, CUSUM charts, Exploratory data analysis and proportional hazards modeling, reliability demonstration, reliability growth monitoring.

(06+06) Hrs

Text Book:

1	Henry OTT	Noise reduction Techniques in Electronics Circuit, Wiley International, Second ed., 2009.

Reference Books:

1	W. Prasad Kodali	Engineering Electromagnetic Compatibility: Principles, Measurements and Technologies and Computer Models, Wiley, IEEE Press, 2nd Edition, 2001.
2	Henry W. Ott	Electromagnetic Compatibility Engineering, John Wiley and Sons, 1st Edition, 2009.
3	Clayton. R. Paul	Introduction to Electromagnetic Compatibility, John Wiley and Sons, 2nd Edition, 2006.
4	Bernhard Keiser	Principles of Electromagnetic Compatibility, Artech house, 3rd Edition, 1998.
5	Balguruswamy	Reliability Engineering, TATA McGraw-hill Publication, 3rd Edition, 2005
6	Walter C. Bosshart	Printed Circuit Board, Tata McGraw-Hill publication, 3rd Edition, 2009.
7	Patrick D.T. O'Connor, David Newton and Richard Bromley	Practical Reliability Engineering, John Wiley & Sons, 4th Edition, 2002

Course Outcomes: The students will be able to

CO1: Analyze the requirement of Instrument and systems. Identify the sources of Noise
CO2: Discuss the various EMI / EMC STANDARDS
CO3: Design various electronic circuits , noises identification and appropriate elimination methods related to instrument and system
CO4: Discuss the various Guidelines for PCB Design
CO5: Estimate, analyze, improve the reliability of instrument and system

Open Elective 1

Embedded Systems

Contact Hours/ Week	: 3+0+0 (L+P+T)	Credits :	3.0
Total Lecture Hours	: 40	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Course Code	: N2OE01		

Course Objective: To impart the knowledge of Cortex M3 and M4 based Microcontroller Architecture, Exception and Interrupt behavior, Programming and configuring on chip peripherals and interfacing of I/O devices.

UNIT- I

Introduction: Basic architecture of Embedded Systems, Microprocessors and Microcontrollers, Von-Neumann and Harvard Architectures, History of ARM family of processors, Architecture and Features of ARM Cortex M3 and

M4 processors. Programmer's model: Operation Modes and States, General purpose Registers, Special function Registers, Behavior of APSR. Pipelining, Prefetch unit and Branch target forwarding in ARM cortex M3 and M4 processors. Memory system: Memory map.

(05+05) Hrs

UNIT- II

Memory Format: Memory endianness, data alignment and unaligned data access support, Bit-band operation in ARM Cortex M3 and M4 processors. Embedded Software development-1: Embedded Software Development and compilation flow. Data types in C – programming used for Cortex M4 processors. Introduction to Cortex M3 based Microcontroller: Features, Memory map, basic configuration and programming of GPIO. Interfacing Input output devices to Cortex M3 based Microcontroller-1: LEDs and Switches, C-Programming examples.

(05+05) Hrs

UNIT- III

Instruction set: Operation and addressing modes of MOV instruction, Arithmetic instructions, Logical instructions, Memory access instructions, Program flow control instructions, Shift and rotate instructions, Data conversion instructions, Bit-field processing instructions, compare and test instructions. Use of suffix in instructions. ARM Assembler directives, Assembly level programming examples. Interfacing Input output devices to Cortex M3 based Microcontroller-2: 7-segment Display, Push button keys, mxn matrix keypad. Programming examples (Both assembly and C).

(05+05) Hrs

UNIT- IV

Embedded Software development-2: Program flow (Software Flow).
Exceptions and Interrupts: Overview of Exceptions and Interrupts, Exception types, Vector table and Reset status, Exception entrance sequence, Exception handler execution, Exception return, Interrupt latency, NVIC registers for interrupt control, Exception handlers in C and assembly level programming, Stack Frames, Exceptions entrance and stacking, Exception return and unstacking. Programming Examples (Both assembly and C). System control blocks of Cortex M3 and M4 based Microcontroller: Reset, Brown-out detection and External interrupt inputs.
Peripherals in Cortex M3 and M4 based Microcontroller: Configuration and programming (both assembly and C) Nested Vectored Interrupt Controller (NVIC) and Timers.

(05+05) Hrs

UNIT-V

Configuration and programming (Only C) PWM unit, Watchdog timer, Analog to Digital Converter (ADC), Digital to Analog Converter (DAC), Universal Asynchronous Receiver Transmitter (UART) , SPI and I2C. Case study: Temperature control system, Traffic control systems, Washing machine control system. **(06+06) Hrs**

Text Books:

1	Joseph Yiu	The Definitive guide to ARM Cortex M3 and Cortex M4 processor, Elsevier, 3rd Edition, 2013.
2	Cortex-M Technical Reference Manual. revision r1p1	
3	LPC17xx Reference Manual.	

Reference Book:

1	Ming-Bo Lin	An Introduction to Cortex-M3-Based Embedded Systems: Cortex-M3 Assembly Language Programming, Createspace Independent Publishing Platform, 2019.

Course Outcomes: Students will be able to

CO1: Explain the architecture of ARM cortex M3 and M4 Architecture and differentiate Microcontrollers and Microprocessors.

CO2: Explain the Memory system of ARM Cortex M3 and M4 based Processors and Develop the program for ARM cortex M3 and M4 based microcontrollers in order to Interface Input and output devices such as LED and Switches.

CO3: Explain the operation of the Instruction set of the ARM cortex M3 and M4 based processors and Develop the program for ARM cortex M3 and M4 based microcontrollers in order to Interface Input and output devices such as 7-segment Display, Push button keys, mxn matrix keypad.

CO4: Explain the concept of Exceptions and interrupts and Develop the program to configure peripherals of ARM cortex M3 and M4 based microcontrollers such as External interrupts, NVIC and Timers,

CO5: Develop the program to configure peripherals of ARM cortex M3 and M4 based microcontroller and to develop the program for ARM cortex M3 and M4 based microcontrollers in order to Interface Input and output devices.

CMOS RF Circuit Design

Contact Hours/ Week	: 3+0+0(L+P+T)	Credits :	3.0
Total Lecture Hours	: 40	CIE Marks :	50
Total Tutorial Hours	: 0	SEE Marks :	50
Course Code	: N2OE02		

Course Objective: To impart the knowledge on designing CMOS RF Circuit.

UNIT- I

Introduction to RF Design and Wireless Technology: Design and Applications, Complexity and Choice of Technology. Basic concepts in RF design: Nonlinearly and Time Variance, Inter-symbol interference, random processes and noise, Sensitivity and dynamic range, conversion of gains and distortion, characteristics of passive IC components, resistor, capacitor and inductor.

(05+05) Hrs

UNIT- II

Transceiver Architectures: Receiver Architecture: Heterodyne, Homo dyne, Image Reject Receiver and Transmitter Architecture. Transmitter Architecture: Direct Conversion Transmitters, Two-step transmitters.

Single stage amplifiers: Common source stage – with resistive load, Diode connected load, current source load, Triode load, Source degeneration. Source follower, Common gate stage, Cascode stage.

(05+05) Hrs

UNIT- III

Differential amplifiers: Single ended differential operation, Basic differential pair, common mode response, Differential pair with MOS loads, Current mirrors: Basic current mirrors, Cascode current mirrors, Active current mirrors.

Low noise Amplifier design: CS stage: Inductive load, Resistive Feedback, Inductive degeneration. Variants of CS LNA, Noise – Cancelling LNAs, Differential LNAs. Non linearity Calculations in LNAs.

(05+05) Hrs

UNIT- IV

Mixers: Mixer Nose Figures, Port – Port Feed through, Single –balanced and double balanced Mixers, Introduction to Passive and Active Mixers.

Oscillators: General Principles: Feedback view, One-Port view, Cross-Coupled Oscillator, Three – Point Oscillators. Voltage Controller Oscillators (VCO): Tuning Limitations, Effect of varactor Q, VCOs with wide tuning Range. Effect of Phase Noise, Low noise VCOs.

(05+05) Hrs

UNIT- V

Phase Locked Loop (PLL): Type – I PLLs: VCO phase Alignment, Dynamics of Type – 1 PLLs, Frequency Multiplication, Draw backs of Type – 1 PLL.

Type-II PLLs: Phase/Frequency Detectors, Charge Pumps, Charge-Pump PLLs, Transient Response.

Integer N Frequency Synthesizer: Basic integer N Frequency Synthesizer, Setting behavior, Spur reduction technique.

Distributed Systems: Transmission lines, reflection coefficient, the wave equation, examples, Lossy transmission lines, Smith charts – plotting gamma.

(06+06) Hrs

Text Books:

1	B. Razavi	RF Microelectronics, PHI, 2nd Edition, 2011
2	R. Jacob Baker, H.W. Li, D.E. Boyce	CMOS Circuit Design, layout and Simulation, PHI, 1998.
3	Thomas H. Lee	Design of CMOS RF Integrated Circuits Cambridge University press, 2nd Edition, 2003.
4	Y.P. Tsividis	Mixed Analog and Digital Devices and Technology, TMH, 1996.

Course Outcomes: Students will be able to,

CO1: Explain performance parameters to be considered for the design of RF circuits.

CO2: Design single stage amplifiers. Discuss various Transceiver architecture and bandwidth estimation techniques.

CO3: Analyse and Design differential amplifier and of low noise amplifiers

CO4: Identify and explain the general considerations of mixers and Oscillators.

CO5: Discuss the modelling of various devices at RF Frequency and general principles of oscillators and PLL. Design PLL models using Matlab Prepare the report.

SIDDAGANGA INSTITUTE OF TECHNOLOGY, TUMAKURU

(An autonomous institution affiliated to VTU, Belagavi, Approved by AICTE, New Delhi, Accredited by NAAC with 'A' grade & ISO 9001:2015 Certified)

M.Tech. in Computer Science & Engg.

SCHEME OF TEACHING AND EXAMINATION (80 Credits Scheme)

Applicable for students admitted from the Academic Year 2022-23 and onwards

I Semester

Sl. No.	Course Type and Course Code		Course Title	Teaching Hours per Week			Examination				Credits
				Theory	Practical / Seminar	Tutorial / Skill Development Activities	Duration in hrs.	CIE Marks	SEE Marks	Total Marks	
				L	P	T/SDA					
1.	BSC	N1PGMAT	Advanced Mathematics in Computer Science	3	0	0	3	50	50	100	3
2.	IPCC	N1SCS01	Analytical Approach to Computer Networks	3	2	0	3	50	50	100	4
3.	PCC	N1SCS02	Complexity Analysis of Algorithms	3	0	2	3	50	50	100	4
4.	PCC	N1SCS03	Advanced Operating Systems	2	0	2	3	50	50	100	3
5.	PCC	N1SCS04	Cloud Computing	2	0	2	3	50	50	100	3
6.	PEC	N1XXXE1x	Professional Elective – 1	2	-	2	3	50	50	100	3
7.	MCC	N1PGRM	Research Methodology and IPR	3	0	0	3	50	50	100	3
8.	PCCL	N1SCSL1	Statistical Analysis using R & Python Laboratory	1	2	0	3	50	50	100	2
9.	AUD/ AEC	N1XXXAUD / N1XXXAEC	BoS Recommended online course	Classes and Evaluation Procedures are as per the policy of the online course providers							0
	Total			**19**	**4**	**8**		**500**	**400**	**900**	**25**

Professional Elective 1	
N1SCSE11	Social Network Analysis
N1SCSE12	Big data & Data Analytics
N1SCSE13	Data Science

Note: **BSC**-Basic Science Courses, **IPCC**-Integrated Professional Core Courses, **PCC**: Professional Core Course, **PEC:** Professional Elective Course,

MCC- Mandatory Credit Course, **PCCL**-Professional Core Course Lab, **NCMC**-Non Credit Mandatory Course
AUD/AEC –Audit Course / Ability Enhancement Course(A pass in AUD/AEC is mandatory for the award of the degree)
L-Lecture, **P**-Practical, **T/SDA**-Tutorial / Skill Development Activities (Hours are for Interaction between faculty and students)

Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with practical of the same course. The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from the practical part of IPCC shall be included in the SEE question paper.

Audit Courses /Ability Enhancement Courses suggested by BoS (ONLINE courses):
Audit Courses are prerequisite courses suggested by the concerned Board of Studies.
Ability Enhancement Courses will be suggested by the BoS if prerequisite courses are not required for the programs.

- These courses are prescribed to help students to enhance their skills connected to the field of specialization as well allied fields that leads to employable skills. Involving in learning such courses are impetus to lifelong learning.
- The courses under this category are online courses published in advance and approved by the concerned Board of Studies.
- Registration to Audit /Ability Enhancement Course shall be done in consultation with the mentor and is compulsory during the concerned semester.
- In case a candidate fails to appear for the proctored examination or fails to pass the selected online course, he/she can register and appear for the same course if offered during the next session or register for a new course offered during that session, in consultation with the mentor.

The Audit / Ability Enhancement Course carries no credit and is not counted for vertical progression. However, a pass in such a course is mandatory for the award of the degree.

Skill development activities: in a concerned course, the students should

- Interact with industry (small, medium, and large).
- Involve in research/testing/projects to understand their problems and help creative and innovative methods to solve the problem.
- Involve in case studies and field visits/ fieldwork.
- Accustom to the use of standards/codes etc., to narrow the gap between academia and industry.
- Handle advanced instruments to enhance technical talent.
- Gain confidence in modelling of systems and algorithms for transient and steady-state operations, thermal study, etc.
- Work on different software to simulate, analyze and authenticate the output to interpret and conclude.

All activities should enhance student's abilities to employment and/or self-employment opportunities, management skills, Statistical analysis, fiscal expertise, etc. Students and the course instructor/s to involve either individually or in groups to interact together to enhance the learning and application skills of the study they have undertaken. The students with the help of the course teacher can take up relevant technical –activities which will enhance their skill. The prepared report shall be evaluated for CIE marks.

MATHEMATICS FOR DATA SCIENCE

(Effective from the academic year 2022 -2023)

SEMESTER – I

Subject Code	N1PGMAT	IA Marks	50
Number of Lecture Hours/Week	3:0:0	Exam Marks	50
Total Number of Lecture Hours	39	Exam Hours	03

CREDITS – 03

Course objectives:

1. To apply concepts of graph theory such as vertex and edge connectivity, planarity and edge coloring to solve real world problems.
2. To create computational graphs for deep neural networks
3. To interpret the basic concepts of probability and stochastic processes and apply the same to solve computer science based problems.
4. To understand the paradigm of programming known as Functional Programming which is based on the mathematics of lambda calculus.
5. Apply linear algebra concepts to model, solve, and analyze real-world situations.

UNIT – 1	Teaching Hours
Graph Theory : **Review of basics** **Planar Graphs :** Introduction, Euler's formula, Kuratowski's theorem, Different representations of planar graph, Detection of planarity. **Graph Coloring :** Chromatic number, chromatic partitioning, chromatic polynomial, matchings, coverings, The four color problem.	**8 Hrs.**
UNIT– 2	
Graph Theory Continued: **Connectivity:** Definitions and properties, Cut-vertices, blocks, connectivity, Menger's Theorem, Network flow **Computational Graphs :** Why computational graphs?, Calculus on Computational Graphs, Deep Neural Networks As Computational Graphs	**8 Hrs.**
UNIT – 3	
Probability: Introduction, Sample space, Conditional probability and Bayes Theorem, Independence of events, Counting, Random Variables and their Probability Distributions, Multiple Random Variables, Some Special Distributions **Stochastic Processes** Markov Process: Introduction, Markov chains, Birth and Death Process, random walk, constrained optimization.	**8 Hrs.**
UNIT – 4	
Queuing systems: Simple queuing models, Queues with batch arrivals, Vacations, Bulk arrivals and priorities. **Functional Logic** **Functional programming & Lambda Calculus:** Abstraction, λ expressions, Function Application and Currying, reduction rule, Normal form, Arithmetic and Boolean logic, Higher-order functions, Recursion, Free and Bound variables, Lazy Evaluation, λ calculus is Turing complete. **Error functions:**	**8 Hrs.**

Role of error functions in Machine Learning	
UNIT – 5	
Linear Algebra: Representation of problems in Linear Algebra, Vectors, linear functions, Clustering, Linear Independence, Least squares, Matrices, Use of Inverse, Eigen values and Eigen vectors in Data Science	**7 Hrs.**

Course outcomes: The students should be able to:

CO1: Solve problems involving vertex and edge connectivity, planarity and edge coloring.
CO2: Represent Deep Neural Networks using Computational Graphs
CO3: Apply the knowledge of probability theory and stochastic processes to analyze computer science related problems in practice
CO4: Analyse the connection between lambda-calculus and computability applied in Functional programming
CO5: Demonstrate an understanding of application of Vectors, linear functions, Clustering, Linear Independence, Least squares, Matrices, Use of Inverse, Eigen values and Eigen vectors in Data Science

ANALYTICAL APPROACH TO COMPUTER NETWORKS
(Effective from the academic year 2022-2023)
SEMESTER – I

Subject Code	N1SCS01	CIE Marks	50
Teaching Hours/Week (L-T-P)	3-0-2	SEE Marks	50
Total Number of Lecture Hours Practical Hours	39 26	Exam Hours	03

CREDITS – 04

Course objectives:

- Discuss with the advances of Computer Networks.
- Analyses scheduling algorithms to achieve QoS.
- Discuss error control and congestion control protocols.
- Define and analyze network traffic, flow controlling and resource allocation.

UNIT – 1	**Teaching Hours**
Scheduling: Scheduling Introduction, Conservation law, Requirements: Ease of implementation, Fairness and protection, Performance bounds, Ease and efficiency of admission control, Scheduling best-effort connections, Scheduling guaranteed-service connections. **Congestion Control Principles:** What is congestion? Congestion collapse, Controlling congestion: design considerations. **Practicals:** Scheduling algorithms implementation: First-Come, First-Served (FCFS) Scheduling, Shortest-Job-Next (SJN) Scheduling, Priority Scheduling Shortest Remaining Time, Round Robin(RR) Scheduling, Multiple-Level Queues Scheduling	**8 Hours** **6 hours**
UNIT– 2	
Congestion Control: rate-based versus window-based control, RTT estimation, traffic phase effects, multicastcongestion control. **Error Control:** Error Control, causes of bit errors, bit-error detection and correction, causes of packet errors, packet-error detection and correction. **Practicals:** Bit-error detection and correction. Packet-error detection and correction.	**8 Hours** **4 Hours**
UNIT – 3	
Flow Control: Flow control Introduction and Model, Open loop flow-control Techniques, Closed loop flow-control techniques. **Practicals:** Sliding window protocol Stop and wait protocol Go back N protocol	**8 Hours** **6 Hours**
UNIT – 4	
Traffic Management: Introduction, An economic framework for traffic management, Traffic models, Traffic classes, Time Scales of traffic management, Scheduling, Renegotiation, Signaling, Admission control, Peak-load pricing, Capacity Planning. **Practicals:** Basic network traffic models**:** Poisson Model, Packet Train Model, Self-Similar model.	**7 Hours** **6 Hours**

UNIT – 5	
Packet Queues and Delay Analysis: Little's theorem, Birth-and-Death Process, Queuing disciplines, Markovian FIFO queuing Systems, Non-Markovian and Self-Similar Models, Networks and Queues. **Practicals:** Little's theorem, Birth-and-Death Process	**8 Hours** **4 Hours**

Course outcomes: The students should be able to:

- Analyze different scheduling algorithms.
- Analyze various congestion control, error control and flow control protocols.
- Develop effective communication mechanisms using techniques like connection establishment, queuing theory, recovery etc.
- Appraise existing traffic management models and Interpret various research solutions for QoS Protocols and prepare document/report .

Textbooks:

1. S. Keshav, An Engineering approach to computer networking : ATM networks, the Internet and the telephone network, Pearson Education (Unit 1 to Unit 4)
2. Nader F Mir - Computer and Communication Networks, Pearson education (Unit 5)
3. Network Congestion Control Managing Internet Traffic, Michael Welzl, John Wiley and Sons Ltd. (Unit 6) (E-book available)

Practicals:

Using any one of the network simulators (NS2/NS3, Qualnet, or any other) or programming languages, students should demonstrate one of the network control techniques (Congestion control, Flow control, Traffic Management, Security, Routing, etc.). For demonstration a specific networking scenario should be defined, the demonstration should be on the basic techniques or revised techniques or on research papers available.

Perceive, analyze and simulate/Interpret various network protocols and techniquesand prepare document/report.

COMPLEXITY ANALYSIS OF ALGORITHMS
(Effective from the academic year 2022 -2023)
SEMESTER – I

Subject Code	N1SCS02	CIE Marks	50
Teaching Hours/Week (L-T-P)	3:0:2	SEE Marks	50
Total Number of Lecture Hours Practical Hours	39 26	Exam Hours	3

CREDITS – 4

Course objectives:

- Learn new techniques for solving specific problems more efficiently and for analysing space and time requirements.
- Analyse a variety of algorithms with practical applications and the resource requirements of each.
- Determine the most suitable algorithm for any given task and then apply itto the problem.
- Demonstrate adequate comprehension of the theory of intractability andprove when certain kinds of problems are intractable.

UNIT – 1	**Teaching Hours**
Growth of Functions: Asymptotic notations; Standard notations and common functions; Divide and Conure: Recurrences, Maximum subarray problem, Strassen's algorithm for matrix multiplication, The substitution method, The recursion tree method, The master method. **Amortized Analysis**: Aggregate analysis, Accounting and Potential Methods. Lab programs: 1. Write a program to implement Strassen's algorithm for matrix multiplication. 2. Write a program to find the subset sum in an array of positive integers	**8 + 6 Hours**

UNIT– 2	
B Trees: Definition of B trees, Basic operations on B trees, Deleting a key from aB tree. **Binomial Heaps**: Binomial trees and binomial heaps, Operations on binomial heaps. **Fibonacci Heaps**: Structure of Fibonacci heaps, Merge able heap operations, decreasing a key and deleting a node. Lab programs: 1. Write a program to implement Binomial Heap of integers to support the followingoperation (assume suitable degree for heap) a. Insert an element in to the Binomial Heap. b. Find_Min, Extract_Min, c. Decrease_Key and Delete_Key *2.* Write a program to implement B-Tree of degree *t=3.* a. Insert keys to B-Trees b. Display the B-Tree keys c. Search a key (use binary search on internal nodes to perform searchoperation) 3. Write a program to implement Fibonacci heap of integers to support the followingoperation (assume suitable degree for heap) a. Insert an element in to the Fibonacc heap. b. Find_Min c. Search and element in the heap.	**8 + 6 Hours**

UNIT – 3

Graph Algorithms: Bellman -Ford Algorithm; Single source shortest paths in a directed acyclic graph, Johnson's Algorithm for sparse graphs; Flow networks and Ford Fulkerson method; Maximum bipartite matching. Solving systems of Linear Equations. Lab programs: 1. Write a program to find single-source shortest path in a weighted directed graphusing Bellman-Ford algorithm. 2. Write a program to find all-pairs shortest path using Johnson's algorithm for sparsegraphs. 3. Write a program to implement Ford-Fulkerson algorithm for solving maximum-flowproblem. 4. Write a program to solve linear equations using LU decomposition method.	**8 + 8 Hours**
UNIT – 4	
String-Matching Algorithms: Naive string Matching; Rabin -Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm. **NP-Completeness**: NP- completeness problem- Clique problem, Vertex cover problem, Subset sum problem and Hamiltonian cycle problem Lab programs: 1. Write a program to perform string matching using Rabin-Karp algorithm. 2. Write a program to perform string matching using Knuth-Morris-Pratt algorithm.	**8 + 6 Hours**
UNIT – 5	
Approximation algorithms: Introduction, the vertex cover problem, traveling salesmen problem, Set covering problem, Randomization and linear programming, subset problem.	**7 Hours**

Course outcomes: The students should be able to:

- Apply the knowledge of mathematics for algorithm analysis and apply them for specific instances.
- Analyse, compare and demonstrate the working of advanced data structures and analysethe time complexity of each operation over them.
- Apply the knowledge of engineering fundamentals such as graphs, matrix, linear equations, to solve real world problems.
- Develop solutions for real world problems on string matching
- Apply the knowledge of approximation to solve NP-completeness problems
- Do a survey and prepare a substantial report on current research in selected topics of algorithms.

Textbooks:

ADVANCED OPERATING SYSTEMS
(Effective from the academic year 2022 -2023)

SEMESTER – I			
Subject Code	N1SCS03	CIE Marks	50
Number of Lecture Hours/Week	2:2:0	SEE Marks	50
Total Number of Lecture Hours Tutorial Hours	26 26	Exam Hours	03

CREDITS – 03

Course objectives: This course will enable students to

1. To understand and analyse the Mutual Exclusion, Deadlocks, Resource management, and Agreement, Scheduling algorithms with respect to Distributed Operating Systems.
2. To understand and analyze various concurrency control algorithms used in Distributed Operating Systems.

UNIT – 1	Teaching Hours
Distributed Operating Systems: Architectures of Distributed Systems - System Architecture types - issues in distributed operating systems - communication networks . [4.1- 4.6] **Theoretical Foundations** – Introduction, Inherent limitations of a distributed system – Lamport's logical clocks - Vector clocks . [5.1 -5.4] **Self Study** :Global state - Cuts of a distributed computation - Termination detection. [5.6, 5.7,5.8] **Tutorial Topics** : - Communication primitives, The Message Passing Model, Remote Procedure Calls, Design Issues in RPC. Casual ordering of messages [4.7,5.5]	**5 +5**
UNIT– 2	
Distributed Mutual Exclusion - Introduction - the classification of mutual exclusion algorithms, Preliminaries, Simple solution, Non Token based algorithms :Lamport's Algorithm, Ricart Agrawala Algorithm.[6.1-6.7] **Distributed Deadlock Detection** -Introduction - deadlock handling strategies in distributed systems - issues in deadlock detection and resolution - control organizations for distributed deadlock detection - centralized and distributed deadlock detection algorithms .[7.1-7.7] **Self Study:** Maekawa's Algorithm.[6.8] **Tutorial Topics** : Token Based Algorithms: Suzuki Kasami's Broadcast Algorithm, Singhal's Heuristic Algorithm, Raymond's Time Based Algorithm, hierarchical deadlock detection algorithms.[6.10-6.13][7.8]	**6+6**
UNIT – 3	
Agreement protocols - introduction-the system model, a classification ofagreement problems, solutions to the Byzantine agreement problem.[8.1-8.4] **Distributed resource management: Distributed File Systems**- introduction-architecture, Design issues[9.1,9.2,9.4] **Self Study** : applications of agreement algorithms, log structured file systems.[8.5] **Tutorial Topics:** Mechanism for building distributed file systems, Mounting , Caching , Hints, Bulk Data Transfer, Encryption -[9.3]	**5+5**

UNIT – 4	
Distributed Scheduling - introduction - issues in load distributing - components of a load distributing algorithm - stability - load distributing algorithm - performance comparison - selecting a suitable load sharing algorithm - requirements for load distributing -task migration and associated issues[11.1-11.5, 11.8,11.9,11.11,11.12] **Tutorial Topics** : Sender initiated algorithms, Receiver initiated algorithms, Symmetrically initiated algorithms and adaptive initiated algorithms.[11.6]	**5+5**
UNIT – 5	
Concurrency control : theoretical aspects - introduction, Database systems-a concurrency control model of database systems- the problem of concurrency control **[19**.1 – 19.4] **Concurrency control algorithms** - Introduction, basic synchronization primitives, Lock based algorithms- Timestamp based algorithms.[20.1-20.4] **Tutorial Topics** : Optimistic algorithms - Kung-Robinson Algorithm, Concurrency control algorithms.- Completely Centralized Algorithm, Centralized Locking algorithm, Primary-Site Locking Algorithm , Two-Phase Locking Algorithm[20.5,20.6]	**5+5**
Course outcomes: The students should be able to:	
CO1. Illustrate the basic concepts of DOS and its architecture. **CO2.** Analyse and discuss the features of logical and vector clocks used in distributed systems **CO3:** Analyse and discuss deadlock handling strategies in distributed systems. **CO4**: Analyse and discuss load distributing algorithm mechanisms in distributed systems. **CO5:** Analyse concurrency control algorithms**.**

CLOUD COMPUTING
(Effective from the academic year 2022-2023)
SEMESTER I

Subject Code	N1SCS04	CIE Marks	50
Number of Lecture Hours/Week	2L+2T	SEE Marks	50
Total Number of Lecture Hours Tutorial Hours	26 26	Exam Hours	03

CREDITS – 03

Course objectives:

- Providing good understanding of cloud computing and a systematic knowledge of the fundamental technologies of cloud computing architecture, applications, virtualization, storage management and security.
- Providing a foundation to develop cloud based applications

UNIT – 1	**Teaching Hours**
Introduction: Network-centric computing and network-centric content, Peer-to-peer systems, Cloud computing: an old idea whose time has come, Cloud computing delivery models and services, Ethical issues in cloud computing, Cloud vulnerabilities, Major challenges faced by cloud computing,	**6L Hours**
Tutorial topics: Cloud Infrastructure: Cloud computing at Amazon, Cloud computing: the Google perspective, *Microsoft Windows Azure* and online services, Open-source software platforms for private clouds, Cloud storage diversity and vendor lock-in, Cloud computing interoperability: the Intercloud, Service- and compliance-level agreements	**6T Hours**
UNIT – 2	
Cloud Computing: Applications and Paradigms: Challenges for cloud computing, Existing cloud applications and new application opportunities, The *MapReduce* programming model, Clouds for science and engineering,	**5L Hours**
Tutorial topics: Clouds for science and engineering, High-performance computing on a cloud, Cloud computing for biology research, Social computing, digital content, and cloud computing.	**5T Hours**
UNIT – 3	
Cloud Resource Virtualization: Virtualization, Layering and virtualization, Virtual machine monitors, Virtual machines, Performance and security isolation, Full virtualization and Para virtualization. Hardware support system for virtualization	**5L Hours**
Tutorial topics: Case study: *Xen*, A VMM Based on Paravirtualization, A Performance comparison of virtualization, The darker side of virtualization.	**5T Hours**
UNIT – 4	
Storage Systems: The evolution of storage technology, Storage models, file systems, and databases, Distributed file systems: The precursors, General Parallel File System, Google File System	**5L Hours**
Tutorial topics: Apache Hadoop, Locks and Chubby: A locking service, Transaction processing and NoSQL databases, BigTable	**5T Hours**
UNIT – 5	
Cloud Security: Cloud security risks, Security: The top concern for cloud users, Privacy and privacy impact assessment, Trust, operating system security, Virtual machine security,	**5L Hours**
Tutorial topics: Security of virtualization, Security risks posed by shared images, Security risks posed by a management OS.	**5T Hours**

Course outcomes (COs): *At the end of the course the student will be able to:*

- Describe various cloud computing models, services, ethical issues and discriminate the Services provided by cloud service providers.
- Analyze usage of cloud computing technology for various applications.
- Describe virtualization technologies and its usage
- Compare and contrast various file systems used by cloud service providers and discuss security challenges in cloud computing

Reference Books:

2. Anthony T. Velte, Toby J. Velte, and Robert Elsenpeter, “Cloud Computing – A practical Approach”, TMH.
3. Enterprise Cloud Computing Technology, Architecture, Applications, Gautam Shroff, Cambridge University Press, 2010.
4. Cloud Computing Implementation, Management, and Security: John W. Rittinghouse , James F. Ransome, CRC Press, 2010.

Research Methodology and IPR (Effective from the academic year 2022-2023) SEMESTER – I			
Subject Code	N1PGRM	CIE Marks	50
Number of Lecture Hours/Week	3:0:0	SEE Marks	50
Total Number of Lecture Hours	39	Exam Hours	03
CREDITS – 03			
Course objectives:			
CLO1. Identify the area of research and set the Objectives. CLO2. Define the research problem and carryout literature CLO3. Develop Research design and frame work for experimentation CLO4.Interpret Sampling design , Measurement and scaling techniques in RM CLO5. Develop data collection and hypothesis testing procedure CLO6. Interpret and write research and technical report.			
UNIT –1			**Teaching Hours**
Meaning, Objectives and Characteristics of research - Research methods Vs Methodology -Types of research - Descriptive Vs. Analytical, Applied Vs. Fundamental, Quantitative Vs. Qualitative, Conceptual Vs. Empirical - Research process - Criteria of good research - Developing a research plan			**8 Hours**
UNIT – 2			
Defining the research problem - Selecting the problem - Necessity of defining the problem -Techniques involved in defining the problem - Importance of literature review in defining a problem- Survey of literature - Primary and secondary sources Identifying gap areas from literature review.			**8 Hours**
UNIT – 3			
Research design and methods Research design Basic Principles- Need of research design Features of good design Important concepts relating to research design - Developing a research plan - Exploration, Description, Diagnosis, and Experimentation - Determining experimental and sample designs			**8 Hours**
UNIT – 4			
Sampling design - Steps in sampling design - Characteristics of a good sample design - Types of sample designs - Measurement and scaling techniques - Measurement In Research, Measurement Scales, Sources Of Error In Measurement, Tests Of Sound Measurement, Technique Of Developing Measurement Tools Methods of data collection, Collection of primary data - Data collection instruments Testing of hypotheses - Basic concepts - Procedure for hypotheses testing flow diagram for hypotheses.			**8 Hours**
UNIT – 5			
Interpretation and report writing - Different steps in the preparation - Layout, structure and language of the report - Illustrations and tables - Types of report - Technical reports and thesis. IPRs- Invention and Creativity- Intellectual Property-Importance and Protection of Intellectual Property Rights (IPRs) - A brief summary of Patents, Copyrights, Trademarks, Industrial Designs.			**7 Hours**

Course outcomes (COs): *At the end of the course the student will be able to:*

CO1: Identify research categories and develop research plan.
CO2: Conduct and investigate the research problem and carryout literature review.
CO3: Investigate and Develop Research design and frame work for experimentation.
CO4: Analyse and Develop Measurement and scaling techniques in their research & hypothesis testing procedure
CO5: Plan and develop systematically the research and technical report.

STATISTICAL ANALYSIS USING R & PYTHON LABORATORY

(Effective from the academic year 2022 -2023)

SEMESTER – I

Subject Code	N1SCSL1	IA Marks	50
Number of Lecture Hours/Week(L:T:P)	1:0:2	Exam Marks	50
Total Numbers of Lab session Practical Hours	13 26	Exam Hours	03

Credits – 2

Course objectives:

1. To understand the concept of statistical learning where Statistical learning refers to a set of tools for modeling and understanding complex datasets.
2. To Manipulate data within R and to create simple graphs and charts used in introductory statistics
3. To analyse and simulate any given data set using R or Python. To Synthesize and Demonstrate the Marketing, Management and Business statistical Model through open ended project

Sl. no.	Experiments
	CYCLE -1 (Basics of R programming)
1	Introduction to R Programming
2	Getting Used to R Programming: Describing Data , Viewing and Manipulating Data – sampling, deriving confidence intervals etc.
3	Getting Used to R Programming: Plotting Data , Reading in Your Own Data – program to do preliminary data screening
	CYCLE -2 (Basic Analysis Techniques)
4	program to do Statistical hypothesis generation and testing
5	program to perform Analysis of variance
6	program to derive Correlation analysis
	CYCLE -3 (Regression Analysis)
7	Consider any data set and simulate the data set in order to obtain. i) The linear regression. (plot the linear and non-linear model) ii) Multiple Linear Regression. iii) Non-linear Transformations of the Predictors. iv) Qualitative predictors. Also show the mean and standard deviation of each quantitative predictor
8	Exercise for Logistic Regression, LDA, QDA, and KNN : i) Consider the stock market data set. Transform all of the elements for which the predicted probability of a market increase exceeds 0.5. Given predictions, produce a confusion matrix in order to determine how many observations were correctly or incorrectly classified. Suggest a possible trading strategy of buying on days when the model predicts an increasing market, and avoiding trades on days when a decrease is predicted. **ii)** Perform LDA in stock market set (use MASS library) and analyze the posterior probability output. **iii)** Fit a QDA model to the stock market data and analyze the QDA predictions. Perform KNN using knn() function and predict the market's movement. Which of these methods appears to provide the best results on this data?
9	Consider an example to predict the probability of `default` using `income` and `balance` on the `Default` data set. Estimate the test error of this logistic regression model using the validation set approach. (Do not forget to set a random seed before beginning your analysis.) a) Fit a logistic regression model that uses `income` and `balance` to predict `default`. b) Using the validation set approach, estimate the test error of this model. In order to do this, you must perform the following steps: i) Split the sample set into a training set and a validation set ii) Fit a multiple logistic regression model using only the training observations.

	iii) Obtain a prediction of default status for each individual in the validation set by computing the posterior probability of default for that individual, and classifying the individual to the `default` category if the posterior probability is greater than threshold value (assume the value – e.g., 0.5) iv) Compute the validation set error, which is the fraction of the observations in the validation set that are misclassified. c) Repeat the process in (b) three times, using three different splits of the observations into a training set and a validation set. Comment on the results obtained. d) Now consider a logistic regression model that predicts the probability of `default` using `income`, `balance`, and a dummy variable for `student. Estimate the test error for this model using the validation set approach. Comment on whether or not including a dummy variable for `student` leads to a reduction in the test error rate
	CYCLE -4 (Open Ended Project)
10	Sample project to demonstrate Bi variate and multi variate data
11	Sample project to demonstrate data classification and tabulation
12	Sample project to demonstrate finance management or business statistics

Course outcomes:

On successful completion of this course, students will be able to:

At the end of the course the student will be able to:

CO1: To implement each of the statistical learning methods using the popular statistical software package R, python etc.

CO2: To use statistical learning tools to analyze the data

CO3: To Synthesize and Demonstrate the Marketing, Management and Business statistical Model through open ended project.

Conduct of Practical Examination:

1. All laboratory experiments are to be included for practical examination.
2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
3. Students can pick one experiment from the questions lot prepared by the examiners.
4. Change of experiment is allowed only once and 20% Marks is to be deducted.

SOCIAL NETWORK ANALYSIS

(Effective from the academic year 2022 -2023)

SEMESTER – I

Subject Code	N1SCSE11	CIE Marks	50
Number of Lecture Hours/Week	2:2:0	SEE Marks	50
Total Number of Lecture Hours Tutorial Hours	26 26	Exam Hours	03

CREDITS – 03

Course objectives: This course will enable students to

1. To understand the components of the social network.
2. To model and visualize the social network.
3. To mine the users in the social network.
4. To understand the evolution of the social network.
5. To know the applications in real time systems

UNIT – 1	**Teaching Hours**
Social Network Analysis : Introduction to Web - Limitations of current Web – Development of Semantic Web – Emergence of the Social Web – Statistical Properties of Social Networks -Network analysis **Tutorial Topics** : Development of Social Network Analysis - Key concepts and measures in network analysis	**5 +5**
UNIT– 2	
MODELING AND VISUALIZATION Visualizing Online Social Networks - A Taxonomy of Visualizations - Graph Representation - Centrality- Clustering - Node-Edge Diagrams - Visualizing Social Networks with Matrix- Based Representations- Node-Link Diagrams **Tutorial Topics** : Use of Hadoop and Map Reduce - Ontological representation of social individuals and relationships.	**6+6**
UNIT – 3	
MINING COMMUNITIES Aggregating and reasoning with social network data, Advanced Representations – Extracting evolution of Web Community from a Series of Web Archive. **Tutorial Topics:** Detecting Communities in Social Networks - Evaluating Communities	**5+5**

UNIT – 4	
EVOLUTION Evolution in Social Networks – Framework - Tracing Smoothly Evolving Communities - Models and Algorithms for Social Influence Analysis - Influence Related Statistics - Social Similarity and Influence - Influence Maximization in Viral Marketing **Tutorial Topics** : Algorithms and Systems for Expert Location in Social Networks - Expert Location without Graph Constraints - with Score Propagation	**5+5**
UNIT – 5	
APPLICATIONS A Learning Based Approach for Real Time Emotion Classification of Tweets, A New Linguistic Approach to Assess the Opinion of Users in Social Network Environments, Explaining Scientific and Technical Emergence Forecasting. **Tutorial Topics** : Social Network Analysis for Biometric Template Protection	**5+5**

Course outcomes: The students should be able to:

CO1: Work on the internal components of the social network

CO2: Model and visualize the social network

CO3: Analyse the behaviour of the users in the social network

CO4: Predict the possible next outcome of the social network

CO5: Apply social network in real time applications

Textbooks:

Sl No	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
Textbook				
1	Computational Social Network Analysis: Trends, Tools and Research Advances	Ajith Abraham, Aboul Ella Hassanien, Václav Snášel	Springer	2012
2	Handbook of Social Network Technologies and Applications	Borko Furht	Springer,	1 st edition 2011

BIG DATA & DATA ANALYTICS
(Effective from the academic year 2022-2023)
PROFESSIONAL ELECTIVE 1

Subject Code	N1SCSE12	CIE Marks	50
Teaching Hours/Week (L-T-P)	2-0-2	SEE Marks	50
Total Number of Lecture Hours Practical Hours	26 26	Exam Hours	03

CREDITS – 03

Course objectives: :

- To acquire the concepts of Big Data and apply the same to real world problems (Application).
- To analyse Big data technologies in comparison with RDBMS for storing data (Application ,Analysis)
- To develop map reduce applications (Application, Syntheses).
- To provide hands on experience with Hadoop, Hbase, Hive , R and Spark (Application)
- To perform social media and text analytics using R on typical business applications (Application, Analysis, Synthesis, Evaluation)
- To research, prepare reports and present latest technologies used in Big Data Analytics Domain. (Analysis, Synthesis, Evaluation)..

UNIT – 1	**Teaching Hours**
Getting an Overview of Big Data: What is Big Data? History of Data, Management – Evolution of Big Data, Structuring Big Data, Types of Data, Elements of Big Data,Volume, Velocity, Variety, Veracity, Big Data Analytics, Careers in Big data, Advantages of Big Data Analytics, Future of Big Data. **Exploring the Use of Big Data in Business Context:** Use of Big Data in Social Networking, Business Intelligence, Marketing, Product Design and Development, **Introducing Technologies for Handling Big Data:** Distributed and Parallel Computing for Big Data,How data models and computing models are different, How does Hadoop Function? Cloud Computing and Big Data, Cloud Services for Big Data, In-Memory Computing Technology for Big Data	**05 Hours**
Practicals : **Use of Big Data in Preventing Fraudulent Activities, Preventing Fraud Using Big Data Analytics, Use of Big Data in Retail Industry, Use of RFID Data in Retail. Introducing Hadoop, HDFS and MapReduce.**	**04 Hours**
UNIT– 2	
Understanding Hadoop Ecosystem: Hadoop Ecosystem, Hadoop Distributed File System, HDFS Architecture, Concepts of Blocks in HDFS Architecture, NameNodes andDataNodes, The command line interface, Using HDFS Files , Hadoop specific File System Files, HDFS commands, The org.apache.hadoop.io.package, HDFS High Availability , Features of HDFS, MapReduce, Hadoop Yarn, Introducing HBase, HBase Architecture, Regions, Storing Bigdata with HBase, Interacting with the Hadoop Ecosystem, HBase in Operation – Programming with HBase, Combining HBase and HDFS, REST and Thrift, Data Integrity in HDFS, Features of HBase ,hive, Pig and Pig Latin, Sqoop, Zookeeper, Flume, Oozie **Understanding Big Data Technology Foundations:** Exploring the Big Data Stack, Data Sources Layer, Ingestion Layer, Storage Layer, Physical Infrastructure Layer, Platform Management Layer, Security Layer, Monitoring Layer, Analytics Engine, Visualization Layer, Big Data Applications, Virtualization and Big Data, Virtualization Approaches, Server virtualization, Application Virtualization, Network Virtualization, Processor and Memory Virtualization, Data and Storage Virtualization, Managing Virtualization with Hypervisor. Implementing Virtualization to work with Big data.	**6 Hours**

No SQL Data Management: Introduction, Types of NoSQL Data Models, Schema-less Databases, Materialised Views, Distribution Models, Sharding. **Storing Data in Databases and Data Warehouses:** RDBMS and Big Data, CAP Theorem, Issues with the Relational Model, Non-Relational Database, Issues with the Non-Relational Model, Polyglot Persistence, Integrating Big Data with Traditional Data Warehouses, Big Data Analysis and Data Warehouse, Changing Deployment Models in Big Data Era **Practicals : Demo and Working with Hadoop and NoSQL**	**6 Hours**
UNIT – 3	
Understanding MapReduce Fundamentals and HBase: The MapReduce Framework. Exploring the Features of Map Reduce. Working of MapReduce. Exploring Map and Reduce Functions. Techniques to Optimize MapReduce Jobs. Hardware/Network Topology, Synchronization, File System. Uses of MapReduce. **Exploring Hive:** Introducing Hive, Getting Started with Hive ,Hive services, Hive Variables, Hive Properties, Hive Queries, Data Types in Hive, Built-In Functions in Hive, Hive DDL, Creating Databases, Viewing a Database, Dropping a Database, Altering Databases, Creating Tables, Creating a Table Using the Existing Schema, Dropping Tables, Altering Tables, Using Hive DDL Statements, Data Manipulation in Hive, LoadingFiles into Tables, Inserting Data into Tables, Update in Hive, Delete in Hive, Using Hive DML Statements, Data Retrieval Queries, Using the SELECT Command, Using the WHERE Clause, Using the GROUP BY Clause, Using the HAVING Clause, Using the LIMIT Clause, Executing HiveQL Queries, Using JOINS in Hive, Inner Joins, Outer Joins,Cartesian Product Joins, Map-Side Joins, Joining Tables **Using Oozie:** Introducing Oozie, Main Functional Components of Oozie, Benefit of Oozie, Installing and Configuring Oozie, Understanding the Oozie Workflow, Execution of Asynchronous Actions in Oozie, Implementing the Oozie Workflow, Oozie Recovery Capabilities, Oozie Workflow Life Cycle, Oozie Coordinator, Types of Oozie Coordinator, Oozie Coordinator Lifecycle Operations, Oozie Bundle, Oozie Parameterization with EL, Workflow Functions, Coordinator Functions, Bundle Functions, EL Functions, Oozie Job Execution Model, Accessing Oozie, Oozie SLA, Event Status, SLA Status ,Oozie Activity, The Oozie SLA Subsystem, SLA Language Schema **Practicals : Demo and Working with Map-Reduce, HBase, Hive and oozie**	**5 Hours** **6 Hours**
UNIT – 4	
Introduction to Apache Spark: What Spark brings to the table, Spark components, Spark program flow, Spark ecosystem, Downloading and starting the spark-in-action virtual machine **Spark fundamentals:** Exploring the spark-in-action VM, Managing multiple Spark versions, Getting to know Spark's command line interface (spark-shell), Playing with simple examples in spark-shell, Exploring RDD actions and transformations and double functions **The Spark API in depth:** Working with key-value pairs, Data partitioning and shuffling, Grouping, sorting, and joining data, Using accumulators and broadcast variables **Practicals : Demo and Working with Spark**	**5 Hours** **5 Hours**
UNIT – 5	
Understanding Analytics and Big Data: Comparing Reporting and Analysis, Types of Analytics, Points to consider during Analytics, Developing an Analytic Team, Understanding Text Analytics **Analytical Approaches and Tools to Analyse Data:**Analytical Approaches, History of Analytical Tools, Comparison of various Analytical Tools **Exploring R:** Basic Features, Expressions, functions, vectors, objects, handling data,	**5 Hours**

creating plots, Reading datasets and exporting Data from R, Performing Graphical Analysis in R **SOCIAL MEDIA ANALYTICS AND TEXT :** Introduction to Social Media, Key Elements of Social Media, Understanding Text Mining Process, Sentiment Analysis, Performing Social Media Analytics and Opinion Mining on Tweets, Online Social Media Analysis. **Practicals : Demo and working with R and Analytical tools**	**5 hours**

Course outcomes: The students should be able to:

- Apply the concepts of Big Data to real world problems.
- Explore Big data technologies for storing data.
- Write map reduce programs.
- Perform social media and text analytics using R on chosen applications
- Work on Big Data technologies like Hadoop, Hbase. Hive R and Spark
- Do literature survey on emerging Big Data Technologies, prepare technical reports with relevant results and present before audience convincingly.

Textbooks:

1	D T Editorial Services,	BIG DATA Black Book, Dreamtech press 2016 Edition
2	PetarZečević and Marko Bonaći,	SPARK IN ACTION, Manning Publications, Nov 2016 Edition

Reference Books:

1	Pete Warden	Big Data Glossary, O'Reilly, 2011

DATA SCIENCE
(Effective from the academic year 2022 -2023)
PROFESSIONAL ELECTIVE 1

Subject Code	N1SCSE13	CIE Marks	50
Teaching Hours/Week (L-T-P)	2:0:2	SEE Marks	50
Total Number of Lecture Hours Practical Hours	26 26	Exam Hours	03

CREDITS – 03

Module-1 **5+5 Hrs**

Introduction: What is Data Science? Big Data and Data Science hype – and getting past the hype, Why now? – Datafication, Current landscape of perspectives, Skill sets. Needed Statistical Inference: Populations and samples, Statistical modelling, probability distributions, fitting a model,

Practicals :

Introduction to R – Working with R

Module-2 **5+5 Hrs**

Exploratory Data Analysis and the Data Science Process: Basic tools (plots, graphs and summary statistics) of EDA, Philosophy of EDA,The Data Science Process, Case Study: RealDirect (online real estate firm).

Practicals :

Working on Three Basic Machine Learning Algorithms: Linear Regression, k-Nearest Neighbours (k-NN), k-means

Module-3 **5+5 Hrs**

One More Machine Learning Algorithm and Usage in Applications: Motivating application:Filtering

Spam, Why Linear Regression and k-NN are poor choices for Filtering Spam, Naive Bayes andwhy it works for Filtering Spam, Data Wrangling: APIs and other tools for scrapping the Web

Practicals :

Working on Naive Bayes classifier and tools for scrapping the web

Module-4 **6+5 Hrs**

Feature Generation and Feature Selection (Extracting Meaning from Data): Motivating application: user (customer) retention. Feature Generation (brainstorming, role of domain expertise, and place for imagination)

Recommendation Systems: Building a User-Facing Data Product, Algorithmic ingredients of a Recommendation Engine, Dimensionality Reduction, Singular Value Decomposition, Principal Component Analysis,

Practicals :

Feature Selection algorithms. Filters; Wrappers; DecisionTrees; Random Forests.

Exercise: build your own recommendation system

Module-5 **5+6 Hrs**

Mining Social-Network Graphs: Social networks as graphs, Clustering of graphs, Direct discovery of communities in graphs, Partitioning of graphs, Neighbourhood properties in graphs, Data Visualization: Basic principles, ideas and tools for data visualization. Data Science and Ethical Issues, Discussions on privacy, security, ethics, Next-generation data scientists

Practicals :

Working on Clustering of graphs and Data visualization

Course outcomes:

At the end of the course the student will be able to:

- Define data science and its fundamentals
- Demonstrate the process in data science
- Explain machine learning algorithms necessary for data sciences
- Illustrate the process of feature selection and analysis of data analysis algorithms
- Visualize the data and follow of ethics

Question paper pattern:

The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to60.

- The question paper will have ten full questions carrying equal marks.
- Each full question is for 20 marks.
- There will be two full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from eachmodule.

Textbook/ Textbooks

Note: **IPCC**-Integrated Professional Core Courses, **PCC**: Professional Core Course, **PEC:** Professional Elective Course, **OEC**- Open Elective Course
MPS- Mini Project with Seminar, **PCCL**-Professional Core Course Lab,
AUD/AEC –Audit Course / Ability Enhancement Course (A pass in AUD/AEC is mandatory for the award of the degree)
L-Lecture, **P**-Practical, **T/SDA**-Tutorial / Skill Development Activities (Hours are for Interaction between faculty and students)

Professional Elective 2		Professional Elective 3		Open Elective 1	
N2SCSE22	Blockchain Technology	N2SCSE32	Theoretical Foundations of Computer Science	N2OE01	
N2SCSE123	Mobile Computing	N2SCSE33	Advanced Database Management	N2OE02	
N2SCSE24	Deep Learning	N2SCSE34	Mobile Application Development	N2OE03	

1. **Mini Project with Seminar:** This may be hands-on practice, survey report, data collection and analysis, coding, mobile app development, field visit and report preparation, modelling of system, simulation, analysing and authenticating, case studies, etc.

   CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide, if any, and a senior faculty of the department. Students can present the seminar based on the completed mini-project. Participation in the seminar by all postgraduate students of the program shall be mandatory.

   The CIE marks awarded for Mini-Project work and Seminar, shall be based on the evaluation of Mini Project work and Report, Presentation skill and performance in Question and Answer session in the ratio 50:25:25. Mini-Project with Seminar shall be considered as a head of passing and shall be considered for vertical progression as well as for the award of degree. Those, who do not take-up/complete the Mini Project and Seminar shall be declared as fail in that course and have to complete the same during the subsequent semester. **There is no SEE for this course.**

2. **Internship:** All the students shall have to undergo a mandatory internship of **06 weeks** during the vacation of II and III semesters. A University examination shall be conducted during III semester and the prescribed internship credit shall be counted in the same semester. The internship shall be considered as a head of passing and shall be considered for vertical progression as well as for the award of degree. Those, who do not take-up/complete the internship shall be declared as fail in the internship course and have to complete the same during the subsequent University examination after satisfying the internship requirements.

ADVANCES IN INTERNET OF THINGS (Effective from the academic year 2022 -2023) SEMESTER II			
Subject Code	N2SCS01	CIE Marks	50
Number of Lecture Hours/Week(L:T:P)	3:0:2	SEE Marks	50
Total Number of Lecture Hours Practical Hours	39 26	Exam Hours	03
CREDITS – 04			
Course objectives: : (Used Blooms Taxonomy) This course will enable students			
• Develop schemes for the applications of IOT in real time scenarios • Manage the Internet resources • Model the Internet of things to business • Understand the practical knowledge through different case studies • Understand data sets received through IoT devices and tools used for analysis			
UNIT – 1			**Teaching Hours**
What is The Internet of Things? Overview and Motivations, Examples of Applications, IPV6 Role, Basic Nodal Capabilities. Application Examples-Overview, Smart Metering/Advanced Metering Infrastructure- Health/Body Area Networks, Smart Cards, Tracking **Experiment - Cycle 1** Identify sensors, controllers and analytics and Install Packages – Set up Environment using Raspberry Pi/Arduino, Build simple IoT Applications such blink LEDs, Control Switches, IR motion sensor controlling etc.			**10 Hours** **5 Hours**
UNIT– 2			
Fundamental IoT Mechanism and Key Technologies-Identification of IoT Object and Services, Structural Aspects of the IoT, Key IoT Technologies. Constrained Application Protocol, Representational State Transfer, ETSI M2M, CENELEC, IETF Ipv6 Over Low power WPAN, Zigbee IP(ZIP), IPSO **Experiment – Cycle 2** Aquarium control, Environment pollution reading app, street light control, dustbin control etc			**10 Hours** **5 Hours**
UNIT – 3			
Layer ½ Connectivity: Wireless Technologies for the IoT-WPAN Technologies for IoT/M2M, Cellular and Mobile Network Technologies for IoT/M2M, Self Study Components: Layer 3 Connectivity: Ipv6 Technologies for the IoT, MQTT protocols, AMQP protocols, Web 3.0 technologies **Experiment – Cycle 3** SCADA environment set up, Run and deploy Applications using SCADA, wearable device applications, Tracking using Google Maps etc. Use ESP32 with MODBUS SCADA			**9 Hours** **5 Hours**
UNIT – 4			
Case Studies illustrating IoT Design-Introduction, Home Automation, Environment, Agriculture, Cities Data Analytics for IoT – Introduction (Text Book 2) Self Study Component: Productivity Applications			**5 Hours**
UNIT – 5			
Apache Hadoop , Using Hadoop MapReduce for Batch Data Analysis, Apache Spark (Text Book 2) Self Study Component: Structural Health Monitoring Case Study. **Experiment – Cycle 4 (Open Ended Project)** Develop IoT Application for any of the real timeapplications such as health care, smart city, smart factory, smart home, vehicle to vehicle, human-to-human, human-to-machine, machine-to-machine, agriculture, 4G-5G technology based, LoRAWAN/WPAN technologies and apply data analytics. Integrate any IoT platforms such as Hadoop, OPC Foundation (UA-IIoT-			**5 Hours** **11 Hours**

starter kit), Azure Industrial IoT, WhaleShark etc	

Course outcomes: The students will be able to:

CO1. Understand the basics of IoT, frameworks and IoT applications

CO2. Apply and Analyze IoT Technologies offered by Internet Routing protocols and M2M **CO3. Apply and Analyze** capabilities offered by wireless technologies and IP Version 6 (IPv6)**CO4. Design** and **develop** IoT application through Case study.

CO5. Analyse the IoT data Analytic framework using Apache, SCADA, UA IIoT tools etc.

CO6. Do Literature **Survey** on IoT technologies through various case study of real time applications and prepare technical reports and present before audience convincingly. **Develop** solutions for the Open Ended topics.

SOFTWARE ARCHITECTURE AND PROCESSES
(Effective from the academic year 2022 -2023)
SEMESTER – II

Subject Code	N2SCS02	CIE Marks	50
Teaching Hours/Week (L-T-P)	3-0-2	SEE Marks	50
Total Number of Lecture Hours Tutorial Hours	39 26	Exam Hours	3

CREDITS – 4

Course objectives:

1. Identify the suitable agile process model that leads to timely, economical, incremental delivery of the software to be built .
2. Choose the appropriate guiding principles for all the activities of the software construction
3. Identify the risks associated with the process, product
4. . Analyze the software quality attributes to be considered for the product being developed
5. Demonstrate the entities of the software configuration management
6. Plan a realistic schedule for the completion of the project

UNIT – 1	**Teaching Hours**
AGILE DEVELOPMENT:What Is Agility? Agility and the Cost of Change ,What Is an Agile Process? ,Agility Principles ,The Politics of Agile Development ,Human Factors ,Extreme Programming (XP),XP Values ,The XP Process Industrial XP ,The XP Debate ,Other Agile Process Models ,Adaptive Software Development (ASD) ,Scrum ,Dynamic Systems Development Method (DSDM). **PRINCIPLES THAT GUIDE PRACTICE** :Software Engineering Knowledge, Principles That Guide Process , Principles That Guide Practice ,Communication Principles, Planning Principles , Modeling Principles , Construction Principles , Deployment Principles **QUALITY MANAGEMENT CONCEPTS:** What Is Quality? , Software Quality , Garvin's Quality Dimensions , McCall's Quality Factors , ISO 9126 Quality Factors , Targeted Quality Factors , The Transition to a Quantitative View , The Software Quality Dilemma , ―Good Enough‖ Software , The Cost of Quality , Risks , Negligence and Liability , Quality and Security , The Impact of Management Actions , Achieving Software Quality , Software Engineering Methods, Project management techniques, Quality control, Quality assurance. **Tutorial class:** Explore Tools (Examples on collaborative and communication and project management tools) for Agile Process, work practices	**8+2**
UNIT– 2	
FORMAL MODELING & VERIFICATION: The clean room strategy, functional specification, clean room design, clean room testing, formal methods concepts,. **REVIEW TECHNIQUES** : Cost Impact of Software Defects), Defect Amplification and Removal , Review Metrics and Their Use , Analyzing Metrics , Cost Effectiveness of Reviews , Reviews: A Formality Spectrum , Informal Reviews , Formal Technical Reviews , The Review Meeting , Review Reporting and Record Keeping , Review Guidelines **SOFTWARE QUALITY ASSURANCE** : Background Issues , Elements of Software Quality Assurance , SQA Tasks, Goals, and Metrics , SQA Tasks , Goals, Attributes, and Metrics , Formal Approaches to SQA, Statistical SoftwareQuality Assurance , Generic Example , Six Sigma for Software Engineering , Software Reliability , Measures of Reliability and Availability , Software Safety, **Tutorial class:** applying mathematical notation for formal specification, sample driven reviews The ISO 9000 Quality Standards , The SQA Plan	**8 + 4**

UNIT – 3	
SOFTWARE CONFIGURATION MANAGEMENT : Software Configuration Management , An SCM Scenario Elements of a Configuration Management System , Baselines , Software Configuration Items , The SCM Repository , The Role of the Repository, General Features and Content, SCM Features , The SCM Process , Identification of Objects in the Software Configuration , Version Control , Change Control , Configuration Audit , Status Reporting , Content Management ,Change Management , Version Control , Auditing and Reporting. **PRODUCT METRICS :** A Framework for Product Metrics , Measures, Metrics, and Indicators , The Challenge of Product Metrics , Measurement Principles , Goal-Oriented Software Measurement , The Attributes of Effective Software Metrics , Metrics for the Requirements Model , Function-Based Metrics , Metrics for Specification Quality , Metrics for the Design Model , Architectural Design Metrics , Metrics for Object-Oriented Design , Class-Oriented Metrics—The CK Metrics Suite , Class-Oriented Metrics—The MOOD Metrics Suite, OO Metrics Proposed by Lorenz and Kidd , Component-Level Design Metrics , Operation- Oriented Metrics , User Interface Design Metrics **PROJECT MANAGEMENT CONCEPTS :** The Management Spectrum, The People , The Product, The Process , The Project, People, The Stakeholders, Team Leaders , The Software Team, Agile Teams , Coordination and Communication Issues , The Product , Software Scope , Problem Decomposition, The Process, Melding the Product and the Process, Process Decomposition, The Project **Tutorial Class:** configuration management for web and mobile apps, Design Metrics for web and Mobile apps	**8+6**
UNIT – 4	
ESTIMATION FOR SOFTWARE PROJECTS : Observations on Estimation , The Project Planning Process , Software Scope and Feasibility , Resources, Human Resources , Reusable Software Resources , Environmental Resources , Software Project Estimation, Decomposition Techniques, Software Sizing , Problem-Based Estimation , , Process-Based Estimation , Estimation with Use Cases, Reconciling Estimates , Empirical Estimation Models , The Structure of Estimation Models , The COCOMO II Model . **PROJECT SCHEDULING :** Basic Concepts ,Project Scheduling , Basic Principles , The Relationship Between People and Effort , Effort Distribution, Defining a Task Set for the Software Project , A Task Set Example, Refinement ofSoftware Engineering Actions , Defining a Task Network ,Scheduling ,Earned Value Analysis **Tutorial class:** Examples of LOC-Based Estimation, FP-Based Estimation, Process- Based Estimation and Use-Case–Based Estimation	**8+7**
UNIT – 5	
MAINTENANCE AND REENGINEERING : Software Maintenance , Software Supportability , Reengineering , Business Process Reengineering , Business Processes , A BPR Model , Software Reengineering , A Software Reengineering Process Model ,Software Reengineering Activities , Reverse Engineering , Reverse Engineering to Understand Data , Reverse Engineering to Understand Processing , Reverse Engineering User Interfaces , Restructuring , Forward Engineering , Forward Engineering for Client-Server Architectures, The Economics of Reengineering. **SOFTWARE PROCESS IMPROVEMENT :** What is SPI? , Approaches to SPI, Maturity models, The SPI Process, Assessment and gap analysis, education and training, selection and justification, installation/migration, risk management for SPI, critical success factors **Tutorial class:** Code Restructuring, Data Restructuring, Forward Engineering for Object-Oriented Architectures, The CMMI, People CMMI	7+7

Course outcomes: The students should be able to:

- Identify the agile model to be adopted for the software development.
- Estimate the time, cost of project by employing the systematic project management concepts.
- Recognize the quality attributes to be adhered for the software to be constructed.
- Demonstrate the architecture validity for the candidate system.
- Identify the Scheduling tracking & control mechanism for the project.

Textbooks:

NATURAL LANGUAGE PROCESSING
(Effective from the academic year 2022 -2023)
SEMESTER - II

Course Code	**N2SCS03**	CIE Marks	50
Teaching Hours/Week (L:T:P)	(2:0:2)	SEE Marks	50
Total Number of Lecture Hours Practical Hours	26 26	Exam Hours	03

CREDITS – 03

Course objectives:

- To Understand the NLP techniques like parsing, POS-tagging and Word sense disambiguation.
- To explore language modeling techniques such as N-grams.
- To explore the applications of NLP such as Text categorization, Information retrieval etc.

Module-1 **5 L + 6 P**

Introduction to NLP: What is NLP? How does NLP work? Why NLP important? Techniques and methods of NLP, What is NLP used for? Benefits of NLP, Challenges of NLP, The evolution of NLP.

Morphology and Finite-State Transducers: Survey of English Morphology- Inflectional Morphology, Derivational Morphology, Finite-state morphological Parsing- The lexicon and Morphotactics, Morphological parsing with Finite-state Transducers.

Lab Component:

1. Explore on the following fundamentals:
   a) Tokenize a given text.
   b) Obtain the sentences of a text document.
   c) Remove stopwords in a text.
   d) Remove punctuations.
   e) Perform stemming and lemmatization.
2. Extract names, emails and phone numbers from a text.
3. Tokenize the tweets.

Module-2 **5 L + 6 P**

N-grams: Counting Words in Corpora, Simple UnSmoothed N-grams, Smoothing – Add-one smoothing.

Word Classes and Part-of-Speech Tagging: Part-of-Speech Tagging , Rule-based Part-of-speech Tagging, Transformation-Based Tagging.

Lab Component:

Tag the words in a given text using POS tagger.

Find the most common words in the text excluding stopwords.

Perform spell correction for a given text.

Module-3 **5 L + 6 P**

Context-Free Grammars for English: Constituency, Context-Free Rules and Trees, Sentence-Level Constructions, The Noun Phrase.

Parsing with Context-Free Grammars: Parsing as search, A Basic Top-Down parser, Problems with the Basic Top-Down parser, The Earley Algorithm.

Lab Component: Perform syntax parsing using various parsers.

Find the Similarity between words and documents.

Extract topic Keywords using LDA.

Module-4	**5 L + 6 P**
Lexical Semantics: Relations among Lexemes and Their Senses, WordNet. **Word sense Disambiguation and Information Retrieval:** Selectional Restriction based disambiguation, Robust word sense disambiguation. **Lab Component:** Classify a text as positive/negative sentiment. Find Synonyms from NLTK WordNet. Develop a gender classifier by using the existing classifiers.	
Module-5	**6 L + 2 P**
Information Retrieval- Vector space model, term weighting, term selection and creation, homonymy, polysemy, synonymy, improving user queries. **Text Categorization:** Decision Trees, Maximum Entropy Modeling, Perceptrons, k Nearest Neighbor Classification. **Lab Component:** Perform Information extraction over a given text that includes entity and relation extraction.	

Course outcomes:

At the end of the course the student will be able to:

1. Explain and Apply basic NLP techniques like parsing and POS-tagging to parse and tag sentences in English.
2. Describe the probabilistic language modeling technique like N-grams model and Apply the same to model the texts in English.
3. Discuss and apply NLP techniques to solve problems such as Text categorization, Word sense disambiguation and Information retrieval.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

Sl No.	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
Textbook/s				
1	Speech and Language Processing: An introduction to Natural Language Processing, Computational Linguistics and Speech Recognition Chapters: 3,6,8,9,10,16,17	Daniel Jurafsky and James H Martin	Prentice Hall	Low Price Edition, 2000
2	Foundations of Statistical Natural Language Processing Chapters: 16	Christopher D. Manning	MIT Press	1999
3	https://www.techtarget.com/searchenterpriseai/definition/natural-language-processing-NLP (Unit-1: Introduction to NLP)			
Reference Books				
1	Natural language processing with Python, Bird	Steven, Ewan Klein, and Edward Loper	O'Reilly Media, Inc.	1st Edition, 2009
2	Natural Language Processing and Information Retrieval	Tanveer Siddiqui, U.S. Tiwary	Oxford University Press	2008
3	Natural Language Understanding	James Allen	Benjamin/Cummings publishing company	1995

PARALLEL COMPUTING LABORATORY
(Effective from the academic year 2022 -2023)
SEMESTER – II

Course Code	N2SCSL1	CIE Marks	50
Teaching Hours/Week (L:T:P)	1:0:2	SEE Marks	50
Total Number of Lab Session Practical Hours	13 26	Exam Hours	03
CREDITS – 02			

Course objectives:

1. To program parallelly using Message Passing Paradigm
2. To program parallelly using Threading
3. To program parallelly using shared address space
4. To program for GPUs using CUDA

Conduct of Practical Examination:

1. All laboratory experiments to be conducted using MPI, OpenMP, CUDA.
2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
3. Students can pick one experiment from the questions lot prepared by the examiners.
4. Change of experiment is allowed only once and 20% of Marks is to be deducted.

EXPERIMENTS

1. Working with MPI
   a) sending and receiving messages
   b) Creating and using Cartesian Topology
   c) Collective communication and computation operations
2. Threaded Programming
   a) Mutual Exclusion
   b) Condition variables for 33odeling33zation
   c) Read-write locks
   d) Barriers
3. Working with OpenMP
   a) Pragma directives – parallel, reduction, for, sections, single, master, critical, atomic, barrier, ordered, flush
   b) Merging, nesting parallel of directives
   c) Scheduling
   d) Data handling
4. Working with CUDA
   a) Querying devices and using device properties
   b) Graphics Interoperability
   c) Zero copy host memory
   d) Portable pinned memory

Course outcomes:

On successful completion of this course, students will be able to:

1. To implement and debug program using Message Passing Interface (MPI)
2. To implement and debug threaded programs
3. To implement and debug program using OpenMP to use shared address space
4. To implement and debug programs on GPU

BLOCKCHAIN TECHNOLOGY (Effective from the academic year 2022 -2023) PROFESSIONAL ELECTIVE 2			
Subject Code	N2SCSE22	CIE Marks	50
Number of Lecture Hours/Week	2:0:2	SEE Marks	50
Total Number of Lecture Hours Tutorial Hours	26 26	Exam Hours	03
CREDITS – 03			

Course objectives: : (Used Blooms Taxonomy) This course will enable students

- To analyse and characterize basic concepts of distributed computing on which blockchain technology is based. Also, the concept of decentralization and its relationship with blockchain technology (Comprehension, Analysis).
- To analyse Various methods and platforms that can be used to decentralize a process or a system and to apply theoretical foundations of symmetric cryptography, which is necessary to understand that how various security services such as confidentiality and integrity
- To understand, apply and analyze concepts related to bitcoin cryptocurrency in detail. Also, the alternative coins (Analysis, Application)
- To learn the theoretical aspects of smart contracts such as design and architecture, Ethereum Virtual Machine, mining and supporting protocols, Ethereum Development Environment, and to develop Smart Contracts by setting up private networks for Ethereum smart contract development and programming (Synthesis)
- To learn how Hyperledger works and how they can be programmed, Alternative Blockchains and Scalability and Other Challenges (Comprehension, Application)
- To provide practical exposure by giving hands on experience Blockchain framework and to research on Blockchain real time applications- prepare a technical document and make a presentation (Analysis, Syntheses and Synthesis).

UNIT – 1	Teaching Hours
Blockchain 101: Distributed systems; History of blockchain – Electronic cash, Blockchain, Blockchain defined, Peer-to-peer, Distributed ledger, Cryptographically-secure, Append-only, Updateable via consensus, Generic elements of a blockchain, Benefits and limitations of blockchain, Tiers of blockchain technology, Features of a blockchain; Types of blockchain,Consensus, CAP theorem and blockchain. **Decentralization:** Decentralization using blockchain; Methods of decentralization: Disintermediation, Contest-driven decentralization; Routes to decentralization, **Tutorial Class:** How blockchain works, how blockchain accumulates blocks, how to decentralize, The decentralization framework example	**5+5**
UNIT– 2	
Decentralization and Cryptography: Blockchain and full ecosystem decentralization, Storage, Communication, Computing power and decentralization, Smart contracts, Decentralized organizations, Cryptography and Technical Foundations: Symmetric Cryptography- Cryptographic primitives, Public Key Cryptography: Asymmetric cryptography, Public and private	**5+5**

keys, Hash functions, Tutorial Class: Platforms for decentralization, RSA digital signature algorithm, Elliptic Curve Digital Signature Algorithm	
UNIT – 3	
Bitcoin and Alternative Coins A: Bitcoin, Digital keys and addresses, Transactions, Blockchain, Mining, Bitcoin Network and Payments- Wallets, Innovation in Bitcoin, Theoretical foundations, Bitcoin limitations, **Tutorial Class:** Bitcoin payments, , Bitcoin Clients and APIs, Alternative Coins, Namecoin, Litecoin, Primecoin, Zcash	**5+5**
UNIT – 4	
Smart Contracts and Ethereum 101: Smart Contracts: Definition, Ricardian contracts, Ethereum 101: Introduction, The Ethereum network, Components of the Ethereum ecosystem, Ether cryptocurrency / tokens (ETC and ETH), The Ethereum Virtual Machine (EVM), Blocks and blockchain, Fee schedule, **Tutorial Class**: Testnets, Wallets and client software APIs, tools, and Dapps	**6+6**
UNIT – 5	
Hyperledger: Projects under Hyperledger, The reference architecture, Fabric,Blockchains Blockchain-Outside of Currencies, Scalability and Other Challenges **Tutorial Class**: Hyperledger as a protocol, Alternative Blockchains	**5+5**
Course outcomes: The students should be able to:	
CO1. Analyse and characterize the Blockchain technologies and architectures, decentralization **CO2. Apply and Analyze** simple Dapps, basics of Smart Contracts, and Develop solutions using cryptographic techniques **CO3. Understand** and **analyze** the concepts of cryptocurrencies and alternative coins **CO4. Design** and **Deploy** solutions using smart contracts, Ethereum, Dapps and Tools **CO5. Apply , Analyze and Develop** the Hyperledger protocol, Architecture and alternative blockchain solutions. **CO6.** Do Literature Survey on blockchain techniques – prepare technical reports and present before audience convincingly. Develop solution for blockchain open ended problems.	
Open Ended Activity: (Individual/Group) 1. Develop Cryptography algorithm 2. Implement the solutions using cryptocurrencies (open-source) 3. Implement the solutions for a Wallet Service, even offline 4. Develop Dapps 5. Develop and deploy solutions using smart contracts 6. Design and Develop solutions for betting App to make HTTP requests from Ethereumsmart contracts to access data from World Wide Web 7. Design and Deploy solutions using Distributed ledger technologies 8. Apply the blockchain solution for IoT (IoTA), AI/ML, cyber security blendedframeworks 9. Explore and survey blockchain based industry specific solutions for business andother domains 10. Design and develop tools and techniques to address many real-world businessproblems with applicable Blockchain solutions 11. Develop real-time practical Dapps using Ethereum, web3 and JavaScript 12. Build enterprise-level Dapps using Truffle Explore the case study –

MOBILE COMPUTING
(Effective from the academic year 2022 -2023)
PROFESSIONAL ELECTIVE 2

Subject Code	N2SCSE23	CIE Marks	50
Number of Lecture Hours/Week	2:2:0	SEE Marks	50
Total Number of Lecture Hours Tutorial Hours	26 26	Exam Hours	03

CREDITS – 03

Course objectives: This course will enable students to

- **Describe** the basic concepts of mobile computing and its Architecture.
- **Discuss** CDMA, GSM. Mobile IP, Wimax and Different Mobile OS
- **Describe** various Markup Languages CDC, CLDC, MIDP; Programming for CLDC, MIDlet
  Analyse Mobile IP layer protocols and security concerns

UNIT – 1	**Teaching Hours**
Introduction to mobile computing: Mobility of Bits and Bytes, Wireless- The Beginning, Mobile Computing, Dialogue Control, Networks, Middleware and Gateways, Application and Services (Contents), Developing Mobile Computing Applications, Security in Mobile Computing, Standards-Why is it Necessary?, Standard Bodies, Players in the Wireless Space. **Tutorial Topics** : **Mobile Computing Architecture**: History of Computers, History of Internet, Internet-The Ubiquitous Network, Architecture for Mobile Computing, Three-Tier Architecture.	**5 +5**
UNIT– 2	
Global System for Mobile Communications (GSM): Global System for Mobile Communications, GSM Architecture, GSM Entities, Call Routing in GSM, PLMN Interfaces, GSM Addresses and Identifiers, Network Aspects in GSM, GSM Frequency Allocation, Authentication and Security **Tutorial Topics** : **General Packet Radio Service (GPRS):** Introduction, GPRS and Packet Data Network, GPRS Network Architecture, GPRS Network Operations	**6+6**
UNIT – 3	
Wireless Application Protocol (WAP), CDMA AND 3G: Introduction, WAP, MMS, GPRS Applications, Spread-Spectrum Technology, Is-95, CDMA versus GSM, Wireless Data **Tutorial Topics:** Third Generation Networks. Applications on 3G.	**5+5**

UNIT – 4	
Databases and Mobile computing: Data Dissemination and Systems for Broadcasting , Data Synchronization in Mobile Computing Systems, Mobile Devices: **Tutorial Topics** : Application Servers and Management, Mobile Wireless Short range Networks and Mobile Internet	**5+5**
UNIT – 5	
Mobile Application languages: Introduction, XML, JAVA, Java 2 Micro Edition (J2ME) , Introduction, CDC, CLDC, MIDP; Programming for CLDC, MIDlet model ,Provisioning, MIDlet life-cycle, Creating new application, MIDlet event handling. **Tutorial Topics** : GUI inMIDP, Low level GUI Components, Multimedia APIs; Communication in MIDP, Security Considerations in MIDP.	**5+5**
Course outcomes: The students should be able to:	
CO1: Analyze the state of art techniques in mobile computing. CO2: Analyze the requirements of GSM. Mobile IP, WiMAX technologies CO3: Demonstrate the functioning of Mobile IP layer protocols and security concerns. CO4: Demonstrate the working of data dissemination, data synchronization issues and security concerns. CO5: Analyze the requirements of program for CLDC, MIDlet model. CO6: Write and Present a comprehensive research based technical report on various topics in mobile computing.

DEEP LEARNING
(Effective from the academic year 2022-2023)
PROFESSIONAL ELECTIVE 2

Course Code	**N2SCSE24**	**CIE Marks**	**50**
Credits L: T: P	**2:2:0**	**SEE Marks**	**50**
Total Number of Lecture Hours Tutorial Hours	26 26	**SEE Duration**	**3 Hrs**

CREDITS – 03

Course objectives: The students will be able to

1. Learn deep learning methods for working with sequential data
2. Learn deep recurrent and memory networks
3. Apply deep learning mechanisms to various learning problems.
4. Know the open issues in deep learning, and have a grasp of the current research directions.

Unit – I	
Deep Feedforward Networks: Multilayer Perceptron Gradient-Based Learning, Hidden Units, Architecture Design, Back-Propagation Algorithm Tutorial topic: Example: Learning XOR,	**07Hrs (5L+4T)**
Unit – II	
Convolutional Networks: Convolution Operation, Motivation, Pooling, Convolution and Pooling as an Infinitely Strong Prior, Variants of the basic convolution function, Structured Outputs, Tutorial topics: Data types, Efficient Convolution Algorithms, Random or Unsupervised features, The Neuroscientific basis for convolutional networks	**08Hrs (5L+ 6T)**
Unit – III	
Sequence Modeling: Recurrent and Recursive Nets: Unfolding Computational Graphs, Recurrent Neural Networks, Bidirectional RNNs, Encoder-Decoder Sequence-to-Sequence Architectures, Tutorial topics: Deep Recurrent Networks, Recursive Neural Networks, Echo State Networks, The Long Short-Term Memory and Other Gated RNNs	**08Hrs (5L+ 5T)**
Unit – IV	
Structured Probabilistic Models For Deep Learning: The challenge of unstructured 39odeling, Using graphs to describe model structure: Directed, Undirected, Partition function, Energy-based models, Factor graphs; Sampling from graphical models, Advantages of structured 39odeling, Tutorial topics: learning about dependencies, Inference and approximate inference, The deep learning approach to structured probabilistic models	**08 Hrs (6L+6T)**
Unit –V	
Practical Methodology: Performance Metrics, Default Baseline Models, Determining Whether to Gather More Data, Selecting Hyperparameters, Debugging Strategies, Tutorial topics: Example: Multi-Digit Number Recognition. **Applications:** Vision, NLP, Speech.	**08 Hrs (5L+ 5T)**

Course Outcomes:
After going through this course, the student will be able to:

CO1	Describe basic concepts of neural network, its applications and various learning models
CO2	Acquire the knowledge on Recurrent, Recursive Nets
CO3	Analyze different Network Architectures, learning tasks, Convolutional networks
CO4	Identify the deep learning algorithms which are more appropriate for various types of learning tasks in various domains.
CO5	Implement deep learning algorithms and solve real-world problems.
CO6	Execute performance metrics of Deep Learning Techniques.

THEORETICAL FOUNDATIONS OF COMPUTER SCIENCE
(Effective from the academic year 2022-2023)
PROFESSIONAL ELECTIVE 3

Subject Code	N2SCSE32	CIE Marks	50
Teaching Hours/Week (L-T-P)	2-2-0	SEE Marks	50
Total Number of Lecture Hours Tutorial Hours	26 26	Exam Hours	03

CREDITS – 03

Course objectives:

- **Identify** different formal language classes like regular and context free and their relationships.
- **Design** grammars and recognizers for different formal languages.
- **Analyze** and modify the CFGs to normal forms.
- **Demonstrate** the equivalence between various language recognizers.
- **Describe** Turing machine and its variants.
- **Analyze** Undecidable and Intractable problems.

UNIT – 1	**Teaching Hours + Tutorial Hours**
Introduction to Finite Automata: The central concepts of Automata theory; Deterministic finite automata; Nondeterministic finite automata; An application of finite automata; Finite automata with Epsilon- transitions. **Regular Expressions and Languages:** Regular expressions; Finite Automata and Regular Expressions; Applications of Regular Expressions; Algebraic laws for regular expressions;	**5 + 6**
UNIT– 2	
Properties of Regular languages – Proving languages not to be regular languages; Closure properties of regular languages; Decision properties of regular languages; Equivalence and minimization of automata. **Context-Free Grammars and Languages:** Context–free grammars; Parse trees; Applications;	**5 + 6**
UNIT – 3	
Ambiguity in grammars and languages; Normal forms for CFGs; The pumping lemma for CFGs. **Pushdown Automata and Properties of CFL's :**Definition of the Pushdown automata; The languages of a PDA; Equivalence of PDA's and CFG's; Deterministic Pushdown Automata; Closure properties of CFLs; Decision properties of CFLs.	**5 + 6**
UNIT – 4	
Introduction To Turing Machine: The turning machine; Programming techniques for Turning Machines; Extensions to the basic Turning Machines; Restricted TMs; Turing Machine and Computers.	**5 + 6**
UNIT – 5	
Undecidability and Intractable problems A Language that is not recursively enumerable; An Undecidable problem that is RE; Other undecidable problems; The Classes P and NP; An NP complete problem; A restricted satisfiability problem; Additional NP-Complete Problems.	**6 + 2**

Course outcomes: The students should be able to:

- **Apply** the basic mathematics and science knowledge to explain the theoretical foundations of computing.
- **Apply** the concepts of theoretical foundations of computing to **show** the equivalence among different notations of regular and context free languages.
- **Analyze** the language and **formulate** regular expressions and context free grammars.
- **Identify** the class of languages based on Chomsky hierarchy to **prove** the membership of regular and context free languages.
- **Analyze** the given language and **design** the automata to accept the language.
- **Analyze** the Undecidable and Intractable problems.

Textbooks:

- Introduction to Automata Theory, Languages and Computation, John E. Hopcroft, Rajeev Motwani, Jeffrey D. Ullman, 3rd Edition, Pearson education, 2007.

Reference Books:

1. Fundamentals of the Theory of Computation, Principles and Practice, Raymond Greenlaw, H. James Hoover, Morgan Kaufmann, 1998.
2. Introduction to Languages and Automata Theory, John C Martin, 3rd Edition, Tata McGraw-Hill, 2007.
3. Introduction to Computer Theory, Daniel I. A. Cohen, 2nd Edition, John Wiley & Sons, 2004.

ADVANCED DATABASE MANAGEMENT (Effective from the academic year 2022-2023) PROFESSIONAL ELECTIVE 3			
Subject Code	N2SCSE33	CIE Marks	50
Teaching Hours/Week (L-T-P)	2-0-2	SEE Marks	50
Total Number of Lecture Hours Practical Hours	26 26	Exam Hours	03
CREDITS – 03			

Course objectives:

- To acquire knowledge on parallel and distributed databases and its applications.
- To study the usage and applications of Object Oriented database
- To understand the basic concepts, principles of intelligent databases.
- To understand the advanced topics of data warehousing and mining.
- To learn emerging and advanced data models
- To acquire inquisitive attitude towards research topics in databases.

UNIT – 1	**Teaching Hours**
Review of Relational Data Model and Relational Database Constraints: Relational model concepts; Relational model constraints and relational database schemas; Update operations, transactions and dealing with constraint violations. Overview of Object-Oriented Concepts – Objects, Encapsulation, Polymorphism, Type and class hierarchies etc. **Practicals :** Working with SQL	**4 Hours** **4 Hours**
UNIT– 2	
Object and Object-Relational Databases: Object Oriented Concepts: – Objects, complex objects; Object model of ODMG Conceptual design of Object database. Overview of object relational features of SQL; Practicals : Object definition Language ODL; Object Query Language OQL; Overview of C++ language binding;	**6 Hours** **5 Hours**
UNIT – 3	
Object-relational features of Oracle; Implementation and related issues for extended type systems; The nested relational model. **Parallel and Distributed Databases:** Architectures for parallel databases, Introduction to distributed databases; Distributed DBMS architectures; Practicals : Working with Oracle – Object-relational features, ; Parallel query evaluation; Parallelizing individual operations; Parallel query optimizations;	**6 Hours** **6 Hours**
UNIT – 4	
Storing data in a Distributed DBMS; Distributed catalog management; Data Warehousing, Decision Support and Data Mining: Introduction to decision support; OLAP, multidimensional model; Implementation techniques for OLAP; Data Warehousing; Practicals : Distributed Query processing; Updating distributed data; Distributed transactions; Distributed Concurrency control and Recovery. Window queries in SQL; Finding answers quickly;	**6 Hours** **6 Hours**

UNIT – 5	
Views and Decision support, View materialization, Maintaining materialized views. Introduction to Data Mining; Counting co-occurrences; Mining for rules; Tree-structured rules; Clustering; Similarity search over sequences; Incremental mining and data streams; Additional data mining tasks. **Enhanced Data Models for Some Advanced Applications:** Active database concepts and triggers; Temporal, Spatial, and Deductive Databases – Basic concepts. Practicals : Working with triggers, creating statement level active rules, data models for advanced applications – Mobile databases; Multimedia databases; Geographical Information Systems; Genome data management.	**7 Hours** **5 Hours**

Course outcomes: The students should be able to:

- Select the appropriate high performance database like parallel and distributed database
- Model and represent the real world data using object oriented database
- Embed the rule set in the database to implement data warehousing of mining
- Choose and design database for recent applications database for better interoperability

MOBILE APPLICATION DEVELOPMENT
(Effective from the academic year 2022-2023)
PROFESSIONAL ELECTIVE 3

Subject Code	N2SCSE34	CIE Marks	50
Teaching Hours/Week (L-T-P)	2-0-2	SEE Marks	50
Total Number of Lecture Hours Practical Hours	26 26	Exam Hours	03

CREDITS – 03

Course objectives:

- Analyze system requirements for mobile applications.
- Apply of mobile development frameworks
- Demonstrate mobile application design.
- Demonstrate and implement mobile application.

Theory – Module 1	**Teaching Hours**
Introduction to mobile communication and computing: Introduction to mobile computing, Novel applications, limitations and GSM architecture, Mobile services, System architecture, Radio interface, protocols, Handover and security. Smart phone operating systems and smart phones applications.	**5 Hours**
Practicals – Cycle 1 Installing the Android SDK, Creating Android Virtual Devices, Creating the First Android Project, Using the Text View Control, Using the Android Emulator. Debugging Android Apps, Exceptions and Stack Traces, Unit Testing and Audio Playback	**5 Hours**
Theory – Module 2	
Fundamentals of Android Development: Introduction to Android, The Android 4.1 Jelly Bean SDK, Understanding the Android Software Stack. The Intent of Android Development, Four kinds of Android Components: Activity,Service, Broadcast Receiver and Content Provider, Building Blocks for Android Application Design, Laying Out Controls in Containers	**6 Hours**
Practicals – Cycle 1 Creating User Interfaces with Layouts and Widgets – Applications such as visiting card, Sign Up/Login Activity, Wall paper changer, count ticks, calender generator, clipboard activity, communicating with SMS and emails without server etc	**6 Hours**
Theory – Module 3	
Graphics and Animation: Drawing graphics in Android, Creating Animation with Android's Graphics API. **Creating the Activity, Working with views:** Exploring common views, using a listview, creating custom views, UI Fragments and the Fragment Manager, Using Fragment Arguments Starting an Activity from a Fragment, Recycler View, Data Binding and MVVM	**5 Hours**
Practicals – Cycle 2 Calculator, file parser (JSON, XML) etc, audio player, EMI calculator, alarm ticker, Meeting Scheduler, etc	**5 Hours**
Theory – Module 4	
Understanding layout, Putting an Displaying web pages and maps, SQLite Databases, Background Services, publishing android applications	**5 Hours**
Practicals – Cycle 3 communicating with SMS and emails with server, Medical DB – simple application, Background task service based apps, Server based Applications etc	**5 Hours**
Theory – Module 5	
Two Pane Master detail interfaces, Property Animation , Locations and Play Services, Maps, Creating and using content providers: Creating and consuming services,	**5 Hours**
Practicals – Cycle 3 (Open Ended Projects) Games, platform integrated applications – AR/VR (Unity 3D / Engine Tools etc), IoT, AI,	**5 Hours**

Decentralized Apps etc.	

Course outcomes: The students should be able to:

- Describe the requirements for mobile applications
- Explain the challenges in mobile application design and development
- Develop design for mobile applications for specific requirements
- Implement the design using Android SDK
- Usage of DataBase, Server concepts, games development
- Deploy mobile applications

Textbooks:

1. Mobile Computing: (technologies and Applications-N. N. Jani S chand
2. Bill Phillips, Chris Stewart and Kristin Marsicano, "Android Programming: The Big Nerd Ranch Guide", 3rd Edition, Big Nerd Ranch Guides, 2017. ISBN-13:978- 0134706054
3. B.M.Hirwani- Android programming Pearson publications-2013
4. W. Frank Ableson, Robi Sen and C. E. Ortiz - **Android in Action**, Third Edition-2012 DreamTech Publisher

SCHEME OF TEACHING AND EXAMINATION (80 Credits Scheme)

Applicable for students admitted from the Academic Year 2022-23 and onwards

III Semester

Sl. No.	Course Type and Course Code		Course Title	Teaching Hours per Week			Examination				Credits
				Theory	Practical / Seminar	Tutorial / Skill Development Activities	Duration in hrs.	CIE Marks	SEE Marks	Total Marks	
				L	P	T/SDA					
1.	PROJ	N3SCSPR	Project Work Phase – 1	0	6	0	--	100	--	100	3
2.	SP	N3SCSSP	Societal Project (to be carried out during the intervening vacation of II and III semesters)	0	6	0	--	100	--	100	3
3.	INT	N3SCSINT	Internship	(06 weeks Internship completed during the intervening vacation of II and III semesters)			3	50	50	100	6
	Total			**0**	**12**	**0**		**250**	**50**	**300**	**12**

Note: **PROJ**-Project Work Phase-1, **SP** –Societal Project, **INT**-Internship
L-Lecture, **P**-Practical, **T/SDA**-Tutorial / Skill Development Activities (Hours are for Interaction between faculty and students)

1. **Project Work Phase-1:** The project work shall be carried out individually. However, in case a disciplinary or interdisciplinary project requires more participants, then a group consisting of not more than three shall be permitted.
   Students in consultation with the guide/co-guide (if any) in disciplinary project or guides/co-guides (if any) of all departments in case of multidisciplinary projects, shall pursue a literature survey and complete the preliminary requirements of the selected Project work. Each student shall prepare a relevant introductory project document, and present a seminar.
   CIE marks shall be awarded by a committee comprising of HoD as Chairman, all Guide/s and co-guide/s (if any) and a senior faculty of the concerned departments. The CIE marks awarded for project work phase -1, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25. **There is no SEE for this course**.
2. **Societal Project:** Students in consultation with the internal guide as well as with external guide (much preferable) shall involve in applying technology to workout/proposing viable solutions for societal problems.
   CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide if any, and a senior faculty of the department. The CIE marks awarded, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.
   Those, who have not pursued /completed the Societal Project, shall be declared as fail in the course and have to complete the same during subsequent semester/s after satisfying the Societal Project requirements. **There is no SEE for this course**.
3. **Internship:** Those, who have not pursued /completed the internship, shall be declared as fail in the internship course and have to complete the same during subsequent University examinations after satisfying the internship requirements. Internship SEE (University examination) shall be as per the University norms.
   CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide if any, and a senior faculty of the department. The CIE marks awarded for project work phase -1, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.

SCHEME OF TEACHING AND EXAMINATION (80 Credits Scheme)

Applicable for students admitted from the Academic Year 2022-23 and onwards

IV Semester

Sl. No.	Course Type and Course Code		Course Title	Teaching Hours per Week			Examination				Credits
				Theory	Practical / Field work	Tutorial / Skill Development Activities	Duration in hrs.	CIE Marks	SEE Marks	Total Marks	
				L	P	T/SDA					
1.	PROJ	N4SCSPR	Project Work Phase – 2	0	8	0	3	100	100	100	18
	Total			**0**	**8**	**0**		**100**	**100**	**100**	**18**

Note: **PROJ**-Project Work Phase-2
L-Lecture, **P**-Practical, **T/SDA**-Tutorial / Skill Development Activities (Hours are for Interaction between faculty and students)

1. Project Work Phase-2: Students in consultation with the guide/co-guide (if any) in disciplinary project or guides/co-guides (if any) of all departments in case of multidisciplinary projects, shall continue to work of Project Work phase -1to complete the Project work. Each student / batch of students shall prepare project document, and present a seminar.

CIE marks shall be awarded by a committee comprising of HoD as Chairman, all Guide/s and co-guide/s (if any) and a senior faculty of the concerned departments. The CIE marks awarded for project work phase -2, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.

SEE shall be at the end of IV semester. Project work evaluation and Viva-Voce examination (SEE), after satisfying the plagiarism check, shall be as per the Institute norms.

IV Semester

Sl. No.	Course Type and Course Code		Course Title	Teaching Hours per Week			Examination				Credits
				Theory	Practical / Field work	Tutorial / Skill Development Activities	Duration in hrs.	CIE Marks	SEE Marks	Total Marks	
				L	P	T/SDA					
1.	PROJ	N4LDCPR	Project Work Phase – 2	0	8	0	3	100	100	100	18
	Total			**0**	**8**	**0**		**100**	**100**	**100**	**18**

Note: **PROJ**-Project Work Phase-2
L-Lecture, **P**-Practical, **T/SDA**-Tutorial / Skill Development Activities (Hours are for Interaction between faculty and students)

1. **Project Work Phase-1:** The project work shall be carried out individually. However, in case a disciplinary or interdisciplinary project requires more participants, then a group consisting of not more than three shall be permitted.Students in consultation with the guide/co-guide (if any) in disciplinary project or guides/co-guides (if any) of all departments in case of multidisciplinary projects, shall pursue a literature survey and complete the preliminary requirements of the selected Project work. Each student shall prepare a relevant introductory project document, and present a seminar.CIE marks shall be awarded by a committee comprising of HoD as Chairman, all Guide/s and co-guide/s (if any) and a senior faculty of the concerned departments. The CIE marks awarded for project work phase -1, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25. **There is no SEE for this course**.
2. **Societal Project:** Students in consultation with the internal guide as well as with external guide (much preferable) shall involve in applying technology to workout/proposing viable solutions for societal problems. CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide if any, and a senior faculty of the department. The CIE marks awarded, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.

   Those, who have not pursued /completed the Societal Project, shall be declared as fail in the course and have to complete the same during subsequent semester/s after satisfying the Societal Project requirements. **There is no SEE for this course**.
3. **Internship:** Those, who have not pursued /completed the internship, shall be declared as fail in the internship course and have to complete the same during subsequent University examinations after satisfying the internship requirements. Internship SEE (University examination) shall be as per the University norms.

4. **Project Work Phase-2:** Students in consultation with the guide/co-guide (if any) in disciplinary project or guides/co-guides (if any) of all departments in case of multidisciplinary projects, shall continue to work of Project Work phase -1to complete the Project work. Each student / batch of students shall prepare project document, and present a seminar.

   CIE marks shall be awarded by a committee comprising of HoD as Chairman, all Guide/s and co-guide/s (if any) and a senior faculty of the concerned departments. The CIE marks awarded for project work phase -2, shall be based on the evaluation of Project Report, Project Presentation skill, and performance in the Question and Answer session in the ratio of 50:25:25.

   SEE shall be at the end of IV semester. Project work evaluation and Viva-Voce examination (SEE), after satisfying the plagiarism check, shall be as per the Institute norms.

Program Outcome of this course

Sl. No.	Description	POs
1	Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and computer science and business systems to the solution of complex engineering and societal problems.	Po1
2	Problem analysis: Identify, formulate, review research literature, and analyze complex engineering and business problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.	PO2
3	Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.	PO3
4	Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.	PO4
5	Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations	PO5
6	The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering and business practices.	PO6
7	Environment and sustainability: Understand the impact of the professional engineering solutions in business societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.	PO7
8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering and business practices.	PO8
9	Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.	PO9
10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.	PO10
11	Project management and finance: Demonstrate knowledge and understanding of the engineering, business and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.	PO11
12	Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.	PO12

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

1. Three Unit Tests each of **20 Marks**
2. Two assignments each of **20 Marks** or **one Skill Development Activity of 40 marks** to attain the COs and POs

The sum of three tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester End Examination:

1. The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
2. The question paper will have ten full questions carrying equal marks.
3. Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
4. Each full question will have a sub-question covering all the topics under a module.
5. The students will have to answer five full questions, selecting one full question from each module

LINEAR ALGEBRA AND APPLICATIONS

Contact Hours/ Week	: 3 (L+0+0)	Credits :	3
Total Lecture Hours	: 45	CIE Marks :	50
Sub. Code	: N1PGMAT	SEE Marks :	100

Prerequisites: Basic Matrix operations & Calculus

Course Outcomes:

Upon successful completion of this course, students will able to:

1. Solve systems of linear equations using multiple methods, including Gaussian elimination and matrix inversion.
2. Demonstrate understanding of the concepts of vector space and subspace for signal processing applications.
3. Demonstrate understanding of linear independence, span, and basis.
4. Determine eigen-values and eigenvectors and solve eigenvalue problems.
5. Apply principles of matrix algebra to linear transformations.

UNIT 1

Linear Equations in Linear Algebra: Systems of Linear Equations, Row Reduction and Echelon Forms, Vector Equations Solution Sets of Linear Systems Applications of Linear Systems, Linear Independence, Invertible Matrices, LU factorization, Determinants: Introduction to determinants, Cramer's rule. Properties of Determinants Cramer's Rule, Volume

9 Hours

UNIT 2

Vector Spaces: Vector Spaces and Subspaces, Null Spaces, Column Spaces, and Linear Transformations, Linearly Independent Sets; Bases, Coordinate Systems, Dimension of Vector Space, Rank, Change of Basis.

9 Hours

UNIT 3

Linear transformations: Introduction to Linear Transformations, Mapping, Functions, Linear Transformation, kernel and Image of a Linear Mapping, Singular and nonsingular Mapping, Operations of Linear Mapping, Rank-nullity theorem, Algebra of linear transformations

9 Hours

UNIT 4

Eigen-values and Eigenvectors: Characteristic polynomial, Cayley-Hamilton Theorem, Diagonalization, eigenvectors and linear transformation, Diagonalization of symmetric matrices, minimal polynomial, annihilating polynomials. **9 Hours**

UNIT 5

Orthogonality and Least-Squares: Inner Product, Length, and Orthogonality, Orthogonal Sets, Orthogonal Projections, The Gram-Schmidt Process, Least-Squares Problems, least square lines, general linear models Inner Product Space. **9 Hours**

Textbooks:

1	David C. Lay	Linear Algebra and its Application, Pearson Education Third Edition.
2	G.Seymour Lipschutz	Schaum's Outline of Linear Algebra, Third Edition
3	Strang,	Linear Algebra and its Applications, Third Edition, Thomson Learning.
3	Kenneth Hoffman and Ray Kunze	Linear Algebra, 2nd edition, Pearson Education (Asia) Pte. Ltd. Prentice Hall of India, 2004.

ANTENNA THEORY & DESIGN

Contact Hours/ Week	:	3+2	Credits :	4
Total Lecture Hours	:	52	CIE Marks :	50
Sub. Code	:	N1LDCI01	SEE Marks :	100

UNIT 1

Antenna fundamental and definitions: Radiation pattern, near-and far-field regions, reciprocity applied to antennas, directivity and gain, effective aperture, polarization, input impedance, efficiency, Link budget calculation (Friis transmission equation), antenna temperature, bandwidth,VSWR..

UNIT 2

Antenna Arrays: Analysis of uniformly spaced array of n-point sources with uniform and non-uniform excitation amplitudes: Binomial and Chebyshev polynomials arrays. **Antenna array synthesis:** Synthesis principles, Line sources shaped beam synthesis, linear array shaped beam synthesis and Woodward-Lawson method, pattern multiplication**,** extension to planar arrays**.** Mutual coupling, Phased arrays, feeding techniques.

UNIT 3

Resonant Antennas: Field component of short dipole and radiation resistance , Thin linear antenna field components, radiation resistance and input impedance, linear elements near conductors (ground plane), Yagi-Uda and Log-periodic dipole arrays, wire antennas in Cellular Base station, mobile and satellite applications. **Microstrip antenna:** Rectangular Microstrip antenna, construction and design equations, feeding methods, radiation mechanism.

UNIT 4

Helical antenna and Aperture antennas: Construction, design concepts, and field equations of normal and axial mode helical antenna, Construction, design concepts, and field equations (no derivation) of pyramidal horns, Reflector antennas - Parabolic reflector antenna principles, Offset parabolic reflectors, Gain calculations for reflector antennas, Feed antennas for reflectors, General feed model, design considerations for horn and reflector antennas in radar and satellite applications.

UNIT 5

Smart antennas: Introduction, Smart-Antenna Analogy, Cellular Radio, Signal Propagation, Smart Antennas' Benefits, Smart Antennas' Drawbacks, Array design: Linear Array and Planar array, Antenna Beamforming, Beamforming, Diversity Combining, MIMO Antennas.

Method of moments: Introduction to methods moments, Pocklington's integral equation.

Lab contents:

1. Analysis of Linear and Planar arrays using Matlab

2. Design and analysis of Microstrip patch antenna EM simulation tools (IE3D and AWR)

3. Design and analysis of Dipole and Yagi-Uda antennas using EM simulation tools (IE3D and AWR)

4. Experimental characterization of VHF and S-band microstrip antennas.

5. Design and simulation of circularly polarized microstrip patch antenna using EM simulation tools (IE3D and AWR)

6. Design of 2X2 MIMO antenna using EM simulation tools (IE3D and AWR).

7. Design of Aperture Antennas using EM simulation tools (IE3D and AWR).

ADVANCED COMPUTER NETWORKING

Contact Hours/ Week	: 3+2 (L+P)	Credits :	4
Total Lecture Hours	: 50	CIE Marks :	50
Sub. Code	: N1LDC02	SEE Marks :	100

Prerequisites: Fundamentals of Data communication networks, Probability & Random Processes.

Course Objectives:

- Students will be able to explain various network protocols of their respective layers.
- To develop applications using Socket programming
- Analyze various techniques with their performance for effective communication.

UNIT 1

Fundamentals: Building a Network, Applications, Requirements, Network Architecture, Implementing Network Software, Performance (Text 1: Chapter 1.1, 1.2, 1.3, 1.4, 1.5).

UNIT 2

Advanced Internetworking: The Global Internet, Multicast, Multicast addresses, Multicast, Multiprotocol Label Switching (MPLS) End-to-End protocols: Simple Demultiplexer (UDP), Reliable Byte Stream (TCP) (Text 1: Chapter 4.1, 4.2, 4.3, 5.1, 5.2).

UNIT 3

Congestion Control and Resource Allocation: Allocating Resources, Issues in Resource allocation, Queuing Disciplines, TCP Congestion Control, Congestion-Avoidance Mechanisms, Quality of Service. (Text 1: Chapter 6.1, 6.2, 6.3, 6.4 and 6.5).

UNIT 4

Applications: Traditional Applications: Electronic Mail (SMTP, POP, IMAP, MIME), World Wide Web (HTTP), Multimedia Applications, Infrastructure Services (Domain Name System (DNS), Network Management (SNMP), Overlay Networks (Text 1: Chapter 9.1, 9.2, 9.3, 9.4. Text 2: Chapter 23.1 to 23.16, Chapter 24, Chapter 25, Chapter 27.1 to 27.8).

UNIT 5

End-to End data: Presentation formatting, Multimedia DataNetwork Security: Security attacks, Cryptographic building blocks, Key Predistribution, Authentication protocols, Firewalls (Text 1: Chapter 7.1, 7.2, 8.1, 8.2, 8.3, 8.5).

Course Outcomes:

On successful completion of this course students are able to

- Classify network services, protocols and architectures, explain why they are layered.
- Knowledge on Advanced Internetworking applications and their protocols, and ability to work on their own applications (e.g. Client Server applications, Web Services).
- To analyse various techniques for Congestion avoidance and Resource Allocation.
- Gain the knowledge of application layer protocols.
- Understand the concept of Network Security through cryptographic blocks, authentication protocols and Firewalls.

ADVANCED DIGITAL COMMUNICATION

Contact Hours/ Week	:	2+2	Credits :	3
Total Lecture Hours	:	40+15	CIE Marks :	50
Sub. Code	:	N1LDC03	SEE Marks :	100

Background: Characterization of Communication Signals and Systems: Representation of band pass signals and systems, Signal space representation, Representation of Digitally modulated signals, Spectral characteristics of digitally modulated signals.

UNIT 1

Digital Modulation Schemes(COHERENT) and Optimum receivers(OR) for AWGN channels: Memoryless modulation methods(PAM, QAM, PSK, FSK), Signaling schemes with memory(CPFSK,CPM, MSK and OQPSK).Optimal Detection(OD) for a general Vector channel, Optimal detection for Binary antipodal, orthogonal signaling, Implementation of OR for AWGN channels-Correlation and Matched filter receiver, OD for PAM, PSK, QAM,.

UNIT 2

Coding Techniques: The structure of Convolutional codes, Transfer domain approach, Trellis modulation, Coding gain, Decoding of Convolutional codes (Viterbi decoding), Punctured convolutional codes,

UNIT 3

Communication through band limited linear filter channels: Optimum receiver for channels with ISI and AWGN, Linear equalization, Decision feedback equalization, Adaptive Equalization: Adaptive linear equalizer, adaptive decision feedback equalizer, adaptive equalization of Trellis- coded signals.

UNIT 4

Digital Communication Through Fading Multi-Path Channels:
Doppler shift Characterization of fading multi-path channels, the effect of signal characteristics on the choice of a channel model, frequency-Nonselective, slowly fading channel Diversity techniques for fading multi-path channels, Digital signal over a frequency-selective, slowly fading channel.

UNIT 5

Spread Spectrum Signals for Digital Communication: Model of Spread Spectrum Digital Communication System, Direct Sequence Spread Spectrum Signals, Frequency-Hopped Spread Spectrum Signals, CDMA, time-hopping SS.

Text book:

1	John G. Proakis	Digital Communications, 5th edition, McGraw Hill, 2001

Reference Books:

1	Bernard Sklar	Digital Communications - Fundamentals and Applications", 2nd Edition Pearson Education (Asia) Pvt. Ltd, 2001
2	Andrea Goldsmith	Wireless Communications, Cambridge University Press, 2005
3	Andrew J. Viterbi	CDMA: Principles of Spread Spectrum Communications, Prentice Hall, USA, 1995.

Tutorial/Hands on Components:

1. Develop a Simulink model of a MPSK/MPAM/MQAM modulation – Demodulation for the given value of M=___.

   a. Sketch the constellation and expected BER plot.

   b. Simulate and plot BER vs. SNR graph for the same.

   c. Plot the graph of BER vs. SNR for the given modulation scheme.

   d. Comment on the performance characteristics.

2. Develop FDM system model for the transmission over single channel. Mention the carrier frequencies, channel frequency details used in the model. Simulate and obtain the demodulated messages.
3. Develop a Simulink model of AWGN equivalent model for a given power spectral density of 0.5 W/Hz. Use this model as a channel for BPSK based communication system. Compare the BER obtained using the model used with the Simulink AWGN model.
4. Write the MATLAB code for the generation of ASK, PSK and FSK schemes. Obtain the time domain representation of all the above modulation scheme for the given input bit stream 1 0 0 0 1 0 1 1.
5. Write the MATLAB code for the generation of Q PSK scheme. Obtain the time domain representation of all the above modulation scheme for the given input bit stream 1 0 0 0 1 0 1 1.
6. Consider a Convolution code (2,1,3) with gen = [5 7]; Write the MATLAB code for convolution encoding and Viterbi decoding for the encoding scheme given by considering 1 bit, 2 bit and 3 bit random errors.
7. Write the MATLAB code for the demonstration of OFDM modulation-demodulation involving CE and interleaver.

OPTICAL FIBER COMMUNICATION & NETWORKING

Contact Hours/ Week	: 2+2(P)	Credits :	3
Total Lecture Hours	: 40	CIE Marks :	50
Sub. Code	**:** N1LDC04	SEE Marks :	100

Unit 1

Introduction to the optical communication: Propagation of signals in optical fiber – Basics,losses in Fibers - Attenuation , Bending losses, Dispersion – Chromatic and Waveguide Dispersion Non- linear effects – Stimulated Brillion scattering Stimulated Raman scattering, four wave mixing, Solitons

Unit 2

Optical Components: Couplers, Isolators, and Circulators Multiplexers and Filters, Optical Amplifiers, detectors. Modulation - Demodulation: Formats, Ideal receivers, Practical direct detection receivers, Optical preamplifiers, Bit error rates, Coherent detection.

Unit 3

Transmission System Engineering: System model, Power penalty, Transmitter, Receiver, Crosstalk. Client Layers of optical layer: SONET/SDH: Multiplexing, layers, Frame structure. Asynchronous Transfer Mode: ATM functions, Adaptation layers, Quality of Service (QoS) and flow control, Signaling and Routing.

Unit 4

WDM network elements: Optical line terminals, Optical line amplifiers, Optical Add/ Drop Multiplexers, Optical cross-connects. WDM Network Design: Cost trade-offs, LTD and RWA problems, Routing and wavelength assignment, Wavelength conversion.

Unit 5

Control and Management: Network management functions, management framework, Information model, management protocols, Layers within the optical layer. Control and Management : Performance and fault management, Impact of transparency, BER measurement, Optical trace, Alarm management, Configuration management, Optical Safety

Text books:

1	Rajiv Ramswami, N Sivaranjan	Optical Networks", M. Kauffman Publishers, 2000
2	Gerd Keiser	"Optical Fiber Communication", MGH, 1 991

Reference books:

1	John M. Senior	Optical Fiber Communications", Pearson edition, 2000
2	G. P. Agarawal	"Fiber Optics Communication Systems", John Wiley NewYork, 1997

TUTORIAL/HANDS-ON COMPONENT:

1. Computation/ program for step index fiber to find i) Numerical aperture ii)Acceptanceangle iii) Solid acceptance angle iv) Propagation constant
2. Computation/ program for graded index fiber to find i) Numerical aperture ii)Acceptance angle iii) Solid acceptance angle iv)Propagation constant
3. Computation/ program for step index fiber to find Mode Field Diameter.
4. Computation/ program to find the Rayleigh scattering loss for silica fiber and plot agraph for loss v/s wavelength.
5. Numerical computation on optical fiber attenuation, dispersion.
6. Numerical computation on optical receivers, couplers, MZI.
7. To setup fiber optic Analog and digital link.
8. Study of Propagation loss in optical fiber.
9. Measurement of bending losses in optical fiber.
10. To measure the numerical aperture of the plastic fiber.
11. Band width Measurement of Fiber Optic Analog Link. Study the characteristics offiber Optics LEDs and Photo detector

Satellite Communication

Teaching Hours/Week (L:P:SDA)	2:0:2	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03

Course Learning objectives:

- To provide a basics of orbital mechanics of satellites
- To understand basic subsystems of a satellite.
- To verify satellite link budget calculations.
- To analyze/ apply the concepts to satellite communications system designs.
- To develop specialized satellite link for a given specifications

UNIT 1

Orbital Mechanics and Launchers: Introduction to satellite communication, Orbital mechanics, Look angle Determination, Orbital perturbations, Orbit determination, Launches and Launch Vehicles, Orbital effects in communications Systems performance

Teaching-Learning Process Chalk and talk/PPT/case study/web content

UNIT 2

SPACE SEGEMENT: Satellite subsystems, Attitude and orbit control systems (AOCS), Telemetry, Tracking, Command and Monitoring, Power systems, Communications subsystems, Satellite antennas, Equipment Reliability and space Qualification, Earth segment.

Teaching-Learning Process Chalk and talk/PPT/case study/web content

UNIT 3

Satellite Link Design: Basic Transmission Theory, System Noise Temperature and G/T Ratio, Design of Downlinks, Satellite Systems using Small Earth Stations, Uplink Design, Design for Specified C/N: Combining C/N and C/I values in Satellite Links, System Design Examples. Error control coding for digital satellite links, Propagation effects and their impact on satellite links

Teaching-Learning Process Chalk and talk/PPT/case study/web content

UNIT 4

Modulation and Multiplexing Techniques for satellite links, Multiple Access for satellite communication.

Teaching-Learning Process Chalk and talk/PPT/case study/web content

UNIT 5

Low Earth Orbit and Non-Geo-stationary Satellite Systems: Introduction, Orbit Considerations, Coverage and Frequency Considerations, Delay and Throughput Considerations, Operational NGSO Constellation Design – Iridium, Teledesic, Digital DBS TV, Satellite Radio Broadcasting. Satellite Navigation and the Global Positioning System

Teaching-Learning Process Chalk and talk/PPT/case study/web content

Suggested Learning Resources:

Text Books:

1. Timothy Pratt, Charles Bostian, Jeremy Allnutt – John Wiley & Sons Satellite Communications, II Edition, 2006
2. Dennis Roddy Satellite Communications, McGraw Hill, 2016

Reference Books:

1. K. R. Raja Rao Satellite communication Concepts and Applications, 2nd Edn. 2013
2. Maral G Satellite Communications Systems, Techniques and Technology, Wiely India PVT. LTD

Skill Development Activities Suggested

- The students with the help of the course teacher can take up relevant technical –activities which will enhance their skill. The prepared report shall be evaluated for CIE marks.

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	To apply Kepler laws planetary motion to design satellite orbits	L2
CO2	To analyze and apply the design parameters to develop satellite subsystems	L2
CO3	To identify the losses in the propagation and to design the satellite links	L2
CO4	To evaluate the performance of satellite communication links using the modulation, multiple access techniques.	L4

Mapping of COs and POs

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO2	x	x	x									
CO3	x	x	x			x	x					
CO4	x	x	x		x	x	x		x			x

AD-HOC WIRELESS NETWORKS

Contact Hours/ Week	: 2+2(T)	Credits :	3
Total Lecture Hours	: 40	CIE Marks :	50
Sub. Code	: N1LDCE12	SEE Marks :	100

Prerequisites: Fundamentals of Wireless Network

Course Objectives:

- To develop an understanding of modern network architectures from a design andperformance perspective.
- To introduce the student to the major concepts involved in wide-area networks(WANs), local area networks (LANs) and Wireless LANs (WLANs).
- To design Ad Hoc wireless networks

UNIT 1

Ad hoc Wireless Networks: Introduction- Issues in Ad hoc Wireless Networks- Ad hoc Wireless Internet; MAC Protocols for Ad hoc Wireless Networks: Introduction- Issues in Designing a MAC Protocol- Design Goals of MAC Protocols- Classification of MAC protocols- Contention-Based Protocols- Contention- Based Protocols with Reservation Mechanisms- Contention- Based Protocols with Scheduling Mechanisms- MAC Protocols thatuse Directional Antennas.

Lab Component: Create a sample wireless topology using Simulation Tool, Create a mobile Ad-hoc networks using Simulation Tool.

UNIT 2

Routing Protocols for Ad Hoc Wireless Networks: Introduction- Issues in Designing a Routing Protocol for Ad hoc Wireless Networks; Classification of Routing Protocols; Table Driven Routing Protocols; On- Demand Routing Protocols- Hybrid Routing Protocols- Hierarchical Routing Protocols.

Lab Component: Implement an Ad-hoc On-demand Distance Vector protocol using Simulation Tool.

UNIT 3

Multicast Routing in Ad hoc Wireless Networks: Introduction, Issues in Designing a Multicast Routing Protocol, Operation of Multicast Routing Protocols, Classifications of Multicast Routing Protocols- Tree-Based Multicast Routing

Lab Component: Implement multicast routing protocol using Simulation Tool.

UNIT 4

Transport Layer and Security Protocols for Ad hoc Networks: Introduction- Issues in Designing a Transport Layer Protocol; Design Goals of a Transport Layer Protocol; Classification of Transport Layer Solutions; TCP over Transport Layer Solutions **Lab Component:** Implement a Transmission Control Protocol using Simulation Tool, Implement an User Datagram Protocol using Simulation Tool.

UNIT 5

Quality of Service and Energy Management in Ad hoc Wireless Networks Introduction-Issues and Challenges in Providing QoS in Ad hoc Wireless Networks- Classification of QoS Solutions- MAC Layer Solutions- Network Layer Solutions; Energy Management in Ad hoc Wireless Networks.

Lab Component: Implement a Low Energy Adaptive Hierarchy protocol using Simulation Tool.

Course Outcome:

On successful completion of this course students are able to

- Describe the unique issues and current technology trends for the implementation and deployment of wireless ad- hoc/sensor networks also discuss the challenges in designing MAC protocols for Ad Hoc wireless networks.
- Describe challenges in designing routing protocols for Ad Hoc wirelessnetworks.
- Describe challenges in designing multicast routing protocols for Ad Hocwireless networks.
- Describe the challenges in designing transport protocols for Ad Hoc wirelessnetworks.
- Discuss the challenges in designing QoS and energy management services toAd Hoc wireless networks.

ADVANCED DIGITAL COMMUNICATION LAB

Contact Hours/ Week	:	1+2	Credits :	2
Total Lecture Hours	:	15	CIE Marks :	50
Sub. Code	:	N1LDCL1	SEE Marks :	50

Antennas

1. Design and analysis of rectangular microstrip antenna
2. Design and analysis of dipole and Yagi-Uda antenna
3. Design and analysis of antenna arrays
4. Conduct experiment to plot radiation pattern, find gain, beamwidth, resonant frequency and polarization of Yagi-Uda and dipole antenna

Digital Communication

1. Simulation and BER analysis of ASK, FSK, PSK in MATLAB and Simulink.
2. Simulation and BER analysis of QPSK, MSK, GMSK and M-array modulation techniques in MATLAB and Simulink.
3. Implementation of Basic modulation schemes on FPGA kit.
4. Simulation of Convolution coding schemes in MATLAB and Simulink.
5. Simulation of adaptive equalizers in MATLAB and Simulink.
6. Simulation of Spread spectrum techniques in MATLAB and Simulink.

ADVANCED DIGITAL SIGNAL PROCESSING

Contact Hours/ Week	: 3+2+0	Credits :	4
Total Lecture Hours	: 45+15+0	CIE Marks :	50
Subject Code	: N2LDCI01	SEE Marks :	50

UNIT 1

Discrete Fourier Transformation: DFT, Application of DFT for Spectral Analysis, FFT, Using FFT to Implement Power Spectrum.
Digital Filters: Structure of a Digital Filter, Design of Notch Filter, Design of Digital FIR Filters using Windowing Technique. Design of Digital IIR Butterworth Filter using Bilinear Transformation.

UNIT 2

Hardware and Software for Digital Signal Processors: Digital Signal Processor Architecture, Digital Signal Processor Hardware UNITs, Digital Signal Processors and Manufactures, Fixed-Point and Floating-Point Formats, Digital Signal Processing Programming Examples.

UNIT 3

Multirate Digital Signal Processing: Multirate Digital Signal Processing Basics, Polyphase Filter Structure and Implementation, Oversampling of Analog-to-Digital Conversion, Application Example: CD Player.
Implementation of DSP Algorithms: FFT Processing - Implementation of FFT Algorithm, Using Circular Buffers to Implement FIR Filters, IIR Filter Implementation, DSP Hardware Structures for FFT Algorithm, FIR Filter and IIR Filter, Implementation of Decimator and Interpolator.

UNIT 4

Adaptive Filters and Applications: Introduction to LMS Adaptive FIR filters, Basic Weiner Filter Theory and LMS algorithm. *Applications:* Noise Cancellation, System Modeling, Line Enhancement using Linear Filtering.
Other Application Examples: Canceling Periodic Interferences using Linear Prediction, ECG Interference Cancellation, Echo Cancellation in Long-Distance Telephone Circuits.

UNIT 5

Waveform Quantization and Compression: Linear Midtread Quantization, μ-law Companding, Examples of DPCM, DM, and ADPCM, Discrete Cosine Transform (DCT), Modified DCT, and Transform Coding in MPEG Audio.
DSP Applications: Detection of Fetal Heartbeats, Adaptive Removal of Ocular Artifacts from Human EEGs, and Equalization of Digital Audio Signals.

Text Book:

1. Li Tan & Jean Jiang, "***Digital Signal Processing: Fundamentals and Applications***", *2nd Edition, Academic Press, 2013*
2. E.C. Ifeachor, and B. W. Jervis, ***"Digital Signal Processing: A Practical Approach",*** *2nd Edition, Pearson Education, India, 2002*

Reference Books:

2. Sen M. Kuo and Woon-Seng Gan, **"Digital Signal Processors: Architecture, Implementations, and Applications",** Pearson Prentice Hall

LAB COMPONENTS

A. LIST OF EXPERIMENTS USING MATLAB:

1. Write as MATLAB code for the computation of N-Point DFT using conventional DFT equation and FFT algorithm and compare their computational performance.
2. Write as MATLAB code for spectral analysis and linear filtering using DFT.
3. Write as MATLAB code to implement FIR low pass filter. Also use FDA tool and MATLAB Simulink to verify the design.
4. Write as MATLAB code to implement IIR low pass filter. Also use FDA tool and MATLAB Simulink to verify the design.
5. Write as MATLAB code to design notch filter, digital resonator and comb filter.

B. LIST OF EXPERIMENTS USING TMS320C6748 DSP PROCESSOR:

1. Write a C code for Audio loop back.
2. Write a C code to verify the sampling theorem.
3. Write a C code for generation of delay.
4. Write a C code for generation of echo.
5. Write a C code for the generation of Sine wave.
6. Write a C code for low pass filtering of a signal using FIR Filter.

ADVANCED WIRELESS COMMUNICATION

Contact Hours/ Week	: L+P+T/SDA 3+0+2	Credits :	4
Total Lecture Hours	: 45+0+15	CIE Marks :	50
Sub. Code	: N2LDC02	SEE Marks :	100

UNIT 1

Wireless channel: physical modeling for wireless channels, input/output model of wireless channel, time and frequency response, statistical models. (Ref.1 Chap.2)

Point to point communication: detection in Rayleigh fading channel, time diversity, antenna diversity, frequency diversity, impact of channel uncertainty. (Ref.1 Chap.3)

UNIT 2

Diversity: Introduction, Microdiversity, Macrodiversity and simulcast, Combination of Signals, Error Probability in fading channels with diversity Reception, transmit diversity. (Ref.2 Chap.13)

UNIT 3

Capacity of wireless channels: AWGN channel capacity, resources of AWGN channel, Linear-time invariant Gaussian channels, capacity of fading channels. (Ref.1 Chap.5)

UNIT 4

Introduction to fading, diversity and coding, Radio Communication on Flat Rayleigh Fading Channels, Diversity Combining, performance evaluation and special cases, Space and Time coding, MIMO and STC, Design of Codes for MIMO Systems, Capacity Limits for MIMO systems (Ref 6, Ch 8)

UNIT 5

Equalization: Introduction, effects of frequency-Selective multipath fading, Multipath effects and data Rate limitations, Discrete Multipath fading channel Model, Adaptive Channel Measurement, Introduction to Adaptive discrete matched filter, Adaptive equalization, Different types of equalizer architectures, Introduction to direct sequence spread spectrum, DSSS in Multipath Fading (Ref 6, Ch 9 & Ch 10)

ERROR CONTROL CODING

Contact Hours/ Week	: 2+2 (L+T)	Credits :	3
Total Lecture Hours	: 49	CIE Marks :	50
Sub. Code	:N2LDC03	SEE Marks :	100

Prerequisites: Fundamentals of information theory & coding

Course Objectives:

- Students will be able to understand the Galois field, for realizing channel codes
- To understand and analyze various channel codes and interpret.
- Able to realize various decoding techniques.

UNIT 1

Information theory: Introduction, Entropy, Source coding theorem, discrete memoryless channel, Mutual Information, Channel Capacity Channel coding theorem (Chap. 5 of Text 1). **Introduction to algebra:** Groups, Fields, binary field arithmetic, Construction of Galois Fields GF (2m) and its properties, (Only statements of theorems without proof) Computation using Galois field GF (2m) arithmetic, Vector spaces and Matrices (Chap. 2 of Text 2).

UNIT 2

Linear block codes: Generator and parity check matrices, Encoding circuits, Syndrome and error detection, Minimum distance considerations, Error detecting and error correcting capabilities, Standard array and syndrome decoding, Single Parity Check Codes (SPC),Repetition codes, Self-dual codes, Hamming codes, Reed-Muller codes. Product codes and Interleaved codes (Chap. 3 of Text 2).

UNIT 3

Cyclic codes: Introduction, Generator and parity check polynomials, Encoding of cyclic codes, Syndrome computing and error detection, Decoding of cyclic codes, Error trapping Decoding, Cyclic hamming codes, Shortened cyclic codes (Chap. 4 of Text2).

UNIT 4

BCH codes: Binary primitive BCH codes, Decoding procedures, Implementation of Galois field arithmetic. (6.1,6.2,6.7 of Text 2) Primitive BCH codes over GF (q),

Reed -Solomon codes (7.2,7.3 of Text 2).

Majority Logic decodable codes: One -step majority logic decoding, Multiplestep majority logic (8.1,8.4 of Text 2).

UNIT 5

Convolution codes: Encoding of convolutional codes: Systematic and Nonsystematic Convolutional Codes, Feedforward encoder inverse, A 27 catastrophic encoder, Structural properties of convolutional codes: state diagram, state table, state transition table, tree diagram, trellis diagram.

Viterbi algorithm, Sequential decoding: Log Likelihood Metric for Sequential Decoding (11.1,11.2, 12.1,13.1 of Text 2).

Course outcomes:

At the end of the course the student will be able to:

1. Understand the concept of the Entropy, information rate and capacity for the Discrete memoryless channel
2. Apply modern algebra and probability theory for the coding.
3. Compare Block codes such as Linear Block Codes, Cyclic codes, etc. and Convolutional codes.
4. Detect and correct errors for different data communication and storage systems.
5. Analyze and implement different Block code encoders and decoders, and also convolutional encoders and decoders including soft and hard Viterbi algorithm.

Textbooks:

RF COMMUNICATION & NETWORKING LAB

Contact Hours/ Week	: 1+2(T+P)	Credits :	2
Total Lecture Hours	:	CIE Marks :	50
Sub. Code	: N2LDCL1	SEE Marks :	50

1. Design a resonant circuit with a loaded Q=1.1 at f=142.4 MHz that operates between a source resistance of 100Q and load resistance of 1009. Discuss how to increase quality factor (Q) by 20. Use perfect components. Analyze the circuit using simulation tool and compare the theoretical and simulation result.

2. Design a resonant circuit (as shown in Figure 6.54) such that it operates between Rs=5022 and R.=2000 Q with a Q=20 at the center frequency f,=100 MHz. The inductor has a Qc = 100 at 100 MHz. Use a tapped-C transformer to achieve the desired Q. Analyze the circuit using simulation tool. Compare the quality factor of tapped- C transformer circuit with the quality factor of without C-transformer.
3. Design a low pass filter using both maximally flat and equairipple (0.5dB ripple) methods with a cutoff frequency of 3GHz, 50Q impedance level, and at least 20dB insertion loss at 4GHz.
   Analyze the circuit using simulation tool and compare the performance of the two filters.
4. Design an L matching network to match a load impedance Z,= ..... to a 502 line at frequency f,=.....-Provide two possible solutions with neat circuit sketches. Analyze the circuits using simulation tool and verify the matching condition.
5. Design an L matching network to match a load impedance Z,= ..... to a 50Q line at frequency f,=.....Provide two possible solutions with neat circuit sketches. Analyze the circuits using simulation tool and verify the matching condition.
6. Simulate a wired network with six nodes point – to – point network with duplex links between them. Set the queue size and vary the bandwidth and find the number of packets dropped.

7. Simulate a four node point-to-point network with the links connected as follows: n0 –n2, n1 – n2 and n2 – n3. Apply TCP agent between n0-n3 and UDP between n1- n3.

8. Apply relevant applications over TCP and UDP agents changing the parameter and determine the number of packets sent by TCP / UDP.

9. Simulate an Ethernet LAN using n nodes (6-10), change error rate and data rate and compare the throughput.

10. Simulate simple ad-hoc network with transmitting nodes performance with respect to transmission of packets. (Using DSDV/AODV protocol)

RF AND MICROWAVE CIRCUIT DESIGN

Contact Hours/ Week	: 2+2	Credits :	3
Total Lecture Hours	: 45	CIE Marks :	50
Sub. Code	: N2LDCE21	SEE Marks :	100

UNIT 1

Basics of RF and microwaves: Introduction- Properties of RF and Microwaves**,** reasons for using rf/microwaves, RF/microwave applications, low RF and high RF circuit design considerations. **RF electronics:** wire, resistors, capacitors, Inductor, definitions- Decibel, Decibel watts, space factor, ripple, bandwidth, Resonance, circuit Q and loaded Q, insertion loss, impedance transformation, coupling of resonant circuits. **Text1**: Chapter 5 and 6, **Text2:** Chapter 1 and 2.

Lab: Design of resonant circuits.

UNIT 2

The wave fundamentals: mathematical form of propagating waves, properties of waves, waves on a transmission line (tem mode), quarter-wave transformers, a generalized lossless transmission line circuit, microstrip line, Empirical Formulas**, The Smith Chart:** description of the smith chart, **Smith Chart Applications**: distributed and lumped element circuit applications, input impedance determination**.** **Text1:** Chapter 7, 9 and 10

Lab: Design of Quarter wave Transformers and Microstrip Line

UNIT 3

Design of matching networks: definition - matching, selection of a matching network, maximum average power transfer, design of matching circuits using lumped elements, matching network design using distributed elements Text1:Chapter11

Lab: Design of Matching Networks.

UNIT 4

Basic design consideration in active networks: Stability considerations: Stability Circles. Graphical Solution of Stability Criteria, Analytical Solution of Stability Criteria, Potentially Unstable Case**. Gain considerations**: Power Gain Concepts, A Special Case: Unilateral Transistor, The Mismatch Factor, Input and Output VSWR, Unilateral Case (Maximum Gain), Constant Gain Circles (Unilateral Case), Unilateral Figure of Merit **Noise considerations:** Importance of Noise. Noise Definition, Sources of Noise. Thermal Noise Analysis. Noise Model of a Noisy Resistor. Equivalent Noise Temperature. Definitions of Noise Figure. Noise Figure of Cascaded Networks. Constant Noise Figure Circles. **Text1:** Chapter 12, 13, 14.

Lab: Graphical Solution of Stability Criteria

UNIT 5

RF/microwave amplifiers design: types of amplifiers, small-signal amplifiers, design of different types of amplifiers, small-signal amplifier design, design of different types of amplifiers, high-gain amplifier (hga) design, low-noise amplifier (lna) design, **Text1:**Chapter15,16

Lab: Design of high gain amplifier and Low Noise Amplifier

Text books:

MILIMETER WAVE TECHNOLOGY

Contact Hours/ Week	: 2L+2T	Credits :	3
Total Lecture Hours	: 45	CIE Marks :	50
Sub. Code	: N2LDCE22	SEE Marks :	100

UNIT-1

Introduction to Millimeter-wave Technology: Band designation, Millimeter-wave system, Atmospheric attenuation, Rain attenuation, Long distance communication possible, mm-wave propagation, Millimetre-wave applications, Guiding structures at mm-wave frequencies, Substrate parameters, Phase and Group Velocity, Slow and Fast Waves, Skin depth, Calculation of α and β, **Millimeter-wave Technology Guiding Structures:,** Sources of losses, Dielectric loss, Conductor loss, Radiation and surface wave loss, Surface wave and leaky wave modes, Different guiding modes, TEM Wave, Transmission lines, TE wave, TM wave, Different forms of planar transmission lines. **Lab component:** Analysis of different types of transmission lines using simulation tool.

(7HL+2HP= 9H)

UNIT-2

Millimeter-wave Technology Passive Components: Passive Components As a Part of a System, The Radar Subsystem, planar Resonators, Examples, planar Filters design using Insertion loss method, Butterworth (Maximally Flat) Response, Chebyshev Response, Lowpass Prototype Filter and Elements, Elements Values for a Chebyshev LPF, Practical Filter Design, Design of a bandpass filter. Branch Line Couplers, Parallel line coupler.

(7HL+2HP= 9H)

UNIT-3

Millimeter-wave Technology electronic switches and Link Budget: Electronic Switches, Small Signal Model, FET Switches, FET Switches, CMOS Switches Link Budget: MM-wave Propagation, Friis Transmission Equation, Link Margin: Example, Digital Modulation, Digital Modulation and Bit Error Rate, Noisy Channel, Link Budget (Indoor Model), Milimeter Wave Link Budget.

(7HL+2HP= 9H)

UNIT-4

Millimeter-wave Technology Antennas: Antenna parameters, Design Challenges at Millimeter-WaveFrequencies, Printed millimeter wave antennas, Dipole and Patch Antennas, ,Printed Arrays at Millimeter-Wave Frequencies, Waveguide Slot Antennas, Waveguide Slot Arrays, Planar Waveguide Type Slot Arrays, On-chip and off-chip antennas, On Chip Antennas: Challenges, Improvement of Antenna (on Chip) Efficiency, Selection of On Chip Radiator, Dipole and Slot Antennas, Folded. Packaging Issues, Antenna as a Part of Packaging, , Leaky Wave Antennas: Uniform LWA: Single Beam, Periodic LWA.

(7HL+2HP= 9H)

UNIT-5

Millimeter Wave Systems: Thermal Noise, Noise Temperature, External Source of Noise, Anten,na and Source Noise, Noise in a receiver, Rece,iver Noise Temperature, Receiver Noise, Noise Bandwidth , Receiver Noise Factor, Operating Noise Factor, Noise Figure for Cascaded System Elements, Receiver Noise Calculation, Passive Millimeter Wave Imaging, Passive Imaging, Millimetre-wave ,applications, Passive MM-Wave Camera, Transceiver Architectures, Superheterodyne Architecture, Frequency Conversion, Direct Conversion Architecture, Software Radio Architecture, Six Port Architecture.

(7HL+2HP= 9H)

WIRELESS SENSOR NETWORKS

Contact Hours/ Week	: 2+2 (L+T)	Credits :	3
Total Lecture Hours	: 50	CIE Marks :	50
Sub. Code	:N2LDCE31	SEE Marks :	100

Prerequisites: Fundamentals of Data communication networks, Wireless communication.

Course Objectives:

- Students will be able to explain WSN architecture and Protocol stack
- To understand the factors influencing WSN design
- Analyze various techniques with MAC and Transport layer.

UNIT 1

Introduction: Sensor Mote Platforms, WSN Architecture and Protocol Stack (Chap. 1Text 1). WSN Applications: Military Applications, Environmental Applications, Health Applications, Home Applications, Industrial Applications (Chap. 2 Text 1).

UNIT 2

Factors Influencing WSN Design: Hardware Constraints Fault Tolerance Scalability Production Costs WSN Topology, Transmission Media, Power Consumption (Chap. 3 Text 1). Physical Layer: Physical Layer Technologies, Overview of RF Wireless Communication, Channel Coding (Error Control Coding), Modulation, Wireless Channel Effects, PHY Layer Standards

(Chap. 4 of Text 1).

UNIT 3

Medium Access Control: Challenges for MAC, CSMA Mechanism, Contention-Based Medium Access, Reservation-Based Medium Access, Hybrid Medium Access (Chap. 5 of Text 1). Network Layer: Challenges for Routing, Data-centric and Flat Architecture Protocols, Hierarchical Protocols, Geographical Routing Protocols

(Chap. 7 of Text 1).

UNIT 4

Transport Layer: Challenges for Transport Layer, Reliable MultiSegment Transport (RMST) Protocol, Pump Slowly, Fetch Quickly (PSFQ) Protocol, Congestion Detection and Avoidance (CODA) Protocol, Event-to-Sink Reliable Transport (ESRT) Protocol, GARUDA

(Chap. 8 Text 1).

UNIT 5

Time Synchronization: Challenges for Time Synchronization, Network Time Protocol, Timing-Sync Protocol for Sensor Networks (TPSN), Reference Broadcast Synchronization (RBS), Adaptive Clock Synchronization (ACS) (Chap. 11 of Text1).

Localization: Challenges in Localization, Ranging Techniques, Range-Based Localization Protocols, Range-Free Localization Protocols. (Chap. 12 Text 1).

Textbooks:

1. Wireless Sensor Networks', Ian F. Akyildiz and Mehmet Can Vuran, John Wiley & Sons Ltd. ISBN 978-0-470-03601-3 (H/B), 2010
2. 'Wireless Sensor Networks:Signal Processing and Communications Perspectives', Ananthram Swami, et. al., John Wiley & Sons Ltd., ISBN 978-0470-03557-3, 2007

Course outcomes:

At the end of the course the student will be able to:

1. Acquire knowledge of characteristics of mobile/wireless communication channels
2. Apply statistical models of multipath fading
3. Understand the multiple radio access techniques, radio standards and communication protocols to be used for wireless sensor
4. Design wireless sensor network system for different applications under consideration. 5. Understand the hardware details of different types of sensors and select right type of sensor for various applications.

NANOELECTRONICS

Course Code	N2LDCE32	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	2:0:2	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03

Course Learning objectives:

- Introduced to the foundations of micro/nanoscale fabrication with emphasis on understanding the nano-scale properties of materials and living systems, and then analysing their engineered products and processes.
- Learn about the need and functioning of clean room facilities that are essential in nanotechnology enterprises.
- By applying the methods of fabrication technology, you will analyse the nano-electronics products.
- Learn about safety and safe working procedures in the domain of nanotechnology which all engineers must adhere to.

UNIT 1

ReseExplain nanoscale science and technology: Explain the science and engineering behind nanotechnology. Understand nanoscale fabrication basics: electrostatic, hydrogen, Van der Waals, and shear interaction, surfactants, self-assembly, diffusion, absorption, and adsorption properties

Teaching- Learning Process Chalk and talk/PPT/case study

UNIT 2

Illustrate nanotechnology facility development and safety: Building and equipment requirements; clean room technology; Air handling units, safety data sheet (SDS), cleanroom behaviour, hazard and safety. Waste disposal practices and guidelines.

Teaching- Learning Process Chalk and talk/PPT/case study/web content

UNIT 3

Illustrate nanoelectronics fabrication process: CAD tools for device design; thin film deposition, doping, annealing, sintering, ion implantation, and characterization; photolithography and e-beam lithography: photo and e-beam resists, mask writing, exposure, development and inspection; etching techniques, mask pattern transfer on wafer-spin coating and baking, development and inspection. Metal layer evaporation and lift-off, insulation of the devices, opening of contact pad; and device packing on the system.

Teaching-Learning Process Chalk and talk/PPT/case study/web content

UNIT 4

Analyse the properties at nano scale: Electrical characterization of the fabricated devices: equipment and test, electrical and thermal conductivity, thermal expansion; reflectance, refractive index PL (semiconductor band gap, band structure, and impurity states), inspection and morphological imaging (optical microscopes, electron microscopy, thermal analysis of the films, AFM, STEM, cryo-electron microscopy), material defect structures.

Teaching- Learning Process Chalk and talk/PPT/case study/web content

UNIT 5

Explain nanoelectronics device and applications: Types of nano scale devices, structures, and systems (CMOS, nano-transistors, Schottky device, nanowires based, lab-on-chip electrodes); System-on-Chip bonding and packaging (basic application only), micro-electro-mechanical-systems (MEMS)**.**

Teaching -Learning Process Chalk and talk/PPT

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	Explain and evaluate the basics of nanotechnology	L2
CO2	Explain nanotechnology facility development, applications, safety, and hazards.	L3
CO3	Design and Fabricate nanotechnology fabrication process to synthesize an engineered structure	L2
CO4	Analyze and choose appropriate characterization technique(s) to study the properties at nanoscale	L2
CO5	Explain the applications of nanotechnology in bio-engineering	L3

Mapping of COS and POs

COMPUTER VISION

Course Code	**N2LDCE33**	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	2:0:2	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03

Course Learning objectives:

- Explore the fundamentals of image formation.
- Discuss the major ideas, methods, and techniques of computer vision and pattern recognition.
- Able to implement algorithms and techniques to analyze and interpret the visible world around us.

UNIT 1

CAMERAS: Pinhole Cameras, Radiometry – Measuring Light: Light in Space, Light Surfaces, Important Special Cases, Sources, Shadows, And Shading: Qualitative Radiometry, Sources and Their Effects, Local Shading Models, Application: Photometric Stereo, Interreflections: Global Shading Models, Color: The Physics of Color, Human Color Perception, Representing Color, A Model for Image Color, Surface Color from Image Color.

Teaching- Learning Process Chalk and talk/PPT/case study/web content

UNIT 2

Linear Filters: Linear Filters and Convolution, Shift Invariant Linear Systems, Spatial Frequency and
Fourier Transforms, Sampling and Aliasing, Filters as Templates, Edge Detection: Noise, Estimating Derivatives, Detecting Edges, Texture: Representing Texture, Analysis (and Synthesis) Using Oriented Pyramids, Application: Synthesis by Sampling Local Models, Shape from Texture.

Teaching- Learning Process Chalk and talk/PPT/case study/web content

UNIT 3

The Geometry of Multiple Views: Two Views, Stereopsis: Reconstruction, Human Stereposis, Binocular Fusion, Using More Cameras, Segmentation by Clustering: What Is Segmentation?, Human
Vision: Grouping and Getstalt, Applications: Shot Boundary Detection and Background Subtraction,
Image Segmentation by Clustering Pixels, Segmentation by Graph-Theoretic Clustering,

Teaching- Learning Process Chalk and talk/PPT/case study/web content

UNIT 4

Segmentation by Fitting a Model: The Hough Transform, Fitting Lines, Fitting Curves, Fitting as a Probabilistic Inference Problem, Robustness, Segmentation and Fitting Using Probabilistic Methods:
Missing Data Problems, Fitting, and Segmentation, The EM Algorithm in Practice, Tracking With Linear Dynamic Models: Tracking as an Abstract Inference Problem, Linear Dynamic Models, Kalman Filtering, Data Association, Applications and Examples.

Teaching- Learning Process Chalk and talk/PPT/case study/web content

UNIT 5

Geometric Camera Models: Elements of Analytical Euclidean Geometry, Camera Parameters and the Perspective Projection, Affine Cameras and Affine Projection Equations, Geometric Camera
Calibration: Least-Squares Parameter Estimation, A Linear Approach to Camera Calibration, Taking
Radial Distortion into Account, Analytical Photogrammetry, An Application: Mobile Robot Localization, Model- Based Vision: Initial Assumptions, Obtaining Hypotheses by Pose Consistency, Obtaining Hypotheses by pose Clustering, Obtaining Hypotheses Using Invariants, Verification, Application: Registration In Medical Imaging Systems, Curved Surfaces and Alignment.

Teaching- Learning Process Chalk and talk/PPT/case study/web content

Suggested Learning Resources: Books

1. *Computer Vision – A Modern Approach,* David A. Forsyth and Jean Ponce, PHI Learning, 2009.
2. *Computer and Machine Vision – Theory, Algorithms and Practicalities*, E. R. Davies, Elsevier 4th Edition, 2013.

Web links and Video Lectures (e-Resources):

https://www.digimat.in/nptel/courses/video/108103174/L19.html

Skill Development Activities Suggested

- The students with the help of the course teacher can take up relevant technical –activities which will enhance their skill.

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	Implement fundamental image processing techniques required for computer vision.	L3
CO2	Perform shape analysis	L2
CO3	Implement boundary tracking techniques	L3
CO4	Apply chain codes and other region descriptors	L3

Mapping of COS and POs

Multimedia Communication

Course Code	N2OE01	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	2:0:2	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03

Course Learning objectives:

- To provide the fundamentals on representation of multimedia such as text, image, video.
- To understand basic compression standards
- To analyze/ apply the concepts video standards.

UNIT 1

Multimedia Communications: multimedia information representation, multimedia networks, multimedia applications, network QoS and application QoS.
(Ref.1 Chap. 1)
Information Representation: text, images, audio and video, Text and image compression, compression principles, text compression, image compression.
(Ref 1 Chap 3)

Teaching-Learning Process Chalk and talk/PPT/case study/web content

UNIT 2

Audio and video compression, audio compression, video compression, video compression principles, video compression standards: H.261, H.263, P1.323, MPEG 1, MPEG 2, Other coding formats for text, speech, image and video.
(Ref 1 Chap 4)

Teaching-Learning Process Chalk and talk/PPT/case study/web content

UNIT 3

MPEG Video Coding: MPEG 4, 7 and beyond: Overview of MPEG 4, Object based visual coding, synthetic object coding, object types, profiles and levels, H.264, MPEG 7, MPEG21 (Ref2. Chap.12)

Teaching-Learning Process Chalk and talk/PPT/case study/web content

UNIT 4

Multimedia Network Communications: Quality of multimedia data transmission, multimedia over IP, multimedia over ATM networks, Transport of MPEG-4, Media on Demand, Multimedia over Wireless networks, CBIR in Digital Libraries
(Ref 2 Chap 16, 17, 18)

Teaching-Learning Process Chalk and talk/PPT/case study/web content

UNIT 5

Internet Applications and the WWW. Domain name system, email, FTP, TFTP, internet telephony, SNMP, URLs and HTTP, HTML, audio and video streaming, security, search engines (Ref 1 Chap. 14 &15)

Teaching-Learning Process Chalk and talk/PPT/case study/web content

Suggested Learning Resources:

Text Books:

1. Fred Halsall "Multimedia Communications", Pearson education, 2008.
2. Ze-Nian Li and Mark S. Drew Fundamentals of Multimedia, PHI Learning Private Limited-New Delhi, 2008.

Reference Books:

1 K. R. Rao, Zoran S. Bojkovic, Dragorad A. Milovanovic "Multimedia Communication Systems", Pearson education, 2004

2 Raifsteinmetz, Klara Nahrstedt "Multimedia: Computing, Communications and Applications", Pearson education, 2002

3 John Billamil, Louis Molina, Multimedia: An Introduction, PHI, 2002

Web links and Video Lectures (e-Resources):

https://www.eugenieshek.com/popular-multimedia-tools-list
https://multimedia.journalism.berkeley.edu/tutorials/26-useful-tools-for-producing-multimedia-content/
https://www.studocu.com/in/document/madurai-kamaraj-university/multimedia/multimedia-tools-lecture-notes-3/11789941

Skill Development Activities Suggested

- The students with the help of the course teacher can take up relevant technical –activities which will enhance their skill. The prepared report shall be evaluated for CIE marks.

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	To apply the concepts of data representation to text, image and video signals.	L3
CO2	To compare the multimedia standards for text and image.	L3
CO3	To analyze the video coding techniques for multimedia.	L2
CO4	To develop application using multimedia tools.	L3

Mapping of COs and POs

ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

Course Code	N2OE02	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	2:0:2	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03

Course Learning objectives:

- Explain machine learning algorithms necessary for Artificial Intelligence
- Ability to build and assess data-based models.
- Explore advanced problem solving paradigms and knowledge representation

UNIT 1

Introduction, problem Solving: state space search and control strategies

Teaching- Learning Process Chalk and talk/PPT/case study/web content

UNIT 2

Problem reduction and Game playing, Logic concepts and logic programming

Teaching- Learning Process Chalk and talk/PPT/case study/web content

UNIT 3

Advanced problem-solving paradigm: planning Knowledge representation

Teaching- Learning Process Chalk and talk/PPT/case study/web content

UNIT 4

Uncertainty Measure: Probability Theory, Bayesian Belief Networks, Machine Learning Paradigms: Machine learning system, supervised and unsupervised learnings, Inductive, deductive learning, Clustering

Teaching-Learning Process Chalk and talk/PPT/case study/web content

UNIT 5

Support vector Machine, case-based reasoning and learning. ANN: Single Layer, Multilayer. RBF, Design issues in ANN, Recurrent Network

Teaching- Learning Process Chalk and talk/PPT/case study/web content

Suggested Learning Resources:

Text Books

1. *Artificial Intelligence:* Saroj Kaushik, Cengage Learning, 2014 Edition.
2. *Artificial Intelligence: Structures and Strategies for Complex Problem Solving*, George F Luger, Pearson Addison Wesley, 6th Edition, 2008.
3. *Artificial Intelligence*, E Rich, K Knight, and S B Nair, Tata Mc-Graw Hill, 3rd Edition, 2009.
4. *Artificial Intelligence: A Modern Approach*, Stuart Russell and Peter Norvig, Prentice Hall 3rd Edition, 2009.

Web links and Video Lectures (e-Resources): https://nptel.ac.in/courses/106102220

Skill Development Activities Suggested

- The students with the help of the course teacher can take up relevant technical – activities which will enhance their skill.

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Lev
CO1	Define Artificial intelligence and identify problems for AI. Characterize the search techniques to solve problems and recognize the scope of classical search techniques	L1
CO2	Define knowledge and its role in AI. Demonstrate the use of Logic in solving AI problems	L3
CO3	Demonstrate handling of uncertain knowledge and reasoning in probability theory.	L3
CO4	Apply Learning methods to real world problems	L3

Mathematical Foundations for Computer Applications

Contact Hours/Week	:	3+2(L+T)	Credits	:	04
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Course Code	:	N1MCA07	Course	BSC	

Course Objectives:

This Course will enable students to:	
1.	Familiarize the logical notation to define and reason about fundamental mathematical concepts such as sets, relations, and functions.
2.	Understand the concepts of vectors, matrices, and their operations.
3.	Understand the basics of data, Frequency Distributions, Correlation and Regression.
4.	Learn types of probability, Bayes Theorem and the Discrete Probability Distribution of a Random Variable.

UNIT – I	**07 Hours**
Set Theory: Sets and Elements, Universal Set and Empty Set, Subsets, Venn diagrams, Set Operations, Algebra of Sets and Duality, Finite, Infinite sets & Counting Principle, The Inclusion-Exclusion Principle, Classes of Sets, Power Sets, Partitions.	

UNIT – II	**08 Hours**
Relations: Product Sets, Relations, Pictorial Representations of Relations, Composition of Relations, Types of Relations, Equivalence Relations. **Functions:** Functions, One-to-One,Onto, and Invertible Functions, Mathematical, Exponential and Logarithmic Functions, Recursively Defined Functions, Cardinality.	

UNIT – III	**08 Hours**
Vectors & Matrices: Vectors, Matrices, Matrix Addition and Scalar Multiplication, Matrix Multiplication, Transpose, Square Matrices, Invertible (Nonsingular) Matrices, Inverses, Determinants, Elementary Row Operations & Echelon Matrices.	

UNIT – IV	**08 Hours**
Statistical Methods: Collection of Data, Graphical Representation, Comparison of Frequency Distributions - Measures of Central Tendency and Measures of Dispersion.	

UNIT – V	**08 Hours**
Probability and Distributions: Introduction, Basic Terminology, Probability & SetNotations, Independent Events, Bayes Theorem	

TEXT BOOKS:

1.	Seymour Lipschutz, Marc Lipson: Discrete Mathematics, Revised 3rd Edition, McGraw-Hill. (Chapters: 1, 2, 3, 5)
2.	B S Grewal: Higher Engineering Mathematics, 43rd Edition, Khanna Publishers. (Chapters: 25, 26)

REFERENCE BOOKS:

1.	Ralph P Grimaldi, B V Ramana: Discrete and Combinatorial Mathematics, 5th Edition, PEARSON.
2.	Kenneth H Rosen: Discrete mathematics and Its Applications, 5th Edition, TATA McGRAW-HILL.

WEB LINKS:

1.	https://learn.careers360.com/maths/sets-relations-and-functions-chapter/
2.	https://byjus.com/jee/sets-relations-and-functions/
3.	https://www.javatpoint.com/discrete-mathematics-tutorial
4.	https://www.tutorialspoint.com/discrete_mathematics/index.htm

Course Outcomes:

After the completion of this course, students will be able to:	
CO1	***Apply*** the fundamentals of set theory to perform various set operations on the real world problems.
CO2	***Apply*** the concept of relations and functions on sets to determine their types and the composition.
CO3	***Acquire*** ability to work with vectors, matrices and ***apply*** the basic mathematical operations on matrices & determinants.
CO4	***Acquire*** ability to represent the data, Compare Frequency Distributions, Correlate two variables and draw the lines of Regression.
CO5	***Apply*** the concept of probability for uncertainty and real world problems.

Data Structures and Algorithms

Contact Hours/Week	:	3+2(L+P)	Credits	:	04
Total Lecture Hours	:	39	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course Code	:	N1MCAI08	Course	IPCC	

Course Objectives:

This Course will enable students to:	
1.	Differentiate the properties of various data structures such as stacks, queues, lists, trees and Graphs.
2.	Understand working of various sorting and searching techniques.
3.	Understand various Algorithm design techniques.

UNIT – I	**07 Hours**

Classification of Data Structures: Primitive and Non- Primitive, Linear and Nonlinear; Data structure Operations, Stack: Definition, Representation, Operations and Applications: Polish and reverse polish expressions, Infix to postfix conversion, evaluation of postfix expression, Recursion - Factorial, GCD, Fibonacci Sequence, product of two numbers.

Practical Component:

1) Implementing stack using arrays and demonstrating stock span problem.
2) Program to solve sliding window maximum using stack.
3) Program to find next greater frequency element.
4) Demonstration on collection of query strings.

UNIT – II	**08 Hours**

Queue: Definition, Representation, Queue Variants: Linear queue Circular Queue, Priority Queue, Double Ended Queue.

Linked List: Types of linked list, Singly linked list basic operations: Inserting (at first, at last,) and removing nodes (at first, at last), search key in singly linked list.

Practical Component:

1) Design to develop and implement circular QUEUE characters.
2) Implementing menu driven Singly Linked List for maintaining student data. Program to check is Singly Linked List is in palindrome or not.
3) Implementing menu driven Double Linked List for employee data.

UNIT – III	**08 Hours**

Non-linear data structures Trees and Graphs: Binary Search tree, binary Expression tree, Tree traversal methods and memory representation of binary trees, graph traversal using DFS and BFS.

Practical Component:

1) Implementing Binary search tree of integers and demonstrate all traversal methods.
2) Implementing a program to demonstrate operations on graphs
3) A program to check the given binary tree is binary search tree or not.
4) Implementing program to search n elements in an unbalanced binary search tree.

UNIT – IV	**08 Hours**

Introduction, Fundamentals of the Analysis of Algorithm Efficiency Notion of Algorithm, Fundamentals of Algorithmic Problem Solving, Important Problem Types, Analysis Framework, Asymptotic Notations and Basic efficiency classes.
Brute Force: Selection Sort, Sequential Search, Exhaustive search and String Matching. Divide-and-Conquer: Merge sort, Binary Search.

Practical Component:

1) Sorting a given set of n integer elements using Merge sort and Quick sort and the measure of their time complexity.

UNIT – V	**08 Hours**

Greedy Technique: Prim's and Dijkstra's Algorithm.
Dynamic Programming: Warshalls and Floyds algorithms.
Space and time tradeoffs : Sorting by counting, hashing(open and closed hashing)

Practical Component:

1) Implementing 0/1 Knapsack problems using (i) Dynamic Programming method (ii) Greedy method.
2) From a given vertex in a weighted connected graph, find shortest paths to other vertices using Dijkstra's algorithm. Write the program in Java.import java.util.*;
3) Find Minimum Cost Spanning Tree of a given connected undirected graph using Kruskal's algorithm. Use Union-Find algorithms in your program.
4) Find Minimum Cost Spanning Tree of a given connected undirected graph using
Prim's algorithm.
5) Write Java programs to
(a) Implement All-Pairs Shortest Paths problem using Floyd's algorithm
(b) Implement Travelling Sales Person problem using Dynamic programming

TEXT BOOKS:

1.	Introduction to the Design and Analysis of Algorithms. AnanyLevitin, Pearson Education, 2nd Edition.
2.	Data Structures with C (Schaum's Outline Series) Paperback – 1 July 2017, Seymour Lipschutz, Mc Graw Hill

REFERENCE BOOKS:

1.	Horowitz, Sahni and Anderson-Freed Fundamentals of Data Structures in C, 2nd Edition, Universities Press Pvt. Ltd., 2011
2.	Jean- Paul Tremblay Paul G. Sorenson An Introduction to Data Structures with Applications, 2nd edition, McGraw-Hill International, 2007
3.	Yedidyah Langsam, Moshe J. Augenstein, Aaron M. Tenenbaum Data structures using C and C++, PHI/Pearson, 2nd Edition, 2015.

WEB LINKS:

1.	https://nptel.ac.in/courses/106/103/106103069/
2.	https://archive.nptel.ac.in/courses/106/106/106106131/
3.	https://www.tutorialspoint.com/data_structures_algorithms

Course Outcomes:

After the completion of this course, students will be able to:	
CO1	Analyze the working and applications of linear data structures: stacks and Queues and linked list.
CO2	Analyze working of Queue & Linked List
CO3	Analyze working non-linear data structures: trees and graphs.
CO4	Elucidate asymptotic notations and analyze the working of Brute force and Divide and Conquer algorithm techniques.
CO5	Analyze the working of Greedy, Dynamic Programming and Space and Trade off algorithm techniques.

Operating System and UNIX

Contact Hours/Week	:	3+2(L +T)	Credits	:	04
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Course Code	:	N1MCA09	Course	PCC	

Course Objectives:

This Course will enable students to:	
1.	Understand the basic operating system structure and concept of process scheduling.
2.	Visualize the intricate relationship between an operating system and its underlying Hardware
3.	Learn scheduling algorithms, deadlock detection algorithms and memory management
4.	Learn the performance of memory management techniques, page replacement and disk scheduling algorithms.
5.	Understand UNIX file attributes, filters and Shell scripting

UNIT – I	07 Hours

Introduction

What is an Operating System, Mainframe systems, Desktop systems, Multiprocessor system, Distributed system, clustered systems, Real Time systems, Handheld systems, Feature Migration, Computing environment, System Components, OS Services, System calls, System Programs, System Structure, Virtual Machines.

UNIT – II	08 Hours

Process Management and Synchronization

Process concept, Process Scheduling, operation on Processes, Cooperating Processes, Inter process Communication, CPU Scheduling-Basic concepts, Scheduling Criteria, Scheduling algorithms, Multiple processor scheduling, Real Time Scheduling.

The critical section problem, Synchronization hardware, Semaphores, Classical problems of synchronization, Critical regions.

UNIT – III	08 Hours

Deadlocks and Memory Management

Deadlocks, System model, Characterization, Methods for handling deadlocks, deadlock prevention, avoidance, detection and its recovery.

Memory Management: Background, Swapping, contiguous allocation, Paging, Segmentation, Segmentation with paging.

UNIT – IV	08 Hours

Storage Management

Virtual Memory – Background, Demand Paging, Copy - on-write, Page replacement algorithms, Thrashing

Mass Storage Structure – Disk Structure, Disk Scheduling, Disk Scheduling algorithms, Disk Management.

UNIT – V	08 Hours
Introduction to Unix: Basic commands, File Permissions, simple filters: head, tail, cut, paste, sort, unique, tr. Advanced filters: grep global regular expression. Introduction to Sed. **Essential Shell Programming**: Introduction to Shell Scripts, Command Line Arguments, Logical Operators, if Conditional, using test and [ ] to Evaluate Expression, The case Conditional, expr, while: looping,for: looping with a list, set and shift commands.	

TEXT BOOKS:

1.	Abraham Silberschatz, Peter Baer Galvin, Greg Gagne: Operating Systems Principles, 8th Edition, Wiley – India.
2.	Sumitabha Das: UNIX Concepts and Applications, 4th Edition, Tata McGraw Hill, 2006

REFERENCE BOOKS:

1.	UNIX: The Complete Reference: Kenneth Roson et al, Osborne/McGraw Hill, 2000.
2.	UNIX and Shell Programming: M G Venkateshmurthy, Pearson Education Asia, 2005
3.	D M Dhamdhere: Operating Systems – A Concept Based Approach, 2nd Edition, Tata McGraw – Hill, 2002.

WEB LINKS:

1.	**To Understand Operating System Basics:** https://nptel.ac.in/courses/106/105/106105214/ https://nptel.ac.in/courses/106/106/106106144/
2.	**To Understand Basics in Unix:** https://www.youtube.com/watch?v=1hf_0EeOYBY (NPTEL IIT Madras)
3.	**Shell Script:** https://www.youtube.com/watch?v=48zApVSX97s (NPTEL IIT Madras)

Course Outcomes:

After the completion of this course, students will be able to:	
CO1	Explicate the core structure and functionality of Operating System.
CO2	Interpret the various process management and synchronization mechanisms.
CO3	Analyze the knowledge of occurring deadlock concepts and apply wide range of problem solving methods to solve deadlocks.
CO4	Identify and analyze the performance of different memory management techniques, page replacement and disk scheduling algorithms.
CO5	Identify Unix commands, interpret file attributes, filters and write shell scripts.

Professional Web Development – I

Contact Hours/Week	:	3+2(L+T)	Credits	:	04
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Course Code	:	N1MCA10	Course	PCC	

Course Objectives:

This Course will enable students to:	
1.	Interpret the basic concepts of Web environment, HTML, CSS and Http
2.	Implement simple web applications with the elements of JQueries and JavaScripts.
3.	Interpret and use the platform of Java Enterprise Edition, Web Development and the Usage of Builder Tool.
4.	Interpret and use the XML based Web technologies and applications.
5.	Interpret to build projects infrastructure with the usage of management and Comprehension tools

UNIT– I	**08Hours**

How the Web Works: Web Applications in Comparison to Desktop Applications, Static Web sites versus Dynamic Web sites, Internet Protocols.
Http:Hypertext Transfer Protocol, Headers, Request Methods, Response Codes.
HTML: Structure of HTML Documents, DOCTYPE, HTML Tables and Forms
Front End Design: Cascading Style Sheet (CSS): Introduction to CSS – Basic syntax and structure, Box Model, In-line Styles, Embedding Style Sheets, Linking External Style Sheets, Backgrounds, manipulating text, Positioning using CSS.

UNIT– II	**08Hours**

Bootstrap: Getting Started with Bootstrap- Mobile-irst design ,Why Bootstrap, Including Bootstrap in your HTML file, The Bootstrap CDN, Overriding with custom CSS, Using the Bootstrap customizer, Deep customization of Bootstrap, Downloading the Bootstrap source code, ,using the Bootstrap Grid-using the Bootstrap Grid classes, Customizing the grid for small devices, Adding offsets to columns, Pulling and pushing columns, Nesting columns, Using LESS with Bootstrap, Customize and extend Bootstrap with LESS, a CSS preprocessor, to take advantage of the variables, mixins, and more used to build Bootstrap's CSS. Compiling LESS files, using SimpLESS to compile LESS files, using WinLess to compile LESS files, using the command line to compile LESS files, Putting it all together.

UNIT– III	**08Hours**

JavaScript: Client-Side Scripting, The Client-Server Model, The Request-Response Loop, Asynchronous data requests.
Document Object Model (DOM): Inner elements and modifying DOM element.
Advanced JavaScripts and JQuery: Java Script Pseudo-Classes, Object literals, Emulate Classes through Functions, Using Prototypes, JQuery foundations: Including jQuery in the Javascript Page, JQuery selectors.

UNIT– IV	**07 Hours**

XML and XSLT: An introduction to XML and XSLT: What isXML?, WhatisXSLT and how does it work?, The Document Type Definition (DTD) used in XML, The XML Schema Definition (XSD) ,Transforming XML to XHTML, using XSLT, Basic elements in XSLT, Generating loops

with XSLT, Sorting XML data with XSLT, Using XSLT filtering and query features. **JSON**: Introducing JSON, JSON Grammar, JSON values, JSON tokens, JSON object. **AJAX**: Under standing AJAX ,XML and JSON for Ajax: The Character Decode	
UNIT– V	**08Hours**
MAVEN: Getting started with Maven, Setting up Maven, Maven Dependency Management, Using Repositories, Dependency identification. Maven Project basics, Understanding POM.XML. Properties in POM.XML. **Node.JS:** Setting Up for Node.js Development, Understanding Node.js, Node.js functions: anonymous functions **Data Visualization**- Getting Started with D3.js, Using SVG to Create Images Using Code , Base tag Basic elements , Positioning an element , Styling an element ,Important SVG elements	

TEXTBOOKS:

1.	Fundamentals of Web Development by Randy Connolly (Unit-I, Unit-II), Pearson Edition 2015, ISBN 10: 1292057092, ISBN 13: 978-1-29-205709-5
2.	Learn Java for Web Development, Authors: Vishal layka, Apress edition-2014, ISBN-13 (pbk): 978-1-4302-5983-1, ISBN-13 (electronic): 978-1-4302-5984-8 (Unit-III)
3.	BOOTSTRAPPING doing more with LESS,Publisher: Hachette Book Publishing India Pvt Ltd, ISBN: 9789380143125, 9789380143125
4.	Ajax on Java, Steven Douglas Olson, OReilly-2007, ISBN-10: **0-596-10187-2** (Unit-IV)
5.	Introducing Maven Apress: By BalajiWaranasi ,Apress release-2014, ISBN-13 (pbk): 978-1-4842-0842-7 (Unit-V)
6.	Begin Node.js by Basarat Ali syed, Apress release-2014, ISBN-13 (pbk): 978-1-4842-0188-6 (Unit-V)
7.	D3.js Quick Start Guide, Matthew Huntington, 2018 Packt Publishing, ISBN-13: 978- 1789342383
8.	Web Programming Building Internet Applications, Chris Bates, Wiley India, 3rd Edition, 2020, ISBN: 9780470017753

REFERENCE BOOKS:

1.	Principles of web Design, JOELSKLAR.
2.	XML, Solomon.H,Simon Ph.D, McGrawHill

WEBLINKS:

1.	https://www.w3schools.com
2.	https://getbootstrap.com/2.0.1/less.html#compiling
3.	https://www.freecodecamp.org/
4.	https://www.javatpoint.com/
5.	https://www.json.org/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1	***Design and develop*** simple web applications with the elements of HTML and CSS.
CO2	***Design and develop*** web applications with the usage of Bootstrap in HTML and CSS.
CO3	***Develop*** advanced Java Scripts using DOM and JQuery.
CO4	***Implement*** the usage of XML and its supportive components
CO5	***Interpret, setting up*** and ***implement*** the usage of package management tools such as Maven, NodeJs

Object Oriented Programming with Java

Contact Hours/Week	:	3+2(L+T)	Credits	:	04
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Course Code	:	N1MCA11	Course	PCC	

Course Objectives:

This Course will enable students to:	
1.	Comprehend the fundamental concepts of Java environment and Object oriented programming, interpretation of Classes, Objects and the various methods usage.
2.	Interpretation and implementation of Java basic programming with the concepts such as packages, inheritance, interfaces and usage of exceptions and I/O streams.
3.	Interpretation and implementation of Thread life cycle methods, multi-threading, synchronization and running Applets.
4.	Interpretation of various Java class types and fundamentals of Networking with Java

UNIT – I	**08 Hours**

Java Programming Fundamentals: The Java Language, The Key Attributes of Object-Oriented Programming, The Java Development Kit, A First Simple Program, Handling Syntax Errors, The Java Keywords, Identifies in Java, The Java Class Libraries.
Introducing Classes, Objects and Methods
Class Fundamentals, How Objects are Created, Reference Variables and Assignment, Methods, Returning from a Method, Returning Value, Using Parameters, Constructors, Parameterized Constructors, The new operator Revisited, Garbage Collection and Finalizers, The this Keyword.

UNIT – II	**08 Hours**

A Closer Look at Methods and Classes: Controlling Access to Class Members, Pass Objects to Methods, How Arguments are passed, Returning Objects, Method Overloading, Overloading Constructors, Recursion, Understanding Static, Introducing Nested and Inner Classes, Varargs: Variable-Length Arguments. Inheritance
Inheritance Basics, Member Access and Inheritance, Constructors and Inheritance, Using super to Call Superclass constructors, Using super to Access Superclass Members, Creating a Multilevel Hierarchy, When are Constructors Executed, Superclass References and Subclass Objects, Method Overriding, Overridden Methods support polymorphism, Why Overridden Methods, Using Abstract Classes, Using final, The Object Class.

UNIT – III	**08 Hours**

Interfaces: Interface Fundamentals, Creating an Interface, Implementing an Interface, Using Interface References, Implementing Multiple Interfaces, Constants in Interfaces, Interfaces can be extended, Nested Interfaces, Final Thoughts on Interfaces. **Packages** : Package Fundamentals, Packages and Member Access, Importing Packages, Static Import.
The Exception Hierarchy: Exception Handling Fundamentals, The Consequences of an Uncaught Exception, Exceptions Enable you to handle errors gracefully, using Multiple catch clauses, Catching subclass Exceptions, try blocks can be nested, Throwing an Exception, A Closer look at Throwable, using finally, using throws, Java's Built-in Exceptions, New Exception features added by JDK 7, Creating Exception Subclasses.

UNIT – IV	07 Hours
Multithreading fundamentals The Thread Class and Runnable Interface, Creating Thread, Creating Multiple Threads, Determining When a Thread Ends, Thread Priorities, synchronization, using Synchronization Methods,The Synchronized Statement, Thread Communication using notify(), wait() and notify All(), suspending, Resuming and stopping Treads. Applets : Understanding Applets, Applets Life cycle, Usage of Applet.	

UNIT – V	08 Hours
Auto boxing and Annotations Enumerations, Java Enumeration are class types, The Values () and Valueof() Methods, Constructors, methods, instance variables and enumerations, Auto boxing, Annotations(metadata) Networking with Java.net **Networking fundamentals** The Networking classes and Interfaces, The InetAddress class, The Socket Class, The URL class, The URLConnection Class, The HttpURL Connection Class.	

TEXT BOOKS:

1.	Jim Keogh, The complete Reference J2SE, Tata Mc_Graw Hill , 2002
2.	Herbert Schildt The Complete reference,7th Edition,TaTa McGraw Hill.

REFERENCE BOOKS:

1.	J2SE Architecture Book, B.V.Kumar, ISBN: 9780070621633
2.	Programming with Java, E.Bala guru swamy, 6th Edition

WEB LINKS:

1.	https://www.roseindia.net/
2.	https://javatpoint.com/
3.	https://tutorialspoint.com/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1	Interpret Java environment and Object oriented programming with the usage of Classes, Objects and the various methods.
CO2	Interpret and implement Java basic programs with the concepts such as packages, inheritance, interfaces and usage of exceptions and I/O streams.
CO3	Interpret and implement Thread life cycle methods, multi-threading, synchronization and execute Applets.
CO4	Interpret and implement various Java class types and interface Networking with Java

Computer Networks

Contact Hours/Week	:	3+0 (L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	N1MCA12	Course	PCC	

Course Objectives:

This Course will enable students to:	
1.	Understand computer networks by going through basic terminologies and concepts.
2.	Study the conceptual and implementation aspects of network applications, including application layer protocols, clients, servers, processes and interfaces.
3.	Understand the principles as to how two entities can communicate reliably over a medium through series of complicated scenarios.
4.	Understand how forwarding and routing functions of the network layer.
5.	Understand two fundamentally different types of link layer channels, broadcastchannels and HFCs, To get clear idea about wireless Internet devices, mobility related services.
6.	Understand network security related algorithms and protocols.

UNIT – I	**07 Hours**

Introduction, nuts-and-bolts description, service oriented description, The network edge, client and server programs, network access. The network core, circuit switching, multiplexing, packet switching.

ISPs, delays in packet switch networks, end-to-end delay. Throughput in computer networks. Layered architecture, 5 layer model, message, segments, and networks under attack.

UNIT – II	**08 Hours**

Application layer: Network application architectures, client server architectures, peer-to-peer architecture. Client server processes. Network application architectures, client server architectures, peer-to-peer architecture. Client server processes. Application layer protocols, services needed by an application, reliable data transfer, bandwidth, timing, services provided by the Internet. Transport protocols, TCP and UDP services. HTTP, web cashing. File transfer, out of band and in band, FTP commands and replies, electronic mail in the Internet, simple mail transfer protocol, mail message formats.

Transport Layer: transport layer services, best effort delivery service, transport layer multiplexing, multiplexing and de-multiplexing. Connectionless transport, UDP, UDP segments structure, UDP checksum. Principles of reliable data transfer, reliable data transfer protocol, positive and negative acknowledgements, ARQ protocols, Go-Back-N protocol, SR protocol.

UNIT – III	**08 Hours**

The network layer: Introduction, forwarding and routing, forwarding table. VC networks, VC setup and VC tear down. Datagram networks, longest matching prefix rule. The router fundamentals, input ports, switching fabric, routing processor. Output ports, queue management, HOL blocking. The Internet protocol, IPv4 datagram format, fields, functions. IPv6 protocol, format, fields, differences between IPv4 and IPv6.

UNIT – IV	08 Hours
The link Layer: services offered by the link-layer protocols, framing, link access, reliable delivery, flow control, error detection and correction. Parity checks-one and two dimensional, check summing methods. CRC-example problem, multiple access protocols-channels partitioning protocols. Random access protocols- ALOHA and slotted ALOHA. Career sense multiple access, space-time- diagram of two CSMA nodes with colliding transmissions. Link layer addressing, MAC address, address resolution protocol. Dynamic host configuration protocol, address resolution protocol, DHCP client server scenario. The Ethernet, Ethernet frame structure, connectionless service, Manchester encoding. CSMA/CD-Ethernets multiple access protocol.	

UNIT – V	08 Hours
Physical layer: Guided transmission media, magnetic media and twisted pairs, coaxial cables, fiber optic cables, satellite communication. Wireless networks, components of wireless networks, network characteristics, hidden terminal problem. **Security in computer networks** - Elements of secure communication. Confidentiality, authentication, message integrity and non-repudiation. Availability and access control Eves dropping, principles of cryptography, plain text, Types of attacks. Symmetric key cryptography, mono-alphabetic cipher, Block ciphers.	

TEXT BOOKS:

1.	James F. Kurose, Keith W. Ross: Computer Networking- A Top down Approach, 5th Edition, Pearson Publishing. [1-1- 1.5, 2.1-2.4, 3.1-3.5, 4.1-4.5, 5.1-5.5, 8.1, 8.2]
2.	Andrew S. Tennonbaum and David J. Wetherall, Computer Networks, 5th Edition, PearsonPublishing. [Unit 5: 2.2- 2.4, 2.7]

REFERENCE BOOKS:

1.	Behrouz A. Forouzan: Data Communications and Networking, 4th Edition, Tata Mc_GrawHill, 2006.
2.	Larry L.Peterson and Bruce S.David: Computer Networks- A Systems Approach, 4th Edition,Elsevier 2007, Tata MC_Graw Hill , 2004.
3.	Nader F.Mir: Computer and Communication, Perason Education, 2007.

WEB LINKS:

1.	https://nptel.ac.in/courses/106/105/106105183/
2.	https://www.youtube.com/watch?v=XMhCC2Q4xJA
3.	https://www.youtube.com/watch?v=0PbTi_Prpgs
4.	https://www.youtube.com/watch?v=k9ZigsW9il0

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Interpret the different network components and layers.
CO2.	Illustrate the functionalities of the predominant protocols of application layer and

	transportation layer.
CO3.	Interpret the functionalities of network layer.
CO4.	Illustrate various functionalities of link layer and its protocols.
CO5.	Explicate the concepts of physical layer and secure communication.

Professional Web Development – I Lab

Contact Hours/Week	:	3	Credits	:	1.5
Total Lecture Hours	:	-	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	N1MCAL5	Course	PCCL	

Course Objectives:

This Course will enable students to:	
1.	Implement the usage of Web environment and demonstrate the functionality of static and dynamic web elements such as HTML5,CSS,Http.
2.	Design and validate XML based web applications with the elements of DTD, XSD, XSLT, JQueries and Java Scripts.
3.	Use the platform of Java Enterprise Edition, Web Development and the develop web applications using JSON and web builder tools such as MAVEN.

Sl.no	Programs
1.	Develop HTML5 static web pages of an online Book store. The pages should resemble: www.amazon.com. The website should consist the following pages. 1.Home page 2.Registration and user Login 3.User profile page 4.Books catalog
2.	Create Style sheet to set formatting for text tags and embed that style sheet on web pages created for your site. Tools: Notepad Editor and Web Browser like Chrome or Mozilla Firefox
3	Design a Web page and implement the usage of LESS with Bootstrap code
4	Develop and demonstrate, using Java script, a HTML5 document that collects the USN(the valid format is: A digit from 1 to 4 followed by two upper-case characters followed by two digits followed by two upper-case characters followed by three digits; no embedded spaces allowed) of the user. Event handler must be included for the form element that collects this information to validate the input. Messages in the alert windows must be produced whenerrors are detected.
5.	Write a Java script program to do the following1.Get the current date and time 2.Reverse the given string 3.Execute mouse events
6.	Validate an XML document by using the following : i) DTD ii) XSD iii)XSLT.
7.	Convert JSON text into a Java Script and perform operations.
8.	Setting up and implementing web application operations using Maven.

WEB LINKS:

1.	https://www.w3schools.com/nodejs/
2.	https://www.w3schools.com/xml/
3	https://javascript.info/
4	https://www.javatpoint.com/
5	https://www.w3schools.com/nodejs/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1	Design and develop web applications with the usage of the web elements HTML5, CSS and Bootstrap
CO2	Design and develop XML based applications with the usage of supportive elementsDTD, XSD, XSLT, JSON and implementing Java Scripts.
CO3	Setting up and implement the usage of package management tools such as Maven, NodeJS on for Web applications

Java lab

Contact Hours/Week	:	3	Credits	:	1.5
Total Lecture Hours	:	-	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	N1MCAL6	Course	PCCL	

Course Objectives:

This Course will enable students to:	
1.	Design and build Java applications with the implementation of basic Java object oriented methods dynamically.
2.	Implement the mutable and unmutable elements and console based implementation of Java String and Thread API .
3.	Design and build Java web applications and implement the usage of packages and enumerations.

Sl.no	Programs
1.	Program on object oriented concepts
2.	Program on this keyword
3	Programs on method overloading and overriding
4	Program on Varargs
5.	Programs on inheritance concepts
6.	Programs on packages
7.	Programs on abstract classes and interfaces
8.	Programs on Exception handling
9.	Programs on multithreading
10.	Programs on autoboxing and annotation

WEB LINKS:

1.	https://www.roseindia.net/
2.	https://javatpoint.com/
3.	https://tutorialspoint.com/
4.	https://w3schools.com/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1	Implement Java programming language features.
CO2	Design and develop packages and multithreading
CO3	Design and implement the usage of exception handling

Soft Skills

Contact Hours/Week	:	3	Credits	:	0
Total Lecture Hours	:	3	CIE Marks	:	100
Total Tutorial Hours	:	-	SEE Marks	:	-
Course Code	:	HSS08	Course	NCMC	

Course Objectives:

This Course will enable students to:	
1.	To make the students aware of the importance of soft skills in the present-day business world and work environment
2.	To learn the science behind picking up any skill quickly
3.	To help students realize as well as develop key soft skills interviewers look for – such as changemanagement, professionalism, inter- and intra-personal skills, adaptability etc.
4.	To develop effective resumes (paper-based as well as video)
5	To understand the importance of and create an effective digital footprint
6	To provide simulated Group Discussion and Personal Interview experience based on the models adopted by reputed companies.
7	To understand professional etiquette to be displayed in workplaces.

METHODOLOGY

Interactive instructor led session with audio-visual aids / case studies.

Day	#	**Topic**	**Sub-topics covered**	Duration (Hrs)
1.	1	How to pick up skills faster?	1. Knowledge vs skill 2. Skill introspection 3. Skill acquisition 4. "The 10,000 hours rule" and the converse	2
	2	Interpersonal and Intrapersonal skill building	Social Interaction 1.Interpersonal Communication2.Peer Communication 3.Bonding 4.Types of social interactionEmotional Management Responsibility 1. Types of responsibilities 2. Moral and personal responsibilities	2
	3.	Professional etiquette	Workplace etiquette - meeting room, pantry, cubicle Dining etiquette Telephone etiquette Email and business correspondence etiquette	2
2.	4	Change Management	Who moved my cheese? Tolerance of change and uncertaintyJoining the Bandwagon Adapting change for growth – overcoming inhibition	2

			Adapt to changes(tolerance of change and uncertainty) Adaptability Curve Survivor syndrome	
	5	Creating a digital footprint	1.How what you post online / information online can affect people's and recruiter's perception about you 2. Usage of Linkedin to further one's career prospects 3. Managing content that one posts on platforms like Twitter, Facebook, Instagram etc. to create positive footprint about oneself Why is it important to leave a digital footprint?	2
	6	Time Management	Prioritization - Time Busters Procrastination Scheduling Multitasking Monitoring Working under pressure and adhering to deadlines	2
3	7	Group Discussion –Basics	1.Importance of GDroundSkills assessed in a GD How to ace a GD Dos and donts in a GD Idea generation techniques One mock GD involving participation from 12 volunteers, facitilated by the trainer	2
	8	Personal Interview - Basics	Self-introduction practice. Body language – especially grooming for personal interview.Personal interview – FAQs discussion.	2
	9	Building a resume from scratch	1. How to write a good and impressive Resume. 2. Important aspects of an impressive resume.3.Sample template and formatting ideas.	2
4	10	Group Discussion – Advanced	GD sample Video with analysis and discussion.GD Dos and Don'ts – Worksheet practice. Roleplays for Dos and Don'ts. Idea generation – worksheet practice.	3
	11	Personal Interview - Advanced	1.Extensive discussion on PI FAQs. 2.Interview questions from based onresume - discussion. 3. PI Videos – discussion and analysis. 4. Highlighting successful answers for PI:3 questions.5.Body language during a personal interview. 6.Unconventional types of interviews (Stress, panel, MR, guesstimation)	3
5	12	Resume Writing - Workshop (Drafting a paper-based as well as avideo resume)	1. Resume writing – Worksheet practice. 2. 3 stage Resume drafting. 3. Rough draft-1. 4. Rough draft -2. 5. Fair draft. 6. Discussion on specific aspects of an 7. impressive Resume. 8. Creating a video resume	3
	13	Setting andachieving Targets	Ambition, goal, passion and career objective - difference SMART goals and Action plans Obstacles -Failure management (case studies)	1.5

	14	Introspection	Identify your USP - Unique Selling Proposition Recognize your strengths and weakness (SWOT) Nurture strengths Fixing weakness Overcoming yourcomplex Confidence building	1.5
6	15	Group Discussion - Mock	1. Mock Group Discussions featuring groupsof 10people, with each GD lasting for 15 minutes. 2. Detailed feedback for each participant 3.Introspection by the audience to add value to the GD	3
	16	Personal Interview - Mock	1. Mock personal interview for a sampleset of candidates 2. Simulate the real personal interview experience. 3. Individual feedback and areas of improvements areshared.	3

ASSESSMENTS PROVIDED

The following assessments are integrated into the training programme to best judge a student's proficiency on soft skills.

1. Team building tasks (Inside training hours)
2. Participation in group activities (Inside training hours)
3. Psychometric test
4. Creating a resume

1.	Who moved my Cheese?' by Spencer Johnson
2.	'Outliers' by Malcolm Gladwell
3.	'Emotional Intelligence' by Daniel Goleman'Road Less Travelled' by Scott Peck M.
4.	'How to win friends and influence people' by Dale Carnegie
5.	Who moved my Cheese?' by Spencer Johnson

Course Outcomes:

After the completion of this course, students will be able to:	
CO1	Display key soft skills expected by recruiters
CO2	Be able to apply scientific methods to learn any skill quickly
CO3	Participate in Group Discussions and Personal Interviews effectively
CO4	Create effective resumes that impress interviewers (paper-based as well as video)
CO5	Apply professional etiquette to be displayed in various workplace scenarios

Basic Programming

Contact Hours/Week	:	3	Credits	:	0
Total Lecture Hours	:	3	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	N1MCABC	Course	BC	

Course Objectives:

This Course will enable students to:	
1.	Learn the fundamental programming concepts and methodologies.
2.	Code, document, test, and implement a well-structured, robust computer program using C++.
3.	Write reusable modules using Inheritance and polymorphism.

UNIT – I	**08 Hours**
Principles of Object-Oriented Programming and Functions: Object oriented Programming Paradigm, basic concepts of object oriented programming, Benefits of OOPS, Object oriented languages, Applications of OOP, Variables, Operators in C++, Scope resolution Operator, Manipulators, Function prototyping, call by reference, return by reference, inline functions, default arguments, const arguments, function overloading.	

UNIT – II	**07 Hours**
Classes and Objects: C structure revisited, specifying a class, Defining member functions, A C++ program with class, Making an outside function inline, Nesting of member functions, Private member functions, Arrays within a class, memory allocation for objects, static data members, static member functions, array of objects, objects as function arguments, friendly functions, returning objects.	

UNIT – III	**08 Hours**
Constructors And Destructors: constructors, parameterized constructors, multiple constructors in a class, constructors with default arguments, dynamic initialization of objects, copy constructors, constructing two dimensional arrays, destructors. **Operator Overloading:** Defining operator overloading, overloading unary and binary operators, overloading using friend, rules for overloading operators.	

UNIT – IV	**08 Hours**
Inheritance: Introduction, Defining derived classes, Single inheritance, making a private member inheritable, Multi-level inheritance, Multiple inheritance, Hierarchical inheritance, Hybrid inheritance, Virtual base classes, Abstract classes, Constructors in derived classes.	

UNIT – V	**08 Hours**
Pointers, Virtual functions and polymorphism: Introduction, Pointers, pointers to objects, this pointer, pointers to derived classes, Virtual functions, pure virtual functions. **Templates:** class templates, class templates with multiple parameters, function	

templates, function templates with multiple parameters, overloading of template functions, member function templates, Non-type template arguments.

TEXT BOOKS:

1.	Balagurusamy, Object Oriented Programming with C++, 6th edition, TMH, ISBN: 9781259029936, 125902993X

REFERENCE BOOKS:

1.	The Complete Reference C++, Herbert Schildt, 4th Edition, TMH
2.	C++ Primer, Stanley B. Lippman, Josee Lajoie, Barbara E. Moo, 4th Edition, Addison Wesley, 2005
3.	Object-Oriented Programming with C++, Sourav Sahay, Oxford University Press, 2006

3.	https://www.tutorialspoint.com/cplusplus/index.htm
4.	https://www.onlinegdb.com/online_c++_compiler

Course Outcomes:

After the completion of this course, students will be able to:	
CO1	Apply various basic C++ concepts and features.
CO2	Develop programs using Class, Object and Friend functions
CO3	Design programs using constructors, destructors and Operator overloading
CO4	Analyzing the use of different types of Inheritance and Virtual Base Classes.
CO5	Design programs using polymorphism techniques and Templates

III Semester

Machine Learning

Contact Hours/Week	: 3+2(L+T)	Credits	: 04
Total Lecture Hours	: 39	CIE Marks	: 50
Total Tutorial Hours	: 26	SEE Marks	: 50
Course Code	: N3MCA01		

Course Objectives:

This Course will enable students to:	
1.	Learn the basic concepts of machine learning and Concept Learning.
2.	Learn the elements of decision trees & Model Evaluation.
3.	Understand the concepts of artificial neural networks & Evaluating Hypothesis.
4.	Understand the Bayesian classifiers and instance based learning.
5.	Familiarize unsupervised learning.

UNIT – I	**07 Hours**
Introduction: Well posed learning problems, Designing a Learning system, Perspectives and Issues in Machine Learning. **Concept Learning:** A Concept learning task, Concept learning as search, Find-S: Finding a maximally specific hypothesis, Version spaces and the Candidate Elimination algorithm.	

UNIT – II	**08 Hours**
Decision Tree Learning: Decision tree representation, Appropriate problems for decision tree learning, The Basic decision tree learning algorithm, Hypothesis space search in decision tree learning, Issues in decision tree learning. **Model Evaluation:** Metrics for evaluating Classifier Performance, Holdout method & Random Subsampling, Cross-Validation, Bootstrap.	

UNIT – III	**08 Hours**
Artificial Neural Networks: Introduction, Biological Motivation, Neural Network representations, Appropriate problems for Neural network Learning, Perceptrons, Multilayer Networks and the backpropogation algorithm, A Differentiable Threshold Unit, The Backpropagation Algorithm. **Evaluating Hypothesis:** Motivation, Estimating hypothesis accuracy, Sample Error & True Error, Confidence Intervals for Discrete-Valued Hypotheses.	

UNIT – IV	**08 Hours**
Bayesian Learning: Introduction, Bayes theorem, An example, Naïve Bayes classifier, An Illustrative Example, Bayesian belief networks, Conditional Independence, Representation, Inference. **Instance based Learning**: Introduction, k-nearest neighbor learning, Distance-Weighted Nearest Neighbor Algorithm, and Remarks on k- Nearest Neighbor Algorithm.	

UNIT – V	08 Hours
Unsupervised Learning: Cluster analysis: What is Cluster analysis?, Requirements for Cluster analysis, Partitioning Methods: k-Means, Hierarchical Methods: Agglomerative vs Divisive Hierarchical Clustering, Distance Measures in Algorithmic Methods, Expectation-Maximization Algorithm.	

TEXT BOOKS:

1.	Tom M Mitchell , Machine Learning, McGraw Hill Education (India) Edition 2013. (Sections: 1.1, 1.2, 1.3, 2.2, 2.3, 2.4, 2.5, 3.2, 3.3, 3.4, 3.5, 3.7, 4.1, 4.2, 4.3, 4.4, 4.5 (4.5.1, 4.5.2), 5.1, 5.2, 6.1, 6.2, 6.9, 6.11(6.11.1, 6.11.2, 6.11.3), 8.1, 8.2, (8.2.1, 8.2.2))
2.	Jiawei Han, MK, JP, Data mining, Concepts & Techniques, 3rd Edition, MK. (Sections: 8.5, 8.5.1, 8.5.2, 8.5.3, 8.5.4, 10.1(10.1.1, 10.1.2), 10.2(10.2.1), 10.3(10.3.1, 10.3.2), 11.1.3

REFERENCE BOOKS:

1.	Ethem Alpaydin, Introduction to Machine Learning, 3rd Edition, EEE, MIT Press, 2018.
2.	SaikatDutt, Subramanian Chandramouli, Amit Kumar Das, Machine Learning, Pearson Publications, 4thimpression, 2019, ISBN 978-93-530-6669-7

WEB LINKS:

4.	https://www.youtube.com/?gl=IN&tab=w1
5.	https://ai.google/
6.	http://ndl.iitkgp.ac.in/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1	Summarize the basics of machine learning and apply the concept learning algorithm to real world problems.
CO2	Apply decision trees for classification tasks and evaluate classifier's performance.
CO3	Apply neural networks for classification tasks and evaluate the hypothesis accuracy.
CO4	Apply Bayesian learning and instance-based learning techniques for classification tasks.
CO5	Apply unsupervised learning techniques for clustering the data.

Mobile Application Development

Contact Hours/Week	:	3+0 (L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	3NMCA02			

Course Objectives:

This Course will enable students to:	
1.	Understanding the concepts of mobile and its platforms
2.	Explore the android tools and its applications
3.	Analyze the usage the UI design LBS
4.	Understand the messaging and network related

UNIT – I	08 Hours

Introduction

Preliminary Considerations – Cost of Development – Importance of Mobile Strategies in the Business World – Effective use of Screen Real Estate.

Understanding Mobile Applications: Users – Understanding Mobile Information Design – Understanding Mobile Platforms – Using the Tools of Mobile Interface Design.

UNIT – II	08 Hours

Getting Started with Android Programming

What is Android – Obtaining the required tools– Anatomy of an Android Application – Components of Android Applications – Activities – Fragments – Utilizing the Action Bar, introduction to Android SDK, build.gradle and Android Manifest file.

UNIT – III	08 Hours

Android UI Design and Location Based Services

Views and View Groups – Basic Views – Fragments – Displaying Maps – Getting Location Data – Publishing for Publishing – Deploying APK Files, Importance of debug build and release build.

UNIT – IV	08 Hours

Android Messaging and Networking

SMS Messaging – Sending Email – Networking – Downloading Binary Data, Text files – Accessing Web Services – Performing Asynchronous Call – Creating your own services – Communicating between a service and an activity – Binding activities to services, Simple SQL lite/cloud database connectivity.

UNIT – V	07 Hours

Feedback and Oscillator Circuits

iOS – Obtaining the tools and SDK – Components of XCODE – Architecture of iOS – Building Derby App in iOS – Other useful iOS things – Windows Phone: Getting the tools you need – Windows Phone 7 Project – Building Derby App in Windows Phone 7 –Distribution – Other useful Windows Phone Thing.

5.	https://www.geeksforgeeks.org/android-tutorial/
6.	https://www.tutlane.com/tutorial/android
7.	https://www.w3schools.in/category/android-tutorial/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Exemplify the existing UI design components to build mobile applications.
CO2.	Develop applications using software development kits (SDKs), frameworks and toolkits.
CO3.	Apply Android UI Design and Location Based Services
CO4.	Design and develop an application using Android Messaging and Networking
CO5.	Deploy competent mobile application development solutions on various cross platforms.

Computer Networks

Contact Hours/Week	:	3+0 (L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	3NMCA03			

Course Objectives:

This Course will enable students to:	
1.	Impart knowledge of computer networks by going through basic terminologies and concepts.
2.	Study the conceptual and implementation aspects of network applications, including application layer protocols, clients, servers, processes and interfaces.
3.	Understand the principles as to how two entities can communicate reliably over a medium through series of complicated scenarios.
4.	Understand how forwarding and routing functions of the network layer.
5.	Understand two fundamentally different types of link layer channels, broadcastchannels and HFCs, To get clear idea about wireless Internet devices, mobility related services.
6.	Understand network security related algorithms and protocols.

UNIT – I	**07 Hours**
Introduction, nuts-and-bolts description, service oriented description, The network edge, client and server programs, network access. The network core, circuit switching, multiplexing, packet switching. ISPs, delays in packet switch networks, end-to-end delay. Throughput in computer networks. Layered architecture, 5 layer model, message, segments, and networks under attack.	

UNIT – II	**08 Hours**
Application layer: Network application architectures, client server architectures, peer-to-peer architecture. Client server processes. Network application architectures, client server architectures, peer-to-peer architecture. Client server processes. Application layer protocols, services needed by an application, reliable data transfer, bandwidth, timing, services provided by the Internet. Transport protocols, TCP and UDP services. HTTP, web cashing. File transfer, out of band and in band, FTP commands and replies, electronic mail in the Internet, simple mail transfer protocol, mail message formats. **Transport Layer:** transport layer services, best effort delivery service, transport layer multiplexing, multiplexing and de-multiplexing. Connectionless transport, UDP, UDP segments structure, UDP checksum. Principles of reliable data transfer, reliable data transfer protocol, positive and negative acknowledgements, ARQ protocols, Go-Back-N protocol, SR protocol.	

UNIT – III	**08 Hours**
The network layer: Introduction, forwarding and routing, forwarding table. VC networks, VC setup and VC tear down. Datagram networks, longest matching prefix rule. The router fundamentals, input ports, switching fabric, routing processor. Output ports, queue management, HOL blocking. The Internet protocol, IPv4 datagram format, fields, functions. IPv6 protocol, format, fields, differences between IPv4 and IPv6.	

UNIT – IV	08 Hours
The link Layer: services offered by the link-layer protocols, framing, link access, reliable delivery, flow control, error detection and correction. Parity checks-one and two dimensional, check summing methods. CRC-example problem, multiple access protocols-channels partitioning protocols. Random access protocols- ALOHA and slotted ALOHA. Career sense multiple access, space-time- diagram of two CSMA nodes with colliding transmissions. Link layer addressing, MAC address, address resolution protocol. Dynamic host configuration protocol, address resolution protocol, DHCP client server scenario. The Ethernet, Ethernet frame structure, connectionless service, Manchester encoding. CSMA/CD-Ethernets multiple access protocol.	

UNIT – V	08 Hours
Physical layer: Guided transmission media, magnetic media and twisted pairs, coaxial cables, fiber optic cables, satellite communication. Wireless networks, components of wireless networks, network characteristics, hidden terminal problem. **Security in computer networks** - Elements of secure communication. Confidentiality, authentication, message integrity and non-repudiation. Availability and access control Eves dropping, principles of cryptography, plain text, Types of attacks. Symmetric key cryptography, mono-alphabetic cipher, Block ciphers.	

TEXT BOOKS:

1.	James F. Kurose, Keith W. Ross: Computer Networking- A Top down Approach, 5th Edition, Pearson Publishing. [1-1- 1.5, 2.1-2.4, 3.1-3.5, 4.1-4.5, 5.1-5.5, 8.1, 8.2]
2.	Andrew S. Tennonbaum and David J. Wetherall, Computer Networks, 5th Edition, PearsonPublishing. [Unit 5: 2.2- 2.4, 2.7]

REFERENCE BOOKS:

1.	Behrouz A. Forouzan: Data Communications and Networking, 4th Edition, Tata Mc_GrawHill, 2006.
2.	Larry L.Peterson and Bruce S.David: Computer Networks- A Systems Approach, 4th Edition,Elsevier 2007, Tata MC_Graw Hill , 2004.
3.	Nader F.Mir: Computer and Communication, Perason Education, 2007.

WEB LINKS:

3.	https://www.youtube.com/watch?v=0PbTi_Prpgs
4.	https://www.youtube.com/watch?v=k9ZigsW9il0

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Interpret the different network components and layers.
CO2.	Illustrate the functionalities of the predominant protocols of application layer and

	transportation layer.
CO3.	Interpret the functionalities of network layer.
CO4.	Illustrate various functionalities of link layer and its protocols.
CO5.	Explicate the concepts of physical layer and secure communication.

Software Project Management

Contact Hours/Week	:	3+0 (L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	3NMCA04			

Course Objectives:

This Course will enable students to:	
1.	Deliver successful software projects that support organization's strategic goals
2.	Match organizational needs to the most effective software development model
3.	Plan and manage projects at each stage of the software development life cycle (SDLC)
4.	Create project plans that address real-world management challenges
5.	Develop the skills for tracking and controlling software deliverables

UNIT – I	08 Hours

Introduction to Project Management

Importance of software project management: What is a project? Problems with Software Projects What are Project Management? Stages of Project. The Feasibility Study. The Cost-benefit Analysis. Planning. Project Execution. Project and Product Life Cycles. The Stakeholder of Project. All parties of project. The Role of Project Manager. Project Management Framework.

Project Planning

Integration Management. What is Integration Management? Project Plan Development. Plan Execution. Scope Management. What is Scope Management?. Methods for Selecting Projects. Project Charter. Scope Statement. Work Breakdown Structure. Stepwise Project Planning Overview. Main Steps in Project Planning.

UNIT – II	08 Hours

Project Scheduling

Time Management, Importance of Project Schedules, Schedules and Activities, Sequencing and Scheduling Activity, Project Network Diagrams.

Network Planning Models, Duration Estimating and Schedule Development, Critical Path Analysis, Program Evaluation and Review Technique (PERT).

Project Cost Management

Importance and Principles of Project Cost Management, Resource Planning, Cost Estimating, Types of Cost Estimates, Expert Judgment, Estimating by Analogy, COCOMO Model, Cost Budgeting, Cost Control.

UNIT – III	08 Hours

Project Quality Management

Quality of Information Technology Projects, Stages of Software Quality Management Quality Planning, Quality Assurance. Quality Control, Quality Standards, Tools and Techniques For Quality Control.

Project Human Resources Management

What is Project Human Resources Management? Keys to Managing People, Organizational Planning, Issues in Project Staff Acquisition and Team Development.

UNIT – IV	08 Hours
Project Communication Management Communications Planning, Information Distribution, Performance Reporting, Administrative Closure, Suggestions for Improving Project Communications.	

UNIT – V	08 Hours
Project Risk Management The Importance of Project Risk Management, Common Sources of Risk in IT projects, Risk Identification, Risk Quantification, Risk Response Development and Control, Project Procurement Management Importance of Project Procurement Management, Procurement Planning, Solicitation. Source Selection, Contract Administration and Contract Close- out.	

TEXT BOOKS:

1.	Kathy Schwalbe, ―Information Technology Project Management‖, International Student Edition, THOMSON Course Technology, 2003
2.	Bob Hughes and Mike Cotterell, ―Software Project Management‖, Third Edition, Tata McGraw-Hill.

REFERENCE BOOKS:

1.	Basics of Software Project Management, NIIT, Prentice-Hall India, 2004.
2.	Pankaj Jalote, Software Project Management in Practice, Pearson Ed., 2002.
3.	S.A. Kelkar, Software Project Management, a Concise Study, Revised Edition, Prentice-Hall India, 2003

WEB LINKS:

1.	https://www.tutorialspoint.com/software_engineering/software_project_management.htm
2.	https://www.geeksforgeeks.org/software-engineering-software-project-management-spm/
3.	https://london.ac.uk/sites/default/files/study-guides/software-engineering-project-management.pdf
4.	http://www.cs.ox.ac.uk/people/michael.wooldridge/teaching/soft-eng/lect05.pdf
5.	https://www.tutorialspoint.com/ms_project/ms_project_tutorial.pdf

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Recognize the practices and methods for successful software project management
CO2.	Apply the evaluation techniques for estimating cost, benefits, schedule and risk
CO3.	Identify techniques for requirements, policies and decision making for effective resource management and project quality
CO4.	Devise a framework to manage project communication and project reporting
CO5.	Develop strategies for software project management plan for activities, risk, monitoring, control and procurement management

Professional Practices and Ethics

Contact Hours/Week	:	3+0(L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	3NMCA05			

Course Objectives:

This Course will enable students to:	
1.	Interpret the different types of barriers in communication
2.	Inculcate the problems covering Quantitative, verbal Ability and Logical Reasoning
3.	Interpret the job search process and networking
4.	Inculcate the Effective Presentation Strategies
5.	Develop Ethics in business world.

UNIT – I	09 Hours

Basics of Technical Communication

Introduction, Process Of Communication, Language As A Tool, Levels Of Communication, The Flow Of Communication, Communication Networks, Importance Of Technical Communication Barriers To Communication: Definition Of Noise, Classification Of Barriers.

Active Listening: Introduction, Types Of Listening, Traits Of A Good Listener, Active Versus Passive Listening

UNIT – II	08 Hours

Group Communication and writing skills:

Various Forms of group communication, body language, discussion and group discussion. Paragraphs & Essays: Expressing idea, Paragraph construction, Paragraph length, paragraph pastern, Kinds of paragraph, writing first draft, revising & finalising, Essay,

Letters & Email: Letter writing, business letter, cover letter, resume, Email.

UNIT – III	09 Hours

Strategies in the job search process.

Job search, Building a network of contacts, identifying appropriate jobs, Finding your employer, Preparing the application documents, Constructing the resume.

Interviews: Introduction, Objectives, Types of Interviews, Job Interviews

Group Discussion: Introduction, Group Discussion, Organizational Group discussion,Group discussion as part of selection process

UNIT – IV	07 Hours

Effective Presentation Strategies

Introduction, Defining purpose, Analyzing Audience and Locale, Organizing Contents, preparing outline, Visual Aids, Understanding Nuances of Delivery, Kinesics, Proxemics, Paralinguistic, Chronemics.

UNIT – V	06 Hours
An Overview of Ethics What are Ethics? Ethics in the Business World, Fostering good business ethics, improving corporate ethics, improving corporate ethics, Ethics in Information Technology (IT)	

TEXT BOOKS:

1.	Meenakshi Raman and Sangeeta Sharma: Technical Communication - Principles and Practices, Oxford University Press, 2011, Chapters: 1, 2, 4, 5, 6, 7
2.	Raymond V Lesikar, Flatley, Rentz, Pande : Business Communication Making connections in a digital world, 11th Edition, Tata McGraw-Hill Edition. Chapter: 9.
3.	George Reynolds: Ethics in Information Technology, Thomson Course Technology, 2nd Edition, 2007 Chapter: 1

REFERENCE BOOKS:

1.	M.Ashraf Rizivi: Effective Technical Communication, 1st Edition, Tata McGraw Hill, 2005.
2.	Mike W Martin and Ronald Schinzinger: Ethics in Engineering, 3rdEdition, Tata McGraw Hill, 2003

WEB LINKS:

1.	https://onlinecourses.nptel.ac.in/noc21_hs76/preview
2.	https://onlinecourses.nptel.ac.in/noc21_hs02/preview
3.	https://www.coursera.org/courses?query=soft%20skills
4.	https://www.edx.org/learn/soft-skills
5.	https://learning.linkedin.com/content-library/online-business-courses/soft-skills

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Acquire the communication skills.
CO2.	Perceive the knowledge of group communication and writing skills.
CO3.	Acquire the knowledge of job search strategies, interviews and GDs.
CO4.	Demonstrate the effective presentation strategies.
CO5.	Adopt ethical and privacy practices.

Artificial Intelligence & Deep learning

Contact Hours/Week	:	3+0(L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	3NMCAE21			

Course Objectives:

This Course will enable students to:	
1.	Know the representations and algorithms used to build artificial intelligence systems
2.	Understand the role of the knowledge representation and reasoning.
3.	Achieve the knowledge in building the simple knowledge-based systems.
4.	Foundation to deep learning and its major architectures

UNIT – I	07 Hours
What is AI? The state of the art. **Intelligent Agents:** Agents and environment; Good behavior: the concept of Rationality ; The nature of environment ; the structure of agents . **Problem solving:** Problem-solving agents; Example problems; Searching for solution;Uninformed search strategies.	

UNIT – II	08 Hours
Informed Search: Informed search strategies ; Heuristic functions ; **Adversial search:** Games ; Optimal decisions in games; Alpha-Beta pruning **Constraint satisfaction problems:** Defining Constraint satisfaction problems.	

UNIT – III	08 Hours
Logical Agents: Knowledge-based agents; The wumpus world ;Logic, **Propositional logic:** A very simple logic; **First-Order Logic:** Representation revisited; Syntax and semantics of first-order logic; Using first-order logic	

UNIT – IV	08 Hours
Fundamentals of Deep Networks: Neural networks, Training neural networks, Defining Deep Learning, Common architectural principles of Deep Networks-Parameters, Layers, Activation functions, Loss functions, Hyper parameters, Building blocks of Deep Networks-RBMs, and Auto encoders.	

UNIT – V	08 Hours
Major architectures of Deep Networks: Convolutional Neural Network-Biological inspiration, Intuition, CNN architecture over view, Input Layers, Convolutional layers, pooling layers, Fully Connected layers, Recurrent Neural Networks- Modeling the time dimension, 3D Volumetric input, General RNN architecture, LSTM networks, Domain specific Applications, when do I need deep learning	

TEXT BOOKS:

1.	Stuart J Russel and Peter Norvig : Artificial Intelligence A Modern Approach, 3rd Edition, Pearson India Education limited, 2015, (1.1,2.1to2.4,3.1 to 3.6,5.1 to 5.3, 6.1, 7.1 to 7.4, 8.1 to 8.3, 9.1 to 9.4)
2.	Josh Patterson and Adam Gibson, Deep Learning, A practitioner's approach, First edition, Shroff Publishers and Distributors Pvt.Ltd.,2017.

REFERENCE BOOKS:

1.	Elaine Rich, Kevin Knight: Artificial Intelligence, 2nd Edition, Tata McGraw Hill, 1991.
2.	Nils J. Nilsson: Principles of Artificial Intelligence, Elsevier, 1980.
3.	Ian Goodfellow, Yoshua Bengio and Aaron Courville, Deep Learning,MIT Press, Jan2017
4.	S Lovelyn Rose, L Ashok Kumar, and D Karthika Renuka, Deep learning using Python, Wiley India Pvt.Ltd.,2019

WEB LINKS:

1.	Artificial Intelligence, Dash gupta(IITK), https://nptel.ac.in/courses/106/105/106105079/
2.	Andrew Ng, AI for everyone, coursera.org
3.	Deeplearning Tutorial(Stanford university),http://deeplearning.stanford.edu/tutorial/
4.	Mitesh M Khapra(iitm),and Sudarshan Iyengar(IITR), Deep learning, https://nptel.ac.in/courses/106/106/106106184/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Apply basic principles of AI with problem solving agents.
CO2.	Analyze and apply searching techniques to solve real world problems
CO3.	Represent the real world problems by using first order and propositional logic.
CO4.	Comprehend the deep neural network and its major architectures

Assignment Component with open ended Project:

1. Mini project should give proper idea about the application of AI or Deep learning.
2. Maximum of two students per team. No team is allowed to do the same project.
3. Must be able to give demo and generate reports.

Virtual Reality and Augmented Reality

Contact Hours/Week	:	3+0(L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	3NMCAE22			

Course Objectives:

This Course will enable students to:	
1.	Gain the knowledge of Virtual Reality concepts and its implication.
2.	Understand the Input-Output interactions in Virtual Reality
3.	Understand role of Computer Graphics in Virtual reality
4.	Gain the knowledge of Architecture of Augmented Reality

UNIT – I	**07 Hours**
Introduction to Virtual Reality: History of Virtual Reality, Types of Virtual Reality, Three I's of Virtual Reality, Architecture / Components of Virtual Reality, Applications of Virtual Reality Common Issues of Human Communication Media	

UNIT – II	**06 Hours**
Input Devices: Trackers: Three Dimensional Position Trackers: Tracker Performance Parameters, Mechanical Trackers, Magnetic Trackers, Optical Trackers, Gesture Interfaces – The Pinch Glove, The 5DT Data Glove, The Cyber glove.	

UNIT – III	**10 Hours**
Output Devices: Graphic Displays The human visual system, Personal Graphics Displays, Sound Displays The human auditory system, Haptic Feedback – The Human Haptic System, Tactile Feedback Interfaces, Force Feedback Interfaces. **Programming with Unity**: Unity Basics, Manipulating the Scene, Code blocks and Methods, Debugging Conditional and looping statements. Working with objects, Working with Scripts, Player movement, Camera Movement **Further Learning for Unity**: The Asset Store	

UNIT – IV	**08 Hours**
Computing Architectures for VR: The Rendering Pipeline – The Graphics Rendering Pipeline, The Haptics Rendering Pipeline **Modeling:** Geometric Modeling – Visual Object Shape, Object Visual Appearance; Kinematics Modeling – Homogeneous Transformation Matrices, Object Position; Physical Modeling – Collision Detection, Surface Deformation, Force Smoothing and Mapping, Haptic Texturing; Behavior Modeling; Principles of touch feedback and force feedback;	

UNIT – V	**07 Hours**
Introduction to Augmented Reality: Definition and scope, technology and features of augmented reality, difference between AR and VR, Challenges with AR, Augmented reality methods, Mixed Reality, Applications of AR & MR **Computer Vision for Augmented Reality :** Marker-based tracking, Marker-less tracking	

TEXT BOOKS:

1.	Burdea, G. C. and P. Coffet. Virtual Reality Technology, Second Edition. Wiley-IEEE Press, 2003/2006.
2.	Alan B. Craig, Understanding Augmented Reality, Concepts and Applications, Morgan Kaufmann, 2013.

REFERENCE BOOKS:

6.	https://docs.unity3d.com/Manual/index.html
7.	https://youtu.be/XLP4YTpUpBI

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Apply Virtual Reality concepts and its implication.
CO2.	Illustrate the Input-Output interactions in Virtual Reality
CO3.	Build applications using UNITY tool.
CO4.	Illustrate the role of modeling in Virtual Reality
CO5.	Exemplify the Architecture of Augmented Reality

IoT

Contact Hours/Week	:	3+0(L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	3NMCAE23			

Course Objectives:

This Course will enable students to:	
1.	Understand the definition and significance of the Internet of Things
2.	Understand the components of IoT .
3.	Discuss the architecture, operation, and business benefits of an IoT solution

UNIT – I	08 Hours
Introduction, Design And Technologies : Introduction- Definition & Characteristics of IoT – **Physical design of IoT**-Things in IoT and IoT protocols **logical Design of IoT**- IoT Functional Blocks-IoT Communication Model and IoTCommunication APIs	

UNIT – II	07 Hours
IoT Enabling Technologies - Wireless Sensor Networks -Cloud Computing- Big Data Analytics - Communication Protocols- Embedded Systems. **IoT Levels & Deployment Templates.** **Domain Introduction** Introduction- Home Automation – Cities - Industry- Health & Lifestyle.-Environment-Energy-	

UNIT – III	08 Hours
M2M And System Management: Introduction-M2M-Difference between IoT andM2M **SDN and NFV for IoT** - Software Defined Networking - Network Function Virtualization- IoT System Management- Need for IoT Systems Management – **Simple Network Management Protocol** -Limitations of SNMP - Network Operator-Requirements	

UNIT – IV	08 Hours
Protocols Infrastructure - 6LowPAN- IPv6, Identification - EPC-uCode-URIs,Comms / Transport - Wifi, Bluetooth- LPWAN,Discovery- Physical Web- mDNS-DNS-SD,Data Protocols – MQTT-CoAP- AMQP- Websocket- Node,Device Management ,Semantic -JSON-LD.	

UNIT – V	08 Hours
IoT Platforms Design Methodology - IoT System for Weather Monitoring – IoT System for Agriculture. **Introduction to Cloud Storage Models & Communication APIs** -WAMP - AutoBahn for IoT-Xively Cloud for IoT . **Python Web Application Framework** - Django Architecture -Starting Development withDjango Toolkit-arduino-rasberry pi.	

TEXT BOOKS:

1.	Arshdeep Bahga and Vijay Madisetti, “Internet of Things - A Hands-on Approach”, Universities Press, 2015

REFERENCE BOOKS:

1.	Dieter Uckelmann et.al, “Architecting the Internet of Things”, Springer, 2011.
2.	CunoPfister, “Getting Started with the Internet of Things”, O’Reilly, 2011.

2.	https://www.edx.org/learn/iot-internet-of-things

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Comprehend the fundamental concepts of IoT
CO2.	Perceive the IoT Enabling Technologies and Domains
CO3.	Explore the system management and domain for various applications of IoT.
CO4.	Categorize the various protocols that are used for developing IoT applications.
CO5.	Design methodologies of IoT using cloud and python

Big Data Analytics

Contact Hours/Week	:	3+0(L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	3NMCAE24			

Course Objectives:

This Course will enable students to:	
1.	Gain knowledge of various technologies supporting Big DATA
2.	Get acquainted with Hadoop Ecosystem : YARN, MapReduce, Spark
3.	Get acquainted with HIVE, PIG and NoSQL

UNIT – I	08 Hours

Getting an Overview of Big Data: What is Big Data? Types of Data, Elements of Big Data, Careers in Big data.
Introducing Technologies for Handling Big Data: Distributed and Parallel Computing for Big Data, Cloud Computing and Big Data, and In-Memory Computing Technology for Big Data.
The Hadoop Distributed Filesystem: Design of HDFS,HDFS Concepts, Blocks, Namenodes and Datanodes, Block Caching, HDFS Federation ,HDFS High Availability , Hadoop file system, Data Flow: Anatomy of a File Read , Anatomy of a File Write, Coherency Model, Parallel Copying with distcp, Keeping an HDFS Cluster Balanced

UNIT – II	08 Hours

YARN: Anatomy of a YARN Application Run, Resource Requests, Application Lifespan, Building YARN Applications , YARN Compared to MapReduce 1, Scheduling in YARN, Scheduler Options ,Capacity Scheduler Configuration , Fair Scheduler Configuration , Delay Scheduling, Dominant Resource Fairness.
Spark: Introduction to Spark, Difference between Hadoop and Spark.

UNIT – III	08 Hours

How MapReduce Works: Anatomy of a MapReduce Job Run :Job Submission, Job initialization, Task Assignment, Task Execution, Progress and Status Updates, Job Completion. Failures : Task Failure, Application Master Failure, Node Manager Failure, Resource Manager Failure. Shuffle and Sort :The Map Side, The Reduce Side, Configuration Tuning. Task Execution :The Task Execution Environment, Speculative Execution, Output Committers MapReduce Types and Formats: the Default MapReduce Job, Input Formats:Input Splits and Records, Text Input, Binary Input, Multiple Inputs, Database Input (and Output). Output Formats:Text Output, Binary Output

UNIT – IV	07 Hours

Exploring Hive: Introducing Hive, Hive Variables, Hive Properties, Hive Queries, Data Types in Hive, Built-In Functions in Hive, Hive DDL, Creating Databases, Viewing a Database, Dropping a Database, Altering Databases, Creating Tables, Creating a Table Using the Existing Schema, Dropping Tables, Altering Tables, Using Hive DDL Statements, Data Manipulation in Hive, Loading Files into Tables, Inserting Data into Tables, Update in Hive, Delete in Hive, Using Hive DML Statements, Data Retrieval Queries, Using the SELECT Command, Using the

WHERE Clause, Using the GROUP BY Clause, Using the HAVING Clause, Using the LIMIT Clause, Executing HiveQL Queries, Using JOINS in Hive, Inner Joins, Outer Joins, Cartesian Product Joins, Map-Side Joins, Joining Tables.

UNIT – V	**08 Hours**

Pig: Execution Types,
Comparison with Databases, Pig Latin : Structure, Statements, Expressions , Types, Schemas , Functions, Macros. User-Defined Functions: A Filter UDF, An Eval UDF, A Load UDF. Data Processing Operators Loading and Storing Data, Filtering Data, Grouping and Joining Data , Sorting Data, Combining and Splitting Data. Pig in Practice: Parallelism, Anonymous Relations, Parameter Substitution

NoSQL: Introduction to NoSQL, why NoSQL, Characteristics of NoSQL. Types of NoSQL models: key value Data model, Column-oriented data model, document data model, graph databases. Schema less database, materialized views, Distributed models: CAP theorem. Sharding

TEXT BOOKS:

1.	Hadoop – The Definitive Guide; Storage and Analysis at Internet scale, Tom White, 4th Edition, 2015, O'Reilly, Shroff Publishers & Distributers Pvt. Ltd., ISBN – 978-93-5213-067-2
2.	Big Data – Black Book, DT Editorial Services, Edition – 2015, Dreamtech Press, ISBN - 978-93-511-9-757-7

WEB LINKS:

1.	https://nptel.ac.in/courses/106/104/106104189/
2.	https://www.youtube.com/watch?v=1vbXmCrkT3Y
3.	https://www.guru99.com/nosql-tutorial.html
4.	https://www.youtube.com/watch?v=2yQ9TGFpDuM
5.	https://www.w3schools.in/mongodb/introduction-to-nosql/
6.	https://www.tutorialspoint.com/hive/hive_installation.htm

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Comprehend various technologies supporting Big Data
CO2.	Analyze the working of YARN and SPARK
CO3.	Analyze and apply MapReduce for real time problems
CO4.	Apply Hive Query for real time problems
CO5.	Apply PIG Latin for real time problems; differentiate types of No SQL

Big Data Analytics Assignment component:

1. Students should form a team of not more than 3, and deliver a presentation covering Hive, Pig, Map reduce and Tableau.
2. Each team must submit the report of the presentation
3. No two teams are allowed to use the same database for presentation.

Entrepreneurship

Contact Hours/Week	:	3+0 (L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	3NMCAE31			

Course Objectives:

This Course will enable students to:	
1.	Gain knowledge about Entrepreneur, Intrapreneur, Entrepreneurship
2.	Get acquainted with different types of Entrepreneurship
3.	Get acquainted with Micro & Small and Medium Enterprise, Intellectual Property Rights, Project Management and Financing

UNIT – I	**07 Hours**
Entrepreneur: Introduction, Evolution, Characteristics of successful Entrepreneur, Charms of becoming an entrepreneur, entrepreneurial decision process, functions, need and types of entrepreneurs, Distinction between an Entrepreneur & a manager, Intrapreneur. Entrepreneurship: Concept, growth of Entrepreneurship in India, Role of Entrepreneurship in Economic Development.	

UNIT – II	**08 Hours**
Women Entrepreneurship: Concept, Functions, Growth, Problems, Developing and Limitation of Women Entrepreneurship. Rural Entrepreneurship: Meaning, need, problems of rural entrepreneurship, developing rural entrepreneurship, NGO & Rural Entrepreneurship. Challenges faced by women entrepreneurs, strategies for the development of women entrepreneurs Tourism Entrepreneurship: meaning, perspective, Tourism enterprise, entrepreneur, entrepreneurship, policy measures. Agri-prenuership: Introduction, need for developing agri-prenuership in India, Opportunities for developing agri-prenuership, Challenges involved in developing agri-prenuership, suggestions for developing agri-prenuership. Social Entrepreneurship: Introduction, meaning, perspective, Social Entrepreneurship inpractice, boundaries of Social Entrepreneurship	

UNIT – III	**08 Hours**
Micro & Small Enterprise: Small Enterprise: Meaning, Micro & Macro Units, Essentials, Features & Characteristics, Relationship between Micro & Macro Enterprises, Rationale behind Micro & small enterprises, Scope of Micro & small enterprises & objectives of Micro enterprises. Financing of Enterprise: Meaning & need of financial planning, sources of finance,capitalisation, term loans, sources of short term finance, Venture capital. Forms of business ownership: Sole proprietorship, partnership, company, cooperative, selection of appropriate form of ownership	

UNIT – IV	08 Hours
Identification of Business opportunities: Introduction, Mobility of Entrepreneurs, Business opportunities in India, Models for opportunity evaluation. Project Management and Financing: Introduction, Project Manager, Project Life Cycle, Project Scheduling: GANTT Charts, Network techniques, Project Management software: Microsoft Project, InstaPlan, Yojana, PRISM Project Manager, PRIMAVERA, Generating an investment project proposal: Project Analysis, Market Analysis, Technical Analysis, Financial Analysis, Economic Analysis, Ecological Analysis. Project Financing: Equity Financing, Angel Financing, Debt Financing, Miscellaneous sources. Project Implementation Phase, capital structure and cost of capital, Detailed Project Report. Business Plan: Introduction, purpose, contents, presenting why do some plans fail? Procedure for setting up an enterprise. Institution supporting business enterprises: Introduction, central level institutions, state level institutions, other institutions, Institutions supporting women entrepreneurs	

UNIT – V	08 Hours
Intellectual Property Rights and Micro & Small and Medium Enterprise: IPR and MSMEs, Patents: meaning, what can be patented? Types of patent, who can file a patent, patent process. Copyrights: Meaning, objectives. Trademarks: Meaning, functions, categories of trademarks, benefits, registration of trademarks. Geographical indications, Industrial designs, Trade Secrets, Integrated Circuits, protection of new variety of plants, why IPR for MSMEs? Efforts to help MSMEs to exploit benefits of IPR, Need for further actions. Role and importance of micro, small and medium enterprises, concepts and definition of MSME, The MSMED ACT 2006, Problems facing the MSME sector.	

TEXT BOOKS:

1.	Entrepreneurial Development, Dr S S Khanaka, Revised edition, S Chand Publishing
2.	Entrepreneurship and Small Business Enterprises, Poornima M Charantimath, 2nd Edition, Pearson

REFERENCE BOOKS:

1.	Desai, Vasant, Project Management and Entrepreneurship', Himalayan Publishing House, Mumbai.
2.	Gupta and Srinivasan, 'Entrepreneurial Development', S Chand & Sons, New Delhi.

WEB LINKS:

1.	https://nptel.ac.in/courses/110/106/110106141/
2.	https://onlinecourses.nptel.ac.in/noc19_mg55/preview
3.	https://teamtreehouse.com/library/how-to-start-a-business

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Comprehend entrepreneur, entrepreneurship and role of entrepreneurship in economic development.
CO2.	Explicate the need of women, rural, tourism and social entrepreneurships.
CO3.	Recognize features of micro and small enterprise, financing of enterprise and Forms of business ownership
CO4.	Identify various business opportunities, significance of project management, project scheduling and financing.
CO5.	Explicate the concept of IPR for micro, small and medium enterprises

Cyber Security and Cyber Laws

Contact Hours/Week	:	3+0(L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	3NMCAE32			

Course Objectives:

This Course will enable students to:	
1.	Gain knowledge of basics of Cybercrime, tools and methods used in cybercrime
2.	Realize cybercrime in Mobile and Wireless devices
3.	Gain knowledge of computer forensics , security policies and cyber laws

UNIT – I	**08 Hours**
Introduction to Cybercrime: Cybercrime: Definition and Origins of the Word, Cybercrime and Information Security, Who are Cybercriminals?, Classifications of Cybercrimes, Cybercrime: The Legal Perspectives, Cybercrimes: An Indian Perspective, Cybercrime and the Indian ITA 2000, A Global Perspective on Cybercrimes, Cybercrime Era: Survival Mantra for the Netizens. Cyber offenses: How Criminals Plan Them: How Criminals Plan the Attacks, Social Engineering, Cybers talking, Cybercafe and Cybercrimes, Botnets: The Fuel for Cybercrime, Attack Vector, Cloud Computing.	

UNIT – II	**08 Hours**
Cybercrime: Mobile and Wireless Devices: Introduction, Proliferation of Mobile and Wireless Devices, Trends in Mobility, Credit Card Frauds in Mobile and Wireless Computing Era, Security Challenges Posed by Mobile Devices, Registry Settings for Mobile Devices, Authentication Service Security, Attacks on Mobile/Cell Phones, Mobile Devices: Security Implications for organizations, Organizational Measures for Handling Mobile, Organizational Security Policies and Measures in Mobile Computing Era, Laptops	

UNIT – III	**07 Hours**
Tools and Methods Used in Cybercrime: Introduction, Proxy Servers and Anonymizers, Phishing, Password Cracking, Key loggers and Spywares, Virus and Worms, Trojan Horses and Backdoors, Steganography, DoS and DDoS Attacks, SQL Injection, Buffer Overflow, Attacks on Wireless Networks. Phishing and Identity Theft: Introduction, Phishing, Identity Theft (ID Theft).	

UNIT – IV	**08 Hours**
Understanding Computer Forensics: Introduction, Historical Background of Cyber forensics, Digital Forensics Science, The Need for Computer Forensics, Cyber forensics and Digital Evidence, Forensics Analysis of E-Mail, Digital Forensics Life Cycle, Chain of Custody Concept, Network Forensics, Approaching a Computer Forensics Investigation, Setting up a Computer Forensics Laboratory: Understanding the Requirements, Computer Forensics and Steganography, Relevance of the OSI 7 Layer Model to Computer Forensics, Forensics and Social Networking Sites: The Security/Privacy Threats, Computer Forensics from Compliance Perspective, Challenges in Computer Forensics, Special Tools and Techniques, Forensics Auditing, Anti- forensics.	

UNIT – V	08 Hours
Cybercrime and Cyberterrorism: Social, Political Ethical and Psychological Dimensions Introduction to Security Policies and Cyber Laws: Need for An Information Security Policy, Information Security Standards – ISO, Introducing Various Security Policies and Their Review Process, Introduction to Indian Cyber Law, Objective and Scope of the it Act, 2000, Intellectual Property Issues, Overview of 20082020 / 23 Intellectual - Property - Related Legislation in India, Patent, Copyright, Law Related to Semiconductor Layout and Design, Software License	

TEXT BOOKS:

1.	Cyber Security: Understanding Cyber Crimes, Computer Forensics And Legal Perspectives, Sunit Belapure and Nina Godbole, Wiley India Pvt Ltd, 2013
2.	Introduction to information security and cyber laws, Surya Prakash Tripathi, Ritendra Goyal, Praveen Kumar Shukla, Dreamtech Press 2015

REFERENCE BOOKS:

1.	Cyber security: Managing Systems, Conducting Testing, and Investigating Intrusions ,Thomas J. Mowbray, John Wiley & Sons, 2013
2.	Cyber Security Essentials James Graham, Ryan Olson, Rick Howard CRC Press 2010

WEB LINKS:

1.	https://nptel.ac.in/courses/106/106/106106129/
2.	https://www.youtube.com/watch?v=F7mH5vz1qEI&list=PLf8YqCm9HoI6fb4LdoY2tFgJfM0 PrgInS

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Comprehend fundamental of Cyber crime
CO2.	Realize cybercrime in Mobile and Wireless Devices
CO3.	Apply Tools and Methods Used in Cybercrime
CO4.	Realize significance and applications of Computer Forensics
CO5.	Comprehend Security Policies and Cyber Laws

Software Testing

Contact Hours/Week	:	3+0(L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	3NMCAE33			

Course Objectives:

This Course will enable students to:	
1.	Understand the principles of testing.
2.	Identify the need for testing.
3.	Identify testing process.
4.	Describe various types of test and their objectives.
5.	Identify the types of tests to be conducted on applications.

UNIT – I	**08 Hours**
Introduction to testing as an engineering activity, the evolving profession of software engineering, the role of process in software quality, testing as a process. Testing fundamentals: initiating a study of testing, basic definitions, why testing is necessary? What is testing? The psychology of testing? Software quality assurance group, software-testing principles, the tester's role in a software development organization.	

UNIT – II	**09 Hours**
The test development life cycle (tdlc), when should testing stop?; verification strategies; review, walkthrough, inspection testing types and techniques; white box testing: basis path testing, flow graph notation, cyclomatic complexity, graph matrices, loop testing black box testing: boundary value analysis, equivalence partitioning, graph based testing methods, error guessing.	

UNIT – III	**09 Hours**
Levels of testing; The Need for Levels of Testing, Unit Test, Unit Test Planning, Designing the Unit Tests. The Class as a Testable Unit, Running the Unit tests and Recording results, Integration tests, Designing Integration Tests, Integration Test Planning, System Test – The Different Types, Regression Testing, Alpha, Beta and Acceptance Tests, Web testing: Introduction to web testing, web testing process and techniques, cross browser testing, web browser error messages, Performance testing	

UNIT – IV	**07 Hours**
Test planning: what is test plan; why to plan test? Template for test plan; guidelines for creating the test plan; risk analysis Test design: importance; test design essentials; good test case; test case mistakes; test case template; test design stages; Software Testing Metrics: Why Test Metrics are Important?: Types of Test Metrics Manual Test Metrics; Test Metrics Life Cycle;How to calculate Test Metric;Test Strategy;Test Plan Vs Test Strategy	

UNIT – V	**06 Hours**
Test execution: Objectives; execution considerations; execution activities Defect management: what is defect; defect life cycle; defect management process	

TEXT BOOKS:

1.	Ilene Burnstein, "Practical Software Testing", Springer international edition. Publisher : Springer; 2003 1st edition (Unit-I)
2.	Foundations of Software Testing ISTQB certification (Level I) by Dorothy graham, Erik van veenendaal, Rex black, Publisher : Cengage Publications, 3rd edition
3.	Watts Humphrey, "Managing the Software Process", Publisher : Addison Wesley , 1st edition.

REFERENCE BOOKS:

1.	Boris Beizer, "Software System Testing And Quality Assurance", Publisher : Van Nostrand Reinhold, 1st edition
2.	Gordon schulmeyer , "Zero Defect Software", Publisher : McGraw-Hill, 1st edition

WEB LINKS:

1.	https://www.coursera.org/specializations/software-testing-automation
2.	https://www.udemy.com/course/everything-for-software-tester/
3.	https://www.udacity.com/course/software-testing--cs258
4.	https://www.greatlearning.in/academy/learn-for-free/courses/software-testing-fundamentals1
5.	https://www.guru99.com/software-testing.html
6.	https://onlinecourses.nptel.ac.in/noc19_cs71/preview
7.	https://testinginstitute.com/Free-Software-Testing-Training.php

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Identify the need and the importance of software testing as an engineering activity
CO2.	Interpret the concept of testing using different types of testing and testing techniques.
CO3.	Identify the different levels of testing.
CO4.	Demonstrate the test plans and test cases.
CO5.	Interpret the defect management process

User Interface and User Experience

Contact Hours/Week	:	3+0(L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	3NMCAE34			

Course Objectives:

This Course will enable students to:	
1.	Explain the concepts of how to use Interactive systems like electronic mails, object action interface model, human-computer interaction
2.	Designing the user-interface is intended primarily for designers, managers and evaluators of interactive systems
3.	Understand the concepts of task related menu organization like single menus, combinations of multiple menus, form filling, dialogue boxes, audio menus and window designing.
4.	Understand the given features, parameters and patterns of User Interface or User Experience for a real world scenario
5.	Perform in a team to makes oral presentation on the effects of Wearable devices on health and environment/Banking/Insurance etc.,

UNIT – I	**07 Hours**
What Users Do: A Means to an End, the Basics of User Research, Users' Motivation to Learn, The Patterns – Safe Exploration, Instant Gratification, Satisficing, Changes in Midstream, Deferred Choices, Incremental Construction, Habituation, Micro breaks, Spatial Memory, Prospective Memory, Streamlined Repetition, Keyboard Only, Other People's Advice, Personal Recommendations	

UNIT – II	**08 Hours**
Information Architecture and Application Structure: The Big Picture, The Patterns – Feature, Search and browse, News Stream, Picture Manager, Dashboard, Canvas Plus Palette, Wizard, Setting Editor, Alternative Views, Many Workspaces, MultiLevel Help Making it Look Good: Visual Style and Aesthetics: Same content, Different styles, The Basics of Visual Design, What This Means for Desktop Applications, The Patterns: Deep Background, Few Hues, ManyValues, Corner Treatments, Borders That Echo Fonts, Hairlines, Contrasting Font Weights, Skins and Themes.	

UNIT – III	**08 Hours**
Design and UX: Users Vs Life Cycles, Visual Design, Web standards, Potential Barriers to sustainable UX, designing for Emerging Technologies: Design for Disruption, Eight DesignTenets for Emerging Technology, Changing Design and Designing Change, Fashion with Function: Designing for wearable devices, the next big wave in Technology, the wearable market segments, Wearable are not able, UX (and Human) Factors to consider.	

UNIT – IV	08 Hours
An Ecosystem of connected device: The concept of an Ecosystem, The 3Cs Frame work: Consistent, Continuous and Complementary, Single Device Design is History, It's an Eco system, The Consistent Design Approach: What is consistent Design, Consistency in Minimal Interface, Page 56 of 139 Progressive Disclosure in Consistent Design, Beyond Device Accessibility, Devices are means not an end.	

UNIT – V	08 Hours
The Continuous and Complementary Design Approach: The continuous Design Approach: What is Continuous Design? Single Activity flow and the Sequenced Activity Flow. What is Complementary Design? Collaboration: Must-Have, Collaboration: Nice to have, Control: Nice to Have, Fascinating Use Cases: What do they mean for my work? Integrated Design Approaches: 3 Cs as building blocks: Beyond the Core Devices: The Internet of Things, The Internet of Things already there?	

TEXT BOOKS:

1.	Jenifer Tidwell, "Designing Interfaces", 2 nd Edition, Oreilly, 2015.
2.	Jonathan Follet, "Designing for Emerging Technologies- UX for Genomics, Robotics and The Internet of Things", 1st Edition, Oreilly, 2014.
3.	Michal Levin, "Designing Multi-Device Experiences", 1st Edition, Oreilly, 2014.
4.	Tim Frick, "Designing for Sustainability", 1st Edition, Oreilly 2016

REFERENCE BOOKS:

1.	Ben Shneiderman, Plaisant, Cohen, "Jacobs: Designing the User Interface", 5th Edition, Pearson Education, 2010.
2.	Unger and Chandler, "A Project Guide to UX Design", 2 nd Edition, New Riders, 2012

WEB LINKS:

1.	https://www.youtube.com/watch?v=c9Wg6Cb_YlU
2.	https://www.youtube.com/watch?v=qDUYIQZVQDE
3.	https://www.youtube.com/watch?v=tRpoI6vkqLs

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Explicate the concepts related to User interface or User Experience.
CO2.	Apply the knowledge of features, approach, patterns for designing User interface or User Experience for a given scenario.
CO3.	Analyse the given features, parameters and patterns of User interface or User Experience for a real world scenario.
CO4.	Perform in a team to make oral presentation on the effects of wearable devices on health and environment/Banking/Insurance etc.,

Machine Learning Lab

Contact Hours/Week	:	2	Credits	:	1.0
Total Lecture Hours	:	-	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	3NMCAL1			

Course Objectives:

This Course will enable students to:	
1.	Understand writing programs in Python for various machine learning algorithms.
2.	Apply appropriate dataset for a given machine learning program.

Implementation of the following techniques of machine learning in Python:	
Sl.no	**Programs**
1.	**FIND-S algorithm** for finding the maximally specific hypothesis consistent with the training examples.
2.	**Candidate-Elimination algorithm** to output a description of the General and Specific boundary sets consistent with the training examples.
3.	**ID3 algorithm** to construct the decision tree, finding the accuracy and apply this knowledge to classify a new sample.
4.	***K-Nearest* Neighbour algorithm** to classify the given data set.
5.	**Backpropagation algorithm to** build an Artificial Neural Network.
6.	**Naïve Bayesian Classifier** to classify a set of documents and to calculate the accuracy, precision, and recall for the given data set.
7.	**Bayesian network** construction for medical data to diagnose heart patients.
8.	***K-Means* algorithm** to cluster the given data set and comments on the quality of clustering.
9.	**EM algorithm** to cluster the given data and compare the result with that of using k-Means algorithm.

WEB LINKS:

1.	https://www.w3schools.com/
2.	https://www.tutorialspoint.com/
3.	https://www.freecodecamp.org/
4.	https://www.youtube.com/
5.	http://ndl.iitkgp.ac.in/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Analyze & implement Find-S algorithm using Python.
CO2.	Analyze & implement Supervised learning algorithms using Python.
CO3.	Analyze & implement Clustering algorithms using Python.

Mobile Application Development Lab

Contact Hours/Week	:	3	Credits	:	1.5
Total Lecture Hours	:	-	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	3NMCAL2			

Course Objectives:

This Course will enable students to:	
1.	Understand the installation of android studio tools
2.	Define problems of the societal interest for implementation on mobile
3.	Understand basic graphical primitives
4.	Understand multi-threading concepts, SMS

Sl.no	Programs
1.	Design an application that contains Phone Contacts in vertical linear manner. Selected contact appears at the top of the list with a large italicized font and a blue background.
2.	Create an application that uses Layout Managers and Event Listeners.
3	Develop a standard calculator application to perform basic calculations like addition, subtraction, multiplication and division.
4	Devise an application that draws basic graphical primitives (rectangle, circle) on the screen.
5.	Build a mobile application that create, save, update and delete data in a SQL lite/cloud database connectivity.
6.	Devise an application that implements Multi-threading.
7.	Develop a mobile application that displays the Google maps and different view in maps.
8.	Create an application that writes data to the SD card.
9.	Implement an application that creates a service and play the music in back ground/display the accepted text and demonstrate start and stop the services.
10.	Devise a mobile application that creates alarm clock.

WEB LINKS:

1.	https://www.youtube.com/watch?v=giVfVQlKBVM
2.	https://www.youtube.com/watch?v=aS_9RbCyHg
3.	https://www.tutorialspoint.com/android/index.htm
4.	https://developer.android.com/
5.	https://www.geeksforgeeks.org/android-tutorial/
6.	https://www.tutlane.com/tutorial/android
7.	https://www.w3schools.in/category/android-tutorial/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Develop applications using software development kits (SDKs), frameworks and toolkits.
CO2.	Apply Android UI Design and Location Based Services
CO3.	Design and develop an application using Android Messaging and Networking

Mini Project

Contact Hours/Week	:	03	Credits	:	1.5
Total Lecture Hours	:	-	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	3NMCAL3			

Course Objectives:

This Course will enable students to:	
1.	Develop problem statement
2.	Understand requirement analysis and identify design methodologies
3.	Use computing tools and appropriate programming language

Prerequisites: None

Course Details:

1	Students are expected to take up mini project with a team size not exceeding 2*. The objective of this course is to develop real time mini projects using latest technologies.
2	The title, relevance, novelty, synopsis and technologies used for developing an application or to carry out research work will be scrutinized by respective guides and Mini project coordinator.
3	The Mini project work can be carried out as an application project / research oriented project.
4	The team must submit project report (20 - 30 pages) hard copy and soft copy approved by both DPEC and project guide.
5.	The sample contents for both application project and the research oriented project are shown below:

Sample contents for application development include the following chapters:	***Sample contents of the Report include the following for Research oriented work:***
• Introduction • Project Plan • Analysis and Design • Implementation (screenshots with description to be included) • Testing • Conclusion • Future enhancements • References	• Title, Abstract, Keywords • Introduction • Literature Survey • Objectives of Investigation • Research findings (e.g. Proposed method or Process, or System) • Validation (Experimental Results or Theoretical Analysis) • Conclusion & References

Note: * May vary with prior approval from Head of the Department.

Course Outcomes:

After the completion of this course, students will be able to:	
CO1	Identify the relevant topic that is in synchrony with recent trends in information technology by performing the literature survey referring journals and conference articles.
CO2	Identify the problem statement befitting the domain of interest.
CO3	Conduct investigations, Analyze the requirements, and Interpret the problem.
CO4	Identify algorithms, and propose innovative ideas to solve the problem.
CO5	Apply modern computing tools and techniques to develop an application.
CO6	Commit to professional ethics & apply the management principles for managing the projects.
CO7	Work effectively as an individual and as a team member
CO8	Indulge in lifelong learning to improve competence as a computing professional.
CO9	Apply appropriate testing techniques and develop test cases.
CO10	Prepare a technical report and demonstrate the project

Department of Master of Computer Applications

SCHEME & SYLLABUS

2022-2023 (EVEN Semester)

Department of Master of Computer Applications
Siddaganga Institute of Technology
B.H. Road, Tumakuru

Scheme of Teaching and Examinations – 2022
Master of Computer Applications (MCA)

Database Management Systems

Contact Hours/Week	:	3+2(L+T)	Credits	:	04
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Course Code	:	N2MC01	Course	PCC	

Course Objectives:

This Course will enable students to:	
1.	Understand the different issues involved in the design and implementation of a database system.
2.	Study the physical and logical database designs, database modeling, relational, hierarchical, and network models
3.	Understand and use data manipulation language to query, update, and manage a database
4.	Design and build a simple database system and demonstrate competence with the fundamental tasks involved with modeling, designing, and implementing a DBMS.
5.	Analyze relational and non-relational data model to check the performance of the data models with respect to design and manipulations

UNIT – I	**08 Hours**
Introduction; An example; Characteristics of Database approach; Actors on the screen; Workers behind the scene; Advantages of using DBMS approach; A brief history of database applications; when not to use a DBMS. Data models, schemas and instances; Three-schema architecture and data independence; Database languages and interfaces; The database system environment; Centralized and client-server architectures; Classification of Database Management systems.	

UNIT – II	**08 Hours**
Using High-Level Conceptual Data Models for Database Design; An Example Database Application; Entity Types, Entity Sets, Attributes and Keys; Relationship types, Relationship Sets, Roles and Structural Constraints; Weak Entity Types; Refining the ER Design; ER Diagrams, Naming Conventions and Design Issues; Relationship types of degree higher than two. **Relational Model and Relational Algebra:** Relational Model Concepts; Relational Model Constraints and Relational Database Schemas; Update Operations, Transactions and dealing with constraint violations; Unary Relational Operations: SELECT and PROJECT; Relational Algebra Operations from Set Theory; Binary Relational Operations : JOIN and DIVISION; Additional Relational Operations; Examples of Queries in Relational Algebra; Relational Database Design Using ER- to-Relational Mapping.	

UNIT – III	**08 Hours**
Data Definition and Data Types, Specifying Constraints in SQL, Basic Retrieval Queries in SQL, INSERT, DELETE, and UPDATE Statements in SQL, More Complex SQL Retrieval Queries, Views (Virtual Tables) in SQL, Schema Change Statements in SQL ,Discretionary Access Control Based on Granting and Revoking Privileges, Transaction Support in SQL (Commit, Rollback, Save point)	

UNIT – IV	**08 Hours**
Introduction to PL/SQL programming, PL/SQL blocks, Cursor types, Stored Procedures, Functions, Exception handling, Packages and Triggers. Informal Design Guidelines for Relation Schemas, Functional Dependencies, Normal Forms Based on Primary Keys, General Definitions of Second and Third Normal Forms, Boyce-Cod Normal Form, Denormalization,	

UNIT – V	07 Hours
NoSQL, SQL versus NoSQL, Types of NoSQL Databases, CAP theorem, Getting Started with MongoDB – Documents, Collections, Databases, Getting and Starting MongoDB, MongoDB Shell, Data Types, Inserting and Saving Documents, Removing Documents, Updating Documents, Introduction to find, Query Criteria, Type Specific Queries and $where Queries	

TEXT BOOKS:

1.	Elmasri and Navathe: Fundamentals of Database Systems, 7th Edition, Pearson Publishers, 2016 (Chapters 1, 2, 3 except 3.8, 5, 6.1 to 6.5, 7.1, 8, 10,11)
2.	Raghu Ramakrishnan and Johannes Gehrke: Database Management Systems, 3rd Edition, McGraw-Hill, 2003. (Chapters 16, 17.1, 17.2, 18)
3.	Professional NOSQL, Shashank Tiwari, 2011, Inc.WROXPress, John Wiley & Sons, ISBN: 978-0-470-94224-6,
4.	MongoDB: The Definitive, Guide Kristina Chodorow and Michael Dirolf, 1st Edition, 2010 O'Reilly Media, ISBN: 978-1-449-38156-1.

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	**Identify** the fundamentals of database technologies and its different architectures
CO2.	**Analyse** the Entity Relational model concepts and **Design** relational algebraic expressions for SQL queries
CO3.	**Illustrate** the various concepts of SQL and **Develop** Queries to perform CRUD (Create, Retrieve, Update and Delete) operations on database
CO4.	**Analyze** the fundamentals of PL/SQL Programming constructs and its relevance to the applications and **Apply** the database design process with Normalization concepts.
CO5.	**Implement** a relational and non-relational data model for any given problem and analyze performance of the data models with respect to design and manipulations

Advanced Java

Contact Hours/Week	:	3+2(L+T)	Credits	:	04
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:	26	SEE Marks	:	50
Course Code	:	N2MC02	Course	PCC	

Course Objectives:

This Course will enable students to:	
1.	Interpretation and implementation of Java Collection Framework elements.
2.	Design and build Java Swing GUI applications
3.	Implementation of event handling mechanism using swing components.
4.	Implement JDBC concepts and build applications integrating relational databases.
5.	Design and build Java web applications using Servlets and JSP integrating JDBC.

UNIT– I	**07 Hours**
Java Collection Framework: The Collections Framework: Collections overview, Recent changes to Collections, The Collection Interfaces, Java Collection API and framework, Collection Interface, List interface, Set interface, Queue interface, The Collection classes: ArrayList class, List, ArrayList, Queue,LinkedListclass,HashSetclass,TreeSetclass,AccessingaCollectionviaanIterator, Using an iterator, The For-Each alternative to iterators, User defined classes	

UNIT– II	**08 Hours**
Designing GUI using Swing Components: Introduction to Swings : Advantages of Swings over AWT, JLabel and ImageIcon, JTextField, JButton, JCheckBoxes, JRadioButtons, JList LayoutManagers: FlowLayout, BorderLayout. **Event Handling on Swing Components**: Introduction to EventHandling, Delegation Event Model mechanism, Event Classes: The ActionEvent Class, The MouseEvent Class, The WindowEvent Class, Event Listener Interfaces: The ActionListener Interface,The MouseListener Interface, The MouseMotionListener Interface, The WindowListener Interface.	

UNIT– III	**08 Hours**
JDBC Object The Concept of JDBC, JDBC Driver Types, JDBC Packages, A Brief Overview of JDBC Process, Database Connection, Associating the JDBC/ODBC Bridge with the Database, Statement Objects, ResultSet, Transaction Processing, Metadata, Data Types, Exceptions. **JDBC and Embedded SQL** Model Programs, Tables, Indexing, Inserting Data into Tables, Selecting Data from a Table, Metadata, Updating Tables, Deleting Data from a Table, Joining Tables, Calculating Data, Grouping and Ordering.	

UNIT– IV	**08 Hours**
Servlets Introduction, Advantages of Servlets over CGI, Installing Servlets, Servlets Life Cycle, Servlet API, Handling HTTP GET Request, Handling HTTP POST Request, ServletContext, ServletConfig, Generic Servlet, HttpServlet. **Servlets – Cookies, Sessions -** Cookies: Creating and Reading a Cookie, Servlets Session Tracking, Designing dynamic GUI applications using Servlets.	

UNIT– V	**08 Hours**
Java Server Pages(JSP) Introduction to JSP, Advantages of JSP, JSP Architecture, Processing a JSP page, JSP access Models (Model1 & Model2), Developing FirstJSP, JSP Scripting Elements-(Directives, Declaratives, Scriplets, Expressions, Comments, Implicit Variables), PageDirectives, JSPActions, JSP accessing Database system	

TEXTBOOKS:

1.	JimKeogh,ThecompleteReferenceJ2EE,TataMc_Graw Hill,2002
2.	Herbert Schildt TheCompletereference,7thEdition,TaTa McGraw Hill.
3.	Herbert Schildt The Complete Reference J2EE,Tata Mcgraw Hill, ISBN: 978-0-07-052912-0

REFERENCEBOOKS:

1.	J2SE Architecture Book, B.V.Kumar, ISBN:9780070621633
2.	Programming with Java ,E.Bala guruswamy, 6th Edition
3.	J2EE ArchitectureBook, B.V.Kumar,ISBN:9780070621633

WEBLINKS:

1.	https://www.roseindia.net/
2.	https://javatpoint.com/
3.	https://tutorialspoint.com/
4.	https://w3schools.com/
5.	https://www.roseindia.net/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Develop applications using Java Collection Framework API
CO2.	Develop Swing based application by adding event handling mechanism.
CO3.	Develop dynamic web applications using database connectivity and embedded SQL
CO4.	Design and Develop Client and Server side programs using servlets.
CO5.	Design and Develop web applications using JSP.

Professional Web Development – II

Contact Hours/Week	:	3+2(L+T)	Credits	:	04
Total Lecture Hours	:	39	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course Code	:	N2MCI01	Course	IPCC	

Course Objectives:

This Course will enable students to:	
1.	Interpret and implement the services of Web services technologies: WSDL,SOAP
2.	Interpret TypeScript , Construct, compile TypeScript file and Interpretation of Angular 2
3.	Design and develop Angular web application which creates rich interactive Features with reducing code to build user interface applications.
4.	Interpret about what a Restful API for web development and how it is structured and the usage of Spring Boot and Deployment process.
5.	Discover the Spring MVC model and Architecture principles and how the components impact Application Development

UNIT– I	**07Hours**

WSDL:
Web services Description Languages Inside WSDL,The WSDL document Type Element, Message Element, PortType Element, Binding Element, Port Element, Service element.
Simple Object Access Protocol(SOAP): SOAP one-way transmission primitive, SOAP request-response transmission primitive, SOAP binding element, SOAP operation element, SOAP body element, SOAP fault element, SOAP header element, SOAP address element, WSDL and HTTP binding
Practical Component:
1) Implement the service of Web Services Description Language (WSDL). Create and use your own function and execute it using WSDL.
2) Implement the service of Simple Object Access Protocol (SOAP). Create and use your own function and execute it using SOAP.

UNIT– II	**08Hours**

Introduction to TypeScript: Understanding TypeScript, Installing TypeScript, Building first TypeScript file, Compiling TypeScript, Annotations, Interfaces, Classes and Running TypeScript web app.
Angular2:
Getting Started - What is Angular?, Angular applications: the essentials(Components, Templates, Dependency Injection, Angular CLI, First Party Libraries)
Understanding Angular: Overview, Components(Overview, Component Lifecycle, View Encapsulation, Component Interaction, Component Styles, Parent and Child Component Interaction, Content Projection, Dynamic Components, Angular Elements), Templates(Overview, Introduction, Text Interpolation, Template Statements, Binding(Understanding Binding, Attribute Binding, Class and Style Binding, Event Binding, Property Binding, Two-Way Binding), Dependency Injection(Dependency Injection in Angular, Understanding Dependency Injection, Creating an Injectable service, Defining dependency providers, Hierarchical injectors)
Practical Component:
1) Create a new project using AngularJs and implement the User Interface Service operations.
2) Design and develop Angular 2 application and implement the Event Binding operations

UNIT– III	**08Hours**

Spring Framework: Basics of Spring architecture, environment setup, Inversion Of Control containers, First Spring Application, Spring Dependency Injection, Applying different configurations:Using Annotations and XML configuration
Spring Boot: Pre requirements, Spring Boot, Running Spring Boot application, working withclasses and dependencies, Spring Boot-Tomcat Deployment. Spring Boot servlet initializer,

Update packaging JAR into WAR.

Practical Component:

1) Design and build a web application using Spring Framework

2)Implement Dependency Injection using Annotations configuration process or XML Configuration process.

UNIT– IV	08Hours

RESTAPI: Introduction to RESTful webservices,, RESTful key elements, RESTful methods,RESTful Architecture, RESTful principles and constraints, creating first RESTful webservice, Running and testing first RESTful webservice, POSTMAN for API Testing.

Exposinga RESTAPI: RESTful, Spring Data within Spring Application

Practical Component:

1) Design and build RESTful Web Service with Nodejs or express.

2) Design and build RESTful Web Service to implement data operations.

UNIT– V	08Hours

Spring MVC: Model 1 architecture, Model2- MVC architecture, Model 2 with Front Controller, Controller without a view, with a view, with a view and using ModelMap, Controller for a simple form, simple form with validation

Practical Component:

1) Design and build first web application using Spring Boot Framework.

2) Design and build a MVC Application using Spring Boot Framework and add some useful services.

TEXTBOOKS:

1.	Understanding web services XML, WSDL, SOAP and UDDI, Eric New Comer, David chappell Series Editor, Pearson Education, ISBN 0-201-75081-3
2.	https://www.typescriptlang.org/docs/handbook/typescript-tooling-in-5-minutes.html Sridhar Rao : Web Development with Angular and Bootstrap, 3rd Edition, Packt, ISBN: 978-1-78883-810-8
3.	Web Development with go,Building scalable web Apps and RESTful Services ShijuVarghese,Apress.ISBN-13 (pbk): 978-1-4842-1053-6 Felipe Gutierrez:
4.	Spring Framework, Apress Edition, ISBN:9781430265337,2014
5.	Mastering Spring 5, RangaRaoKaranam, 2nd Edition, 2019, Packt Publishing, 1789618169, 9781789618167 –unit – 5
6.	Spring in action, Walls, Craig, and Ryan Breidenbach, 6th Edition, 2020, Dreamtech Press, ISBN – 9781617297571 – unit - 4

REFERENCEBOOKS:

1.	RESTful API Design, Matthias Biehl, API University Press,
2.	Springin Action,ISBN-13:978-1617294945
3.	ANGULAR, Lakshmi Kamala Thota, ISBN:9789389932072,9789389932072

WEBLINKS:

1.	https://www.soapui.org/docs/soap-and-wsdl/working-with-wsdls/ https://www.typescriptlang.org/docs/handbook/typescript-tooling-in-5-minutes.html
2.	https://angular.io/docs
3.	https://www.w3schools.com//CSS/
4.	https://restfulapi.net/
5.	https://spring.io/
6.	https://getbootstrap.com

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Create, Configure and deploy WSDL and SOAP for web services.
CO2.	Interpret and implement TypeScripts , interpret and implement the essential aspects of Angular 2 components, controllers and services.
CO3.	Interpret and implement the usage of Spring framework and Spring Boot framework concepts
CO4.	Implement RESTful API in accessing and using the data.
CO5.	Build, configure and develop Spring MVC model services.

Software Engineering

Contact Hours/Week	:	3+0(L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	N2MC03	Course	PCC	

Course Objectives:

This Course will enable students to:	
1.	Define software engineering and explain its importance
2.	Discuss the concepts of software products and software processes
3.	Explain the importance of process visibility
4.	Introduce the notion of professional responsibility

UNIT – I	08 Hours
Introduction: Professional Software Development; Software Engineering Ethics, IEEE/ ACM code of Software Engineering Ethics **Software Processes**: Waterfall, Incremental Development, Integration And Configuration, The Rational Unified Process, Plan-Driven, Extreme Programming, Scrum, DevOps, DevOps Vs Agile **Case study:** Identify the suitable development method for any real world problem	

UNIT – II	08 Hours
Requirements Engineering: Software Requirements: Functional and Non-functional requirements; User requirements; System requirements; Interface specification; the software requirements document, Requirements Specification, Characteristics and components of SRS, Structure of SRS (IEEEformat) **Requirements Engineering Processes**: Feasibility studies; Requirements elicitation and analysis; Requirements validation; Requirements management **Case study**- Develop Software Requirement Specification for any real world application (IEEE format)	

UNIT – III	08 Hours
System Modeling: Context models; Structural models; Behavioral models; Model driven engineering, Architectural Design: Architectural design decisions, Architectural patterns; Interaction Modeling : Use case models , Sequence diagrams; Structural modeling : Class diagrams; **Agile Software Development:** Agile Methods; Plan- Driven and Agile Development; Agile Project Management; Scaling Agile Methods.	

UNIT – IV	07 Hours
Software testing: Development testing; Test driven development; Release testing; User testing. **Project Management**: Risk management; Managing people; Teamwork; Project scheduling;	

UNIT – V	08 Hours
Project planning: Software Pricing; Plan Driven Development; Project Scheduling; Agile Planning; Estimation Techniques; Algorithmic Cost Modeling; COCOMO II Model; Project Duration And Staffing. **Software Quality Management** Software Quality, Software Standards, Software Measurement, Quality Management And Agile Development, Configuration Management, ISO 9001:2015 Standards	

TEXT BOOKS:

1.	Ian Sommerville: Software Engineering, 9th Edition, Pearson Education Ltd., 2017. (Chapters-: 1, 2, 3, 4, 5, 8, 20, 21)

REFERENCE BOOKS:

1.	Guide to the Software Engineering Body Of Knowledge (SWEBOK Version 3) Library of Congress Online Catalog
2.	Roger.S.Pressman: Software Engineering-A Practitioners approach
3.	Waman S Jawadekar: Software Engineering Principles and Practice
4.	DevOps for Developers, Michael Huttermann, 2012, Apress, ISBN:978-1-4302-4569-8,

WEB LINKS:

1.	https://www.computer.org/education/bodies-of-knowledge/software-engineering
2.	The NATO Software Engineering Conferences (interesting historic material)
3.	*Software Engineering Code of Ethics and Professional Practice* established in a joint effort by IEEE-CS and ACM [copy at ACM]
4.	https://nptel.ac.in/courses/106/105/106105087/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1	Adopt software engineering principles for software development.
CO2	Analyze the functional and non functional requirements.
CO3	Identify the design and methods for application development.
CO4	Identify the project management and testing activities.
CO5	Formulate project plan and adopt the software quality measurements.

Professional Elective – 1

Machine Learning

Contact Hours/Week	:	3+0(L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	N2MCE11	Course	PEC	

Course Objectives:

This Course will enable students to:	
1.	Learn the basic concepts of Machine learning and Concept Learning.
2.	Learn the elements of Decision Trees & Artificial neural networks.
3.	Understand the Bayesian classifiers and Instance based learning.
4.	Understand the Support Vector Machines, Regression techniques & Model Evaluation.
5.	Familiarize the methods of Clustering.

UNIT – I	**07 Hours**
Introduction: Well posed learning problems, Designing a Learning system, Perspectives and Issues in Machine Learning. **Concept Learning:** A Concept learning task, Concept learning as search, Find-S: Finding a maximally specific hypothesis, Version spaces and the Candidate Elimination algorithm.	

UNIT – II	**08 Hours**
Decision Tree Learning: Decision tree representation, Appropriate problems for decision tree learning, The Basic decision tree learning algorithm, Hypothesis space search in decision tree learning, Issues in decision tree learning. **Artificial Neural Networks:** Introduction, Biological Motivation, Neural Network representations, Appropriate problems for Neural network Learning, Perceptrons, Multilayer Networks and the Backpropogation algorithm, A Differentiable Threshold Unit, The Backpropagation Algorithm.	

UNIT – III	**08 Hours**
Bayesian Learning: Introduction, Bayes theorem, An example, Naïve Bayes classifier, An Illustrative Example, Bayesian belief networks, Conditional Independence, Representation, Inference. **Instance based Learning**: Introduction, k-nearest neighbor learning, Distance-Weighted Nearest Neighbor Algorithm, and Remarks on k- Nearest Neighbor Algorithm.	

UNIT – IV	**08 Hours**
Support Vector Machines: for Linearly Separable & Inseparable data. **Prediction:** Linear Regression, Nonlinear Regression. **Accuracy & Error Measures:** Classifier Accuracy Measures, Predictor Error Measures, Evaluating the accuracy of a Classifier or Predictor, ROC Curves.	

UNIT – V	**08 Hours**
Cluster analysis: What is Cluster analysis? Euclidean, Manhattan & Minkowski distances, Partitioning Methods: The k-Means Method, The k-Medoids Method, Hierarchical Methods: Agglomerative & Divisive Hierarchical Clustering, BIRCH, Density-Based Methods: DBSCAN.	

TEXT BOOKS:

1.	Tom M Mitchell , Machine Learning, McGraw Hill Education (India) Edition 2013. (for first 3 Units)
2.	Jiawei Han, MK, Data Mining, Concepts & Techniques, 2nd Edition, MORGAN KAUFMANN PUBLISHERS (for 4th & 5th Units)

REFERENCE BOOKS:

1.	Ethem Alpaydin, Introduction to Machine Learning, 3rd Edition, EEE, MIT Press, 2018.
2.	SaikatDutt, Subramanian Chandramouli, Amit Kumar Das, Machine Learning, Pearson Publications, 4thimpression, 2019, ISBN 978-93-530-6669-7

WEB LINKS:

1.	https://www.geeksforgeeks.org/machine-learning/
2.	https://machinelearningmastery.com/
3.	https://www.ibm.com/in-en/cloud/learn/machine-learning
4.	https://www.sas.com/en_in/insights/analytics/machine-learning.html
5.	https://ai.google/
6.	http://ndl.iitkgp.ac.in/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	***Interpret*** the basics of machine learning and apply the concept learning algorithm to real world problems.
CO2.	***Perform*** classification/labeling of data objects using the various techniques of supervised learning.
CO3.	***Apply*** the various techniques of supervised learning to perform regression.
CO4.	***Evaluate*** the machine learning models using the various accuracy metrics.
CO5.	***Apply*** the various techniques of unsupervised learning to perform the clustering of real world problems.

Software Testing

Contact Hours/Week	:	3+0(L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	N2MCE12	Course	PEC	

Course Objectives:

This Course will enable students to:	
1.	Realize the principles of testing and need for testing
2.	Analyze various testing techniques and testing levels
3.	Gain knowledge on object oriented testing and fault based testing
4.	Plan & Monitoring the process , mange defects and realize the use requirement traceability matrix

UNIT – I	**07 Hours**
Introduction to Software testing: Introduction to testing as an engineering activity, the role of process in software quality, testing as a process. Testing fundamentals: why testing is necessary? What is testing? The psychology of testing? Software-testing principles, the tester's role in a software development organization, software testing life cycle.	

UNIT – II	**08Hours**
Test design techniques: Static and dynamic testing. Static testing- review, walkthrough, inspection testing types and techniques. Dynamic testing- white box testing: basis path testing, flow graph notation, cyclomatic complexity, code coverage testing: statement, condition, data flow, and branch. Dynamic testing- black box testing : boundary value analysis, equivalence partitioning, state transition, decision table	

UNIT – III	**08 Hours**
Levels of testing: Unit Test, Integration tests - big-bang, top-down, bottom-up, sandwich; System Test; Regression Testing; Alpha, Beta and Acceptance Tests; Performance testing: load, stress, stability, scalability; Web testing: Introduction to web testing, web testing checklist. Hands on session on JMeter	

UNIT – IV	**08 Hours**
Object-Oriented Testing: Issues in Testing Object-Oriented Software, Object-Oriented Unit Testing, Object-Oriented Integration Testing, Object-Oriented System Testing. **Fault based testing:** Assumptions in fault-based testing, Mutation Analysis, Fault-based Adequacy Criteria; Variations on mutation Analysis.	

UNIT – V	**08 Hours**
Planning and Monitoring the Process, Documenting Analysis and Test, Risk analysis, Test matrix, requirement traceability matrix(RTM), Test strategy document, Test Pyramid, Defect cycle management, hands on session on defect management.	

TEXT BOOKS:

1.	Mauro Pezze, Michael Young, Software testing and Analysis- Process, Principles and Techniques, Wiley India, 2012
2.	Paul C Jorgensen, "Software Testing A Craftsman's Approach", Auerbach publications, 3rd edition, 2011.

REFERENCE BOOKS:

8.	https://onlinecourses.nptel.ac.in/noc23_cs38/
9.	http://tryqa.com/what-is-software-testing/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Identify the importance of software testing as an engineering activity.
CO2.	Classify and apply testing techniques.
CO3.	Classify the levels of testing.
CO4.	Analyze object oriented testing and fault based testing.
CO5.	Plan and Monitoring the Process, manage defects, and realize the need of test matrix

Foundations of Block Chain

Contact Hours/Week	:	3+0(L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	N2MCE13	Course	PEC	

Course Objectives:

This Course will enable students to:	
1.	Comprehend the fundamentals of the Blockchain and its organization
2.	Describe the underlying concepts of working of a Blockchain.
3.	Infer the working principle of Bitcoin .
4.	Interpret the working of using Ethereum.
5.	Examine possible business applications of of Blockchain.

UNIT – I	**07 Hours**
Introduction to blockchain , back history of blockchain , what is blockchain?, centralized vs. Decentralized systems, layers of block chain, application layer, execution layer, semantic layer, propagation layer, consensus layer, why is blockchain important?, limitations of centralized systems, adoption so far, blockchain uses and use cases.	

UNIT – II	**08 Hours**
Laying the blockchain foundation, game theory, nash equilibrium, prisoner's dilemma, byzantine generals problem, zero-sum games, why to study game theory, computer science engineering. The blockchain , merkle trees, properties of solution, transaction, distributed consensus mechanisms, applications, scaling blockchain, off-chain computation, sharding state.	

UNIT – III	**08 Hours**
The history of money, what is bitcoin? Working with bitcoins, the bitcoin blockchain, block structure, the genesis block, the bitcoin network, network discovery for a new node, bitcoin transaction, consensus and block mining, block propagation, putting it all together, bitcoin scripts, bitcoin transaction revisited, scripts, full nodes , vs spys, full nodes, spys	

UNIT – IV	**08 Hours**
From bitcoin to ethereum, ethereum as next-gen blockchain, design philosophy of ethereum, ethereum blockchain, ethereum accounts, tie usage, merkle patricia tree, rlp encoding, ethereum transaction and message structure, ethereum state transaction function, gas and transaction cost, ethereum smart contract, contract creation, ethereum virtual machine and code execution, ethereum ecosystem, swarm whisper, dapp, development components	

UNIT – V	**08 Hours**
Propelling business with blockchain , recognizing types of market friction, information frictions, interaction frictions, innovation frictions, moving closer to friction-free business networks, reducing information friction, easing interaction friction, easing innovation friction, transforming ecosystems, through increased visibility. Blockchains in action: use cases of financial services, trade finance, post-trade clearing and settlement, cross-border transactions, trusted digital identity, multinational policy management, government, supply chain management, food safety, global trade, healthcare, electronic medical records, and healthcare payment preauthorization.	

TEXT BOOKS:

1.	Bikramaditya Singhal, Gautam Dhameja, Priyansu Sekhar Panda, Beginning Blockchain , Apress Media, 2018, ISBNL 9781484234433 (Chatper 1-4)
2.	Manav Gupta, Blockchain for Dummies, John Wiley & sons, 2nd IBM Limited Edition, ISBN: 9781119545934 (chapter 3 and 4)

REFERENCE BOOKS:

1.	Peter Lypovonyav, Blockchain for Business 2019, Packt Publishing Limited, 2019, ISBN: 9781789956023
2.	Debajani Mohanty, Ehereum for Architects and Developers, Apress Media, 2018, ISBN 9781484240748

WEB LINKS:

1.	https://archive.nptel.ac.in/courses/106/105/106105235/

4.	https://www.guru99.com/blockchain-tutorial.html
5.	https://blockchain.cse.iitk.ac.in/slides-NPTEL-BlockchainTechnologyApplications.pdf

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Explicate the fundamentals of Blockchain and its structure.
CO2.	Outline the prerequisite concepts of Blockchain.
CO3.	Illustrate the working of Bitcoin cryptocurrency.
CO4.	Demonstrate the use of Ethereum in implementing Blockchain.
CO5.	Examine potential business use cases of Blockchain.

Professional Elective – 2

Artificial Intelligence and Deep learning

Contact Hours/Week	:	3+0(L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	N2MCE21	Course	PEC	

Course Objectives:

This Course will enable students to:	
1.	Know the representations and algorithms used to build artificial intelligence systems
2.	Understand the role of the knowledge representation and reasoning.
3.	Achieve the knowledge in building the simple knowledge-based systems.
4.	Foundation to deep learning and its major architectures

UNIT – I	07 Hours
What is AI? The state of the art. **Intelligent Agents:** Agents and environment; Good behavior: the concept of Rationality ; The nature of environment ; the structure of agents . **Problem solving:** Problem-solving agents; Example problems; Searching for solution;Uninformed search strategies.	

UNIT – II	08 Hours
Informed Search: Informed search strategies ; Heuristic functions ; **Adversial search:** Games ; Optimal decisions in games; Alpha-Beta pruning **Constraint satisfaction problems:** Defining Constraint satisfaction problems.	

UNIT – III	08 Hours
Logical Agents: Knowledge-based agents; The wumpus world ;Logic, **Propositional logic:** A very simple logic; **First-Order Logic:** Representation revisited; Syntax and semantics of first-order logic; Using first-order logic	

UNIT – IV	08 Hours
Fundamentals of Deep Networks: Neural networks, Training neural networks, Defining Deep Learning, Common architectural principles of Deep Networks-Parameters, Layers, Activation functions, Loss functions, Hyper parameters, Building blocks of Deep Networks-RBMs, and Auto encoders.	

UNIT – V	08 Hours
Major architectures of Deep Networks: Convolutional Neural Network-Biological inspiration, Intuition, CNN architecture over view, Input Layers, Convolutional layers, pooling layers, Fully Connected layers, Recurrent Neural Networks- Modeling the time dimension, 3D Volumetric input, General RNN architecture, LSTM networks, Domain specific Applications, when do I need deep learning	

TEXT BOOKS:

1.	Stuart J Russel and Peter Norvig : Artificial Intelligence A Modern Approach, 3rd Edition, Pearson India Education limited, 2015, (1.1,2.1to2.4,3.1 to 3.6,5.1 to 5.3, 6.1, 7.1 to 7.4, 8.1 to 8.3, 9.1 to 9.4)
2.	Josh Patterson and Adam Gibson, Deep Learning, A practitioner's approach, First edition, Shroff Publishers and Distributors Pvt.Ltd.,2017.

REFERENCE BOOKS:

2.	Andrew Ng, AI for everyone, coursera.org
3.	Deeplearning Tutorial(Stanford university),http://deeplearning.stanford.edu/tutorial/
4.	Mitesh M Khapra(iitm),and Sudarshan Iyengar(IITR), Deep learning, https://nptel.ac.in/courses/106/106/106106184/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Apply basic principles of AI with problem solving agents.
CO2.	Analyze and apply searching techniques to solve real world problems
CO3.	Represent the real world problems by using first order and propositional logic.
CO4.	Comprehend the deep neural network and its major architectures

Assignment Component with open ended Project:

1. Mini project should give proper idea about the application of AI or Deep learning.
2. Maximum of two students per team. No team is allowed to do the same project.
3. Must be able to give demo and generate reports.

Management and Entrepreneurship

Contact Hours/Week	:	3+0 (L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	N2MCE22	Course	PEC	

Course Objectives:

This Course will enable students to:	
1.	Gain knowledge about Entrepreneur, Intrapreneur, Entrepreneurship
2.	Get acquainted with different types of Entrepreneurship
3.	Get acquainted with Micro & Small and Medium Enterprise, Intellectual Property Rights, Project Management and Financing

UNIT – I	**07 Hours**
Entrepreneur: Introduction, Evolution, Characteristics of successful Entrepreneur, Charms of becoming an entrepreneur, entrepreneurial decision process, functions, need and types of entrepreneurs, Distinction between an Entrepreneur & a manager, Intrapreneur. Entrepreneurship: Concept, growth of Entrepreneurship in India, Role of Entrepreneurship in Economic Development.	

UNIT – II	**08 Hours**
Women Entrepreneurship: Concept, Functions, Growth, Problems, Developing and Limitation of Women Entrepreneurship. Rural Entrepreneurship: Meaning, need, problems of rural entrepreneurship, developing rural entrepreneurship, NGO & Rural Entrepreneurship. Challenges faced by women entrepreneurs, strategies for the development of women entrepreneurs Tourism Entrepreneurship: meaning, perspective, Tourism enterprise, entrepreneur, entrepreneurship, policy measures. Agri-prenuership: Introduction, need for developing agri-prenuership in India, Opportunities for developing agri-prenuership, Challenges involved in developing agri-prenuership, suggestions for developing agri-prenuership. Social Entrepreneurship: Introduction, meaning, perspective, Social Entrepreneurship inpractice, boundaries of Social Entrepreneurship	

UNIT – III	**08 Hours**
Micro & Small Enterprise: Small Enterprise: Meaning, Micro & Macro Units, Essentials, Features & Characteristics, Relationship between Micro & Macro Enterprises, Rationale behind Micro & small enterprises, Scope of Micro & small enterprises & objectives of Micro enterprises. Financing of Enterprise: Meaning & need of financial planning, sources of finance, capitalisation, term loans, sources of short term finance, Venture capital. Forms of business ownership: Sole proprietorship, partnership, company, cooperative, selection of appropriate form of ownership	

UNIT – IV	**08 Hours**
Identification of Business opportunities: Introduction, Mobility of Entrepreneurs, Business opportunities in India, Models for opportunity evaluation. Project Management and Financing: Introduction, Project Manager, Project Life Cycle, Project Scheduling: GANTT Charts, Network techniques, Project Management software: Microsoft Project, InstaPlan, Yojana, PRISM Project Manager, PRIMAVERA, Generating an investment project proposal: Project Analysis, Market Analysis, Technical Analysis, Financial Analysis, Economic Analysis, Ecological Analysis. Project Financing: Equity Financing, Angel Financing, Debt Financing, Miscellaneous sources. Project Implementation Phase, capital structure and cost of capital, Detailed Project Report. Business Plan: Introduction, purpose, contents, presenting why	

do some plans fail? Procedure for setting up an enterprise. Institution supporting business enterprises: Introduction, central level institutions, state level institutions, other institutions, Institutions supporting women entrepreneurs

UNIT – V	08 Hours
Fundamentals of Management: characteristics of management, difference between management and administration, Management as science, art and profession, importance and scope of management, functions of management, management process, principles of management.	

TEXT BOOKS:

1.	Entrepreneurial Development, Dr S S Khanaka, Revised edition, S Chand Publishing
2.	Entrepreneurship and Small Business Enterprises, Poornima M Charantimath, 2nd Edition, Pearson

REFERENCE BOOKS:

1.	Desai, Vasant, Project Management and Entrepreneurship', Himalayan Publishing House, Mumbai.
2.	Gupta and Srinivasan, 'Entrepreneurial Development', S Chand & Sons, New Delhi.

WEB LINKS:

1.	https://nptel.ac.in/courses/110/106/110106141/
2.	https://onlinecourses.nptel.ac.in/noc19_mg55/preview
3.	https://teamtreehouse.com/library/how-to-start-a-business

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Comprehend entrepreneur, entrepreneurship and role of entrepreneurship in economic development.
CO2.	Explicate the need of women, rural, tourism and social entrepreneurships.
CO3.	Recognize features of micro and small enterprise, financing of enterprise and Forms of business ownership.
CO4.	Identify various business opportunities, significance of project management, project scheduling and financing.
CO5.	Explicate the concept of Management.

Cyber Security and Cyber Laws

Contact Hours/Week	:	3+0(L+T)	Credits	:	03
Total Lecture Hours	:	39	CIE Marks	:	50
Total Tutorial Hours	:		SEE Marks	:	50
Course Code	:	N2MCE23	Course	PEC	

Course Objectives:

This Course will enable students to:	
1.	Gain knowledge of basics of Cybercrime, tools and methods used in cybercrime
2.	Realize cybercrime in Mobile and Wireless devices
3.	Gain knowledge of computer forensics , security policies and cyber laws

UNIT – I	**08 Hours**
Introduction to Cybercrime: Cybercrime: Definition and Origins of the Word, Cybercrime and Information Security, Who are Cybercriminals?, Classifications of Cybercrimes, Cybercrime: The Legal Perspectives, Cybercrimes: An Indian Perspective, Cybercrime and the Indian ITA 2000, A Global Perspective on Cybercrimes, Cybercrime Era: Survival Mantra for the Netizens. Cyber offenses: How Criminals Plan Them: How Criminals Plan the Attacks, Social Engineering, Cybers talking, Cybercafe and Cybercrimes, Botnets: The Fuel for Cybercrime, Attack Vector, Cloud Computing.	

UNIT – II	**08 Hours**
Cybercrime: Mobile and Wireless Devices: Introduction, Proliferation of Mobile and Wireless Devices, Trends in Mobility, Credit Card Frauds in Mobile and Wireless Computing Era, Security Challenges Posed by Mobile Devices, Registry Settings for Mobile Devices, Authentication Service Security, Attacks on Mobile/Cell Phones, Mobile Devices: Security Implications for organizations, Organizational Measures for Handling Mobile, Organizational Security Policies and Measures in Mobile Computing Era, Laptops.	

UNIT – III	**08 Hours**
Tools and Methods Used in Cybercrime: Introduction, Proxy Servers and Anonymizers, Phishing, Password Cracking, Key loggers and Spywares, Virus and Worms, Trojan Horses and Backdoors, Steganography, DoS and DDoS Attacks, SQL Injection, Buffer Overflow, Attacks on Wireless Networks. Phishing and Identity Theft: Introduction, Phishing, Identity Theft (ID Theft).	

UNIT – IV	**08 Hours**
Understanding Computer Forensics: Introduction, Historical Background of Cyber forensics, Digital Forensics Science, The Need for Computer Forensics, Cyber forensics and Digital Evidence, Forensics Analysis of E-Mail, Digital Forensics Life Cycle, Chain of Custody Concept, Network Forensics, Approaching a Computer Forensics Investigation, Setting up a Computer Forensics Laboratory: Understanding the Requirements, Computer Forensics and Steganography, Relevance of the OSI 7 Layer Model to Computer Forensics, Forensics and Social Networking Sites: The Security/Privacy Threats, Computer Forensics from Compliance Perspective, Challenges in Computer Forensics, Special Tools and Techniques, Forensics Auditing, Anti-forensics.	

UNIT – V	**07 Hours**
Cybercrime and Cyberterrorism: Social, Political Ethical and Psychological Dimensions Introduction to Security Policies and Cyber Laws: Need for An Information Security Policy, Information Security Standards – ISO, Introducing Various Security Policies and Their Review Process, Introduction to Indian Cyber Law, Objective and Scope of the it Act, 2000, Intellectual Property Issues, Overview of 20082020 / 23 Intellectual - Property - Related Legislation in India, Patent, Copyright, Law Related to Semiconductor Layout and Design, Software License	

TEXT BOOKS:

1.	Cyber Security: Understanding Cyber Crimes, Computer Forensics And Legal Perspectives, Sunit Belapure and Nina Godbole, Wiley India Pvt Ltd, 2013
2.	Introduction to information security and cyber laws, Surya Prakash Tripathi, Ritendra Goyal, Praveen Kumar Shukla, Dreamtech Press 2015

REFERENCE BOOKS:

1.	Cyber security: Managing Systems, Conducting Testing, and Investigating Intrusions ,Thomas J. Mowbray, John Wiley & Sons, 2013
2.	Cyber Security Essentials James Graham, Ryan Olson, Rick Howard CRC Press 2010

WEB LINKS:

1.	https://nptel.ac.in/courses/106/106/106106129/
2.	https://www.youtube.com/watch?v=F7mH5vz1qEI&list=PLf8YqCm9HoI6fb4LdoY2tFgJfM0 PrgInS

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Comprehend fundamentals of Cyber crime.
CO2.	Realize cybercrime in Mobile and Wireless Devices.
CO3.	Apply Tools and Methods Used in Cybercrime.
CO4.	Realize significance and applications of Computer Forensics.
CO5.	Comprehend Security Policies and Cyber Laws.

DBMS Lab

Contact Hours/Week	:	3	Credits	:	1.5
Total Lecture Hours	:		CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	N2MCL1	Course	PCCL	

Course Objectives:

This Course will enable students to:	
1.	Design and implement SQL queries in DBMS
2.	Design and implement NoSQL queries in DBMS
3.	Compare the performance of SQL and NoSQL queries

Sl.no	Programs
Part A: SQL Programming	
1.	**Practical – 1 :** Consider the following tables with their attributes Staff (StaffId, StaffName, JoinDate, Qualification, Designation, Salary, BranchId) Branch (BranchId, BranchName, Intake) Create the above tables by properly specifying the primary keys and the foreign keys. Enter atleast ten tuples (i.e. records) for each relation (i.e. table). Write the SQL Queries for the following requirements 1) List the staff details who hold the Ph. D degree and are working in a particular branch. 2) List the staff details who are drawing the salary in the range of 30000 to 50000. 3) List the staff name whose name starts with 'R' as first character and 'A' as the 3rd character. 4) List the staff details who have joined the institution in the month of January. 5) List the staff details who are working in a particular branch where number of intake is exceeding 60 students. 6) List the branch names along with number of staff members working in each branch, sum of their salaries and average of their salaries. 7) List the staff members who have finished their service by more than 100 months. 8) List the Branch name in which number of staff members working is exceeding by 4. 9) Update the salary of the staff members by increasing 25% who are working in a particular branch where intake is 60 students. 10) Delete the staff member who is drawing a highest salary in a particular branch.
2.	**Practical – 2 :** Consider the following relations for an order processing database application in a company. CUSTOMER (CustomerId, CustomerName, City, ContactNo) ITEM (ItemId, ItemName, Unitprice) CORDER (OrderId, OrderDate, CustomerId) ORDER-ITEM (OrderId, ItemId, Quantity) WAREHOUSE (WarehouseId, WarehouseName, Address) SHIPMENT (OrderId, WarehouseId, ShipDate) Create the above tables by properly specifying the primary keys and the foreign keys. Enter at least ten tuples for each relation. Execute SQL queries for the following requirements: 1) List the order details done by a particular customer belongs to a particular city.

	2) List the item details purchased by a particular customer whose total quantity items are exceeding by 5. 3) List the Customer details belong to a particular city and whose contact no ends with "__222" **4)** List the customer name, number of orders they made, their total ordered amount and their average ordered amount for all the customers: 5) List all warehouses and number of orders they obtained from different customers. **6)** List the warehouse which has got number of orders more than 2. 1) List the warehouse which has received number of orders in the month of January
3	**Practical – 3 :** Consider the following database of student enrollment in courses and books adopted for each course. STUDENT (USN, StudentName, Dob, Gender, Class) COURSE (CourseNo, CourseName, Department) TEXT (BookId, BookTitle, Publisher, Author) ENROLL (USN, CourseNo, Semester, Marks) BOOK_ADOPTION (CourseNo, BookId, Semester) Create the above tables by properly specifying the primary keys and the foreign keys Enter at least 10 records to each table. Execute SQL queries for the following requirements: 1) List the student details and their course details for a particular semester. 2) List the student details under a particular department whose name is ordered in an ascending order. 3) List all the book details under a particular course. 4) List the courses in which number of students enrolled will be more than 2. 5) List the publisher who has published more than 2 books. 6) List the author details who has authored more than 2 books. 7) List the author details who have written book for I semester, computer science course. 8) List only the girls student details whose total number of months starting from their date of birth is more than 200. 9) Update the marks by giving grace marks of 15 % to the boys student who has scored lowest in his class of a particular course. 10) List the course to which maximum number of students have joined.
4	**Practical – 4.** Consider the following Employee database. Department (Deptno, Deptname, Location) Employee (EmpNo, EmpName, Job, Manager, HireDate, Salary, Commission, Deptno) SalaryGrade (Grade, LowSalary, HighSalary) Create the above tables by properly specifying the primary keys and the foreign keys Enter at least ten tuples for each relation. Execute SQL queries for the following requirements: 1) List employee names who have joined between the months July to December of the year 1981. 2) List employee details including department and their grade based on the salary of all the employees except clerks. 3) List the employees whose name should not start with a letter 'A' and should not end with a letter 'A' but it should be there in the name. 4) Find all the employees who have joined the company before their managers

	5) List the name of employees who have finished their 25 years of experience in the company. 6) List the employee name, salary, PF, HRA, DA and gross; order the results in the ascending order of gross. (PF is 10%, HRA is 50%, DA is 30% of the salary and gross is sum of salary, PF, HRA & DA) 7) List the departments for which no employee is working. 8) List the department name, number of employees working, total salary, average salary, maximum salary and minimum salary in each of the department. 9) List year in which most of the employees have joined the organization (Display the year and no of employees). 10) List the department in which maximum number of employees working.
	Part B: PL/SQL Programming
5.	**Practical – 5 :** Consider the following table : Login (LoginId, LoginName, Password, FirstName, LastName) Write a stored procedure to validate Login name and password with following cases Case-1: Procedure has to check the existence of login name. Case-2: Procedure has to validate password with existing login name Case-3: Procedure has to rise the proper exceptions in both the cases.
6	Practical – 6 Consider the following table : Product (ProductId, ProductName, ProductType, PricePerUnit) Write a PL/SQL Package to auto generated product id and insert the values in to the above table by considering following cases. Case-1: Package has to check the existence of records. Case-2: Package has to generate the next number if there are records already exists. Case-3: Package has to rise the proper exceptions in both the cases.
7	Practical – 7 Consider the following table : Product (ProductId, ProductName, ProductType, PricePerUnit) Write appropriate triggers by considering following events based on the above table. Case-1: A trigger before insert / after insert Case-2: A trigger before update / after update Case-3: A trigger before delete / after delete
	Part C: NoSQL Programming
8	Create the below Collections, insert suitable tuples and perform the following operations using MongoDB Employee (SSN, Name, Job, Salary) Project (ProjectNo, ProjectName, Duration) Assigned_To (SSN, ProjectNo, NoofHours) a) List the employees who are working with a particular designation b) List the employees who are working in a particular project and drawing the salary greater than 35000 c) List the employees whose name starts with ‘S’ as first character. d) List the employees who are working as Analyst and drawing the salary in the range of 25000 and 40000. e) List the employees who are working for a particular project whose duration exceeds 100 days. f) Update the employee salary with a hike of 25% who have worked more than 100 hours.

	g) Remove the projects to which no employee is assigned.
9	Practical-9 Create the below Collections, insert suitable tuples and perform the following operations using MongoDB Part (PartNo, PartName, Price, Colour), Supplier (SupplierNo, SuplierName, Address) Part_Supplier(PartNo, SupplierNo, SupplyDate, Quantity) a) List the supplier name who are supplying particular parts b) List the SteelGrey colored Part names whose price greater than ₹ 1000 c) List the part names which are supplied by suppliers from a particular address. d) List the part names whose supplied quantity is exceeded by 25 on a particular date. e) List the part names whose price is greater than 500 and supplied quantity is more than 50. f) Update the price of the White colored parts with a new price of 25 % higher rate. g) Remove the suppliers who are supplying parts from a particular address.
10	Create the below Collections, insert suitable tuples and perform the following operations using MongoDB Book (ISBN, Title, Price, Author, Publisher) Student (Usn, StudentName, Class, Gender) Borrow (ISBN, Usn, BorrowedDate) a) List the book titles in which there is a particular keyword pattern “Computing”. b) List the student names who have borrowed DBMS books. c) List only the girl student names belong to a particular class. d) List the books with a price greater than Rs.750 and title with a keyword “Fundamentals” or “Introduction”. e) List the Author names who have authored more than 1 Book. f) List the Publisher names who have published more than 2 Books. g) List the student names who have borrowed more than 1 Book. h) Remove only the boys students from a particular class.

Course Outcomes:

After the completion of this course, students will be able to:	
CO1	Analyze and write SQL queries for the given relational database schema.
CO2	Demonstrate PL/SQL programming concepts for the given relational database schema.
CO3	Apply NoSQL techniques and concepts of relational database to solve real time applications.

Advanced Java Lab

Contact Hours/Week	:	3	Credits	:	1.5
Total Lecture Hours	:	-	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	N2MCL2	Course	PCCL	

Course Objectives:

This Course will enable students to:	
1.	Design and build Java Swing GUI applications with the implementation of event handling mechanism.
2.	Interpret and implement JDBC concepts and build applications integrating relational databases.
3.	Design and build Java web applications using Servlets, JSPs and integrating JDBC

Sl.no	Programs
1.	Programs on Collection Framework elements.
2.	Programs on designing GUI using Swing components.
3	Programs on handling events on swing GUI applications
4	Programs on Statement and Prepared Statement object using JDBC
5.	Programs on embedded sql statements
6.	Programs on Servlet Interface, GenericServlet and HttpServlet class
7.	Programs on Session Tracking using servlets.
8.	Programs on Scripting elements in JSP
9.	Programs on Action tags in JSP

WEB LINKS:

1.	https://www.javatpoint.com/java-swing
2.	https://www.tutorialspoint.com/jdbc/index.htm
3.	https://www.edureka.co/blog/servlet-and-jsp-tutorial/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1	Design and develop Java applications to demonstrate the usage of event handling mechanism and JDBC transactions over Embedded SQL queries using Java AWT, SWING and JDBC API.
CO2	Design and develop dynamic web based Java applications to demonstrate database transactions, Java sessions using embedded SQL, HTML, Servlet.
CO3	Design and develop dynamic web based Java applications using JSP.

Cloud Computing Lab

Contact Hours/Week	:	4	Credits	:	02
Total Lecture Hours	:	-	CIE Marks	:	50
Total Practical Hours	:	26	SEE Marks	:	50
Course Code	:	N2MCL3	Course	PCCL	

Course Objectives:

This Course will enable students to:	
1.	Examine the use of Cloud Computing to solve given engineering problem.
2.	Use of the public cloud computing platforms.
3.	Use of cloud native technologies to develop cloud agnostic solutions.

Exercise	Concepts	Projects
Creating EC2 instance and manually hosting website	EC2, Security Groups, ssh keypair, putty, WinSCP	
Creating EC2 instance and using user-data to automate the web server installation and static websitehosting	user-data	
Creating Security Groups in AWS	security-group	
Creating AMI of the EC2 Instance	EC2 AMI	
Assigning Elastic IP address to EC2 Instance	Elastic IP	
1. Creating VPC	VPC, public subnet, private subnet, RDS, multi-tier application	Project 1: (Two tier application deployment) Deploy a 2-tier application with following requirements - Create custom vpc with public and private subnet - Deploy the frontend UI application in public subnet. - Deploy the backend database (AWS RDS) in a private subnet. - Establish a connection between frontend and backend. - Demonstrate the database CRUD operationthrough frontend.
2. Creating Security Group in your VPC		
3. Fork the GitHub php-mysql project		
4. Creating a EC2 instance in a new VPC with user-data		
5. Setting up RDS MySQL DB instance		
6. Deleting DB Instance		
Creating S3 bucket and uploading objects	S3 bucket	
Providing Public Read Access to S3 Bucket	S3 bucket policy	
Enabling Website Hosting on the S3 bucket	Static Website Hosting	
Creating DynamoDB table and exploring the dynamodb operations	DynamoDB	

1 - Creating IAM Policy and Role to Lambda 2- Creating DynamoDB Table 3 - Creating S3 bucket 4 - Creating Lambda function	IAM Policy and Roles, DynamoDB, S3 bucket, Lambda functions	Project 2: (AWS Serverless Project) Automatically populate employees details in DynamoDB using Lambda function when employees details are uploaded to S3 bucket in json format
1. Creating Target Groups and Application Load Balancer 2. Creating Launch Templates and Autoscaling Groups	AWS ALB, Autoscaling Launch Templates Autoscaling groups.	Project 3 (Autoscaling Project) Demonstrate the Scale-out and Scale-incapabilities of AWS Autoscaling
AWS Cloud Formation Hands on - S3 and EC2 instance	Cloud Formation template	

TEXT BOOKS:

1.	Cloud Computing: Concepts, Technology & Architecture By Thomas Erl, Ricardo Puttini, Zaigham Mahmood, illustrated ,Prentice Hall, 2013 ISBN 0133387526, 9780133387520
2.	Cloud Computing: Principles and Paradigms By Rajkumar Buyya, James Broberg, Andrzej Goscinski, Publisher : Wiley, Edition :1 ISBN-13: 978-8126541256

WEB LINKS:

1.	AWS Getting Started: https://aws.amazon.com/getting-started/
2.	AWS Free tier: https://aws.amazon.com/free
3.	AWS EC2 https://aws.amazon.com/ec2/
4.	AWS RDS https://aws.amazon.com/rds/
5.	AWS S3 https://aws.amazon.com/s3/
6.	AWS CloudFormation: https://aws.amazon.com/cloudformation/
7.	AWS Server less https://aws.amazon.com/serverless/

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Analyze the trade-offs in cloud modules, services and cloud characteristics.
CO2.	Use of AWS cloud with a core AWS services like EC2, VPC, RDS and IAM
CO3.	Perceive the serverless technologies and core AWS serverless services
CO4.	Use of Infrastructure as a Code (IaC) concepts and AWS Cloud Formation
CO5.	Perceive the Cloud native technologies and Autoscaling.

Soft Skills

Contact Hours/Week	:	3	Credits	:	0
Total Lecture Hours	:	3	CIE Marks	:	100
Total Tutorial Hours	:	-	SEE Marks	:	-
Course Code	:	HSS08	Course	NCMC	

Course Objectives:

This Course will enable students to:	
1.	To make the students aware of the importance of soft skills in the present-day business world and work environment
2.	To learn the science behind picking up any skill quickly
3.	To help students realize as well as develop key soft skills interviewers look for – such as changemanagement, professionalism, inter- and intra-personal skills, adaptability etc.
4.	To develop effective resumes (paper-based as well as video)
5	To understand the importance of and create an effective digital footprint
6	To provide simulated Group Discussion and Personal Interview experience based on the models adopted by reputed companies.
7	To understand professional etiquette to be displayed in workplaces.

METHODOLOGY

Interactive instructor led session with audio-visual aids / case studies.

Day	#	**Topic**	**Sub-topics covered**	Duration (Hrs)
1.	1	How to pick upskills faster?	1. Knowledge vs skill 2. Skill introspection 3. Skill acquisition 4. "The 10,000 hours rule" and the converse	2
	2	Interpersonal and Intrapersonal skillbuilding	Social Interaction 1.Interpersonal Communication 2.PeerCommunication 3.Bonding 4.Types of social interaction Emotional Management Responsibility 1. Types of responsibilities 2. Moral and personal responsibilities	2
	3.	Professional etiquette	Workplace etiquette - meeting room, pantry, cubicleDining etiquette Telephone etiquette Email and business correspondence etiquette	2
2.	4	Change Management	Who moved my cheese? Tolerance of change and uncertainty Joining the Bandwagon Adapting change for growth – overcoming inhibition Adapt to changes(tolerance of change and uncertainty) Adaptability Curve Survivor syndrome	2
	5	Creating a digital footprint	1.How what you post online / information online can affect people's and recruiter's perception about you 2. Usage of Linkedin to further one's career	2

			prospects 3. Managing content that one posts on platforms like Twitter, Facebook, Instagram etc. to create positive footprint about oneself Why is it important to leave a digital footprint?	
	6	Time Management	Prioritization - Time Busters Procrastination Scheduling Multitasking Monitoring Working under pressure and adhering to deadlines	2
3	7	Group Discussion – Basics	1.Importance of GDroundSkills assessed in a GD How to ace a GD Dos and donts in a GD Idea generation techniques One mock GD involving participation from 12 volunteers, facitilated by the trainer	2
	8	Personal Interview - Basics	Self-introduction practice. Body language – especially grooming for personal interview.Personal interview – FAQs discussion.	2
	9	Building a resume from scratch	1. How to write a good and impressive Resume. 2. Important aspects of an impressive resume.3.Sample template and formattingideas.	2
4	10	Group Discussion –Advanced	GD sample Video with analysis anddiscussion.GD Dos and Don'ts – Worksheet practice. Roleplays for Dos and Don'ts. Idea generation – worksheet practice.	3
	11	Personal Interview - Advanced	1.Extensive discussion on PI FAQs. 2.Interview questions from based onresume - discussion. 3. PI Videos – discussion and analysis. 4. Highlighting successful answers for PI:3 questions. 5.Body language during a personal interview. 6.Unconventional types of interviews (Stress, panel, MR, guesstimation)	3
5	12	Resume Writing - Workshop (Draftinga paper-based as well as avideo resume)	1. Resume writing – Worksheet practice. 2. 3 stage Resume drafting. 3. Rough draft-1. 4. Rough draft -2. 5. Fair draft. 6. Discussion on specific aspects of an 7. impressive Resume. 8. Creating a video resume	3
	13	Setting and achieving Targets	Ambition, goal, passion and career objective - difference SMART goals and Action plans Obstacles -Failure management (case studies)	1.5
	14	Introspection	Identify your USP - Unique Selling PropositionRecognize your strengths and weakness (SWOT) Nurture strengths Fixing weakness Overcoming yourcomplex Confidence building	1.5

6	15	Group Discussion -Mock	1. Mock Group Discussions featuring groupsof 10people, with each GD lasting for 15 minutes. 2. Detailed feedback for each participant 3.Introspection by the audience to add value tothe GD	3
	16	Personal Interview - Mock	1. Mock personal interview for a sample set of candidates 2. Simulate the real personal interview experience. 3. ndividual feedback and areas of improvementsareshared.	3

ASSESSMENTS PROVIDED

The following assessments are integrated into the training programme to best judge a student'sproficiency on soft skills.

1. Team building tasks (Inside training hours)
2. Participation in group activities (Inside training hours)
3. Psychometric test
4. Creating a resume

1.	Who moved my Cheese?' by Spencer Johnson
2.	'Outliers' by Malcolm Gladwell
3.	'Emotional Intelligence' by Daniel Goleman'Road Less Travelled' by Scott Peck M.
4.	'How to win friends and influence people' by Dale Carnegie
5.	Who moved my Cheese?' by Spencer Johnson

Course Outcomes:

After the completion of this course, students will be able to:	
CO1	Display key soft skills expected by recruiters
CO2	Apply scientific methods to learn any skill quickly
CO3	Participate in Group Discussions and Personal Interviews effectively
CO4	Create effective resumes that impress interviewers (paper-based as well as video)
CO5	Apply professional etiquette to be displayed in various workplace scenarios

Soft Skills (0 Credit)

Description	*Schedule*	*Conducted for*	*Reduced to*
Activity-1	In regular class	20 marks	20 marks
Activity-2	In regular class	20 marks	20 marks
Activity-3	In regular class	20 marks	20 marks
Activity-4	In regular class	20 marks	20 marks
Activity-5	In regular class	20 marks	20 marks

IV Semester

Major Project

Hours/Week	:	40	Credits	:	20
Total Lecture Hours	:	-	CIE Marks	:	50
Total Tutorial Hours	:	-	SEE Marks	:	50
Course Code	:	4NMCA41			

Major project Regulations	
1	The project is to be carried out by individual student.
2	The major project is to be carried out for 14-16 week duration and evaluated at the end of the semester for the assigned credits.
3	The project may be carried out covering either of following • Design of a system. • Theoretical/Analytical modeling. • Computer simulation. • Developing working software • Interdisciplinary computer application/modeling.
4	The project may be part of the research activity carried out in the department or outside the institute in a recognized industry/research lab.
5	The literature survey should be one of the components of the project.
6	All the project work should be approved by DPEC
7	The DPEC allocate guides for the major project.

Table 1. Break up of CIE marks for major project

Seminar-1	20 marks
Seminar-2	40 marks
Seminar-3	40 marks
Total	**100 marks**

*CIE is evaluated for 100 marks, **which is reduced to 50**.

Rubrics:

Seminar-1

1. Relevance of the project topic & related literature survey (CO1). –5M
2. Identification of requirements, problem analysis and framing objectives and preparing Abstract (CO2)-5M
3. Degree of understanding the domain to adopt methodology to design the model (CO3)- 10M

Seminar-2

1. Project Design (CO4)-10M
   - Low level design
   - High level design
2. Project Implementation, Testing (CO5)-15M
   - Implementation of project using appropriate tools/ technologies
   - Preparing test plan (as per project requirement)
3. Commitment to professional ethics and practices (CO6)-5M
4. Lifelong learning to adopt new tools/technologies (CO7)-5M
5. Adopt Project management principles while developing project (CO8)-5M

Seminar-3

1. Project demonstration and project report submission (with similarity index <=25%) (CO9)- 25M
2. Degree of innovative content / degree to which the project addresses societal/ environmental needs. (CO10)- 07M
3. Work effectively on the project individually or as a member in a team. (CO11)-5M
4. Identify business model to convert project work into a product. (CO12)-2M

SEE for the major project

SEE is conducted by an external examiner and the Project guide. The breakup of marks is given in Table 2.

SEE is done for a total of 100 marks, ***which shall be reduced to 50.***

Table 2. Break up of SEE marks for major project

Evaluation of the Dissertation report by external examiner and the guide(average of independent evaluations)	50 marks
Presentation, Demonstration and viva-voce	50 marks
Total	**100 marks**

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Identify the relevant topic that is in synchrony with recent trends in information technology by performing the literature survey through standard journal referrals or industry professionals.
CO2.	Analyse the defined problem and identify the corresponding requirements / objectives
CO3.	Design and develop a model / procedure / algorithm
CO4.	Conduct investigations of computing problems for the proposed problem.
CO5.	Implement the developed model using appropriate software tools / technologies
CO6.	Commit to professional ethics, and to the norms of computing practice.
CO7.	Effectively engage in lifelong learning
CO8.	Apply the management principles for managing projects
CO9.	Prepare a report and demonstrate the project
CO10.	Identify Legal / Ethical / Societal / Health or Environmental issues related to project work.
CO11.	Work effectively as an individual and as a member while carrying out a project work.
CO12.	Generate ideas & identify the business model to convert the project work into a product.

Technical Seminar

Course Code	:	4NMCAS1	Credits	:	02
SEE Marks	:	-	CIE Marks	:	50

Course Objectives:

This Course will enable students to:	
1.	Identify the topic of the seminar appropriate to the domain
2.	Perform literature survey
3.	Understand the ppt and report preparation techniques

Instructions to Students:	
1.	Select the seminar topics from recent publications (last 5 years) and your area of interest.
2.	The seminar topics must be referred through Scopus Journals/Conferences, Web of Science, IEEE explore or ACM digital library, etc.
3.	After reading the refereed journals/conference papers, students must prepare and submit a report to their respective guides by comparing the contribution of all the authors, methods used, Parameters used for comparison, Experiments carried out, Tools used, results they have published, Improvements claimed, Limitations, etc.
4.	The research article should be prepared based on the limitations observed and ideas for improving the proposed work.
5.	Finally if the students prepare and publish a research article in the Scopus/Web of science Journals/Conferences will be awarded with 10 marks and for non-Scopus will be awarded with 5 marks.

Course Outcomes:

After the completion of this course, students will be able to:	
CO1.	Perform the literature survey through standard referrals and select the relevant topic that is in synchrony with recent trends.
CO2.	Prepare a concise article using ICT efficiently
CO3.	Communicate professionally and develop the spirit of lifelong learning

Scheme for Continuous Internal Evaluation (CIE):
The evaluation will be done by ONE Senior faculty / Internal Guide from the department and ONE External member from Academia / Industry / Research Organization. Evaluation will be done in batches.

Rubrics for SEE evaluation

- Topic - 05 Marks
- Literature Review – 10 Marks
- Technical relevance, Sustainability and Societal Concerns - 10 Marks
- Presentation Skills - 10 Marks
- Viva- Voce – 05 Marks
- Paper Published (Scopus Indexed / Non- Scopus Indexed) – 10 / 5 Marks

Scheme of Study and Examination (2022-24 BATCH)

MBA I Semester

Subject Code	Name of the Subject	Credits	Contact Hours				Examination			
			Lecture hours / per week	Lab hours / week	Self Learning Component	Total lecture hours	Duration (hours)	CIE Marks	SEE Marks	Total Marks
N1MBA01	Management and Organisational Behaviour	4	4	--	--	50	3	50	50	100

	Total	**23**								**1000**

@ One hour self-study under the supervision of course faculty

* Two lab hours = 1 credit / 1 theory = 1 credit

**A student will be declared passed or failed based on continual evaluation of their performance in group discussion, mock-interview and other events designed.

The Semester End Examination will be based on multiple choice questions.

##Based on internal evaluation described in detail as part of the syllabus.

I SEMESTER SYLLABUS

MANAGEMENT AND ORGANISATIONAL BEHAVOIUR

Subject Code	**N1MBA01**	CIE Marks :	**50**
Credits (Lecture Hrs./week)	**4**	SEE Marks :	**100**
Total no. of Lecture Hrs.	**50**	Exam Duration :	**03 Hours**

Course Objectives:

- To introduce the concept of Management in the workplace.
- To develop holistic approach to management
- To develop organizational skills
- To make students understand organizational dynamics
- To focus on the behavior of individuals and groups in organizations

Course Outcomes: Upon completion of this course, the students will be able to

CO1: Comprehend the principles of management, planning and organizing.

CO2: Describe the principles of leadership, motivation and control.

CO3: Elaborate the basics of organizational and individual behavior.

CO4: Elucidate the concepts of individual behaviors, personality, perception and attitudes.

CO5: Explain the behaviors in organization, current opportunities and challenges dynamics of group and employee work life balance.

Course Pedagogy: Lectures, Assignments, Case studies and Presentations

FOUNDATIONS OF MANAGEMENT
UNIT- 1 (13 Hours)

Management, Planning and Organising: Definition of management, nature, purpose and functions. Evolution of management thought. Characteristics of 21st century executives, social responsibilities of managers, and ethics in Business.

Planning: Meaning and nature of planning, Steps in planning process; Objectives: meaning, setting and managing objectives – MBO method. Decision making, steps in decision making.

Organising: Meaning, nature and principles of organising– Organisational structure-meaning and types of organisational structures: functional, divisional, matrix, team, network and boundary less structures.

UNIT- 2 (12 Hours)

Leadership, Control and Motivation: Meaning, definitions of a leader, leader traits, and leadership styles - Managerial Grid, Likert's four systems.

Controlling: meaning, definition, basic control process, factors in control effectiveness.

Motivation: meaning, definition and theories – Maslow, Herzberg, and Goal setting theories. Pygmalion effect in Management.

ORGANIZATIONAL BEHAVIOUR
UNIT- 3 (8 Hours)

Organizational Behaviour: Introduction, definition, historical development of Organizational Behaviour, contributing disciplines to OB, limitations of Organizational behaviour, the future of OB.

Individual Behaviours: Introduction, foundation of individual behaviors and influences. Issues between organizations and individuals

UNIT- 4 (9 Hours)

Learning: concept and definitions in learning, theories of classical and operant conditioning.

Personality: Definition, determinants, personality traits and types, instruments to measure personality, personality attributes influencing OB.

Perception: Meaning, factors influencing perception, perceptual errors

Attitudes: Meaning, definition, sources of attitudes, changing attitudes, and work related attitudes.

UNIT- 5 (7 Hours)

Group dynamics: meaning and types of groups and teams, teamwork, stages of group formation.

Challenges and opportunitiesin Organizational Behavior: Organizational Culture, improving peoples' skills, improving quality and productivity, managing workforce diversity, coping with temporariness, stimulating innovation and change, improving customer service, helping employees work-life balance conflicts.

RECOMMENDED BOOKS:

1. V.S.P Rao, Management: Text and Cases, Excel Books, 2nd revised Edition, 2012.
2. Stephen P Robbins, Timothy A. Judge, Seema Sanghi, Organizational Behavior, Pearson Education, 18th Edition, 2022.

REFERENCE BOOKS

1. Margie Parekh and Rajan Gupta, Organizational Behaviour, McGraw Hill Education, 1st Edition, 2017.
2. Ashwathappa, Organization Behaviour, Himalaya Publication House, 15th Edition, 2022.
3. Arun Kumar and Meenakshi, Organizational Behaviour: A modern approach, Vikas Publishing House, 1st Edition, 2009.

BUSINESS STATISTICS WITH WORKSHEETS

Subject Code	**N1MBA02**	CIE Marks*	50
Credits (Lecture Hrs/week)	3	SEE Marks	50
Total no. of Lecture Hrs	40	Exam Duration	1.5 Hours

* CIE will be based on the lab exercises

Course Objectives

- To educate upon different statistical techniques.
- To provide the students with the various sources of data and make them competent to analyze the same.
- To enhance the knowledge on descriptive & inferential statistics.
- To apply different statistical techniques in business/real-life situations.
- To equip with the skills of decision-making using worksheets

Course Outcomes: Upon completion of this course, the students will be able to

CO1: Organize and present the data using various visualization tools.

CO2: Compute various measures of location and dispersion using worksheets.

CO3: Apply the concepts of probability and probabilistic distributions.

CO4: Measure the degree of association between variables.

CO5: Predict the future by applying the concept of time series analysis

Pedagogy: Lectures, Hands-on session using worksheets

UNIT 1 (4 Hands on sessions using worksheet): (4+4)

Introduction to Statistics: Definition of Statistics – Importance and scope of Statistics – Functions of Statistics - Statistical Investigation - Limitations of Statistics – Distrust of Statistics - Statistical Data: Primary and Secondary Data – Sources of Data –Classification of Data

Visualizing and Presenting Data: Types of data variable, frequency distribution, types of data, creating table using Worksheet, Pivot table. Graphical representation of data through Worksheet– bar charts, pie charts, histograms and frequency polygon, superimposing two sets of data onto one graph.

UNIT 2 (6 Hands on sessions using worksheet): (2+6)

Data descriptors: Measures of Central Tendency using worksheet- Mean, Median, mode, percentile, quartile and weighted averages. Measures of Dispersion using worksheet - Range, Quartile Deviation, Standard Deviation, Variance and Coefficient of Variance. Measures of skewness and Kurtosis.

Exploratory Data Analysis: Five-number summary, Box plots and using the Worksheet ToolPak add-in.

UNIT 3 (8 Hours)

Probability and Distribution: Concept and Definition - Relevance to Management Decisions - Sample Space and Events - Relevance of Permutations and Combinations to Probability - Rules of Probability, Random Variables, Mean and SD of Random variables. Introduction to Probability Distribution, Expectation and Variance for a Probability Distribution, Binomial, Poisson's and Normal distribution.

UNIT- 4 (6 Hands on sessions using worksheet): (2+6 Hours)

Correlation and Regression through worksheet: Scatter Diagram, Covariance, Karl Pearson's Correlation Coefficient, Spearman's Rank Correlation, Testing the significance of Correlation.

Linear Regression Analysis: Scatter plot to identify model, Fit line to sample data, Sum of Squares defined, Regression assumptions, Test model reliability.

UNIT-5 (6 Hands on sessions using worksheet): (2+6 Hours)

Time Series Data and Analysis through excel: Stationary and non-stationary time series, Seasonal time series, Univariate, and multivariate methods, Scaling the time series.

Trend Extrapolation: A trend component, fitting a trend to a time series, types of trends, using a trend chart function to forecast time series and trend parameters. Forecasting with moving averages and. exponential smoothing.

Index numbers: Simple and aggregate indices, deflating values.

RECOMMENDED BOOK:

Business Statistics A first course, David M. Levine, Kathryn A Szabat, David F. Stephan and P.K. Viswanathan, Pearson Publication, 7th Edition, 2017.

REFERENCE BOOK:

1. Business statistics using Excel, Glyn Davis & Branko Pecar, Oxford University Press, 2nd Edition, 2013.
2. Essentials of Business Analytics, Camm, Cochran, Fry, Ohlmann, Anderson, Sweeney and Williams, Cengage Publication, 2nd Edition, 2016.
3. Statistics for Business & Economics, David R. Anderson, Dennis J. Sweeney, Thomas A. Williams, Jeffrey D. Camm, and James J Cochran, Cengage Publication, 12th Edition, 2015.
4. Business Statistics, J. Joseph Francis, Cengage Publication, 2nd Edition,2019.

BUSINESS ECONOMICS

Subject Code	N1MBA03	CIE Marks	50
Credits (Lecture Hrs/week)	03	SEE Marks	100
Total no. of Lecture Hrs	40	Exam Duration	03 Hours

Course Objectives

1. To provide basic understanding of various economic concepts
2. To equip the students with the fundamental areas of demand, supply, production and cost concepts.
3. To provide in-depth understanding of different market structures.
4. To provide the basic understanding of macroeconomic policies.

Course Outcomes: Upon completion of this course the students will be able to

CO1. Develop an understanding of the applications of managerial economics and business entity.

CO2. Analyze the demand and supply conditions and assess the position of a business organization.

CO3. Distinguish the characteristics of different market structures.

CO4. Comprehend various measures of National Income.

CO5. Comprehend the fundamentals of business environment and macroeconomic policies.

Part - I (Micro Economics)

UNIT 1: (07Hours)

Introduction to Economics: Role of Economist in decision-making, Relevance of Economics for business, Fundamental principles of Economics: Opportunity Costs, incremental principle, time prospective, discounting and equi-marginal principle, Concepts of Firm & Industry, Objectives of the firms.

UNIT 2 (09 Hours)

Demand Analysis & Elasticity of Demand: Meaning, Law of Demand- Exceptions, Elasticity of demand- Price, Income & cross elasticity, advertising and promotional elasticity. Analysis of elasticity of demand for Managerial decision-making.

Theory of Production: Production function, Short-run & Long-run, Returns to scale, Economies and diseconomies of scale. Theory of cost.

UNIT 3 (08 Hours)

Market Structure: Perfect Competition – Features, Price determination, Monopoly: Features, Types of monopoly, Pricing under monopoly, Price discrimination, Oligopoly: Features, Kinked demand Curve, Cartels, Price leadership, Monopolistic Competition: Features, Price determination, Product differentiation.

Part - II (Macro Economics)

UNIT 4 (08 Hours)

National Income: National income - Definitions; conceptual framework, Methods of measurement – income, product and expenditure method, Difficulties in measuring national income. GDP, GNP, NNP, HDI, Circular flow of income, NITI Ayog.

UNIT 5 (08 Hours)

Macroeconomic Policies:

PEST analysis, Agriculture Policy, Monetary policy: Objectives and credit control tools, Fiscal policy: Objectives, Industrial policy, Business cycle- features and phases, Inflation- Alternative ways to reduce inflation, FEMA.

RECOMMENDED BOOK:

1. Dr D M Mithani, Managerial Economics- Theory and Applications, Himalaya Publishers, 2017.
2. Economics, N.Gregory Mankiw and Mark P Taylor, 4th Edition, CENGAGE 2019.

REFERENCE BOOKS:

1. Christopher R Thomas and S. Charles Maurice, Managerial Economics, McGraw Hill Education, Indian Adapted Edition, 12th Edition, 2020.
2. Rohini Aggrawal, Students Guide to Mercantile & Commercial Law, Taxman Publications, 2014.
3. Economics, John Sloman, 10TH Edition Pearson India 2018.

MARKETING MANAGEMENT

Subject Code	N1MBA03	CIE Marks :	50
Credits (Lecture Hrs/week)	03	SEE Marks :	100
Total no. of Lecture Hrs	40	Exam Duration :	03 Hours

Course Objectives:

1. Demonstrate an understanding of fundamental concepts of marketing.
2. Identify ethical and legal implication of marketing decisions.
3. Analyse global business opportunities and its implications on a firm's marketing strategy.
4. Apply the conceptual knowledge and tools to systematically analyse and solve marketing problems.
5. Integrate various elements of marketing to develop a marketing plan.

Course Outcomes: Upon completion of this course, the students will be able to

CO1: Explain the fundamental concepts of marketing, including ethics and social responsibility in marketing.

CO2: Examine the underlying factors influencing buyer behaviour and their impact on strategic marketing decisions.

CO3: Explain the concepts of product, new product development and product life cycle.

CO4: Formulate different pricing and distribution strategies.

CO5: Design promotional strategy for an organization.

Pedagogy: Lecture and Case study, Students presentations, Self -Study.

UNIT 1: Introduction to Marketing (8 Hours)

Define marketing. Needs, wants and demands. The market offering – products, services and experiences. Value, satisfaction and quality. Exchange, transactions and relationships. Marketing management. Demand management. Building profitable customer relationships.

The marketing process, Strategy, marketing and planning, Strategic marketing, The marketing mix, The marketing plan, Marketing organization, Marketing control.

Marketing audit: Meaning, Features of marketing audit, various components of marketing audit.

The way Business and Marketing are changing, Marketers use of Internet, customer databases, and customer relationship management in the New Economy. Adapting Marketing to the New Economy, Major Drivers of the New Economy, Marketing in the Internet age, Major forces shaping the Internet age, Marketing strategy in the new digital age, E-commerce domains. Digital ecosystem.

The marketing environment: The company's microenvironment, The company's macro environment, Rural marketing environment in India and rural marketing.

UNIT-2: Consumer Behaviour (8 Hours)

Consumer Markets: Models of consumer behaviour, Characteristics affecting consumer behaviour, Consumer decision process, Types of buying decision behaviour, The buyer decision process, The buyer decision process for new products.

Business Markets: Characteristics of business markets. A model of business buyer behaviour, Business buyer behaviour. Business buying on the Internet.

Type of online markets and their functions.

Market segmentation: Levels of market segmentation, Segmenting consumer markets, Segmenting business markets, Developing market segments, Requirements for effective segmentation, Market targeting, Segment strategy, Differentiation, Differentiating markets, Product positioning, Positioning strategies, Selecting the right competitive advantages, Communicating and delivering the chosen position.

UNIT-3: Product & Branding (8 Hours)

Product and branding: Define product. Levels of product, Product classifications. Packaging / Labeling: Packaging as a marketing tool, requirement of good packaging, Role of labeling in packaging, Product decisions, Branding strategy, Brand equity, Managing brands, New-product development and product life-cycle strategies:

Marketing services: Nature and characteristics of a service. Defining services and the service mix, Service characteristics, Marketing strategies for service firms.

UNIT-4: Pricing (8 Hours)

Define price. Factors to consider when setting prices, Internal factors affecting pricing decisions, External factors affecting pricing decisions, General pricing approaches, Cost-based pricing, Value-based pricing, Competition-based pricing, New-product pricing strategies, Market-skimming pricing, Market-penetration pricing, Product-mix pricing strategies, Price-adjustment strategies, Psychological pricing, Promotional pricing, Geographical pricing, Price changes. Managing marketing channels: Supply chains and the value delivery network, The nature and importance of marketing channels, How channel members add value, Selecting channel members, Managing and motivating channel members, Evaluating channel members.

UNIT-5: Promotion (8 Hours)

Promotion: Integrated marketing communication strategy, The changing communications environment, Setting the total promotion budget and mix.

Advertising: Important decisions in advertising, Setting advertising objectives, Setting the advertising budget, Developing advertising strategy, Evaluating advertising Sales promotion: Setting sales promotion objectives Major sales promotion tools, Developing the sales promotion programme.

Public relations: The role and impact of public relations, Major public relations tools.

Personal selling: The nature of personal selling, The personal selling process, Steps in the selling process, Direct marketing

Pay per click advertising and Digital display advertising.

RECOMMENDED BOOK:

1. Philip Kotler, Gary Armstrong and Prafulla Agnihotri, Principles of Marketing, Pearson, 17th Edition, 2018.
2. Philip Kotler, Kevin Lane Keller, Abraham Koshy and Mithileswar Jha, Marketing Management, Pearson, 16th Edition, 2022.

REFERENCE BOOKS:

1. Lamb, Hair, Sharma and Mc Danniel, Marketing, Thomson, 8th Edition, 2016.
2. Evans & Berman, Marketing, Biztantra, 8nd Edition, 2012.
3. William M Pride, O C Fewell, Marketing – Concepts, strategies, Biztantra, 12th Edition, 2005.
4. Ramaswamy & Namakumari, Marketing Management, Macmillan, 4th Edition, 2009.
5. Arun Kumar & Meenakshi, Marketing Management, Vikas, 3nd Edition, 2016.
6. Philip Kotler, Armstrong, Principles of Marketing, Pearson Education, 17th Edition, 2018.
7. Tapan Panda, Marketing Management, Excel Publication, 2008.
8. Dr. K. Karunakaran, Marketing Management (Text & Cases in Indian Context), HPH, 2011.
9. M J Etzel, B J Walker, William J Stanton, Fundamentals of Marketing Management, TMH, 14th Edition, 2007.

FINANCIAL ACCOUNTING –REPORTING AND ANALYSIS

Subject Code	N1MBA05	CIE Marks	50
Credits (Lecture Hrs/week)	3	SEE Marks	100
Total no. of Lecture Hrs	40	Exam Duration	03 Hours

Course Objectives:

- To understand and explain accounting standards
- To explain and analyses accounting cycle
- To conceptualize and understand the valuation of inventory
- To know and understand treatment of assets and liabilities
- To prepare and analyses the financial statements

Course Outcomes: Upon completion of this course, the students will be able to

CO1: Describe the fundamental accounting concepts and principles.

CO2: Explain the various concepts related to financial reporting

CO3: Comprehend financial statements.

CO4: Analyze income statement and balance sheet of an organization.

CO5: Prepare and analyze cash flow statement of an organization.

UNIT 1: Basics of Accounting (7 Hours)

Accounting Conventions and Concepts, Accounting Principles, and accounting disclosures, Users of Accounting, Accounting cycle, Accounting Equation. Ethical issues in accounting. Window dressing.

UNIT 2: Financial Reporting (9 Hours)

Generally Accepted Accounting Principles (GAAP). International Accounting Standard Board (IASB) Indian Accounting Standards -International Financial Reporting Standards (IFRS). Fixed assets. Accounting for Depreciation. Methods

of depreciation – Straight-line and Written Down Value methods. Capital expenditure and revenue expenditure. Profit and loss related concepts – reporting methods (vertical and horizontal), Measuring Income, various heads in income statements, Balance sheet related concepts Reporting of Assets and liabilities under Companies Act – Auditors' Report

UNIT 3: Financial Statements (10 Hours)

Preparation of Financial Statements. (Sole trader with basic adjustments). Published financial statements: Contents of Annual Report, Key Financial Statements, Notes to financial statements, Consolidated financial Statements. Statements of banking, insurance, transport, and manufacturing companies.

UNIT 4: Analysis of Financial Statements- I (8 Hours)

Introduction to analysis of financial statements; Horizontal (comparative analysis and trend analysis) analyses and vertical (common size) analysis.

Ratio Analysis –Profitability, Liquidity, Solvency and Leverage for manufacturing concerns; Du-Pont analysis Key ratios for analysing financial statements of banking and insurance companies.

UNIT5: Analysis of Financial Statements- II (6 Hours)

Preparation and analysis of Cash Flow Statement (indirect method); Presentation of Cash Flow Statement- Cashflow from Operating, Activities; Investing Activities; Financing Activities. Analysis of cash flow statements of manufacturing, service, banking, and insurance companies.

RECOMMENDED BOOK:

1. Ambrish Gupta, Financial Accounting for Management– An analytical perspective, Pearson Publication, 6th Edition, 2018.

2. R.Narayanaswamy, Financial Accounting- A Managerial Perspective, PrenticeHall India, 7th Edition, 2022.

REFERENCE BOOK:

ETHICS, GOVERNANCE AND LEADERSHIP

Subject Code	N1MBA06	CIE Marks	50
Credits (Lecture Hrs/week)	03	SEE Marks	100
Self-learning	01		
Total no. of Lecture Hrs	40	Exam Duration	03 Hours

The objectives of this course are:

- To bring out the role of ethics
- To inform correct approach to governance and behavior in business context.
- To enable students to develop a framework to address ethical challenges in business
- To educate why ethical leadership quality is important.

Course Outcomes: Upon completion of this course, the students will be able to

CO1: Comprehend the meaning and importance of Ethics

CO2: Describe the importance of Good Governance

CO3: Explain the importance of Corporate Governance

CO4: Describe the need and importance of Ethical leaders.

CO5: Elucidate the leadership lessons from ancient Indian scriptures

UNIT 1:

Introduction to Ethics: (07 Hours)

Principles of Personal Ethics; Principles of Professional Ethics; Business Ethics; Roots of unethical behavior; Corporate Citizenship.

Activity: Case Studies focusing on the ethical behavior of individual and corporates e.g., Lehman Brother Accounting Fraud Case

UNIT 2:

Governance: (07 Hours)

Meaning and importance of Governance, Principles of good Governance, Public Policy, E Governance, Citizen Charter.

Activity: Reflections on Governance in India

UNIT 3

Corporate Ethics: Good Governance (08 Hours)

Definition of Corporate Governance, Significance of corporate governance, benefits to Corporation and Society, what is 'Good' Corporate Governance?

Activity: Case Studies focusing on Good/Bad Governance practices e.g. Tata Steel- A company that also makes steel.

UNIT 4

Leader and leadership: (09 Hours)

Meaning and definition, relevance and importance. Leader roles, types and qualities, differences between leadership and management, Emotional intelligence and leadership. Leadership and ethics, traits of an ethical leader.

Activity: Presentations on success stories of Indian ethical leaders

UNIT 5

Leadership (09 Hours):

Leadership lessons from Indian Scriptures: Motivating Employees, Transparency and Accountability, Social Responsibility.

Cases and biographies of select ethical leaderships among Indian and Asian business corporations-Tata Steel, Wipro, Serum Institute…..

Activity: Presentations on success stories of Indian ethical leaders

RECOMMENDED BOOKS:

1. A C Fernando, Corporate Governance – 'Principles, Policies and Practices', 3/E, Pearson Education, 2020
2. Leadership In Organization,9/e Author(s) : Gary A. Yukl, Pearson, 9th Edition, 2019.

REFERENCE BOOKS:

ESSENTIALS OF ENTREPRENEURSHIP

Subject Code	N1MBA07	CIE Marks:	50
Credits (Lecture Hrs/week)	03	SIE Marks:	100
Total no. of Lecture Hrs	40	Exam Duration:	03 Hours

Course Objectives:

- To familiarize the students about entrepreneurship and its importance.
- To expose and coach them on entrepreneurial competencies.
- To help them to know various stages and the problems associated with startups.
- To help them understand the various funding alternatives.
- To ignite and motivate them to become an entrepreneur.

Course Outcomes: Upon completion of this course, the students will be able to

CO1: Elucidate the basic concepts of entrepreneurship and entrepreneurial process

CO2: Apply design thinking in building business models

CO3: Identify, develop business ideas, and create business plans

CO4: Compare various funding alternatives for start-ups

CO5: Pitch the business idea

UNIT- 1 Introduction (8 Hours)

Understanding the Entrepreneur - Entrepreneurship – Types of Entrepreneurships - Corporate Entrepreneurship. Skills important to Entrepreneurship – 8 Components of the practice of Entrepreneurship. Myths of Entrepreneurship, Start-ups- Meaning, Feature. Difference between a start-up and a small business. Social Entrepreneurship- Types, Difference between Social entrepreneurship, and CSR

UNIT-2 Creating & Finding Opportunities (8 Hours)

The Entrepreneurial Mindset and Opportunity Recognition Finding and evaluating an idea: Strategies for Idea Generation, Design Thinking: Meaning, Process and

Phases. Setting up a company - legal entities and pros and cons. Building Business Model: Parts. Customer Value Proposition (CVP). Bass Diffusion Model.

UNIT-3 Business Model Canvas (9 Hours)

Business Model Canvas model: Components, Business Plan: Components, Summary of Different Types of Business Plans. Tips for Writing Business Plans. Revenue Model: Meaning, Types, Cost drivers. Pricing strategies: Generating Revenue from "Free" subscription, SAAS Models.

Group Activity: Developing Business Model Canvas.

UNIT-4 Financing for Startups (8 Hours)

Fund-raising – Bootstrapping, Bootstrapping Strategies, Crowdfunding Versus Crowdsourcing Stages, Financing for Startups: Equity financing- Stages, forms, Government initiatives. Basics Of Valuation, Types of investors-angels, seed, Venture Capital, Private Equity, stages of start-up funding, Institutional funding for WC. Minimum Viable Product –Meaning and utility, prototyping. Key metrics to measure health of a startup.

UNIT 5-Networks & Pitch (7 Hours)

The value of networks, building networks, virtual network, Navigating Legal and IP Issues. Entrepreneurial Marketing: Traditional Marketing Versus Entrepreneurial Marketing, Features of Entrepreneurial Marketing. Pitching of Idea - components of a pitch deck - elevator pitch - best practices while pitching to investors.

Group Activity: Teams would be formed during the course and will pitch their ideas in front of jury.

RECOMMENDED BOOK:

Heidi M. Neck, Christopher P. Neck, Emma L. Murray - Entrepreneurship_ The Practice and Mindset-SAGE Publications, 2nd edition,2020.

REFERENCE BOOKS:

MANAGERIAL COMMUNICATION

Subject Code	**N1MBA08**	CIE Marks	50
Credits (Lecture Hrs/week)	03	SEE Marks	50
Total no. of Lecture Hrs	40	Exam Duration	1.5 Hours

Course Outcomes: Upon completion of this course, the students will be able to

CO1: Demonstrate effective listening and speaking skills.
CO2: Communicate effectively without errors.
CO3: Manage business correspondence

UNIT-1 (5 Hours)

LISTENING: Active Listening, Strategies to listen better, understanding: Announcements, Conversations, Stories, Discussions, Dialogues, Technical instructions, Speech, Feelings, News bulletin, Mediating an argument, interviews, talk shows, Product pitch, Inferring a client's interest.

UNIT- 2 (8 Hours)

SPEAKING: Introduce a speaker, answering the interview questions, introducing oneself, expressing emotions, what to say in an argument, describe the plot of a book, give precise information,
Discuss and evaluate solution, give advice and complex information, express doubts, viewpoints and opinions, make requests and give orders, narrate stories

UNIT-3 (6 Hours)

READING: Skimming and scanning: demonstration strategy, supporting idea: strategy, supporting idea: demonstration infographics: strategy, a letter of appointment, product labels, a newspaper article, the events of a journey, articles with contrasting arguments, a project proposal, a company report, reading to infer meaning: demonstration, an article on the Consumer Protection Bill, an article on agriculture, an article on women freedom fighters.

UNIT-4 (12 Hours)

WRITING: Common phrases to use organize your thoughts before writing, write

a short report, summarize information, write about feelings and reactions, write a letter asking for information, narrate sequentially, use images effectively, report and summarize, write a descriptive email, ask for further information, write a brief report - minutes of a meeting, write an apology email – general, write a letter of opinion, write a simple review, write a thank you email, give information, share news and express thoughts, emails: purpose, emails: structure, emails: tone, write using idiomatic expressions, write a letter of complaint – general, para jumbles, paraphrasing, precise writing.

UNIT-5

GRAMMAR and VOCABULARY: (8 Hours)

Adverbs, modals, conditionals, comparative clauses, interrogative clauses, conjunctions, tenses, negative adverbials, forms of adjectives, subject verb agreement, active & passive voice, superlative adjectives, intensifiers, confusing adverbs, ellipsis, and tags, common vocabulary errors, tips to improve vocabulary, homonyms, idioms and phrases, using slang in conversation, words used in the workplace, commonly mispronounced words, prefixes and suffixes, financial terms, business jargon, political and legal jargon.

II SEMESTER SYLLABUS

OPERATIONS MANAGEMENT

Subject Code	**N2MBA01**	CIE Marks :	50
Credits (Lecture Hrs/week)	03	SEE Marks :	100
Total no. of Lecture Hrs	40	Exam Duration :	03 Hours

Course Objectives:

- To introduce the concepts, tools and applications in operations management.
- To assess and choose appropriate location and layouts.
- To categorise inventory and control them.
- To appraise the essentials of material requirement planning, just-in-time and lean operations.
- To espouse the importance of quality management.

Course Outcomes: Upon completion of this course the student will be able to

CO1. Comprehend various concepts and relevance of operations management.
CO2. Determine suitable locations and layouts.
CO3. Evaluate various inventory control techniques.
CO4. Apply the essentials of material requirement planning, just-in-time and lean operations.
CO5. Develop skills in managing quality in an organisation.

UNIT 1 (6 Hours)

The Operation Function: Role of operations in an organisation. Production of goods versus providing services. The scope. Operations management and decision making. Historical evolution. Operations strategy.

UNIT-2 (8 Hours)

Location and Layouts: Importance of locations, objectives, nature and evaluation of alternative locations. Process selection and technology in layout. Different layouts. Designing product and process layouts.

UNIT-3 (8 Hours)

Inventory Management: Nature and importance of inventories. Requirements for effective inventory management. Inventory Cost Structures. Independent versus Dependent Demand. ABC Inventory Management, Economic Order Quantity (EOQ). Continuous Review (Q) System. Periodic Review System (P).

UNIT-4 (9 Hours)

Materials Requirement Planning (MRP): An overview of MRP. MRP inputs. MRP processing. MRP outputs. MRP II.

Just in Time (JIT) and Lean Operations: Characteristics of lean systems. The Toyota Approach. Supporting goals. Building blocks – product design, process design, personnel/organization elements, manufacturing planning and control (including kanban).

UNIT-5 (9 Hours)

Managing Quality: Evolution of Quality Management. The Quality Gurus. Defining Quality – Product quality and service quality. Quality Awards and Certifications. TQM and Six Sigma.

Quality Control and Improvement: Inspection. Process Quality Control - attribute control, variable control and using control charts.

RECOMMENDED BOOKS

1. William J Stevenson, Operations Management, McGraw Hill Education (India), 12th Edition, 2018.
2. Lee J Krajewski, et. al., Operations Management, Process and Supply Chains, Pearson, 12th Edition, 2019.
3. Jay Heizer, Barry Render, Chuck Munson and Amit Sachan, Operations Management Sustainability and Supply Chain Management, Pearson, 12th Edition, 2017.

REFERENCE BOOKS

1. Roger G Schroeder et al, Operations Management in the Supply Chain, Mc Graw Hill, 7th Edition, 2018.

2. B. Mahadevan, Operations Management – Theory and Practice, Pearson, 3rd Edition, 2015.

FINANCIAL MANAGEMENT

Subject Code	**N2MBA02**	CIE Marks :	50
Credits (Lecture Hrs/week)	03	SEE Marks :	100
Total no. of Lecture Hrs	40	Exam Duration :	03 Hours

Course Objectives

- Familiarizing the students with the financial environment of business, especially the Indian financial systems.
- Developing the analytical skills to value investments projects and companies.
- Analyse of capital allocation decisions (capital budgeting).
- Evaluate how a firm finances its investments (capital structure decision) and how it manages its short-term operations (working capital decision).
- Discuss various aspects related to dividend payments by firms.

Course Outcomes: Upon completion of this course, the students will be able to:

CO1: Comprehend the fundamentals of financial management and financial system.

CO2: Apply the concept of time value of money

CO3: Estimate and evaluate cash flows of capital projects

CO4: Estimate cost of capital of a firm and explain its implications on capital structure

CO5: Describe the significance of working capital management and estimate working capital requirements.

UNIT-1 (6 Hours)

Introduction to Financial Management: Functions of financial management. Finance function in an organization. Role of finance manager, treasurer, controller. Objectives of financial management – Profit maximization Vs. Wealth

maximization. Basic concepts of corporate financial planning. Basic concepts of Indian Financial System: Financial Institutions and Financial markets.

UNIT-2 (8 Hours)

Time Value of Money: Concepts of future value and present value of single amounts, annuities and perpetuity. Computation of Equated Monthly Installments (EMI), effective interest rate etc. Loan amortization.

UNIT-3 (10 Hours)

Capital Budgeting Decisions: Significance, Techniques of project evaluation – Payback, Accounting Rate of Return (ARR), Net Present Value (NPV), Internal Rate of Return (IRR) and Benefit Cost Ratio. Estimation of cash flows for capital budgeting – principles of cash flow estimation. Cash flows of expansion and replacement projects.

UNIT-4 (8 Hours)

Cost of Capital and Capital Structure: Basic concepts. Cost of equity, cost of preference capital and cost of debt. Weighted average cost of capital. Floatation costs and cost of capital. Marginal cost of capital schedule. Cost of capital and capital budgeting – linkages.

Capital Structure: Basic concepts, capital structure & market value of a firm - Practical considerations. Leverage--operating, financial and combined. EBIT-EPS analysis. Introduction to theories of capital structure – NI approach, NOI approach, Modigliani-Miller approach and traditional approach.

Various methods of raising funds in the primary market. Rights issue of shares. Raising long term and short-term funds – various sources-equity, preference shares, debt - its characteristics.

UNIT 5 (8 Hours)

Dividend Decisions and Working Capital Management: Types of dividends. Bonus shares and stock split. Buy-back of shares. Factors considered for dividend payments. Dividend Theories – Gordon Model, Walter Model and MM Hypothesis.

Working Capital Management: Factors influencing working capital. Working capital policy. Operating cycle and cash cycle. Estimation of working capital requirements (Does not include Cash, Inventory and Receivables Management).

RECOMMENDED BOOK:

1. Prasanna Chandra, Financial Management – Theory & Practice**,** McGraw-Hill Education, 11th Edition, 2023.

REFERENCE BOOKS:

2. Pandey I M, Financial Management, Vikas Publishing House Pvt. Limited, New Delhi, 12th Edition, 2021.
3. Damodaran Aswath, Corporate Finance–Theory & Practice, Wiley India Pvt Ltd, New Delhi, 2nd Edition, 2007.

STRATEGIC MANAGEMENT

Subject Code	**N2MBA03**	CIE Marks :	50
Credits (Lecture Hrs/week)	03	SEE Marks :	100
Total no. of Lecture Hrs	40	Exam Duration :	03 Hours

Course Objectives:

- To provide an overview of the meaning and nature of strategic management
- To analyze a company's environment
- To understand generic competitive strategies
- To help formulate long term and grand strategies
- To understand the strategy implementation process

Course Outcomes: Upon completion of this course, the students will be able to

- Examine the relationship between strategic inputs, strategic actions (formulation, implementation and evaluation) and strategic outcomes to design a strategic plan.
- Identify and describe the key components of the strategic management process and how it can be applied in organisations.
- Assess and judge strategic inputs, including the external and internal environment, strategic mission and strategic intent.
- Create a strategy including synthesising appropriate elements of business level strategy, competitive dynamics, corporate level strategy, cooperative strategies and international strategies.
- Apply selected theory and strategy frameworks to analyse practical strategy related issues in organisational contexts.

Pedagogy: Lectures, presentations and case analysis

UNIT 1 (9 Hours)

Meaning and Nature of Strategic Management: Importance and relevance of strategic management, Characteristics of Strategic Management, The Strategic Management Process – Relationship between a Company's Strategy and its Business Model, Significance of crafting and execution of Strategy.

Strategy Formulation: Developing Strategic Vision and Mission for a company–Setting Objectives–Strategic Objectives and Financial Objectives–Balanced score

card, Company Goals and Company Philosophy. The hierarchy of Strategic Intent – Merging the Strategic Vision, Objectives and Strategy into a Strategic Plan.

UNIT-2 (8 Hours)

Analysing a Company's Environment: The Strategically relevant components of a Company's external environment – Industry Analysis–Industry's dominant economic features - Competitive Environment Analysis – Porter's five force model – Industry driving forces – key success factors – concept and implementation
Analyzing a company's resources and competitive position – Analysis of the company's present strategies - SWOT Analysis–Value chain Analysis – Bench marking and ethical conduct.

UNIT-3 (8 Hours)

Generic Competitive Strategies: Low cost provider strategy – Differentiation Strategy – Best cost provider Strategy – Focused Strategy – Strategic alliances and Collaborative partnerships – Mergers and acquisition Strategies – Outsourcing Strategies – First Mover advantages and disadvantages – Strategies for using Internet in the Global scenario. International Business level strategies – strategic alliances and joint ventures with foreign partners.

UNIT-4 (8 Hours)

Formulating Long Term and Grand Strategies: Competing in the foreign markets – Entry strategies – Quest for competitive advantage in foreign markets – Strategic alliances, Joint Ventures and its relevance – Tailoring Strategy to fit specific Industry and company situation – Setting and qualifying long term objectives for Grand Strategies – Innovation, Integration and diversification – Conglomerate Diversification, Retrenchment, Restructuring and turnaround for a better tomorrow – GE nine cell planning grid and grand strategy selection at business level – Contingency approach to strategic choice by looking back to the past strategies.

UNIT-5 (7 Hours)

Strategy Implementation: Operationalizing strategy, Annual Objectives, Developing Functional Strategies, Developing and communicating concise policies. Institutionalizing the strategy. Organizational Structure and Controls - Structure, Leadership and Culture. Managers as an Organizational Resource. Structural Considerations, Relationships between Strategy and structure, Organizational Leadership. Strategic control guiding and evaluating strategies, Establishing strategic controls, Operational Control Systems, Monitoring performance and evaluating deviations, challenges of strategy implementation.

RECOMMENDED BOOK:

HUMAN RESOURCE MANAGEMENT

Subject Code	**N2MBA04**	CIE Marks :	50
Credits (Lecture Hrs/week)	03	SEE Marks :	100
Total no. of Lecture Hrs	40	Exam Duration :	03 Hours

Course Objectives

To Inform the importance of Human Resource Management

- To introduce the concepts and practices of Human Resource Management
- To Analyze the key issues related to administering the human elements such as motivation, compensation, appraisal, career planning, diversity, ethics, and training
- To familiarize students with the various human resource management practices across industry.
- To provide real life experiences in Human Resource Management through case studies.

Course Outcomes: Upon completion of this course, the students will be able to

CO1: Explain the importance of human resources and their effective management.

CO2: Appraise the process of job analysis and role of recruitment.

CO3: Explain selection, placement and induction with factors involved.

CO4: Explain the concepts and practices in training, development, and performance appraisal system.

CO5: Elaborate on the purpose, need and awareness on career planning and guidance besides the contemporary/current trends / developments in the field of HRM

Pedagogy: Lectures, presentations and case studies

UNIT 1 (8 Hours)

Introduction: meaning and definition of human resource management. Features and functions of HRM, objectives of HRM, policies, procedures in HRM– role of HR manager – qualities of a HR manager.

UNIT-2 (7 Hours)

HR planning and Recruitment: Job analysis- meaning, and types. Human Resource Planning- definition, objectives and need for HRP, benefits of HRP. Recruitment- meaning, definitions, factors affecting recruitment – centralized and decentralized recruitment – recruitment techniques – recruitment process.

UNIT-3 (8 Hours)

Selection, Placement and Induction: Meaning – definition of selection –steps in selection procedure – various types of tests (aptitude, achievement, situational, interest, and personality) – types of interviews and interview process —placement and induction.

UNIT-4 (7 Hours)

Human Resource Training and Development: Meaning of Training & Development (T&D) – importance of training – benefits of training – areas of training – training methods – on-the-job and off-the-job training.

Performance Appraisal System (PAS) – meaning – need –objectives – components of PAS –uses of performance appraisal – limitations and problems of performance appraisal

UNIT-5 (10 Hours)

Career Planning and Current trends:

Career planning – meaning – need, career development actions – promotion – meaning – purpose – bases of merit – seniority – merit cum seniority – benefits – problems – promotion policy – introduction to HR Analytics and its benefits to organizations in the present scenario.

Current trends in human resource management- New work policies, practices of gig economy, hybrid and remote work models, digital workplace technologies, AI and ML driven- recruitment, hiring processes, pre-screening, onboarding.

RECOMMENDED BOOK:

1. Pravin Durai, Human Resource Management, Pearson Education, 2020.

REFERENCE BOOKS:

1. Memoria, V.S.P. Rao and Archana, Human Resource Management, Himalaya Publishing House, 2023.
2. BiswajeetPatnayak, Human Resource Management, PHI Learning, 6th Edition, 2020.
3. V.S.P. Rao, Human Resource Management, Excel books, 2022.

BUSINESS RESEARCH METHODS & IPR

Subject Code	**N2MBA05**	CIE Marks :	50
Credits (Lecture Hrs/week)	03	SEE Marks :	100
Total no. of Lecture Hrs	40	Exam Duration :	03 Hours

Course Objectives:

- To introduce the importance of Research Methodology.
- To introduce the basic concepts of Research Methodology.
- To familiarize students with research process, conducting of research and research design.
- To familiarize the students with various sampling techniques.
- To familiarize the students with preparing the report and evaluation of research report.

Course Outcomes: Upon completion of this course, the students will be able to

CO1: Comprehend the fundamentals of business research.

CO2: Select appropriate research design, define the measurement scale and develop instrument.

CO3: Develop appropriate sampling design.

CO4: Present, analyze and interpret the data.

CO5: Organize the findings and prepare research reports.

Pedagogy: The pedagogy consists of lectures, presentations, practical assignments, self-study components and case analysis.

UNIT 1 (8 Hours)

Introduction to Business Research: Introduction to Business Research. Significance of business research. Applied and pure research. Characteristics of good research. The language of research – concepts, constructs, operational definitions, types of variables, proposition, hypothesis and types of hypothesis. Scientific method in research. Inductive and deductive reasoning. Research Process: Stages in research process. Management-Research Question Hierarchy. Research question, investigative question and measurement question.

Business Research Proposal: Types of research proposals. Structure of the research proposal.

UNIT-2 (9 Hours)

Research Design: Meaning of research design. Classification of designs. Types of research designs: Exploratory, Descriptive, Causal designs. Qualitative Vs. quantitative research. Qualitative research methodologies: interview, individual depth interview, group interview, focus groups, case study. Observations studies: uses of observation, non-behavioral and behavioral observation. Surveys.

Measurement: Nature of measurement. Measurement scales: nominal, ordinal, interval and ratio scales. Error sources: respondent, situational factors, the measurer, the instrument. Characteristics of good measurement: Validity & Reliability. Types of validity: content, criterion-related, construct. Measurement scales: attitudes & behaviour. Selecting a measurement scale. Rating scales: simple attitude scales, Likert scales, Semantic Differential Scales, Numerical/multiple rating scales, Stapel scales, constant-sum scales. Ranking scales. Questionnaire design: question categories, content, wording. Structured and unstructured response.

UNIT-3 (5 Hours)

Sampling Methods: Reasons for sampling. Characteristics of a good sample. Steps in sampling design. Probability Sampling: simple random sampling, complex probability sampling, systematic sampling, stratified sampling, cluster sampling, area sampling and double sampling. Non-probability sampling: convenience, purposive: judgment sampling and quota sampling, snowball sampling. Estimation of sample size from a normally distributed population.

Data Description & Display: Data editing coding and entry.Cross tabulation of data

UNIT-4 (12 Hours)

Testing of Hypothesis: Testing hypothesis: Type I and Type II errors. Statistical testing procedures. Parametric tests: one-sample tests, z-test and t-test, two-sample tests (independent samples and related samples), One-way ANOVA. Non-parametric tests: chi-square test, sign test, run test, Mann-Whitney U-test, Wilcoxon Matched Pairs Test, Kruskal-Wallis Test. (Numerical Problems only on: one-sample tests, two-sample (z-test and t-test), one-way ANOVA and chi-square test)

UNIT-5 (5 Hours)

Presenting Insights & Findings: Report Writing: Short reports, Long reports: technical reports, management reports. Components of research report. Presentation of Statistics. Oral presentation: Aristotle's 3 Principles of Persuasive communication. Audience analysis. Organize, Support, visualize Deliver Practice & Arrange. Web-based presentations.

Intellectual Property: The Concept, Intellectual Property bystem in India, Development of TRIpS Complied Regime in India, Patents Act,1970, Trade Mark Act, 1999,The Designs Ac! 2000, The Geographical Indications of Goods [Registration and Protection) Act1999, Copyright Act, 1957

MANAGING INFORMATION TECHNOLOGY,

SYSTEMS AND BUSINESS

Subject Code	**N2MBA06**	CIE Marks	50
Credits (Lecture Hrs/week)	03	SEE Marks	100
Total no. of Lecture Hrs	40	Exam Duration	03 Hours

Course Objectives

1. To educate the students on the need for information systems in business.
2. To envisage and acquiesce with the emerging information technologies/systems and effect on businesses.
3. To appraise the pervasiveness of enterprise applications.
4. To explore the new avenues of e-business and its impact on organisations.
5. To enrich the students' thinking in the context of emerging big data and data analytics.

Course Outcomes: Upon completion of this course, the students will be able to

CO1. Examine the need for information systems in organisations and their role in decision making.
CO2. Evaluate the growth of information infrastructure and its effect.
CO3. Maximise the benefits of enterprise applications in the organisational ecosystem.
CO4. Distinguish business models of ecommerce based on business transactions and technologies.
CO5. Develop aptitude in business intelligence and its influences on businesses.

UNIT 1 (8 Hours)

Role of information management in Business: Information Systems and transformation of business – Recent Developments – globalization challenges and

opportunities: A flattened world – The Emerging Digital firm – Strategic business objectives of Information Systems – Information system and its dimensions.

UNIT 2 (8 Hours)

IT Infrastructure: Definition – evolution – technology drivers – Infrastructure components – hardware platform trends – software platform trends – the Internet – wireless revolution.

UNIT 3 (8 Hours)

Enterprise Applications: Enterprise Systems – Supply Chain Management Systems – Customer Relationship Management Systems – Opportunities and Challenges of enterprise applications.

Managing Knowledge: Dimensions of knowledge – KM value chain – enterprise wide KM systems – knowledge work systems.

UNIT 4 (8 Hours)

E-Commerce: Introduction – key concepts and features – types – business models – revenue models – e-commerce marketing – B2B – m-commerce services and applications.

UNIT 5 (8 Hours)

Business Intelligence: Problems with traditional file management systems – Capabilities of data base management systems (DBMS) and Relational DBMS – Capabilities of DBMS – Designing databases.

The Challenges of big data – Business Intelligence Infrastructure – Analytical Tools: Relationships, Patterns and Trends – Databases and the Web – Establishing an Information Policy.

RECOMMENDED BOOKS:

Kenneth C Laudon and Jane P Laudon, Management Information Systems, Pearson, 17th Edition, 2022.

REFERENCE BOOKS:

1. James A. O' Brien, Management Information Systems, Tata McGraw Hill, 10th Edition, 2013.

BIG DATA TOOLS FOR MANAGERS

Subject Code	**N2MBA07**	CIE Marks*	50
Credits (Lecture Hrs/week)	3	SEE Marks	50
Total no. of Lecture Hrs	39	Exam Duration	1.5 hours

* CIE will be based on the lab exercises

Course Objectives:

- To familiarise the basic concepts, evolution, technology and applications of Big Data.
- To educate the design of data model and use MYSQL for designing, querying and manipulation applications.
- To build the requisite skills in R-studio.
- To introduce the basics of Python programming language
- To solve statistical and managerial problems using different tools.

Course Outcomes: Upon completion of this course, the students will be able to

- CO1: Explain basics of Big-data and Databases.
- CO2: Retrieve information using MYSQL.
- CO3: Employ R for data analysis and visualisation.
- CO4: Develop and understanding of Python concepts.
- CO5: Employ python for managerial or mining applications.

Pedagogy: Lectures, Case Studies, Data analysis through hands-on sessions, exercises and activities.

UNIT 1 (7 Hours)

Overview of Big Data: Types of Digital data – Structured, Semi-structured and Unstructured data, characteristics of data, Evolution of Big Data, Definition of Big Data, challenges with Big Data, Fundamentals of Big Data – Volume, Velocity, Variety, Veracity, Importance of Big Data, Common software/tool which deals with Big Data.

Databases: Introduction to Data, Database; Characteristics of the database approach, Database Management Software, Introduction to Relational DBMS–

Tables, Attributes, Tuples. Introduction to MySQL tool, MySQL tool installation, Getting familiar with MySQL windows.

UNIT 2 (8 Hours)

Data Querying and Retrieval using SQL (Structured Query Language)

Concepts of Data Definition Language (DDL) and Data Manipulation Language (DML), Data Dictionary, SQL, SQL Data Definition and Data Types, Specifying Basic Constraints in SQL, Schema Change Statements in SQL (DROP, ALTER command); Basic Queries in SQL; Insert, Delete and Update Statements in SQL; Additional Features of SQL; Views (Virtual Tables) in SQL. (Includes Hands-on sessions on Databases SQL commands and queries using MYSQL tool).

UNIT 3 (8 Hours)

Introduction to R: Introduction to R, features of R, Installation of R & RStudio, Getting started – Window sections of RStudio, First interaction, Command line versus Scripts, Comments, help in R, Directory, Output in R, Packages, Functions (call, arguments, return values), Datatypes of R - Vectors, Matrices, Lists, DataFrame.

Importing data into R: Text, CSV, Excel, SPSS, SAS files, and from the web, viewing data.

Hands-on sessions and exercises using R-studio: Descriptive Statistics, Data Visualization, Correlation and Regression (simple and multiple linear regression).

UNIT 4 (7 Hours)

Introduction to Python with Practical Sessions

Programming essentials: Introduction to Python, Python Stack for data analysis, Installation and working with Python, working with Jupyter notebook, Import statements, PIP utilities, downloading package from the Internet, Declaring Variables, Basic operators, Conditional Statements (if..else..elseif

statements), Generating Sequence Numbers, Control flow statements (loops – for, while), Functions – Call, Arguments and return values.

Working with Python collections: Lists, Tuples, Set, Dictionary

UNIT 5 (9 Hours)

Python: Hands-on sessions

Descriptive Statistics – Structured Data: Introduction to Pandas package, Working with tabular dataset - Reading &Writing CSV/Excel/Text files, Displaying records, Quick summary of data, Indexing, Value counts and Cross tabulations, Sorting, Creating new columns, Grouping, Aggregating, Joining various dataset, Remove columns/rows, Filtering records.

Time series analysis and forecasting: Time series analysis & forecasting model, Time Data Visualization

Text analysis – Unstructured Data: Introduction to Text Analysis, loading & exploring the textual dataset.

EMPLOYABILITY SKILLS

Subject Code	**N2MBAES**	CIE Marks**	100
Credits (Lecture Hrs/week)	2	SEE Marks	--
Total no. of Lecture Hrs	2	Exam Duration	--

** A student will be declared passed or failed based on continual evaluation of their performance in group discussion, mock-interview and other events designed.

Course objectives:

- To equip essential communication skills.
- To build confidence to face interview and participate in group discussions.
- To enhance managerial and leadership skills in individuals.

Course Outcomes: Upon completion of this course, the students will be able to

C01: Exhibit effective oral and written communication.

CO2: Perform well in group discussions and interviews.

CO3: Develop required managerial and leadership skills expected from the industry.

UNIT 1 (14 Hours)

Group Discussion (Introductory & Advanced):

- Many-on-many discussion
- Focus on :
  - Team Work
  - Reasoning Ability
  - Leadership & Initiative
  - Listening and Awareness

- Tips on Body Language, Eye Contact, Positive Gestures during group discussion
- Topics of group discussion will be related

to media, current affairs, politics, celebrities and other general topics

- Focus on individual participation
  - Active Participation
  - Viability in Advance Level
- Practice on different forms of G.D:
  - Open GD
  - Close GD
  - Practice on various abstract topics (A is an alphabet)

UNIT 2 (3 Hours)

E mail Writing & Writing Skill

a. E Mail Writing:
- General Etiquette
- Format and different parts of an email
- Common mistakes in Punctuation, Grammar and Spelling
- Sending effective mails
- Form and tone of mails
- Responding to mails

b. Essay Writing
c. Paragraph Writing
d. Picture Theme Writing

UNIT 3 (2 Hours)

Resume/CV Preparation

- Tips for writing impressive CV/resume
- As per the recent format
- Tips on basic structure of writing resume/CV
- Do's and Don'ts of writing resumes/CV
- Relevant information to be included

UNIT 4 (7 Hours)

HR & Mock PI

- In Mock Personal Interview students will be experience
- the real time Interview ambience & process conducted at
- different companies
- Will have Frequently asked Technical Interview questions
- Branch - wiseTechnical Review on basic Concepts
- Tips to handle HR Interview given
- Crucial Do's and Don'ts for HR Interview given
- Common HR questions and guidance for answers given

UNIT 5 (3 Hours)

Personality Development

- Formal Dressing:

e. Dress code b) Do's & Don'ts

- Professional Etiquettes

a) Behavioural Strategies b) Interpersonal Skills

b) Critical Thinking

- Body Language

a) Positive Gestures b) Postures

c) Facial expression d) Importance of Eye Contact

UNIT 6 (8 Hours)

Business Communication Skills

- General Tips & Techniques to improve Communication (Verbal & Non-Verbal)
- Understanding Communication Barriers (activity related)
- Activities related EFFECTIVE SPEAKING , ACTIVE LISTENING
- Focus on LANGUAGE creativity
- Negotiation & Problem solving Skills

UNIT 7 (2 Hours)

Entrepreneurship & Managerial Skills

- Activities Encouraging Innovative Ideas
- Activity involving planning, problem solving and decision making

- Activity to develop understanding about Team Dynamics and its relations

UNIT 8 (2 Hours)

Presentation Skills

- Effective Self Presentation
- Structure of Presentation
- Informative & Creative Presentation
- Tips to Proper Connect with Audience
- Usage of audio-visual aids

UNIT 9 (3 Hours)

Team Building & Leadership Skills

- Importance of Team Building
- Enhancing Leadership abilities in individuals and in Groups
- Activities enhancing Leadership skills
- Activities related Team Work & Team Building
- Focusing on Team Coordination
- Overcoming Fears and Gaining Confidence for Better Leadership

SEMINAR ON CONTEMPORARY BUSINESS

Subject Code	**N2MBACB**	CIE Marks	100
Credits (Lecture Hrs/week)	01	SEE Marks	--
Total no. of Lecture Hrs	--	Exam Duration	--

Course Objectives:

- To familiarise students with the contemporary developments in business
- To equip students to critically analyse various real life business developments
- To equip students in preparation of reports and making presentations based on contemporary business developments

Course Outcomes: Upon completion of this course, the students will be able to:
CO1: To demonstrate knowledge of contemporary business developments

CO2: To critically evaluate business developments

Guidelines:

1. Seminar on Contemporary Business is designed to keep the students abreast of the contemporary developments in business at national and international levels.
2. The course will be administered through presentations based on business news and preparation of a report on a business event. In addition, there will be two quizzes on recent developments in business.
3. The course will be spread over the entire semester. Each day a group of selected students will be asked to make presentation on the important business news of the previous day. It will be structured in such a way that each student will get four chances to make the presentation.
4. The students are expected to go through the business news in newspapers, television, internet etc. and write down important headlines. They must read these headlines in the class on the next day. They must also pick up any one headline and talk in detail about that.
5. Each student will get 5 minutes to make the news presentation. The students making presentation on the same day should make sure that they choose different headlines for giving details.

6. There will be two quizzes of 25 marks each covering the contemporary developments in business. Both these quizzes will have 50 multiple choice questions carrying 0.50 marks for each correct answer. The duration of the quiz will be 30 minutes.
7. At the end of the semester the students will be divided into groups of four. Each group has to prepare a detailed report on any one contemporary business news. The size of the report should be 8 to 10 pages. The groups will make a presentation on the report.
8. There will be no Semester End Examination for this course. This course will be evaluated based on Continuous Internal Evaluation (CIE) for 100 marks. Components of CIE are as follows:

Business News Presentation	25 marks
Report on Contemporary Business	25 marks
Tests on Contemporary Developments (2 tests of 25 marks)	50 marks
Total	100 marks

9. Business news presentation will be evaluated as follows:

Contents of the presentation	5 marks
Clarity on the news detailed	10 marks
Quality of presentation	10 marks
Total	25 marks

(The average marks awarded for four presentations by a student will be reckoned as the final marks for this component)

10. Report on contemporary business developments will be evaluated as follows:

Clarity of the topic covered	5 marks
Depth of coverage	5 marks
Critical evaluation of the topic	5 marks
Overall quality of the report	5 marks
Quality of presentation	5 marks
Total	25 marks

(The marks for this component will be awarded for the group and all members of the group will get the same marks, which is awarded to the group.)

The rubric for evaluation is as follows:

Business News Presentation

Evaluation Criteria	Poor(1-2, 1-3 Marks)	Average(3-4, 4-7 Marks)	Excellent (5, 8-10 Marks)
Contents of the presentation (5)	Minimal description of the topic	Moderate description of the topic	Detailed and extensive description of the topic
Clarity on the news detailed (10)	Demonstrates a lack of understanding of the topic, with confusion and incorrect interpretations.	Moderate level of understanding of the topic, but some key concepts may be misunderstood.	Exhibits a clear and comprehensive understanding of the topic and effectively explains the key concepts.
Quality of presentation (10)	Lack of clarity in concepts and poor confidence	Average clarity of concepts and average confidence	Good clarity of concepts and high confidence
Total : 25 marks			

Report on Contemporary Developments

Evaluation Criteria	Poor(1-2, 1-3 Marks)	Average(3-4, 4-7 Marks)	Excellent (5, 8-10 Marks)
Clarity of the topic covered (5)	Demonstrates a lack of understanding of the topic, with confusion and incorrect interpretations.	Moderate level of understanding of the topic, but some key concepts may be misunderstood.	Exhibits a clear and comprehensive understanding of the topic and effectively explains the key concepts.
Depth of coverage (10)	Covers only a limited number of topics ,leaving out significant areas.	Covers a reasonable range of topics, but may lack coverage of	Covers a wide range of topics ,addressing key areas and providing a holistic understanding.

		some important aspects.	
Critical evaluation of the topic(5)	Lacks critical analysis of the topic, presenting only surface-level information.	Provides moderate level of analysis but may not thoroughly explore multiple perspectives.	Demonstrates a deep and insightful analysis of the topic by considering multiple perspectives.
Overall quality of the report (5)	Acceptable quality and completeness	Reasonable quality and completeness	Good quality and completeness
Quality of presentation (5)	Lacks a clear organization and structure, making it difficult to follow.	Basic organization and structure, but improvements can be made in terms of logical sequencing.	Well-organized and structured, with a logical flow.
Total : 25 marks			

PROJECT ON SOCIAL AND RURAL ISSUES

Subject Code	**N2MBAPS**	CIE Marks :	100
Credits (Lecture Hrs/week)	01	SEE Marks :	--
Total no. of Lecture Hrs	--	Exam Duration :	--

This course attempts to utilize the academic capability and skill of the students of MBA programme to develop and suggest practicable solutions to societal problems while helping the students to become a socially aware global citizen.

Course Objectives:

- Conduct preliminary study and analysis of nature and vulnerability of social or rural problems prevalent in India.
- Carry out review of literature regarding the applicability and impact of alternative solution models adopted for different problems.
- Pursue a research methodology to develop a practicable solution to societal problems.
- Explore the concept and viability of social entrepreneurship which the students may pursue as a career path.
- Inculcate of the ability to utilize the academic competence and aptitude to develop feasible solutions to various societal problems.
- Use statistical tools and related software applications.

Course Outcome: Upon completion of this course, the students will be able to

CO1: Sensitize/Sensible towards the social and rural issues.

CO2: Define the problem, research objectives, methodology, collect the data, analyse the data and interpret the solutions.

CO3: Present the project report

Course Execution

The course shall be executed through the faculty mentors, who will act as a guide to students. Thus, this course would present an opportunity to the faculty as well to contribute to the social service learning. Each student, in consultation with the respective mentor, must carry out necessary study, literature review and to prepare a project report to suggest feasible solutions to pre-identified societal

problems of various social development organizations. Students can choose one of the issues from the following list but not restricted to:

- Minorities in India and welfare programmes
- Untouchability
- The Problem of population
- Social Deviance
- Adolescent Delinquency
- Alcoholism
- Drug Addiction
- Family disorganization
- Crime
- Beggary
- Old age problem
- Destitution
- Poverty
- Illiteracy
- Unemployment
- Homelessness
- Social evils
- Lower living standards
- Lack of facilities, services and health.

Guidelines

1. On completion of the project work, the student shall have to prepare a report. While preparing the report, each student has to note the following important points.
2. The size of the report shall be between 30-50 pages. The Report shall contain the following components: Problem Formulation, Research Design, Framing Questionnaire, Data Collection, Analysis and Interpretation, Suggestions & Conclusion.
3. The report shall be a Spiral Bound copy in A4 size sheet with Times New Roman font 12 for body and 14 for headings Header: Title of the project, Footer: SIT, Dept of MBA and page number.
4. A certificate by the guide, and Head of the Institution indicating the bonafide performance of the project by the student is to be enclosed.
5. An undertaking by the student to the effect that the work is independent and original has to be given.
6. A note on 'Acknowledgements' containing the name of the Institute/ Institutions which the student wants to thank has to be added.

Presentation Guidelines

1. Each student will be allotted 15 minutes for presentation, which will be followed by 5 minutes of interactions / questions from the panel.
2. The presentation will be evaluated by a panel of faculty members comprising the Project Guide and other subject experts.
3. Students are required to keep the presentations ready well in advance and copy the same to any one laptop of that batch before the commencement of the presentation.
4. Students are required to bring all supportive materials like filled questionnaires and show the same to the panel on demand.
5. The suggestions / modifications / alterations given by the panel should be incorporated in the final report.
6. If the panel is not satisfied with the quality of any presentation, the student will be asked to make one more presentation on a later date. In such cases, the marks obtained by the student in the second presentation will be final.

OTHER DETAILS TO BE CONTAINED IN THE REPORT

The following should be included in the Project Report in the same sequence as given below:

1) Acknowledgment - to all those who have helped the student complete the project.

2) Certificate from the guide

3) Table of contents, chapter wise with the appropriate page numbers.

4) Actual project content following the given format.

5) Bibliography - It is important for students to list the Books/references

FORMAT OF THE PROJECT REPORT

A) TITLE PAGE: The first page should contain the following details.

TOP: The Title of the report in block capitals which is properly centered.

CENTRE:

1) Full name of the candidate in capital letters

2) Enrollment No. _____

3) Program Name _____

BOTTOM:

A) Name of the college, Year of Submission (e.g. DECEMBER 2017)

B) MARGIN: Left 25mm (1″), Top 25mm (1″), Right 25mm (1″), Bottom 25mm (1″).

C) FONT: Times New Roman (12 pts) or Arial (12 pts)

D) PAGE NUMBER: At center bottom of the page.

Evaluation:

The marks will be awarded based on each student's contribution to the project, the presentation and the project report. This enables students to contribute to the project.

Particulars	**Marks**
Report writing • Problem identification • Research design • Data collection • Analysis and interpretation • Suggestions	50
Presentation • Relevance of the topic • Data collected • Analysis and interpretation • Suggested solutions • Overall presentation	50

The rubric for evaluation is as follows:

Presentation

Evaluation Criteria	Poor(1-3,1-5,1-2 Marks)	Average(4-7,6-11,3-4 Marks)	Excellent (8-10,12-15,5 Marks)
Relevance of the topic (10)	Minimal description of the topic	Moderate description of the topic	Detailed and extensive description of the topic
Data collected (15)	Inadequate – secondary/ primary data (quality & quantity	Primary / secondary data collected but of inadequate quality	Adequacy of data
Analysis and interpretation (10)	Basic analysis done	Analysis done, but without understanding the requirement of the analysis	Analysis of higher order and suitable for the data with clear understanding of the use of analysis
Suggested solutions (5)	Not very clearly articulated. Suggestions very routine.	Reasonably articulated and suggestions are fair	Articulated with implementable suggestions which makes business sense
Overall presentation (10)	Lack of clarity in concepts and poor confidence	Average clarity of concepts and average confidence	Good clarity of concepts and high confidence
Total : 50 marks			

Report Evaluation

Evaluation Criteria	Poor(1-3 Marks)	Average(4-7 Marks)	Excellent (8-10 Marks)

Problem Identification (10)	The problem identification is poor	The problem identified is reasonably acceptable	The problem identification is appropriate and clearly exhibited in the report
Research Design (10)	Design methodology not defined properly	Design methodology defined but not properly justified	Appropriate design methodology and proper justification.
Data Collection (10)	Inadequate – secondary/ primary data (quality & quantity	Primary / secondary data collected but of inadequate quality	Adequacy of data
Analysis and Interpretation (10)	Basic analysis done	Analysis done, but without understanding the requirement of the analysis	Analysis of higher order and suitable for the data with clear understanding of the use of analysis
Suggestions (10)	Suggestions are more generic and less feasible.	Suggestions are based on findings and but less feasible.	Suggestions are based on findings and feasible.
Total : 50 marks

* CIE is awarded on the basis of conducting a research on the chosen topic of their specialisation, presentation of the topic (seminar) and submitting the report. The presentation and the report will be evaluated by the internal guide and internal panel of examiners. The detailed guidelines are mentioned in the syllabus book.

**The Department offers a bouquet of specialisation courses available on different MOOC platforms every year. A student should register for a course and complete the course successfully to get the credit.

CIE includes two tests of 50 marks each.

III Semester Syllabus

COST AND MANAGEMENT ACCOUNTING

Subject Code	N3MBA01	CIE Marks :	50
Credits (Lecture Hrs/week)	4	SEE Marks :	100
Total no. of Lecture Hrs	52	Exam Duration :	03 Hours

Course Objectives:

- To familiarise students with concepts, nature and classification of costs.
- To illustrate various methods and techniques of product costing.
- To demonstrate how cost concepts are used for decision making.
- To explain the costing systems used in service organisations.
- To describe how costing is used as a control tool in organisations.

Course outcomes:

CO1: Classify costs and analyse the relationship between costs and volumes of operation

CO2: Ascertain the cost of a product under job and process costing systems using the principles of absorption costing

CO3: Perform Cost-Volume-Profit Analysis for an organization and apply the same for taking various decisions including pricing

CO4: Compute the costs incurred by an organization in providing various services

CO5: Prepare budgets for an organization and analyse variances using standard costs.

Pedagogy: Classroom discussions, problem solving, case studies, student assignments and presentations.

UNIT 1 (10 Hours)

Management Control and Cost Concepts: Meaning, nature and purpose. Profit, growth and control. Goal congruence. Conflict among stakeholders. Hierarchy of controls and corporate governance.

Cost terms, cost drivers, cost pools and cost objects. Classification of costs. Direct and indirect costs. Product costs and period costs. Computation of total costs and unit costs for manufacturing, merchandising and service firms. Cost behavior with respect to volumes- variable/ fixed and semi variable.

UNIT-2 (12 Hours)

Costing systems: Absorption costing – treatment of direct and indirect costs – overhead allocation and absorption.

Job costing – manufacturing and service sector

Process costing: preparation of process accounts – treatment of normal loss, abnormal loss and abnormal gain.

Activity based costing (ABC) – cost pools- cost drivers and product costing using ABC.

UNIT-3 (14 Hours)

Cost-Volume-Profit (CVP) Analysis: CVP relationship with output. Break-even analysis. Sensitivity analysis, Cost planning & CVP. Cost analysis for decision making. Determining cost behavior. Decisions on Make or buy; closing down unprofitable divisions/products/product line; alternative sourcing. One time special orders, Product mix decisions – under certain capacity constraints. Sell or process further, make or buy (outsourcing), operate or shut down.

Pricing Decisions (Theory only): Major influences on pricing. Short and long run pricing, various methods of pricing. Cost plus pricing. Target costing for target pricing. Transfer Pricing – Meaning & methods.

UNIT-4 (6 Hours)

Services Costing: Basic concepts of services/operating costing. Costing systems in service industry. Computation of total and unit costs in Transportation, Hospital and Hotels.

UNIT-5 (10 Hours)

Budgeting & Budgetary Control: Types of budgets- Preparation of sales budget, production budget and cash budget, Preparation of flexible budget. Standard costing-Variance analysis (material variances).

1) Jawaharlal, Cost Accounting, Tata McGraw Hill Publishing Company Limited, 5th Edition, 2013.
2) Robert N Anthony & Vijay Govindarajan, Management Control Systems, Tata McGraw Hill Publishing Company Limited, 12th Edition, 2007.

REFERENCE BOOKS:

1) Charles T Horngren, Srikant M Datar & George Foster, Cost Accounting – A Managerial Emphasis, Pearson Education, 15th Edition, 2017.
2) Lynch & Williamson, Accounting for Management – Planning & Control, Tata McGraw Hill Publishing Company, 3rd Edition, 2004.
3) M Y Khan & P K Jain, Cost Accounting, Tata McGraw Hill Publishing Company, 2nd Edition, 2014.
4) T R Sikka, Fundamentals of Cost Accounting, Viva Books, 7th Edition, 2012.

SUPPLY CHAIN MANAGEMENT

Subject Code	**N3MBA02**	CIE Marks	50
Credits (Lecture Hrs/week)	03	SEE Marks	100
Total no. of Lecture Hours	39	Exam Duration	03 Hours

Course Objectives (COs):

1. To appraise the students various concepts related to the supply chain management.
2. To educate the importance of supply chain decision such as design, planning, and operations of a firm.
3. To showcase the ways by which the companies use different supply chain drivers to improve their performance.
4. To emphasise the efficacies of collaboration and coordination in a supply chain.
5. To develop competency by exposing/analysing the students to various case studies and appraise the students with the contemporary trends in supply chain management in India.

Course Outcomes

Upon completion of this course the student will be able to

CO1. Explain various drivers of supply chain performance.
CO2. Assess the role of distribution, distribution network and network design.
CO3. Evaluate role, component, characteristics and various methods of demand forecasting and managing uncertainty.
CO4. Prioritise the efficacies of coordination and collaboration in a supply chain.
CO5. Analyse different modes of transportation, transportation networks and sourcing decisions.

Pedagogy: Lectures, cases, and discussions.

UNIT 1 (9 Hours)

Introduction to Supply Chain Management: Supply chain – historical perspective – objectives – importance – decision phases – process view – achieving strategic fit – challenges – impellers of supply chain – financial measures of performance – drivers of supply chain performance – framework for structuring drivers – facilities – inventory – transportation – information – sourcing – pricing – infrastructure.

UNIT-2 (8 Hours)

Designing Distribution Networks and Network Design: Role of distribution – factors influencing distribution network design – design options for a distribution network – online sales and Omni-Channel Retailing – Distribution channels in Indian agricultural, FMCG and commodity sectors – Role of network design – factors influencing network design decisions – framework for network design decisions.

UNIT-3 (8 Hours)

Demand Forecasting: Role – characteristics – components – approach – time series methods – measures of forecast error – role of IT.

Managing uncertainty: Safety inventory and its appropriate level – impact of supply uncertainty, aggregation and replenishment policies – measure to reduce safety inventory.

UNIT-4 (7 Hours)

Coordination in a Supply Chain: Lack of supply chain coordination and the Bullwhip effect – its effect on performance – obstacles to coordination – managerial levers – practical approaches to improve supply chain coordination – Indian experiences.

UNIT-5 (7 Hours)

Transportation and Sourcing: Role of transportation – modes and their performance characteristics – design options and their trade-offs – Tailored transportation. Sourcing decision – aggregation methods – factors influencing growth of surplus by a third party – risk of using a third party – strategic factors in sourcing – examples of successful third-party suppliers – total cost of ownership (TCO).

LEGAL ENVIRONMENT OF BUSINESS

Subject Code	**N3MBA02**	CIE Marks :	50
Credits (Lecture Hrs/week)	03	SEE Marks :	100
Total no. of Lecture Hrs	39	Exam Duration :	03 Hours

Course Objectives:

- To provide basic understanding on the Indian Contract Act 1872.
- To brief the importance of Law of Agency.
- To enable the students with usage of negotiable instruments.
- To elaborate the provisions relating to formation of a company, powers and responsibilities of the directors and managers, holding company meetings and winding up of a company.
- To explain the nature and formation of partnership, the rights, duties and liabilities of partners and the procedure for dissolution of partnerships.

Course Outcomes

CO1: Explain the basic elements of enforceable contract and agreement
CO2: Comprehend basic legal framework of special contracts.
CO3: Apply the basic principles of negotiable instruments, insurance and sale of goods.
CO4: Explain the provisions of Companies Act regarding formation, types and management of companies
CO5: Describe the laws relating to partnership firms, foreign exchange and consumer protection in India.

Pedagogy: Pedagogy includes classroom discussions, student assignments and presentations.

UNIT 1 (9 Hours)

Law of Contract: Definition, essentials, offer – definition and essentials, acceptance – definition and essentials, consideration – definition and essentials, exceptions to the rule, no consideration - no contract, capacity of parties, free consent, termination of contract, remedies for breach of contract.

UNIT-2 (7 Hours)

Law of Agency: Kinds of agents, rights and duties of agent and principal, creation of agency, termination of agency.

SEMINAR ON FUNCTIONAL DOMAIN

Subject Code	N3MBAFD	CIE Marks :	--
Credits (Lecture Hrs/week)	1	SEE Marks :	--
Total no. of Lecture Hrs	--	Exam Duration :	--

Course Objectives:

- To train the students in their ability to understand, analyse and communicate various aspects of business in a holistic way.
- Enable the students to critically analyse the contemporary subjects in their area of specialization.
- To train them in research skills in the most advanced areas of their stream.
- To develop presentation skills.
- To develop paper(s) in consistent with the theme of the discipline.

Course Outcomes: A students will be able to :

- Understand, analyse and communicate various aspects of business in a holistic way.
- Critically analyse the contemporary subjects in their area of specialization.
- Demonstrate research skills in the most advanced areas of their stream.
- Make presentation skilfully.
- Develop paper(s) in consistent with the theme of the discipline.

Guidelines:

1. This course called "Seminar on functional domain" is offered with a view to enable MBA students to understand, analyse and communicate various aspects of business in a holistic way and demonstrate research skills.
2. The Seminar on functional domain is a research based course which carries one credit.
3. Each student of III semester has to choose a seminar topic relevant to the area of specialization and give a research based seminar on the same. The topic can be broadly based on
   (a) Recent developments in the area, and/or
   (b) Application of a concept/theory/model in the relevant field, and / or
   (c) Application of a concept/theory/model in Indian/global context etc.
4. The research based write-up on Seminar on functional domain shall broadly be organized into following sections / headings:
   a) Introduction
   b) Theoretical framework: Definition, explanation and significance/relevance of the concept (The use of text books is restricted only to the theoretical framework).
   c) Real-life illustrations/examples/case studies
   d) Data analysis & interpretations
   e) Regulatory framework
   f) Advantages/disadvantages/limitations etc.

g) Concluding remarks
h) Learning Outcome
i) Bibliography (list of reference materials along with publications, volumes)

5. The information required for developing the Seminar on functional domain report should be drawn from field surveys or company specific reports from data bases such as Prowess, Capitaline, internet, newspapers, magazines and journals. Content in the write-up/paper should be original and independent.
6. The students have to submit a brief report (Font: Arial; font size: 12), minimum of 12 pages, including tables, charts and graphs, if any) along with a soft copy of the complete report to the respective guides.
7. Students attached to their respective Faculty Guides are advised to finalize the topic in consultation with their Faculty Guides. Once the topic is finalized, the students are required to register the same with the Seminar Coordinator in the prescribed format.
8. A particular topic cannot be choosen by more than one student.
9. For presentations, a maximum of 10 to 12 PPT slides be prepared beforehand.
10. Each student will be given 15 minutes to make the presentation followed by 5 minutes for questions/clarifications etc.
11. The presentation as well as the report shall be evaluated by a team consisting of faculty guide and a panel of examiners (Internal Faculty) constituted by the HOD, MBA dept.
12. The marks for Seminar on functional domain, are distributed as follows:
    Part 1:Presentation:total marks 50, the distribution is as follows:

a) Subject matter, contents & methodology	20
b) Communication/Presentation Skills	15
c) Response to queries/clarifications	15
Total Marks	50

Part 2:Seminar Report, weekly reports and interaction with guide :
total marks 50, the distribution is as follows:

a) Organisation of the report, Subject matter, contents & methodology	10
b) Quality of questionnaire and data collection and analysis	20
c) Findings, suggestions and implications	10
d) Continuous interaction with guide	10
Total Marks	50

CIE is awarded on the basis of conducting a research on the chosen topic, presentation of the topic (seminar) and submitting the report. The presentation and the report will be evaluated by the internal guide and internal panel of examiners.
The presentation can be done around term 1 and report can be submitted around term 2.

MOOC / NPTEL

Subject Code	**N3MBAMN**	CIE Marks	100
Credits (Lecture Hrs/week)	2	SEE Marks	-
Total no. of Lecture Hrs	16	Exam Duration	-

Course Outcome:

After the successful completion of the course, students will be able to:

CO1: Understand and articulate the nuances in the selected course

Guidelines:

This course is offered to the students with the purpose of giving them a wide opportunity to enhance their knowledge. The students are given an opportunity to choose from the list of courses mentioned below and offered by Coursera, NPTEL, SWAYAM, Udemy etc., and enrol themselves.

Students must complete 1 MOOC during the III Semester based on their interest and submit the certificate. The duration of the course should be for 6-8 weeks. In the beginning of the semester, students must register for a MOOC and update the information to their respective Proctors. This will enable the proctor to monitor the progress. After completion of the course, students must submit the completion certificate. Those Students who fail to get the course completion certificate will have to repeat the course.

Comprehensive list of various areas in which MOOC can be selected

Management Skills
Product Management
Marketing Analytics
Digital Marketing
Financial Analytics
Business Strategy
Leadership
Agile
Personal Productivity
Customer Engagement
Personal Finance
Financial Risk Management
Investment Banking
Private Equity
Company Valuation
Credit Analysis
Quantitative Finance
Financial Modelling
Organizational Psychology
Talent Management
People Analytics
Payroll Management
Onboarding
Talent acquisition

Strategic HR
Managing Compensation and Benefits
Business Analytics
Power- BI
Emotional Intelligence
AI/ML

Evaluation : Students are required to complete the course and take-up the assessment at the end of the course.

Sl. #	Evaluation	Evaluation Method	Marks
1.	Internal 100 Marks	Weekly Progress reports to the proctor	20
2.		Presentation on the learnings from the course	30
3.		Final course assessment score and submission of certificate to the proctor	50

APTITUDE SKILLS

Subject Code	N3MBAAS	CIE Marks	100
Credits (Lecture Hrs/week)	1	SEE Marks	-
Total no. of Lecture Hrs	39	Exam Duration	-

Course Objectives:

- To lay a foundation to basic mathematics required for cracking placement related tests.
- To develop reasoning and data interpretation skills among students.
- To train students on advanced aptitude reasoning, verbal skills and group discussions.
- To enhance the performance of students in placements and competitive examinations
- To enhance employability of students

Course Outcomes:

After completion of this course, the students will be able to:

CO1: Solve problems in basic mathematics that are set in placement related tests.
CO2: Answer questions relating to reasoning and data interpretation in interviews.
CO3: Participate in group discussions confidently.
CO4: Perform successfully in placement related tests and competitive examinations
CO5: Clear the assessment by companies for placements

UNIT-1 (7 Hours)
Aptitude
Basic Concept and Formulas of Geometry, Average, Decimal Fractions, H.C.F. and L.C.M., Height and Distance, Numbers Basics (Only formulas and Examples).

UNIT-2 (8 Hours)

Percentage, Permutations and Combinations Basics, Profit and Loss, Simplification, Square Root and Cube Root, Time and Distance Basics, Time and Work Basics

UNIT -3 (8 Hours)
Reasoning and Data Interpretation (DI)
Age, Calendar, Clock, Directions, Blood Relation, Introduction to DI, Tabular Data (Tables), Line Graph, Bar Chart or Graph, Pie Chart or Graph

UNIT -4 (8 Hours)
Verbal Aptitude
English Usage or Grammar, Vocabulary Based (Synonyms Antonyms), Sentence Correction, Fill in the blanks, Cloze Passage, Analogies or Reverse Analogies

UNIT – 5 (8 Hours)
Training on Advanced Aptitude Reasoning, Verbal Skills & Group Discussion
Common Errors, Phrase Substitution, Spelling Test, Rearrangement of Sentence, Cloze Test, Reading Comprehension, Root words to improve vocabulary, Spotting errors, Synonyms and Antonyms
Introduction to GD, Factual topic, Controversial topics, Abstract topics, Case-based GD, Social issues, Current affairs, Technology and business, do's and don'ts, Mock GD Sessions.

RECOMMENDED BOOKS:

1. R S Agarwal, Quantitative Aptitude for Competitive Examinations, S Chand Publishing, 17th Edition, 2017.
2. R S Agarwal, A modern approach to verbal and non-verbal reasoning, S Chand Publishing, 2nd Edition, 2017.
3. A to Z about Interviews by M. B. Sivaramakrishnan, 2008.
4. Quantitative Aptitude for Competitive Examinations- Author: Dr R S Aggarwal, 7th edition, reprint 2015.

Pedagogy:

- Practice -Based Teaching and Training.
- Activity based teaching and training
- Interaction with professional trainers.
- Classroom Discussions

Evaluation

Assessment	Marks
Test 1	50 Marks
Test 2	50 Marks
Total	**100 Marks (CIE)**

SALES AND DISTRIBUTION MANAGEMENT

Subject Code	**N3MBAMM06**	CIE Marks :	50
Credits (Lecture Hrs/week)	03	SEE Marks :	100
Total no. of Lecture Hrs	39	Exam Duration :	03 Hours

Course Objectives: To make the students capable doing the following:

- Formulate appropriate personal selling, CRM strategies for organisations and excecute role of a sales manager skilfully.
- Design suitable sales strategies including forecasting and quantifying sales quota for organisations.

IV Semester Syllabus

INTERNSHIP

Subject Code	**Credits** (Lecture Hrs/week)	**CIE+SEE**
N4MBAINT	08	50+50

Course objectives

The internship module aims to provide the student with:

1. A practice-oriented and 'hands-on' working experience in the real world or industry, and to enhance the student's learning experience.
2. An opportunity to develop a right work attitude, self-confidence, interpersonal skills and ability to work as a team in a real organisational setting.
3. An opportunity to further develop and enhance operational, customer service and other life-long knowledge and skills in a real world work environment.
4. Pre-employment training opportunities and an opportunity for the company or organisation to assess the performance of the student and to offer the student an employment opportunity after his/her graduation, if it deems fit.

Course outcome

CO1: Comprehend the characteristics of the industry.
CO2: Comprehend the characteristics of the company.
CO3: Describe the operations of the specific functional area.
CO4: Fulfill assigned tasks in a time bound manner.
CO5: Write the intrenship report

Every eligible student has to take up an internship during 4th semester. The duration of the internship is eight weeks and it carries 8 credits. Internship includes presentations in the form of the seminars on the work done, internship report submission, and report evaluation.

1 Introduction

1.1 All eligible students, who are promoted to the fourth semester, are required to undertake Internship at a business organisation. The objective of the internship is to expose students to the real-life working conditions of a business organisation and to provide them hands-on experience of working for an organisation.

1.2 The internship is expected to prepare the students for taking up jobs

in business organisations after the MBA programme.

1.3 Internship carries 8 credits.

2 Selection of the Organisation

2.1 The Institute shall place students in different organisations for the internship. The responsibility of placing the students shall rest with the Departmental Project Evaluation Committee (DPEC) and the Training and Placement department.

2.2 The students will have to undergo the internship at the organisations allotted to them by the Institute. They will not be permitted to take up internships at organisations of their choice.

2.3 In exceptional cases, where a student is able to get internship on his/her own in a highly reputed organisation, DPEC will have the discretion to permit the student to take up the same, subject to fulfillment of all other regulations related to the internship.

3 Duration

3.1 The internship will be for a period of eight weeks during 4th semester.

3.2 The actual date of commencement and closure will be announced by the Institute in consultation with the business organisation.

3.3 The students are required to report at the organisation on all working days during the eight weeks. Under normal circumstances, the students are not permitted to avail any leave during this period. In case of any contingency, a student can avail a maximum of *two days* leave during the eight weeks period with prior permission of the supervisor.

4 Supervision

4.1 Each student will be supervised by two supervisors, one internal and the other external.

4.2 The internal supervisor will be a faculty member of the Institute. DPEC will allot supervisors to each student before commencement of the internship.

4.3 The student will report to the internal supervisor on a weekly basis by submitting weekly reports duly signed by the external supervisor in the format prescribed by DPEC.

4.4 The external supervisor will be a competent authority at the business organisation where the student undertakes internship. The student will be reporting to the external supervisor on a daily basis.

4.5 The external supervisor will be giving various assignments/tasks to the students during the period of internship.

5 Contents

5.1 The eight-week internship is divided into three parts. The first part, which should be completed during the first two weeks, relates to an overall study of the organisation. The student is expected to gather details regarding history of the organisation, the ownership structure, management team, product/service profile, details of branches/offices, employee strength, HR initiatives, marketing strategies, achievements and accolades, future plans etc. During this period, they are also expected to conduct a SWOT analysis for the organisation and analyse its financial position during the last three years.

5.2 The second part of internship is for a period of five weeks. During this period the students are expected to work for the organisation in a department allotted to them by the external supervisor. They may be given specific assignments/jobs by the supervisor. The students will work in various departments of the organisation under the guidance of the external supervisor, so that they get exposure to different functions of the organisation.

5.3 Out of the five weeks, the supervisor may allot the students for three to four weeks in any one of the functional areas, viz. Finance, Marketing or HR depending on the student's choice of specialisation. The remaining one to two weeks can be utilised for providing exposure in other functional areas/departments. The external supervisor has complete freedom in engaging the students during these five weeks depending upon the internal circumstances of the organization.

5.4 The external supervisor reserves the right to assign any task to the student and the student is expected to fulfill the same to the satisfaction of the supervisor.

5.5 The last one week of the internship shall be spent on writing the report. The contents of the report are mentioned in section 6. The schedule of activities is summarised below.

Table 1

	Activity	**Duration**
1	Overall study of the organisation	2 weeks
2	Work in a specific department or on a specific task	3-4 weeks
3	Experience in various functional departments	1-2 weeks
4	Report writing	1 week

5.6 Each student is expected to maintain a project dairy where the student has to record the activities carried out on a daily basis. This daily report has to be approved by the external supervisor and the

same shall form part of the report. The daily report also acts as proof of attendance.

6 Internship Report

6.1 Each student is required to submit a report to the Institute on completion of the internship. The report shall be approved by the external supervisor before submission.

6.2 The report should be prepared using MS Word. The font used shall be Times New Roman, 12 points with 1.5-line spacing.

6.3 The size of the internship report will be around 50 pages comprising of three sections as follows:

a. The first section, which shall not be more than 20 pages, will deal with the organisation study done during the first two weeks of internship. The details are outlined in 5.1 above.
b. The second part of the report will be the report on daily activities. The students are expected to write a brief half page summary of activities carried out on each day. The day and date has to be clearly mentioned. This size of this section shall not be more than 20 pages.
c. The third part of the report shall be on the learning outcomes during the internship project. It should contain various aspects learnt by the student, challenges faced during the internship and how those challenges were overcome. The students are also expected to explain how the internship has helped them to sharpen their managerial skills and prepared them for a corporate career. The length of this section shall not be more than 10 pages. The contents of the internship report are summarised below:

Table 2

Sl. No.	Contents	Number of pages
1	Section 1- Organisation Study	20
2	Section 2- Report on Daily activities	20
3	Section 3- Learning Outcomes	10
	Total	50

7 Evaluation

7.1 The Internship will be evaluated in three parts. The first part is an evaluation of the activities carried out during the eight-week period. This will be for 50 marks and will be done by the external supervisor. The external supervisor will look into the following aspects for evaluation:

Table 3

Sl.No.	Components	Marks
1	Punctuality & attendance	15
2	Efficiency of completing the assignments	20
3	Overall behaviour of the student	15
	Total	50

The external supervisor will assign marks to the students confidentially and communicate the same to the Head of the Department in a sealed envelope. The supervisor will not reveal the marks to the student.

7.2 The second part of evaluation will be on presentation. Each student has to give two seminars on the internship. The first one will be scheduled after one month of commencement of internship. The students are expected to present details on the organisation and the work carried out so far. The final presentation will be scheduled at the end of fourth semester. The final presentation will be evaluated based on the following parameters:

Table 4

Sl. No.	Component	Marks
1	Organisation study	5
2	SWOT Analysis	5
3	Work done during the internship period	5
4	Experience of working in various functional departments	5
5	Overall Learning Outcomes	5
	Total	**25**

7.3 The third part of evaluation will be on internship report. The internship report will be evaluated by internal supervisor. The report will be evaluated for 25 marks by considering the following aspects:

Table 5

Sl. No.	Components	Marks
1	Organisational Study	5
2	Report of daily activities	10
3	Report on learning experience	5
4	Overall quality of the report	5
	Total	**25**

7.4 The final marks for internship will be out of 100. The first 50 marks

will be the marks awarded by the external supervisor. The second component will be awarded by the internal supervisor for the report evaluation and the third component will be marks awarded by the panel members on final presentation. The pattern of evaluation is summarised below:

Table 6

Sl. No.	**Components**	**Maximum Marks**
1	Evaluation by the external supervisor (**Table 3)**	50
2	Final Presentation (panel of examiners)	25
3	Evaluation of Report by the internal supervisor	25
	Total	**100**

CAPSTONE PROJECT

Subject Code	N4MBACP
Credits	4

Capstone Projects and its Guidelines

Every qualified student has to take up a capstone project during the mid of third semester and evaluation by the end of fourth semester. The duration of project is eight weeks and project work carries 4 credits. Project Work includes, Preliminary and Final Project Presentation in the form of the seminar followed by a Project Report

Guidelines for Capstone Project

1. The project work shall be for a period of 8 weeks from mid of the third semester, will continue during the 4th semester.
2. The Department Evaluation Committee shall allot students to respective Guides based on the functional areas. Further a student will have to:

a) Identify a problem / issue related to the area of specialisation.
b) The student after identifying the problem/issue on a specific aspect should undertake the study/investigate/conduct survey; analyse the data, infer and offer suggestions for solving the problem/issue.
c) Each student must submit the **Weekly Reports** in the prescribed format to the allocated guide and the weekly review of the same during the project period shall be done by the project guide.
d) Each student must maintain the Project Diary indicating the progress of the Project

Overview of the capstone project:

I. Organisational Profile that will include:

- Statement of the problem
- Literature Review
- Methodology: Data collection, hypotheses, analysis, findings, and suggestions

The project shall be on a topic related to the area of specialization opted by the candidate (in consultation with the allotted Faculty Guide if need be).

II**. Evaluation of Project Work:**

The total marks for the project work is 100. The evaluation criteria include:

Preliminary project presentation – This carries 25 marks and each student has to make a preliminary project presentation (after four weeks) during the course of the ongoing project. This preliminary project presentation is evaluated on criteria that will include:

1. Organization Profile

2. Literature review
3. Methodology

Final Project presentation – Marks allotted is 25 and on the completion of the allotted duration for the Capstone project, a student has to submit a presentation on the below:

1. Data analysis and interpretation
2. Tools used
3. Findings
4. Suggestions
5. Conclusion and Learning outcome.

Marks Distribution for Project Report Evaluation

#	Component	Max Marks
	Preliminary project presentation	
A	Organization Profile	05
B	Literature review	05
C	Methodology	15
	Final Project presentation	
G	Data analysis and interpretation	05
H	Tools used	05
I	Findings, suggestions and observations	05
J	Conclusion, usefulness/relevance of the study and learning outcome.	05
K	Overall Presentation & Quality of Report	05
	Total	50

III. Report Submission 50 marks

SERVICES MARKETING

Subject Code	**N4MBAMM06**	CIE Marks	50
Credits (Lecture Hrs/week)	03	SEE Marks	100
Total no. of Lecture Hrs	39	Exam Duration	03 Hours

Course Objectives: To make the students capable doing the following:

- Formulate export policy of an organization considering India's trade concessions and nuances of International marketing.
- Design oversea market research plan and manage global marketing activities.
- Develop global product strategy including adaptation of product componemnts.

INTERNATIONAL FINANCIAL MANAGEMENT

Subject Code	**N4MBAFM0**1	CIE Marks :	50
Credits (Lecture Hrs/week)	03	SEE Marks :	100
Total no. of Lecture Hrs	39	Exam Duration :	03 Hours

Course Objectives:

- To impart knowledge on international monetary and financial system.
- To identify various international sources of funds and instruments available in the international capital and money markets.
- To expose the students to the nuances of exchange rate determination.
- To identify and measure the risks generated by the volatility of exchange rates and use the appropriate hedging technique(s) to reduce the company's exposure to exchange rate risk.
- To expose students on how the MNCs manage their assets and liabilities.

Course Outcome

At the completion of this course, students will be equipped themselves with:

CO1: Describe the risks and benefits for an organization operating globally.
CO2: Summarize the role of foreign exchange market and key determinants of exchange rates.
CO3: Explain relationships between exchange rates, inflation and interest rates.
CO4: Evaluate the exchange rate risk exposures of multinational companies and hedging strategies.
CO5: Describe the process of Assets-Liabilities Management in MNCs

Pedagogy: Lectures, problem solving, case discussions, and student assignments.

UNIT 1 (9 Hours)

International Financial Environment: The importance, rewards and risks of international finance-Goals of MNC - International monetary system. International flow of funds - Balance of Payments-International trade flows-International capital flows – Foreign Direct Investment- International Portfolio Investments. Agencies that facilitate international flows.

UNIT-2 (8 Hours)

International Financial Markets: An overview of international financial markets - Foreign exchange markets - Foreign exchange trading – Cash and spot exchange markets - Foreign exchange rates and quotations – Forward markets – Foreign exchange market participants - Exchange rate behavior -

Cross rates - Government influence on exchange rates - Arbitrage profits in foreign exchange markets, SWIFT mechanism.

UNIT-3 (8 Hours)

Forecasting Foreign Exchange Rate: Measuring exchange rate movements – Exchange rate equilibrium – Factors affecting foreign exchange rate – Forecasting exchange rates – International parity relationships: Interest rate parity, Purchasing power parity and Fisher Effects.

UNIT-4 (8 Hours)

Foreign Exchange Exposure: Management of Transaction exposure – Management of Translation exposure – Management of Economic exposure. Foreign Exchange Risk Management: Hedging against foreign exchange exposure – Forward market – Futures market – Money Market Hedge - Options market. Alternative Hedging Techniques.

UNIT-5 (6 Hours)

Asset and Liability Management

Long-Term Asset and Liability Management:– Country Risk Analysis-Multinational Cost of Capital and Capital Structure- - Long-term financing: International Bond Financing, International Equity Financing.

Short-Term Asset and Liability Management: An overview of international trade finance, Sources of short-term funds, International cash management.

FINANCIAL & COMMODITY DERIVATIVES

Subject Code	**N4MBAFM02**	CIE Marks	50
Credits (Lecture Hrs/week)	03	SEE Marks	100
Total no. of Lecture Hrs	39	Exam Duration	03 Hours

Course Objectives:

- To explain the basic concepts of derivative contracts and markets.
- To illustrate how forward and futures contracts are priced and how they are used for hedging price risk.
- To expose students to the working of swap contracts for risk management.
- To explain basic concepts, pricing and various trading strategies using option contracts.
- To describe the nature of interest rate markets and how Value at Risk is used as a risk assessment tool.

Course Outcomes:

CO1: Explain the basic principles of derivatives and functions of derivatives markets.
CO2: Compute value of futures contracts and design hedging strategies.
CO3: Design swap transactions and explain the benefits
CO4: Determine price of options contracts, design trading strategies and explain payoffs
CO5: Compute forward interest rates and VaR of portfolios

Pedagogy: Lectures, presentations and case studies.

UNIT 1 (6 Hours)

Derivatives: Introduction, Financial and commodity derivatives. Exchange traded and OTC derivatives. Functions of derivatives markets. Players in the derivatives market. Development of Commodity and Financial Derivatives Markets in India. Role of SEBI in regulating financial derivatives market. Functioning of MCX, and NCDEX. Forwards and futures contracts. Trading in futures contract. Margin system.

UNIT-2 (10 Hours)

Risk Management using Forward and Futures Contracts: Divergence of spot and future price. Basis risk. Hedging using futures. Pricing of futures contracts – financial & commodity. Futures on stock. Arbitrage opportunities. Futures on stock index. Hedging using index futures.

Commodity Exchange Risk Management: Spot and futures prices. Polling of spot prices. Contract Specifications. Margining system. Marked to Market. Daily and Final Settlement. Circuit Filters. Position Limits. Delivery on derivative exchanges. Options devolvement mechanism.

UNIT-3 (6 Hours)

Swaps: Mechanics of swap transaction. Designing interest rate swap. Comparative advantage in swaps. Designing Currency swap. Mechanics of Commodity and equity swaps.

UNIT-4 (12 Hours)

Option Contracts: Types of options. Characteristics. Pricing of option contracts. Put-Call party. Binomial model. Black & Scholes Model. Option Greeks. Options on stocks, options on stock indices, and other exotic options. Hedging strategies using options. Trading strategies– spreads and combinations.

UNIT-5 (5 Hours)

Interest Rate Markets: Types of rates. Zero rates. Determining zero rates. FRAs. Interest rate derivatives. Credit Risk Management. Value at Risk. Different approaches to computation of VaR. Stress testing & back testing of VaR.

RECOMMENDED BOOK:

John C Hull, Options, Futures & Other Derivatives, Pearson Education, 10th Edition, 2018.

TAX MANAGEMENT

Subject Code	**N4MBAFM03**	CIE Marks	50
Credits (Lecture Hrs/week)	03	SEE Marks	100
Total no. of Lecture Hrs	39	Exam Duration	03 Hours

Course Objectives:

- To study the current taxation framework in India.
- To expose the students to the latest provisions of Income Tax Act.
- To identify the Tax Planning and Assessment Procedures for Individuals.
- To understand the new structure of Taxes in India and Fundamentals provisions of Goods & Services Tax (GST).
- To provide an overview of International taxation

Course Outcomes: At the end of the course the student must be;

CO1: Explain the meaning and scope of tax policy and types of taxes.
CO2: Compute taxable income from five heads of income.
CO3: Explain the basic concepts of Goods and Services Tax
CO4: Calculate the GST payable on Supply.
CO5: Examine the causes of tax evasion and tax avoidance along with methods adopted by countries to curb tax evasion and avoidance.

Pedagogy: Classroom discussions, problem solving, student assignments and presentations.

UNIT 1 (7 hours)
Basic Concepts: General Framework of direct taxation in India. Assessment year, previous year, person, Assessee, Income, charges on income, gross total income, capital and revenue receipts, residential status (Individual only), receipt and accrual of income, connotation of income deemed to accrue or arise in India, incidence of tax.

UNIT 2 (10 hours)
Individual Tax Planning and Management: Heads of Income (Theory), Basic problems on Salary including components on pension, gratuity, leave salary, provident fund, allowances and perquisites, House property (single house) and Capital Gains.
Basic problems on computation of total Income of the assessee. Tax Management: Filing of Returns and Assessments, Penalties and Prosecutions, Appeals and Revisions, Advance Tax, TDS, Advance Rulings.

UNIT 3 (8 hours)

GOODS & SERVICES TAX-1: Goods & Service Tax (GST): Introduction, Transitional Provisions; Taxes subsumed, Merits and Demerits of GST, Types of GST
Registration: Compulsory Registration, Exemption, Procedure.
Supply of Goods: Meaning and Scope, Time and Value of Supply, Interstate and Intrastate supply, Place of Supply, Audit.

UNIT 4 (8 hours)
Goods and Service Tax 2:
Levy and Collection, Composition Levy, Transaction value. Input Tax Credit, Exemption from GST. Rates of tax, tax Invoice, Debit and Credit Notes, Payments of Tax, Returns, Refunds. Simple problems on calculation of GST (CGST, SGST & UTGST).

UNIT 5 (6 Hours)
International Taxation (Theory only):
Basic concepts of international taxation- An overview from Indian perspective, objectives, tax treaty, domestic tax reforms, double taxation avoidance agreement, purpose and types, tax heavens.

RECOMMENDED BOOKS:

PROJECT ANALYSIS & MANAGEMENT

Subject Code	**N4MBAFM04**	CIE Marks	50
Credits (Lecture Hrs/week)	03	SEE Marks	100
Total no. of Lecture Hrs	39	Exam Duration	03 Hours

Course Objectives:

- To orient the students on the process of project idea generation and screening.
- To impart knowledge about various factors for analyzing the projects based on demand, market, technical and financial aspects.
- To expose the students to the procedures to project the future cash flows and balance sheet.
- To equip the students with various tools available to finance, monitor and control projects in India.
- To acquaint the students about steps involved in efficient management of projects.

Course Outcomes:

CO1: Describe the methods of generating and screening project ideas.
CO2: Analyse and evaluate capital projects.
CO3: Explain Social-Cost Benefit analysis and Environmental Impact Analysis.
CO4: Describe various methods of financing capital projects.
CO5: Apply network techniques for project planning and control.

Pedagogy: Lectures, presentations and case studies

UNIT 1 (8 Hours)
Project Management: Forms of project organization – project planning – project control – human aspects of project management – prerequisites for successful project implementation. Generation and Screening of Project Ideas: Generation of ideas – preliminary screening – project rating index - the Porter's model for estimation of profit potential of industries. Market, Demand and Technical Analysis.

UNIT-2 (8 Hours)
Financial Analysis: Estimation of cost of project and means of financing, estimates of sales and production, cost of production, working capital requirements and its financing, estimates of working results, breakeven point projected cash flow statement, projected balance sheet. Appraisal criteria: Net Present Value – benefit cost ratio – internal rate of returns– payback period – accounting rate of returns – investment appraisal in practice. Project Risk Analysis: Sources, Measures and Perspective on Risk, Sensitivity Analysis,

Scenario Analysis, Hillier Model, Simulation, Decision Tree and Project selection under risk.

UNIT-3 (6 Hours)

Social Cost Benefit Analysis (SCBA): Rationale for SCBA – UNIDO approach to SCBA – Little and Mirrlees approach to SCBA, Analysis of Shadow pricing. Environmental appraisal of projects: types and dimensions of a project – meaning and scope of environment – Environment – Environmental resources values–environmental impact assessment and environmental impact statement.

Environmental Accounting (EA): Concept of EA, National and Corporate Perspectives of EA, Forms of EA, Environmental Management Accounting: Segment EA, Eco Balance EA, Corporate EA, Environmental Financial Accounting, Environmental National Accounting, Case Studies.

UNIT-4 (5 Hours)

Project financing in India: Means of finance – norms and policies of financial institutions, SEBI guidelines, Sample financing plans, structure of financial institutions in India – schemes of assistance – term loans procedures – project appraisal by financial institutions. Financial feasibility analysis– preparation of detailed project report–format of application form of all India financial institutions, Recent trends and models of financing projects in India like PPP, BOOT, VGF etc.

UNIT-5 (12 Hours)

Network techniques for project management – development of project network – time estimation- project time control – 'What if' analysis – determination of critical path – scheduling when resources are limited – PERT and CPM models – Network cost system.

Monitoring and Controlling the Project – The Plan – Monitor – Control Cycle; Earned value; Project Control, Designing Control Systems. Evaluating and Terminating the Project - Evaluation of Projects, Project Auditing and Project Termination.

BANK CREDIT MANAGEMENT

Subject Code	**N4MBAFM05**	CIE Marks	50
Credits (Lecture Hrs/week)	03	SEE Marks	100
Total no. of Lecture Hrs	39	Exam Duration	03 Hours

Course Objectives:

- Provide basic understanding of various functions and tools of a central bank.
- Provide an overview of commercial banking structure and functions
- Provide in-depth knowledge on credit process and financial appraisal of credit decision.
- Provide basic understanding of various tools used to appraise corporate performance.

Course Outcomes:

CO1: Explain the role of central bank in framing monetary policy and controling money supply

CO2: Describe the fundamental principles of banking and features of bank deposits

CO3: Describe the credit function, types of loans, credit process and modes of credit delivery

CO4: Explain the credit monitoring function and credit restructuring by banks

CO5: Explain the various means of managing credit risk by banks

Pedagogy : Lectures, presentations and case studies

UNIT-1 (7 Hours)

Central Bank and Monetary Policy: Meaning and relevance. Central Bank tools to regulate monetary policy – OMOs, Reserve requirements, Policy rates. Operation of reserve requirements in India – NDTL computation, CRR and SLR Requirements. Banking sector reforms in India – The Narasimham committee I and II, The Raghuram Rajan Committee.

UNIT-2 (8 Hours)

Banking Function: Definition of Banking. Basic concepts of retail banking. Negotiable instruments. Types of deposits and NRI accounts. Laws in everyday banking – Customer of a Bank, Eligibility to be a customer, Bank-Customer relationship, Rights and Obligations of a Banker, Termination of Banker-Customer relationship.

Sources of Bank Funds: Basic concepts, Bank liabilities, Protecting the depositor and Commonly used approaches to deposit pricing. Non-deposit sources. Uses of Bank Funds. Financial Statements of a Bank.

UNIT-3 (8 Hours)

Credit Function: Introduction to lending, Credit process – constituents of credit process. Steps to credit analysis. Types of lending – Fund based, Non-fund based and Asset based lending. Steps in loan pricing. Customer profitability analysis. Modes of credit delivery, legal aspects of lending – Types of securities-Pledge, Hypothecation, Assignment, Lien and Mortgage. Common securities for bank loans.

UNIT-4 (8 Hours)

Credit Monitoring: Basic concepts, Need for review and monitoring. Triggers of financial distress model – The Altman's Z score. Credit information – CIBIL. Debt restructuring – Corporate and SME, Relief measures under debt restructuring. Debt Recovery Tribunal – Functions, Authority and Powers. SARFEASI Act, Insolvency and Bankruptcy Code-Need, features and procedures.

UNIT-5 (8 Hours)

Credit Risk: Basic concepts. Definition of credit risk, Classifying impaired loans. Prudential norms for Asset classification, income recognition and provisioning. Credit risk transfers – Securitization, Loan sales, Covered bonds and Credit derivatives.

Capital adequacy and regulations. Risk based capital standards. Basel I, II and III - important provisions.

RECOMMENDED BOOK:

ORGANIZATIONAL DEVELOPMENT

Subject Code	N4MBAHR02	CIE Marks	50
Credits (Lecture Hrs/week)	03	SEE Marks	100
Total no. of Lecture Hrs	39	Exam Duration	03 Hours

Course Objectives:

- To understand the importance of Organizational Development (OD) in management
- To introduce the concepts and practices of OD
- To familiarize students with OD strategies
- To provide experiences through case studies in OD
- To provide for field surveys to get a feel of the organisations across sectors

Course Outcomes:

- Understanding the importance of OD in management
- Understanding the concepts and practices of OD
- Crafting of creative strategies in OD
- Ability to use OD knowledge in organizations
- Develop ability through analysing current events and arriving at meaningful diagnosis for the organisational state of affairs.

Pedagogy: Lectures, Case studies and Presentations.

UNIT 1 (8 Hours)

Conceptual framework of OD: Overview of the field of Organizational Development (OD), Definitions of OD, History of OD, values, assumptions and beliefs in OD, characteristics of OD.

UNIT 2 (10 Hours)

Organizational change and OD: Dynamics of planned change, force field analysis, Types of organizational change, triggers for change, factors leading to resistance to change, objectives and strategies for implementing organizational change.

UNIT 3 (6 Hours)

An overview of OD interventions: Process of OD, Classification of OD interventions, Organizational Diagnosis, Weisbord's (Six Box) model for organizational diagnosis, Beckhard's confrontation meeting.

UNIT 4 (8 Hours)

Theory and Management of OD: Participation and empowerment, empowerment & commitment, Teams and team work, Broad team building

interventions, Parallel learning structures, A Normative re – educative strategy of changing, Process consultation approach to change, Action research, a process and an approach.

UNIT 5 (7 Hours)

Organizational climate: OCTAPACE Model of climate survey- Structural Interventions and the applicability and future of OD, the changing environment, Implications of OD for the client, Ethical standards in OD, OD's future.

OCCUPATIONAL TESTING

Subject Code	N4MBAHR01	CIE Marks	50
Credits (Lecture Hrs/week)	03	SEE Marks	100
Total no. of Lecture Hrs	39	Exam Duration	03 Hours

Course Objectives:

- To understand occupational testing
- To understand various instruments and tools used for psychometric testing
- To develop the ability to administer questionnaires and instruments
- To develop a knowledge base of construction of scales and tools across the broad areas of behavioural sciences.
- To make aware of the applications of psychology in the professions associated with human behaviour.

Course Outcomes:

CO1: Describe the concept of psychological measurements.
CO2: Explain various psychological tests, their history and evolution.
CO3: Comprehend the purpose and process of psychological tests and their relevance in psychological research.
CO4: Apply psychological tests in business settings.
CO5: Elaborate on the social and ethical aspects of psychological testing.

Pedagogy: Lecture, Articles and journal references, case studies.

UNIT 1 (8 Hours)

Introduction to concept measurement, individual differences and assessment:

Measurement: meaning, definition, role of measurement in psychology. Measurement scales: properties and types of scales; attributes of measuring instruments, problems in psychological measurement, types of measurement.

Individual Differences: meaning, definition, reasons to measure individual differences, identifying and measuring differences; meaning of psychological assessment and psychometrics.

Assessment: core characteristics, technical nature of assessment, stable and changing characteristics of traits.

UNIT 2 (8 Hours)

Origin and functions of psychological testing:

History of Psychological Testing: Early interests in mentally retarded, first experimental contributions of Francis Galton, Raymond Cattell, and Alfred Binet. Beginnings of psychological tests, intelligence testing, testing of ability,

test of other psychological constructs. Testing from the early 1900 and present, testing in 21st century.

Psychological tests: concept, definition, nature and characteristics. Types, control and use of psychological tests; test administration. Typical Differences between psychological testing and assessment.

UNIT 3 (8 Hours)

Technical and Methodological Principles:

Test construction: defining a test, why and what they measure, steps involved in test construction, selecting scaling methods, main points in planning construction of Tests. Item analysis: meaning, steps, testing the items, revising the Test, publishing the Test.
Scoring and problems in scoring

Reliability: meaning, types of reliability, factors affecting, importance of reliability.

Error and errors of measurement
Validity: definition, types, factors affecting validity, relationship

UNIT 4 (8 Hours)

Ability and Personality tests:
Ability Tests: Individual tests and Group tests, concept, definition, differences, and types.
Personality Tests: concept, definition, development of personality tests, objective measures of personality, projective tests…

UNIT 5 (7 Hours)
Application of and ethical and social issues in psychological testing
Applications in: educational, counseling and guidance, clinical and organisational setting.

Ethical and social issues- protection of privacy, confidentiality, user qualification and competence, testing diverse populations

RECOMMENDED BOOKS:

TEAM DEVELOPMENT AND LEADERSHIP

Subject Code	**N4MBAHR03**	CIE Marks	50
Credits (Lecture Hrs/week)	03	SEE Marks	100
Total no. of Lecture Hrs	39	Exam Duration	03 Hours

Course Objectives:

- To provide basic understanding of the concepts of team, team work, group dynamics in accomplishing organizational goals.
- To brief the importance of virtual teams in the context of globalization.
- To explain the various leadership theories by Stephen Covey, Robin Sharma, Max Landsberg, Warren Bennis and Burt Nanus.
- To enlightens students with the challenges of leadership in the corporate world.
- To discover the emerging issues in leadership including strategic leadership, leaders of public wellbeing, leaders in recession and downturn and leaders in social enterprise.

Course Outcomes:

CO1: Describe the fundamental concepts of team and team dynamics.
CO2: Explain the operations of various teams and implications of Emotional Intelligence.
CO3: Explicate the role of Leadership in Business Organizations
CO4: Expound the major theories of leadership.
CO5: Discuss the challenges of leadership in Business Organizations.

Pedagogy: Lectures, case analysis, and discussions.

UNIT 1 (10 Hours)
Introduction to Team work:
Meaning of Team and Group. Difference between the Team and the Group. Classification of teams. Advantages and Disadvantages of Team work. Shared purpose and Common Goals of Teams. Stages of Team Formation and Team Dissolution. Feedback in Teams. Team Performance curves. Group dynamics and group politics.

UNIT-2 (10 Hours)

Operation of Teams and Emotional Intelligence: Self-Managed Work Teams (SMWT) – meaning, scope, objectives, advantages and disadvantages. Virtual Teams - meaning, scope, objectives, advantages and disadvantages. Challenges of supervision in Virtual Teams.

Emotional Intelligence (EI) – meaning, emotional problems in Team Building and how to manage Emotional Intelligence. Daniel Goleman's Theory of Emotional Intelligence and its relevance in Team Building.

UNIT-3 (5 Hours)

Leadership: Meaning, definition, role, significance of leadership in organization. Differences between Leading, Managing and Entrepreneurship.

UNIT-4 (10 Hours)

Leadership Theories: The managerial grid, path – goal theory, Leadership Theories propounded by Daniel Goleman, John Adair,

Seven Habits of highly effective people by Stephen Covey. Transactional and Transformational Leadership.

UNIT-5 (4 Hours)

Leadership in the 21st Century: The challenges of leadership in the corporate world Teaching leadership. Differences between leaders and followers. Strategic Leadership and Leadership succession. Change Management and Leadership differences. Leader as a change agent.

RECOMMENDED BOOKS:

LEARNING AND DEVELOPMENT

Subject Code	**N4MBAHR04**	CIE Marks	50
Credits (Lecture Hrs/week)	03	SEE Marks	100
Total no. of Lecture Hrs	39	Exam Duration	03 Hours

Course Objectives:

- To provide basic understanding of T&D.
- To equip the students with the basic training process and various benefits from T&D.
- To provide the detail description of training need analysis framework.
- To empower with the knowledge to understand different methods and techniques of training.
- To facilitate the students to design, validate and evaluate the training.

Course Outcomes:

CO1: Comprehend the role of training and development in organizations.
CO2: Develop the framework for training need analysis and structure the training design.
CO3: Discuss the various training methods and techniques.
CO4: Describe the process of evaluation and validation of training.
CO5: Explain the importance of management development in the organization.

Pedagogy: Lectures, case analysis, and discussions.

UNIT 1 (4 Hours)

Introduction: Definition, Scope, Difference Concepts, Objectives, Benefits of training, The role of Training in Organizations, Place of Training in organizational structure, A training process Model, Difference between training and development.

UNIT-2 (12 Hours)

Training Needs Analysis: The framework for conducting a Training Needs Analysis: Organizational Analysis, Operational analysis, Person Analysis, Gathering Training Needs Data, Outcomes of Training Needs Analysis – Non training Needs, Training Needs, Approaches to Training Needs Analysis Business. TNA and Design.

Training Design: Factors, Training design Process, Organizational constraints, Developing objectives, why use Training objectives, Facilitations of learning-focus on trainee, Facilitation of Learning-focus on training design,

facilitation of transfer-focus on training, facilitation of transfer focus on organizational intervention, Design theory, Outcomes of Design.

UNIT-3 (10 Hours)

Training Methods and Techniques: Approaches to Training, Matching Methods with Outcomes. Lectures and Demonstrations – Straight Lectures, Discussion Methods, Demonstrations. Computer – Based Training-Programmed Instruction, Intelligent Tutoring Systems, Interactive Multimedia, Virtual Reality. Games and Simulations – Equipment Simulators, Business Games, In-Basket Technique, Case studies, Role Play, Behaviour Modelling. On-The-Job Training – Job Instruction Technique, Apprenticeship Training, Coaching, Training The Trainer For On-The-Job Training.

UNIT-4 (7 Hours)

Validation, Evaluation of Training: Validation concepts, Types, Methods. Rationale For Evaluation, Need, Principles, Criteria, Objectives, Approaches, Resistance to Evaluation, Types of Evaluation Instruments, Types of Evaluation Data, Evaluation Designs, KirkPatrick model.Training Audit – Meaning, Features, Approaches, Functions, Model, and Steps.

UNIT-5 (6 Hours)

Management Development: Why focus on Management Development, Approaches to Management Development, Overview of the Managerial Job, Management Characteristics, Management Development implications, Sources of Knowledge and Skills, Special needs of Technical Manager, Training for Executive Level Management.
